His look of discontent growing, he opened the trunk at the foot of the bed and began rummaging among the contents. Old neckties, old collars, old waistcoats, a shoe box full of old letters and photographs, empty pipe cases, old shirts that had not yet been thrown away—every young man who has gone to the city to seek his fortune will know most of the items which that trunk contained. And near the bottom of it he came to a book, From Country Clerk to Merchant Prince, a book which made him forget the rubbers and brought a look to his face, half tender and half sad—the same expression which sometimes comes to an older man when he happens to find a bundle of old letters in a neglected drawer of his desk.

Paul carried the book to the bed with him, and as he turned its well-remembered pages a sheet of paper fell out—a memorandum which he had written on the day before he left North Branderville—in the days when the confidence of youth was strong as steel within him and discontent had not yet curled his lip.

"Time-Table," the paper was headed, and underneath were the following paragraphs:

May 1, 1913. I am leaving for New York.
May 1, 1914. By this date I shall be in a good position, where my hard work, faithfulness and integrity will be well rewarded.
May 1, 1916. By this time I shall have worked myself up to a responsible position in the firm.
May 1, 1918. By this time I shall have saved enough to go into business for myself.
May 1, 1920. Firmly established in my own business.
May 1, 1921. Business doubled since this time last year.

Paul glanced up at the calendar by the side of his chiffonier. It was May 6, 1921—five days after the date when his business should have doubled since this time last year. For a time he sat quietly—mourning a little, perhaps, over that confident young man who on May 1, 1913, had been leaving for New York—accompanied by the invisible figure of Hope—the world a football for his feet, and every kick a goal.

"Rotten!" he finally told himself in a low voice as he contrasted his leaky shoes to that last-quoted entry in the time-table. "And yet—it all seemed easy enough then. I could have sworn I could **do it**—just the sa those other men did it in **the Merchant** Pri Another thought came to him—**a thought** whic been rankling in his mind **more and more** *often* past few **months**: "I guess have to be **slicker** nowadays you did then. *Got to* have a Got to be **a smooth** article know how **to get away** *with* Me—I've been **working** like a h at the office, **thinking** that wa right way to **get along**—and all time Old **Man Weatherby's** p ably been **laughing** at *me and p* ing me for a **fool**. What I ough do is to have **a talk with** him find out where I **stand**. *All* it ne is nerve, and **I've** got to k sometime."

Half an hour later, when he the house, the **rain** had covered sidewalk with a *stippled film* wh soon demonstrated the theory capillary attraction by finding way through the holes in his sh

"Just what I said," he t himself, a feeling like *fatality* t ing possession of him. "To-ni I'll have the toothache *again*, a to-morrow ——"

He made a wry grimace—one those sour expressions *which* som times darken the faces of th who have been unsuccessful in th search for the golden eggs; and you had been walking behind hi then, blessed with the *gift of divi* ing things unseen, you might ha perceived that instead of being a companied by Hope—starry-eye and clad in white—another invi ible figure was now walking alo with its hand on Paul's shoulder- a clever-looking old gentleman wit a suspicion of a horn on his fore head—a clever-looking gentlema who is sometimes known as Ol Gooseberry, and who limps just a little as he walks.

II

IT WAS a magnificent building—the Bryce Building, in which Paul Sohmer worked—with a main entrance like something from the Arabian Nights, gorgeous in marble and gilt, and illuminated from chandeliers that might have reminded you of inverted Christmas trees, with golden boughs instead of evergreen, and every branch a glory of frosted light.

Indeed, when Paul had first set foot in that entrance, eight years before our story opens, he had regarded himself as being at last on the highroad to fortune. But on the morning to which he had now arrived there was no such feeling in him as he strode toward the elevators. Instead, he was nursing one of those dark moods which seem to settle upon the children of men at times—a mood of disillusion such as comes to the young when Santa Claus no longer lives and there are no raisins in the pudding—a mood of disenchantment such as comes to the old when love begins to lose its charm and rheumatism is settling in the knees.

The other clerks had already arrived and Paul greeted them with gloomy curtness as he made his way to his desk.

Eight years before, when he had first seated himself at that same desk determined to learn the export business from A to Z, he wouldn't have changed places with prince, potentate or any other person, but on the morning when our story opens he slammed up his roll-top curtain as though he would like to break it, and muttered "Darn you!" beneath his breath when one of the drawers wouldn't open as quickly as he wished. For a time he sat arranging his papers and preparing his work for the day, half watching the door for Mr. Weatherby to make his appearance, half listening to the conversation that was going on around him.

"I see Pete Finley and Bat Yonson fought a draw last night," said one of the bookkeepers.

"Sure they did," said another. "What do you think? They'll get another match now and make twice as much money. A couple of wise guys. You don't s'pose they're fighting for their health, do you?"

Digitized by Google

I wonder how much they get when they fight."
About five thousand each."
Not bad for half an hour's work."
I'll tell the world it isn't."
It wouldn't be so bad if they got it all," said the bookkeeper, "but the matchmaker's a wise guy, too, and he gets slice or he wouldn't sign them up. And the manager his—often gets half of it—and what's left, there's erally a lawyer waiting to slap an attachment on it—another lawyer has to be hired to pry the attachment

Serves 'em right if it's a crooked game."
Where do you get that stuff? Tell me something that 't crooked nowadays."
"You've said something," said the stenographer, who s dusting her machine. "Last two weeks I've been oming with a girl who works for one of the big theatrical n uptown—and say! The things she tells me!"
Behind his desk Paul shortly nodded his head.
"Crazy—crazy—everything's crazy nowadays," he muted to himself.
During his first years at the office he had never allowed at sort of conversation to sink into his mind, but had garded it as the claptrap of those who didn't deserve ccess, only partly meant and not to be taken seriously. at lately, and especially after his two years in the service Mars, he, too, was beginning to wonder whether, with few rare exceptions, everything and everybody weren't oked—whether all the qualities mentioned in the Merant Prince had not become obsolete, like writing business letters in longhand, or taking a trip to Buffalo by ay of the Erie Canal.
"Stay honest—and stay poor." "Work hard and see what gets you." "Save your money—the wise guy likes to ake it away from you in chunks." Such were the gems f philosophy which were beginning to adorn his thoughts. ls for the Merchant Prince stuff, hadn't he tried it out or over eight years? And what ad it brought him?
Paul shuffled his damp feet nder the desk and for the second time that day he called himself a fool.
"I'm getting on for thirty," he thought. "And pretty soon I'll be getting on for forty. Yes, and I might as well be serving time in jail as fooling along the way I'm doing now."
Old stories that he had heard vaguely began to stir in his memory. There was one about a Boston merchant who, on a sworn statement, had simultaneously borrowed fifty thousand dollars from ten different banks, each bank thinking it was the only one that was making the loan. And then, of course, with his half million dollars safely salted away, the wise man from the East had gone bankrupt, and had never had to worry any more. There was another about a bank cashier who started on his vacation with a clean million dollars in his suitcase, and had settled his case out of court for seven hundred and fifty thousand. Then there was the prohibition officer who had accepted a bribe of eighty-five thousand dollars and had resigned his position the next morning. Slick work and graft. Hold up your hands and deliver! The Merchant Prince had become a Pirate and the papers were full of his carryings-on. Building-material manufacturers were robbing the public right and left; ships that had cost a fortune were being sold to favored companies for a few thousands; the prohibition laws were a joke; importers were dodging the customs.
"And that's no dream," thought Paul, pushing his papers aside and turning to stare out at the rain. "Old Man Weatherby's doing it right along. Nearly all the stuff we've been getting lately is undervalued. But he isn't going to take it out of me any longer. I've been undervalued long enough. Just as soon as he comes in I'm going to strike him for a raise. Might as well be dead and buried as sticking around here forever for eighteen dollars a week."
In the hall outside a quick step was heard—a step which seemed to say "Look out; I'm going to catch you!"—and simultaneously the office grew silent, except for the tippity-tap-tap of Miss McGuire's busy typewriter. The door opened and the senior member of the firm strode through the railing gate with a gruff "Good morning." The next moment he had vanished into his private office and Paul found his heart beating faster at the task before him.
"Darned if I'll put it off," he suddenly told himself. "I've put it off too long already. I'll get him now before he calls Miss McGuire in; and the sooner I start the sooner it's over."
Rising grimly from his chair he made his way to the door of S. J.'s private office and raised his knuckles to the panel.
"Rap-rap-rap!" he sounded; and again more loudly, "Rap-rap-rap!"
"Come!" cried a voice inside.
Paul hesitated a moment, and then drawing a full breath he threw back his shoulders and passed through the swinging door.

III

IT WAS characteristic of old S. J. that after a glance at Paul he should continue his perusal of the morning mail, slitting open an envelope with an air of irritation and reading the letter inside as though he despised it.
"Mr. Weatherby," began Paul, "I'd like to have a talk with you for a few minutes."
"Well?" demanded the older man, attacking the next envelope with his paperknife.
"It's eight years now since I started to work here; and I'd like to know if I've given satisfaction."
Old S. J. looked weary, as though he recognized the prelude of a very old tune.
"I'll tell you one thing quick enough," he said. "If you hadn't given satisfaction you wouldn't be here now."
"When I first came here you said my advancement depended entirely upon my own efforts. I've worked hard—yes, and faithfully, and well. On foreign-mail nights I've often been at the office till after ten o'clock. When Savage was sick for over three months I did his work as well as my own. I've never been a clock watcher—nor a time killer—nor a knocker. I've been a worker—yes, and a hard worker—but after eight years, it seems to me—well, it seems to me that I ought to know where I stand."
"How long do you say you've been here?"
"Eight years."
"Including your two years in the Army?"
"Yes, sir."
"Mmm. That makes six years—not eight. Do you ever stop to think that I kept your job open for you while you were away?"
"Yes, sir."
"Mmm. Give me credit for that. And now let me tell you something: If you have a better job in mind—as I suppose you have, talking to me like this—I can fill your desk a dozen times to-morrow for less money than I'm paying you now. This is a competitive world that we live in; I have to compete, and so must you."
At that he seized upon another envelope and slit its gizzard open with a whish of his knife that had something fierce about it.
"Do you mean to say, then," said Paul, stammering a little, his lips suddenly feeling dry and unwieldy, "do you mean to say, then, that—that there's no further chance of getting on here?"
"So far as that's concerned," said old S. J., making a note on the letter he was reading, "you'll have to draw your own conclusions. Any advance of salary at the present time is absolutely out of the question. Tell Miss McGuire to come in. That's all the time I can give you."
Paul went back to his desk as though to the roll of muffled drums, his feet feeling wetter than ever, and his future looming up like a constant succession of rainy days and leaky shoes and hopes deferred to make the heart grow sick.
"The old thief!" he muttered to himself at last. "I believe it now—every word they say about him. Anybody who would do a trick like that—string a kid along for eight years—and then practically tell him to go to the devil——"
Nursing his resentment he slowly set about his day's work. The afternoon before he had prepared the papers covering an export shipment of machinery from a Milwaukee firm, in whose favor the foreign purchaser had issued a letter of credit. Paul now gathered these papers together—the steamship bills of lading, insurance certificates, invoices and drafts—and pinning them to the letter of credit he took the documents to the bank which handled the firm's export business. Five minutes later the foreign-exchange clerk pushed through the wicket a check for thirty-seven thousand dollars, drawn to the order of the Milwaukee manufacturer.
"Thirty-seven thousand dollars!" thought Paul; and—nearly a minute later: "If that was only mine!"
When he returned to the office he had a heightened color, and almost hurriedly he gave the check to the bookkeeper to be forwarded to Milwaukee.
"Thirty-seven — thousand — dollars," he presently found himself repeating, and then catching himself with a start he put his mind back on his work, his ears growing warmer every moment.
Rich man, poor man, beggar man, thief—there are few men living, and those few probably touched with deafness, who haven't heard the whisper of Old Gooseberry in their time.

A Chance for the So-Goes

THE Hoosiers say that every man in Indiana is a politician, and since the Nineteenth Amendment they probably include every woman also. They used to claim, too, that "As Indiana goes, so goes the Union," which pleased the Hoosiers and was not unduly annoying to any section of the public save the politicians of the other ambitious barometer states, of which there were several. In any event, Indiana maintained a rather consistent so-goes political reputation for a considerable time, and certainly politics was, and is, a favorite vocation, avocation, pastime, employment, diversion and practice of a large percentage of the population.

There always is some politics stirring in Indiana. The candidates begin their campaigns early and continue them over long stretches of time. The Hoosiers like to hear political speeches, and are keen to discuss political issues. As soon as one election is over candidates seeking for votes at forthcoming elections begin their rounds, and there never is a moment when the cities and the rural districts are not entertainingly besieged by members of all parties who desire the frequent suffrages of the people. Consequently the people of Indiana are a politically well-informed people—far better informed than the people of New York, say, where politics is neither so intensive nor so interesting—and to a large degree select their candidates and decide their elections on the basis of political knowledge rather than because of political enthusiasms.

Fundamentally the real Indianians—the authentic Hoosiers—the men and women of the country as distinguished from the aliens and the hyphenates—the Americans—have a keenly intelligent comprehension of national political affairs and tendencies and an active interest therein.

Hence all other Americans of similar comprehension and interest are watching with deep concern the progress of the campaign now being made in Indiana by Albert J. Beveridge for the nomination for United States senator, and with strong confidence that the voters of Indiana will take this opportunity to return Mr. Beveridge to the Senate, not alone because such action will be of advantage to Indiana but because it will be a distinct national, American service as well.

There is no greater menace to the security and perpetuity of American institutions than the continued deterioration of the United States Senate in character, in ability and in political integrity that has occurred during the past twenty years. It has degenerated from its former high capacity of check upon and balance for the political extravagances and maladministrations of the Lower House of Congress to a body now even more demagogic than that Lower House. It is now weak in leadership, faltering and inconclusive in purpose, swayed by blind partisanship, obstructionist, opportunist, raucous with the cries of self-seeking demagogues, and unable even to carry out its own feeble policies without interminable and futile discussion and the injection of all sorts of influenced compromise and capitulation to outside influences.

The only policy of its majority is expediency, and the only plan of its minority is to impede. The quality of the Senate's membership has so deteriorated from its earlier rosters that now one-third, at least, of the names on the roll-call are names that designate individuals who would add little weight to the deliberations of any average board of county supervisors.

The Senate of the United States should be, and was, the great, determining, able and scrupulous legislative forum of this country. It is now the rostrum of little politicians and the breeding place of little politics. It requires but a glance at the list of the Senate's membership of twenty years ago, say, and at that of to-day, and the most casual knowledge of the capabilities and character of the present senators to make proof of that assertion; that, and the daily record of the Senate's proceedings.

Wherefore the people of Indiana are fortunate in this present primary campaign for the selection of an Indiana senator. They have an opportunity to do the country a service, and themselves as well, by returning to the Senate Albert J. Beveridge, who not only has a record of twelve years of able and exceptional service in that Senate to commend him, both to Indiana and to the nation, but in the time that has elapsed since his first senatorial service ended has grown greater in stature and ability. He is an orator with a background and a perspective; a historian and a biographer with a wide and accurate knowledge of our Government, its functionings, its necessities and its capabilities; a man of independent thought and determined action; of character, courage and experience.

This is a chance for the Hoosier so-goes. It is quite possible that if Indiana shows the way by going for Beveridge other states may follow that excellent political example in the selection of their senatorial candidates to the great national service of bringing the United States Senate back to its former status of real and patriotic statesmanship.

Land Settlement for Veterans

ONE of the sections of the Delayed Compensation Bill makes provision for purchase of land for veterans desirous of entering on agricultural pursuits. Such a proposal receives everywhere local support, because every state, even the oldest on the Atlantic Coast, desires land settlers—to take up new land or reclaim abandoned land. To city folk the proposition sounds easy, but to farmers it has the earmarks of a promotion scheme. It is agreed that the new settler must have a better start than the earlier homesteader; but just how much a better start and how supported by the Government is not made clear. What we propose to do Australia has been doing for three years. The experiences with land settlement by veterans in that country ought to yield points of guidance for us.

The several states of Australia conduct the enterprises, but the Commonwealth contributes funds as well as the states. The original Soldiers Repatriation Act established a Repatriation Department for purposes of administration. The returned soldier is entitled to elect one of several options for land settlement. Each approved settler is granted £1000—£625 as working capital, £375 for resumptions and expenses incidental to settlement. Land is available under five different tenures, or combinations of them. The application is passed on in more than a perfunctory, red-tape manner. Every effort is made to fit the applicant to his land, so that he will stick. The following forms of tenure are available:

1. The lease, in perpetuity, of a homestead farm. The holder must reside on the farm for five years. He pays a rental equal to 2½ per cent of an announced valuat subject to reappraisement every twenty years. The re the first five years may be paid in specified improveme

2. Lease of a piece of Crown Land, extending forty- years. The holder must reside on the land five years, rental is 1¼ per cent of land value, reappraisement e fifteen years; the rental of the first year is payabl improvements.

3. Purchase of land. Payment on appraised cap value is to be made in fifteen equal annual installme with interest at 2½ per cent.

4. Suburban holdings, either with lease in perpetuity under sale. Settler must reside on the holding five ye the terms of rental or purchase are like those stated abo

5. Settlement purchase, especially for establishment coöperative land colonies like those at Durham and D in California. These are for diversified agriculture or special crops.

More than 1,000,000 acres were set apart as available these several projects. There is a long waiting list, desp the best efforts of the administrative board. *During* first year of operations more than 15,000 soldiers w settled on the land.

In order fully to evaluate this accomplishment we m recall the conditions in Australian agriculture *since t* war. A new settler of the usual limited means would n have been able to weather the storm of deflation *of pric* On the other hand, the country is still in the extracti state, indeed really a frontier state. There is still a choice of land.

We have little homestead land left untaken. New are for opening as homesteads scarcely exist. Leases on t forest reserves or other public domain would represent a experiment. The opening of further irrigation tracts fac the problems of high costs of reclamation. For the Go ernment to purchase land now in private ownership farms for soldiers would simply mean to make them fre holders without capital for operation. Clearly the cond tions for the undertaking are much more favorable i Australia than here. And the population there still po sesses strongly the psychology of frontier exploitatio almost extinct here. If returned soldiers are to march i the van of a back-to-the-farm movement the undertakin will demand better organization than is to be expecte from politicians anxious for the veteran vote.

The Little Tax Slackers

NOBODY knows and nobody can estimate, even roughly, how many million dollars are annually lost to the Government through the failure of the smaller tax dodgers to file income-tax returns. The Treasury Department is amply equipped for the detection and prosecution of big delinquents. Rich men have found tax dodging a hazardous sport, but the little fellows are protected by their very obscurity.

Under the present procedure nobody except Government officials is in a position to know who has filed a return and who has not. The privacy surrounding income-tax matters makes it possible for millions of persons who receive taxable incomes to evade with impunity even the small payments to which they are liable; and it cannot be doubted that many avail themselves of the defects of the system to the limit. It is common knowledge that there are many parts of the country, particularly rural districts, where very few persons even think of paying an income tax and where only the richest offenders are brought to book.

There is a simple remedy for existing conditions, an easy way to stop millions of little leaks. If the Secretary of the Treasury would cause local lists of income-tax payers to be printed and to be generally displayed in courthouses, post offices and other Federal premises, or published in local newspapers, the effect would be immediate and striking. Such lists would be eagerly conned and studied. Unless human nature should suddenly and radically alter, the slackers would be shown up in short order; for no man who has met a common obligation feels kindly toward his neighbors who have repudiated it. Absence from the list would put every tax dodger on the defensive. It would be less painful to come clean than to run the gantlet of neighbors' eyes.

This plan is worth a trial. Added income would be vastly greater than the expense that would be involved.

THE SUN-HUNTERS

By Kenneth L. Roberts

THE manner in which modern migrations are stimulated is pretty much the same all over the world. A ident of Poland, having no money l no job, borrows enough money m a relative in America to ke the trip. Having made it writes back pityingly to his nds in Poland. "Why," he s in his letter, "should you y in Poland? It is a rotten ce. Borrow some money and me over here quick. The place full of rich suckers who will buy ything you show them. All the Amerans have money. Come quickly before mebody gets all of it away from them."

In a Tin-Can Town, Lemon City, Near Miami

As soon as it becomes known that America an offer advantages which Europe doesn't ossess the European is filled with a passionate desire to apture a few of them. Philosophers who have made a areful study of human motives and emotions have emalmed the philosophy of migrations in a few phrases, such s "Distance lends enchantment" and "They all look good when they're far away." These phrases are true; but the hing that lends the greatest amount of enchantment to a distant piece of real estate is a letter from Cousin Walt or Friend Herbert saying, "You ought to see the fish we catch down here. A full-course dinner costs only seventy-five cents. Don't miss this next year."

The Northern States in the past few years have developed a new type of migrant. Instead of being hot on the trail of any sort of coin, currency or legal tender, as is the modern European immigrant, and instead of being in search of political or religious freedom, as were many European immigrants during the past century, the modern migrant is after warm weather during the winter months.

He is a sun-hunter. He is sick of four months of snow and ice. He is heartily tired of cold feet, numb ears, red flannel underwear, rheumatism, stiff neck, coal bills, coughs, colds, influenza, drafts, mittens, ear tabs, snow shovels, shaking down the furnace, carrying out ashes, and falling down on an icy sidewalk and spraining his back. It gives him a prolonged pain to wear his overshoes and a muffler, and to have to thaw out the radiator of his automobile every two or three days. The bane of his existence is sitting around the house for four months waiting for April to come along and unstiffen his joints.

He wants sun and lots of it. If he must spend four months doing nothing he prefers to spend it amid the Spanish moss and the palm trees, hearkening dreamily to the cheerful twittering of the dickey birds and to the stirring thuds of the coconuts, oranges and grapefruit as they fall heavily to the ground.

In the big hotels in Palm Beach, Miami, Ormond, Daytona, St. Augustine and other Florida resorts are the time-killers, with their jewel lariats and their acres of white trousers, with their flask-trimmed tea dances and their hard-boiled social aspirations and their refined gambling houses and their trick whisky canes. The sun, to the time-killers, is not of the utmost importance. If they were unable to change their clothes several times a day they would feel ill at ease; if they were unable to be charged a little matter of forty dollars a day for a double room and bath they would feel that they were being slighted in some way; if they couldn't have the knowledge that they were inhaling the same air that was being inhaled by the leading millionaires and society pets they would feel cheated.

Not so the sun-hunter. The sun-hunter knows the value of a dollar. He usually knows the value of a nickel also. It is said that before he relinquishes his hold on a twenty-five-cent piece he gives it a farewell squeeze of such violence that the eagle on it frequently emits a shrill scream of anguish. This statement, I believe, is a gross exaggeration. The fact remains, however, that one never finds the sun-hunter throwing his money around in the loose spasmodic manner that always characterizes the genuine time-killer I have been describing.

And the sun-hunter wants just two things—sun and air. He knows nothing about Charlie Schwab or Harry Payne Whitney, and he would take no interest whatever in them unless they got between him and the sun.

Clothes mean nothing in his life. The male sun-hunter is usually garbed in dark trousers which hang loosely on his legs like the trousers always inflicted on sculptured statesmen by sculptors of the Horace Greeley period. He may or he may not wear a coat, depending entirely on his whim of the moment; but he almost invariably affects the old-fashioned gallus, or suspender. He will be found in this garb on Sunday morning, when fishing for yellowtails on the edge of a creek with a bamboo pole; he will be found in it on Wednesday afternoon, when visiting the movies; and he will be found in it on Friday evening, when engaged in an exciting game of euchre with a pair of brother and

THE UPRISING GENERATION

The Adventure of the Missing Chaperon

By Nina Wilcox Putnam

ILLUSTRATED BY MAY WILSON PRESTON

"I'll Trouble You to Leave Me Alone! I'm Fed Up With Your Mid-Victorian Tommyrot!"

AT LAST I have a past! Of course the family have made an awful row about it, and I had to work hard getting it, and now Rosamond—that's my elder sister—says it's only a technical past, when you come to look into it carefully. But at any rate I've got it now, and, though I was rather frightened at the time, it was fearfully exciting and I think a woman simply has to have an interesting past to attract any real attention. Look at Helen of Troy and Cleopatra and—oh, well, anybody! And besides all that, with this great literary talent of mine, I want some day to write one of those thrilling memoirs that get you so much trouble and money at the same time, because of telling such a lot of knowing things about the best people, and all that!

And if one is to get together enough material, why, one ought to start one's past in plenty of time, if you know what I mean. Of course I am eighteen, and that is rather late, but still I feel I have at any rate made a good beginning.

This past of my very own started after my quarrel with Ted Stonewall. Ted is an early indiscretion of mine, and it is now practically impossible for me to shake him. Very romantic for him, but a perfect bore for the woman to have a man hang around like that after one's tired of him—eh what?

And I got through with Ted simply aeons ago. We met when I was young, a mere child with no discrimination, and while the family were not so watchful about whom I got to know. He came to our country house with the boy who was delivering groceries and I happened to be on the back fence eating a hot cake I had coaxed from the chef. I was a mere flapper at the time and of course could not be expected to know my own mind. Ted gave me an apple and that started it all. I was very much in love with him for a while and used to see a lot of him every summer when we came back to Rosemere. I didn't meet him in town partly because Miss Spears makes that sort of thing so unnecessarily difficult, and partly because Ted's father, who was combined Coal, Wood and Insurance, lived in Rosemere Village all the year around.

The day I put up my hair for the first time without mother telling me to put it down again Ted kissed me—out in the orchard, because mother didn't encourage his coming around to the front door. Democracy simply means nothing to mother if the democrat uses bad grammar. Ted didn't, but his parents probably did, and that was enough for Mrs. Edward Torrington. I wasn't exactly forbidden to see Ted; mother was far too wise for that! But I was more or less on my honor not to, and this was a less day. So I saw him. And after that kiss he became simply impossible!

"I'm going to marry you one day, Pet Torrington!" he said in his heavy way. "I'm going in business with father in the spring, and I'll make good! I'll marry you—you needn't laugh, young lady!"

Wasn't that quaint? I was terribly intrigued by it, but remember I was a mere child of seventeen at the time. I hadn't come out, and I was fearfully ignorant. And by the next summer I was really living—having a perfectly dizzy time, Rosamond being mercifully married out of my way, and of course I wasn't going to have Ted hulking around and criticizing me in his ridiculous, old-fogy fashion. I was fond of him, of course, for auld lang syne, and all that, but I didn't want him scaring everybody else off, and his ideas about women were simply antique! The crisis came one afternoon when he showed up in a flivver—in a flivver, mind you!—and asked me to go to ride with him in it. It was a brand-new shining cracker box and it seems the amusing infant had bought it with his first earnings.

"No, I won't go, thanks," said I. "Not in that rat trap. I'm too slim to ride comfortably in it, Ted."

We were standing on the terrace, where we could com- an excellent view of the shining flivver. Ted frowned a cigarette.

"Sit down, won't you?" I suggested. "I'll ring for a drink!"

"No, thanks!" said Ted shortly. Then he burst out, "I don't like to see you drink, Pet! It's all wrong—I don't give a darn who says no! Your mother ought to stop you!"

"Mother," said I suavely, "is playing bridge over at the Slossens'. She won't be home for hours. Do change your mind."

"No!" said he hotly. "Your doing it behind her back makes it all the worse, Pet! My mother wouldn't allow such a thing! Honestly, dear—I wish you'd cut it out."

"Don't be a prune, Ted," said I. "And don't call me dear, either. I told you that was all off!"

"You can't cut the dear out as far as I'm concerned!" said Ted firmly. "I love you, and although it's no news to you, I may add I intend to marry you. And I have every right to protest."

"You have nothing of the kind because you're not!" I flashed back at him. "You give me the perishin' blues, old thing! I'm quite capable of taking care of myself!"

"That's just where you're dead wrong!" said Ted very earnestly. "You think you're as wise as the Sphinx, when as a matter of fact you're as innocent as a kitten. Girls seem to have gone crazy nowadays. What most of you need is a good old-fashioned spanking bring you back to your senses! My mot never acted like that when she was a I'd like to bet; no, nor yours, either!"

"But they probably put a lot over, just the same, thing!" I snapped. "Don't ever doubt it! The only ference is that they did it on the sly!"

"I don't believe that for a moment!" said Ted. "Y like to kid yourself that everybody has always done same sort of thing. You'll be sorry some day."

"I'll risk it," said I coldly. "And until that fatal h falls, Mr. Theodore Stonewall, I'll trouble you to leave alone! I'm fed up with your mid-Victorian tommyrot

"It isn't tommyrot, dear," said Ted, coming over a trying to take my hands. "It isn't rot—really, P Decency is never old-fashioned, whatever y may think."

"Ted, you bore me to tears," I replied languid "The world has changed and it's left you behir that's all. Stop being so silly, do!"

"All right," he sighed helplessly. "Come on hop in the fliv and I'll be good. Please! It's peach of an engine—the best of its tribe!"

"No!" said I. "I'm dated."

"Who?" demanded Ted, jealous in a flas "Pet, I've heard some talk. It's not Gran Messinger, I hope?"

"What if it is?" I said. "Can't I even make date without your permission?"

"Not with a married man—especiall one with the sort of reputation Messing has!" said Ted. "Pet, don't be a fool You can't do that sort of thing and ge away with it indefinitely, by gosh! Th life you lead is all wrong! I mean th crowd that hangs around the country club It's not normal! Take that diamond cu they're playing for now, for instance Think of a diamond-mounted tennis cup Paugh! They can't even do athletic wholesomely!"

"Ted, you talk from the depths of th camphor chest," I said, "and I resent your tone."

And indeed I did resent it! Ted's joining the pack which had been yelping at the heels of us poor buds all season marked the limit as far as I was concerned. As if a girl didn't have to have some experience, some knowledge of life! Mother's attitude I could endure. I could manage her, because she would have died rather than have me left out of things or be different from the other girls in the crowd.

"Ted Stonewall, that'll be about all!" I said, exasperated. "I am perfectly capable of running my own life without any help from you! I'll see whom I choose and go where I wish, and I do not wish to ride in that tin pan of yours. After this I'll never ride in it! I'm through!"

"But I'm not through with you!" said Ted with that clumsy, ridiculous seriousness of his. "I'm not through with you. But I'll stay away now, until you send for me. You are a bluff! And when you're through pulling chestnuts out of the fire and finding they are too hot to eat—why, ring me up!"

"Ted Stonewall, you insulting thing!" I cried.

But the sound of my voice was drowned in the roar of the flivver as Ted jumped in and started down the driveway. Thoroughly riled, but somehow not quite as gay as I ought to have been over Ted's very bourgeois departure, I went up to my room and sat down in front of my dressing table, still awfully wrathy as I prettied up and selected a hat. But I did not concern myself with that ridiculous Ted very long. Not much!

Instead I concerned myself with making my get-away unobtrusively before mother came home. Because though mother is awfully good form and fairly intelligent in some minor things such as cultural subjects, she and I are out of sympathy on many vital matters, and she has the most unreasonable way of drawing the line in places where a line has no more reason than if it were in a cubist drawing. For instance, she thinks it's all right for G. G. Third to call on me for hours all alone in our own drawing-room, or even out on the porch at night; but she wouldn't dream of letting me motor with Gran Messinger. And motor

with him was just exactly what I was off to do, and I had to hurry in order to get out of the house before she could refuse me permission to go.

When I was dressed I must confess my appearance gave me a good deal of satisfaction. I'd had a permanent wave two days before and it made my bobbed hair look simply delicious. And I had just that world-weary look which I think is so fascinating in a woman. I was too intrigued for words, because this was the first time I had ever been out alone with Granny Messinger, and I didn't want him to take me for a child.

He was waiting in the little lane outside the gate with his Colby-Droit roadster, and looking simply top-hole. Oh, I do think older men are so attractive! There is something finished-looking about them that is perfectly fascinating, provided they don't look too finished, if you know what I mean. Gran had this look, combined with a charming figure, gloriously well groomed, soft little mustache, patent-leather hair, and that poise which positively none of the kids can show. I guess that it only comes with experience, secret experience.

"Cheero, old dear!" said I as he reached out a hand and drew me aboard. "I had a time getting out!"

Of course that wasn't quite true, but I had to be interesting right off the bat with a man like Gran.

"The deuce you say!" said he. "I came directly from town. Look here—d'you mind if we keep along the back roads? No use rushing into the crowd on the beach and letting them start any Maltese remarks, eh?"

"Right!" said I. "One can't do the most innocent sort of thing without making talk, can one?" And I looked at him out of the corner of my eye.

"Innocent?" said Gran. "Innocent? Pet, your innocence appalls me!"

And he laughed in the wickedest way. It simply gave me shivers of delight. And then we started cruising off through the heavenly piny back roads, that are so lovely on our part of Long Island, and I settled down to enjoy myself thoroughly.

You see, Ted was right when he said that Gran Messinger had a fearfully bad reputation. But that didn't prevent his being chairman of the house committee at the club, and of course received everywhere, and all that. Naturally all the debs were mad about him, and I knew, for instance, that Sylvia Glenning and Tot Romney, my best friends, would simply die of envy if they could see me now! They were awfully keen about him, too, and we three had rehashed him pretty thoroughly more than once, and supposed a lot of things about him that couldn't be published.

And here I was, secretly motoring with him, all alone out in the woods! It was absolutely too dizzy for words! But how was I to keep him interested and amused? That was an awful question.

You see, it was the first time we had really talked. We'd danced a lot, for he had cut in on me no end for several weeks. But you know how that is. You just chatter when you toddle.

But out here in the air with nothing to occupy one but the view, it was appalling! I had to say something interesting and say it quickly. Gran was the type of man who throws the whole burden of entertaining on the woman. He sits back and dares you to amuse him. But help? Not heavily! So it was up to me.

I thought rapidly for a moment, and then decided to confess my sins. Of course I hadn't any sins, so I was obliged to invent some. But that was all the better; I wasn't hampered in my recital by mere facts. Also there was no back kick to imaginary slips, or so, poor fish that I was, I thought at the time.

For a starter I registered world-weariness and turned great troubled eyes to his in a combined come-on and an I-know-you-will-be-sympathetic look which was perfectly safe as long as he kept on driving. I wanted him to drive, for I wasn't looking for a petting party.

"Gran," I said, "I'm dreadfully off my feed to-day! Don't you think I'm showing my age terribly?"

"I do," said he. "You look all of eighteen, Pet. What ails you?"

"My conscience," said I. "I must cut out the sort of life I'm leading, Granny, or I'll be in hot water the first thing you know. I'm ruining my life, old thing!"

"Well, what else is there to do with one's life?" said Gran in his deliciously cynical way. "That is, if one wants any fun out of it. What's your favorite vice now, Pet?"

"Gambling," I said moodily, because that was the worst thing I could think of offhand. "Gran, I'm a born gambler and I always lose—yet **I can't stop** myself fearfully in debt!"

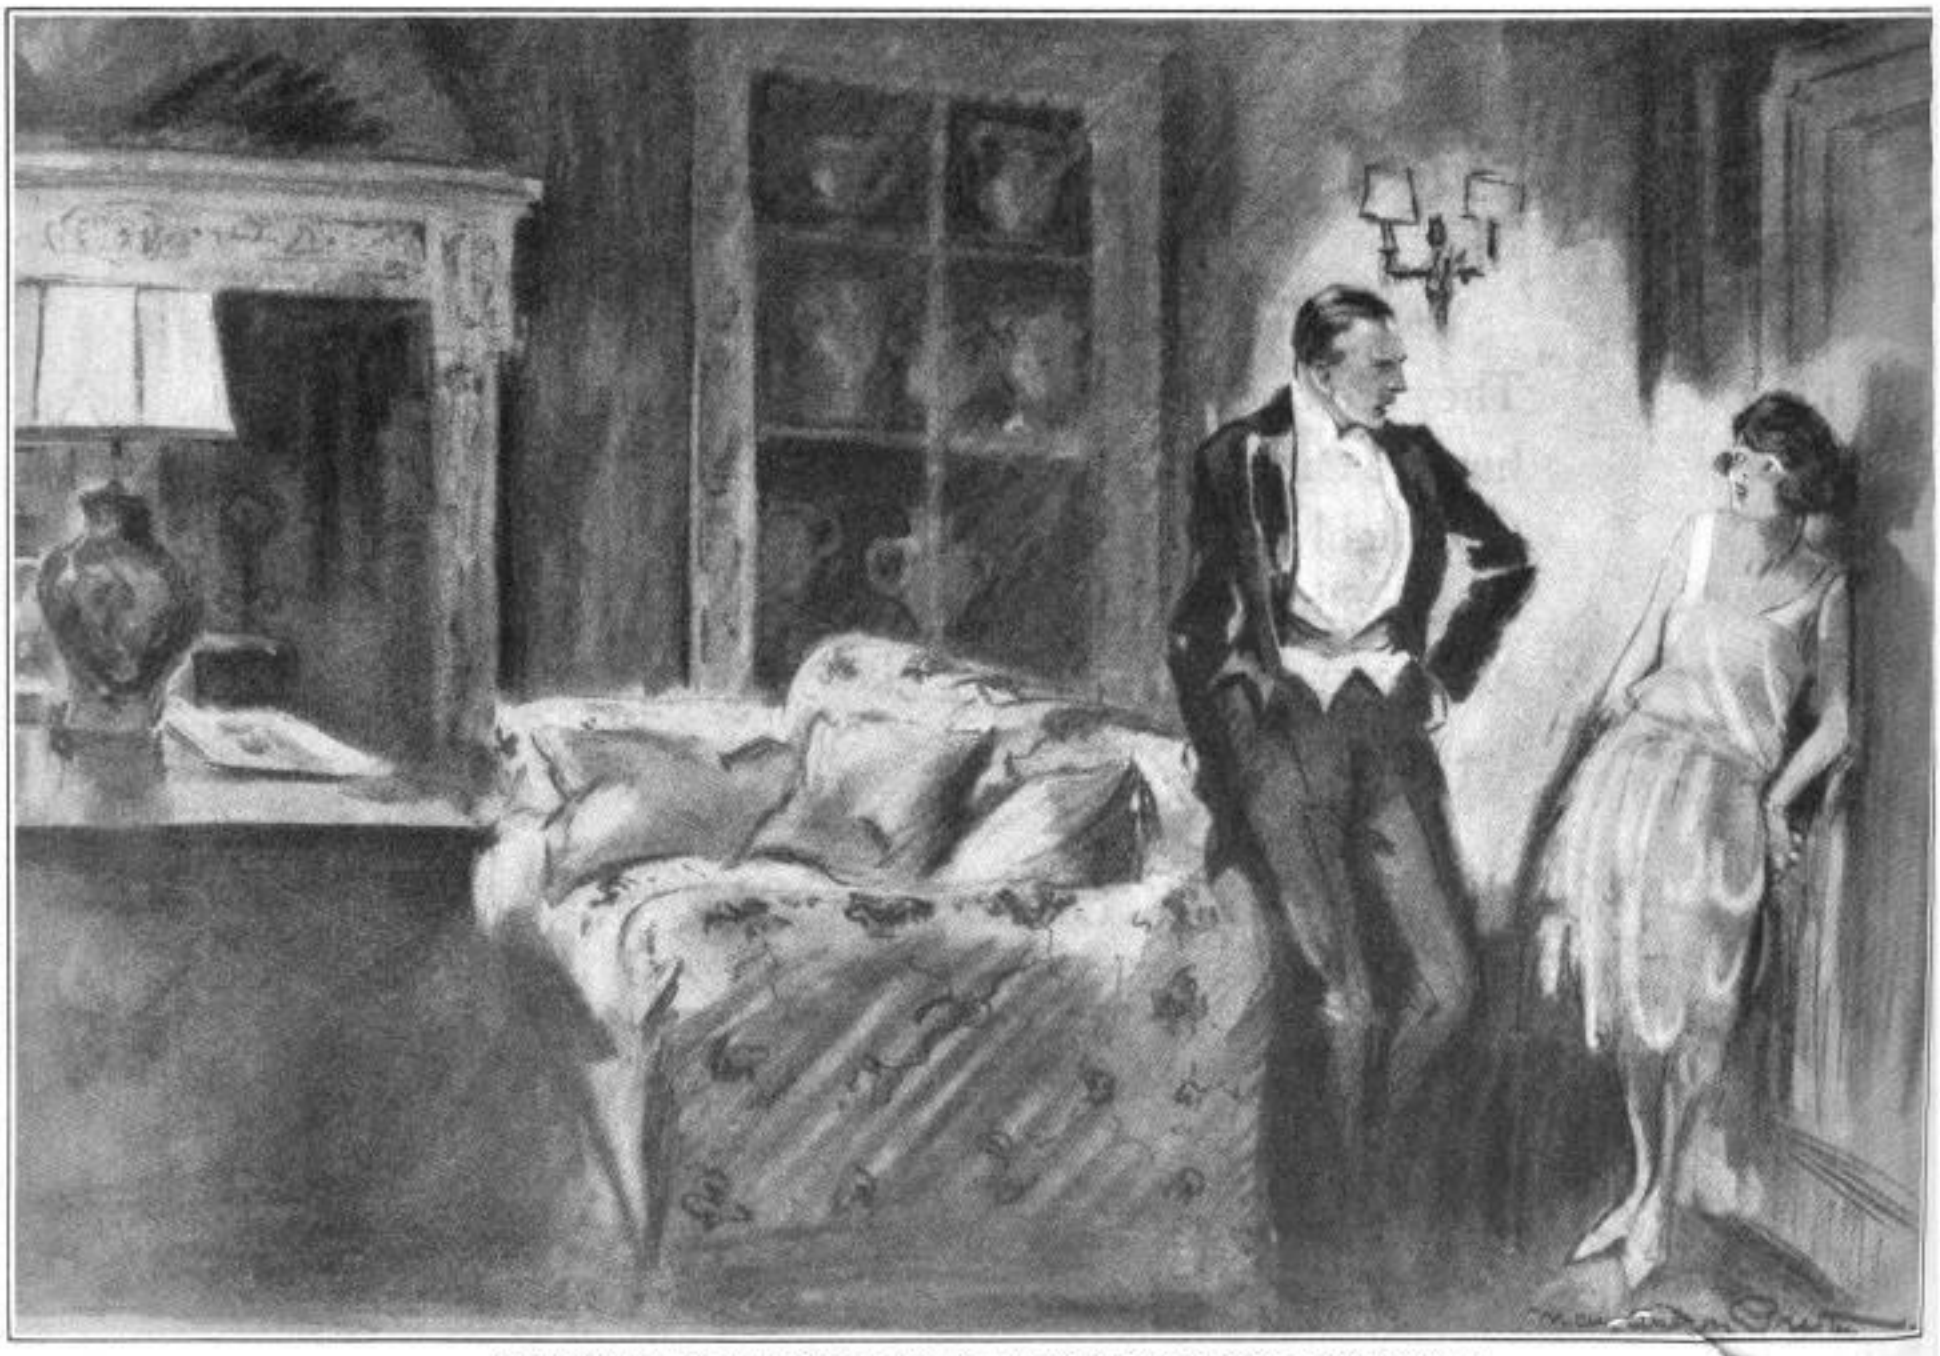
"The deuce you say!" said **Gran, his smile** var Up to now he had not been taking **me very** serious I could see that this hit him. **"By Jove,** that's awful!"

"Yes, isn't it?" said I, sighing **contentedly** at my But Gran of course took it for deep **melancholy.** " dare to tell my family—I simply **don't dare!"**

"I say, look here—how much?" **said he.** "Wo let me —— Eh?"

"Oh, no!" said I hastily. "**I couldn't dream** of thing. It's two thousand dollars—**about."**

"Phew!" said Gran with a long **whistle.** "I'll s are going strong for a baby!"



"I'm not a baby!" I said. "**I wish I were!** Gamb a vice with me, Gran, that's all! **Sometimes I** *feel a* years old!"

"You're a wise little duck," said **Gran seriously.** " here, though, you are a good sport. **A** *girl should* e herself—get a lot out of life. What **I mean**—experi and all that. I like you because you're **such a** *crazy* But two thousand dollars in the hole! **I say,** better l clean it up. Let me do it, eh what?"

Wasn't that too exciting for words? **Being** *offered* m to pay my gambling debts by a married **man!** I was s thrilled to tears! I sat there congratulating *myself* laying a mental bet that neither Sylvia nor Tot equal that for an experience! I could see them writhe envy when I told about it—if I decided to *tell. M* while the plot was thickening. Gran had taken one off the wheel and thrown his arm about the seat b my shoulders. My heart began to beat violently wit excitement of the game, but I wasn't a bit afraid. I I could handle him. And just think—what a *wond* item to tuck away for my past!

"Oh, no! Nothing doing, Gran!" I said, but s and looking down so that he wouldn't be sure wheth really meant it or not. You know—old stuff. I ha got to the place where it was my cue to jump *off the* with the villain in full pursuit—and land safely below w out breaking a single bone in my head! But we warming up. Gran was driving slowly and the road

A wave of buying preference for the Hupmobile is evidently sweeping the country.

We began to feel it months ago, in a steady sales increase that persisted during the generally stagnant period.

Now our latest dealer reports show that this increase continues to swell in vigor and in volume.

Nothing can be responsible for it but the *known* good value of the Hupmobile, and the fact that people must now be convinced of value before they will buy.

UP STAGE AND DOWN

By Charles Collins

ILLUSTRATED BY JAMES M. PRESTON

THERE was no reason why Mab Moody should go on the stage, so she went. There was no reason why, once on it, she should have succeeded, but she did. In these matters, as well as in some other things, Mab was a surprising young person. There was, for example, no valid cause for her to detest Harvey Norris, who taught her the A B C of acting—and all of that deserves to be explained.

The name Mab, mark you, is not short for Mabel; if it were, these things might not have happened. It belongs to Maeve, the queen of the fairies, who, being of Irish origin, is an extremely influential myth, and she probably put in a word for the girl who was baptized for her. Mab Moody, at any rate, made her début into the theater without any of the struggles and pangs which are believed to attend that process. She merely declared her intention, the enchanted land opened its stage door before her and, like a lucky fairy child, she calmly walked in and took out citizenship papers. Her first make-up box, borrowed from Harvey Norris, the stage manager, whom she afterward learned to despise, had a rabbit's foot in it, and it was an efficient talisman.

The gift of beauty had no share in the magic which manipulated these events, for Mab, in the days of her novitiate, was not a startling creature to look at. She was a little dumpling of eighteen years, round and soft as a fat kitten, a true roly-poly of a girl, five feet high with no waistline; and the way she did her hair was apparently patterned after a daguerreotype of her grandmother. Although too young to have a discernible profile she certainly had eyes, large, brown and gentle, with tremendous lashes which she knew how to flutter effectively; and her smile had a slant to it that was both droll and lovable. Her voice was merely a sweet, timorous whisper. Such was Mab, an odd child, with fat arms and legs and delicate hands and feet, when she first felt the call to a career among the beauties and the beasts behind the footlights.

Mab's home was in Illinapolis, where her father manufactured plows on an impressive scale; and that city was enough of a capital to support the kind of resident theatrical company which is known as summer stock. For three seasons of a year Illinapolis had to content itself with the miscellany of the Broadway booking offices, transient troupes in split-week engagements; but from June to August it could call itself a producing center and a contributor to the uplift of the stage. Windsor Morton's Repertory Company would then settle down there, to warm over an old play or try out a new one every week, much to the excitement of the local chapter of the Drama League. And Mab, as became the heiress of one of the best families in Illinapolis, kept in close touch with this cultural movement.

When she discovered that Windsor Morton occasionally recruited native daughters into his company for temporary service in inconspicuous characters—chiefly for the sake of their advertising value and willingness to accept microscopic salaries—the great idea burst upon her. To be among Windsor Morton's immortals for a week or two, to get her picture in the papers before she was a débutante, would be a thrilling kind of lark. It was not ambition that stirred within her, but the sense of adventure.

She went into action immediately, and with an excellent instinct for strategy. Instead of mentioning the matter to her father and mother, and thus submitting to the vexations of a family conference, she took her scheme to a bachelor uncle who had invested in real estate. One of the things he happened to own was the theater where Windsor Morton pitched his tent of dreams every summer. This uncle had a habit of spoiling Mab, so in less than no time he had written a letter to Mr. Morton, who upon reading it moved with equal celerity. The next day after the letter was written Mab Moody was engaged by telephone and called for rehearsal. The important Mr. Morton himself did the telephoning, and his voice as it came over the wire was like frankincense and nard.

"Many Thanks for Your Wire Last Night . . . Yes, Wasn't Everything Wonderful? . . . And Weren't the Critics Perfectly Dear?"

The way of Mab's going on the stage was the way of a princess entering into her loyal kingdom. Nothing could have been done more easily. Even her father, strangely enough, did not object, for he was convinced that Windsor Morton and all his works, having been indorsed by the united women's clubs of Illinapolis, were thoroughly respectable. And he was as nearly right as any man ever is.

What parts Mab Moody acted with the Windsor Morton Repertory Company, to the astonishment and admiration of her relatives, neighbors and playmates, are a completely negligible matter. She was not revealed, as the curtain rose, in maid's costume, dusting off the furniture of the drawing-room—center door fancy set—and expounding the plot in conference with the butler and the cook; and neither did she appear in page's costume to announce to his lordship that the carriage waits without. Such things as these are no longer done in the drama, although the comic weeklies are still printing jokes about them. But these two classic examples will serve as symbols to indicate the nature of her apprenticeship. Although her photograph was duly printed in the Illinapolis Gazette, three columns wide, her parts could have been written on the back of a postage stamp.

She ranged from the almost total obscurity of a supernumerary to deserving humility in bits. In parts she thought she could play with brilliance and conviction—captivating young women of the world who drift across ballrooms with exquisite grace, radiant of wit and coquetry—she discovered that she was most at sea. Being a society girl in Illinapolis and in Lady Windermere's Fan were, it seemed, not so much alike as she had believed. But in sketches of outlandish types—peasants, hoydens, tomboys, slatterns and gamins—that were supposed to give comic relief to the scene, she was not so bad; and occasionally when her lines had true humor in them she experienced the comedienne's bliss of evoking laughter. But whether she succeeded in giving some idea of the playwright's intention or was merely an ama excrescence on the performance, Windsor M ton, a canny man, kept her in the casts w after week, for he needed the few extra dol she drew to the box office the reprieves of rental p ment he could wheedle, cause of Mab, out of easy-going uncle. And th as she rehearsed for n week's play in the morni and appeared in the curr bill evenings and matin Mab grew in experience a knowledge. She began to f very professional and actre like.

Her technical educati was chiefly in the hands Harvey Norris, the sta manager and character m of the company. Whi Windsor Morton posed grac fully, discussing moods, ps chological subtleties, light ar shade, and all that sort thing, and tried to imita Belasco in his devotion to t switchboard, it was Harve Norris, his subordinate, wh did most of the heavy deta work of rehearsing. He ha patience and good nature; h knew exactly what he wante and how to impart that knowl edge; and he inducted Mal into all the mysteries—fron the beading of eyelashes t how to pitch her voice so tha there was some chance of it being heard in the back row— in a quiet, dominating, kindly way that filled her with awe and a kind of shy, tremulous gratitude. This was a new emotion to her, for like most of the emancipated children of this epoch she had never learned respect for authority and experience at home. Having at last found an elder and superior being to worship, she surrendered to the mood with ecstasy.

Harvey Norris was, she proclaimed everywhere, the most wonderful of men. To her parents, her friends, her swains—whose number had increased greatly since she took to the stage—and to her associates in the company, she confided the great news: Mr. Norris was wonderful, wonderful, wonderful! He was the wizard of stage directors and the nonpareil of actors, according to Mab's almost incoherent raptures. He was wise, he was kind, he was clever, he was sweet, he was strong, he was gifted, he was—in short, he was wonderful. She never went so far as to declare that he was handsome, for it was obvious that he was not; but as if in defense of the blunt homeliness that made him a character actor instead of a leading man, she often expressed an aversion, almost amounting to abhorrence, to good looks in the opposite sex. She pensively detected in Harvey a faint resemblance to her favorite hero of history, Abraham Lincoln.

In other words, Mab's first times on any stage were accompanied by a typical happening—a terrific crush on a male colleague.

This is often unfortunate, but Mab, as has been hinted, was born lucky, so the Fates awarded her Harvey Norris and permitted her to think she worshiped the master rather than adored the man.

Mab refused to admit to herself that she was in love. She had experienced the tender passion in occasional spasms, from the age of ten onward, and it had never been like this.

Harvey Norris was a self-contained kind of fellow with no Thespian flash and glitter about him. He could not be called young, although he was youngish; but the difference in age between him and Mab was not so vast as his completely paternal attitude toward her suggested. He accepted her frank adoration with the equanimity of a high-school principal hardened to the marshmallow tenderness of green girls. He pretended not to be flattered by the incense which she burned in his honor, and seemed blind to her soft stricken glances. Altogether he behaved as if he were the safest kind of actor upon whom Mab might waste her first devotion. She was apparently in no more danger

Taming the Coal Eater

Read this if you have a hungry furnace

IF your furnace develops an insatiable appetite for coal and still fails to keep your house warm, that's a sign that much of the fuel you feed it is wasted.

It will pay you to locate this waste and apply the remedy—simple cures which mean a warmer house and often a saving of one-quarter of the season's fuel bill.

Bare pipes waste fuel

As a starter take this fact, not generally known: Under average house-heating conditions a bare steam pipe 50 feet long and 3 inches in diameter loses heat equivalent to 4 tons of coal a season.

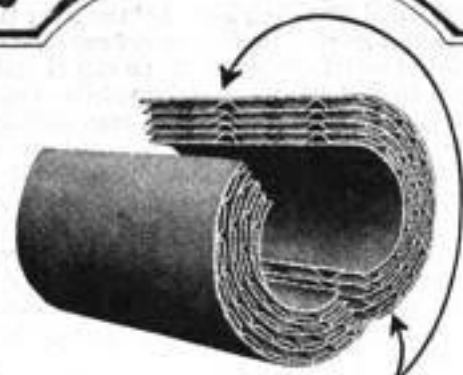
And that says: cover the pipes. Cover them wherever they are open to attack by cold air.

If your house is still "on paper" or in the early stages of building, cover the pipes which run between the walls and under flooring as well as those exposed in the cellar. If you are already living in the house, cover all accessible pipes. Cover the furnace body too.

But any covering will not do. To be efficient a covering must be so constructed that it prevents air from circulating through it and carrying off heat. If there is already some kind of covering on your pipes, here's a test—if your cellar is comfortably warm, the covering is not efficient. That means investigate.

Improved Asbestocel, the real heat insulation

Johns-Manville Improved Asbestocel keeps heat in because air cannot circulate through it. It is built in a series of closed cells, which act as baffles. See cut and description in panel at right.



This unique construction makes Asbestocel the best household insulation on the market. Yet it costs about the same as air cell coverings which do not combine its features of high efficiency, neat appearance and long life.

For economy's sake, insulate with Improved Asbestocel.

Other ways to save coal

Clean the flues and heating surfaces of soot several times a season. Clean out ashes and clinkers frequently. Soot on flues and ashes around the fire-bed waste coal because they keep heat away from the boiler. For complete combustion put just a little coal at a time on the fire.

Johns-Manville has prepared a booklet explaining these principles. Send for it if you want smaller fuel bills.

Insist on this construction

Note that the corrugations run both lengthwise and crosswise—instead of lengthwise alone, as in other coverings. Insist on closed cell construction as your insurance for maximum heat saving. Ask for

Johns-Manville Improved Asbestocel

To the Trade: Johns-Manville has just issued a booklet which tells how to sell and apply heat insulation. Send for a copy and get ready for inquiries.

(Continued from Page 32)

of drastic consequences than if she had been smitten with a secret infatuation for a choirmaster.

Nevertheless he liked her immensely, and more than that. If he had been completely indifferent to her existence, except as a raw amateur to be taught certain paces and gestures in order to humor the caprice of Windsor Morton, he would not have given so much attention to her at rehearsals. The zeal with which he worked over her was more than professional ethics demanded. Stock-company stage direction is careless of ragged edges, but Harvey was thorough when he came to Mab. He never permitted her to fumble and guess her way through a part, and often called her for ten minutes of special coaching before the rest of the company came yawning in to do their morning's chores.

II

SHE did not see much of him outside the theater. Stock means hard work and long hours, and its practitioners have no opportunities for the gay and adventurous recreations that are, in the feverish imaginations of laymen, the inevitable concomitant of life on the stage. This is particularly true in a city like Illinapolis, where the Windsor Mortons, in their one good hour of freedom after the show, had difficulty in finding a decent café open for the satisfaction of their midnight appetites. The night life of Illinapolis was scattered beyond the horizon among a fringe of sinister road houses; and although the jazz boys and jazzabels of Illinapolis might visit these rural slums in their automobiles, they were taboo to the Windsor Mortons, who had to behave according to the highest ideals of the older pillars of local society. Small city stock is a moral institution, and watches its step with vigilance.

For social relaxation there were the leading woman's teas, held on the stage every Friday afternoon after the back of the week's work had been broken. These were almost public functions, attended by matinée maids who had been dazed with the glamour of the great lady, under the chaperonage of their fond and fussy mammas, who also dearly loved a chance to have a cup of orange pekoe with an actress. The other members of the company, particularly the noble-browed leading man and the dapper juvenile, were expected to attend, to help in the entertainment of the customers; and Windsor Morton was always on hand to talk pontifically about modern tendencies in the drama. Mab never missed one of these chatter parties, and enjoyed them hugely, in her dual rôle as a member of both sets, Illinapolitans and Windsor Mortons; but she always came away with a lump of disappointment in her throat. For Harvey Norris was never there.

She wanted to know why, and the leading woman answered her, with a teasing smile, to the effect that Harvey was not a ladies' man and hated society. She at last grew bold enough to challenge him on the subject.

"I brought mamma to Miss Wayne's tea this afternoon," she remarked to him as she idled about backstage in costume, waiting for her only entrance cue. "She said she was dying to meet you, and she was so disappointed."

He smiled down on her quizzically.

"I'm sorry, Mab," he answered. "It would have been nice to meet your mother. But I never go to Miss Wayne's teas. I see enough of her acting on the stage."

Mab thought that his cynical view of Miss Wayne's social manner was a little cruel; but she was glad, anyway, to discover that there was no sentimental bond between them. She had begun to wonder if Harvey Norris were in love with anyone. Or maybe married! A dreadful thought, this last. He had never mentioned a distant wife, as married men have a habit of doing—when they are not trying to be gay deceivers—but she decided that she ought to verify her idea that he was a forlorn bachelor.

So she asked Gloria Wayne about it.

"Not that I know of," said Gloria, shrugging her admirable shoulders. "This is his first season with the company, and he hasn't taken me into his confidence except about what he thinks of me as an actress. But you can never tell about us, Mab, so be careful. Any one of us is likely to have a marriage license or a divorce suit tucked away in our shady past, somewhere out of sight."

Mab declared that she was sure that Gloria herself wasn't married.

"Why are you so sure?" Gloria wanted to know, as she started to comb out her blond wig, which was so much admired in Illinapolis.

"Because you don't wear a wedding ring. There are hundreds of men just crazy to marry you, of course, but you turn them all down because you are devoted to your art."

Gloria laughed and pulled open a drawer in her costume trunk.

"Here's my happy family," she remarked, showing Mab a picture of two obese infants and a grinning man with a large Adam's apple. "It happened ten years ago, and I haven't been able to lose him yet. He has a little job in New York, so we manage to live together occasionally."

Mab was flabbergasted.

"But you mustn't talk about it among the Philistines," Gloria warned Mab. "That would be bad for business. Professionally, at any rate, I'm still single."

"When I marry," Mab declared, "I shall retire from the stage."

Gloria shrieked with laughter at this remark, and refused to explain the joke. She repeated Mab's priceless utterance to everyone in the company, and Mab's attitude toward matrimony became a byword in backstage gossip for the next few days. The others developed a habit of asking her when she was going to retire, and of chuckling at their own wit, which Mab could not understand.

"Why do they think that is funny?" she asked Harvey Norris.

Harvey grinned and hesitated; then he said: "They mean that you're not on the stage yet, from their point of view."

Mab blushed and pouted angrily.

"Oh, I see. They think I'm as rotten as all that, do they?"

"Now don't begin worrying about what they think. As a matter of fact you're doing very well and they say lots of nice things about you, behind your back as well as to your face. But they have the idea that you are amusing yourself and will not go on with it. You're rank outsider to them, Mab."

She hated them all, Harvey included, for a second.

"Well, I'll show them!" she declared pugnaciously. "I'll become a real actress—a regular trouper—in spite them. Do you think I have a chance?"

He considered the question thoughtfully.

"A chance, yes. Anyone who isn't an idiot or monstrosity can learn to act a little and find something to do on the stage, with a certain amount of luck. But if you mean to become more than a minor member of a third-rate stock company, I don't know whether you have a chance or not."

"Then I've been pretty bad?" she quavered.

"Not at all. Your work has been satisfactory from the stock-company point of view. But you'll have to work for another year or so before anyone can tell what kind of a chance you've got. You will have to grow, Mab."

With which he patted her upon the shoulder in a fatherly paternal manner.

Mab resented his words but liked the caress. To be treated like a child had its compensations sometimes.

"What would you advise me to do?" she asked submissively.

"Why, what else would you do but marry the first eligible young business man and live happily ever after in Illinapolis?" he said. "That would simplify matters tremendously."

"I shall do nothing of the kind," she retorted. "I'm sick of this town. I hate being a débutante, which is all I shall have to do if I stay here next winter. And the young business men of the Illinapolis kind give me a pain. I'm going to grow up so fast it will make your head swim, Mr. Harvey Norris, and I'm going to become a real actress or take the veil."

Having delivered this ultimatum she withdrew in the most hoity-toity manner.

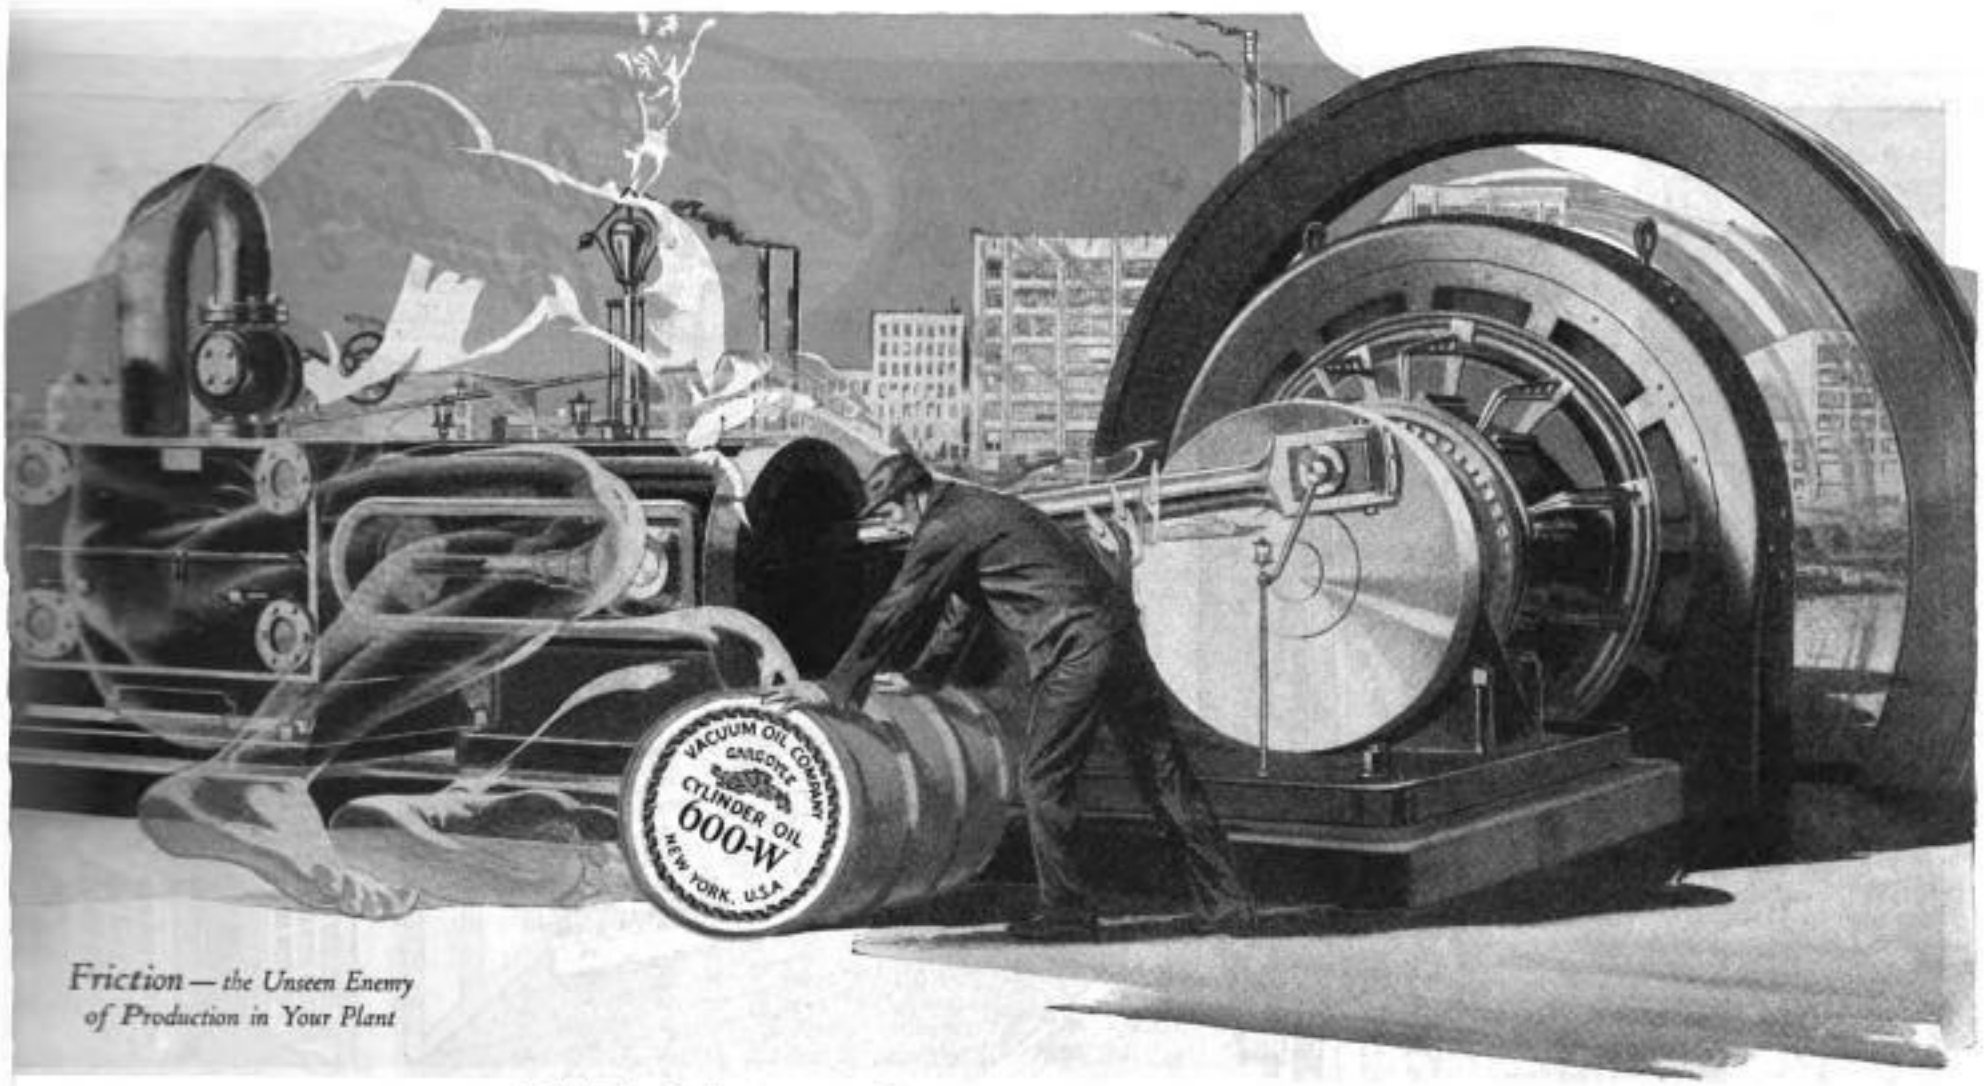
"Be sure not to get fat," he called after her.

She stuck out her tongue at him for a Parthian shot and went away determined, if the tragedy of fatness should overtake her, to become a ponderous low-comedy star in musical shows, making the world and Harvey Norris writhe with laughter at her buffoonery.

Mab had been learning something new about the theater almost every day; but she had not yet discovered her temperament. She had imagined that the word meant the glamour of talent, the free, active self-expression of the non-inhibited artist soul. She did not define this mysterious quality in that way, of course, but she had a vague idea along those lines. She thought that temperament was a happy gift of the gods. She yearned for the day when it would be said that Mab Moody had it.

Sudden, however, she discovered that temperament, in the technical meaning was a satanic affliction, pain to its possessor at times, and a thing of terror to everyone else.

The Windsor Mortons had observed, during Mab's association with them, remarkably like a happy family. There had been no quarrels, no jealousies, no disturbing professional friction. At least nothing of the kind had come to the notice of Mab's eyes and ears. She was convinced that they all loved one another, in a heavenly sort of way, and that life in the theater would be one long Elysium of such happy companionships. Her innocence in this direction was rare and quaint.



The next Monday after Mab had discussed her

Friction — the Unseen Enemy of Production in Your Plant

600-W

Sharp facts about your Steam Cylinder Lubrication

ONE of the most important factors in the economical operation of a plant is Correct Lubrication.

At no point does the effect of correct lubrication show up more strongly than in the operation of steam cylinders.

So important is the correct lubrication of steam cylinders that the majority of builders of steam engines throughout the world recommend or approve the use of Gargoyle Cylinder Oil 600-W.

Gargoyle Cylinder Oil 600-W is more widely used throughout the world than any other brand of steam cylinder oil.

It has been manufactured with scientific exactness by the Vacuum Oil Company for over 40 years. It will correctly meet a wide range of operating conditions in steam cylinders.

Plant owners whose business policy it is to save maintenance-cost dollars rather than "price-per-gallon" pennies will tell you that Gargoyle Cylinder Oil 600-W is by far the most economical steam cylinder lubricant obtainable.

We have published two valuable pamphlets. One is called "Stationary Steam Engines;" the other is "Gargoyle Cylinder Oil 600-W." We shall be glad to send them to you without charge.

GARGOYLE

Lubricating Oils

A grade for each type of service

Stocks of Gargoyle Lubricating Oils scientifically correct for every engine and machine need are carried in principal cities throughout the country.

Domestic Branches:

New York (Main Office)	Boston	Chicago	Philadelphia	Pittsburgh
Buffalo	Rochester	Albany	Detroit	Indianapolis

Roofs of Striking Beauty at Little Cost—

An artistic colorful roof! Nothing adds so much to the charm of a home, be it cottage or mansion.

Yet a roof of striking beauty—of Barrett Everlastic Shingles like the one pictured—is very inexpensive. It is moderate in first cost and practically free from maintenance expense.

Barrett Everlastic Shingles are reinforced on the weather-side with an everlasting mineral surface in fadeless natural colors—either a cool green or a warm cheerful red. And on the under side a "seal-back" of special waterproofing compound stubbornly resists the deteriorating action of air and moisture.

The four styles of Barrett Everlastic Roofings briefly described at the right—two kinds of roll roofing and two forms of shingles—include roofing suitable for any type of steep-roofed building. They are all moderate in price, easy to lay, and soundly economical.

Be sure you get a Barrett Everlastic brand.

Your Choice of Four Styles

Everlastic Multi-Shingles. The newest thing in roofing—*four shingles in one.* Tough, elastic, durable. Made of high grade waterproofing materials with a red or green mineral surface. When laid they look exactly like individual shingles and make a roof worthy of the finest buildings. Weather and fire resisting. Need no painting.

Everlastic Single Shingles. Same material and art-finish (red or green) as the Multi-Shingles, but made in individual shingles; size, 8 x 12¾ inches. A finished roof of Everlastic Single Shingles is far more beautiful than an ordinary shingle roof and, in addition, costs less per year of service.

Everlastic Mineral-Surfaced Roofing. The most beautiful and enduring roll roofing made. Surfaced with mineral in art-shades of red or green. Very durable, requires no painting. Nails and cement in each roll.

Everlastic "Rubber" Roofing. This is one of our most popular roofings. Thousands upon thousands of buildings all over the country are protected from wind and weather by Everlastic "Rubber" Roofing. It is tough, pliable, elastic, durable and very low in price. It is easy to lay; no skilled labor required. Nails and cement included in each roll.

Illustrated booklets of the four styles free on request

(Continued from Page 34)

...ential career with Harvey Norris, Contrary Mary, a play that had great expectations but no history, went into rehearsal. ...had been consigned to Windsor Morton ...a cautious Broadway manager for a ...-company test of its acting value. ...kind of laboratory work contained ...abilities that were lacking in the routine ...ock revivals. It was creative work that ...the players on their mettle; it gave ...m a chance to get their teeth into fresh ...terial; it spurred ambitions that were ...oming jaded with provincial routine. ...rone might easily make a hit in the ...napolis première of Contrary Mary that ...uld take her or him to Broadway at one ...ft bound, for the great impresario who ...s to give the play its metropolitan pro...tion would be on hand to watch the ...ult of the experiment, accompanied by ...tinue of his advisers and flatterers; and ...s author, a young dramatist of promise, ...uld likewise attend. It was to be an ...sion when opportunity might easily ...ck at almost any dressing-room door.

Nearly every new American play, it ...ms, is written as a frank imitation of ...e other play that has made the pro...erial barrel of money. Its proud creator, ...endeavoring to enlist the interest of a ...eptical manager in his latest work, will ...peak of it as a second something or other; ...d the manager, remembering what a gold ...ine the first something or other was, im**mediately pricks up his ears, lights a fresh** Pomona-Pomona, and is ready to listen to a reading.

Following this tradition, Contrary Mary was to be a second Peg o' My Heart. It belonged to that breed of sentimental comedies in which the hoyden heroine, an elfin daughter of the plain people, suffers much from the taunts and sneers of gilded snobs until she is revealed as an heiress in disguise who heaps coals of fire upon the heads of the aristocrats, saves father from bankruptcy, mother from social suicide, daughter from a life of shame, and brother—by marrying him—from a career of cynical bachelorhood. The play differed from Peg o' My Heart in these particulars: The heroine was Scotch, not Irish; and the pet animal she brought with her when she visited her haughty relatives was not a dog but a Shetland pony. Also, to complicate the plot and avoid accusations of plagiarism she had a mania for masquerading in boys' clothes.

Windsor Morton began rehearsal in true ceremonial fashion by reading the play to the assembled company. Mab was thrilled with this formality; it had never been done for any of the stale Broadway successes which had preceded Contrary Mary. Then came the assignment of parts.

Harvey Norris, at a nod from Windsor Morton, who was languid from the dramatic fervor he had put into the reading, arose from the prompt table and began to deal out certain half portions of bound, typewritten manuscripts on which the dialogue and cues for the various parts were assembled.

In making this distribution he passed Mab by with a half-apologetic but still official explanation: "There is no part in this cast for you, Miss Moody. But Mr. Morton hopes you will be good enough to understudy Miss Olivier. Attend rehearsals and please give special attention to her part. We will have a copy of it made for you later on."

Mab meekly answered "Yes, sir," and sat there as still as an image. This announcement came to her as a sort of shock. She wouldn't be in the show; that was rather desolating, she thought. Still, while Mr. Morton was reading the manuscript she hadn't been able to pick out a part for herself. There were no ingénue bits, and the servants were a butler and a chauffeur. This time, it seemed, she was obviously out of luck. But Miss Olivier was the leading ingénue, and if she should happen to die within the next two weeks it would mean Mab Moody to the rescue. There was a chance, certainly, of winning glory—even though Miss Olivier was in the best of health. Thus Mab suddenly became familiar with all the mixed emotions and tragic yearnings of that creature of suppressed desires, the understudy.

She sat tight and looked on. She observed that every member of the company immediately began counting the number of sides, or pages, in his or her part. The result of this audit was either a smile of contentment or an expression of dissatisfaction. In the latter case, Mab thought, the look resembled that of a child who has bitten into an unripe persimmon—a kind of puckery symbol of contempt and disgust.

Suddenly Gloria Wayne, who had seemed to be satisfied with her total of sides, straightened up in her chair and observed in a frost-bitten voice: "There seems to be a slight mistake here, Mr. Morton."

The beatific stage director pretended not to hear her, and Harvey Norris stepped into the breach suavely with "Typist's error, Miss Wayne?"

"Not at all. You have given me Miss Olivier's part. Perhaps she has mine."

With which Gloria made a swift and forcible exchange, plucking Miss Olivier's part out of her hands and tossing the other, like a despised thing, into her lap.

Windsor Morton serenely sidled off into the wings and disappeared. His method of diplomacy was extremely Oriental.

"There has been no mistake, Miss Wayne," said Harvey crisply. "Kindly return Miss Olivier's part to her and take back the one I gave you."

If Miss Wayne had been one of the famous volcanoes of history, Krakatua or Mount Pelée, she could not have gone into a more complete eruption. Mab, who had led a sheltered life in a pacific family, had never heard or seen anything like it before.

The gracious Gloria, heretofore all smiles, coos and caresses, vehemently called upon her God and inquired where in the realm of Lucifer they got that stuff. Was she the leading woman of this verminous troupe of Camembert barnstormers or wasn't she? She certainly was, she would tell the world, and she would play the leading woman's parts in spite of hell, high water, and any nasty conspiracy that had been framed up against her. She talked to Harvey as a teamster will talk to a motorist on a hot summer day after an averted collision.

Harvey let her run on to an effective climax and then tried to pour oil on the troubled waters.

"I thought Mr. Morton had explained this matter to you privately," he said. "Apparently he forgot to. He came to this decision after long-distance telephone conferences with the author and the manager who will make the New York production."

Miss Wayne suddenly passed from verbal violence into the throes of heartbreak. Her tears began to flow freely.

"It's insulting," she moaned. "I shall never forgive Mr. Morton. That snip of a girl gets the title part and I am expected to play her elder sister. It's brutal. It's outrageous. It's incredible."

"I am really very sorry, Miss Wayne," Harvey continued, "and I assure you there was no thought of hurting your feelings in this arrangement. We were thinking only how to get the best results out of the play with our company. The title rôle calls for a slender young girl who can wear boys' clothes deceptively. You would be very attractive in tight knickers, Miss Wayne—but by no means boyish. The part also requires a Scotch dialect, and Miss Olivier happens to have a special knack at it."

"I played the lead in the Number Three Sandy McNab company," piped up that young lady in corroboration.

"And the part of the sister," Harvey ran on encouragingly, "will undoubtedly make the hit of the show. So you see ——"

"I only see," thundered Miss Wayne, "that my contract calls for my services as leading woman with this company! I insist upon my legal rights!"

"Your contract is for ten weeks," Harvey reminded her. "The season is to be extended through an eleventh week, as you know, for this special production."

At this blow Gloria promptly went into hysterics. She threw down on the floor the part she had refused to return, and stamped on it; accused Miss Olivier of improper relations with Windsor Morton, the author of the play, the New York manager, or some other person of mysterious authority over the production; attempted to assault Harvey Norris with her fingernails; and then fainted triumphantly in a picturesque attitude.

Gloria was lugged away to be resuscitated, and then the rehearsal began, in a fumbling kind of way, under Harvey's direction, with everyone strained and unhappy. Mab was asked to read Gloria's lines pro tem., and she nervously stepped into the gap, wondering what was going to come of it all. She had an idea that Gloria had gone mad and would suddenly reappear like a Fury, to attempt all kinds of harrowing things.

Fifteen minutes later the outraged leading woman emerged from her dressing room, red eyed and sullen, and hovered ominously on the outskirts of the rehearsal.

"We will go back to the beginning," Harvey announced calmly, with a gesture at Mab, which meant that she was to drop out and return the part to Miss Wayne.

So they began over again, and Gloria, rather hoarse from the recent abuse of her vocal cords, came in at her entrance cue as if nothing whatever had happened.

That ended the episode, in its surface manifestations. Of course, Gloria and Miss Olivier didn't speak again for years. Incidentally the former made an admirable impression in the rôle of the elder sister, as Harvey had foretold, and thereby won a contract to play it in the New York production.

After the rehearsal Mab, greatly excited by Gloria's uncanny behavior, hung around the theater to talk it over with Harvey Norris.

"What does it mean?" she burbled. "Gloria must be crazy! She starts that awful row, and then she comes back as meek as Moses and takes the part after all."

"That," explained Harvey, "is temperament. She felt that she had to do it to assert her dignity and maintain her prestige as a leading woman."

"But she couldn't play that title part," Mab declared. "She's too big—and too old. She ought to have known better."

"She did," Harvey admitted. "Otherwise she would never have come back. But just the same her position as leading woman compelled her to throw a tantrum because the title part wasn't offered her."

Mab expressed her opinion that Gloria had behaved like a spoiled child.

"You've said a mouthful," Harvey chuckled. "She is exactly that. And so are all the rest of us, more or less, as soon as we get a good juicy taste of success."

Mab considered this cynicism thoughtfully. She did not want to believe it; she hoped that Gloria was a special case; but still Harvey Norris had said it, and he, in her opinion, was infallible.

Then and there she made a great vow which was to have an important influence on her life.

"I am never going to be like that," she asserted, "when I make my big hit."

Harvey gave her an amused look of incredulity.

"No, I'm not," she continued. "I'm not going to get temperamental or vain or stuck-up ——"

"Upstage," he interrupted, tossing her the proper technical word.

"Or upstage or anything. Cross my heart, I hope to die, I'm not."

"That is a very pretty ambition," he said; "I wish you luck at it."

"And I want you to promise me," continued Mab, "that if you ever see me getting that way, any time in the future, you'll come to me and tell me about it. Sometimes, you know, we don't see ourselves as others see us."

"But what are you going to be when you become famous?" he asked teasingly. "Sweet and stately and noble and always kind to dumb animals?"

"I'm going to be—just Mab Moody."

He thought that nothing could be nicer, but he did not tell her so.

"Do you promise?" she demanded.

"I do," he answered in a manner worthy of the occasion. "And here's my hand on it, Mab."

They shook hands gravely.

"Thank you—Harvey."

This was the first time she had dared to call him by his first name; it was indeed an occasion. She romped away radiant with the idea that a bond of intimacy had been established between them. When she got home she made this cryptic note in her diary: "Compact with H. N."

After the week of Contrary Mary, in which Mab understudied the title rôle assiduously but hopelessly, the Windsor Morton Repertory Company closed its season in Illinapolis and disbanded. Most of its members hurried back to New York to spend their midsummer holidays hunting new engagements over the hot asphalt of Broadway. Harvey Norris was noncommittal about his plans, but he vaguely mentioned the necessity of going to Chicago on a legal matter. There was much miscellaneous promising to write, of course, and when Mab bashfully said to Harvey that she would like to ask his advice about her plans he gave her the Masks Club, New York, as a forwarding address.

Jim Henry's Column

Your Mind

It always fascinates me to figure out what will be going on in your mind at the instant that my column invites your attention.

There are several millions of you and I have to start with a thought which will appeal to everyone.

Of course, I must avoid politics or religion and the idea must be of a nature which will permit me to slip easily into a discussion of Mennen Shaving Cream and kindred products like Mennen Talcum for Men and our amazingly efficient Kora-Konia.

I generally fall back on the fact that every man hates to shave. The most casual allusion to the horrors of shaving strikes contact with a wealth of poignantly emotional thoughts and enables me to lead you down to my selling climax without any chance of escape.

I suppose, if I were more of an advertising man and less of a salesman, I would know how to write whang-bang statements of Mennen superiority which would send men into drug stores in droves demanding Mennen's.

But the only selling process I have been trained to is the direct, man-to-man kind, where you have to keep him interested to avoid being rudely rebuffed and in extreme cases removed to the sidewalk.

Now, of course, you are in suspense as to just what I am driving at. It is this:

Why put it off? You are more than half convinced right now that Mennen's is the finest shaving preparation ever invented. Your friends tell you so. Try it. Accept the verdict of your razor—and of your smooth, velvety skin.

And, by the way, if you are in the proud father class, I want you to know about the amazing virtue of our Kora-Konia for soothing Baby's irritated skin and protecting it with a velvety film of healing powder. Nothing like it for prickly heat and baby rashes.

I'll send a sample of Kora-Konia and my demonstrator tube of Mennen Shaving Cream for 10 cents.

"A Clean Tooth Never Decays"

Always Sold in a Yellow Box

Brush Your Upper Teeth Downward and Your Lower Teeth Upward

With this hurried flitting of her new friends, who seemed ever so much nearer and dearer to her than the old stand-bys of Illinapolis, Mab was left high and dry at home, bored, lonesome and slightly blue. Her first touch of the nostalgia of the theater was complicated with sentimental reminiscences of Harvey Norris.

III

SEPTEMBER found her in New York, a new little moth among the bright lights, with the customary collection of notices clipped from the Illinapolis Gazette in her hand bag. There had been the usual family protests against this adventure, but Mab had laughed and cajoled them away, and had been well financed for the pursuit of her destiny.

She had written to Harvey Norris several times in a vein which was quite the correct blend of cool formality and warm affection. He had not answered.

She had telephoned to the Masks Club when she reached New York, with no result except to get a curt answer that Mr. Norris was not in the city. She wrote once more and then gave it up.

Whenever she thought about him her feelings got hurt somehow, but she convinced herself that this was silly, and so she stopped thinking. That was easy enough. Mab found that New York was too exciting to allow anyone to think about anyone else who was out of town.

Of Mab in Manhattan, of Mab's adventures among the mad mercenary managers, there is little to be told. Many things happened, of course, which she thought were important, but as a matter of fact she was too happy—after she had forgotten about Harvey Norris—to have a history.

Her career on the stage—for she had one that contained a surprising amount of success, everything considered—may be accounted for briefly, thus: First, she was lucky, as has been intimated; second, she was a type, or rather the managers believed that she was, which amounted to the same thing.

How she became a type, however, is worth telling. She was sitting in the waiting room of a firm of producing managers, looking for something to turn up, much like a housemaid at an employment agency in the old régime when housemaids were plentiful. A door leading to the private office opened to uncage a worried playwright. He happened to glance at Mab, and started as if he had seen a ghost. He immediately darted back into the sanctum, and emerged with his collaborator in tow. They stared at Mab as if she were some rare work of art, and then bolted back into the inner shrine without a word. Presently out they came again with a stage director at their heels, and the process was repeated, with excited solemnity. Then the press representative was brought out; then the junior partner; finally the senior partner. They whispered together fiercely, but never said a word to Mab, who began to wonder what was the matter with her and to suspect that she had forgotten to put all her clothes on. Finally they retired into their lair to indulge in an almost interminable and apparently venomous debate. Half an hour later Mab was invited inside to face what looked like a grand jury sitting on a murder case. She emerged with a contract signed, sealed and delivered into her hands.

This is what had happened: A play was being cast which contained, among other Semitic characters, a homespun Jewish maiden, aged seventeen or thereabouts. She was to be dark, plump, demure and attractive in an amiably bourgeois manner. She had to look as if she might be the daughter of Ferdinand Da Silva, who would play the rôle of Mischa Mannheimer, the hero. The authors had already considered sixteen applicants for the part and rejected them all because they were either too Jewish or not Jewish enough, or were baby vamps, or had bobbed hair, or too much distinction, or too little class, or for twelve other good reasons and true.

The managers had begun to accuse the playwrights of being too fussy about their Jewish maidens; the authors had begun to assert that the managers would do well to return to their original occupation of cut-rate ticket brokers; and thus a crisis had developed. Then they had stumbled over Mab. She was dark, she was plump, she was demure; she was attractively bourgeoise; she was, in short, the very kind of girl the authors had in mind when they wrote the part, they declared. And so it came about that Mab went to work while hundreds of more deserving actresses continued to worry.

Mab played the part on Broadway and immediately found that it pays to be a type. She had offers that season to act fifteen other Jewish maidens in similar plays. Out of this embarrassment of opportunities she contrived to get three engagements, to raise her salary to an impressive figure, and to have a season of forty almost consecutive weeks, without leaving New York except for the tryouts.

Illinapolis was horrified when she wrote back home, "I am a specialist in fat little kikes," but Broadway admired her for her accomplishment.

But this was not the most important aspect in the metamorphosis of Mab. No, indeed, not by a long shot. She might have gone on playing a line of secondary Jewish maidens until she was fully prepared for the more serious specialty of Jewish grandmothers if something else had not happened. It was something mysterious and inexplicable. It was not quite miraculous, perhaps, but the laws of physiology have not yet given a satisfactory account of it.

In a word, Mab ceased to be roly-poly. A waistline manifested itself in her anatomy. Her fat arms and legs thinned out until they were in artistic harmony with her delicate wrists and ankles. Her plump cheeks smoothed themselves away until her face was like a cameo. Her figure changed from the dumpy to the dainty, and when she walked she no longed clumped but fluttered. Without dieting, banting, rolling on the floor or taking up interpretive dancing, without thinking about the matter at all, Mab dropped from one hundred and twenty-five to one hundred pounds in weight, and evolved from a grub into a butterfly. This piquant transformation sometimes happens to pudgy and awkward girls at the end of their adolescence, and it happened to Mab, the lucky. It is, perhaps, Nature's method of launching her specially favored ugly ducklings into the mating season. So it came about that Mab ceased to be a fat flapper and became a lovely little lady, who looked as if she might be of fairy ancestry.

Of course she had learned how to dress so that she was always turned out with a crisp and gay Manhattan smartness. Of course her hair had been bobbed becomingly and her eyebrows had been delicately plucked and her mouth had become a thin cruel Cupid's bow of carmine by the art of the lipstick. But these were merely superficial changes. It was the subtle sculpture of Nature that altered her from a lower to a higher type, and that took her, as an actress, out of the group of simple Jewish maidens into the class of enchanting American ingénues.

And the gayest, jazziest cafés and dancing places in New York knew Mab as one of Broadway's favorite girls of that season. The prevailing styles of women's dress, as well as Mab's popularity, contributed to the happy result—the night-life crowd began to see a great deal of Mab.

IV

HARVEY NORRIS came back to town after a season on tour, to get in touch again with the sources of things theatrical, to enjoy a thoroughgoing actor's holiday by seeing all the new shows, and to find a new stepping-stone toward his ambition to become a recognized, high-salaried stage director. In carrying out this program he knocked about the theatrical district at a loose end, in and out of clubs, managers' offices, theater lobbies, hotels, and all the other rendezvous of his kind; meeting old friends, exchanging the gossip of his craft, finding out where it was safe to get an occasional drink now that the lid had been harshly tightened on, and amusing himself mildly as a man of his profession and celibate way of life will do.

Occasionally he crossed Mab's trail at a distance. He heard her name mentioned, her popularity declared, her acting faintly praised; but he never quite caught up with her during his first few weeks. He remembered her vividly as that droll little darling back in Illinapolis who had written him a few letters after the Windsor Morton company had disbanded. He was sorry that he hadn't answered those letters; and he was glad to hear that she was getting on so well. He would run across her sooner or later, of course, and they would have a jolly talk over old times.

He was surprised, however, to hear that she was to have the leading ingénue's part in Frank Baird's new play—and a co part it was, too, according to Frank, wrote it. A part that might easily away with the show, Frank had said. did not sound at all like Mab Moody had known her, Harvey thought; an idea occurred to him that there mig another girl of the same name who come up in the past year. He decided he would have to go to the opening find out if this was really his Mab.

Among the telegrams Mab receive night Flippant Philippa opened with h leading ingénue in a brilliant cast wa that read "If you are the Mab Moo knew and rehearsed in Illinapolis I that all your ambitions come true."

She murmured "Oh, that man!" differently—and then tucked it in mirror, in the place of honor among messages of good omen. As she did so observed that it bore a New York line, and she thought, "So he's no long the provinces."

After the third act, in which Mab carried off an intense emotional scene stunning effect—thanks mostly to veterans who had rehearsed her and b up the climax for her to shine in—a hur scrawl of a note was brought to her dres room.

It read: "You're great. Everyo raving about you out in front. I ha knew you. How do you get that w Many congratulations, H. N."

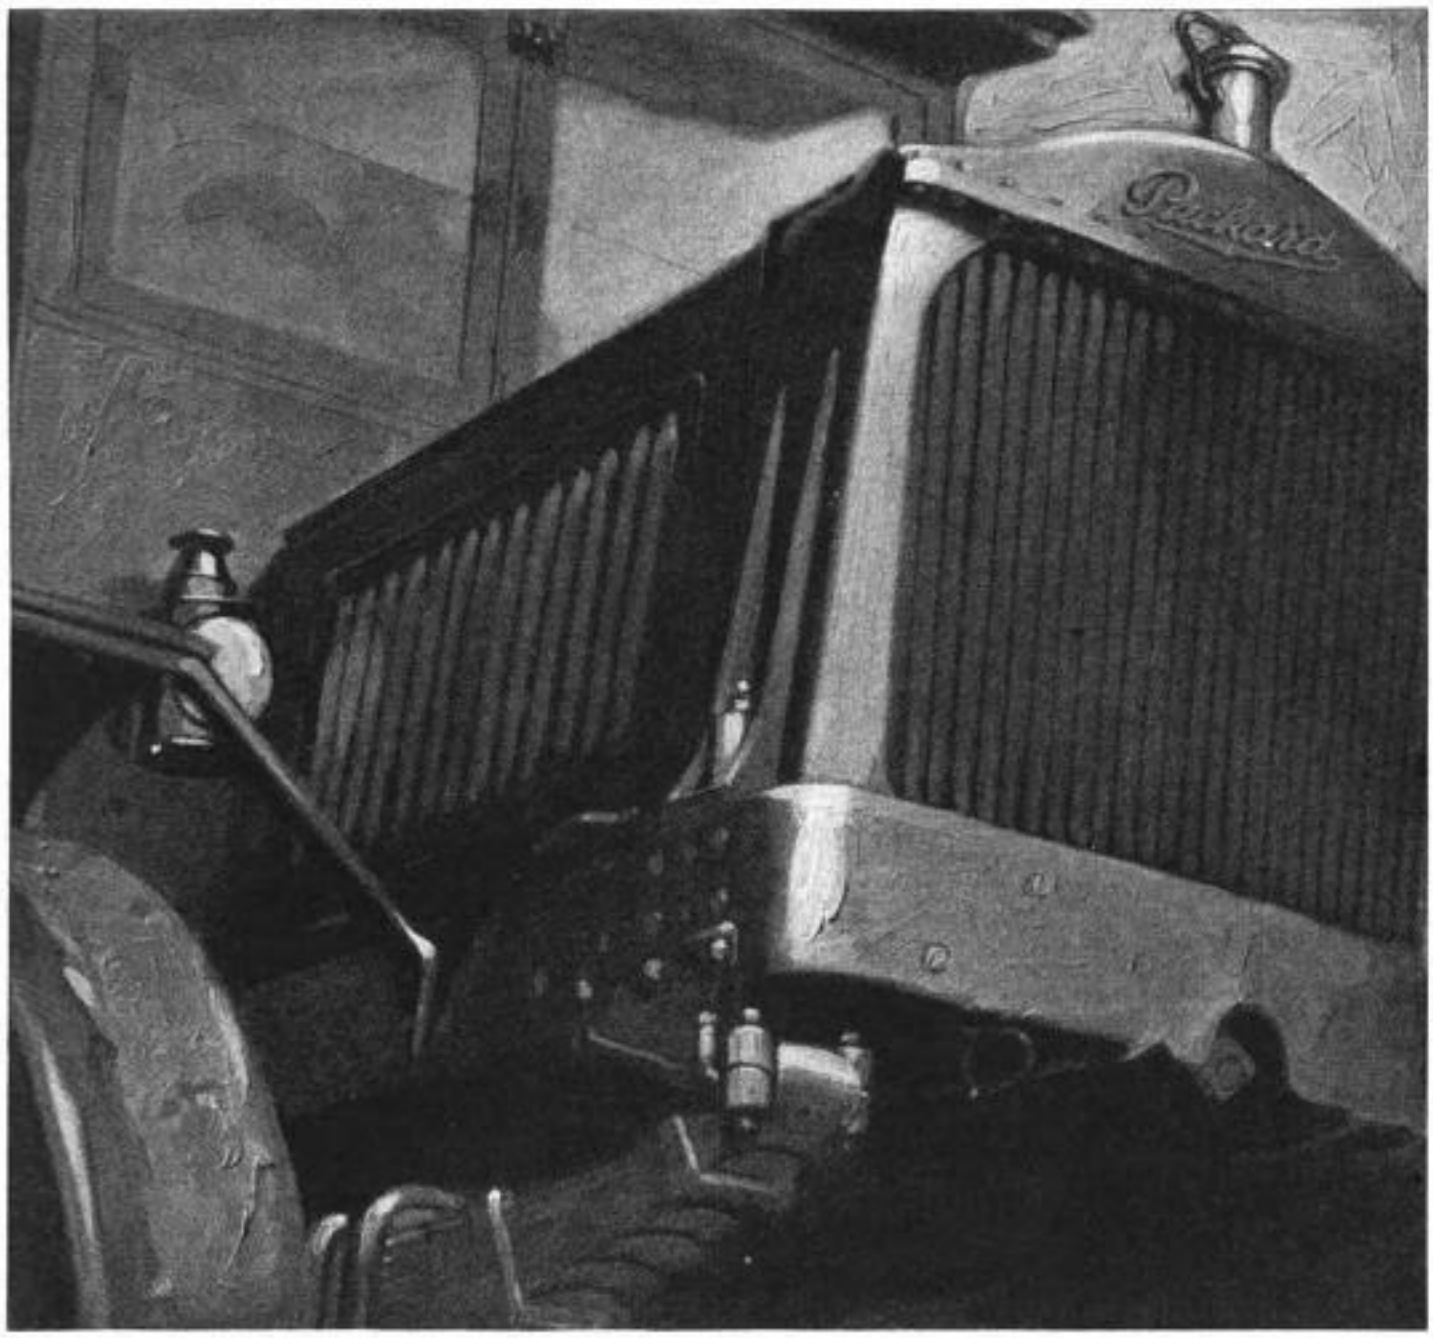
She said to her maid, as she added thi the mementos of a thrilling night: "Ar these men ridiculous, Louise?"

When Mab read the notices of Flipp Philippa in the newspapers the next mo ing her metamorphosis was complet The dramatic critics in raving about play had put in a few extra shrieks of light for her benefit. She immediately d the conclusion that in another season would become a star.

Harvey Norris was much more emotio over the success of his former protégée th he had any right to be. The sudden a thoroughly charming revelation of Mab a grown-up, infinitely pettable and adorab an etherealization of the chubby girl he h known, enraptured him. He left t theater gloating over her, in a professio kind of way—for after all he had so share in the making of this bit of love ness; and he woke up the next morni still inclined to gloat. How infernal pretty she had become! And how she h put it over! The sweet little rascal! Wi a happy grin he recalled a threat she h made—something to the effect that s would become a regular trouper and gro up so fast it would make his head swi Well, she had done it, right enough. Tho letters she had written to him must h somewhere in the bottom of his trunk, f he was sure he had saved them. When h saw her he would explain why he hadn answered.

Such were the reflections of Harve Norris as he went through his matutina splashings. Finally, with a start tha caused his safety razor to ruin its reputa tion, he remembered that he had mad Mab a certain solemn promise.

"And with this hit to top it off!" h ejaculated to his lathered visage. "Oh golly! Oh me, oh my, oh you!"



Before he went down to breakfast h telephoned to the manager of the theate where Flippant Philippa was playing, an acquaintance of his, to say a few pleasant words about the success of the opening, and also to ask casually where Mab Moody wa living.

Mab, in bed, surrounded by dismembered newspapers and a boudoir breakfast, answers her call:

"Yes, this is Miss Moody. . . . Who? . . . Oh, Mr. Norris. Surely not Willy Norris? . . . Oh, Harvey Norris. . . . Yes, of course. So glad to know you are in town. Many thanks for your wire and the note last night. . . . Yes, wasn't everything wonderful? . . . And weren't the critics perfectly dear? . . . Yes, it would be most nice to see you again, Mr. Norris. . . . No, I'm sorry but I'm booked for to-night. . . . No, you see, this is a crowded week, what with flashlights and rehearsals and cuts and parties and everything. . . . Sometime next week then, certainly. . . . Do try again. I'd be delighted. But don't ring me before twelve. . . . By-by."

The Packard Truck goes on the job with every certainty of doing better hauling at lower cost.

It is correctly designed for powerful, economical performance. It is built throughout of the strongest tested materials, destined to last for years in the hardest service. Moreover, it is rated to its work by a method that considers every condition of road and load. The hauling records of more than two hundred lines of business testify today to the economy and earning power of the Packard Truck.

Begins

A Week of Unusual Interest For YOU

It is Educational Pictures Week for thousands of motion picture theatres on this continent.

Progressive exhibitors all over the United States and Canada will run from April 16 to 23 many of Educational's short subjects to give you unusually diversified and well-balanced programs.

Many of the greatest showmen will present short-subject programs made up exclusively of the quality short subjects for which Educational is famous. Thoughtful exhibitors will select from this list:

CHRISTIE COMEDIES
"TORCHY" COMEDIES
MERMAID COMEDIES
CAMPBELL COMEDIES
"SCENICS BEAUTIFUL"
and
WILDERNESS TALES
By Robert C. Bruce
SKETCHOGRAFS-CARTOONS
By Julian Ollendorff
KINOGRAMS-NEWS WEEKLY
and specials like
THE BATTLE OF JUTLAND

All the above motion pictures are advertised in theatre entrances by posters and lobby cards displaying our trade-mark of guaranteed entertainment quality.

(Continued from Page 38)

"Illinapolis!" growled Harvey satirically, as he hung up the receiver. "Illinapolis—with a new Ritz accent!"

V

THEY were nearing the end of a dinner in a café which was so quiet that Mab had never been there before—a proper place for such a reunion. As a reknitting of Illinapolitan ties it had been, thus far, a moderately successful affair. Mab was wondering when this man would apologize for not having answered her letters.

"Do you remember ——" Harvey began hesitantly, and she was sure that the time had arrived.

Well, she would pretend that she didn't remember whether he had answered or not, and that she had forgotten what she wrote or why she wrote it.

"Do you remember the agreement we made, out there in your home town, the day that Gloria Wayne threw her famous tantrum?"

No, Mab couldn't say that she remembered exactly. But didn't Gloria behave like a perfect goose about not getting that part?

"It was about temperament," Harvey reminded her. "You made me promise that if you ever got temperamental or spoiled or upstage I was to come to you and tell you about it."

"How funny!" said Mab evasively.

"Yes, I thought it was funny then," Harvey confessed. "But now, you see, it's different. It's serious. You've made the hit you swore you would make—a hit you can be proud of. I am a little boastful about it myself, and am going about trying to claim the honor of having discovered you."

Mab bowed mockingly in recognition of the compliment.

"Well?" she challenged.

"This is a gossipy town," Harvey droned on soberly. "Or our part of it is, at any rate. So, although I've been back only a few weeks, I've heard a lot about you."

"Scandal?" chirped Mab impudently.

"Of course not. Just gossip. From managers who have offered you parts and been turned down without a thank you. From acquaintances who say you have snubbed them. From the friend of a friend of a modiste who says you drove her into nervous prostration over the gowns you wear in Flippant Philippa. From stage managers who tell how your maids are always walking out on you because you have hurt their feelings. From press agents who describe with jeers how you wanted more publicity than the star."

If a fairy can look as hard as nails Mab was doing it now.

"Harvey Norris, how dare you invite me out to dinner and then repeat all this wretched backbiting stuff!" she flashed at him.

"Because of the promise you asked me to make," he answered uneasily. "It's happened. So I had to tell you about it. You've got some of the symptoms. You are an incipient case of a girl whose head is getting turned by a run of luck on Broadway."

"I am nothing of the kind!"

"It's natural, of course," he conceded. "It's inevitable. To be spoiled a little is the right of every pretty girl, particularly in this business, which is a constant inflammation of the ego. But don't let it go too far, Mab. Remember your sense of humor. Remember your determination to remain just Mab Moody. And for heaven's sake don't forget Gloria Wayne, or else one of these days you'll make a spectacle of yourself the way she did. Now I've told you and the worst is over. Let's have some fresh coffee and forget it."

But Mab was burning with indignation.

"Let me tell you, Mr. Norris," she said stiffly, "I'm not spoiled or upstage. My head isn't turned. You haven't said a thing to prove that it is. You've been out there in the provinces for years and know nothing at all about my career on Broadway. And anyway, it's none of your business whether I am spoiled or not. And furthermore, I deny that I ever asked you to make such a promise, and I think you have been very rude. I've had a perfectly stupid dinner, thank you. Will you kindly call me a taxi?"

She had spoken with such bitter conviction that Harvey crumpled up abjectly. There was nothing left for him to say. The conversation, the dinner and the friendship had closed abruptly.

There was no aftermath during the taxi ride to Mab's theater, because she made it perfectly clear that she did not desire him as an escort and rode away alone. He strolled toward the Masks Club, inwardly cursing women in general and himself in particular.

He also wished that the bars were as alcoholic as in the good old days.

Well, that ended the brief history of Mab and Harvey, no doubt. The wires of friendship were crossed and auld acquaintance had blown a fuse. This disastrous interview left them in hostile attitudes which would become permanent—she resentful, he contemptuous; she convinced that she had been insulted, he determined never again to take a woman at her word. Harvey, in Mab's opinion, was a tactless brute, assuming advisory privileges he had not earned, crudely blabbing the sneering gossip of the envious. Mab, Harvey decided, was a little monster of bad temper, conceit and ingratitude. In these moods they parted, each determined to live up to the theatrical hymn of hate, which demands a scratch for a scratch and a knock for a knock.

As Harvey headed toward his club he dwelt upon Mab's outrageous conduct with a growing sense of bitter humor. It was really priceless, when you came to think about it, he told himself, a gem of satirical comedy in vivid contrasts—Mab, the novice, swearing that she would never get upstage, and Mab, a spoiled darling of Broadway, angrily denying her oath. This would be a good one to spring on the boys at The Masks—a new and memorable variant of a formula classic in theatrical anecdote. In his mind Harvey began to phrase it for its most ironical effect and its biggest laugh.

He turned down Broadway, into the current of early playgoers, and immediately ran into an appropriate audience for a test of his story. The best possible audience, in fact, for it was none other than Gloria Wayne, the inspiration of Mab's broken vow. They met, as old troupers do, with exclamations of delight, too effusive to be altogether genuine; gay, casual phrases of professional patter; questions as to past achievements and present prospects, answered or evaded as need be. It was a swift, comradely picking up of the threads of their lives before they drifted apart again, for another season or forever.

Gloria was headed toward a rendezvous with her husband to see Flippant Philippa, and thus, as they walked together a block or two, Mab came into the conversation quite naturally. Mab and her unpromising start; Mab and her present hit—Gloria developed the subject with animation. Now was the time to serve the cream of the jest, Harvey's footnote to the episode. He therefore gave Gloria the story—with her share in it omitted—in his best Masks Club manner, crisply, quizzically, ironically.

For a first telling he made a rather neat job of pinning a butterfly's wings, he thought. But Gloria did not laugh.

She paused and considered; then she said quietly: "It takes an old, dear friend, one who has earned a lot of privileges, to tell a girl a thing like that. Mab will probably hate you for life. I know I should."

Harvey granted the likelihood of such a feud, and Gloria continued to interpret the omen:

"Of course if you two had kept on being pally after Illinapolis, you'd have had a right to take her at her word and tell her what the wild gossips were saying. But I gather you didn't. You apparently dropped her cold, so you needn't be surprised at getting your fingers burnt when you tried to pick her up again. It's too bad. Mab was crazy about you out there. Well, here's the theater and there's my man, looking jealous. If I ever run into Mab I'll forget what you told me."

With the disappearance of Gloria, Harvey changed his mind. He went to his hotel instead of the Masks Club, and dug three old letters out of his trunk. Then he sat down for an hour of painful literary endeavor, notable for the frequency with which he tore up what he had written.

VI

MAB had gone to her performance, frigid with a comprehensive exasperation. She hated Harvey Norris for his presumptuousness in attempting to correct her manners, for his paternal theory that she was a spoiled child. She was out of patience with herself for lying like a chorus girl an having like a little pig. She despise cats who were saying things about her was even annoyed with the taxi drive not knowing where Flippant Philippa playing. But Harvey, of course, wa principal grievance.

She reached her theater half an hou soon because of that miserably interru dinner. To kill a little time before g back to her stuffy dressing room decided to inspect the new flashlight ph graphs of the play, which had appe that afternoon, in huge rococo frame exhibition in the lobby. She studied pictures carefully, scene by scene, fro professional point of view; and sudd her cloudy mood of sullenness broke in thunderbolt of white-hot rage. She visible in only one of the flashlights, there, by an accident of perspective, was caricatured almost beyond recognit The officiousness of Harvey Norris pas out of her mind. Her artistic prestige been slighted; her contribution to Flipp Philippa had been practically ignored! flamed with indignation.

Like a belligerent wren Mab flew the box-office window and hurled at grinning treasurer a shrill demand for manager of the company. She har recognized her own voice as she spoke.

That culprit had not yet arrived. M learned. She restrained, with difficulty, impulse to tell her troubles to the cyni young ticket seller, and left word for t manager that she wanted to see *him* once. Then she rushed away to her dressi room, almost hysterical, fiercely det mined upon a policy of reparations resignation.

But as she planned her attack the rec lection of Harvey Norris' warning d scended upon her like a cold shower bat Under its tonic influence she tried to co vince herself that she was a lady by bir and an actress only by accident.

"Let me," she breathed prayerfull "remember the Wayne."

That parody of an old war cry helped h to regain her sense of humor.

Between acts Mab charmed the compar manager with her rational attitude towa his excellent explanation of the mischievo flashlights—how the scenes in which sh had figured did not come out right, and s on. She understood perfectly. She agree that another session of flashlight posin would be annoying to the others in th company.

She applauded his suggestion of substi tuting her best cabinet portrait for th flashlight which had made her look s ridiculous. Mab was quite angelic abou it, and the manager went out front pro claiming that Miss Moody was a sensibl girl with a perfect disposition.

That night, after the performance, Mab addressed to Harvey this carefully considered note:

Dear Old Harvey: Please forgive me for being so rude at dinner. Of course I remembered all about it. Perhaps you were right, for I nearly made a goose of myself to-night—in the best style of Gloria Wayne—over nothing more important than some wretched flashlights. But your warning helped me to get hold of myself. So now I am trying to reform, and am being kind to dumb animals. Yours sincerely ——

A missive from Harvey crossed hers:

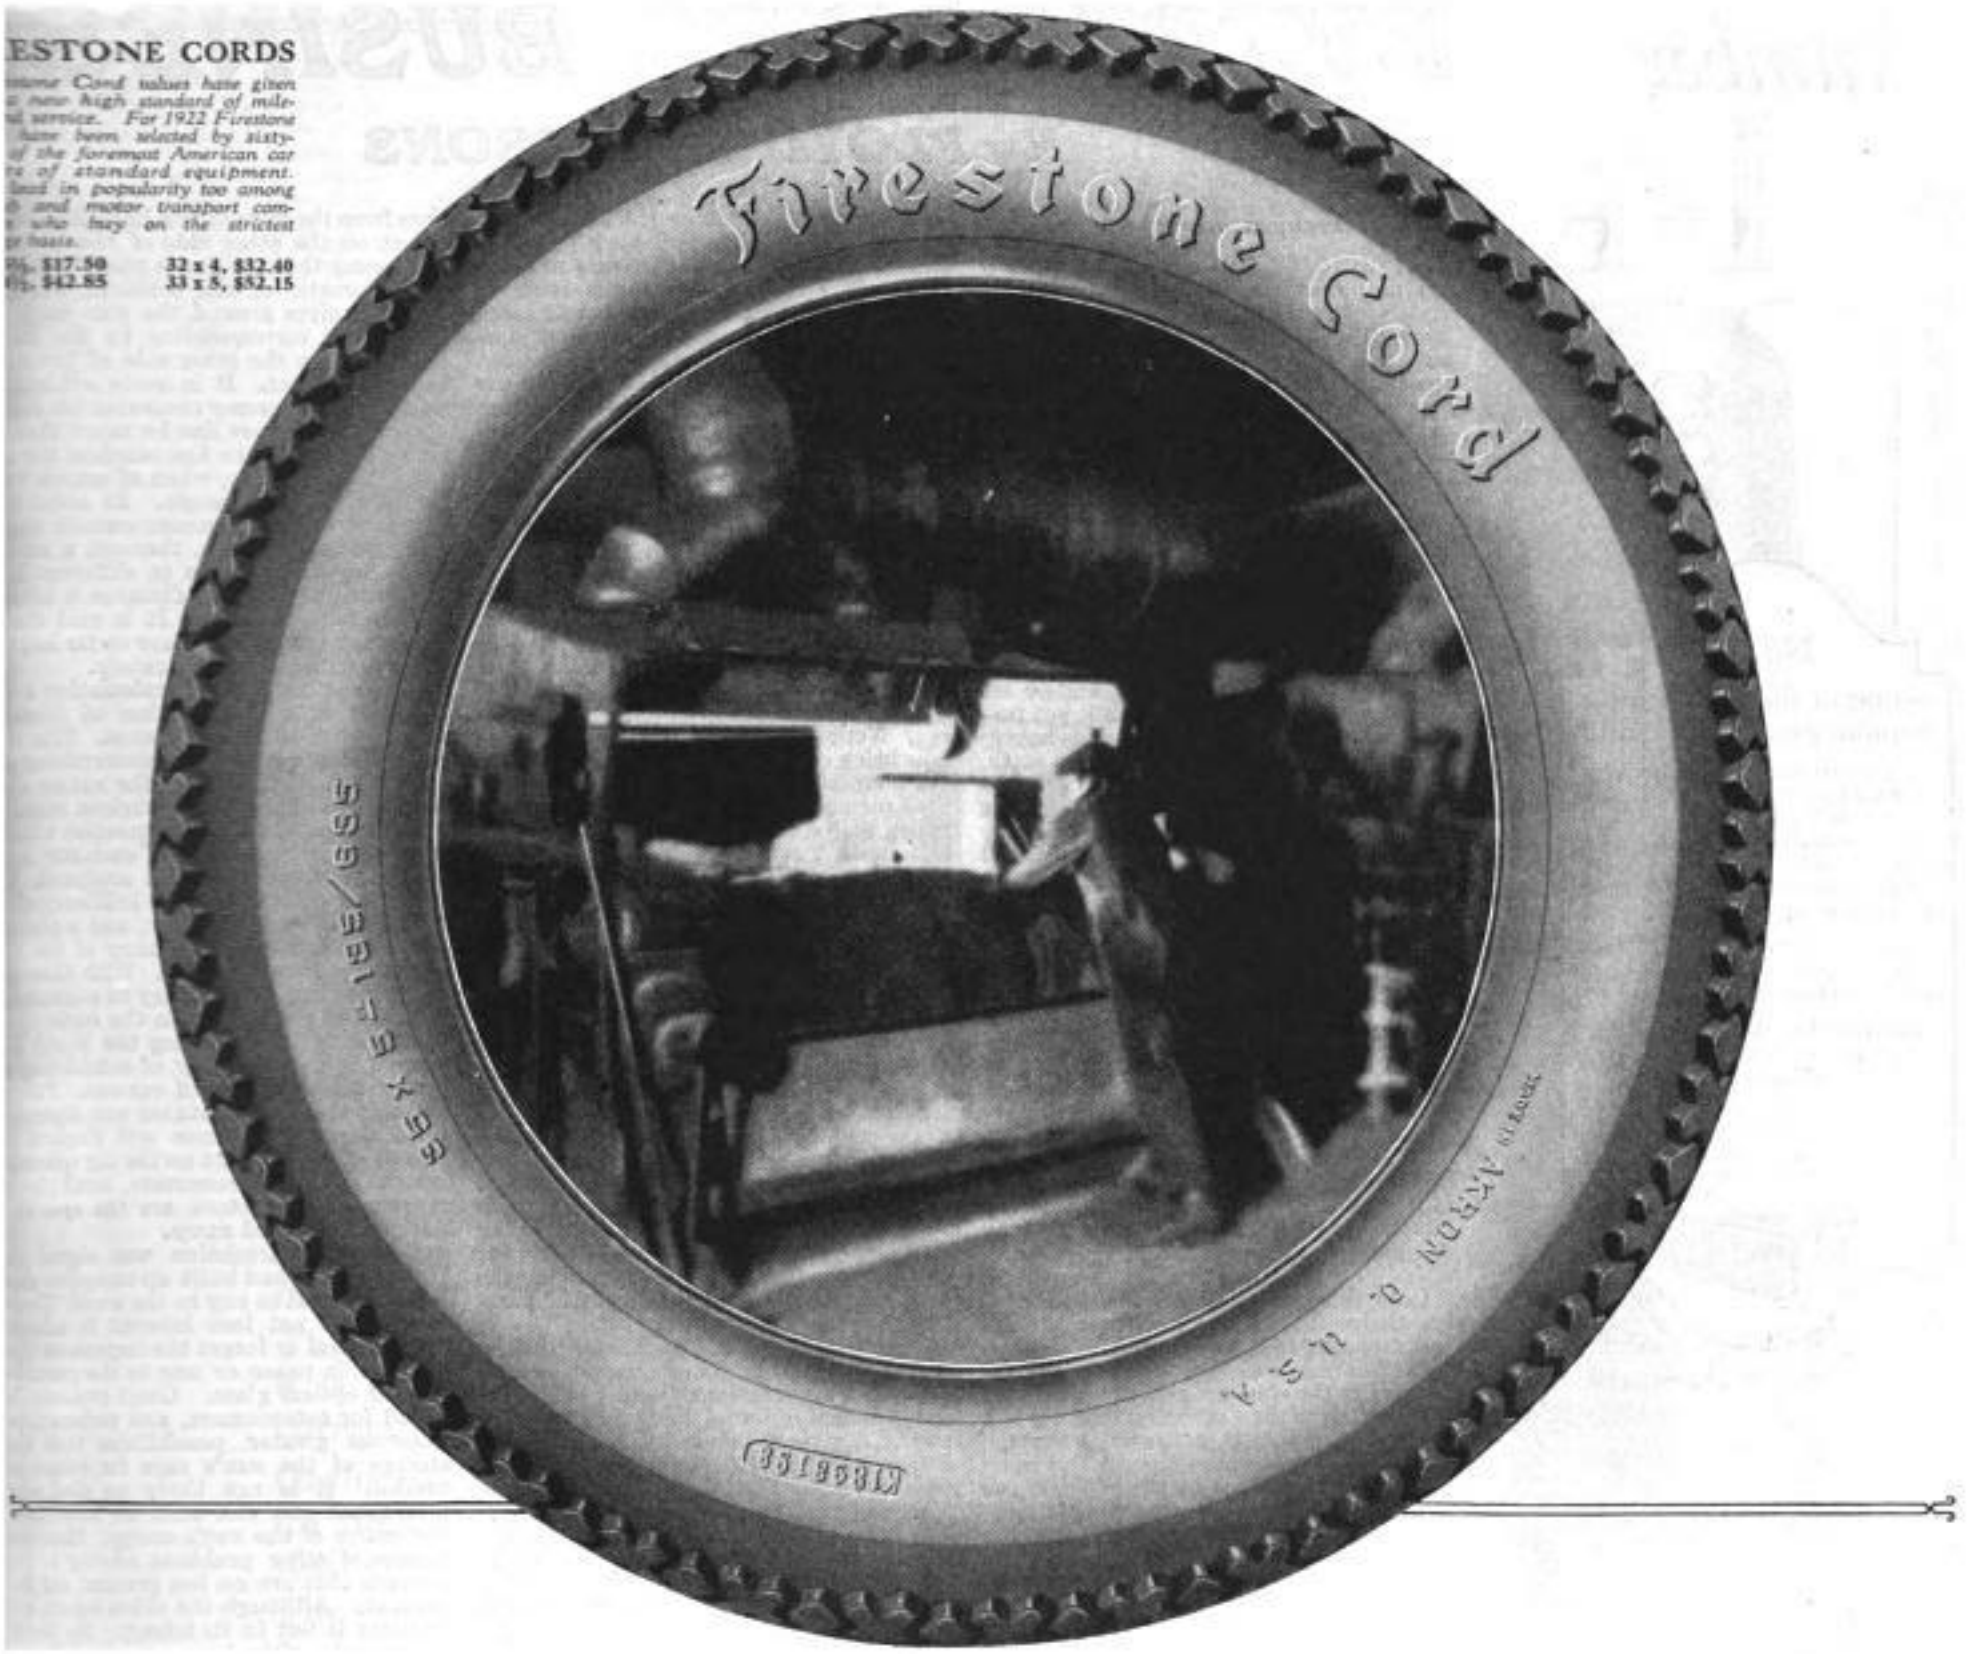
Dear New Mab: I owe you three letters, and I want to explain why I didn't answer them. I would have got around to it at dinner to-night if you had given me time.

I was a married man back in those good days in Illinapolis, and was being sued for divorce. It was a perfectly respectable divorce as such things go, with both victims satisfied. But you were too nice a girl to be having anything to do with an actor about to celebrate his first divorce. I thought it was up to me to drop out of your sight for a while.

It was something like our misunderstanding of last night—I was stupid but I meant well. Let's forget about both incidents. Faithfully yours ——

Mab read this surprising message with mixed emotions. Of course she was glad to have so adequate an explanation of Harvey's indifference, and to accept his apology. But it was not so pleasant to discover the existence of a first Mrs. Norris, and to begin wondering what kind of creature she had been.

There was nothing to be done about it, of course—nothing but to telephone Harvey, a few days later, to inform him gayly that his confession was perfectly disgusting. With that off her mind she promptly accepted another invitation to dinner.



The rest goes without saying.

ESTONE CORDS

...stone Cord values have given ... new high standard of mile... service. For 1922 Firestone ... have been selected by sixty- ... of the foremost American car ... of standard equipment. ... lead in popularity too among ... and motor transport com... who buy on the strictest ... basis.

...½, $17.50 32 x 4, $32.40
...½, $42.85 33 x 5, $52.15

The Goal of Uniform Mileage

FIRESTONE mileage is attracting unusual attention, not merely because it has bettered former records, but because it is being delivered uniformly in tire after tire.

Letters from users show not one or two Firestones giving exceptional service but full sets maintaining a high average.

The reputation for the dependability of the product is zealously guarded in the Firestone organization. It requires more than efficient machines and skilled hands. It results chiefly from unceasing vigilance on the part of the worker, together with painstaking supervision of every minute detail of manufacture.

The Firestone tire-builder works with the finest equipment devised. Pride in his workmanship goes naturally with pride in the organization of which he is an actual shareholder. He recognizes his responsibility for giving Most Miles per Dollar in every tire on which the name Firestone appears.

The goal of uniformly big mileage is constantly kept in mind. This, in no small degree, accounts for the unfailing high average of Firestone performance. It is a fact worth remembering in seeking dependable tires for your car.

Most Miles per Dollar

Firestone

$11.65

30 x 3½ extra size non-skid, the best known tire in the light car class. Higher in quality than ever and now being produced on a scale that permits its being sold at the lowest price on record. The same unusual value in 30 x 3 size at $9.85.

$9.99

Oldfield "999" guaranteed—a full size 30 x 3½ anti-skid tire. Built with four-ply long staple fabric. In 30 x 3 size at $8.99. Prices that cannot be equalled for a reputable, well-known tire of trustworthy quality. Sold by Firestone dealers.

EVERYBODY'S BUSINES

By FLOYD W. PARSONS

Telescopes and the Stars

ASTRONOMY is looked upon by many people as a rather useless profession, and its followers are often derisively dubbed stargazers. But there is a growing belief on the part of many that we have taken too light a view of the science of the heavens, not only because of its influence on our intellectual life but for the reason that astronomy may be utilized to a much larger extent in a practical way in our everyday existence. A famous European astronomer has just discovered a sun spot almost fourteen times the size of the earth. The spot at the present time is in its infancy.

Now the questions arise: Is there any connection between such a spot on the sun and the comparatively mild temperature of our last winter? Some of our winters are severe, while others are not. Is it not possible that this seasonal variation is largely influenced by forces external to the earth, and if so, why should not astronomy eventually provide us a fairly accurate means of weather forecast?

Astronomy is the science of infinity and eternity. It is the oldest science, probably because the heavenly bodies are the most prominent of natural objects. The study of the sun and stars creates a reverence for the truth and a desire to know the truth. The degree of civilization of a nation may be judged by the provision which the people of that country have made for the study of scientific problems.

Astronomy has influenced human thought to a greater extent than any other science. It has given birth to many traditions which still survive, and has always been mixed up with the various types of religions. It has changed the crude and fantastic theories of world origin held by the ancients into proved scientific principles.

Only three centuries ago the leaders of knowledge taught that because the earth had no limbs and muscles, like animals, it could not move as they did. To-day we know that the stars are really suns—many of them larger than our sun; that our sun and family of planets are traveling through space at a speed of more than twelve miles a second, or approximately 400,000,000 miles a year. We know that the early life of the earth was lived at some point in the stellar system far distant from where we are now; that the planet on which we live is hundreds of millions of years old; that if our sun were a hollow shell of its present size, more than a million earths could be dropped into it, and there would still be unoccupied space between the earth spheres. We know that if it were not for the sun's energy the tropics of the earth would speedily attain a state of frigidity far more severe than that which now exists at the North and South Poles. It is the sun's heat that permits us to follow agriculture, and yet less than one two-billionth part of the solar heat of the sun falls upon the earth. Providence has been kind to man in providing a beneficent atmosphere around the earth, for it is this air that protects us from the bombardment of 20,000,000 small foreign bodies which collide with our planet each and every day.

The interest of most people in any science is generally limited to its practical applications. Astronomy has done more for civilization than most of us imagine. We are indebted to it for the first voyage of the Phœnicians, and later for the discovery of the New World. It was his intimate knowledge of the sphere that inspired Columbus with confidence to pursue his journey westward over an unknown sea. The average layman does not realize the great value to the human race of the knowledge we possess concerning the shape of our planet and the fact that the earth rotates upon its axis in a dependable way and revolves around the sun in exact obedience to law.

It is by means of astronomy that latitude and longitude are determined, and practically all important land surveys are founded on this science. Observations of the stars with transit instruments furnish the correct time for all nations. Two astronomers stationed on the same north-and-south line, and supplied with modern equipment, can observe the stars so accurately, in comparison with the beats of their common clock, that they will agree within two one-thousandths of a second as to how much that clock is fast or slow. Astronomy enables us to make precise maps of continents and islands; to sail ships over long courses; to determine the times of high and low tides, so essential to mariners in entering many harbors. It has helped to abolish the necessity of forts on the frontiers of nations, for by observations of the stars we are now able to fix imaginary boundary lines between adjacent countries. Modern astronomical instruments on a ship to-day enable a navigator in clear weather to determine the position of his vessel in midocean, within less than a mile of its true position.

The telescope is the astronomer's super-eye. Work with the wonderful instruments now being constructed is rapidly extending the boundaries of the visible universe. It now requires three to six years to grind, polish and correct the lens of a powerful telescope. The glass disk alone of one of the larger telescopes now used weighs more than two tons. The diameter of such a lens is six feet or more. Hardly more than a dozen people in the United States have the training necessary for working out the difficult calculations required in perfecting the parabolic curve of such a lens. In testing one of these big lenses a ray of light is passed through a hole one fifty-thousandth of an inch in diameter, hits the lens and is reflected back to a plane mirror and then to the opening. If the surface of the lens is perfect the ray of light will go out through the same opening through which it came in. In finishing the surface of one of these lenses it has been found that the opening and closing of a door, or the additional heat from the body of another person in the grinding room perceptibly affects the parabolic curve of the lens.

The telescope is not used solely for its magnifying power; its greatest value consists in its capacity for collecting light from some distant celestial body or cluster of stars. A seventy-two-inch lens will gather and concentrate 100,000 times more light from a distant star than the human eye. The modern astronomer substitutes a photographic plate for the human eye, for the effect of light from a heavenly body, brought to a focus by the lenses of a telescope, is cumulative upon the photographic plate, which is not true in the case of the human eye. The eye will see nearly as much at the first glance as it will ever see. The photographic plate, on the other hand, accumulates its impressions, so that distant bodies which are not luminous enough to make an impression on a plate at once can be made to imprint their images clearly, through keeping them exposed to the eye of the telescope for a period of hours. It is for this reason that modern astronomy is becoming long-exposure photography.

In making these time-exposure photographs it is necessary to move the telescope so that it will accurately follow the travel of the star. If the timing and movement of the telescope are not perfect a blurred plate will result. The longer the exposure the more difficult it is to secure an accurate photograph, and for this reason scientists are endeavoring to construct larger and still larger telescopes. As one authority points out, it has been found impossible to substitute unlimited length of exposure for increased light-gathering power of a big lens. So delicate is the mounting of one of these great instruments that the power required to move a large telescope is no more than that which is required to light a sixteen-candlepower electric bulb.

Another interesting use of the big telescopes, aside from making photographs of distant bodies, is the measurement of the distances to the most remote stars. Direct measurements are impossible, so the astronomer employs the simple method of the land surveyor who wishes to determine the width of a river. In this method a base line is established on one bank of the river, and the surveyor measures the angles made by lines from the ends of this base line to object on the other side of the rive astronomy the base line is the 186,00 mile diameter of the orbit in whic earth revolves around the sun each The object corresponding to the in sible point on the other side of the ri the distant star. It is quite evident when the astronomer measures his an one end of his base line he must then six months, until he has reached the end of the base line, when of course h measure the other angle. In order t sure accuracy these measurements mu repeated many times, through a seri years, by astronomers in different l and finally an average distance is obt that is fairly correct. It is said tha more than thirty stars have so far had distances measured accurately.

A newer method of calculating st distances is a contribution of Amer astronomers to world science. This r recent plan consists in determining tance through a study of the nature of light received from the various stars. spectroscope is used in connection with telescope, and the light of each star is lected, photographed and analyzed. spectroscope measures the brilliancy of light when it left the star, and a phot eter calculates the brilliancy of the l we receive from the star. With these quantities known it is easy to estimate distance of the star from the earth.

Our experiences during the World W taught us the necessity of establishing optical-glass industry of our own. Prio the war the United States was depend upon Germany, France and England its optical glass. Just as the big telesco are the eyes of astronomers, small glas mirrors and reflectors are the eyes o nation's army and navy.

When the armistice was signed United States had built up an optical-gl industry equal to any in the world. The fore let us not lose interest in subje astronomical or forget the importance th attaches in peace or war to the manuf ture of optical glass. Great problems ahead for astronomers, and perhaps no possesses greater possibilities than t storage of the sun's rays for release needed. It is not likely we shall ev accomplish this end until we have foun the source of the sun's energy. There a dozens of other problems relating to th heavens that are no less practical and im portant. Although the oldest science, a tronomy is but in its infancy. No line work can possibly have a greater influen upon the lives of the people of the worl After journeying from Massachusetts t Ohio at the age of seventy-seven to lay th cornerstone of the Cincinnati Observatory ex-President John Quincy Adams said i was his endeavor to turn the enthusiasm for astronomy at Cincinnati into a per manent and persevering national pursuit which might extend the bounds of human knowledge and make the country instru mental in elevating the character and im proving the condition of man upon earth One thing is sure: If the skies were clear of clouds only one day and night a year these twenty-four hours would be eagerly watched and waited for by every person in the world. But as we have the free and easy opportunity to view the wonders of the heavens practically at will, very few of us either appreciate or take advantage of the great privilege afforded us.

Ways to Boost Retail Sales

MERCHANTS are finding the selling game at the present time a difficult and tedious process. Slackened activity resulting from the business depression is forcing retailers to tax their ingenuity. Store managers are searching for new ideas that may stimulate trade. Any promising plan to attract customers and foster a desire to buy merchandise is now speedily utilized.

The methods of shopkeepers to-day are quite changed from those of years gone by. In olden times retail selling was more or less of a struggle between buyer and seller. Antagonism and suspicion permeated

VAN HEUSEN

PATENTED

the World's Smartest COLLAR

THE difference between the VAN HEUSEN Collar and ordinary collars is not merely that one is soft and the others stiff.

The VAN HEUSEN Collar is as stylish as it is soft, and as comfortable as it is correct.

Ordinary collars depend upon stiffness for their style, and upon crispness for their comfort.

The VAN HEUSEN Collar tempers its style to the shorn neck.

Ordinary collars have as little consideration for a neck's curves as a round hole has for a square peg.

The VAN HEUSEN is *more* than "another soft collar."

Ordinary soft collars are no more like the VAN HEUSEN than a pair of carpet slippers is like a Tuxedo.

The VAN HEUSEN Collar, because of its semi-soft fabric, is smarter than a stiff collar and more comfortable than a soft collar.

Ordinary collars are either stiff or soft.

"Well dressed men take off their hats to the VAN HEUSEN Collar" wrote a leading haberdasher.

But it's even more significant that they *bare their necks* to it.

Nine styles, quarter sizes 13½ to 20. Price fifty cents. Will outwear a half-dozen ordinary collars.

If your dealer cannot supply you with the VAN HEUSEN Collar and the VAN CRAFT Shirt (a soft white shirt with the VAN HEUSEN Collar attached) write us for address of one that can.

No Starching

No Rough Edges

Will Not Wrinkle

Saves Your Shirts

Saves Your Ties

It isn't a VAN HEUSEN unless it's stamped

The Reel Joy of Angling

THE thrill of the strike—as a mighty black bass grabs your plug; the sing of your line and whirr of your reel—as down he goes through the cool, shady depths; the splash!—as up he darts to the surface and in a frenzy of fight throws his shining, quivering mass before you; then—tense moments of play, a futile dash or two, and finally—*the catch*. That's bait-casting for game fish. That's the *Reel* sport of angling.

To battle these gamy fellows and get every thrill and joy which bait-casting gives, requires tackle which has stood the test—the tests of thousands and thousands of ardent anglers, who each year are bringing in countless catches like the above, on *South Bend Fishing Tackle*.

Ask to see the famous *South Bend Level-Winding Anti-Back-Lash Reel* and the *South Bend Anti-Back-Lash Reel*—also the equally famous Oreno baits, at most any sporting goods dealer. Every South Bend bait is a tried and proven fish-getter before it is placed on the market for your use.

trade. Not one merchant in a hundred adhered to a one-price system. When John Wanamaker adopted the plan of having only one price for each article and refusing to sell for less, dozens of merchants condemned the new policy and urged legislation to prohibit this one-price plan, which was called "unfair competition" by the critics.

Slowly but surely business morals have improved. Retailing is no longer founded on a system of bargaining. Merchants in the same line coöperate. Advanced practices and new ideas are openly advertised instead of secretly guarded. Store executives meet in convention and exchange experiences. Goods are reliable; damaged articles are marked as such, and the dissatisfied customer may have his money back if he so desires. The contrast in business between to-day and even twenty years ago is amazing when true parallels are drawn.

Though many things are important in operating a store, most retail businesses are based chiefly on salesmanship. Selling over a counter is not so difficult as selling on the road. The customer of the retailer takes the initiative, and enters a store with a definite idea of making a purchase. The retail salesman, therefore, is not compelled to devote so much attention to arousing the prospective buyer's interest and desire to own as is the traveling salesman.

However, the person who sells over a counter must have ability to classify a customer quickly. He must determine first of all whether the prospect has come resolved to buy, has merely reached the stage of desiring to own, or has been prompted only by curiosity. A different method of selling must be employed in each of these three cases. The salesperson must also discover whether the buyer considers the price almost exclusively, whether price and value are equally balanced, or whether price and value are secondary, and suitability alone is the chief consideration.

I found the business philosophy of one famous retailer most interesting. In salesmanship a dozen sound facts in hand are worth a five-foot shelf of books. The two things most necessary to avoid are overstatement and condescension. They kill many sales. Keep the spine straight and the head erect. Holding the head to one side denotes indecision. Hew to the line of truth. Avoid placing negative thoughts in the prospective buyer's mind. After making a sale don't add, "You couldn't use anything more, could you?" Instead make positive suggestions that will encourage desire rather than kill it. Get the customer into personal contact with the article. Some buyers are half sold when they get an article into their hands. Though all deception must be avoided it must not be forgotten that many an unimportant defect would never be noticed except for needless apology. Get rid of the snob salesman who gives attention to the rich and neglects the poor.

Salespeople must understand that before they can sell an article they must sell their own personality. At the commencement of a sales transaction the buyer sizes up the salesperson just as the salesperson does the buyer. No seller can make a permanent success unless he is interested in the goods he is handling, and knows them thoroughly. Each retail-store employe should be taught the value to the firm of public esteem and good will. In selling, it is usually best not to refer to the price of an article unless the customer first inquires about it. This is especially true when the customer appears interested in the merchandise only. An exception to this rule is the case of an article that is of unusually good value in relation to the price. The up-to-date merchant regards possible customers as his guests, just as he does the actual customers. People who are only looking around and not spending should be made to feel perfectly welcome. The attitude of salespeople should be shaped accordingly.

It is a mistake on the part of store managers to pet or coddle their salespeople, especially the beginners. Many young men and women are ruined in business by employers who incline to flattery. Though it is true that indifference toward an earnest, efficient worker may easily be carried too far, it is usually best for a manager to show his high regard for an employe by singling him out for the really tough jobs, for this gives the promising worker a chance to advance and make good. It is always wise to train salespeople to make two or more sales instead of one to each customer. Put a ban on flowery language. The day of oratory in selling is past. Encourage salespeople to develop their memories for names and faces, and insist that they cultivate both tact and a cheerful demeanor. It is not a bad plan to hold each salesman responsible for certain customers, and have him handle all transactions with such buyers, in this way building a personal following. This gives salespeople somewhat the same feeling they would have if they were in business for themselves.

Although it is desirable to have attractive window displays, such exhibits should not be out of keeping with the merchandise inside the store. A luxurious window display defeats its own end if it possesses none of the characteristics of the goods inside the store. One of the greatest mistakes a merchant can make is to refuse ever to sell goods at a loss. Many a store has lost trade and become involved in financial difficulties through hanging onto a stock of old goods that could have been sold easily by marking them down to replacement prices.

It is a good policy for a store to purchase not more than 70 per cent of the stock anticipated as necessary to satisfy seasonal requirements. It is more than likely that additional goods can be secured if needed later in the season to fill shortages. The merchant who follows this plan insures himself against an oversupply of slow-moving goods. When this rule is not followed it too often results that the store must sell surpluses at reduced prices, thus cutting down the original profit. In determining when to buy, the merchant should remember that it is a good rule to make his purchases if possible when others are not buying. When mills and factories are shut down reserve stocks soon melt away. Manufacturing plants that have been closed entirely, or which have been working on part time, cannot get back to full production for a period of weeks. Sound judgment must be exercised in deciding on the proper time to buy.

Original ideas to increase sales have been put into operation by retailers in many parts of the country during the recent months of depression. One store in a small Western city has appointed agents who make weekly reports from near-by towns. The printed forms used provide space for the names of new customers, newly married couples, engaged girls, new babies, houses being built or remodeled, automobiles purchased, high-school graduates and confirmations. The agents or correspondents of the store are given a 10 per cent commission on all goods that any of these prospective customers purchase. A great many stores in both large and small cities are now endeavoring to build up a mail-order out-of-town business by issuing catalogues and offering rebates. In one Western city seven firms got together on a coöperative basis and issued an attractive advertising circular. The plan proved a success in boosting sales, and effected a saving in postage alone of more than ten thousand dollars.

One large retail concern in attempting to enlarge its business with suburbanites and farmers has established a store service on wheels. Several trucks were purchased, supplied with numerous articles in common use, and then assigned to certain established routes. Each house on every route is visited once every two or three weeks. On near-by routes the articles sold are supplied from the truck at once. On the more distant routes orders are taken for the delivery of goods the next time around.

In several towns where business has slumped merchants have introduced a day-and-night sale to stimulate buying. One concern in a small town started such a sale early Monday morning, and kept it going, without interruption, until the following Saturday at midnight. The sale was widely advertised, and the market was scoured for real bargains to add to the regular stock. Day and night shifts were arranged, and the store was never closed from the time the sale started until it ended. A sewing machine was given away each afternoon and a talking machine each midnight. A free lunch was served every night at one o'clock. More goods were sold during the week than had been sold during the two previous months.

One firm answers letters from women on tinted notepaper that is inclosed in an envelope of the social size. Another concern has established a personal-service department to supply customers with useful knowledge. A capable woman in charge of this work has prepared a series of
treating of the manufacture and ca
various fabrics. These talks are given
hall accommodating two hundred per
and include facts concerning the qua
and care of materials. In treating of
moving-picture films taken in Japan
shown. Large sales have resulted fron
plan, and the women of the city have
educated to purchase in a more discrim
ing manner.

A number of large stores are now pa
more attention to children, realizing
these youngsters are the buyers of
future. There are twenty million chil
in the United States between the age
five and fourteen. Several stores
established barber shops for children, w
parents can leave them to have their
cut while the older folks are shopping.
concern publishes a monthly magazine
boys. Another store has organized a st
hour club for children. The club m
every Saturday afternoon, with an in
esting story-teller in charge. The mee
place has been made to resemble a p
room, and is decorated with articles ta
from the toy department. Music and
freshments are served free. The
started with fifty children, and now ha
membership of more than five hundr
Mothers of the children have found it e
venient to shop in other departments of
store while their little ones have b
attending the story hour. The scheme
been a business builder.

The manager of a store in another to
secured from public-school records in
city the ages and dates of birth as well
the addresses of young children likely
appreciate toys. A form letter was sent
parents two or three weeks before the di
of each child's birthday, suggesting that t
store had a large assortment of toys appr
priate for birthday gifts. Many parer
were flattered and pleased by the thoug
ful interest of the merchant, and respond
to the invitation to purchase toys. A
other store, which keeps track of engag
ments of local couples to marry, sends
cordial letter to the new fiancée, suggesti
that she purchase a cedar hope chest
easy terms. As a result of this thoughtf
attention the concern has sold not only
number of these chests but many thin
to go in them.

An impromptu price-cutting sale w
conducted recently with much success by
store in New York City. A number
salesmen armed with big blue pend
pushed their way through the crowds i
the store, and without any previous a
nouncement commenced to reduce th
prices on the tags attached to certain lin
of articles. The psychological effect
having these reductions actually made rig
before the customers' eyes started a buyi
movement that in a few hours cleaned th
shelves of the goods that were reduced. Th
plan was successful because the reduction
were convincing.

One store proved the value of absolut
frankness in advertising by calling atte
tion to the sale of a number of suits tha
had been in stock for several seasons an
were not of the latest style or of the mos
popular colors, but the goods were all woo
and the garments were well tailored and in
perfect condition. The price was right an
the sale was an immediate success, due
chiefly to the honest impression created by
the advertisement.

Though some merchants still continue in
the ways of their forefathers, the majority
of retailers have become students of modern
methods of handling men and rendering
service to the public. These progressive
ones know that men will work much harder
with the boss than they will for him. Be
fore a merchant can build sales he must
build sellers. The trend of the times is
shown by one general manager who in-
stalled an iron box with a padlock on it and
a slit in the top just big enough to receive
an average-size letter. The box was placed
at a point where it could be seen daily by
all employes, and bore this notice, signed
by the general manager: "This box is in-
tended for private communications from
you to me. There is only one key to the
lock, and I have that. Tell me how to
better working conditions, improve meth-
ods and reduce costs. Sign your letter and
give me your home address, and I'll mail
a personal reply to you there."

Perhaps in no line of endeavor is originality of thought more necessary than in retailing merchandise. It is one business where an ounce of ability is worth a pound of pull.

Your Battery Plates Are Dead, Sir"

When the battery expert tells you this, you know it means a new battery

When the old battery can't n your engine, and the expert the service station makes his gnosis and gives you the *bad* s, you just *dig down* and *buy* ew battery.

Face to face with the fact of ates gone *bad*, you know their portance. For the *life* of a ttery is in *the plates.*

Then, isn't it good business nse when buying a new battery buy *plates?* Plates that *last!* f course! And it is just as good nse when manufacturing a bat- ry, to make plates the most portant feature, and build lates *that last.*

The Famous PREST-O-PLATES

This is why Prest-O-Lite *spe- ializes* in plates. Always the aker of a *better* plate, Prest- O-Lite used all its scientific research and skill to improve it, and produced the Prest-O-Plate, a genuine achievement.

Prest-O-Plates are *better* than ordinary plates; basically better in the making, and better in the practical *operation.*

Small-batch mixing assures Prest-O-Plates a *uniform mixture,* making each plate an exact likeness in quality with every other plate.

PREST-O-PLATES Pre-tested

Pre-testing separates *high* vitality plates from *low* vitality plates, leaving only high vitality plates to go into finished Prest-O-Lite Batteries.

Prest-O-Plates possess an *unusual hardness,* combined with a *peculiar* porosity.

None of the *old trading* between lasting strength and ready delivery of power. No power swapped to get durability.

There is proof of it in their dependable *reserve power* in biting cold weather, and great *non-buckling* strength, which resists *overheating* in *summer.*

All PREST-O-LITE Parts Top-Quality

Every *other* part of a Prest-O-Lite battery *measures* up to the *top standard* of Prest-O-Plates.

All the factors of the great Prest-O-Lite institution function as a unit in turning out the best all-weather battery.

Small wonder that 87 leading manufacturers already specify it as original equipment, and this list is growing.

Every Prest-O-Lite is *underwritten* by a liberal and specific guaranty, a definite obligation *plus* a *spirit* that says the car owner must be pleased.

Friendly Expert Service

Your car is the *better* for having a Prest-O-Lite Battery. But, whatever battery you have, give it the benefit of a Prest-O-Lite Service, the *oldest service* to motorists.

The friendly expert help of the Prest-O-Lite representative will banish battery troubles.

Between the *method* of *making* a Prest-O-Lite Battery, and the *method* of *taking care* of it, you *have* the *utmost* in battery service.

TAPE

(Continued from Page 13)

guessed wrong again. A last strike, a final killing! That was the savage, grotesque irony of it. The next play, the next turn of the market might have set him on his feet again, let him go on again; but though he'd had the money, that thousand dollars stitched in his coat, Nat Truax hadn't used it. The money was the last shot in his locker, all that he had left to him. When that was gone ——

The silence of the room was broken by a sudden savage mutter, a snarl. The next instant he was at the door, cursing to himself as he unlocked it and flung it open. He was still in his shirt sleeves; and the light from the dim gas burner overhead gleamed on his shoulders, wet, still dripping. Without the ceremony of a knock he pushed open the door of the room adjoining.

Mrs. Mangin, in a wrapper, stood by the bed, her hair and attire in its usual frowzy disorder. Near by was the boy, a lad of twelve or so. On the bed lay the woman, his mother, her face flushed and her eyes dulled and half closed. She did not move as the door opened, but the boy and the lodging-house keeper turned toward it, startled. An exclamation, a protest, sprang from Mrs. Mangin; but as she saw the face of her top-floor roomer the landlady shrank back, silenced.

"What are you doing here?" demanded Nat Truax. "Turning out that woman?" The landlady gasped. Then as she stared at him her mean, unlovely face hardened. "What's that to you?"

Her lodger strode toward her, his look menacing. "Answer me!" he snapped; and at the dull rancor in his voice and face her eyes fell.

"I brought her some food; a plate of broth," she mumbled sulkily.

The boy, too, was frightened. In his fright, though, his boyishness still asserted itself. He edged across the room, his face pale, his eyes rolling; but he had his fists doubled.

"You get out of here!" he stuttered.

Nat Truax looked at him, his face sour. Then he walked over to the bed and, leaning down, he peered at the woman's face.

"Mrs. Cartright," he said. The woman stirred restlessly, but she did not reply; and he took one of her hands in his. "Look at me, d'you hear!" he ordered. "Mrs. Cartright, look at me!"

The lidded eyes opened tiredly. A moment afterwards into their dullness crept a dawning wonder, and her lips moved.

"Why—it's Nat Truax," she faltered.

"Yes; Nat Truax. Where's Joe, your husband?" he asked.

"Joe?"

"Yes; where's Joe?"

She had closed her eyes. Her face lying on the pillows was wan and tired, a faded face; and in the chance that had brought her to the drab and dingy lodging it was evident that Joe Cartright's wife had come a long way—a long way down too. Presently her lips parted and the man stooped lower to catch her words. Joe was dead.

Nat Truax stood up again.

"Here, you," he said brusquely to the lodging-house woman; "go downstairs—get a doctor." As she still gaped at him, rooted to the carpet in dull wonder, he gave another growl: "D'you hear? Get a move on!" The money, the bills he'd ripped from his coat lining, he had in his hand; and stripping a bill from the packet he thrust it at her. "There's a hundred dollars," grunted Nat Truax; and he shot at the woman another threatening look. "You spend that for what's needed," he ordered. The boy he looked at for a moment. The boy, his eyes rounded, his mouth wide, was shaking. "Don't you worry, son," he grumbled; "it's all right."

Then, his face once more scowling, harsh, he turned and shuffled from the room.

Five minutes later, his hands deep in his pockets, his coat collar turned up to his ears, Nat Truax was stumping along the dingy side street, once more hurrying through the rain. Inside his coat was the tape he'd taken that afternoon from Rooker, Burke & Co.'s.

III

TAPE. In the years Nat Truax had haunted the downtown brokerage shops, feverishly dabbling in the market, the stock tickers he had watched there must have ground out from their maws innumerable miles of the narrow paper ribbon. Miles, miles. It inched from the rasping, chattering machine in a never-ending stream; and even in his dreams, it seemed, he saw it. His ears, too, it seemed, dinned day and night with the staccato clack of the ticker as the tape came from it. For all that, though, the trick, the knack of guessing the riddle he never had managed to catch. Harvey Nash, as it's been said, could do it; but what had happened that day in the brokerage shop was conclusive. Nat Truax was as far from the knack, the trick, as he'd ever been.

Spreading the Wet Garment on His Knees, He Took a Penknife From His Pocket. Swiftly He Began to Rip Out the Lining in the Breast

Now, however, he was going to find out why. That was why he hurried. It was why, too, that night downtown he had sped away from the street corner, hurrying from it as if he fled from what he'd seen at the street end. The doings uptown in the lodging house were merely an incident.

The night before, when he lay sleepless, staring at the wall, he had heard enough to let him guess who were his neighbors in the room next door. It was, in fact, another grotesque detail of the luck—his luck—the kind that for years had dogged him. He might be harsh, a tough bird, as hard as nails; but Joe Cartright, it appeared, had been the man who once had held out a hand to him, saved him when he was on the rocks. In the test, though, it seemed, Nat Truax had proved no tougher than his fellows. It might even be said that in the same test they would have proved not tougher. Never mind, though. What graveled the man was that in his extremity the luck should have lain in wait like this for him. The thousand dollars he had kept by him all these years was only nine hundred now. It was, as the luck ordered, already slipping through his hands.

The money he had hoarded for the end. He often had wondered, though, if the end came, how he'd use the money. The fact is, he'd never dared to face it. In other

years had gone since he had been there la
he still knew the place; and the manservan
who presently opened the door he al
knew. The man knew him as well.

"Sir!" cried the servant. "Mr. Truax!"

Nat Truax made him a gesture of caution

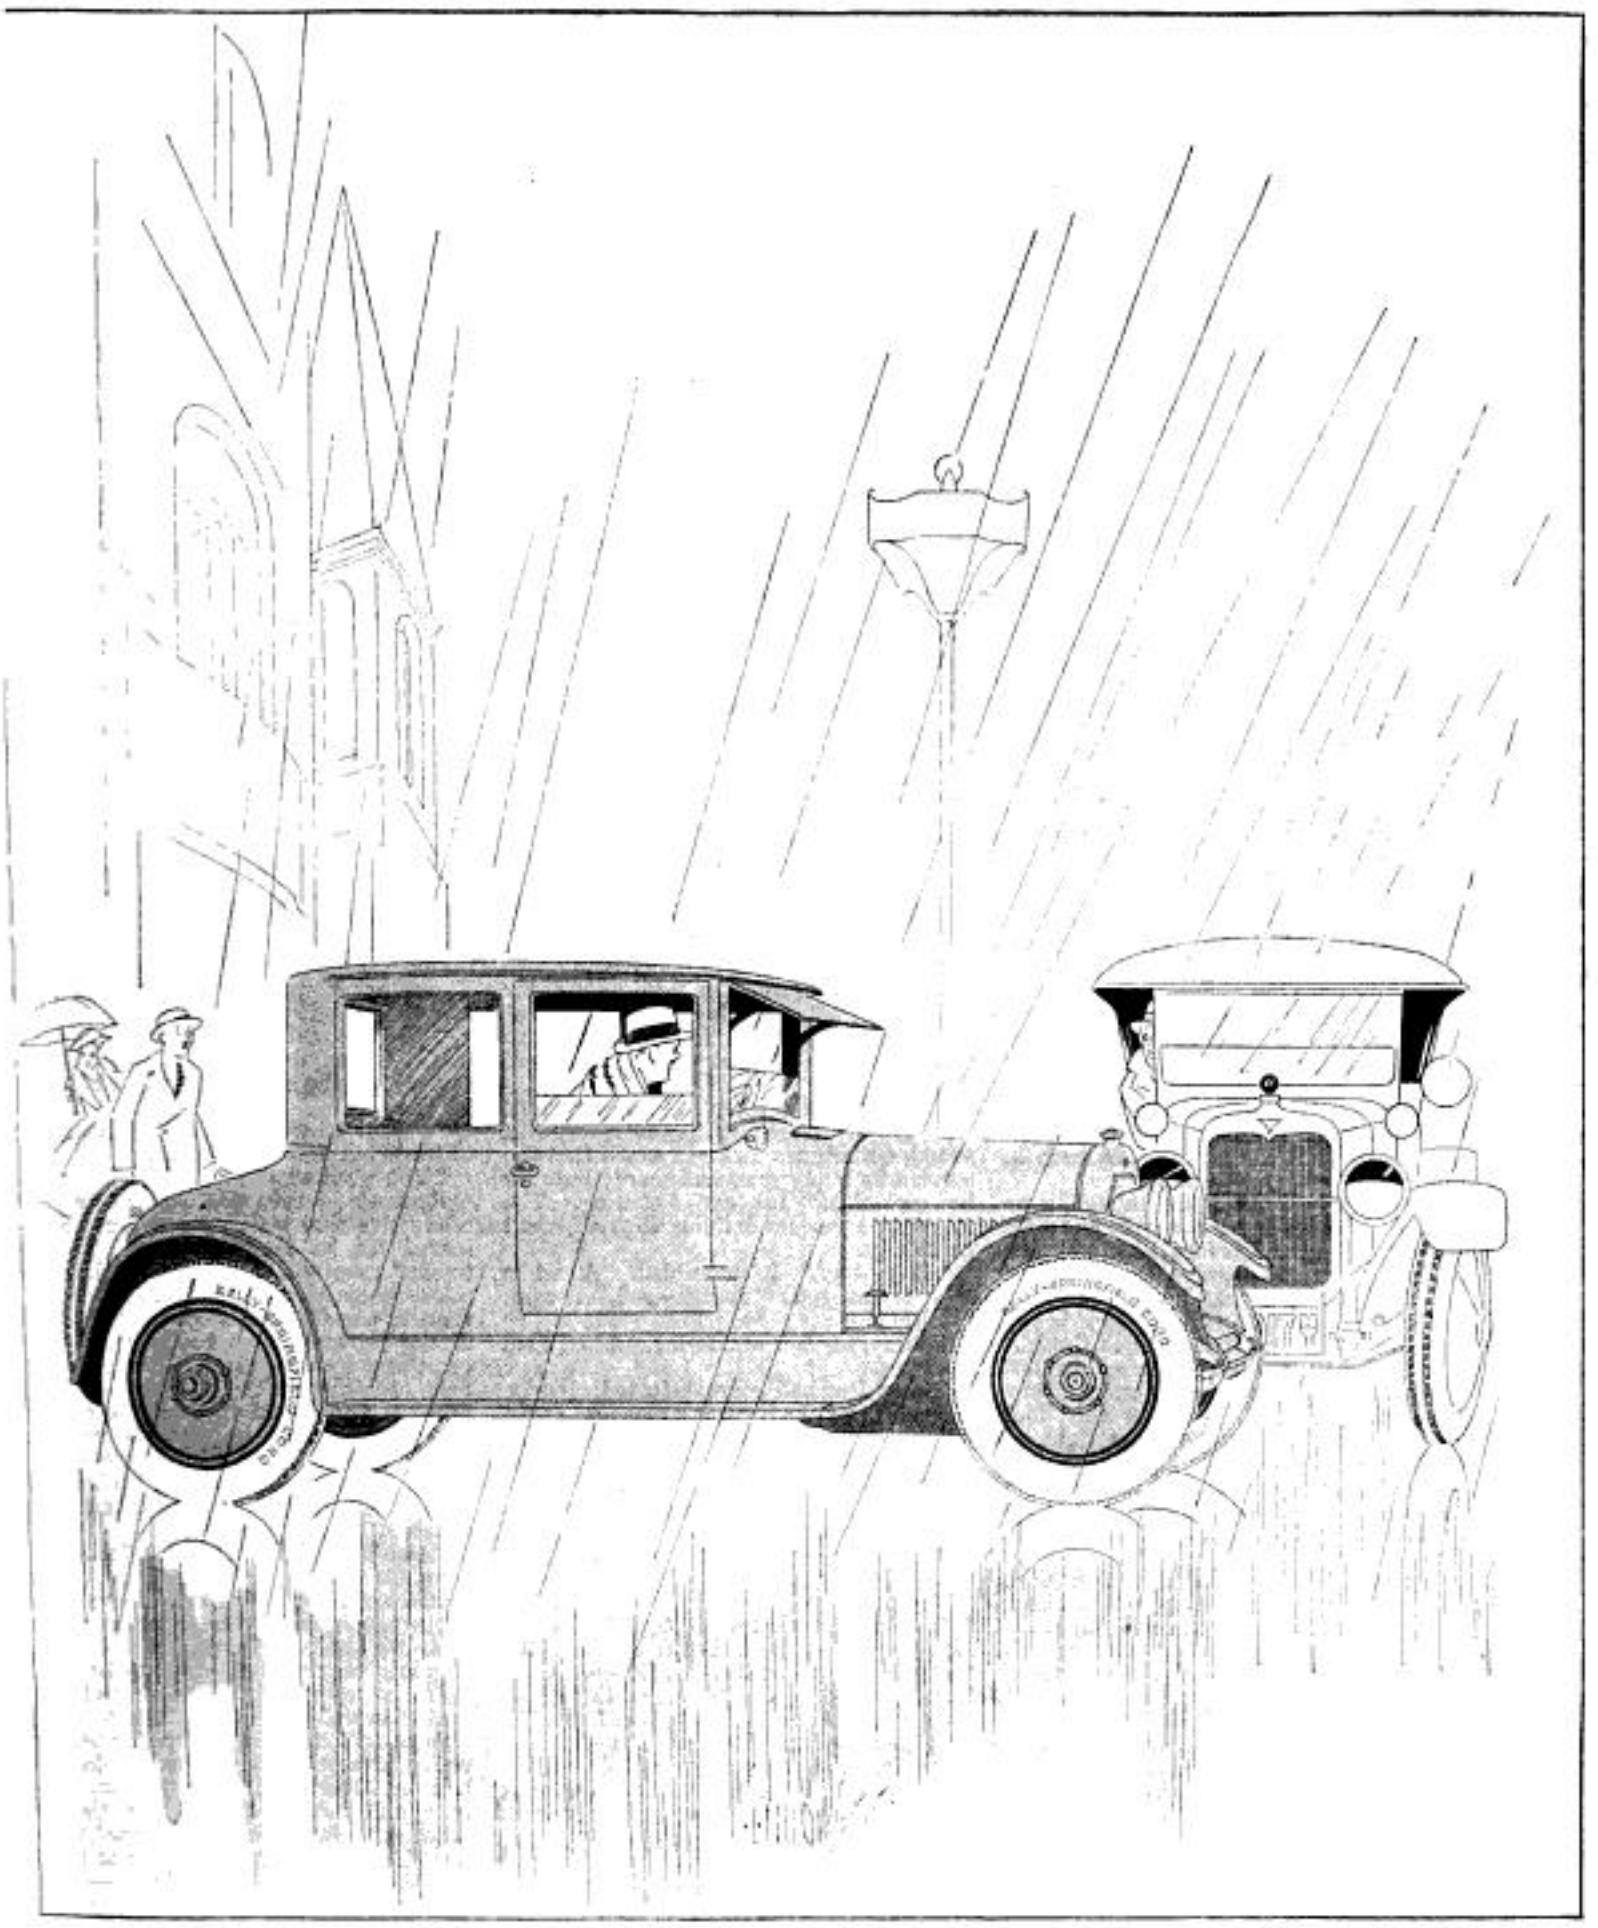
"Your mistress—is she in?" he asked i
a guarded voice.

"She's out, sir. She's dining somewhere
then going on to a dance afterwards," th
man replied. He stared at the visitor, hi
wonder growing. "You're all wet, sir. Ha
something happened, sir?" he faltered.

The question Nat Truax didn't answer.
A harsh laugh came from him.

"A dance, eh?" he croaked. He thrust hi
way into the hall, the water dripping fro
his face, squelching from his soaking shoes.
"Show me upstairs," he ordered brusquely.

The servant's face lost for the momen
its usual air of obsequious deference. He
eyed the visitor with a fishy, uncertain eye.
"Sorry, sir, my mistress said ——" he be-
gan; but a growl, a snarl almost, cut him
short.



"Take me upstairs!" Nat Truax ordered.

The man, after a glimpse of the visitor's
face, closed the door and silently led the
way up the staircase.

The hangings of the house, the pictures
and other ornaments, the deep pile of the

(Continued from Page 46)

carpets and rugs upon the floor—were all further evidences of the costly luxury which made the place distinct; but if Nat Truax marked it nothing of that showed either in his face or in the feverish animation of his eyes. The servant, now silent, led him from the floor above still on. Through two other floors they passed till they came to the floor at the top. There, in less ornate, less richly furnished surroundings they halted before the door of a room in front. Nat Truax touched the manservant on the arm.

"Anyone else up here?" he asked sharply.

"No, sir," said the servant; "the attendant's still at his dinner below." He looked at Nat Truax as he spoke. His air was deprecatory, evidently aghast. He cleared his throat. "The mistress, sir, she will be angry if she hears," he remarked. "She said if you came I was not to let you in. If you needed money I was to give it you, Mr. Truax; but you were not to get upstairs."

"Money, eh?" said Nat Truax. His lip curled itself. "You tell her to keep her money till I ask her for it." He made a motion with his hand for the man to stand aside. "Keep that fellow, the attendant, downstairs," he directed.

"I'll do it for you, Mr. Truax; it's as good as my place, though," said the man.

He stood aside then and, opening the door of the room in front, Nat Truax stepped within.

An electrolier overhead was lighted brightly and, closing the door behind him, the visitor stood gazing about him momentarily. A bed, a big old-fashioned four-poster, half filled the room; and at the foot of the bed was a heavy leather-covered lounge. On this lay sprawled a huge loose-limbed figure, a man, clad in trousers and a corded brocade dressing gown. The robe was open at the throat, disclosing an unkempt collarless shirt, the shirt and the silken texture of the gown soiled each in front with spots, greasy stains.

The man's face and figure, though, were what at once would have caught and held an observer's eye. His face, like the frame it surmounted, was massive, quite huge, in fact; but the eyes that looked out from beneath the man's bushy, shaggy brows were hardly the sort that one had thought to find in features, in a figure, like his. They were dulled and wandering. They raised themselves heavily as the door opened; but in them was no light of recognition.

Crossing the room Nat Truax went to the couch. He stood for a moment looking down at the loose, sprawling figure lying on it.

"Harvey, it's Nat—Nat Truax," he said.

It was then, a second time that night, that Nat Truax was recognized, known.

Harvey Nash looked up at him, his dulled eyes lighting to a flicker of remembrance stirred in the remote blurred cells of his brain. Though he had not died that night when the stroke laid him on the floor beside the ticker, it might have been better for him if he had.

"Nat? Old Nat?" he quavered. His voice, querulous and thick-tongued, droned on its lifeless monotone. "What's happened to you, Nat? You've changed since last night—yesterday."

Yesterday? Last night? It was twenty years and more since that night, the time drifting now through his shadowy mind.

His voice, fretful and petulant, gabbled on. The twenty-odd years were as the day before in his dim, disorganized wits. It wasn't right, droned Harvey Nash, that they'd kept him here all the day, locked in his room like this. He wanted to get out. He wanted to get downtown to the Street. Something was doing in the Street. She wouldn't let him go though.

Who the she was Nat Truax had no need to hear.

Once, years before in that same room, he'd had it out with Harvey Nash's wife. She had been Nat Truax's stenographer—Nash's, too—in the days when they'd traded together; and but for Nat Truax —— Well, that, too, was twenty years and more ago. It was Nat Truax, though, who'd made Harvey Nash take her uptown one day and marry her. Let that go, however. The time Nat Truax had faced her there in the room was years after that. It was after the night, too—long after it—when he had brought home Harvey Nash the last time from Wall Street. She had planned to send Harvey away, it seemed; arranged to get rid of her encumbrance. Nat Truax had stopped it, that's all.

He was not thinking of that now, however. He drew in his breath, its shrill sibilance whistling in the stillness of the room.

"Look!" he said. "See what I have here, Harvey!"

He had, as he spoke, slipped a hand into his pocket and drawn it out again. Once more Harvey Nash's mouth had gone slack and drooling, but with his other hand Nat Truax gripped him by the shoulder.

"Look!" he whispered.

It would be hard to depict the feverish fire of anxiety and expectation in his eyes, for on the outcome the man hovering over the couch had hazarded all his hope. Before the dulled orbs of the other, once his pal, he dangled the tape he'd brought that night from the brokerage office.

"D'you see it, Harvey?" he said.

"Yes, I see it," quavered Harvey Nash. He gave a momentary, meaningless giggle. "What d'you bring me that for, Nat?"

The sweat had started on Nat Truax's brow.

"Read it!" he said hoarsely. "Show me how you used to do it, Harvey! You can show me, can't you?"

A whimper came from Harvey Nash. "My shoulder, you're hurting it," he complained.

His eyes ablaze, Nat Truax tried it again.

"Show me, for God's sake, Harvey!" he said. "It's Nat, old Nat, who's asking you!"

It was ten minutes later when Durkin, the manservant, uneasy and apprehensive now, hurried up the stairs. It was, as he'd said, worth his place to let the visitor in; but as he reached the top-floor landing he paused. Nat Truax he had known for years; and after the look he'd seen that night on his face Durkin had no wish to rouse him. He stood at the stairhead and listened.

The door of the room in front was shut. Through its paneling, however, came a sound, a murmur. It was a sound that the servant for many years had heard; but now he cocked up his ear, listening. The murmur, a voice mumbling to itself, went on fitfully.

"Buy—buy," it mumbled. A while later it changed. "Switch—sell," it said; "sell."

Durkin, his face wondering, pushed open the door.

The visitor had gone, departed; but on the couch sat the servant's master. In his hands Harvey Nash held a narrow paper ribbon, yards and yards of it; and he was running it through his fingers, muttering to himself as he scanned the cryptic letters and numerals printed in its face.

"Sell," he was saying; "sell; switch—buy."

IV

THE market opened at ten o'clock. A half hour, however, before that time the customers' room at Rooker, Burke & Co.'s began to fill with its daily throng of dabblers. The night before, it seemed, the list had closed feverishly hectic and uncertain; and that something was doing in the market was evident not only from this; it was visible also in the general uneasiness that charged the atmosphere.

Beeks, the manager, moved about in the growing crowd. The nervous anxiety his customers showed, though, was too old a story to Beeks to let it affect his affability, and he was as urbane and gentlemanly as ever. In the background Buck Rooker hovered, too, the familiar stub of a cigar clenched betwixt his jaws. Activity of any sort meant, of course, commissions; and Buck's face reflected his satisfaction. As ten o'clock drew near he moved out to the front of the room.

"Gentlemen, your attention," commanded Buck.

It was the head partner's habit each morning to begin the day with a little discourse on the market. Its technical position he referred to first, the term dear to him; after which Buck gave to the dabblers—or such of them as cared to listen—his advice on making their trades. The long pull—that is, lengthy, waiting trades—Buck seldom, if ever, favored. "In and out"—this he advised always—"in and out." The process naturally meant frequent commissions.

"Gentlemen ——"

Buck had reached this far when he stopped. The door of the brokerage office opened, and in walked Nat Truax.

The firm's old customer, the man it had closed out the day before, came in a hurry, it appeared. His face was moist; it w white too; but his eyes, in contrast w his skin, were burning. Thrusting a pa way through the throng he made his w toward Rooker.

"Buck, I want to see you," he said.

Buck scowled. Interruptions like this was not accustomed to.

"Just a moment," he said austerely.

"No," said Nat Truax; "now!"

Beeks, in behalf of his employer, beg to bristle.

"Say!" he said.

The look Nat Truax shot at him w menacing. The threat, too, of its tru lence was imminent; and Beeks fell ba aghast.

"What d'you want, Truax?" growl Rooker.

With a jerk of his thumb Nat Truax dicated the private offices at the ba "Step inside, Buck," he said; and, su and grumbling, Rooker did as he w directed.

The night before, Nat Truax again h not slept. The doctor had come, and had found him at the lodging house on return from the trip uptown. Joe Ca right's widow might not die; but it wou take careful attention—money, too—save her. "How much money?" demand Nat Truax. The doctor didn't know; was impossible to say with pneumonia.

When the doctor had gone, however, N Truax went back to his room. There t money he had left he divided into tw packets. One of them, then, he put ba in the lining of his coat, and sewed it fa again. The other he slipped into h pocket. Five hundred dollars. It was his pocket now as he closed the door Buck Rooker's private office and turned t face the broker.

"Well?" inquired Rooker.

Nat Truax was breathing deeply. I five minutes or so the market would ope for the day.

"I want a room, Buck—a private roo to trade in," said Nat Truax.

"You want wha-at?"

Rooker's drawl was expressive. Th rooms like that kept by the firm were n served for its heavy traders. The cu tomers' room was where the small fry, th pikers, congregated. Nat Truax's demand though, was not just a whim of his. Eac of the private rooms had a ticker of it own; and nothing less would do Nat Trua now. It was sink or swim with him. Fo this last time—and it would be the last that was certain—he must be where h could have quiet, all his faculties concen trated in that final trading. Rooker's gri widened. As the man at the door saw it h shook.

"Don't laugh!" said Nat Truax; and from his throat came a wheeze. It wa thousands of dollars that he'd spent in the brokerage office; and he shook again. With fumbling hands he felt in his inside pocket, stepping toward the broker as he did so "There's my margins," he wheezed.

Rooker methodically counted the money handed to him. There were five hundred-dollar bills in the roll—five hundred dollars—a shoestring. The amount would margin fifty shares of stock; and the sweat beading his face Nat Truax waited, watching. The tip of his tongue for an instant wet his lip. If Rooker said no ——

The broker slipped the bills into his pocket and Nat Truax stirred swiftly.

There was a ticker clacking and chattering in the corner; and for a moment it had paused, its type wheels whirring aimlessly. Then with a sudden resounding thump it burst forth into a renewed reverberating clack and chatter. Outside, too, the sound of a sudden animated stir ran through the customers' room.

"Quick!" cried Nat Truax.

He sped to the machine; and with the tape stretched between quivering hands he hung above it, his eyes gleaming. At the same time from the room came a cry, shrill and vociferous.

"They're off!" it piped.

It was ten o'clock, and the market had opened for the day.

Only for an instant, though, did the man hovering over the rasping, thumping machine linger there beside it. The tape he gave a swift eager glance; and tossing it from him he turned and sped toward the door. At the door he halted, his hand on the knob, and looked back hurriedly at the now wondering Rooker.

"Wait! I'll be back!" he barked. "Don't let anyone in here till I come!"

Lens Achievement

The making of fine lenses is no longer a mysterious art locked in the minds of old world craftsmen.

Through its staff of optical mathematicians, through its Research Laboratory and by means of testing apparatus of the utmost exactitude, the Kodak company has again proved that we here in America can equal the world in the scientific production of instruments of precision.

The production of the Kodak-Anastigmat lens is a distinct achievement—not merely in the fact that it is at least the equal of the finest anastigmats made anywhere in the whole world, but in the further fact that through the use of scientific, specialized machinery of the utmost accuracy it is made and sold at a price which is bringing the anastigmat advantages to hundreds of thousands of amateurs who have not hitherto felt they could afford a lens of the finest quality.

Send for the free booklet "About Lenses."
It contains interesting information that you ought to have.

Eastman Kodak Company

Our Policy

This is our policy, laid down fifty-eight years ago by the four brothers who founded this house: to make our signature an inviolable guarantee of quality when affixed to any article of mens wear

Wilson Bro's

The signature, Wilson Bro's, is not only a guaranty of quality but it is also an unfailing index of fashion and correct dress. Look for this signature on hose, shirts, pajamas, belts, underwear, cravats, garters, handkerchiefs, nightshirts, mufflers, suspenders knit gloves

WILSON BRO'S, CHICAGO

(Continued from Page 48)

Then flinging open the door he was gone. Buck Rooker, his mouth agape, stood ere with the cigar stub drooping from his s.

"Bug!" said Buck. "Nuts!"

V

THE market opened with a whoop. A thousand Steel came over at the first ansaction, the price an eighth up from the se of the night before. A hundred-share t followed, the quotation 80 flat. It was llowed by another hundred-share lot, en another, each at the same price, 80. hen followed a flock of other quotations—eading, Soup, Katy, Mex Pete, Little nnie—each in turn spread on the flowing pe. Steel was the leader though; and moment later in the customers' room rose shrill exuberant voice:

"Five hundred Steel at an eighth!"

By all the signs, the dope the reader, the dept, gets from the tape, that meant inside accumulation—the time to buy. It is a the trend of the big blocks, briefly, that he tape reader gets the hint, his hunch. The tape tells the story—or so they say. Hardly had the man at the ticker, however, shouted out the price when he raised his voice again:

"Steel—five hundred at 80 flat! Another five hundred, the same. Steel, 79—Five hunded at the same. Steel, 80!"

The customers' room was in a ferment. The dabblers, eager for action, like all their sort, milled about in their anxiety to get aboard. In a market like this, though, it would have taken a seer, a Harvey Nash, in fact, to tell which way the cat would jump; and a shrill explosive outcry escaped from one of the most agitated among the customers.

"Himmel, I shall bust!" he vociferated.

The customer, a short, rotund person with protruding eyes screened by heavy, thick-lensed glasses, rushed up to the manager and began to paw him wildly.

"Vat's der dope, Beeks? Der markget—vich vay does she go?" he spluttered.

Beeks gave a grin. "Search me, Bimmy. Why don't you read the tape?" he drawled.

Mr. Bimberg—for that, it seemed, was the gentleman's name—at once exploded again. "Read der dape, vat!" he shrilled. "Is it a choke you make off me?"

If it was a joke Mr. Bimberg failed to see it. He was a specialist, it appeared, in five and ten share lots; but though wild like the rest to get action, how could a man lay a trade in a market running—as Mr. Bimberg termed it—"sideways"? "Sideways" seemed, too, an apt term for it. Then, as the hands of the clock marked ten minutes after ten, the door of the brokerage office opened; and when the crowd thronging the room looked around and saw who stood there a low murmur of wonder and astonishment rose from it.

It was Nat Truax again. This time, though, he was not alone. Two others were with him—a boy and a man; and the crowd stared.

"This way, Joey," said Nat Truax.

It was to the boy he spoke. The boy, a lad of twelve or so, was on the other side of the man Nat Truax had with him. The man's arm Nat Truax had in his, while the boy, his face set and intent on his task, guided him by the elbow. It was this—the figure between them—that made the crowd stare. As the trio started to cross the floor the throng parted, making a pathway for the three.

"The back room, Joey," directed Nat Truax.

Harvey Nash in that brief moment of his appearance seemed to have undergone a change. As the door had opened and the crowd first saw him his mouth was slack and drooping, his dulled eyes vaguely roving. It may have been the old, long-forgotten sights and sounds of the brokerage office that stirred him now—the crowd, the familiar quotation board, the rasping clack and clatter of the stock machine; but whatever it was, a swift, vital transformation swept into his face and frame. His eyes lit alertly, and he threw back his head on his shoulders. From him came a laugh, a chuckle of excitement, animation.

"Hey, Nat!" he chirped.

"Come on, Harvey," urged Nat Truax.

They were halfway to the room at the back when Beeks blocked their path.

"Here! What's this? What's this?" cried Beeks.

Nat Truax bared his teeth at him.

"Out of the way, you!" he snarled.

A thrust of his arm swept the manager aside. Then the door of the back room opened and Buck Rooker emerged. He had sensed the commotion outside; and his jaw was squared belligerently.

"Sa-ay!" he said.

That was all, though, he said. The door Nat Truax opened; and the three, the two men and the boy, stepped inside. Then the door closed behind them; and out in the customers' room Buck Rooker stared at Beeks.

"Say," said the broker, "can you tie it?"

Beeks couldn't. If Beeks and his boss, however, could have looked at that moment inside the doors of a house uptown near the Drive they might have had an explanation of the morning's doings. It would not have left them any the less wondering and startled, perhaps; but whatever the case, in a room on the top floor of the house stood a middle-aged, overdressed woman with frizzed hair and a doll-like, vapid face. Now, however, her face was crimson with anger.

A man, a servant, stood at the door; and it was he, evidently, who was the object of her wrath. "You say you don't know?" she was saying. "Why don't you know? I told you, didn't I, not to let that man inside?"

"I didn't let him in, Mrs. Nash," protested the servant; "it was that boy, the kid with him, who did it. The boy said he wished to see you; and when I went upstairs to find if you was awake he must have opened the door for the man. I didn't see him, anyways, till he had the master down the stairs and outside, driving off in the cab."

A look of uneasiness for a moment replaced the wrath blazing in the woman's eyes. "You don't suppose that man's heard anything, do you?" she faltered; and the servant looked at her queerly.

"About your putting the master away, ma'am? Sending him to that sanatorium?"

"Yes."

Durkin, the servant, didn't know. All he knew was that Nat Truax always had threatened to make trouble if anything like that was tried. The explanation, though, was all very simple. The night before, Nat Truax had for once and for all found out that he'd never solve the riddle, the trick of reading the tape; and that was why he'd taken Harvey Nash to Rooker, Burke & Co.'s. It was to find out if his old pal still could do it.

Down at the brokerage office the door of the back room opened; and the boy, Joe Cartright's son, appeared. His eyes were popping; yet for all that, his air was boyishly alert and confident.

"Hey, Mr. Rooker!" he piped. The broker he beckoned to imperiously. "Mr. Truax wants you—quick!"

Rooker came hurrying. Inside the room the ticker was stamping and chattering in another reawakened burst of sound; and over it hung Harvey Nash, his bulky figure quivering and the tape stretched between his hands. Beside him stood Nat Truax, his coat off and a penknife in his hands. The lining he again had ripped apart; and from it he took the bills he had sewed there the night before. In his air now was no longer any uncertainty.

"Here," he said; and the money he handed to Rooker; "there's some more for margins."

Then he turned to Harvey Nash.

His eyes on the tape Harvey Nash was chuckling and mumbling to himself.

"Steel!" he was saying. "Steel!"

Nat Truax wet his lips. It was only for an instant though. His thumbs he put into his armpits; and his tone, when he spoke, was as airy and nonchalant as if he, too, for the moment, had set back the clock twenty years or so. One had to look close to see how he was shaking.

"Well, Harvey," he said, "what's the dope?"

"Sell," said Harvey Nash.

VI

THAT day's happenings in the market the customers at Rooker, Burke & Co.'s will long remember. They will remember, too, the doings at the brokerage shop. All around, it was an occasion they would have reason to recall. Harvey Nash few of them had ever heard about, while fewer yet had ever seen him. That something, though, was going on in the back room of the odd-lot house none had any reason to doubt.

Buck Rooker's face when he emerged from the inside office was dazed and wondering.

Most Widely Quoted In Foreign Press

Wythe Williams, special correspondent of the Public Ledger, recently cabled from Paris, as follows:

"The Public Ledger leads all American and English newspapers this week in the quotations from the English language press appearing in Continental newspapers. The Havas Agency and its connections, covering virtually all of Europe, give the Public Ledger the leading position in cable reports of the editorial comment on the Conference, especially on the Public Ledger article supporting the justice of René Viviani's 'fervent' speech at the conclusion of the quadruple entente.

"It is notable that the Public Ledger is quoted above the British Press, which because of the short time between Paris and London, usually receives most attention in the reflection of Anglo-Saxon opinion on questions of world importance."

Those 16 Foods

In each dish of oats

The oat supplies 16 needed elements. It is almost a complete food—nearly the ideal food.

As a vim-food it has age-old fame.

As a body-builder it holds premier place.

As a nutrient, every pound of oats will yield 1810 calories of food.

It supplies the vitamines.

It is rich in mineral salts, including

Potassium	Calcium	Phosphorus	Iron
Sodium	Magnesium	Sulphur	

That is why the oat dish holds a unique place in the diet. It helps to guard one against the lack of any needed element.

And that is why the oat dish should be made inviting. Make it so rich, so flavory, so delicious that children will eat an abundance.

Quaker Oats does that for millions the world over.

Quaker Oats

Flaked from queen grains only

The flavor that won the world

Made from just the finest grains, the rich, plump, flavory oats. We get but ten pounds from a bushel.

The oat lovers of 50 nations send to us for Quaker because of that super flavor.

Packed in sealed round packages with removable cover

As he hurried to the booth to telephone the order Nat Truax had given him, Steel by fits and starts had crept up half a point. The order, however, he had hardly given over the wire when Steel came to a standstill. Five minutes later it began to slide. With it went the entire list. At half past ten Steel was a point and an eighth under the opening; and from the thick of the crowd again arose another sudden explosive ejaculation. It came, it appeared, once more from Mr. Bimberg.

"Himmel, I shall bust!" he ejaculated.

Mr. Bimberg, it seemed, had been whipsawed. Having gone short on Steel at the outset, he had switched to the long side, only to have the market go again against him; and now shoving his way through the crowd, his elbows going like flails, Mr. Bimberg precipitated himself on Buck Rooker.

"Say! Vat's heppening?" he vociferated. "Nat Truax he has something up his sleeves, ain't it?" Puncturing the air with an eloquent if somewhat wildly agitated thumb he pointed to the room at the back. "Vat's der dope, Buck? Does he buy or does he sell in there?"

It was no business of Rooker's to say. He shook off Mr. Bimberg's clawing hands; and he was turning away when the door of the back room opened once more and the boy appeared at it.

"Hey, Mr. Rooker!" he shrilled.

Rooker again went hurrying. Inside Harvey Nash still stood at the ticker; and beside him was still Nat Truax. "Cover," said Harvey Nash; "cover; then switch to the long side. Buy!"

The order Nat Truax repeated; and closing the door, at the same time evading the now wildly agitated Mr. Bimberg, Buck Rooker hurried to the telephone. Again as he gave the order Steel began to react. By fits and starts once more it swung back toward its former figure; but ere it reached it the boy once more was calling from the door for Buck Rooker.

"Switch," said Harvey Nash. "Sell Rebecca now!"

Nat Truax's eyes as he gave the order were like lamps. "And pyramid!" he said.

Rooker understood. The order was to sell Republic I & S; and add to the transaction the profit they already had. Not many minutes after that U. S. Steel began to slide again, and with it slid Rebecca, the latter tumbling as if the props had been kicked from under it. Harvey Nash had read what was coming from the tape.

How many times during the next two hours or so Buck Rooker shuttled between the customers' room and the office at the back not even he could have told. To the dabblers outside, however—Mr. Bimberg, in particular—the broker seemed kept upon the jump. The day Mr. Bimberg had not enjoyed—a good many of the others with him. In spite of his efforts to keep on the right side of the now hectic, feverish list, the small rotund gentleman seemed to have guessed wrong in at least four out of five of his trades. Now cleaned out, his margins reduced to a few remaining dollars, he was preparing toward the close to leave the brokerage office when again the door of the back room opened.

"Hey, Mr. Rooker!" called Joey Cartright.

This time the boy did not beckon imperiously to the broker. His eyes were round, true; but now they looked a little frightened. When Buck Rooker went to the door and looked within, his air, too, was startled.

"Say! What's wrong?" he said.

The ticker in the corner had again set up a clattering chatter, striving to keep up with the prices now pouring in on the tape; and over the machine hung Nat Truax, not Harvey Nash, the tape stretched in his shaking hands. Sunken in a chair, his chin on his breast and his eyes once more dulled and roving, Harvey Nash was muttering to himself.

Nat Truax dragged the tape from machine; and bending over the figure h dled in the chair he held the tape be the other's eyes. The market was wave now, shaking to and fro; and on Truax's face the sweat had started. To last dollar, his profits pyramided in margins, he'd played on that one last t

"Look, Harvey!" he croaked.

The man in the chair, his mouth s and drooping, looked up at him with du roving eyes.

"I'm tired, Nat. I want to go h now," said Harvey Nash.

The tape fell from Nat Truax's ha "Here," he said abruptly to the boy. boy went toward him; and fishing into pocket Nat Truax drew out a coin. "Ch it into the air, son. You may have lu I haven't." The boy, as he was bid tossed up the coin; and as it fell to floor Nat Truax put his foot upon "Heads I buy, tails I sell," he said. T he took his foot from the coin.

It was tails; and his voice cracking, Truax turned to the broker.

"Sell," said he.

It was at four o'clock that afterno when on the top floor of the lodging ho over near the ferry there was a sound scurrying footfalls from the stairs. T door of a room at the back opened; an young woman in a neat crisp gown, a nu stepped out.

"Hush!" she whispered.

The boy at the stairhead halted and an instant he caught at his breath.

"Mother—she's all right?" he falter Then, ere the nurse could restrain him, had pushed by and bolted inside the roo The woman in the bed, though, was i asleep.

Her eyes opened; and as she looked at him Joey Cartright gave a cry. It w more like a shout though.

"Mother!" he piped. Then jumping and down in his excitement he held up long cardboard box he had in his han and from it he began stripping the co erings.

"Not flowers!" exclaimed his mother.

"Yes, flowers!" cried the boy. "N Truax stopped and bought 'em."

There was another sound of footfa outside, and a moment later Nat Tru stood at the door. His face, however lacked the boy's fire and excitement. was haggard and drawn; and as t woman saw it a shadow came into her ey It was as if she had seen that look befo and had learned to dread it.

"What happened?" she breathed.

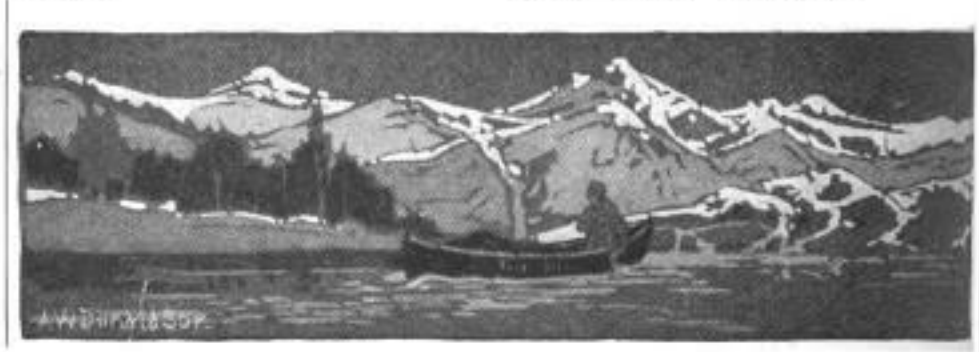
A smile for an instant twisted N Truax's mouth.

"It's all right, my girl," he said. "You' going to get well, and from now on you ar your boy don't have to worry."

"Yes—but how about you, Nat Truax? she said queerly.

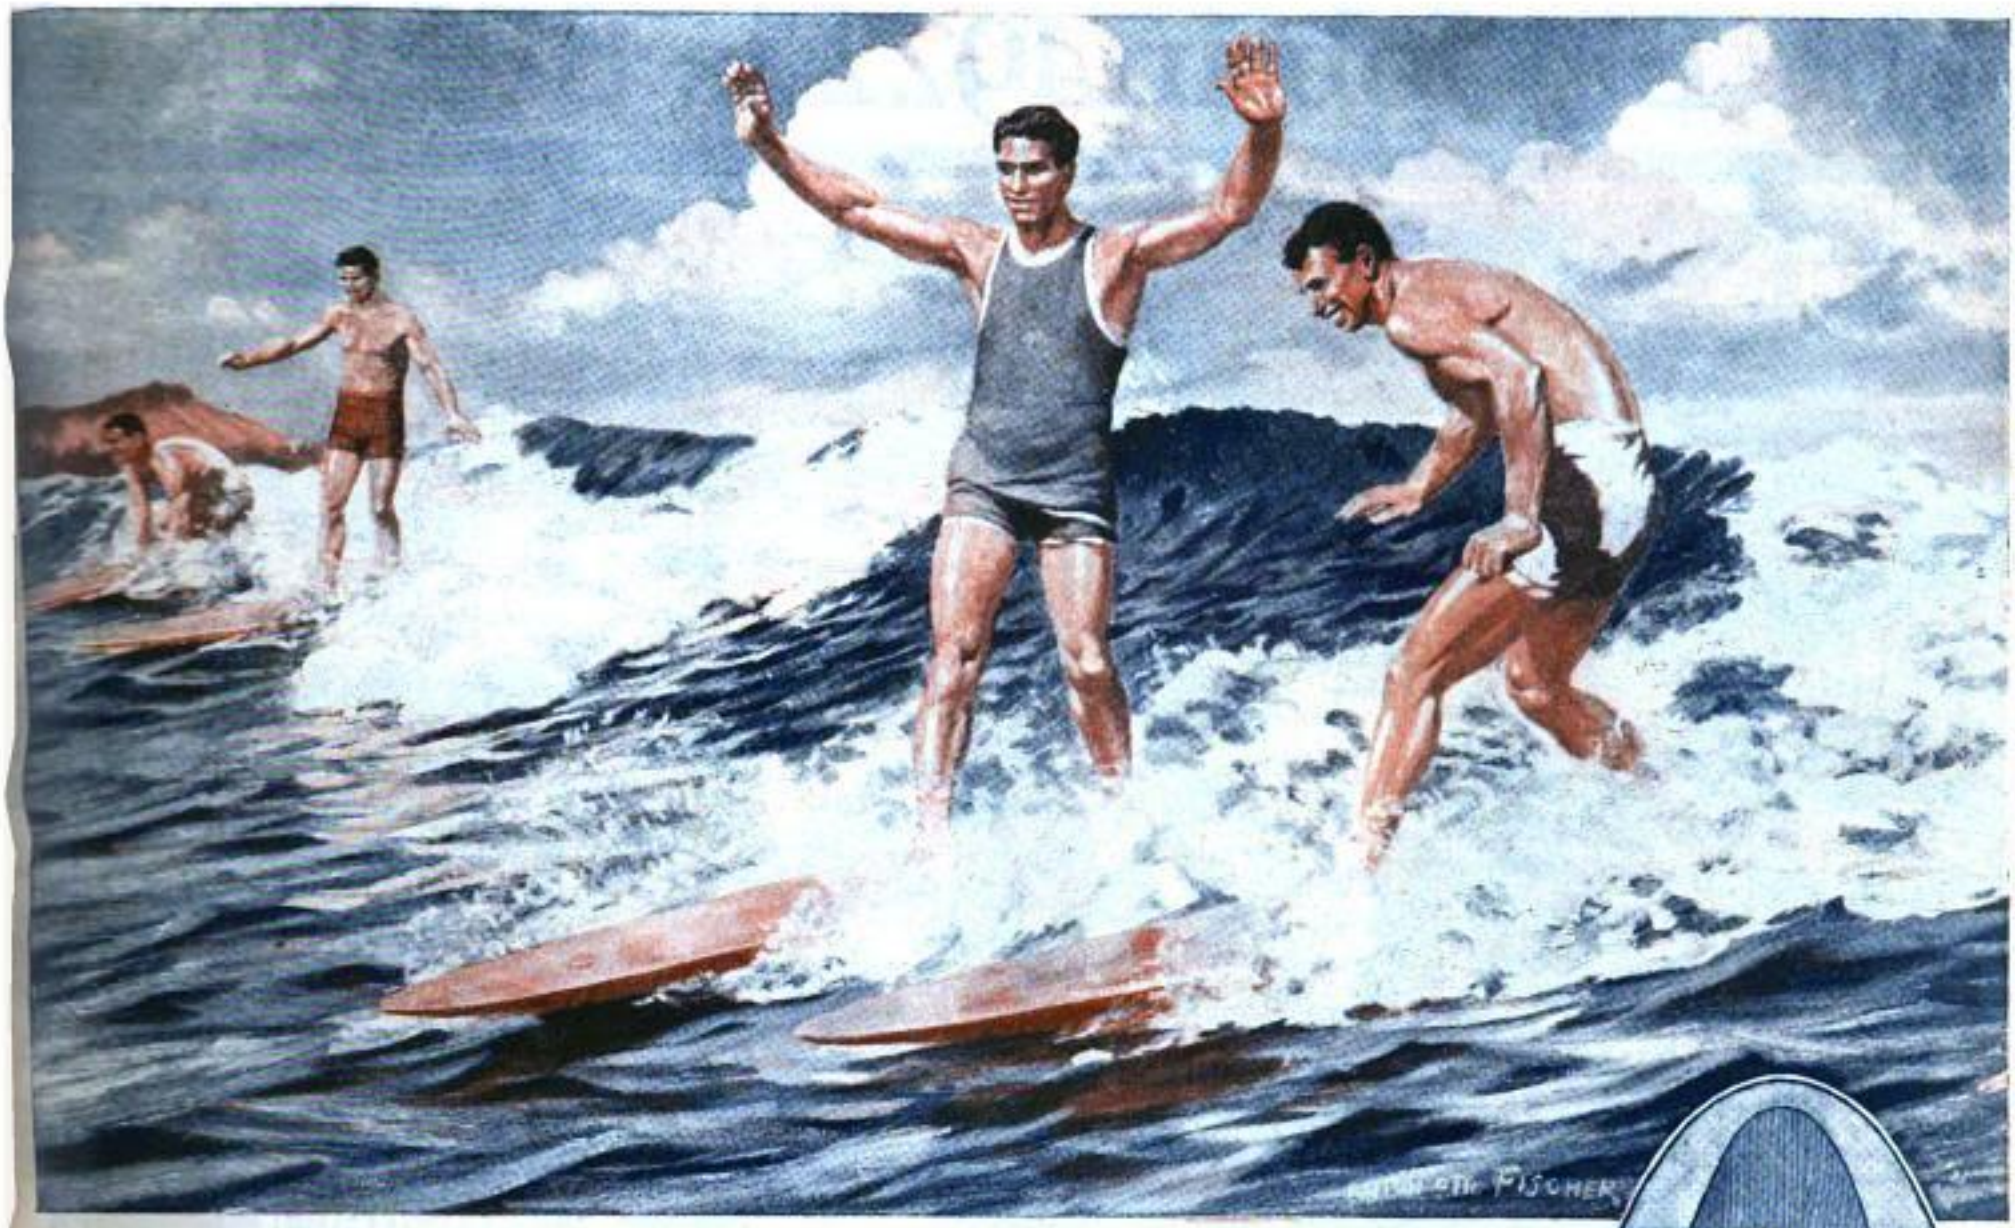
Nat Truax again smiled that thin, wea ied smile of his. What he had undergon in that moment at the brokerage offic when he had stood with his foot on the coi the boy had spun in the air only he woul ever know.

"Yes, I'm all right," he said. "I'm going away somewheres—some place i the country maybe; and I'm going to tak an old friend with me. We two will be to gether there again; and that's all I want, guess."



She was still gazing at him, her breat held.

"Then you—you won?" she faltered.



From his pocket he took a strip of pape and held it where she could see it. Th paper was a check; and as she saw th figures on it she gasped.

"Yes, I won," he answered. Then h drew in his breath; and with a heave of hi shoulders as if he freed them from a load h spoke again.

"Yes—and it was worth the price, I guess," he said. "I'm cured."

Valspar—the Varnish of countless uses—

DUKE KAHANAMOKU of Hawaii, famous athlete, expert on the surf-board and world champion 100-metre swimmer, has discovered still another use for Valspar. Duke Kahanamoku writes:

Honolulu, T. H., May 3, 1921

"Have used Valspar on my surf-boards for several years, and find that it preserves the wood, because it is waterproof and prevents the water from soaking in. No matter how long the board is used in the water, the Valspar is not affected and does not change color."

DUKE KAHANAMOKU

Valspar is durable, easy to apply, weatherproof and *waterproof*—"the Varnish that won't turn white."

Valspar's well-known uses—on floors, furniture, woodwork, linoleum, airplanes, boats and railroad trains—are supplemented by countless others such as on

Baby Carriages	Golf Clubs
Window Screens	Tents
Trunks	Fishing Rods
Hand Luggage	Tennis Rackets
Wicker Furniture	Oilskins
Refrigerators	Gun Stocks
Fireless Cookers	Snow Shoes
Draining Boards	and Skis
Boots and Shoes	Etc., etc.

In fact, anything that's worth varnishing is worth Valsparring.

Don't overlook the coupon below.

The Big Job in 1922 is SELLING

The Same Store
poorly lighted and properly lighted. To get the good-lighting result shown in the large illustration, follow the simple rules stated in the lower right-hand paragraph, "Recipe for Lighting the Average Store".

Good Selling is Partly Good Seeing!

Other things being equal, the well lighted store will always be the busy store! Good lighting does make buying easier. Comparisons are readily made, details are clearly seen and quality is better appreciated when the eyes can aid in the purchase without strain and without fatigue.

Many store proprietors—you are possibly no different from many others—will say, "Yes, but *my* customers can see!" Is this true? Is it not possible that your lighting falls far below the modern standard? A recent survey in a large city was carefully made by experts with the following results: Out of each 100 stores examined, only two had "excellent" lighting, 23 "good", 15 "fair", 60 "poor". If the rule of probabilities holds good, then, your lighting is very apt to be less efficient than you have thought!

Yet correct illumination—the sort that adds to the results of each sales person—costs less than any other important item of store outlay. The recipe in the next column tells, in a few words, how to light the average store.

More detailed instructions will be mailed on request! National Lamp Works of General Electric Company, 303 Nela Park, Cleveland, Ohio.

Each of these labels represents a Sales Division equipped to give a complete lighting service.

Recipe for Lighting the Average Store

For most stores the following rules point the way to excellent illumination. *First*—Use 300-watt MAZDA Daylight lamps, or 200-watt MAZDA C lamps. MAZDA Daylight lamps are preferable, under most circumstances, because (1) they show colors more accurately, and (2) their light blends more agreeably with natural daylight. *Second*—the space between lighting units should not greatly exceed ten feet. *Third*—The lamps should be properly shaded. Shades and reflectors, when made of glass, should be of dense white glass rather than clear or frosted glass, and should surround or enclose the lamp. *Fourth*—Clean the lamps and shades once a month.

NATIONAL MAZDA LAMPS

THE SUN-HUNTERS

(Continued from Page 27)

er sun-hunters. He may change it, but re are few who are aware of it if he does. is the sun-hunter's uniform.

The sun-hunter is not recruited from y one class of citizens. The natives of orida, with their unflagging determina- on to place everything in the most favor- le light, tell you that they are bankers, erchants, doctors, lawyers, what not. ey'd have you think that most of them e bankers. As a matter of fact there are me bankers among them—and some bur- rs too. The bulk of them are farmers; a farmer can, if he wishes, arrange tters so that he has little or nothing to during the winter months. Next to them me contractors, builders and carpenters. he sun-hunters are the people who can away from home with the least amount trouble; and among them one finds re- l business men of all sorts—dairymen, tors, bankers, lawyers and similar folk. Such is the modern American migrant, Florida is the goal of his migration. s soon as the first snow begins to fall in e North, or when the earth has tightened under a black frost, the sun-hunters repare for their flight to the South. Great mbers of them travel by automobile; nd their automobiles are completely tocked with folding chairs, collapsible eds, accordion mattresses, knock-down nts, come-apart stoves, telescopic dish- ashers and a score of dishpans, tables, inner sets, tin cups, water buckets and toilet articles that fold up into one another nd look like a bushel of scrap tin.

In addition to this, each automobile carries a large assortment of canned goods. There are canned goods under the seats, slung against the top, packed along the sides, tucked behind cushions and stacked along the floor. Some of the automobiles are so well stocked with canned things that they could make a dash for the Pole. And as one passes some of them on the road they sound as though their owners were carrying a reserve supply of canned goods under the hood—loose.

Stamped-in-the-Can Sun-Hunters

It is due to the heavy weight of cans carried by these automobiles that the true, stamped-in-the-can sun-hunter is known to himself, to his friends and to his enemies as a tin-can tourist. He lives in more or less permanent settlements known as tin-can towns; and his interests are safeguarded by a flourishing organization rejoicing in the impressive title of Tin Can Tourists of the World.

The badge of the Tin Can Tourists of the World is a small white celluloid button with the letters T C T tastefully disposed on it in dark blue. The emblem of the order is a small soup can mounted on the radiator of the member's automobile. There is also a password which the members bawl at each other when they pass on the road; but this is one of the secrets of the fraternity that should not be profaned by publication.

The tin-canners organized in 1919 at the Tampa tin-can town and have held conventions there ever since. The present membership of the order is estimated by some of the most important officials, or khans, of the Tin Can Tourists to be in excess of 30,000.

Practically every Florida town and city, large and small, located inland or on the gulf or on the ocean, provides a tin-can town or a tin-can village for the Tin Can Tourists. Occasionally these towns are free and provide not only all the comforts of home but comforts that home never possessed for most of the tin-canners.

The largest and most celebrated tin-can town is in De Soto Park, East Tampa, on the shore of Tampa Bay. Hundreds of automobiles are lined up side by side throughout the winter in De Soto Park. The camp, which is carefully regulated and policed by the municipal authorities, is free. A trolley line connects it with the business section of Tampa. In the center of the camp is a pavilion, where entertainments are given. The camp has electric lights, running water, city sewerage, shower baths and an enormous hot-water tank. The tourists are permitted to send their children to the excellent schools on payment of fifty cents a week—which is too little.

Oddly enough fifty cents a week or twenty-five dollars a year is the amount that naturalization experts want to charge aliens for their schooling, but that Congress considers too high. It's not enough for American tin-canners; but it's too much for aliens. How does Congress get that way?

About the only things that aren't furnished for the tin-canners are free telephones, a free morning paper and free butler and valet service.

During the 1920–21 season there were great numbers of free tin-can camps throughout Florida; but Florida towns found, as the United States itself is beginning to find, that an open-handed and unsupervised welcome to any person who can scratch up enough money to take advantage of the welcome will bring nothing but annoyances, losses and misery in its train. The Tampa camp was a success because it was very carefully regulated and policed. Many of the other free camps, however, suddenly woke up to the truth of the old adage that people never appreciate the things that they get for nothing. This is of course the old problem of immigration reduced to a personal basis. The United States talks for a century about the necessity of restricting immigration and forcing aliens to pay for the privilege of enjoying America's benefits; but in that hundred years she does next to nothing. Florida towns, confronted with a mild edition of the same problem, take action overnight.

The Florida Refugees

What happened was this—and the same thing, to a far greater degree and with far more evil and widespread results, is happening to the United States and will keep on happening until immigration is rigidly restricted: Word began to go forth in the Northern States that free camping grounds were to be had in Florida towns and cities; that if one bought a secondhand flivver at the beginning of winter and beat his way to these camps he could live more cheaply than he could live in the North, could afford to accept lower pay for his services than could the Florida natives, and could go back North in the spring with money in his pocket and sell his flivver for what he paid for it. These are almost exactly the same reasons that brought a million immigrants a year to America from Eastern and Southern Europe before the war.

Florida has made it plain that she wants no more of these seasonal laborers who can't make a satisfactory living in their own communities. Most of them are so hard-boiled that a diamond-pointed drill is needed to penetrate their shells; and most of them have as much regard for neatness, cleanliness and the rights of others as a Berkshire hog has for a potato peel. Tin-can towns have begun to charge various prices for the privilege of staying in them—prices ranging from twenty-five cents a night to seventy-five cents a night or from four dollars to ten dollars a month. Even the free towns won't admit residents who wish to go to work each day. They've got to be tourists or devote themselves to taking the air. As a result the seasonal laborers who went to Florida for the 1921–22 season were taking themselves homeward early in 1922 and hurling many a deep, guttural, roughneck curse at the state of Florida as they went. America would get very rapid and satisfactory action on her immigration problem if her citizens could be brought into personal contact with its rottenness.

These automobile hoboes are about as welcome in Florida as a rattlesnake at a strawberry festival. The Florida newspapers, usually very slow indeed to find any flaws in anybody or anything that has secured a foothold in the state, emit poignant shrieks of rage at the very thought of them. Early in 1922 a North Carolina paper, with the smugness which characterizes the utterances of a resort newspaper when it thinks it is administering a painful black eye to another resort, stepped forward with a tale to the effect that 1922 was seeing a great exodus from Florida of broke, hungry and disheartened tourists. Instantly the Florida papers threw their palpitating typewriters into the breach. "The only Florida tourists beating it back to the North," declared the Tampa Tribune scornfully, "are the cut-rate, fly-by-night cheap skates who have been coming to the state and preying off the public for the past

THE WORLD'S GREATEST CONSERVERS OF PROPERTY — PAINT AND VARNISH

Don't let it go another day!

FOR weeks—months—perhaps years—many owners have been saying to themselves: "One of these days I must have that painting done." But as someone said: "One of these days is none of these days." Not until the thought is translated into action, is deterioration definitely checked.

Inside, too. Think of the floors and furniture—of the walls, wainscotings and windows—of the ceilings and stands—of the tables, bookcases and chairs—of the bureaus, mantels and beds—of the many surfaces that must have varnish, and paint, too, if they are to retain their attractive looks, stay clean and sanitary, and give years of faithful service.

If you have property that needs attention, the time to paint and varnish is *now*. There are reliable painters and paint dealers in your town. Talk with them about the painting you ought to have done. Don't let it go another day. The longer you put it off, the more money it will cost you, "one of these days." Save the surface and you save all.

TODAY it costs less to paint than it did. The cost of materials has led in the downward economic trend of manufactured products. But no matter what it costs, the fact remains that it always costs more not to paint than to paint. Rust and rot go on till you check them. The logical time to paint and varnish is NOW.

SAVE THE SURFACE CAMPAIGN
507 The Bourse, Philadelphia

A co-operative movement by Paint, Varnish and Allied Interests whose products and services conserve, protect and beautify practically every kind of property.

(Continued from Page 55)

years. . . . The state has enough own honest labor to take care of with- pening its doors to the floater who is to take the bread out of his brother's h for less than the honest price. This r Florida is taking care of its own out- rk men and women. The riffraff, the lence man, the faker, the wage cutter he public mendicant all get the cold der in Florida."

e true sun-hunter and the Tin Can ist in good and accepted standing are ved in most parts of the state with the quiet welcome that would greet the al of a new citrus fruit. The big re- like Palm Beach don't welcome the anners; but those resorts don't wel- e anyone who isn't able to spend at fifty dollars a day on the merest ntials. And there are numbers of g men employed by the leading Palm ch hostelries who have nothing but terable contempt for the person who n't spend one hundred dollars a day he is at Palm Beach.

far as I know, tin-canners have never mpted to wield their can openers at n Beach or Miami Beach; and it is ly probable that the regular Palm ch set would give the tin-canners even e of a pain than the tin-canners would the Palm Beach set. One can imagine anguish on both sides if Mrs. J. Vander- nk Fritter, of Park Avenue, and a party her prominent friends should, after g in bathing in full evening dress at A.M., emerge in a still potted state and smack into a flivver loaded with that ll-known tin-canner, Herman Blister, of kkhammer, Michigan, and his wife, ter, daughter and maiden aunt. The itter party might feel that its entire eve- g had been spoiled; but the Blister mily would probably feel that a sinister ud had descended on their entire season.

Roughing it De Luxe

The tin-canner spends, for his winter of avel, about the same amount of money at a seasoned Palm Beach mixer fre- ently spends in a couple of days. This 't exaggeration either.

On the road between Miami and Palm ach I encountered a commodious porta- bungalow lumbering noisily along in the neral direction of Palm Beach at the te of about fifteen miles an hour. It lled the entire road, which was nine feet ide at that point. There are many tretches of fine macadamized road in lorida which are exactly nine feet wide, so that when two machines pass each other ne or both of them have to take to the ditch. The reason for such peculiar road building is supposed to be that the road engineers took a look at the surrounding country, decided that nobody would ever be willing to live in it, and figured that all traffic along the road would run in only one direction—north. They were mistaken, as people usually are about the development of Florida.

At any rate this portable bungalow filled the road, and it continued to fill the road until it found a good hard place beside the road that would permit it to get out of the way without tearing itself to pieces. It had a thermometer hanging beside its back door in an attractive manner, and three neighborly looking people were sitting placidly on its glassed-in front porch. Across the base of the front porch in large gold letters was painted the owners' ad- dress, from which fact one might suspect that the owners were not persons who were striving to hide their lights beneath a bushel, or who would shrink timidly from publicity.

When questioned, the suspicion became a certainty. The owners of the portable bungalow proved to be typical Tin Can Tourists, equally ready to share with you their last tin of Norwegian sardines or Chicago baked beans in the Boston manner, or to furnish you with concise and intimate information concerning their own or their neighbors' business and family affairs from the panic of 1907 down to the present day.

The owner of the portable bungalow was a dairyman who had grown tired of de- veloping rheumatism, chilblains and a grouch during the long winter months, and had decided three years before to spend the winter in Florida. He had enjoyed his first winter so much that he had persuaded a couple of friends to make the trip with him during the second winter; and this winter there were two other couples in his party. The four other people traveled ahead in a little sedan, while he and his wife and his eighteen-year-old son pounded along be- hind in the ole truck. "Yessir, this house here is nothing but our ole delivery truck with a camping top put on it, and she cer- tainly is the greatest ole truck you ever saw! Why, my gracious, she'll just go through anything, this ole truck will! Why, coming through the Everglades this ole truck ran into ——"

That is one of the hall marks of the simon-pure Tin Can Tourist. No matter how battered and dilapidated his auto- mobile may be, it has qualities which place it above all other cars—even above other and newer cars of the same make. It can extricate itself from thicker mud and from deeper sand than other automobiles. Its feats of endurance are superautomotive. They verge—to hear the tin-canner tell it—on the miraculous. After the tin-canner has dwelt for some time on the almost- human intelligence of the little ole car, one thinks of the little ole car as standing up on its hind wheels and honking with delight when its master says a kind word to it.

The dairyman's portable bungalow, which would slough its skin with the advent of spring and return to its less romantic duties of trucking milk, contained a porta- ble stove, countless canned things, a fully equipped sink and kitchen cabinet, three hammocks, bedding for seven people, and a phonograph, to say nothing of numerous odds and ends like chairs, dishes, pans, suitcases and what not.

In the party that used this portable bungalow as a base there were, as I have said, seven people. The seven of them had started from Ohio on the twenty-second of November, worked down to the west coast of Florida, lingering at the larger and better resorts, crossed over to the east coast, and were slowly working back up through Palm Beach and Ormond. I met them on the eighth of February; so they had been on the road for two months and a half.

The expenses were borne equally by all the travelers, except the dairyman's son, who worked out his keep around the cars. The six others chipped five dollars apiece into a general pool as money was needed. In the two and one-half months a grand total of $510 had been chipped in; and this sum covered the expenditures of the trip—gasoline for both automobiles; inner tubes, tires and repairs for both auto- mobiles; street-car fares when needed; food for seven people, and movies whenever the spirit and the movies moved together. This meant an average of seventy-three dollars apiece for two and one-half months' travel in the sunny South, or almost exactly a dollar a day apiece. Such an ex- penditure contrasts startlingly with ex- penditures in the big resorts, where one week's expense for a man and his wife may easily cause a thousand-dollar bill to degenerate into a two-ounce package of chicken feed.

The Original Tin-Canner

The dairyman declared that to travel in the way he was traveling cost him about one-third as much as it would have cost him to travel to Florida in trains and to live at hotels and boarding houses. From this statement it can be seen that one doesn't necessarily have to be a millionaire in order to spend a winter in Florida.

Mr. Charles Dickens, in The Old Curi- osity Shop, described the original luxurious tin-canning vehicle; but Dickens knew the contraption as a caravan. And instead of being motor driven, it was, of course, horse drawn. The original tin-can tourist appears to have been Mrs. Jarley, pro- prietress of Jarley's Waxworks, who rode in "a smart little house upon wheels, with white dimity curtains festooning the win- dows, and window shutters of green picked out with panels of a staring red, in which happily contrasted colours the whole con- cern shone brilliant. . . . One half of it . . . was carpeted, and so partitioned off at the further end as to accommodate a sleeping-place, constructed after the fash- ion of a berth on board ship, which was shaded, like the little windows, with fair white curtains, and looked comfortable enough, though by what kind of gymnastic exercise the lady of the caravan ever con- trived to get into it was an unfathomable mystery. The other half served for a kitchen, and was fitted up with a stove whose small chimney passed through the roof. It held also a closet or larder, several

THE RAZOR THAT SHARPENS ITS OWN BLADES

Just slip the strop through the razor

A few strokes on the strop—the blade is keen again

Ten seconds—no more—for a new, keen edge *every* morning

With this razor you average fifty smooth, clean shaves per blade

ARE you still plugging along with an ordinary non-stropping safety razor? Half-dull blades to struggle with? Sinking dollar after dollar on new blades right along?

Just get the Valet AutoStrop Razor into your hands and you'll see the big difference! A few strokes on the straight leather strop with this razor and you've got a new keen edge for the morning shave. It's as easy as winding your watch—ten seconds does the trick. The Valet AutoStrop Razor strops, shaves and cleans without removing the blade.

It gives a fine smooth shave—the kind you talk about—every day in the week.

It saves the good money you've been spending on blades. Over a year of smooth, clean shaves are guaranteed from every $1.00 package of blades—an average of 50 comfortable shaves per blade. Ask your dealer to demonstrate the Valet AutoStrop Razor for you today.

Valet AutoStrop Razor

Silver plated razor, strop, year's supply of blades, in compact case $5.00

Strops and blades may also be bought separately

Saves constant blade expense

chests, a great pitcher of water, and a few cooking utensils and articles of crockery."

Heated discussions arise among the tin-canners as to the proper size of a camping outfit. The man with a portable bungalow scorns the man who jams all his belongings into a small space as being an old woman and a tightwad; while the man who packs his camp outfit into the small machine views the portable-bungalow owner with the utmost contempt as being inefficient, spoiled by luxury, a road hog and a slave to his belongings.

In Lemon City, a suburb of Miami, I found a tin-canner whose tin-canning outfit was probably the extreme opposite of the portable-bungalow outfit. His home was Chicago, and since early autumn he had jounced from Chicago down to Texas, around the eastern side of the Gulf of Mexico, down the west coast of Florida and up the east coast. He was a hard-boiled bachelor of the sort that announce loudly that they don't propose to bother anybody and that they don't want anybody to bother them. His means of locomotion was a small runabout with a boxlike arrangement behind the seat similar to that used by salesmen who carry their samples around with them. Nothing was strapped to the sides or the running boards of the machine; it was an ordinary runabout with the top up and with an inconspicuous box attached behind. Into this box, which a carpenter had built for him for a matter of seven dollars, the tin-canner had packed everything that he needed for a five months' camping trip. He had lain awake at night for years doping out exactly where he was going to carry the butter and how he could fry the eggs with the least commotion; and the final result was a masterpiece of compactness—of such compactness that if anyone but the inventor had tried to repack the camping outfit he might have sweated over the problem for two hours and still had enough left over to fill a freight car.

The Condensed Tin-Canner

The front of the box came off and proved to be shelves packed with tin cans and other matters pertaining to the kitchen. A khaki top and sides pulled out of the top of the box, extended straight backward from the machine top, and were held in place by collapsible uprights. The seat of the machine, laid along the top of the kitchen shelves, formed the bed; and on this was placed what the owner called a shoulder-and-hip mattress. All a person needed, he explained, was a mattress that made a comfortable resting place for his hips and shoulders; it made no difference what became of his legs. His cooking utensils, including a collapsible stove no bigger than a fair-sized inkwell, came out of a small tin suitcase. He had every move planned out in detail.

"In the morning," he explained, fondling his outfit with the proud and gentle hands of a parent, "I get up and eat one of these individual packages of breakfast food. While I'm doing that the water is boiling for my coffee, and as soon as the coffee is done I put on my frying pan with bacon and eggs in it. I use two paper napkins for my tablecloth. When I have finished breakfast I put the eggshells in the breakfast-food box, wipe out the frying pan with the napkins, put them into the box with the eggshells, and touch a match to the box. That cleans everything up."

He knew exactly how, when and where he was going to do everything, and he was delighted to knock off a couple of days to explain any or all of his well-ordered regimen to anyone who wanted to know about it. He would even deign to explain it as fully as possible to some who didn't want to know about it. One of his greatest pleasures was to unpack and pack the tin suitcase that contained his kitchen utensils. It seemed impossible that any human agency could get all of them into the space at his disposal, but he could do it almost every time. Occasionally he would find himself with a frying pan left over when the packing was finished; but instead of getting excited he would unpack calmly and coolly and fit the things together with a practiced hand until there was nothing left over. He had a collapsible chair that dropped into the side pocket of his coat and took up less space than a notebook. He had a diminutive double-ended ice-cream freezer. This was his ice chest. Butter went in one end and milk or cream in the other. The biggest day in the life of this genius will, I believe, be when he covers a collapsible frying pan to fold into a one-pound bacon box.

The ordinary tin-canner, unlik two extreme examples, is content ordinary small touring car, which motion has a part of his campin attached to every exposed portio machine. The tent and a couple cases are attached to one runnin mattresses and blankets are att the other; cases of canned goods, utensils and other odds and ends to the rear or concealed beneath floor in the tonneau. The false flo quently carried to such an extreme occupants of the automobile cor impression of riding around the the backs of their necks.

When the ordinary tin-canners b their camping outfit the tent exten right angles from the side door of tomobile, so that the occupants of can use the automobile as a com lavatory, sitting room, chiffonier closet, pantry and safe-deposit va

I conferred with a mild-spok canner at a Miami tin-can camp February afternoon as to tin-can general. His wife, who was a cap keen-witted lady in a blue gingha sat with us and dug the soft subst of tiny pine cones, her idea being paper them and varnish them at date and make them into fas strings of beads. This is one of t popular diversions among lady tin- almost as popular as is horseshoe among the male tin-canners.

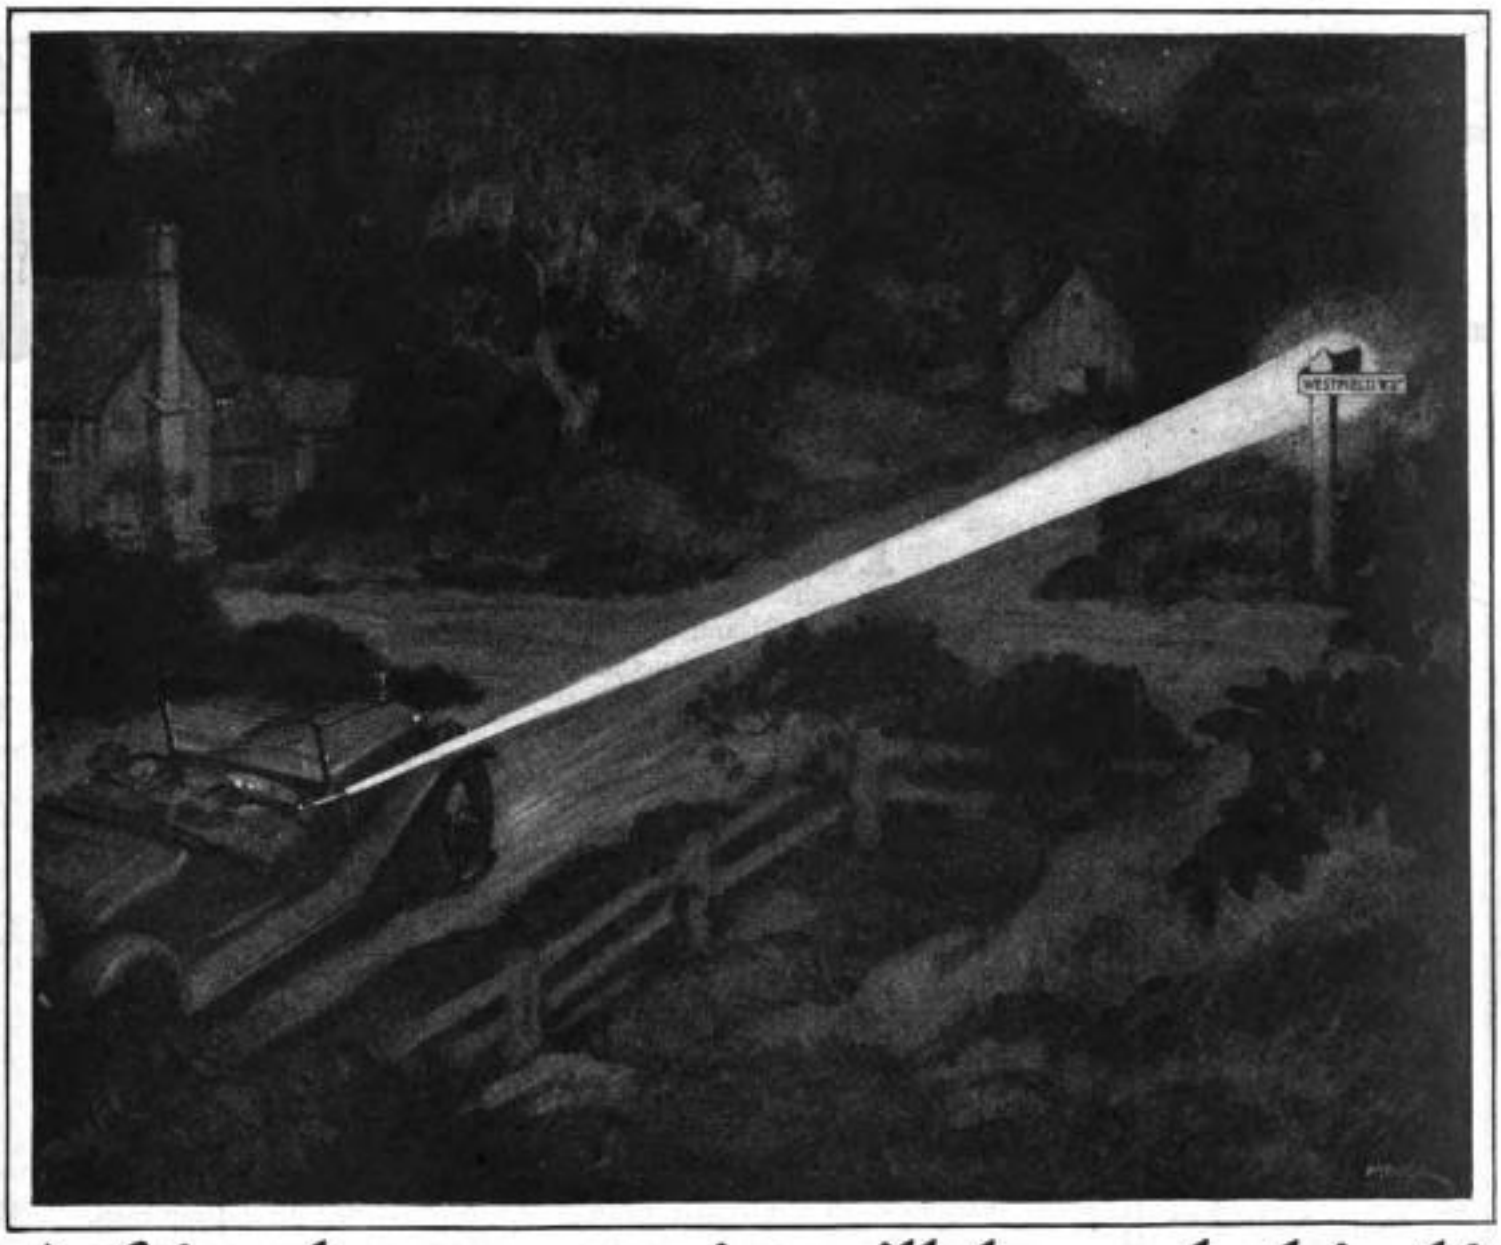
The tin-canner was a noncommi farmer from the vicinity of tha famous Ohio town, Marion. thought on his part, assisted by promptings from his wife, brought following information:

He had broken away from the the winter because he preferred around where it was comfortably sitting around where it was uncom cold. He wasn't particularly stru Florida land, but he liked the Flo

Looking at Florida land with th an Ohio farmer, he felt that he particularly care to pay much mor nickel an acre for most of it. He with a lot of Michigan and Ohio along the road, and they felt the sa about it. Still, it was kind of res soothing to look at, and the sun an more than made up for the drawb the land. The sun was nicer just than the Ohio sun, and there was it. This Florida sun made a per kind of trifling—trifling being mid- slang for lazy.

Better Than It Looks

He wouldn't want any Florida p hear him say that some of the land worthless, because they would p pass an act through the legislature ding him to come back into th again—and he wouldn't like that it was a real pleasant place to com to—in the winter. Besides, you c tell much about this Florida land fro ing at it. Something that was a swa year would be nice solid land the ne and selling for fifty dollars a fron These Florida people were real touc ple and you had to be mighty careful you said when they were around. T flies pricked holes in him every aft but he preferred not to mention it wh Florida people were around, for fe would say he was a California ma had been paid to come over and ca on Florida's fair name. And for th reason he disliked to mention the sa that came up out of the sand arou down and nipped him all over the



There was one bad feature con with tin-canning, and that was lon There were a lot of honeymooners the tin-canners, and they were abo only ones who didn't seem to get Unless you had a couple of friends to with, or were honeymooners, you we to get lonely and homesick, and ge where it was cold, and be sore at y for going back.

They were traveling with a docto his wife from back home. The docto the only doctor in the neighborhood had been just run to death. Folks wo let him alone. He was just run to Somebody was getting sick every n and they'd call him up at all hours

OVER 126 YEARS BIRD'S NEPONSET PRODUCTS ON THE JOB

Bird's Rugs

Bargains Whenever You Buy Them

"OFF with the old and on with the new"—particularly in the matter of floor coverings at the time-hallowed, house cleaning season!

"Brighten up"—the floors especially—is the order of the hour in Springtime.

No need to put up for another single day with a dingy, unattractive, worn old rug. When once you see these lovely, modern, sanitary Bird's Neponset Rugs—*and when you read their price tags*—then you'll know the reason.

The most inexpensive *good* floor covering it is possible to buy, a Bird's Neponset Rug, tones up any room amazingly. It simply radiates cleanliness and good cheer. And it wears and wears and wears—longer than any rug within its price range and its field of usefulness.

For every room in many homes
For many rooms in every home

Felt base, thoroughly waterproofed both sides—and all the way through—which means it cannot rot—stainproof, germproof,—a Bird's Neponset Rug is a blessing to the busy housekeeper.

Easy to clean and to keep clean—once over lightly with a damp mop, and your cleaning is over. No heavy sweeping, lifting, beating, scrubbing or vacuum cleaning.

A practical floor covering—a Bird's Neponset Rug never turns up at the corners. It doesn't wrinkle. It lies perfectly flat and smooth without tacking. You'll find these rich-looking, soft-toned rugs on the floors of many an attractive home. Anywhere, they add a touch of cheery comfort. You save many dollars when you buy one, and many hours of wearisome labor.

The makers of Bird's Neponset Rugs are the originators of felt-base printed floor coverings. Your housefurnishing dealer or department store can show you Bird's Neponset Rugs in a variety of patterns and colors.

(Continued from Page 58)

f and night and just run him to death. f years he'd been planning to take a va- ion and rest up, but they ran him so he ldn't. So finally, when he heard that y were going to Florida, he just up and nt. Oh, he was run to death, but a few eks in Florida had done him a world of od. No, he didn't know how his former tients were getting along. Probably y were all right. Probably there was me young college feller looking out for m. There generally was in a case like at. He didn't know. Things like that dn't worry you much when you struck lorida and began to sit out in the sun.

And so we return to the great craving of he sun-hunters—to sit in the sun and take he air. Golf is a matter of which they now little; tennis is regarded as a game or muscleless smart Alecks; polo might be sort of dog or a game or a movie actor—hey're not quite sure about it; sea bathing a diversion in which they rarely indulge. But they are remarkable sitters. Given a ench in the sun they can outsit a trained thlete or the United States Senate.

Thrilling Outdoor Sports

All the towns and cities and large tin-can camps of Florida cater to the sun-hunters by setting apart a sunny park where they can gather and commune silently or monosyllabically with one another, chew tobacco, discuss fertilizers, cuss the Administration and indulge in the games to which they are addicted. Some of the sun-hunters who wear the benches shiny in these parks are tin-canners; and some are seasonal sun-hunters who have left their farms and their businesses in the North and hired a bungalow in Florida for two hundred or four hundred or eight hundred or a thousand dollars a season; and some are professional sun-hunters from the North who have made barely enough money to last them the rest of their lives unless the country goes Bolshevik or unless Congress taxes their savings out of existence, and who have bought homes for themselves in Florida; and a very few are rebellious husbands from the big hotels who have sneaked away from the money-perfumed atmosphere of the time-killers, and incurred their wives' disgust and loathing by mingling with the roughnecks.

Take, for example, Royal Palm Park, at Miami. It is larger than some of the Florida parks for sun-hunters; but the people who use it are no different from those who use similar parks all over Florida. On one side of the park is Biscayne Bay, with gingerbreadish houseboats and gleaming steam yachts and broad-winged flying boats crowded along the shore. On another side is Miami's principal business street, lined with modern office buildings and up-to-the-minute haberdasheries and modistes and drug stores and real-estate offices and hotels and soft-drink emporiums and parked automobiles and bustling shoppers.

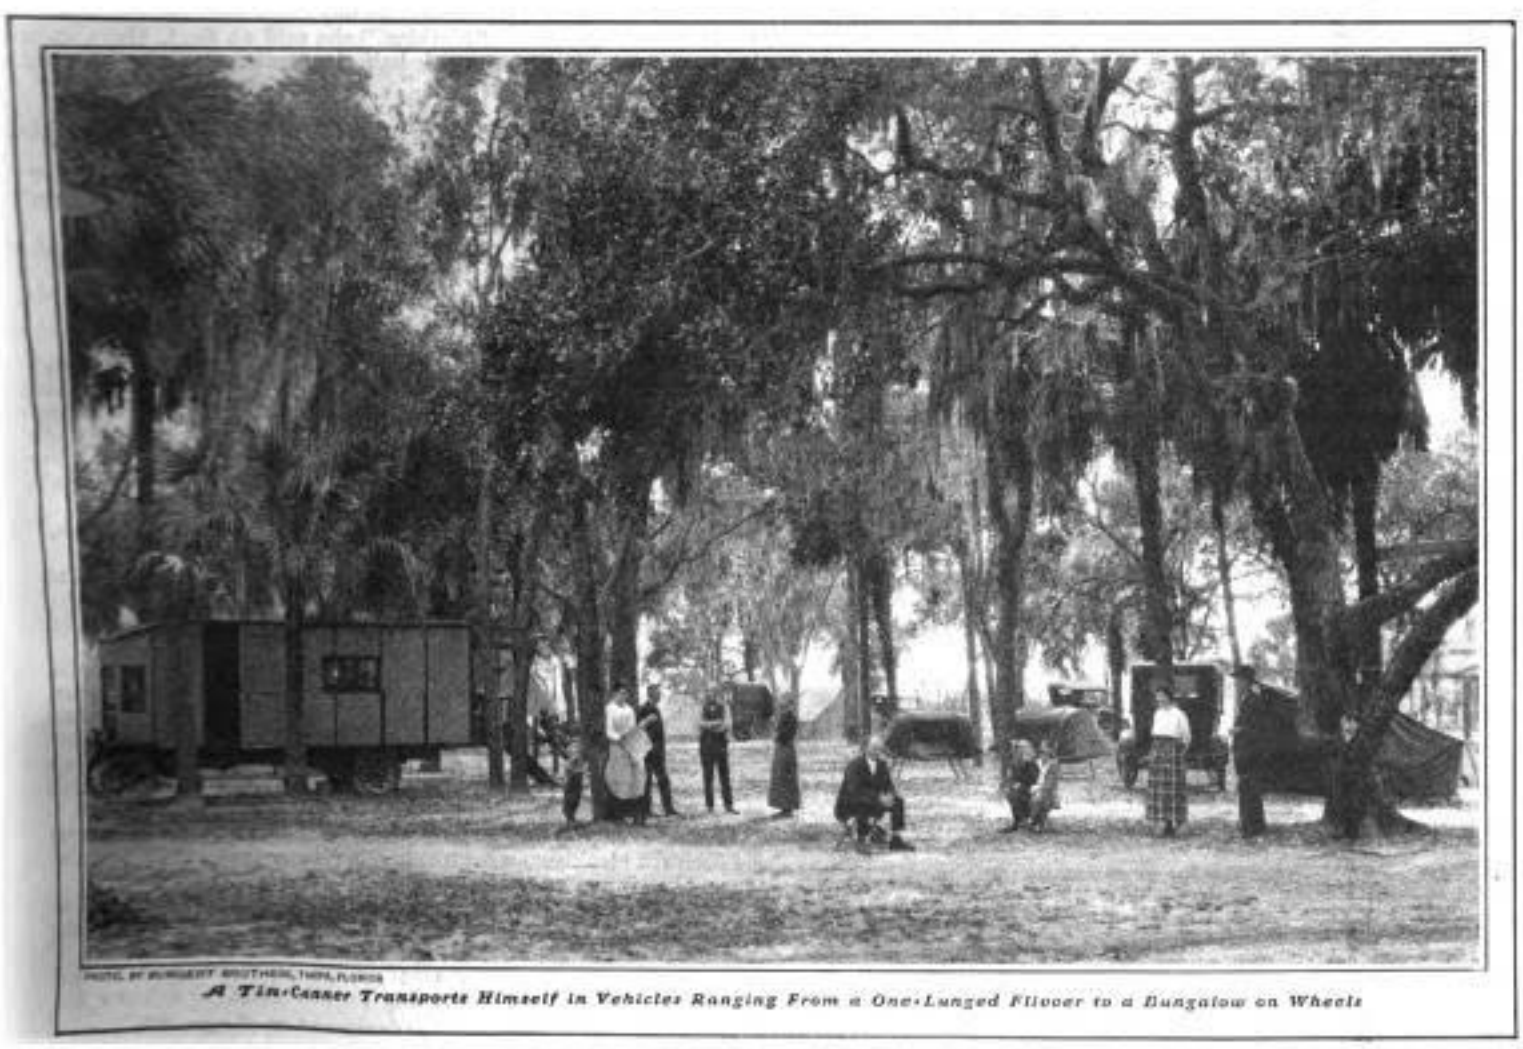
In the park itself, beneath the softly rustling palms, an audience of silent sun-hunters, sprawled on benches which surround the edges, gaze intently at the long double row of horseshoe pitchers and at a score of long tables crowded with men who are brooding over obviously important matters. The men at the tables are the skilled checker, chess and domino players of the tin-can camps and the sun-hunters' colonies. At one table one afternoon I recognized a doctor who had cured my childish ailments in Maine many years ago. Opposite him was a cattleman from Iowa. Beside him was a crippled beggar and panhandler who owned to no home at all; and busily playing checkers with the panhandler was a prosperous-looking small-town banker from Illinois.

Checker and domino tournaments of terrifying ferocity take place at frequent intervals. The champion checker player of Miami issues a challenge to the champion checker player of West Palm Beach, and the outcome is awaited with breathless interest. It is not unusual for individuals to wager as much as fifty cents on the result.

For hair-raising excitement and action so thrilling that it frequently causes hardened sun-hunting onlookers to swallow their chews, one must turn to the horseshoe pitchers. Horseshoe pitching is the representative sport of the tin-canner and the sun-hunter, just as the representative sport of the British workingman is drinking Burton's, and just as the representative sport of certain African tribes is wearing rings in their noses.

Just as an Englishman is unable to see anything in baseball, and just as most Americans yawn heartily at the mere mention of cricket, so is the ordinary passer-by unable to detect the charm in horseshoe pitching. He sees a long row of men tossing horseshoes at iron stakes, and another long row of men digging the horseshoes out of the dirt and tossing them back at other stakes. But the sun-hunters get out immediately after breakfast and pitch all day with feverish intensity and passionate concentration, only quitting when the sun goes down behind the palms in a golden haze.

Some of the horseshoe experts carry their private horseshoes with them in leather bags, and it is not unusual for an aspiring horseshoe tosser to seek out the experts and pay handsomely for copies of the instruments with which they won to fame and high position. Thus it may be seen how among horseshoe tossers, as well as among golfers, ball players and others who should know better, the delusion persists that a workman may attain perfection through his tools instead of through himself.



The more skillful tossers carry with them all the appliances of their avocation—tape measures with which to measure the distance of the shoes from the stake; calipers to measure their distance from each other; chalk with which to keep score; collapsible rakes to smooth out the tumbled dirt around the stakes. The delicate movements of a celebrated tosser as he hitches up his galluses, spits on his right hand and tests his muscles by sinking to a semi-squatting position and rising upright again are watched with the keenest interest by large crowds of sun-hunters. When a horseshoe makes a particularly noteworthy flight a fusillade of applausive spitting splashes on the sun-baked ground.

A Fisherman's Paradise

There is, of course, an International Horseshoe Club. It is too important an organization to be demeaned with a merely local name, such as the Horseshoe Club of America. Then there are local chapters that indulge in tournaments at which feeling runs high. At West Palm Beach, when I was there, a new pitch was being prepared for the big impending tournament with Lake Worth. An international polo match may get more publicity, but there's more quiet bitterness over a horseshoe tournament—much more. Especially in Florida.

Those who weary of dominoes, checkers, chess and horseshoe pitching are at liberty to cut a bamboo pole and sit in the sun beside one of the countless rivers, streams and inlets which dent the Florida coast. These waters are full of trout, bass, red snapper, yellowtails, pompano, grunts—silvery and delicious fish, so-called because of their noisy and peevish growls and grunts of protest when removed from the water—and many other fish whose eating and fighting qualities would have caused Izaak Walton to swoon with delight.

It's hard to believe that the North, every winter, is full of people who hate Northern winters, and of folk who don't know what to do with themselves. If they don't know enough to become sun-hunters they deserve to suffer.

A Tin-Canner Transports Himself in Vehicles Ranging From a One-Lunged Flivver to a Bungalow on Wheels

Try a pipeful or two direct from the factory

Not that it will be any better than the Edgeworth you buy in a store, but we want you to have your first Edgeworth smoke at our expense.

You may repay us by finding that Edgeworth just suits your taste. And if it doesn't—for there are some few men to whom Edgeworth is not just the thing—there's no harm done.

We are glad enough to send free samples in the same spirit that we'd hand you out pouch if circumstances permitted. We wish it were possible to save you even the little trouble of writing for Edgeworth.

Edgeworth is a likable smoke. Men who have tried it and found it to be the right tobacco for them never think of smoking other tobaccos. They'll tell you there are many good tobaccos—and there are. And when you offer them your pouch with "stranger" tobacco in it, they may use up a pipeful just to be friendly.

But notice how quickly they get back to their beloved Edgeworth!

Day after day Edgeworth fans write to us. They tell us human little stories, friendly anecdotes centering around Edgeworth. Often it is the number of years they have smoked Edgeworth that prompted them to write.

Knowing how hard it is for the average man to write letters, we consider these unsolicited messages the greatest tribute to Edgeworth we could possibly have—greater even than the increasing sales. It gives the business of making tobacco a pleasure that runs through the whole gamut—from factory executive to the smoker in the backwoods.

If you have never tried Edgeworth, let us repeat our offer, "Try a pipeful or two direct from the factory." All you have to do is to write "Let me try a pipeful or two" on a postcard, sign your name and address and send the postcard to us. The address is Larus & Brother Co., 1 South 21st Street, Richmond, Va. If you want to add the name of your tobacco dealer, we'll make sure that he has Edgeworth in stock.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

Hundreds of men and women tell what Fleischmann's Yeast is doing for them

THE reports came from all parts of the United States—113 different occupations were represented. Lawyers, artists, lumbermen, wrote in. Housemaids and private secretaries. Dressmakers. Even a boxer told how he had added Fleischmann's Yeast to his daily diet.

These letters reflect the growing realization of men and women all over the country that American meals are often lacking in certain essential food factors.

"We now know definitely," writes one of our greatest authorities, "that the regular diet of a large portion of the people of the United States is falling short of maintaining satisfactory nutrition."

This is what has caused fresh yeast to assume such a new and startling importance in our food. Today men and women are getting from Fleischmann's Yeast exactly the food factors they need. For yeast is the richest known source of the necessary vitamin-B.

Fleischmann's Yeast contains elements which build up the body tissues, keep the body more resistant to disease. Also, because of its freshness, it helps in eliminating poisonous waste matter.

It is well known that many of the things we eat have lost their valuable food properties through refining and other such commercial preparation. Fresh yeast has not been subjected to any such process. Fresh yeast gives you the health-essential food factors in all the potency of their fresh form. This is what your body tissues crave.

Doctors are agreed that laxatives never remove the cause of the trouble. Indeed one physician says that one of its chief causes is probably the indiscriminate use of cathartics. Fleischmann's Yeast as a fresh food is just the natural corrective you need. Fresh yeast, says a noted doctor, should be much more frequently given in intestinal disturbance, especially if it requires the constant use of laxatives.

More and more science is coming to look on digestive disturbance not as a separate ailment for which one takes a drug but as a danger signal that something is fundamentally wrong with the habits of eating. The food factors which Fleischmann's Yeast contains in fresh form improve the appetite, stimulate the digestion, and strengthen the entire digestive process.

Some of these men and women did not like the taste of yeast at first. Almost all grew to like it. Most people took it in water. A number liked it in milk. It tastes something like an egg-nog. Many of the men liked it plain. Women liked to make sandwiches with it, or they took it in fruit juices. Two or three liked it in ice cream. One took it in soup. Several liked it in coffee.

Add 2 or 3 cakes of Fleischmann's Yeast to your own daily diet and notice the difference. *Place a standing order with your grocer. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you.*

Send for free booklet telling what yeast can do for you. Address THE FLEISCHMANN COMPANY, Dept. 608, 701 Washington St., New York City.

FLEISCHMANN'S YEAST is a natural corrective food

THE REAL STORY

(Continued from Page 20)

made a dash for the whirligig arrangement. Just as she got herself inside, a slender, handsomely dressed young man entered the opposite section. The glimpse was as rapid as the contact of two straws carried by opposing currents in a whirlpool. Through the sparkling plate glass she saw two lambent flames, and her knees weakened.

Black eyes, somber as night, eloquent as Shakspere, limpid as dew, fiery as stars, were burning their way through the transparent barrier and into her soul!

Marquis del Argo had arrived.

v

JULIE CORLESS had spent a miserable hour in the confines of her office, doing her best to make the article about Harry Leek something better than a lame, tame catalogue of facts. Her mind was a continent away from her work.

So the Marquis del Argo had come to New York as if in response to her recklessly written biography! Was the man endowed with magic powers? Certainly there was a touch of the supernatural in those eyes which had flashed at her once more through a partition of brightly polished glass. The idea gave her a shudder of dread; there was romance, too, in that shudder.

His reappearance in her life brought up a hundred questions. How had he comported himself these seven years? Had he made good his hot promise to reserve his mind and heart for her? It is wonderful to be loved like that, and by such a man, she found herself thinking, and her lips softened to a fond smile, more appropriate perhaps to eighteen than to twenty-five.

Mr. Trask came in to interrupt her thoughts. His Napoleonic features held a benign look.

"A quarter of seven," he began amiably, "and still working! I thought you society rustlers never really worked. How's that Harry Leek interview coming along?"

"Pretty well," she responded dully.

"Good. Pep it up to the limit. Harry won't care—it all comes under the head of press notices."

Mr. Trask paused and his keen eyes seemed to be seeking out her dejection.

"Heard anything more about that Marquis del Argo?" he asked casually.

Julie raised her eyes, confronted by fearful alternatives. Should she lie to him and thus weave another tangled web about an already complicated situation?

"He registered at the Merlinbilt this afternoon," she announced distinctly.

"You don't say so!" Mr. Trask thrust his fingers into his waistcoat pockets and eyed her speculatively ere he asked: "You've got the story, haven't you?"

"Why, no," faltered Julie. "There isn't any story—that is ——"

"For the love of Mike, Miss Corless!"

"I beg your pardon," cut in Julie with a severe inflection.

"I beg yours," conceded Mr. Trask, "but there's the finest follow-up story in the world just lying round waiting to be grabbed. You can beat everything in town on it, because you're the only reporter who knows anything about Del Argo. Get him to talk—he'll probably be tickled to death. Get his opinion on American divorces, horse racing, shimmy dancing and international marriages.

"And here's another chance: You said in your first article that he was a champion swordsman—get that. Make him tell you his duels and a little spicy stuff about what led up to them. You've got a gold mine there, Miss Corless."

Someone called him out into the hall, so he left her to despair. She had decided that she couldn't under any circumstances go asking a vulgar, impertinent interview of the nobleman who had worshiped her as a queen; then she saw Brick Minor standing diffidently in the doorway. She could not help comparing his rather small, unimpressive figure with that of the dashing Spaniard who dared everything for love.

"A quarter after seven," he smiled, "and you've forgotten all about dinner."

"I don't want any," she declared bleakly. "Oh, Brick, I'm making such a mess of things!"

"That Harry Leek interview, you mean?"

She nodded her diminished head, satisfied to let it go at that.

"Let me see it, won't you?" he begged, and took the litter of yellow paper.

"You've got his athletic record a lit twisted," he explained after reading. "I I'll fix that. It isn't so peppy and jazzy yesterday's story, but it'll pass all rig And now will you dine with me?"

Would she? She woke from her tra to realize that she was hungry. She thou of Brick Minor's company with less re than the day before. Female-wise, liked him far less in one way and far m in another. His complexion was so ugly but after all, he was such a brick!

They had a little table at a downto restaurant. Over a casserole she listen vaguely to Brick's conversation. Never b fore had he talked much of himself. Quaint enough, during his years in the sporti department he had fostered a passion f medieval textiles. He had read volum and written one book on the subject. Bu as he was he had found time to speculate Connecticut real estate and to devote vacations to flying trips abroad; he h driven a few sharp bargains in French a Flemish tapestries.

His tale of bickering in beauty seemed Julie a trifle sordid. Would Del Argo ha stooped from his castle in Spain into su hawking commercialism?

"I hate to sell them," he confesse "I'm keeping a few for my house."

"Your house?" Julie was surprised.

"It isn't built yet," he smiled. "Y see, I've done very well for several yea and I shan't be a sporting editor week aft next. But I'm waiting ——"

He paused and she knew what he w going to say.

"I'm waiting for a woman worth t house I've planned to buy. Julie, I'd mal a very good husband, I think. I know I try. But I've never been in love befor Maybe I've had my long nose sticking t much between pages of copy to look rou me. I don't know how to go at this."

Softness came into his colorless eyes he blurted: "I'm in love now. I haven anything to offer you'd think worth whil But I adore you."

"I'm afraid it won't do any good no Brick," she told him. "But I wish y knew how much I admire you. You' been doing the sort of work—well, y know the sort—for so many years. An yet you've kept yourself above it, remaine one of the finest gentlemen I ever met."

"I don't think you'll ever understan the newspaper business," he assured h with a wholesome laugh.

"I suppose not."

The confession caused her to droop little and he asked, "Julie, what's been o your mind all day?"

"Nothing," she said at first, then cam out with half the truth: "This Marqui del Argo."

"I see." Brick Minor bit his lip.

"He's at the Merlinbilt, you know. Mr Trask insists on my interviewing him."

"Of course. And why shouldn't you?"

"It's hard to explain, Brick. I don' want to."

"That's a poor way to go at it in th newspaper business," he told her in queerly constrained voice. "You're in th profession to advance yourself."

"But you don't understand, Brick."

"Perhaps not." Minor sat as though searching his memory. "Del Argo? Del Argo? There was a Spanish marquis by that name who fenced at Stockholm when I went over to report the Olympiad. Defeated by the French champion. I wouldn't mind talking with him."

"Suppose you do this interview, Brick," she suggested hopefully.

"Oh, no!" Brick grinned. "A good reporter doesn't pass the buck. Besides, I have a prize fight on for to-night. But what's your hesitation, Julie?"

"It's simple enough to me," she said, trying not to make her tone superior. "There are circumstances—well—I hate to put myself in the undignified position of hounding a man of Marquis del Argo's sort into playing vaudeville for the Bugle's readers."

Brick Minor's rough-surfaced features were puckered into a look that revealed how snobbish it sounded.

"I don't think you ought to quit on that plea," he said. "It would be a little like deserting in the midst of battle."

By this remark he managed to spoil the evening for her. And she knew that,

(Continued from Page 62)

Whatever the circumstances, she could never again consider marrying Brick Minor.

Julie Corless went home by Subway, repeating her resolve never to return to Park Row. She was done with the whole sordid mess—with the cheap ethics of the Bugle, with the continual dinning impossible orders into her ears. She had about made up her mind to take a talented spinster to her bosom and open an art tea room when the train slowed up at Thirty-fourth Street. The pause gave her time to change her mind; for she had a thought of her father, who had been a fighting man. People said that Julie was more like the late Major Corless than like her mother. And Major Corless had never cried quit in all his brave adventurous life.

When the door opened Julie stepped out into the Thirty-fourth Street Station and walked over to the Merlinbilt. A sort of courageous numbness had fortified her for the ordeal she was resolved to undergo.

"The Marquis del Argo is still in the dining room," the man at the desk told her when she inquired.

Julie drew a deep breath and withdrew to a padded chair in sight of the Merlinbilt's handsome dining-room door. She had provided herself with a newspaper, round the corner of which she watched the important exit. Like a poor wretch awaiting execution she hoped it would be soon. The moments were interminable. Fat ladies, old men, thin ladies, old girls, tall gallants and blushing maids came trooping out. At last Julie could bear it no longer. Panic overcame her. Only to get away, that was her obsessing thought as she threw down her paper and bounded toward freedom.

Now, in the Merlinbilt's foyer there is a small glass-windowed writing room which stands out like a booth at a turn of a corridor. The fleeing Julie was passing this booth when she was cut off by several fat velvet chairs, occupied by an equal number of fat velvet ladies. In that instant of pause Julie chanced to glance over her shoulder into the plate-glass window.

Those eyes again!

His head and shoulder plainly revealed in the electric glare, Marquis del Argo stood gazing at her through a glassy partition, as though it were his fate always to hypnotize her through this transparent medium. Julie could have screamed, and when she tried to go she found that some invisible carpenter had nailed her shoes to the floor. During this nightmare hesitation the marquis, his somber face kindling, came bursting out of the door.

"Ah, mademoiselle!" he addressed her in French. "What an arrangement of fate that we should meet again!"

Julie knew not how she got there, but when next she began to understand she was seated primly in the writing room, the marquis beside her, his wonderful eyes playing upon her, an enchanted fountain.

"I—I've been waiting outside for you," she began foolishly enough.

"Ah! Then you also have waited! Those years have made no difference to you also, mademoiselle! I shall not call my sufferings vain after this. I have wandered out of this abominable morass to touch the Rose of Paradise."

He said all this in his remarkably pure French. Already the spell had so far overcome Julie Corless that she was quite unable to explain why she had come. How could she tell him that she had sought him out to obtain a frivolous interview for the yellowest journal in America? Instead she sat back and breathed in his words as though they had been clouds of intoxicating perfume. In a thousand years, in a thousand thousand years, Brick Minor could not make love like this!

"Through my suffering and exile, mademoiselle, I have carried your perfect picture in my heart. Not till now have I heard your voice. How sweet it is! Say that you have not forgotten me!"

"I haven't," she said, shaking herself out of her dream. "But it seems strange that you've remembered so long."

"Remembered!" His eyes seemed to be playing a melody to the obbligato of his rich voice. "The Del Argos do not forget, mademoiselle. That motto is upon our crest: 'Our swords and our hearts.' Despite the sacrifices which my love for you has caused ——"

The flow of his speech was stemmed as by some bitter thought, and Julie asked: "For me? Was there some trouble?"

His glorious orbs dimmed for an instant.

"I'm sorry I have caused you suffering," she said softly. "How could I have known? Please tell me."

He changed his position and gazed away. Julie dared study him now and comprehend how handsome he was. His face was lean and distinguished, his hair silky and black as night. He was wearing a dinner jacket, and his soft shirt, of exquisite fineness, was elaborately tucked and pleated. Round his high collar he had wound a black tie several times after the manner of an old-fashioned stock. He looked like a royal poet as he sat there brooding.

"You wish me to tell you," he said at last, his air becoming calmer. "It is a story of persecution, mademoiselle—persecution unrivaled in all the history of treason. And yet the fault was mine—the fault of a heart that loves too much."

He groaned slightly, and Julie restrained an impulse to reach out and stroke one of the slender hands. "Tell me," she insisted.

The Marquis del Argo straightened himself.

"This first: I am a swordsman of reputation. Any gentleman can tell you that. But then, it is my sword that is dishonored."

Again his lambent eyes lost their fire.

"What do I care for my sword when it is a question of the heart? I have done it, and I will do it again. Yet, in effect, he gave me a good fight. But I anticipate my story. You will recall, perhaps, how a certain postal card came to you by *pneumatique*?"

"My chaperon was furious," Julie informed him.

"And well she might have been. But I was beside myself with impatience that morning! I had waited for hours in the rain, then like a whipped dog I slunk away—but no! like a pilgrim of love, humble but glorying much. I met my automobile awaiting me at a corner, and as we made speed across the Seine my heart was afire. I felt that I should burst asunder unless I uttered what was surging through my brain."

Rising to his subject, Marquis del Argo became all animation. Every muscle in his lithe body seemed to be working at once with explanatory gestures. As the story of his emotional experience unrolled itself he stroked his forehead, his waistcoat, the back of his head.

"It was incredible then, mademoiselle, what happened to my life. I found it impossible that I should delay writing to you my sentiments. Also I had an appointment with my hairdresser."

The last statement came to Julie in the nature of an anticlimax.

"This hairdresser was an animal who kept his shop on Place Vendôme. Jacques Mordeau was his name—and why did the devil send me there? This curly-haired, bearded little fat *canaille*, smelling of pomade and full of his shopkeeper's tricks—but yes. He was a great artist of his kind.

"I had no sooner entered his shop than I called for ink and stationery. What should this perfumed little scoundrel do but bring me a postal card, with the excuse that there was nothing better in the shop! I accepted his apology, for I was distracted with the beating of my heart. The words burned from my pen; I never felt finer poetry than that I scribbled then.

"But my evil genius attended me that morning, mademoiselle, as you shall see. This oily fellow, Mordeau, full of the pretentious airs of his class, was busying himself with shampoos and pomades in the little booth I occupied. I had scarce completed the ecstasy of composition when I noticed that his goggle eyes had been following every movement of my pen. I had opened my mouth to remind the tradesman of his position in life when the devil, disguised as a manicure, opened a window, causing a sharp wind to rush across the little room. Before I could right the mischief—and I am not slow of hand—the wind had picked up the postal card made sacred by my message.

"This species of camel, Jacques Mordeau, was first to reach the card where it lay, face up, on the linoleum. As he raised it in his grubby fingers his goggle eyes, bright with curiosity, fed themselves upon the precious words, meant only for your sight. But imagine my feelings.

"'Monsieur le marquis has a gift of style,' he said, bowing very low as he returned the card.

"At those vile words the blood leaped from my heart to my head. That is to say, mademoiselle, the Del Argos are not accustomed to insolence from the *canaille*.

Clicquot Club
Pronounced Klee-ko
GINGER ALE

Not every ginger ale contains Jamaica ginger

All Clicquot Club Ginger Ale is made with Jamaica ginger. The ginger is crushed. The flavor is drawn out by a process of dripping a liquid through the ginger. Then this "debased ginger" is thrown away, though it could be used, by another method, for making ginger ale.

It is not solely from virtuous motives that this is done. What would it profit us to save a little ginger and lose some good customers and friends? We know that the taste of Clicquot sells it. We know that the taste must never vary—that every bottle must have exactly the same blend.

So you can depend always upon Clicquot. You can be sure that only fresh water from bed-rock springs is used and that every ingredient of Clicquot Club Ginger Ale is absolutely pure.

Then, for those who prefer them—

We make Clicquot Club Sarsaparilla, Birch Beer, and Root Beer. When you buy Clicquot Club for the home, try a mixed case. Though the flavors vary, all Clicquot Club beverages are equally pure and good.

The Clicquot Club Company
Millis, Mass., U. S. A.

You *can't* test the value till it rains

It's not so much how snappy the raincoat looks when you stand before the mirror—it's the way it acts when you get out in the rain!

Looks, fit, style—they're all important, and you can judge them at a glance. But after all the one big test is, *"Will it keep me dry?"* Even an expert can't always tell this by *looks*. Your only assurance of satisfaction is the name on the coat and the reputation of its maker.

Raynsters are made by the oldest and largest rubber organization in the world. The Raynster label is your guide and guarantee. Every inch of these raincoats is backed by layer on layer of finest rubber. Every seam is triple-reinforced.

There are many different Raynster models, from the rugged rubber-surface types to smart tweeds and cashmeres with the rubber hidden inside. Special types for boys, too. Whether you want a raincoat for work, for motoring, or for business, there's a Raynster built especially for you.

Look for the name Raynster! If your dealer should be out of the exact Raynster you want, he can get it in no time from the nearest of our many branches.

REG. U.S. PAT. OFF.

A COMPLETE LINE OF RAINCOATS—*A type for every need*

What, then, could I do under the circumstances?"

"You might have waited till you got back to your hotel before you wrote that letter," suggested Julie a trifle dryly.

"The Del Argos strike rapidly—too rapidly," he explained, as though that settled something. "But ah! I was constrained to act upon my sense of honor. What could a gentleman of Spain, thus annoyed, do but kick the *canaille?* I did so with all the strength of my foot. It was a murderous blow, I will confess, for it sent this animal Mordeau head first through a glass case and sprawling over a stand of toilet articles. I thought for an instant that I had taken his unworthy life for his impudence. But no. How much better had it been so!"

The marquis buried his face behind his aristocratic hands and murmured: "The horror of what he said!"

"Tell me, please!" begged Julie, affected as much by the dramatic suspense as by the profundity of his sorrow.

"He rose, mademoiselle, and all the vengeance of the gutter was on his loutish face. 'You have assaulted me in a manner unbecoming a gentleman,' he snarled. 'I have witnesses here.'

"'I have no objections to paying damages,' I replied haughtily.

"'The damages shall be settled upon the field of honor,' he raved, tearing his hair, which was vigorous and curly. 'Marquis, I have been insulted. In the morning my seconds shall call upon you and await your pleasure.'

"I was at first thunderstruck, you can imagine. Then I filled the tawdry establishment with my ironic laughter. A hairdresser of the Place Vendôme was challenging me, Raphael del Argo, to a duel! With all the dignity at my command I informed the fellow that I was inexperienced at fighting with curling tongs or cakes of soap, as he would undoubtedly require; whereupon he shook his stubby fists under my nose and stormed: 'It will not be curling tongs, monsieur! With your permission it shall be swords.'

"'Whom have I the honor of addressing?' I asked, putting all possible sarcasm into the question.

"'Doubtless you will remember me better,' said he, 'under the professional name I bore before my retirement. Jacques Benoit, premier fencing instructor of the French Republic!'"

Marquis del Argo sat quite rigid, his splendid eyes appealing.

"Did you fight him?" whispered Julie.

"Let me tell you," he moaned. "Early next morning appeared at my hotel two ruffians, a tobacconist and a tailor, giving themselves fine airs and announcing that they were Monsieur Mordeau's seconds, anxious to confer with mine. I informed them that my valet was too decent a man to lower himself by such associations. Monsieur Mordeau, they informed me, had instructed them to say that in case I refused to fight he would follow me to the ends of the earth, issuing challenge as he went.

"I cowed the beggars with a look and bade them be gone. But their words left me with an unconquerable depression. The beautiful idyl which you had brought to my heart was to be mired by contact with the vulgar herd. A hairdresser had invited me to befoul my sword in his miserable blood. And yet I am a fighting man, mademoiselle. A growing impulse to meet and slay the loutish animal would have conquered me had I not saved myself against myself by packing and departing at once for Madrid. I paused in Biarritz but a few minutes, merely to write you my farewell and my despair.

"Once in Madrid, I went to the house of my noble father, there to forget my sorrow in the gayeties of the capital. But it was not for long. One morning two pretentiously dressed tradesmen awaited me outside and sent in a note by my valet. The note informed me that Monsieur Mordeau, stopping at one of Madrid's tawdry hotels, was anxious to finish the business begun in Paris; if I refused to fight he was determined to publish me as a coward.

"I was beside myself, mademoiselle. In my fevered imagination I could picture the rage of my father at the stain upon our family. In a panic I summoned these petty tradesmen into my presence and offered them a bribe of princely proportions. They mocked me and declared that Monsieur Mordeau, himself well-to-do, craved nothing better than satisfaction. My father's butler showed them to the back door.

"There are newspapers in Madrid, mi moiselle, which follow the worst ethic American journalism—if you will par me. Here was a titbit for their polit press! Pages of print burst forth satiric items telling how Raphael del A was hiding in the house of his father order to avoid an honorable challenge f a worthy hairdresser of Paris.

"This, indeed, was more than I co endure. Therefore I waited but a sh time before I sent my valet and his cou a respectable gardener, to meet the seco of Monsieur Mordeau."

Marquis del Argo fell back in his ch as though exhausted by the telling of unhappy story.

"You didn't kill him!" gasped Ju laying a hand on his sleeve.

For answer Del Argo pulled that slee up to the elbow, rolled back the cuff a showed an angry scar on the forearm.

"Santa Maria, what a wrist the fell had! It is not right that the middle class should be allowed to fence so well. At t first pass I knew that he was indeed Jacqu Benoit, who had taught swordsmanship the best families of France. He fenced perfect form. Before it was well begun had beaten my guard down and pinned m from wrist to elbow. Some disreputab physician whom he had brought alon attended my wound. When the blood wa stanched I resumed my sword, and lookin my hairdresser in his goggling eyes I said 'Monsieur Pomade, we will engage wit the left.'

"'Indeed we shall not,' replied the artfu dog. 'My left is better than my right, an I have no intention of killing you. *Bon jour, monsieur.* I have had my satis faction!'"

He closed his eyes, and his face, robbed of its principal charm, was still handsome. His account of the dishonorable duel had roused more sympathy in Julie's breast. Under his spell she saw nothing humorous in what he had told her.

"I'm dreadfully sorry!" she murmured.

"Ah!" Instantly he unmasked those orbs of glory. "That sweet understanding is reward for all. But let me tell you *how* my father received the news. That monster of a hairdresser persisted in his dastardly revenge; he gave an account of his victory to the rabble newspaper, which was the enemy of our house. With all their rowdy genius they adorned the tale, relating how the hairdresser, after wounding me in the arm, curled my hair on the point of his rapier and dressed my wounds with a stick of pomade. The article was illustrated. Madrid burst into a roar of laughter. When I visited my clubs those who had called me friend snickered behind their palms. Then my father came to me like a tower of ice.

"'You are no longer a Del Argo,' he said. 'The blade of a scullion has penetrated your veins, polluting your blood. Do me the honor of going at once.'

"So you find me, mademoiselle, an exile from Spain, bearing the name of a commoner in your republic."

"And you did this all for me?" she murmured.

"It is nothing," he assured her, though his look belied his words.

"Have you been here ever since—ever since the duel?" she asked.

"Practically. When I found that I must leave Spain I thought of North America, because I knew that you were living somewhere in that strange commonwealth. I sold my jewels and personal possessions and took passage for New York under the name of C. L. Jones. How adversity matures us, mademoiselle! Unaccustomed though I was to commercial life, I yet developed business genius. With my small capital I launched forth in partnership with a young financier ——"

"In Wall Street?" cut in the romantic young lady.

"No. In bed springs. An enterprising North American wished capital to invest in the Morpheus Bed Springs Works, whose factory was situated, quite appropriately, in the village of Beyond, New Jersey. For five years I have been living there, doing well according to North American standards. C. L. Jones is now a man of property. It is only poor Raphael del Argo who wears a broken heart."

Julie, overcome by his sacrifice and devotion, was on the point of asking him a question that goaded her curiosity.

"I have never married. I am proud," said he, "and there is but one woman who has looked into my soul."

How Heater Design Counts in Heating Satisfaction

Upon the design of a heater, be it Steam or Hot Water Boiler, Warm Air Heater or Onepipe, depends much of its economy, durability and capacity to furnish heat from fuel.

When you consider that there are International Heaters still giving satisfaction after nearly half a century of use, many serving 25 years or more without a repair, obviously they were well-built.

But no matter how well-built a heater may be, it will neither be economical nor provide satisfactory comfort unless it is exactly suited to requirements and properly installed.

For over 75 years we have made all standard types of heaters, each most carefully designed and sturdily built. Making all standard types and interested only in giving heating satisfaction, we are in a position to give absolutely unprejudiced advice in the selection of a *type* and *size* of heater best suited to your exact needs.

Send for our catalog. With the catalog we send a simple chart and question blank. These returned, enable our engineers to give you valuable but free advice. Address Service Dept. A.

BRANCHES: New York, Chicago, Nashua, N. H., Greensboro, N. C., Cleveland, O.

DISTRIBUTING POINTS:
Portland, Oregon, Lynch Brothers
Spokane, Wash., Holley-Mason Hardware Company
San Francisco, Cal., California Hydraulic Engineering and Supply Co.
Salt Lake City, Utah, W. P. Kiser
St. Paul, Minn., Farwell, Ozmun, Kirk & Co.
Denver, Colo., Garrett-Elliott Heating Supply Co.
Nashville, Tenn., The Plumbing & Heating Supply Co.
Kansas City, Mo., Richards & Conover Hardware Co.

INTERNATIONAL
WARM AIR HEATERS

Many styles and sizes within a wide range of prices make selection possible for any building with any set of conditions—where warm air heat is advisable.

International Warm Air Heaters are so well designed as to obtain the greatest benefit from the fuel burned. This means economy. Send for catalog. Address Dept. A.

(Continued from Page 66)

His eyes were looking deep, deep into her innermost being. She almost swooned in the delight, but she still had strength to say, "It's strange that you should come to New York—just now."

"It was you who brought me to New York," he told her, moving a little nearer.

"I?" She lacked strength to stir.

"I saw that curious, vulgar article in the paper. It mentioned my presence at Biarritz that fateful summer. Do you realize, *ma chère*, that you are the only living person who knew of my going to Biarritz? I was there less than an hour. Only by my letter did even you know."

"I never thought of that!" exclaimed Julie, a certain panic entering her dream.

"And when I read that mad article I said: 'Enough! She is in New York and has spoken of me. I am now a man of means. I shall go back into the world and resume my title. She shall hear of me; we shall meet again!'"

Del Argo leaned over and took her hand. She let him hold it an instant.

"I offer you again," he said in his sweet low voice, "the title of my family and the devotion of my heart. And who knows? With the wealth and ability of an American girl, could we not win back my place in court society?"

The room swam before her eyes. Her fairy story had come true! Then into the spell there crept the serpent of doubt.

"I suppose I ought to tell you," she wavered. "I'm tremendously honored, but ——"

"But what?" he taxed her almost fiercely. "There is not another?"

"No. It isn't that. But you spoke of my—my wealth helping you back into the world. I'm not rich any more, marquis."

"No?"

He looked at her curiously, and the dulling of his jewel-like eyes gave her courage to add: "I came here to-night to talk to you ——"

"Ah, yes. You have told me."

"—— to talk to you about an interview."

"An interview?" For the first time little wrinkles showed in his forehead.

"Yes. You see, I represent a newspaper ——"

If the cushions of his chair had been concealing a poison fang the Marquis del Argo could not have arisen more quickly.

"I am giving no interviews for the newspapers," he said with all the frozen dignity of his class; and without so much as a bow he strode out of the room.

VI

THE managing editor of the Bugle took Miss Corless' sudden resignation far more seriously than one would have expected. She was a weak spoke in the wheel; that he admitted; but it is always embarrassing to have a spoke fall out in the course of a race. Mr. Trask, who had conceived the idea of putting pep and yet more pep into the society page during Miss Ragnell's invalidism, now cursed himself for having been so severe with Julie Corless as to have sent her home and to bed. After all she was better than nothing.

Early one evening about a week after Julie's desertion Mr. Trask sat in his swivel chair chewing a cigar and glaring morosely at Brick Minor, who was chewing another cigar.

"Do you think she's ill or only playing possum?" asked Mr. Trask savagely.

"She isn't the sort that plays possum," replied Brick, his rough skin reddening.

"H'm." Mr. Trask studied his cowe then barked: "Did you see her?"

"No. She isn't seeing anybody. mother ——"

"Ah!" The trace of a crafty smile over the Napoleonic countenance, inc ing that he knew how things stood Brick Minor. Then Mr. Trask brough fist down and spluttered: "What's the ter with those society hustlers, anyl You'd think they were war correspon the way they get shell shock. I've tu the department over to Riley, which m that the page is dead until Cissy c back. Ho, hum!"

The telephone rang again. Mr. T put his ear to the receiver.

"Minor will know him. I'll send right over," he muttered, and hung

"Here's a new chapter on that Del story," he snapped as Brick rose to go. said not a word, but his eyes spark through his glasses.

"Burgstaller, of the Merlinbilt, is s ing us an S O S."

"You don't mean the marquis ——"

"That's it!" supplied Mr. Trask wit new cheerfulness. "He's been blowing h self like a Roman candle—on credit. Bu staller got suspicious and put the ho detective on the case. It must have b easy, for the h. d. to have found anythin

"Well, what did he find?" grunted Br Minor, sensing a fear that Julie might dragged into the case.

"Del Argo's a counterfeit, that's Sworn statement of his divorced wife a a lot of other dope. Now Burgstaller's g the marquis locked up in his office; doesn want to make any publicity if he can h it. But he's anxious to have Miss Corle come and tell what she knows."

"Impossible," declared Brick. "She w running a temperature all week."

"Well, see here," begged Mr. Trask, h voice taking on a wheedling tone, don't think there's any story in this f us—the Merlinbilt company's solid wi our office, you know. But we'd like to do favor for Burgstaller."

"I'll know Del Argo," Minor volunteere "I saw him fence at Stockholm."

"So you told me," admitted the ma aging editor. "Go round and identif him, will you? If Burgstaller turns th man over to the police grab the story whi it's hot. If he turns him loose do what yo can for Burgstaller. It's just a favor be tween friends—understand?"

Minor hastened uptown to the Merlin bilt. He cared less than three straws fo Burgstaller, Trask or Del Argo. Julie alon concerned him. A news gatherer by in stinct, he had pieced together sufficien evidence to assure himself that there wa more to Julie's strange behavior than mere maidenly shrinking from the require ments of yellow journalism. What wa Del Argo's hold on Julie Corless?

The scene which Minor encountered in the sanctum of Mr. Burgstaller, of the Merlinbilt, was no more painful than that presented by the average directors' meeting. The room was full of Havana's incense. Burgstaller, the house detective and the splendid cavalier who called himself Del Argo were all smoking very good cigars. In a far corner an overblown beauty with a gorgeously plumed hat and a sulky mouth sat staring inimically.

"I'm Mr. Minor, of the Bugle," announced Brick.

"Here's just the story for you," beamed Mr. Burgstaller, shaking hands. Then he

(Continued from Page 68)

added in a low whisper: "Not for publication unless I say so—see?"

"I understand," replied Brick, and was introduced to the company.

"Mr. Alviso," announced Burgstaller, indicating the handsome foreigner. "And Mrs. Alviso; and our house detective, Mr. Alsace."

Brick bowed and sat down.

"Now, Mrs. Alviso," drawled the detective, casting fishy eyes toward the overblown beauty, "will you please repeat for the gentleman what you have just told me?"

"Certain-lee," replied the lady, glaring hatred toward him whom they now called Alviso. "Henry and me first met at Coney—that was in summer, 1914. It was a sort of hot night and ——"

"Just stick to the bare facts, if you will," suggested Mr. Burgstaller kindly.

"Well, there wasn't nothing between him and I until fall, when he said that waiting on table wasn't no place for a lady like me. He wrote the sweetest letters—now, don't try to interrupt, Henry!" This last was directed toward the dark gentleman, who affected an amused smile.

"He gushed a lot about love and said he'd keep my picture next to his heart—that's been his weakness—keepin' pictures next to his heart."

"Would you mind showing Mr. Minor the—documentary evidence?" asked Mr. Burgstaller.

"You mean them photos and all that?" she shrilled; answering her own question she delved into a shabby handbag and brought out a scrappy collection.

"He was always crazy 'bout rich women," she buzzed on. But Brick Minor was too much concerned in what he saw to attend further lamentations.

He was holding a half dozen photographs in fan formation under his nose. There was a variety of portraits, all of ladies—a jeweled dowager, a dashing horsewoman, a simpering miss. Some of them were inscribed with sweetish sentiments to the Marquis del Argo. But that which caused Brick Minor's heart to turn over and his cheeks to blaze hotly was a portrait he would have given all he owned not to have recognized.

Julie Corless, slimmer and less mature than the Julie he knew, beamed with a look of girlish purity out of a cabinet photograph with the name of a Parisian atelier stamped on its margin.

"There's a letter goes with that," said Mr. Burgstaller coolly.

Brick Minor could scarcely see the half-formed scrawl on a bluish sheet which he held under his unhappy eyes. Then he struggled with the shockingly bad French:

Mon cher Marquis: Les circonstances de ma vie rendent difficile l'introduction qui vous desire. Ma chaperone est une femme severe et je n'ai point de la liberte ——

He could read no more.

"It was them letters and photos and the way he carried on with ladies everywhere we got a job that fed me up with Henry," snapped Mrs. Alviso from her corner.

"Where did you get these?" asked Brick frostily, turning to the Spaniard.

Alviso shrugged his graceful shoulders, but his ex-wife cut in sharply:

"He kept 'em locked in his trunk. I found 'em one day when I thought he was holdin' some money back on me and ——"

"I see," interrupted Brick Minor.

Mr. Burgstaller took up the cross-examination, facing the unworthy Alviso, who sat languidly blowing smoke rings.

"Mr. Alviso," said the manager politely, "you have registered at my hotel with a dozen empty trunks. You have been here ten days, and, so far as I can see, you have no intention of paying your bill. This afternoon you tried to leave the hotel without settling. There is a serious penalty attached to jumping a hotel bill."

"So I am informed," replied the accused in the tone which one gentleman employs with other gentlemen.

"There is also evidence that you are not what you pretend to be. If you are not Marquis del Argo, as you say you are ——"

"That can be quite easily settled," cooed Alviso with just the trace of a foreign accent. "I am not Del Argo."

"I see," agreed Mr. Burgstaller, apparently moved by the dramatic announcement. "Then I suppose you know that you are facing another serious charge?"

"I suppose so." Alviso smiled and undulated his shoulder blades.

"Gentlemen," he went on pleasantly, fore the prosecution could resume, "I no intention of annoying you further have no money. If you wish to send n jail I offer you my services, as I have little defense."

What game was this adroit fellow ing now? The slightly foreign accent explaining smoothly: "The Marquis Argo is with me an assumed name. I only seen the gentleman twice, whe came to the shop of the hairdresser employed me in Paris. I am an ambit man. I always had a desire to be somet in the great world. Possibly that had n to do with my interesting career.

"In the profession of hairdressing meets many distinguished men, you understand. Quite frequently I im sonated these celebrities—there was l but excitement to be gained by the ad ture. One time, for instance, I gained t porary control of the Duc de Bourb automobile—that is another amusing st I cut quite a figure with it for an entire and no questions asked—for reasons kn to the duke and myself."

Alviso smiled in pleasant recollectio

"Shortly before that adventure I burnt my forearm severely with an elec curling iron. Would you care to see scar?" Deftly Alviso rolled back his sle to exhibit an angry disfigurement. "T was useful a little later when I decided impersonate the Marquis del Argo.

"The marquis, perhaps you rememl became famous throughout the Contin because of a duel which he was forced fight with Jacques Mordeau, a hairdres Mordeau had once been my employer, a at his shop I had seen the marquis knew how much we resembled each oth I am a man of very poor character. Bu have imagination. My scar and my rese blance to the marquis was, for me, tempting a combination to resist.

"I did very well, at brief intervals, rel ing my duel with the hairdresser to sel audiences. This required discretion. Ho ever, I managed to profit by the story a borrow from time to time in watering pla where Americans abound."

Alviso was looking Brick Minor straig in the eyes when he said this callous thi A murderous impulse filled the veins of t sporting editor. Poor Julie had been o of those Americans with whom wateri places abounded.

"How came you in Beyond, New Je sey?" asked Mr. Burgstaller.

"I have been there for a year," a nounced the accused. "I could not purs my trade in this country because my reco is known among hairdressers all over t world. I have worked as timekeeper in t Morpheus Bed Springs Works. I hav saved—well, saved enough for clothing an a few trunks. It has been like strong drink gentlemen, this passion for impersonatin a nobleman."

Silence fell over the room at the end the strangely frank confession.

Finally the manager of the Merlinbil turned to Brick Minor and asked point blank, "Is this man the Marquis del Argo?"

"He looks a great deal like him," sai Brick, staring boldly into the face of th adventurer.

"Have you ever seen the marquis?"

"I saw him fence at the Olympiad i Stockholm."

"Then you would recognize him. Is thi man Del Argo?"

Alviso's beautiful eyes and Minor's keen ones encountered each other just a second.

"No," said the sporting editor. "It is only a resemblance."

"And now," smiled the impostor, helping himself to another cigar out of Mr. Burgstaller's stock, "it seems to me there is nothing to do but to call in the police."

"And serves you good and right!" came the chiding tones of his divorced wife.

"Mr. Alsace," commanded the manager of his lanky house detective, "you'd better ring up headquarters ——"

Mr. Alsace had just risen to obey when Minor blockaded the door.

"I don't think you'll gain anything by this, Mr. Burgstaller," he objected.

"Who's running this business?" asked the manager, reddening.

"You are," announced Brick Minor. "And I don't think you're keeping a hotel to lose money."

"I don't intend to be beaten out of it," replied Mr. Burgstaller hotly.

"That's my point. If you'll bring me the bill ——"

Who's running this business?" smiled k Minor, and fled into the night.

VII

INOR walked miserably up Madison Avenue, his pocket burning with the idence he had wrested from the Spanish ondrel. The encounter had left him irres- te and sick at heart, for in that bad arter of an hour he had linked up the idence against Julie Corless. He walked ffingly along, considering what to do; s dragging feet, a mite more forceful than s will, were advancing him step by step ward Mrs. Corless' apartment.
He paused at last in front of the familiar use. Gazing up at the rows of wide- ned windows he saw lights shining on e third floor. Acting upon impulse, for rick had passed the reasoning stage, he ent up to the little vestibule and rang e Corless bell.
Presently the door began that mysteri- s click-click peculiar to the elevatorless partment house. Minor turned the knob nd bounded up to the second landing, here to find the Corless door ajar and lie, looking white as a swan, in a filmy ouse gown, standing in a patch of light.
"Brick!" she cried in a faint little voice.
"I just thought I'd come up," he began.
He had taken her hand, which seemed far more fragile than the one he had clasped before. She led him into the small drawing- room, which, with its few pieces of hand- some Chippendale, its English engravings, its carved marble mantelpiece and Dresden ornaments, always gave him a feeling of being at home with people he understood.
Seated beside her on the chintz-covered couch, he found breath to say, "I'm mighty glad to see you're around again."
"Oh, I'm ever so much better to-day," she answered with a pale smile. "I've been up since noon. I bullied mother into going to the theater. I hope you're all right, Brick. You look tired."
"Julie," he launched forth, for the Alviso woman's bale of evidence was burning in his pocket, "I've been up to the Merlinbilt on a story. It seems to concern you."
"Me!"
He was sorry for his words when he saw the look in her face, yet a demon prompted him to say on: "The Marquis del Argo."
She looked away for just an instant, then said in a perfectly natural voice: "I'm glad you did the interview, Brick. You can handle it so much better than I ever could."
"I'm not sure of that," he grunted. "It wasn't the interview we expected, Julie."
"What did he say?" The look of fear had come again into her eyes.
"Burgstaller called the office and said that Del Argo was being held for jumping his hotel bill. Because I had seen Del Argo fence at Stockholm they sent me on the detail. The man confessed everything——"
"Everything?" she asked in a still, small voice.
"To Burgstaller's satisfaction. He said that his name was Alviso and that he was a hairdresser by trade——"
"Brick, my dear!"
She folded her thin hands and looked so pitiful that he was loath to go on until she insisted: "You must tell me, Brick."
"He said that he had taken Del Argo's name in order to make a fine appearance in the world. It seems he's had a bad habit of collecting photographs and letters——"
He brought a faded blue envelope and a girlish portrait out of his pocket and thrust them into her hands. She made no attempt to read the letter, which she knew by heart, but she held up the photograph just an instant before she closed her eyes.
"Where did you get these?" she whispered.
Brick was ready to tell her about the overblown beauty. Then a sense of pity sealed his lips.
"Oh, the detective shook these out of his clothes," he said easily. "I knew you wouldn't want them hanging round. And—I thought maybe you'd let me keep the picture."
"It's spoiled for any decent man," she said bitterly, and with a strength which belied the slimness of her hands she tore portrait and letter in twain.
"What a little fool I was!" she cried. "What a snob and what a romancer! Brick, you're going to write it up, aren't you? It's your duty, you see."
Her eyes had become wild with resentment and despair, but Brick Minor's words came soothingly:
"There won't be anything written up, my dear. Alviso's hotel bill has been paid and the Merlinbilt has sent him on his way."
It was a full minute before she comprehended his words, then she asked: "Brick Minor, did you pay that impostor's bill?"
"Why, yes," he replied sheepishly. "There wasn't anybody else round to."
Then Brick Minor found himself straining her slender body against his breast and expressing his ecstasy in supplications that she mustn't cry and that she mustn't go on like that.
"Let me tell you! Let me——" he heard a smothered voice saying into his lapel.
"Tell me just one thing, Julie," he conceded.
"Yes, I'll marry you," she agreed, jumping accurately to the conclusion. "If you'll have me, Brick."
Brick Minor made no verbal reply, but his subsequent behavior indicated that she had been accepted without reservations. After a half hour of beautiful nonsense wherein Brick had described a real-estate bargain he had seen at Greenwich and they had quarreled loverlike over the spot—either in the reception hall or the dining room—where his largest Flemish tapestry should be hung, Julie had a lucid interval and said severely: "Brick Minor, you've been evasive about one thing. Now that's no way to begin, is it?"
"I am an open book," he grinned, but he had an inner dread lest she question him about poor Alviso's matrimonial past.
"Why in the world did you pay that Spanish impostor's hotel bill and let him go without punishment?"
Brick Minor cleared his throat.
"You know, I suppose, that I saw Del Argo fence at Stockholm when I reported the Olympiad?"
"Yes—you've told me that."
"I met him on that occasion and had lunch with his party. I ought to know him, don't you think?"
"You ought to," she replied, puzzled.
"Well, this Spanish impostor, as you call him, is the Marquis del Argo himself."
Julie Corless sat quite still, her chin resting in the cup of her hands.
"I think I see," she said dreamily. "But I can't understand why he should be passing himself off as a hairdresser."
"Family pride is a curious thing," replied Brick Minor as he rose to go back to the office and tender his final resignation.

7 out of 10 Cars Have Ignition Trouble—

Is Yours One of the Seven?

Actual Size

ONLY three in ten of the motor cars in the street are entirely free from ignition trouble.

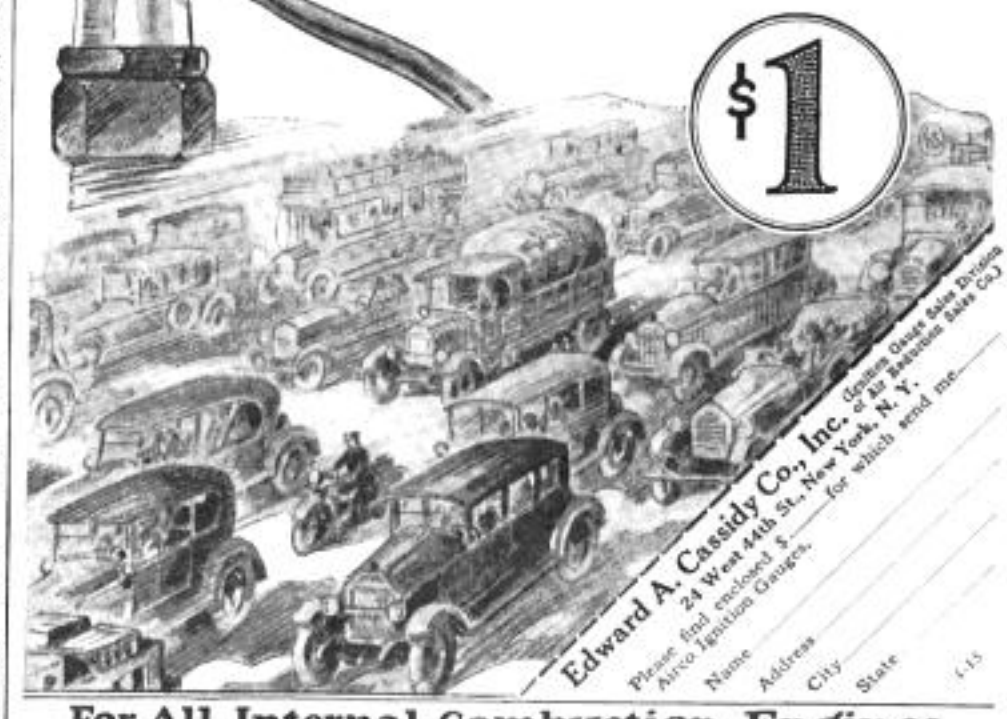
Each of the other seven has some hidden defect—perhaps a missing plug or a short-circuited wire—constantly unbalancing the engine, racking shafts and bearings and causing serious damage.

The motorist who spots every symptom of ignition trouble at once not only keeps his engine running smoothly, but lengthens its life and minimizes repair expense.

The slightest defect in the ignition system—whether in the coil, distributor, magneto, plugs or high-tension wires—can be detected instantly by using the Airco Ignition Gauge.

Airco IGNITION GAUGE

The Watchdog of the Ignition System



The Airco Ignition Gauge consists of a hard rubber insulating shell enclosing a small glass tube of Neon—a rare gas of the air which flashes orange-red when electrified. Variations in the regularity and relative intensity of the flashes indicate trouble and reveal its cause.

The Airco Ignition Gauge is conveniently small to carry and easy to use. Its blunt contact cap will not slip off plugs or wires when testing. The few simple directions are printed indelibly on the shell. There are no wires to connect, no shocks, no danger. Be sure you get the Airco—the original ignition gauge.

You can buy it at your accessory dealer's, or fill in and mail the coupon.

AIR REDUCTION SALES CO.

This instrument embodies all of the high standards of perfection characteristic of the twenty-one other products of the Air Reduction Sales Co., pioneers in the extraction of the gases of the air for industrial use, and large manufacturers of oxygen, acetylene, apparatus, etc., for the oxyacetylene welding and cutting industry.

THE GOLDEN EGGS

(Continued from Page 25)

golden days of spring in which poets are born, and pessimists have to struggle hard for existence. The blue of the sky looked as though it had been washed by some celestial laundress and put out in the sun to dry. There was a balmy wine in the air—much stronger than any paltry half of one per cent. You sniffed it, breathed it, drank it, and after the first few draughts you began to feel at one with lilac blossoms on the south side of a stone wall, and wild violets in a sheltered dell, and curled-up hickory leaves beginning to burst their buds, and blue-eyed calves frolicking over the meadow with their tails aloft, and orioles tuning their songs in the topmost branches of the maples and making civilization seem shabby, and man a wingless cuckoo in a weeping willow tree.

One of Paul's last duties that day was to visit a steamship office on State Street, and as he walked through Battery Park even he began to feel the magic of the day—insensibly at first but gradually with a perceptible lifting of his tragic mood.

"There are other places in the world besides Weatherby's," he thought to himself at last. "I don't have to stick there as long as I live. All I have to do is to look around and get into something good—something with a future to it, this time—and make up for the years I've lost."

The sun still warming him, half-forgotten schemes arose to his mind. There was Stapleson, for instance, who had once been a bookkeeper for the firm. He started with a lucky deal in Bethlehem Steel, and now had an apartment on Riverside Drive and a summer cottage on the shore. Ever since then Paul, too, had followed the market—in his mind—and more than once he had made an imaginary fortune in the rise of stocks. Wrought Iron Common, for instance, was about due for one of its periodical climbs. The only thing needed was a little capital.

Yes, and there was money in real estate, leasing old buildings for a long term of years, fixing up the fronts a little and renting them out again at a profit. Or a man might start a chain of garages through the country, the same as a chain of grocery stores; or invent something like an automobile bumper that would automatically stop the car if it touched anything; or plays could be written like Checkers or The Old Homestead—surely he'd hit on something. Surely everything profitable in the world hadn't been gobbled up yet.

In short, by the time he went home that evening a feeling of promotion had taken possession of him, a sense of adventure—as though something important and satisfactory was about to happen; perhaps the same feeling that comes to the lilac bud when the sun has warmed it, or to the blue-eyed calf when it lowers its head and gallops over the pasture.

"I ought to get a new suit and a pair of new shoes before I leave Weatherby's, though," he told himself. "Now let's see—if I go slow—and save four dollars a week ——"

He was still at this, and not very fond of the answer which was threatening, when he reached his boarding house and climbed the steps. In the vestibule a girl was trying to unlock the inner door and was evidently having trouble with the key.

"What's the matter?" asked Paul. "Won't it fit?"

"No," she said; "and I hate to ring. Landladies never like it. She gave me the key this morning, but I think it needs filing or something."

He noticed then for the first time the two suitcases which she had been carrying.

"New boarder?" he asked.

"Yes," she nodded. "Just moving in."

Paul unlocked the door and picked up the suitcases—and even as the couplings of a freight train creak when the locomotive first picks up the load, so Paul's wrists felt the strain the moment he lifted those suitcases off the floor.

"I'll carry them in for you," he said. "Where's your room?"

"Third floor front."

"We're neighbors then. I'm third floor rear." He paused and then rather awkwardly added, "Paul Sohmer's my name."

"Mine's—Edna Benson," said she.

He gave her a smile which she received with that caution which daughters of the city have learned to throw around such offerings; and she followed him up the stairs, both busy with their own thoughts, and between them one of those screens of silence behind which human beings have learned to hide the things that are in their minds.

"Some class, all right," thought Paul. "Down on her luck, I wouldn't be surprised, and had to find a cheaper boarding house. Suitcases look like the real thing, too, but aren't they heavy! I'll bet she didn't carry them far." Aloud he asked, "Come in a taxi with these?"

"No," she said. "On the El."

"And carried these suitcases all the way from the station?"

Her answer had a touch of spirit in it. "You wouldn't expect me to leave them behind, would you?"

Paul whistled to himself, his arms and wrists already beginning to ache, but he had climbed another flight before the solution came to him.

"I know," he suddenly told himself. "She didn't take a surface car from the station because she wanted to save the nickel. Probably had to pay a week's board in advance, and it just took every cent she had."

They had reached the third floor by that time, and the girl opened the door of the front hall room. Paul had another chance to look at her then; but if he had been expecting to see any signs of poverty he was certainly disappointed. On her head was a brave little hat of dark red velvet; her suit had a freshness and a fit to it that would have done credit to many a dummy in a Fifth Avenue window; and her shoes and stockings had that indefinable trimness which had been included in Paul's first impression—"Some class, all right." And yet, if he had disregarded the accessories and had looked at the girl herself, he might have noticed that her face was peaked a little more than Nature demanded, and that her eyes, as she thanked him, were brighter than they should have been, and had vague shadows beneath them too.

"Dinner's at half past six," he said. "Did Mrs. Seeger tell you?"

"Yes, thank you," she said.

"'Yes, thank you,'" repeated Paul to himself in his own room a minute later. "Some queen, all right." He looked at the dancing girl on his wall, her skirt standing out from her waist like an opalescent ring of fluff, poised on the point of her toe and looking enraptured.

"She's prettier than you," said he, and still looking at the picture he thoughtfully added, "I wonder if you would have carried those two trunks six blocks to save a nickel."

The smiling face looked back at him, inscrutably ecstatic. "Guess!" it seemed to say.

"I'll say you wouldn't," said Paul, and turning to the portrait of his mother he added more thoughtfully still: "I never thought of that before. It's bad enough for a man to be down on his luck, but God help a girl in the city when she finds she can't get on."

"Pardon Me," He Said. "This Young Lady Was Here the First. You Take Your Place in the Line"

V

MANY old saws have a rusty sound and grate upon the reason. "Still waters run deep," perhaps—but so do those who haven't the wit to talk. "The night brings counsel"—yes, but it brings cold feet as well. "Nothing is impossible to a willing heart"—yet probably Mr. Hohenzollern couldn't tell you so. But there is one old saw which cuts as truly as on the day when it was first sharpened—"Misery likes company," and every time Paul started to think of his interview with old S. J. some ended by thinking of Miss Benson half-guessed troubles. After din over he was standing on the fron building those vague plans of g which are the heritage of disap youth, when the door behind him and the girl in the third floor front ca

"Oh, it's you," she said, and moment's thought she added, "I you can tell me—I want to find paper office where they take ad ments."

"I know where there's two," sai "and I was just going out for a w you wouldn't mind—coming with

They went down the steps togethe walking quietly by his side. "You I'm not putting you out?" she ask

"Indeed, you're not," he said. "It He had started to say "It's a pl but it didn't sound quite right—s of that freshness which he had shunned like the plague. "It's—a ful evening, isn't it?" he concluded enough, and frowned at himself having been born with the gift of

"Yes," she said. "I think *spring's*

They walked along in silence for and when they came to a street lar stole a glance at her. She was slig told himself, than he had thought, ing him of the bisque statuette of shepherdess that had stood for yea mother's mantelshelf—a dainty fi the Watteau age that had to be carefully when it was dusted for might be broken.

"Yes, and she's prettier than tha he thought.

Slender, diminutive and pretty, h was something else as well. Nigh trick to cast romantic spells, hid details and letting the fancy play, Paul glanced down at his companio the light of the lamp she was no l young woman out of a boarding h her way to an advertising office; a mysterious figure of grace and her eyes deep as though with the of impending drama—a helpless threatened by a dragon and arou Paul's mind a growing feeling of chi an ambition to shield her, mind h her—to swing his foot like a mule s and kick the dragon into the mi next week.

In the brighter lights of Broadh mood attained even higher prop Young Apollos, slightly sallow of fi engaged in the immemorial past looking them over, glanced at Edn unconcealed admiration—glances t which she walked without the lea cern. Paul noticed them, though, soon as he had assured himself th were rolling off the girl by his side lik drops off a rosebud he felt the spirit o

"Yes, you can look," he seemed "but this young lady's walking wi and I know how to take care of remember that!" At the crossi guided her with his hand cupped un elbow, but when he reached the adv office he opened the swinging porti so much strength that the door sl back against the wall, and the peo side turned around to see what H was entering, and whether or not it be safe for them to stay.

Along one side of the office was a equipped with blanks and pencils c to the wall. Paul followed Edna to cant space and when she started to one of the blanks he happened to s opening words:

"Situation Wanted—Female."

"Out of a job. I thought it was thing like that," he nodded to himse under the glare of the lights above th he noticed for the first time the sus of shadows beneath her eyes. At th spirit of chivalry grew and was in nigh perfect flower when Edna went place in the line that had formed in of the clerk's cage, and was almos mediately jostled aside by a prosp looking man who was evidently in those prosperous hurries which a Sit Wanting Female could hardly be ex to understand.

Paul was on him like a flash.

"Pardon me," he said. "This lady was here the first. You take place in the line."

McQUAY-NORRIS PISTON RINGS

Get the power you pay for

Gas, leaking past worn or improperly designed piston rings, is power and money lost. Oil, leaking past the other way, fouls your spark plugs and increases carbon troubles.

That is why it pays to renew your piston rings. This is why thousands of motorists insist on piston rings of McQuay-Norris make—perfect fitting—seated right—exact in design. The Leak-Proof Ring is famous—proved through 12 years of experience. The Superoyl—the most effective oil ring. Then there's the lower-priced, quick-seating "Jiffy-Grip," and a high-grade snap ring in complete size range.

McQUAY-NORRIS
WAINWRIGHT
PISTONS & PINS

On any size or over-size you may need, your repairman can give you quick service—promptly through his supply house, if he hasn't the right rings in stock.

Complete McQuay-Norris-made piston equipment may be had for your car by securing McQuay-Norris Wainwright Pistons and Piston Pins—recently added to the McQuay-Norris piston ring line.

Booklet Sent FREE. Relation of piston rings to gas engine power and economy is fully explained in our booklet, "To Have and to Hold Power." Mailed postpaid on request. Address Dept. B.

McQuay-Norris Mfg. Co., St. Louis, U. S. A.
McQuay-Norris Manufacturing Co. of Canada, Ltd., Toronto

Leak-Proof—an exclusive two-piece design, preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Superoyl. Each ring packed in a parchment container. Price per ring—

$1.25

In Canada, $1.50

Superoyl—Keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container. Price per ring—

$1.00

In Canada, $1.25

JIFFY-GRIP—a one-piece ring. Non-butting joint, which can be fitted closer than ordinary step cut—velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope. Price per ring—

50c

In Canada, 50c

Snap Rings—of the highest grade. Raised above the average by McQuay-Norrismanufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper.

And Snap Rings of the highest grade

KROEHLER Daven-O

An Added Room—Subtracted Rent

With a Kroehler Daven-O in your home, you can have all the comfort of a handsomely furnished living room, the convenience that an extra sleeping room affords, and economy of reduced rental. The Kroehler Daven-O takes the place of an additional room and subtracts from the family budget the rental which that room would cost.

By day it is a handsomely upholstered, luxurious piece of living room furniture, just like any other fine davenport in appearance, with bedding completely concealed. There is ample room, when folded, for thick, removable mattress and bedding.

At night it is converted, with one simple motion, into a full-sized, comfortable bed, with patented, sagless, folding metal bed frame and springs.

Made in overstuffed styles and Colonial and Period designs, with any wood finish; upholstery of plush, tapestry, velour, genuine leather or leather substitute. Made to harmonize with any decorative scheme. Handsome styles, at prices to meet any requirement. Sold by leading furniture dealers everywhere, for cash or easy payments. Ask for demonstration. Look for Kroehler trade mark. Send for free booklet.

The Invisible Bed Room

Long Daven-O No. 830

(93)

(Continued from Page 74)

There was a clash of eyes, but perhaps the prosperous man had risen to affluence because he had the gift of knowing when best to advance and when best to beat a retreat.

"Sorry, I'm sure," said he, making a place for Edna in front of him. "I had no idea ——"

"That's all right," said Paul, breathing hard and looking stern; and when they left the office a few minutes later there was a touch of color on Edna's cheeks, and one of her hands rested lightly on his arm.

"Listen," she whispered. "Suppose—suppose he hadn't stepped back when you told him to—that man in there?"

"Somebody would have had to carry him back," said Paul shortly.

They walked along without speaking for a few minutes, her eyes deeper than they had been, and a proud little strut to her walk. Every woman sooner or later meets the man who will fight for her, and she never exactly hates him for it.

"That's the best of being a man," she said. And in a lower voice: "I often wish I was one."

"Why? What would you do?"

"I'd get on—somehow," she said. "Make money—somehow. You know—a lot of it. And then I'd travel. I've always wanted to go to Europe—Switzerland, France, places like that."

He told her about the Vosges then—of the village where he had been stationed while in the service of Mars.

"It must be nice there," she breathed once, drinking in every word; and again, "Oh, I'd love that!"

Soon after she seemed to grow tired.

"I guess we'd better start back," she said. "I—I was in the hospital quite a while this winter—and I'm not very strong yet."

Paul sat in his room a long time that night—staring out at the towels and dishcloths that were dimly waving in the darkness like ghostly vestments; and with every breath he drew he grew more and more determined.

He, too, would get along! There must be some way. He, too, would get his hands on a bunch of money—the same as the rest of them did!

"I've been a fool long enough," was his good-night thought, after he had set his alarm clock as though he were turning an engine of fate. "I'm going to try the other thing now, and see what I get from that."

VI

FOR the next month Paul's thoughts beat against the limitations of his mind like waves against a rock. Surely there was some way—some opening for a bright young man without capital intent upon a quick success; but when the week was over, all that he had for his pains was a growing doubt of his own abilities.

"Perhaps that's the reason I haven't got on," he told himself one evening. "Perhaps I haven't got it in me. Maybe there's some little thing that's missing—something that I shall never have." Which wasn't very cheerful thinking.

"Funny, too," he thought, "the way old S. J.'s been acting lately. Told me to-day that he wanted Gus to know how to make out ocean bills of lading. I wonder if he's thinking of firing me and giving Gus my job."

Which also wasn't a particularly cheerful thought, especially at a time when office clerks were a drug on the market and the strongest firms were trimming down their forces to the bone.

"If I only had some money to start with," he told himself with a hungry look. "Wrought Iron Common is going up again."

After dinner that evening he went with Edna to the advertising office, but there was nothing there for her.

She was quiet for a minute or two, and then with an air of serenity she said, "Well, I guess I can stand it for a month."

She spent her days, he had learned, answering ads in the papers, and applying in person to those who gave names and addresses. She was a stenographer, and from bits she had dropped Paul had guessed that she wasn't a very good one.

"A sort of misfit, maybe, like me," he had thought, and felt himself drawn more closely to her because of that.

They walked together to Riverside Park and stood for nearly five minutes on the edge of the Drive, waiting for an opening in the procession of cars that were rolling up and down by the side of the river. Stately limousines and sporty runabouts, fa sedans and knowing-looking taxis, aute biles of every size and make went slip past them in a double line that seeme have no end—until, if you had been th you might have been pardoned for thin that all the cars in the world were on rade, taking advantage of one of those vine spring evenings when it seems a si be lonely and a crime to stay indoors.

"You know what they remind me o said Edna. "The Egyptians in their c iots." And voicing a very old thought added, "Wouldn't you wonder where t all came from?"

"Beats me," said Paul, watching th with another of his hungry looks. "I u to think that I'd have one—long bef this."

"Isn't it funny," she said, "how so people are lucky—and some aren't?"

Seeing a break in the traffic they r across to the opposite side of the Drive, a then he noticed that the hand on his a was trembling.

"I'll have to sit down," she said.

They found a bench by the side of t parapet, and when they sat down Pa saw that she was trembling still. With instinct as old as the human race he plac his arm around her for a rest. "Lean c me," he gently told her. "You'll be bett soon. Don't be afraid. Just think m arm's a rock."

He felt her little body trembling agains his shoulder, and so for a time they sa there, watching perhaps the lights on th battleships below, and listening to the pro cession of the Egyptians behind them Gradually she grew quiet again.

"I'm all right now," she said at last, and gently moved his arm.

"You ought to see a doctor," Paul told her. "It isn't right for you to be like this. A doctor ought to be able to give you something to make you strong again in no time."

"They say I need a change and a long rest," she said, and turning to him with a smile that had a touch of tragedy in it she continued: "Isn't that funny? A change—and a long rest. Can you imagine that?"

Paul groaned to himself.

"Lord, if I only had some money!" he mourned, half despairing and half in prayer.

"Why, what would you do with it?"

"What would I do? Well, now, I'll tell you." And gently putting his arm around her again he continued, "First I'd make a lot more money—and then I'd take you to France—or Switzerland—somewhere far away—and you'd have all the rest you wanted, and grow strong and well again."

"Wouldn't that be nice!" she sighed contentedly, and after leaning her head on his shoulder for a few moments she added, more to herself than to him, "I'm afraid there's not much chance, though."

"Not much chance?" he repeated, one of the moods of Hercules falling on him again. "I'm going to get some money soon if I have to take New York by the neck and shake it!"

But the opportunity came more easily than that. The next week old S. J. called him in and gave him an order from South Africa to be placed with the Hedman Manufacturing Company, a Cleveland concern. The order was accompanied by a letter of credit for sixty-two thousand dollars made out in favor of the Hedman company—the money to be paid them in exchange for the ocean shipping documents.

"Get this through as quickly as you can," said old S. J. in his testy manner. "They're in a hurry for the stuff down there."

Delivery, Paul noted as he returned to his desk, was to be within three months, and from his previous experience with the Hedman company he guessed that they would probably be a month or two late.

"Sixty-two thousand dollars," he thought. "If I could only get the use of that—till the Hedman people are ready to make their shipment!"

VII

BIT by bit that day Paul worked upon the details—doing it impersonally, one might say, the same as he would have solved a puzzle in the Sunday paper.

"Anybody could easily make out the ocean bills of lading—and sign them," he told himself. "There's a bunch of blanks in my bottom drawer."

He drew one out, and in imagination he filled in the dotted lines, adding the shipping marks in the margin and the sprawling signature under the agent's name.

LINCOLN

MOTOR CARS

Beauty

LINCOLN MOTOR CARS are supremely beautiful to look upon.

Their beauty does not lose its charm, because it is the full embodiment of rare good taste and true refinement.

The charm does not grow less, because the beauty of the coachwork is not merely an embellishment for a mediocre mechanism.

Even were they outwardly less elegant, LINCOLN MOTOR CARS would still, in truth, be beautiful because of the infinite fineness of their mechanical structure.

But the fineness of the mechanism is not for beauty's sake. It is for the sake of how that fineness expresses itself in superlative performance, and in unremitting constancy.

The beauty which delights the eye and the beauty of the mechanism so unite and blend that the LINCOLN owner luxuriates in a mode of travel in which none but LINCOLN owners are privileged to participate.

And this superior mode of travel is persisting, in the LINCOLN, long beyond what motordom has been accustomed to experience.

TWELVE BODY TYPES

Murphy Varnish—for over fifty years an invisible preserver of beautiful surfaces

2,000,000 New Cars Came Out of a Can!

Just as for fifty years, master painters have preferred Murphy Varnishes for fine surfaces, so have motor car owners come to appreciate the time-tested skill and artistry in varnish making which has produced Da-cote—the motor car enamel which has renewed the showroom glory of over 2,000,000 cars.

Da-cote is Murphy Varnish colored with finest pigments and ground to the smoothness of cream.

Anyone can use Da-cote and get fine results—brush marks melt like magic into one even satiny surface—overnight it dries, leaving a finish hard and radiant as glass. Costs about two dollars.

Try it some afternoon and next day have a new car. Or use it to renew porch furniture, or to preserve metal surfaces from rust. Da-cote comes black and white and in ten popular colors.

Murphy Univernish

Will Brighten Your Home

The floors and stairs in your house—have they lost that lustrous newness of the day you took possession? Murphy Univernish will make them smile once more, for this wonderful "universal" varnish leaves a beautiful, professional finish wherever applied. Of course, it won't turn white. Not affected by soap, boiling water, alkali, nor even ammonia. Comes clear and in six wood colors.

Murphy Varnish Company

NEWARK, N. J. CHICAGO, ILL.

The Dougall Varnish Company, Limited, Montreal, Canadian Associate

(Continued from Page 78)

"The insurance certificates would be easier yet," he thought. "All that anybody would have to do would be to make out an application and take it around to the insurance company, and they'd have the certificates in half an hour."

The only other documents necessary would be the invoices and the draft.

"Anybody could easily get some billheads printed, with the Hedman company's name on them," he nodded. "There's a printing shop near Seventy-second Street, and they wouldn't know whether your name was Hedman or what it was. And then a rubber stamp for the draft, 'Hedman Mfg. Co., ... Treasurer.'"

With these papers and the letter of credit in his hand he saw himself in imagination going to the bank and pushing them through the window marked "Foreign Exchange"—even as he had pushed other sets of papers for the last eight years. There would be a brief glance at the documents—by this time they had learned that Paul could be relied upon to have them in order—and a few minutes later the foreign-exchange clerk would silently give him one of the bank's checks for the amount of the invoice, plus freight and insurance.

"About sixty-four thousand dollars altogether," thought Paul, and felt his breath coming faster as he turned and stared out of the window. At first the size of this imaginary check unconsciously disturbed him, but it wasn't long before he saw the error of his fears.

"It's only the little fellows who are caught," he repeated to himself, drawing from some of those wise modern sayings aforesaid; "the big ones get away. The little fish who grabs a hundred dollars goes to Sing Sing, but the big fish who gets away with a million goes to Palm Beach." Besides, it wasn't as though he were going to take it for good. He was only going to use it till it was really needed, and then when the Hedman shipment came through he would pay their bill with a cashier's draft, and nobody would be out a cent.

"Sixty-four thousand dollars," he thought again. "Suppose I had put that on Wrought Iron Common last month when it was down to 44." If he had bought on a ten-point margin he could have swung sixty-four hundred shares, and Wrought Iron Common was now selling at 56. "Twelve dollars a share profit," he morosely nodded. "I'd have made over seventy-five thousand dollars in less than a month." And the stock had only just begun to move. Half a dozen times in its history it had sold at 100 and more. "And it's on its way up to par again," thought Paul, frowning at the opportunities which he had lost in the past. "Any fool can see that."

For the rest of the day he did his work in a sort of mechanical trance, his mind skimming around in dangerous circles; and it wasn't till late in the afternoon that he saw a detail which he hadn't noticed before.

"I hadn't thought of that," he reflected. "The bank would give me a check, all right, but it would be drawn to the order of the Hedman Manufacturing Company. And what good would that do me?"

Vaguely at first, and then more definitely, the solution took form in his mind.

"That's right," he nodded; "I'd go to one of the big banks and introduce myself as Mr. Hedman, and say that I was starting a company and wanted to make a first deposit. Then a day or two later I could draw most of it out. I wouldn't need cash; I'd only have to draw a check to some good firm of brokers."

By that time, as you will see, he was no longer working out the details impersonally. He didn't say, "Anybody could go to one of the big banks," but "I'd go." So easy at times, alas—so easy is the descent to Avernus. But although the plan was now nearly fully fledged in his mind, old habits have an inertia which is hard to overcome; and planning is one thing, but doing is another.

"I don't know," sighed Paul as the afternoon drew to a close. "Anyhow, I'll send Hedman the order and tell them a credit has been opened. And then, to-morrow or next day, I can still mail them the letter of credit—if I want to."

Meanwhile he hid it among the papers in one of his pigeonholes and went uptown. Wrought Iron Common, he noticed in his paper, had gone up two more points.

"On six thousand shares," he told himself, "that would be twelve thousand dollars profit. At that rate I could make seventy thousand dollars in a week and still have the money to pay Hedman."

Disturbing snatches of old dreams be to trouble him, but with a variation t added to their disturbance—and t charm. Before, he had always seen him as the central figure who had found golden eggs, but now by the side of Merchant Prince was a Princess—a ser little queen with class in every line of h whose eyes were constantly raised to hi mingled love and admiration.

It was nearly half past five when reached his boarding house, and in c trast with the splendor of his visions it h never seemed so common, its windows shabby, or the smell of cooking in its h so stale.

"Mean—cheap," he thought as he ma his way up the stairs; "and if I stay he much longer I'll be just the same."

He reached the third floor with a feelin of helplessness, and was about to tu toward his room when he noticed th Edna's door was open, and that she w sitting at the window, staring out at th street below. There was something in he attitude which quickly drew him towar her.

"What's the matter, Edna?" he asked "I'm mad," she said in a low voice.

"Mad? Why?"

She wouldn't tell him at first, and whe it finally did come out Paul had to guess a lot. That afternoon she had answered an advertisement, and after the man had en-gaged her —— She showed him the mark which his hand had made on her wrist.

"Who was he?" demanded Paul in a rage. "Where's his office?"

She wouldn't tell him, though, and as she sat there, listless and tired, Paul caught glimpses of a brave little spirit which could no longer perk up a whistle—of a tired little body which had grown weary of stating qualifications and salary expected—or of climbing to Room 302 and asking for Mr. Bull.

"I telephoned the newspaper where he advertised, so that no other girls would go there," she said, "and they said they'd attend to him."

"Oh, damn it all!" cried Paul, suddenly moved to mutiny against the constantly recurring craziness of life; and making it comprehensive he went on, "Damn everybody! Damn everything!"

"No, Paul, don't say that," she quickly protested.

It was the first time she had called him Paul, and with a queer fullness in his heart he leaned over and kissed her. The memory of her thin little arms around his neck was still strong within him ten minutes later when he hurried into the printing shop near Seventy-second Street.

"How long will it take you," he asked, "to get me out five hundred billheads?"

"You can have 'em to-morrow noon," said the proprietor. "Got your copy?"

In a world that had strangely grown silent Paul drew a sheet of paper toward him.

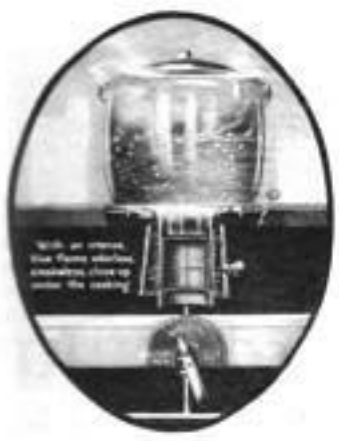
"Hedman Manufacturing Company," he wrote. "Cleveland, Ohio ——"

VIII

OLD Gooseberry himself might well have taken a hand in the matter—oiling the bearings and turning down the grease cups—so swiftly moved the adventure along the road which Paul had planned. At the bank the foreign-exchange clerk accepted the substituted papers without a raise of his eyebrows, and presently pushed through the wicket a check for $64,110.40 drawn to the order of the Hedman Manufacturing Company.

Paul walked out of the bank with his heart playing the anvil chorus against his ribs, and a fine warm sweat breaking out along his spinal column. Once in the street the orchestration grew fainter, and a feeling of confidence that wasn't far from recklessness gradually took possession of him.

"There'll be a great old row when the Congo Prince gets to Delagoa Bay and they find that the shipment isn't on board," he thought. "But I should worry! It won't get there for two months yet, and by that time I'll have money enough to take care of myself."



He had already sketched out a plan of campaign to take care of the situation when his substituted papers would be discovered. He would retain a lawyer—one of the old-fashioned bullyragging school such as achieve temporary fame in prominent criminal cases—Paul had the names of two such men in his mind—and when it was time for the storm to break he would

Come in and See it Work

More Heat Less Care

Note how the heat reaches up and is directed close up under the cooking by the powerful 12-inch burner.

FLORENCE National Demonstration Week April 17-22

YOU are invited to be present at a practical cooking demonstration to be given by us in our stores from

Monday, April the Seventeenth
to
Saturday, April the Twenty-Second
during
Florence National Demonstration Week

Tempting dishes will be prepared and cooked before your eyes, on a Florence Oil Cook Stove, by practical cooks.

You will have the opportunity of seeing how such good things can be simply and conveniently prepared on this stove.

While you are eating you will see that a match touched to an asbestos ring quickly starts the intense heat from the powerful 12-inch burners.

You will see how the heat is easily regulated. A lever handle gives the right heat for any cooking—hot, medium, simmering.

You will be convinced that the Florence Oil Cook Stove is easy to keep clean. Also that it is economical because it burns the cheapest fuel, which is used only when needed.

Watch for our announcements. Come in and let the Florence prove that it can live up to your ideal of a stove.

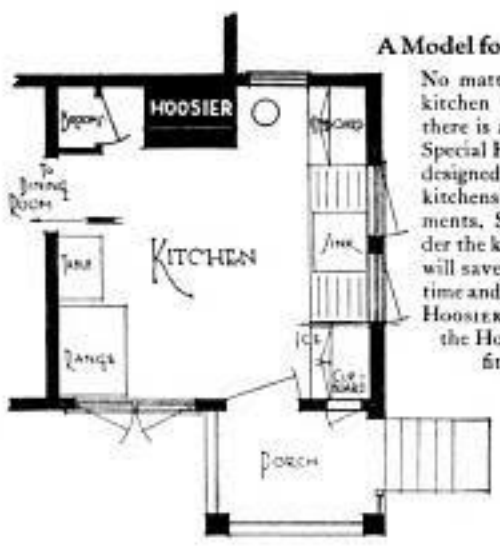
(SIGNED) Seventeen Thousand Merchants

FLORENCE
OIL COOK STOVES

Digitized by Google

Why waste your time and energy in an old-fashioned kitchen? Such a kitchen costs you miles of steps and hours of time each day—an unwarranted tax on your vitality

Don't Let Monotonous Kitchen Work Wear You Out



THOUSANDS of women who, like yourself, thought they had "easy" kitchens, tell us that no woman realizes the amount of drudgery in the average home until the HOOSIER gives her a modern work-reducing kitchen of her own.

Then the contrast is most noticeable. How much better you feel at night! For the first time it dawns on you that you have been wasting more time and energy than you had thought it possible for any woman to squander.

Built-in shelves and cupboards can never serve so well as when used in connection with a HOOSIER. Thousands of women have torn out part of the cases in their kitchens to make room for the HOOSIER

A Model for Every Kitchen

No matter what kind of a kitchen you may have—there is a HOOSIER to fit it. Special HOOSIERS have been designed for the smallest kitchens of the coziest apartments. Some even fit in under the kitchen window. All will save work and worry—time and energy. Go to your HOOSIER dealer and select the HOOSIER which best fits your needs

There is No Substitute for the HOOSIER

At an expense of $300, the wife of the president of a large hardware company had an elaborate arrangement of shelves and cupboards built into her new kitchen. Within twelve months she had carpenters tear out enough of these built-in cases to make room for the HOOSIER. She could have saved money in the first place by using the HOOSIER.

Extra shelf room is essential, but is never so effective as when used in connection with the HOOSIER. Such a combination provides maximum convenience at minimum cost.

Why HOOSIER Excels

The reason the HOOSIER excels is because HOOSIER'S scientific arrangement gives you in one compact spot every help you need to get up a meal and clear away after it.

In the HOOSIER, that spot is equipped with the greatest labor-saving inventions to make kitchen work easy—many of them patented, and not to be duplicated.

In the 23 years during which these inventions and their scientific arrangement in the HOOSIER have been developed, every suggested improvement for a kitchen convenience has been tried out. The best have been accepted—the rest rejected. Today the HOOSIER is the cabinet of proved improvements. Without it you waste miles of steps and hours of time each day.

Liberal Terms Make it Easy to Afford the HOOSIER

There is no reason why any woman need be a kitchen slave. You can afford the HOOSIER *now*. No big outlay is needed. Two million women have already taken advantage of this offer and not one would part with her HOOSIER if she could not replace it. Write for folder. Let us tell you where to get the HOOSIER on such liberal terms that you will never miss the money.

THE HOOSIER MANUFACTURING COMPANY

MAIN OFFICE: 422 Maple Street, Newcastle, Indiana

BRANCHES: Mezzanine Floor, Pacific Bldg., San Francisco; 368 Portage Ave., Winnipeg, Man., Canada

Saves Steps

HOOSIER

d this lawyer around to old S. J., bear- in one hand an olive branch, and in the er a sword. If Mr. Weatherby would ree to make no complaint the money uld be returned in full, every penny of but if Paul was molested even for a gle second, even by a single word, not a t would be given up and in addition to at, information would promptly be given the Federal authorities about S. J.'s sion of duties, undervaluations, and er questionable tricks which were whis- ed about in the office.

"It won't take him long to make his ice!" thought Paul. "But I'll have to d a lawyer. If I went myself he'd have arrested, if he only did it for pure edness; and they'd put me through the rd degree till they found out where the ney was, and maybe I'd get another years for attempted blackmail. No; have to send a lawyer, but that's all t. I'll be able to afford it with the ney I make out of Wrought Iron Com- n."

His confidence growing, he entered a k which had lately been advertising for depositors—and here again Old Goose- ry might have been with him, for a few inutes later a charming young assistant nager was making out a pass book and ul was indorsing the check.

"You are incorporated, Mr. Hedman?" ked the assistant manager, looking up. Or is it a trade name? Or what?"

"Trade name," said Paul, and seeing hat he was expected to say something nore he seized upon inspiration and added, "I shall incorporate later when I have a undred thousand dollars in hand."

"Splendid!" said the assistant manager with one of his charming smiles. "Now if you'll sign this card, please—for a specimen signature."

"P. S. Hedman," signed Paul—the name which he had adopted for his intensive search for the golden eggs. It was all over in five minutes—so quickly, alas, so quickly can Avernus be plumbed—and he returned to the office by way of Broad Street, stop- ping for a moment to look up at the façade of the Stock Exchange, as though he saw a nest up there.

"I'll wait till to-morrow," he thought. "It wouldn't look right if I drew out the money the same day that I put it in."

On his way home that night, opening his paper to the financial page as soon as he reached the Subway Station, he saw that the advance in Wrought Iron Common had been checked in the last hour of trading—the stock closing a point lower than it had opened in the morning.

"Good thing I didn't get started yester- day," he told himself, "or I'd have lost money to-day instead of making it. Still—it's only a temporary decline, of course. Some of the weak ones have probably been taking their profits, but I'll bet the strong ones are holding on all right."

Edna was in her happiest mood that night. She had been engaged, on trial, in a real-estate office at fifteen dollars a week, and she showed Paul a side of her nature which he hadn't seen before. As they started for Riverside Drive she walked by his side with a gay young air of ownership, sometimes striding along in an attempt to keep step with him, quoting grandiloquent lines from a play in which she had taken part at school—"A beautiful day for the hunt, my lord." "Aye, aye, Sir Jaques, and the gallant steeds are ready"—humming snatches of old songs, blowing her nose like a little trombone and laughing at the sound—in short, playing some of those adorable tricks which seem to come natural to every girl when she knows that she loves—and is loved.

"The Egyptians are looking prosperous to-night," she reported as they stood on the edge of the Drive, waiting for a break in the double row. "I'll tell you what would be fun—just to do it once, you know. Some night when you've struck it rich—good and rich, I mean—we'll take a taxi and ride to Grant's Tomb and back. And we'll both sit in the cab with our noses up in the air like this—looking down on the pedestrian clahss, my dear."

"That's all right," said Paul after they had dodged across the asphalt. "I may be striking it rich before you know it, and we'll buy a taxi then, if you'd like one."

"Honestly?"

"You bet you!"

"But how are you going to strike it rich? Are you going into business for your- self—or something?"

"That's it," he solemnly nodded, "and we may have to go and live in France if the business prospers—or Switzerland, even. What do you think of that?"

She gave him that tender look which mothers reserve for their firstborn sons when first they speak of setting the world afire.

"I love you, Paul," she whispered.

They found their bench and he sat for a while staring out over the water, half afraid of the secret which he was nursing, uneasy because he must never share it with her. Edna's head was on his shoulder, her fingers twined in his.

Behind them sounded the roar of the Egyptians, hurrying along in their chariots as though they would never stop. Below them swung the men-of-war—those meek ones who have been promised the inherit- ance of the earth—making signals to each other by lights that winked in dots and dashes.

Paul watched—and listened—the events of the day for a background in his thoughts—the pass book in his pocket—Edna's head upon his shoulder—and more than ever he felt disturbed by the craziness of life, felt himself slipping into a current which would never let him rest again.

"You're cold," said Edna, suddenly sit- ting up and looking at him.

"No, I'm not."

"Yes, you are; you shivered. You ought to have a nice lightweight overcoat, and when I get rich in the real-estate business I'm going to buy you one."

"I'll get one soon," he promised her.

"When we go to live in France—or Switzerland?" she quizzed.

"That's right," he nodded.

"You!" she gently scoffed. After a quick glance around she kissed him, and then her head found its place on his shoul- der once more.

"I love you, Paul," she whispered again.

IX

WROUGHT IRON COMMON had a bad month of it—emulating the frog in the well and slipping back each session a little more than it climbed.

"I'll wait till the flurry's over," thought Paul from day to day. "There's no hurry. The Congo Prince won't get to Delagoa Bay for a long while yet. There's plenty of time."

But though his search for the golden eggs might wait, events moved faster with Edna. One night at the dinner table he noticed how pale she looked, and when they went for their evening stroll she walked like a sad little figure in a tragedy, her merry tricks forgotten.

"I know what's the matter with you," said Paul. "You've been working too hard. You ought to let the other girls at the office do some of it."

"No," she said, drooping more than ever as she walked by his side. "It isn't that. They—they told me to-day that I wouldn't do—said I needn't come again."

"Never mind," said Paul. "I'll be rich enough for both of us soon."

But she didn't enthuse—this girl who wouldn't do—looking instead as though her faith in fairies had gone for good.

"I'm a failure," she sighed.

"You are not!" he quickly assured her. "You're the nicest, sweetest girl that God ever made." And as a new thought came to him he as quickly added: "You wait till to-morrow night, and I'll show you whether or not you're a failure!"

"How?" she asked.

He wouldn't tell her, but the next morn- ing he went to the bank and drew out a thousand dollars, and that night he took Edna to a jazz palace on Broadway and they dined in an artificial arbor among trellises of Dorothy Perkins roses that were made of dusty pink paper, and under elec- tric lights that were fashioned like bunches of grapes.

"Now!" said Paul, beaming at her when the dessert was over. "I've got a surprise for you."

"Another?" she breathlessly asked, her eyes bright with interest.

For reply he fished down into his waist- coat pocket and came up with a small leather case. And, oh, how her eyes were on it! He pressed a spring and the lid flew back, disclosing a solitaire which fairly seemed to throb with fire as it sat in its velvet nest and seemed to say, "Behold! At last! You meet me face to face!"

"Oh, Paul!" she breathed. "What have you got?"

Seattle—Center of the Charmed Land

SEE THOSE BABIES—typical babies in Seattle, healthiest city in the world and in a class by itself in respect to the low rate of infant mortality. If it's good for the babies it's good for you. Learn the secret.

Breathe deeply of this wonderful mixture of mountain and sea air, never too hot nor too cold, always balmy, tonic and life-giving. Whip our trout streams, glide over our shimmering mountain lakes and our placid inland seas. Climb our glorious mountains. Motor over our forest and mountain and seaside roads. Golf, ski, swim, hike, camp, canoe, hunt and do any and all of the things you love—they're all here if they're of the great out-of-doors.

It is the out-of-doors people we especially want, those who can revel in the wonders and delights of the greatest out-of-doors country on the continent; those who can appreciate the supreme masterpieces of Nature's handiwork in majestic and inspiring scenery and the sheer beauty of a lovely countryside—of big trees and ferns and wild woodsy things.

We want them to go back to their tasks renewed in body and soul, and our friends. We want them to learn why babies such as these are Seattle's babies. We want them to spread the tidings until all our over-wrought people will come to America's Summer Playground for healing and regeneration.

Plan for a month, two months or three months. It will be the time of your life. Mt. Rainier National Park will hold you for a month of delight if you can spare the time. Come by train or motor and direct to the Chamber of Commerce Tourist Bureau, 702 Third Avenue, Seattle, and they will make things easy for you. Low summer rates and fine motor roads.

Write today for booklet "The Charmed Land" and begin now making plans. SEATTLE CHAMBER OF COMMERCE, 910 Arctic Bldg., Seattle, Washington.

Maximum temperature, Seattle, 1921—80 degrees.
Average summer months' maximum for 20 years—71 degrees.

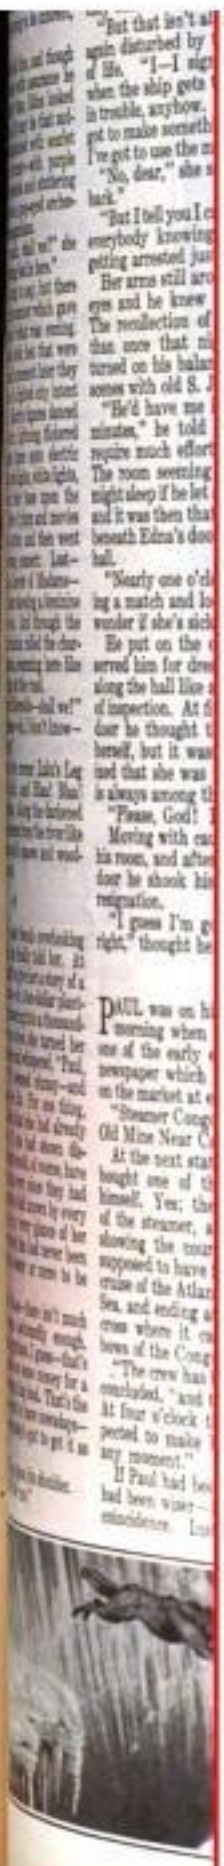
What Columbias do

-furnish ignition current for gas engines
-ring bells
-protect bank vaults
-call the police
-ring fire alarms
-buzz buzzers
-fire blasts
-run toys
-call pullman car porters
-ring burglar alarms
-operate telegraphs and telephones
-light tents and outbuildings
-furnish ignition current for tractors and for quick starting of Fords

• • •



Columbia Dry Batteries for every kind of service are sold at electrical, hardware, and auto accessory shops; garages; general stores.
Insist upon Columbia

Columbia Dry Batteries

—they last longer

Gas engine ignition troubles vanish, once the powerful and sustained ignition current of a Columbia "Hot Shot" Dry Battery is supplied. The "Hot Shot" is universally used for gas engine ignition because it gives more power, lasts longer, and is obtainable everywhere at little cost

didn't I?"

He quickly looked at him, and though he tried to smile back with assurance he scarcely could it. As quietly then, Edna looked around the room and it may be that suddenly she felt disenchanted with scarlet cushions and box vivarts—with purple crepon and dusty rosebuds and stuttering gramophone music from a pop-eyed orchestra of perspiring Senegambians.

"Let's go for a walk; shall we?" she said. "The air's getting bad in here."

It was a simple thing to say, but there was something in her manner which gave Paul a premonition of what was coming. He followed her out with feet that were none too willing, and a moment later they stood in the glare of a lighted city intent upon its pleasure. Electric figures danced and postured—electric lightning flickered and struck—electric tigers spun, electric whales; blue lights, red lights, white lights, yellow lights—cast their hues upon the crowds below. Titles of plays and movies appeared letter by letter, and then went out in disconcerting concert: Lust—Blaa! Blaa!—The Lovers of Madame—Lulu's Leg—the latter showing a feminine limb in active service. And through the center of this illumination rolled the chariots of the Egyptians, swarming here like locusts and blotting out the road.

"Let's go over to Riverside—shall we?" said Edna. "It seems—oh, I don't know—it seems nicer there."

As they turned the corner Lulu's Leg gave a farewell kick, and Blaa! Blaa! went out with a plop. Along the darkened side street came a breeze from the river like a message from moonlit spaces and woodlands sweet and cool.

X

THEY were on their bench overlooking the river when he finally told her. At first he had thought to give her a story of a lucky deal in stocks—of a ten-dollar plant miraculously flowering into a thousand-dollar harvest—but when she turned her head on his shoulder and whispered, "Paul, dear; tell me," it seemed clumsy—and somehow useless—to lie. For one thing, something told him that she had already partly guessed. If she had shown displeasure or distrust it would, of course, have been different; but ever since they had left the restaurant he had known by every tone of her voice, by every glance of her eye, that her love for him had never been stronger, broader, deeper or more to be relied upon.

"Well, I don't know—there isn't much to tell," he began awkwardly enough. "I've joined the Egyptians, I guess—that's all. Get my hands on some money for a while, so I can swing a big deal. That's the one thing you've got to have nowadays—capital—and everybody's got to get it as best they can."

Her head still lay upon his shoulder.

"And you did it for me."

again disturbed by the apparent craziness of life. "I—I signed some papers, and when the ship gets to Delagoa Bay I'll be in trouble, anyhow. That's the reason I've got to make something. That's the reason I've got to use the money; don't you see?"

"No, dear," she said; "you must put it back."

"But I tell you I can't put it back without everybody knowing. What's the use of getting arrested just for fun?"

Her arms still around him she closed her eyes and he knew that she was praying. The recollection of it came to him more than once that night as he tossed and turned on his balancing cot and imagined scenes with old S. J.

"He'd have me in jail inside of twenty minutes," he told himself, and it didn't require much effort to imagine the scene. The room seeming stuffy, he thought he might sleep if he let a current of air through, and it was then that he saw the line of light beneath Edna's door at the other end of the hall.

"Nearly one o'clock," he thought, striking a match and looking at his watch. "I wonder if she's sick."

He put on the old army overcoat that served him for dressing gown, and tiptoed along the hall like an O. D. ghost on a tour of inspection. At first when he reached her door he thought that she was talking to herself, but it wasn't long before he realized that she was pleading with One who is always among those present.

"Please, God! Please!" he heard.

Moving with caution Paul went back to his room, and after he had gently shut the door he shook his head and sighed with resignation.

"I guess I'm going to put it back, all right," thought he.

XI

PAUL was on his way to the office next morning when he caught a headline in one of the early editions of an afternoon newspaper which human ingenuity places on the market at eight A.M.

"Steamer Congo Prince Sinking. Strikes Old Mine Near Cape Verde."

At the next station he left the train and bought one of those evening papers for himself. Yes; there it was, with a picture of the steamer, and a map of the ocean showing the course which the mine was supposed to have followed in its three-year cruise of the Atlantic, starting in the North Sea, and ending at the spot marked with a cross where it came to grief against the bows of the Congo Prince.

"The crew has been taken off," the story concluded, "and the ship is slowly sinking. At four o'clock this morning she was expected to make her downward plunge at any moment."

If Paul had been older—or perhaps if he had been wiser—he would have called it a coincidence. Instead, a thrill passed over

and down the avenue he thought they never stop; but Paul hardly noticed them. Somewhere down in the harbor below, the Hedman shipment was snugly stored in the hold of a South African steamer, and somewhere in the evening mails three banker's drafts were going forward—one to pay for the invoice, one for the insurance and one for the freight.

"I'm so glad," said Edna. "You know, if anything had happened I should never have forgiven myself, because it was all my fault."

"Your fault!" gently repeated Paul, looking at her with love—yes, and a touch of awe. "Why, honey, you didn't have any more to do with it than—than that star up there. I had just grown to believe that everybody and everything was crooked—and I thought I'd try it myself."

"I know!" she as gently protested.

Their bench was occupied, and as they started in search of another he noticed that she walked more slowly.

"Tired?" he asked.

"Well ——" she hesitated.

"Lean on the old rock," he said. "It may rest you a little."

"I got a letter from home last week," she said, her hand upon his arm. "I didn't want to tell you before, till you'd got things straightened out."

She paused and then she continued: "I'm going home Monday. The city—well, it doesn't seem to agree with me. I'd have gone home before, only I felt ashamed. They used to tell me that I'd be glad to go back, but I was so sure that I could get along here, by myself."

"Going home?" said Paul, stopping to look at her as though he couldn't believe his ears. "You mean to say you're going home—and leave me here?"

"That's what I wanted to talk to you about," she said. "I don't see why you can't come too. Of course it's only a little place, but there's always something to do, and people get along there too. You'd be surprised. 'Most everybody has a car, and things like that. I wrote Uncle Will about you, and he said he could find you a job easily enough. And then—don't you see?—if—if you had a girl you could call on her Wednesdays and Sundays—and take her out to parties and sociables and things. And later—maybe—when you'd got along, you know ——"

"I know," said Paul in a low voice. "I could get along. Don't worry."

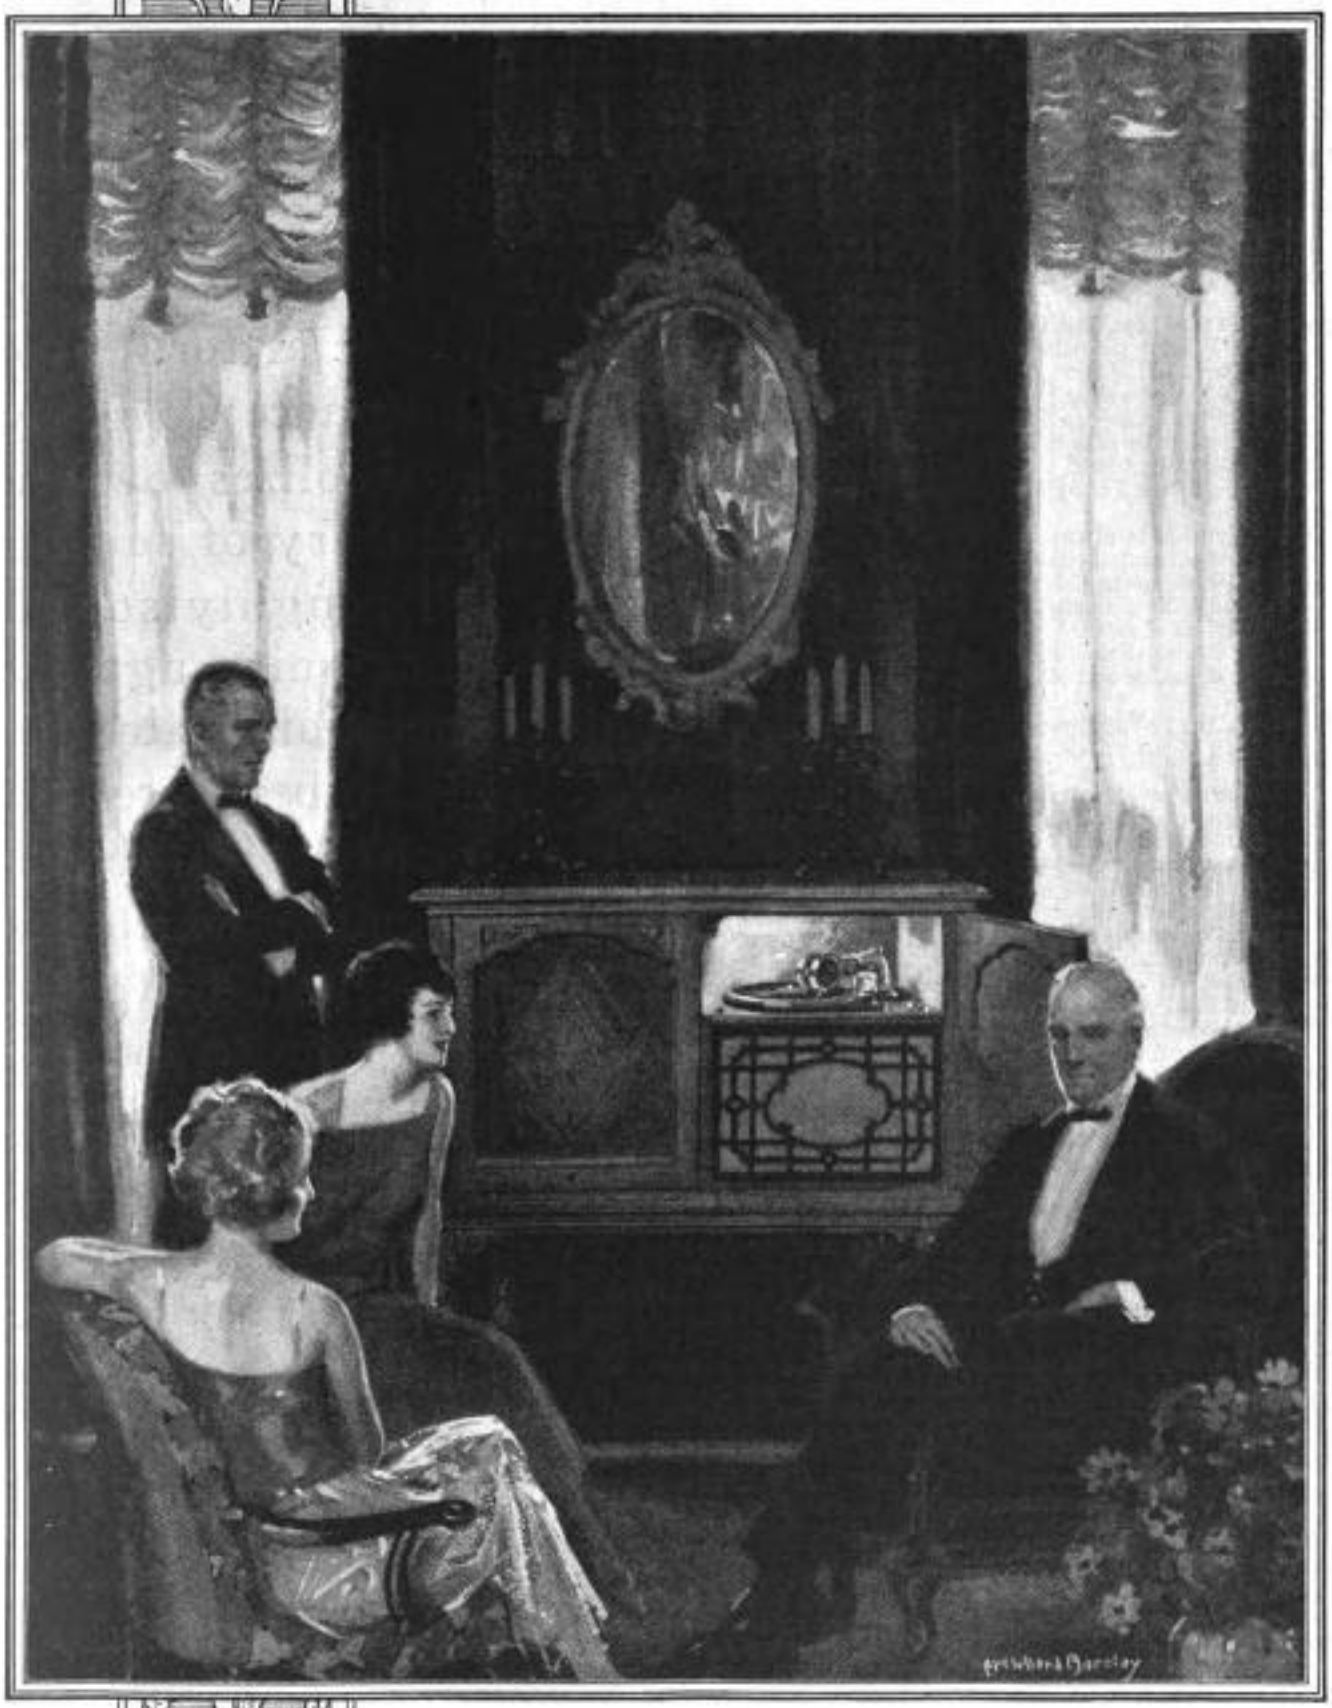
"You'll come then?"

"Come?" he repeated, looking at her with a glance that was part humility. "Do you think I want to stay here alone?"

They stopped by the side of the parapet. She was still leaning lightly on his arm, but if you had been there, blessed with the gift of divining invisible things, you would have seen that it was Paul who was doing the leaning—his search for the golden eggs forgotten, and a happier quest begun.

The trademark of the Hartford Fire Insurance Co.
Engraved by Timothy Cole

The trademark of the Hartford Fire Insurance Company symbolizes over a century of selling thoroughly sound indemnity against financial loss by fire. Today, besides certain protection by a company which has never failed to fulfill its promise, policyholders are offered the advice of Fire Prevention Engineers who help remove the causes of fire. This dual protection can best be secured if the policy bears the Hartford trademark.



There's a Hartford agent near you

HARTFORD FIRE INSURANCE CO.
HARTFORD, CONN.

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life.

When the

World-Great Artists now on Double-Faced Records!

Of supreme importance to every family with a phonograph is the recent decision of Brunswick to offer Standard Artists' numbers on double-faced records.

It marks the first step of Brunswick's nation-wide movement to place greatest artists and greatest music within the reach of every American home.

Brunswick Gold Label Records!

Just twice as much music as before! Two selections in place of one! An inexpensive way to quickly acquire a distinguished musical library. Start by obtaining three or four of these records from the new release each month.

Leopold Godowsky, Richard Strauss, Elly Ney, Giuseppe Danise, Mario Chamlee, Max Rosen, Bronislaw Huberman, Florence Easton, Tino Pattiera, Claire Dux, and other internationally acclaimed artists of the New Hall of Fame will contribute, continuously and exclusively, to the new Brunswick Gold Label Records. *Play on any phonograph.*

Conversation turns

to the Great Artists of *today,*

can you uphold *your* end without embarrassment?

THERE is a New Hall of Fame of concert and operatic stars—great artists of today, succeeding those of yesterday.

Their names are on the lips of well-informed people the world over—Godowsky, Huberman, Ney, Dux, Chamlee, Pattiera, Easton, Danise, Richard Strauss, Max Rosen.

Do you know them? Their most noted triumphs?—the amazing virility of interpretation which inspired world's critics to acclaim them?

To bespeak a cultured person's familiarity with the present-day world of musical art, you must.

Now recording—play on any phonograph

You can hear them now in your own home; can quickly become conversant with the most widely discussed musical attainments of the day.

For without exception, all have chosen Brunswick as the most fitting means to perpetuate their art. And Brunswick Records can be played on *any* phonograph.

Thus the world's *de luxe* recordings, including those of the great Richard Strauss himself, are made available to *every* home.

Note, too, that they come on *double-faced* records—a radical Brunswick departure, explained elsewhere on these pages.

Why Brunswick was chosen

By means of exclusive Methods of Recording and of Reproduction, Brunswick brings phonographic music into the realms of higher musical expression.

"Mechanical" suggestion—discord and vibration are refreshingly absent. Tones are sweeter and more beautiful. Expression is clearer. The true musical expression, both of the artists and their art, is reproduced in amazing fidelity.

For that reason, foremost living artists are now recording exclusively for Brunswick.

And for the same reason, you will find Brunswick in the homes of greatest musicians, both in Europe and America.

Hear—Compare

Hear the Brunswick, phonographs and records. You will find them featured as the Standard of the Day, by those shops devoted to that which is best in music, in every city and town.

There is a Brunswick dealer near you, who will gladly give you a demonstration.

The Brunswick plays all makes of records, and Brunswick Records can be played on any phonograph.

RITA COVENTRY

(Continued from Page 5)

but once, and the excursion had proved depressing—a drive of eleven miles through a sea of mud called by courtesy a road, and at the end the spectacle of a house falling to pieces, surrounded by broken fences, neglected box trees, and undernourished cattle grazing amongst weeds where gardens used to bloom.

Year after year he told himself that something must be done about Blenkinswood, but the mental whisper grew fainter and fainter with time. He knew that the farmer and his family were a shiftless if not dishonest lot who ought to be turned out; yet so unpleasant was the thought of going there again, of seeing the cheap oak furniture in the old paneled drawing-room and the horrid little ornaments on the porphyry mantelpiece which Lafayette had sent from France as a gift to that several-times-great-grandfather of his who had built Blenkinswood, of smelling cabbage cooking and hearing the man's maundering excuses for the years of failure, that he continued to postpone the duty.

Alice had become interested in Blenkinswood soon after becoming interested in him. She had developed what he regarded as a mania about the place, and for a time had spoken to him of what he ought to do about it in a voice which was like the insistent voice of conscience.

"You ought to take care of it," she would say. "You ought to be proud of it. Not everybody has an ancestral home. Not everybody comes from an aristocratic old family. You don't appreciate what it means. Take me, for instance. My father built the house where I was born, in Cleveland. My grandfather came out there from Connecticut when he was a young man. His father was just a plain farmer."

"That's all the Blenkinses were," he would reply. "Planters and farmers are the same thing."

Then he would tell her lightly that ancestry was largely a question of bookkeeping; that everyone had the same number of grandfathers; and that whereas his aristocratic forbears had handed down to him a plantation covered with weeds and mortgages, her father, who had been a manufacturer, had left her and her sister well provided for. He would tell her tales of his ancestors; stories of bouts of drinking over cards, duels and scandals.

"They raised tobacco and slaves and Democrats and hell," he would say. "Down in that part of the county they still think and talk so much about family that they have no time left to weed the garden. They're lovable people, but I thank the Lord I had sense enough to get out and come to New York when I was a youngster. I'm prouder of my seat on the exchange than I should be of twenty Blenkinswoods."

At first Alice had urged him only to put Blenkinswood in repair and get a capable farmer to run it, but presently she began to want to see the old plantation herself. This also had become a fixed idea with her; nor had he been able to shake it with his descriptions of the wretched roads and the dilapidation.

"Isn't it natural that I should be interested in your family?" she would demand. "I'll never get over wanting to see the place where they lived."

That, in effect, was her declaration now, uttered with a curious gentle tenacity.

"But you have seen all of it that's worth seeing," he told her. "You've seen the best of the portraits and furniture from Blenkinswood in my apartment. You'd be awfully disappointed in the place itself."

She shook her head.

"And I've told you a dozen times why I can't take you there. It would make talk."

"It wouldn't if I were your sister or your cousin."

"But you aren't."

"Who'd know that?"

His laugh was impatient.

"The whole county would know it inside of six hours. If a man comes from Virginia the people down there know more about his family than he knows himself. If I were to take you down there it would make a scandal."

"It would be my risk, wouldn't it?"

He gazed at her, amazed.

"Upon my word," he said, "you fairly paralyze me when you say a thing like that! It's so unlike you."

"If a woman has a clear conscience ——"

He interrupted.

"In this world a clear conscience sufficient. You've got to think how look."

"Well, at the worst, how would look? They'd look as if I loved you. I? I'm proud of loving you. I'm pr the kind of love it is. I have nothi conceal. Don't you suppose a good people who know us are able to see love you? Clara knows. I've told h

"What did you do that for?"

"She's the best girl friend I have in York," Alice answered. "She knew it how, and I wanted her to see how it

"What did she say?"

"That I was heading for unhappir

"Well," he said defensively, "I tried to conceal that possibility, did I

"That's what I told her. I wante to see the beauty of an absolutely h friendship like ours. I've never bee happy in my life. You know that. worth any risk. I wanted her to see fine it was—my never demanding anyt of you; wanting only as much as you glad to give; our complete independe your having promised to tell me fra if you ever found yourself losing int in me."

"What did Clara say to all that?"

"She said you might promise, but you wouldn't tell me when it came to point."

"Why did she think I wouldn't?" asked, surprised.

"She says men don't do things that w Poor Clara! It's not unnatural that should be cynical about men after her perience."

"Just what was her experience, do y know?"

"Her husband was absolutely good nothing."

"But how do you know?"

"She's told me all about it."

"Oh!" He smiled faintly.

"That's another reason I wanted to t her about you. She has her life to ma over again, and it's not good for her to so cynical. She mustn't go so much that one bitter experience, judging all m by one. She must learn that some m aren't that way."

He gave a grim little chuckle.

"I guess you didn't make much headwa with her, holding me up as an example."

"What makes you think that?"

"Clara doesn't approve of me."

"I don't see why you say that."

"It's all right," he said. "I'm not com plaining."

III

IT WAS an old though not a hard-fough difference between them, this differen over Clara. He did not care to fight hard, first because Clara was a woman, an second because so long as he was no obliged to see much of her he had no grea objections to Alice's friendship with her.

It was a friendship antedating his ow friendship with Alice. The two girls, wh were of about the same age, had met durin the war, in a Cleveland hospital where the were in training as nurses' aids. Befor they had completed their courses the wa had come to an end. All this Parrish knew by hearsay. As for him, the close of th war had found him doing relief work in Poland, and it was not until some month after his return that he met Alice, who was paying a visit in New York.

He had first seen her at a Sunday-evening party given by some people neither of them knew well—one of those large, vague parties the object of which seems to be to assemble and feed flocks of people who have never met before; and who, having eaten and participated in the vocal din, depart upon their various ways, never perhaps to meet again.

Sometimes, however, they do meet again. Parrish had asked to be presented to Alice, had driven her home after the party, and before leaving her at her door had arranged to have her as his guest for dinner and the theater a few nights later. Though her beauty had been the first thing to attract him he had found himself charmed, as they fell into talk, by her genuineness. Moreover, there was something fascinating about the expression of her mouth. At first you kept thinking she was just about to smile, but you presently discovered that this illusion resulted from the sweet aspect of the lips in repose.

SELLERS 30TH ANNIVERSARY

The Only Automatic Lowering Flour Bin. Comes down level with the work table. Filled with ease. Saves heavy lifting and dangerous climbing.

Automatic Double Base Shelf Extender now brings BOTH base shelves, and their contents, forward. You can reach the pot or pan you need from where you sit at the cabinet.

Silverware Drawer. This is just above the roll front. Plush lined and a convenient place for knives, forks and spoons in frequent use.

Extending Table Drawer Section —A feature every woman has wished for and which is perfected only on the Sellers—makes it possible to get into the big table drawer even when the work table is extended and covered with work things.

The Cabinet That Makes Kitchen Work Easy

WHY thousands and thousands of women have their hearts set upon owning a Sellers is explained with a single word—"Convenience."

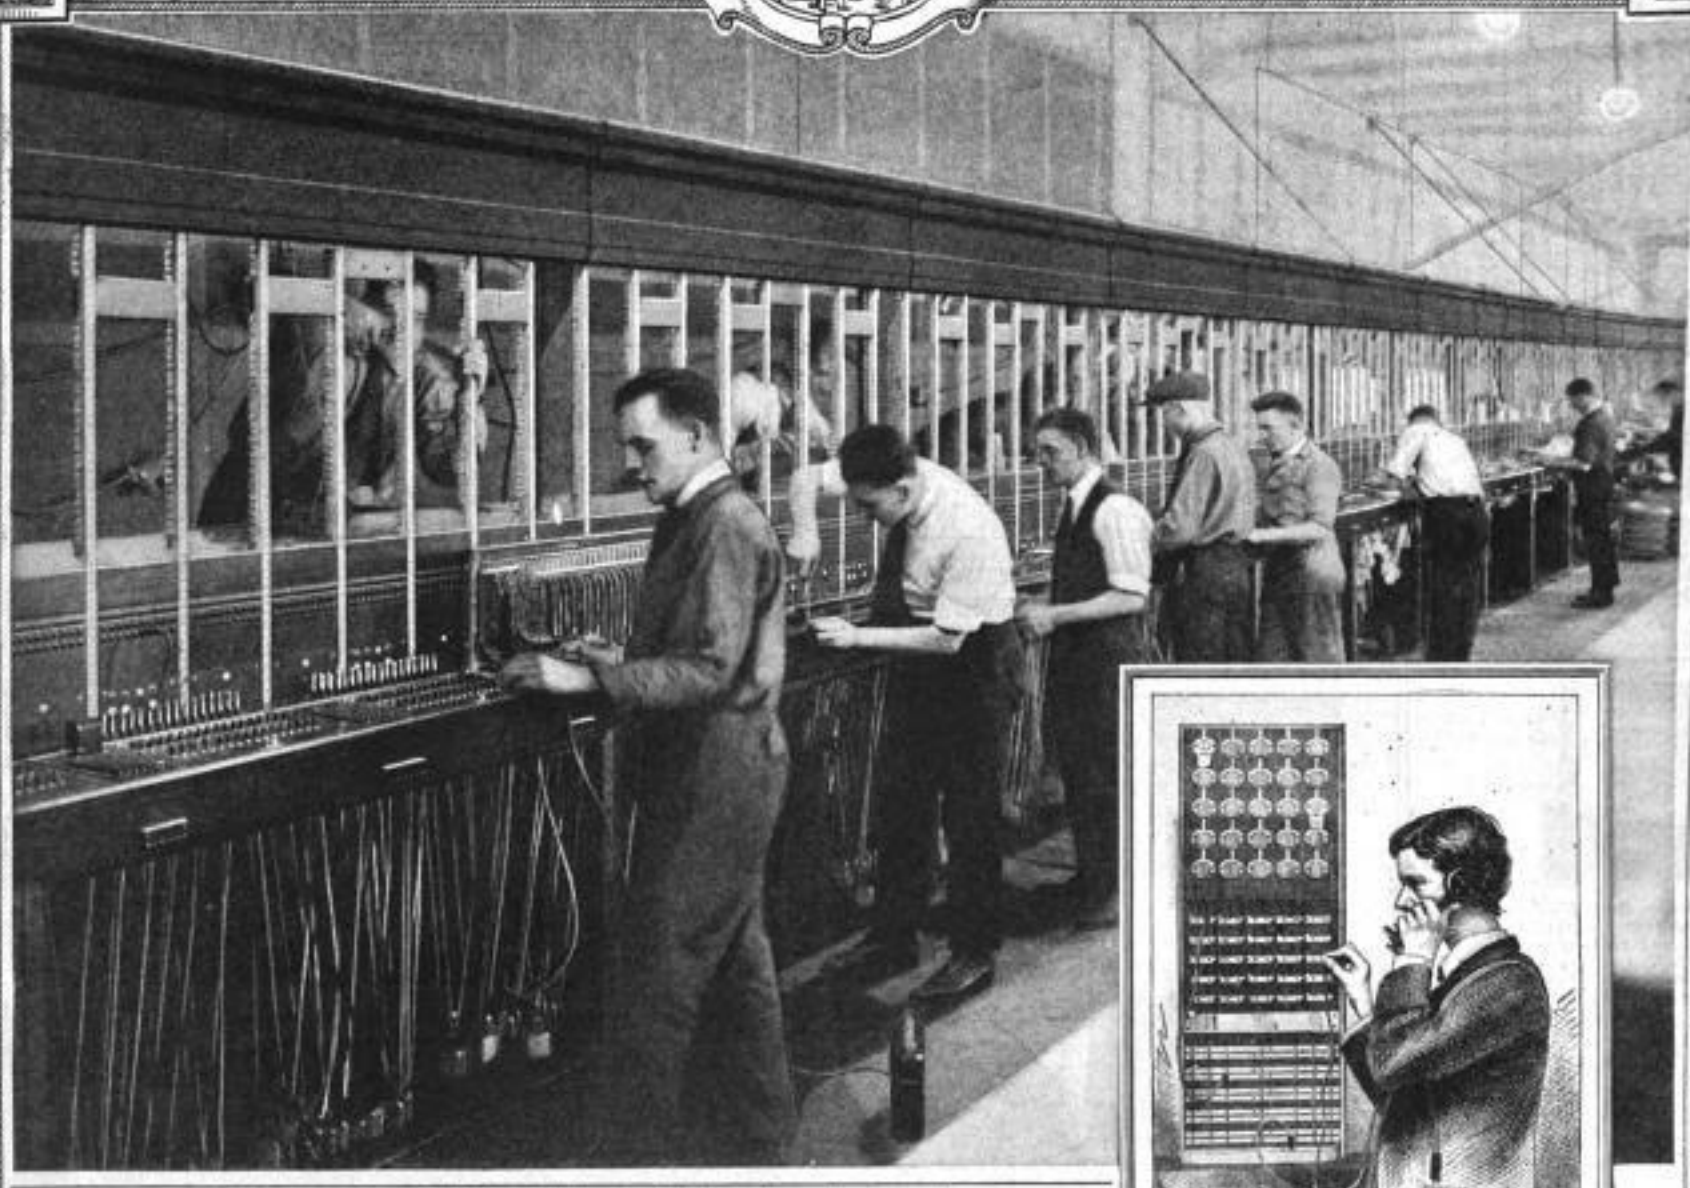
Saving steps is important—but what counts most in your kitchen work is how things are arranged in the cabinet—how it anticipates your wants—how easy it makes your work while you are at the cabinet—how simple it is to care for. These are the things that make a kitchen cabinet a real help and a joy. And in these things the Sellers has no rival.

The new Extension Table Drawer Section, for example, makes it possible to get into the big table drawer, even when the work table is covered with utensils and other things. This is a convenience found on no other cabinet. Then there are the famous Automatic Lowering Flour Bin, the Double Base Shelf Extender, the Dust-Proof Base Top, the Ant-Proof Casters, the Buffet Silverware Drawer, and many others.

In all there are "15 Famous Features" that make the Sellers a real delight to work with, in addition to saving steps.

And what makes the Sellers even more desirable today, in the eyes of most women, is the fact that this superior cabinet costs no more than any good cabinet. Most dealers will place one in your kitchen upon receipt of a small payment down, and make terms for the balance to suit your income.

Building a cabinet in the kitchen costs practically double the price of a beautiful Sellers and can have none of the wonderful features that we have developed in our 30 years' progress. The Sellers requires only the space occupied by a kitchen table.



At present reduced prices, a Sellers is the best value in our history. See your dealer for a demonstration. In the meantime, write for a free copy of our new Sellers Blue Book which pictures and describes the wonderful new features of the Sellers. (128

THE BEST SERVANT IN YOUR HOUSE

Digitized by Google

A 1922 switchboard, built of millions of finely adjusted parts. To plan, make and install such a board sometimes takes two years.

The switchboard of 1878

Setting the stage where a whole town gets together

That busy meeting-place of voices, your telephone switchboard, has a manufacturing story not often considered.

Some idea of the problem can be had from the very size of the boards pictured above—the one of today connecting five thousand subscribers for every dozen served by the crude affair of forty-odd years ago.

And greater size brought greater complexity. The modern switchboard houses a network of wires measured by the mile and is made up of parts measured to the thousandth of an inch for accuracy.

That the switchboard can meet the demands of your service is largely because the Western Electric Company, which makes it, began building boards in 1878, and since has led the way in every important development in the art.

(Continued from Page 88)

In the next few weeks he had seen her ften. The time came when according to er original plan she should return to leveland, where she lived with her mar-ed sister; but she did not go. By then he ad not wanted her to go and, albeit with certain air of playful camaraderie, had old her so. An orphan, financially inde-endent, she was able to do as she pleased, nd now it pleased her most to do as he leased. She put off her departure first from ay to day, then from week to week, mov-g from the house where she had visited a hotel and later to this pleasant little partment, which she had rented furnished r a few months.

Before those months were ended a rankly affectionate relationship had been stablished between them. When her first hort lease on the apartment was expiring he renewed it, this time for a year, and ow another year was half gone.

It was shortly after Alice had first taken he apartment that Clara put in an ap-earance in New York. She came at once o Alice's, with the understanding that she as to remain for a few days while seeking boarding place. The apartment had but wo bedrooms, one of which was occupied y Otillia, and with these facts to work rom Parrish had no difficulty in deducing hat from the time of Clara's advent the iving-room couch must needs be pressed nto service as a bed.

Because of Alice's enthusiasm for her riend he had been disposed at first to like her and had tried during the first week of her stay to make things pleasant for her. When she had been there two weeks, show-ing no sign of preparation to leave, he began to wonder just how long it ought to take to find a boarding place, and just how long a comfort-loving girl like Clara would be content to spend her nights upon a couch. Then he had discovered through a chance remark dropped by Clara herself that it was not she but Alice who was sleeping on the couch, which meant of course that Clara was in possession of the bedroom and the bed. It was then that he first began to notice in Clara's pink prettiness, particu-larly about the nose and eyes, the hint of an expression slightly porcine.

Thenceforward, when he took Alice out, he had ceased to include her visitor, but of course Alice sometimes felt she should not go, and urged him to come instead to her apartment. Now, however, Clara's friends were generally to be found there in the evenings—a heterogeneous collection, rang-ing from sleek young men intent on taking the two girls out to jazz restaurants where they could dance, to Sam Burke—a broker of a type Parrish did not approve—and Georgina, his effulgent, jewel-incrusted, paradise-plume-sprouting wife.

After a few evenings with Clara's friends Parrish had begun to stay away from the apartment, a fact that seemed to disturb Alice far more than it had disturbed her to sleep upon the couch; and thereafter the situation did not long endure. Precisely how it came to be terminated he was never sure. He only knew that after the third week of her visit Clara had moved to a boarding house round the corner.

There she had since resided, and though she continued to be with Alice a great deal, lunching with her either at home or at a restaurant several times a week, spending many of her daytime hours at the apart-ment, and even coming there to do her dressmaking, she now avoided, as though by tacit understanding, the hours at which he was likely to come in.

Clara's chief source of revenue, he had been given to understand, was a small alimony, though something was said also of her writing a weekly New York fashion letter to several Middle Western news-papers. It was to these fashion letters that Clara referred when, as often happened, she spoke of "my work." He had been curious to know what sort of writing she could do, and had several times asked Alice to get him copies of some of her friend's journalistic efforts; but these had never been produced. Alice herself had never been permitted to see them, she told him.

"Dick," said Alice presently, "Clara is wrong about that, isn't she? You would tell me, wouldn't you, if you found yourself losing interest in me? You promised, re-member."

Why, he wondered, were her thoughts running on that theme to-day?

"Did I ever break a promise to you?"

"No; but ——"

"Well, then, what's the use in discussing such a thing?"

"You understand I wouldn't blame you if you did lose interest. We can't control those things. They just happen. All I ask is to be told. It would be so humiliating to feel that you were ——"

"What on earth is all this about?" he demanded impatiently.

"Nothing. But men do tire of women—we all know that. You tired of Josephine. You told me so yourself."

"Josephine!" he exclaimed almost an-grily, placing one hand on the arm of the chair as if about to rise. "What has Jose-phine got to do with it?"

"You were tremendously interested in her at first; but you ——"

This time he did rise.

"Look here!" he said. "I wish you'd be so good as to drop that subject. Jose-phine wasn't —— Well, I prefer not to talk about it."

"All right, dear, so long as you under-stand that you're absolutely free. There are no strings to you. You know that, don't you, Dick?"

She spoke with intensity, gazing into his face, and this eager gravity of hers sur-prised him. It always surprised him. He had a theory that blondes were never in-tense.

"Free?" he repeated. "Why of course! We're both free. That's understood."

He tried to make his tone convincing, and if he failed she did not appear to notice it. It was their established creed, and no one notices the tone in which an established creed is pattered off; yet now he was scrutinizing this creed. How free was he? At the moment he felt painfully like a hus-band, for had he been actually her husband his sense of responsibility to her could not have been much greater. She depended upon him so.

Strange how that sense of responsibility had grown upon him almost unnoticed. It was the very thing he had intended to avoid. From the time when he and Alice had begun to be a great deal with each other he had been careful to make clear to her his atti-tude toward life.

He had told her definitely, although in a manner meant to suggest casualness, that he intended always to remain a bachelor, and so, possessed of this knowledge, she was in position to order matters as she might see fit.

But he had not stopped with that. Now and then, after their relationship had be-come affectionate, he had harked back to the topic, pointing out to her with an air of impersonality which in the circumstances he considered somewhat creditable that she was young and beautiful, with domestic tastes, including a great love for children, and that she ought to marry and have a home and family of her own; and he had even intimated that, delightful though the relationship was to him, he thought it un-fair to her, since it could lead to nothing, and since other men, knowing of her interest in him, or sensing it, would drift away.

"What do I care!" she said.

Since then his prophecy had been ful-filled. Other men she had known had drifted away; they did not come to see her now. Once, more recently, he had spoken of that, finding his opportunity in the disappearance from her living room of all masculine photographs.

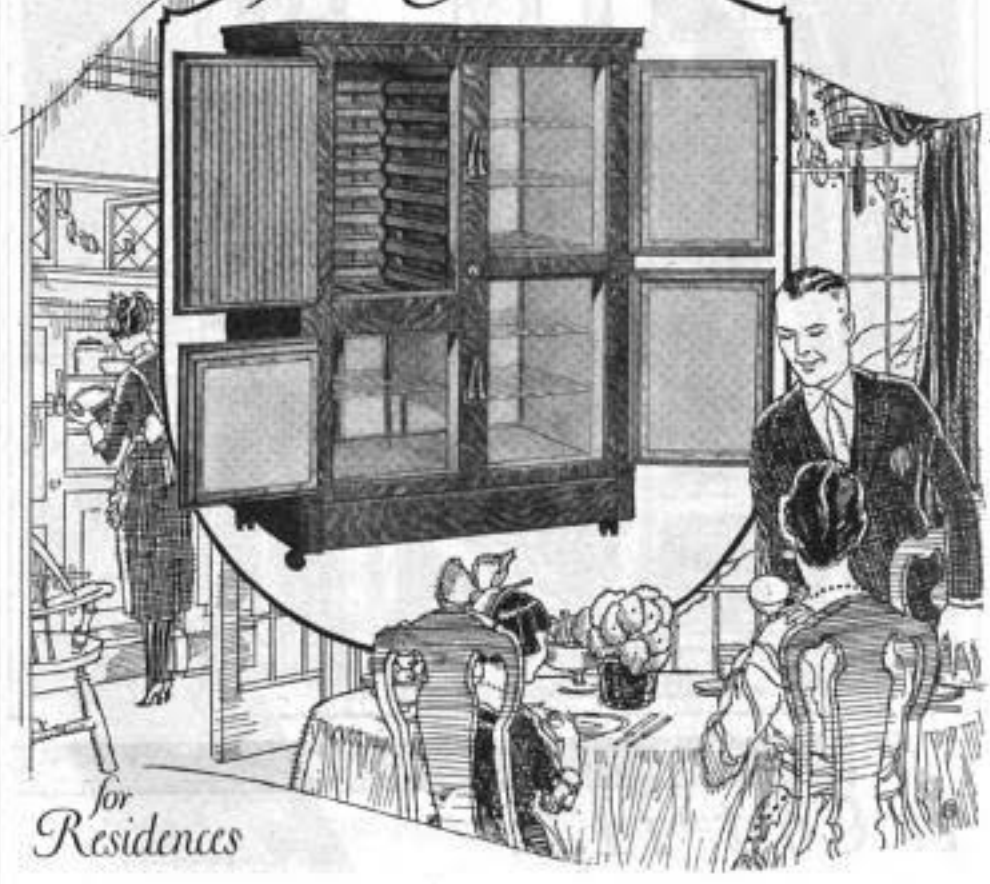
"What's the use in keeping their pic-tures around?" she had returned with a little laugh. "They'll never know the dif-ference."

"You don't see any of them any more?"

"No—thank goodness!" Then as though by way of explanation she had come and kissed him, saying "I love you."

Poor Alice! She did love him. He had ample proof of that. Now he found him-self wishing that she did not love him quite so much. It was less his love for her than hers for him that bound him to her.

"What are you going to do with yourself this evening?" he asked when, at seven, he got up to go.



"I think I'll telephone to Clara and see if she can't come over. We might go to a movie or something." She followed him toward the hall door. "Have a good time, dear, won't you, and forgive me for having been silly?"

"Nonsense! There's nothing to forgive."

"Yes," she insisted, "I can't always hide my feelings as I ought to. It's because I love you so."

"You're a dear girl."

McCRAY Refrigerators for Residences

THE purity and wholesomeness of every meal—as well as much of the tempting appeal—depends largely upon the efficiency of the family refrigerator. This is why users so thoroughly appreciate the McCray. For the patented cooling system, insuring a constant circulation of pure, cold air through every compartment, keeps all food appetizingly fresh, guarding the family's health and preventing waste from spoilage.

The glistening white interior of the McCray opal glass lined refrigerator is easy to keep spotlessly clean and sanitary. There are sizes and styles for small and large homes. *Outside icing* is a feature of residence models—originated and developed by McCray. The McCray is adaptable for mechanical refrigeration if desired.

There is a McCray for every purpose. Devotion to every detail of the problems of refrigeration for more than a quarter of a century has made the McCray standard equipment in residences, grocery stores, markets, hotels, hospitals and institutions. Scientific construction and highest quality materials insure efficient, economical and lasting service.

Send for Your Free Book. In it your refrigeration needs are thoroughly discussed, the complete McCray line is illustrated and described. No obligation, merely send the coupon now.

It Cost $71.45 to Replace this Piece of Pipe

"Its original cost was probably six or seven dollars," said an engineer. "Byers pipe would have cost a couple of dollars more. I took no chances on using cheaper pipe this time."

Whether you invest fifty dollars or fifty thousand dollars in a pipe installation, the penalty of pipe failures is proportionately the same, and the ultimate saving effected by using Byers rust resisting pipe is proportionately as great.

No one can foretell the durability of any metal except by a knowledge of its past performance. Change the metal in the slightest degree, and all calculations as to its life may be upset. This is the reason why Byers pipe is still being made as it was fifty years ago—of genuine old-fashioned wrought iron—the only ferrous pipe metal which can support its claim for durability by past performance of the most convincing character.

Byers Bulletin No. 38, "Installation Cost of Pipe," contains cost analyses of a variety of plumbing, heating, power and industrial pipe systems, with notes on corrosive effects in different kinds of service. Send for a copy.

Look for the Name and Year rolled in every length

"Are you going to think of me after you go?"

"Of course I am."

And it was true. He did think of her. He thought of her as he descended in the elevator, and as he drove home, and as he dressed, and as he went to Rita Coventry's. He thought how good she was, how unselfish, how honest, how devoted, and the thought of her merits weighed upon him. If only she were not so fine and so adoring, things might be easier just now!

Women! A good woman is such a lovely, delicate, lofty-minded thing; but when she falls in love she falls headlong, and doesn't count costs. With a man it is different. He may be in love, but even so he can't think constantly of love and nothing else. He has other interests—and he does like variety. No matter how sincerely he may care for a woman, he doesn't want her draped lovingly around his neck *all* the time. That sort of devotion wears a man out. That is the trouble with women. Once in love they can think of nothing else. They have no outside interests. Love is their whole life.

Thus he thought as his car carried him toward Rita Coventry's house.

IV

HAVING closed the door behind Dick, Alice stood there with her hand upon the knob until she heard the elevator come up to the hall outside and descend again. It was as if she had half expected him to return for something.

With the departure of the elevator she moved back to the living room, crossed to the desk on which reposed the telephone and called up Clara Proctor.

"Have you started dinner yet?" she asked her friend.

"No, I was just going in."

"Come on over here instead. It's Otillia's night out, but we can pick up something for ourselves."

"I thought you were going out?" Clara put in quickly.

"I had expected to, but Dick has to go somewhere."

"All right, dear, I'll be around in a few minutes."

Alice, wearing a checked gingham apron, let her in when she arrived.

"I have soup on," she explained, and hastened back toward the kitchen.

In leisurely fashion Clara removed her coat and hat, and passing into the living room paused before a mirror, giving a touch to her blond hair. Then crossing to the table she took up a fashion magazine and stood for a time looking at it. Noises coming through the open pantry door presently reminded her that supper was being made ready. Without putting down the magazine she moved to the dining-room door, where she stopped and called to Alice.

"Anything I can do, dear?"

"No, don't bother. I'll have everything ready in no time."

Clara returned slowly to the table, finished her cursory inspection of the magazine, replaced it, glanced about the room and wandered slowly to the writing desk. There, after surveying her friend's engagement pad, she took up a letter, scrutinized the handwriting and postmark, put it down again, and went into the bedroom, where she paused near the dressing table, upon the glass top of which a number of silver toilet articles were neatly arranged. Also, on the dressing table stood a large photograph of Parrish in a silver frame.

Clara pushed the photograph an inch or two nearer the edge, took up a pair of manicure scissors and snipped a piece of cuticle at the corner of one of her thumb nails. After feeling the thumb to see that it was smooth she put down the scissors and scrutinized her face in the mirror, turning her head critically from side to side. What she saw apparently satisfied her, for she now gave her attention instead to one of the dressing-table drawers, opening it and reviewing its contents. After examining some handkerchiefs which she removed from a silk case she took up a pair of new white gloves and looked them over as a critical purchaser might have done. Then she drew forth a black net veil, and with eyes again turned toward the mirror held it outstretched before her face. Having replaced the veil she closed the drawer and opened the other, finding in the front of it a small bottle of perfume in a satin-lined box. She removed the glass stopple and sniffed the perfume appreciatively, half closing her eyes, then put the bottle back, closed the drawer and returned to the living room, as Alice appeared from the kitchen with a small platter of cold chicken and lettuce garnished with lettuce leaves.

"Can't I help bring things in?" suggested Clara, stopping as she spoke.

"No, everything's ready. You sit do I'll bring the soup directly." And A disappeared again through the pantry d

Clara moved languidly to the din room and seated herself, and almost sin taneously Alice reappeared with two ste ing cups of tomato bouillon, one of wh she placed before her friend.

"Um!" Clara exclaimed, sniffing. Alice stood near her. "Isn't that a n scent you're using?"

"Yes. Do you like it? I just put o tiny touch."

"I love it. What is it?"

"Fleur de Fée."

"Awfully expensive?"

"I don't know."

"Oh, a present?"

Alice, seating herself, nodded across t table.

"Look out," she warned, "the soup hot."

"Dick?" asked the other.

"No; Margaret."

Margaret was her married *sister* i Cleveland.

"Oh!" said Clara. Then she asked "What do you hear from Margaret?"

Alice sighed.

"I'm worried about her," she said "She hasn't been awfully well. George's business keeps him tied up, and she won't go away without him. What she needs is a change and a rest. I've been trying to get her to come on and visit me, but she always has some reason why she can't. It's not only George and the housekeeping—it makes her nervous to leave the children."

"She's like you," Clara said. "That's the kind of wife and mother you'd be too."

"If I could be as good a wife and *mother* as Margaret," Alice returned, "it would make me mighty happy."

Clara smiled.

"Have no fear," said she, "you would. You'd never consider yourself any more than Margaret does; and married you'd be that much worse."

"Worse?" repeated Alice, smiling.

"Yes, worse. It doesn't pay for a woman to be unselfish with a man. Men don't appreciate it. They'll accept all a woman will give them, and take it for granted."

"You wouldn't say George didn't appreciate Margaret, surely?"

"Of course I never saw them very much when I was in Cleveland," Clara answered, "but I should say he accepted her devotion pretty—well, pretty calmly. Not so calmly as Dick accepts yours, though."

"Dick is mighty sweet to me," Alice defended. "No man could be more thoughtful and kind. You simply don't understand Dick, my dear."

"I understand one thing," Clara retorted, "and that is, if he's so darn thoughtful and kind I should think he'd be saying something about marrying you."

"He has," Alice returned calmly, rising and taking up her empty soup cup.

"He has?"

Alice, coming around the table to get the other cup, nodded.

"I've told you that before. Dick has been perfectly square. In the beginning, when we were first interested in each other, he told me frankly he was going to be a bachelor always."

"Oh, that!" Clara's tone was disappointed and a little bit contemptuous. And as her friend moved toward the pantry she added, "That's when you should have dropped him like a hot cake too!"

Alice did not reply. When she returned from the kitchen bearing plates and a bowl of lettuce-and-tomato salad Clara continued as though there had been no interruption.

"You'll be twenty-eight pretty soon," she said. "You've got to think of your future. You ought to have been married ages ago—a girl like you, with your money and your looks. It isn't right for him to be driving other men away and—and doing nothing about it himself."

"But I keep telling you," Alice returned as she served the salad from the bowl on the sideboard, "that he made his position perfectly clear in the beginning."

"But what about your position?"

"That's understood too. We're absolutely free—both of us."

THE WORLD'S MOST SUCCESSFUL MOTOR CAR ACCESSORY

Salesmen everywhere ride on Hasslers

IT'S the economy of Hasslers—the big saving they make in upkeep and repair costs—that has led great corporations of the country to install them on thousands of company-owned cars their salesmen and service men use.

Hasslers give these salesmen comfort and a restful ride between calls. They give the men more pep and energy, and enable them to really sell to the end of the day. Hassler-equipped Ford and Dodge Brothers cars travel faster and with less injury over rough roads, and save hundreds of dollars' worth of valuable time. For the same reason salesmen who own their own cars ride on Hasslers.

Hasslers cushion the bump and check the upthrow. They stop sidesway, reduce upkeep, repair and fuel costs. Try them for ten days, and if you are not satisfied, money back, no argument.

"Yes," said the other with an ironical d. "He's free, as he wants to be, and u're free whether you want to be or t—and you don't want to be!"

"Yes, I do."

Having served the salad, she had taken e plates to the table, where she was now gaged in placing a slice of chicken and a ce of ham on each.

"That is to say," pursued her friend, you wouldn't want to marry him?"

There was a dry little smile upon her lips she gazed at the unhappy Alice, awaiting reply.

"Not if he didn't want me," Alice insted stoutly.

"He'd have wanted you if you'd made im."

Fork in hand, Alice paused and looked uickly at her friend.

"How?" she asked.

"By chucking all this highfalutin stuff nd playing the game."

"There's nothing of a game about my riendship with Dick."

She made the reply with a little show of lignity. But Clara was not to be deterred.

"That's just what's the matter," she reorted. "Between a man and a woman it is a game. A woman has to use the weapons the Lord gave her. Otherwise the man has all the advantage. He can come to see her when he wants to or stay away when he wants to, but it's up to her to keep him from knowing that. Her job is to keep him on the anxious seat. That's what makes men propose. They always want what they're afraid they can't have. The trouble with you, my dear, is that you're too square with him."

"He's square with me."

"Maybe."

"Have you any reason to suppose he isn't?" demanded Alice, passing Clara's plate.

"Not except that he's a man. I wouldn't trust any man."

Alice took her own plate and sat down.

"You're so awfully cynical," she said. "I can't seem to make you see that my friendship with Dick is ——"

Clara, who had begun to eat, could not wait even to masticate her salad before replying. "I understand this much," she put in thickly: "You'd marry Dick tomorrow if he'd ask you."

"Yes. But I ——"

"Wait!" said Clara, holding up her fork. "You wouldn't raise a finger to get him. Isn't that what you were going to say?"

Alice, looking none too happy, nodded assent.

"I knew it," said her friend, shaking her head hopelessly. "And that's just where you lose out."

"All right then," Alice returned in a tone gentle but determined, "I'll lose out."

She looked at her plate for a moment, touched a lettuce leaf with her fork, then rose and hurried to the kitchen.

"What is it, dear?" Clara called after her.

"Nothing. I just forgot the cocoa."

She was a long time getting it, but her eyes were dry when she returned.

After that Clara permitted her to change the subject.

"There's just a chance," the guest announced as they were finishing supper, "that I'll go to Atlantic City next week sometime. Georgina Burke phoned this afternoon and invited me. That is, if they decide to go. Sam has a cold. It depends on that. If his cold gets better between now and Monday the trip's off." She laughed. "I like Sam Burke. I know he's a trifle loud, but he's all right, and he's strong for me. I amuse him, and he's awfully generous. Of course they'd pay all my expenses. Well, I'd like to get in a few miles on the Boardwalk just about now. Much as I like Sam I'm rooting for his cold to hang on a few days more."

"Why, Clara!" Alice was shocked but amused.

"Oh," said the other lightly, "I make no secret of it. I told Georgina the same thing and asked her to tell Sam. He likes that kind of talk—rough stuff." Then as Alice began to clear the table she, too, arose, and moving some of the dishes to the sideboard asked, "Shall we wash the dishes now?"

"No, don't you bother. I'll just set them in the pantry and do them later."

The proposal was not protested.

Later in the evening when she was about to go Clara spoke again of the new scent her friend was using.

"Um!" she exclaimed. "You always have such nice perfumes."

"Do you like this so much?"

"It's wonderful. It has lure, my dear."

"Lure?"

"Yes. You know—like expensive ladies in elevators at the Ritz."

Alice went to the bedroom and from the dressing-table drawer produced the little bottle in its pretty box and handed it to Clara, who drew out the stopple and inhaled ecstatically.

"Um!" she exclaimed again. "De-lish!"

She corked the bottle, put it back, closed the box and held it out to Alice. But Alice did not take it.

"No," she said, "I want you to have it."

"Oh, Alice! You dear! But I mustn't rob you!"

"Nonsense!" Alice gently pushed away the hand containing the box. "I don't think I like it as well as the kind I used before." And with a little laugh she added, "I guess lure isn't exactly my style anyway—worse luck!"

v

ALIGHTING from his car in front of Rita Coventry's house Parrish told his chauffeur to return at half past eleven.

"And wait," he added.

The house, one of a block of English-basement residences of red brick and white stone, stood in a side street a few doors from Central Park West. Through the evening dimness he saw that the windows of the floor above, now glowing with soft light from within, were equipped with boxes in which low shrubs grew. The front door, two steps up, was of wrought iron backed by plate glass and curtains of light silk, through which sifted a pleasant amber glow.

His ring was answered promptly by a blond young butler, evidently a Frenchman or a Swiss, who, after taking his hat, coat and cane, led him as far as the stair landing, from which point he indicated with a polite gesture the drawing-room at the front of the house on the floor above, whence came a buzz of conversation.

In his first glimpse of the room from the doorway Parrish perceived that it was spacious and that the walls and ceiling were of gray and cream color, with low-relief moldings and embellishments in the Adam style. Furnished in the period, it would have been a chamber dignified and chaste. But it was not so furnished. In its heterogeneous contents he seemed to read the journal of a world traveler, a cosmopolitan with an ample, careless pocketbook, a quick, acquisitive feeling for beautiful things and a striking disregard for the conventions—at least for those having to do with the furnishing and decoration of a house. In a single glance he saw an ancient Spanish desk, tall and bulky, studded with nails and strapped with ornamental ironwork; a Chinese cabinet of red lacquer; and another cabinet of buhl. A semicircular Hepplewhite table stood against the wall between the French windows, and in the next wall space a Korean chest of dark polished wood, heavily bound with brass. The massive table backed against the blue velvet couch at the center of the room was an old Italian piece, and upon it were two lamps made from Chinese jars; but the several tall standing lamps of carved and gilded wood were Florentine. He noted also a light Sheraton sofa, French and American chairs of several different eras, and a stiff Italian throne and footstool covered with old velvet and embroidered with the arms of the Borghese.

Inside the door he paused briefly. Rita, across the room, was half surrounded by a group of guests. Her famous back, which was toward him, was uncovered save for two ropes of pearl beads which passed over her shoulders and connected with her gown at the waistline.

Standing thus, she appeared to be dressed only in these beads and a scant satin skirt, black and lustrous like her hair. The skirt was festooned with strings of beads, some of them pearl, some of an emerald shade matching the large fan of ostrich plumes that dangled from a loop of velvet ribbon on her arm. She was talking and gesturing, using her hands and shoulders as he had seen her use them long ago in Paris at Larue's.

As Larry Merrick, standing near her, caught sight of Parrish and nodded a greeting Rita turned with a rattling of beads, and extending her hand gave him a smile that made him feel as if more lights had been turned on in the room.

He advanced and took her hand. It seemed to him that he had never seen a human being so full of brilliant contrast—white teeth contrasted with red lips, red lips against a creamy skin, and a creamy skin set off in turn by dark eyes and the jet black of her gown and hair.

Except Rita and Larry Merrick, Hermann Krauss, the banker and patron of music, was the only one of the group he knew. The others proved to be Schoen the pianist, his pretty American wife, and Mrs. Fernis, the novelist, who gushed and continually spoke to Rita and of Rita by her first name in a way that made Parrish feel that she was vain of the intimacy.

Hardly had he been introduced when three more guests arrived—Bickford, the steel millionaire, with his girlishly dressed wife of fifty-five or sixty, and Luigi Busini, the great conductor of the opera, a man tall and dark, with a beautiful profile and the look of one whose hat has been blown away and whose hair and mustache have been set on end by the same high wind.

Parrish, who had of course heard the gossip about Rita and Busini, watched them now with interest. Busini kissed her hand and looked at her ardently; but as he did the same with each of the other ladies one could hardly deduce anything from that.

The butler and a maid now appeared with trays of cocktails and appetizing little sandwiches of caviar and pâté de foie gras, after which the company moved in helter-skelter order to the dining room at the rear of the house on the same floor. It was an unusual dining room, resembling rather a conservatory, with its many plants, its large windows facing the south, and its walls of imitation stone, stripped with green lattice through which vines climbed from marble pots on the floor.

Parrish was pleasantly surprised to find himself placed at Rita's right, and it amused him to notice that both Krauss and Busini, seeking their seats at table, looked first at his place card, as though each expected to find his own name there.

"No, Luigi—at the other end," said Rita, indicating to Busini his seat far down the board.

The conductor was at no pains to conceal his disappointment. He gave a little shrug as he turned away.

"He is not pleased," remarked Krauss as he seated himself at Rita's left. His eyes twinkled as they followed Busini. "He looked as if he wanted to slip a stiletto under your fifth rib, Mr. Parrish."

"I have spoiled Luigi," said Rita. "See—he won't look at me. He's cross as a bear." And she explained to Parrish, "He sulks that way if there's anything he doesn't like."

"I understand his disappointment," Parrish said. "You were very kind to place me here."

"No—selfish," she said lightly. "I want to know you. Luigi has sat here often enough. His performance reminds me of something that happened at a dinner in Paris years ago, just after my début. It was Vasquez's first season there. He was a sensation. They were calling him the greatest barytone who had ever lived. The Russian ambassador was at this dinner, but he was placed at the left of the hostess and Vasquez on her right. I sat by the ambassador. He was very charming, but he was annoyed all the same. As he was leaving the house he kissed the hostess' hand, and then, so that she could hear, said to Vasquez, 'Good night, monsieur. His Majesty, my august sovereign, will be much flattered when I tell him that this evening it was you who represented him.'"

Rita's was the sort of dinner at which people talk about dinners and dining. The cuisine, that is to say, was perfectly Parisian and the wines, from sherry to champagne, delicious.

Schoen told of the chef of an Italian prince who refused to prepare a meal for more than twelve. When his employer gave large dinners the chef would cook only for the dozen most prominent guests, the repasts of the remainder being prepared by his assistant, who sometimes made out a separate menu. The chef maintained that twelve was the greatest number for whom one man could cook, and that a smaller number was even better. He had a saying, "*Pas moins que les Grâces, et pas plus que les Grâces et les Muses.*" At last he left because his employer, who was entertaining an Archduke of Austria at luncheon, demanded that he cook for fourteen.

This, in turn, reminded Rita of a story about Brambleton, the London critic. Besides his caustic criticisms, Brambleton

(Continued on Page 98)

It's six to one—

and half a dozen to the other in choosing between ordinary house paints. But U. S. N. Deck isn't an ordinary house paint. It got its training and reputation on the storm battered decks of ships where most paints would lie down and quit in no time.

Home-owners themselves are the ones who discovered how saving it was to use this long-lasting paint inside and out, upstairs and down. They wanted it in every possible shade and color. And got it, too, without sacrificing one drop of wearing quality.

Besides sturdiness, beauty and washability, it's easy to apply, covers a lot of surface, and dries hard over night.

Try it yourself on the nursery walls or that pantry floor. I'll bet you a darn good spring lid you'll never use any other paint if you can help it. And you'll win if you lose the lid. Write me how it comes out: care of The Billings-Chapin Company, Cleveland, Ohio.

General Tire Sales 45% ahead of any previous year

From the very beginning, General Tires have sold beyond our expectations. Since we started in business, each season—almost every month—has shown an increase in sales.

In 1921 we did not, at first, think this could keep up. We did not then see how sales, under those conditions, could exceed the sales of 1920. Yet they did. Sales of General Tires in 1921 were 45% ahead of any previous year. And this year, thus far, sales have been 55% greater than for the same period last year.

Perhaps the best evidence of a tire's success—the most convincing proof that it is giving complete satisfaction—is the success of the factory making it—the success of the dealers who sell it.

And it is actually the fact that, in 43 out of the 100 largest cities in the United States, the most successful tire dealer—the one who has the largest and most successful business—is the General dealer.

The most astonishing fact of all, however, is that General Tires are sold only for cars in use. We do not sell Generals to automobile manufacturers to put on new cars as "original equipment." Therefore, each purchase of a General Tire represents the seasoned judgment of an experienced tire user.

Look up the General dealer. Put a General on your car—*and watch it.* You will then know to what may be attributed The General's success.

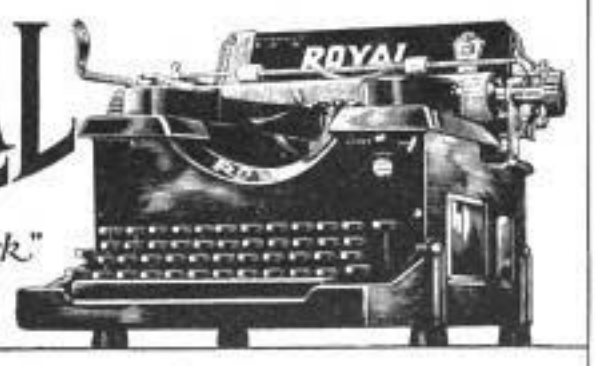
Getting Big Business out on time—*contented*

Anything that expedites the administration of business is a source of profit. So, also, is all that makes for contentment in an organization.

The new Light-Running Quiet-Running Royal speeds up the stenographer's work by lightening it. Its super-elastic touch is a marvel of lightness to her and its clean, accurate typing the source of much satisfaction. It doesn't have to be "driven". Rather, the keys seem to fly and carry the fingers along with them. Contentment!

This Quiet Royal materially reduces the noise and clatter of typing. It greatly facilitates concentration. Disturbance and distraction are real dollars and cents liabilities in an office. Everything that is conducive to clear thinking and concentration is a real dollars and cents asset, and the Quiet Royal is exactly this.



The Light-Running Quiet-Running Royal is already getting the stenographic forces of Big Business, and businesses that are going to be big, out on time—contented. It speeds up typing and tones it down! It is the answer of a great inventor to a need long felt by aggressive executives and office managers.

Our fifty-six page book, "The Evolution of the Typewriter", beautifully illustrated in color, will be mailed free on request. Address department S.

LIGHT-RUNNING
QUIET-RUNNING

(Continued from Page 95)

was famous for two things—his love of food and of solitude and silence. He avoided people, or if he could not avoid them refused to be drawn into conversations. One day a fellow critic who more than once had crossed swords with him in print saw him alone in a restaurant. He spoke to Brambleton, but the latter did not answer. Just then the waiter put a dozen oysters on the table before him.

"Look here, Brambleton," said his confrere, "don't you think you had better invite me to lunch with you to-day?"

Brambleton shook his head and glared.

"Because it is unlucky to do what you are doing," the other persisted. "You're thirteen at table."

The dinner was all but over before Parrish realized that his neglect of Mrs. Fernis, at his own right, had verged upon rudeness. In the last few moments he turned and talked with her, trying to make up for the earlier delinquency. And yet he felt that here, much more than at the average dinner party, there was an excuse for what he had done. It was not only he whose attention had been centered on Rita. Mrs. Fernis and all the others had looked to her rather than to those beside them. Eyes drawn to Rita in the first instance by her beauty were held not only by that beauty but by some strange adductive power almost entirely apart from it; a kind of vividness which Parrish, watching her, explained to himself as being like the vital force of two or three persons combined in one. She bubbled with spirits. Her mind and tongue were quick. She was amusing. Yet there was that about her which, even when the things she said were of no consequence, made people pause and listen. Call it personality, individuality, magnetism, charm, allurement, what you will, she had that gift, indefinable and priceless, that super something which is granted to a few rare beings in this world, and which causes those who have it to stand out from the mass of mankind like searchlights in the night.

VI

AS THE party left the dining room he managed to keep his place at her side.

"I'm to see those prints?" he reminded her.

"Yes, later—if you don't mind waiting after the others go."

"Oh, thanks!" Then he asked a question about something he had wondered over: "How have you found time to interest yourself in prints—a woman as busy as you are?"

"Ah," she replied, looking at him over her white shoulder and giving him the smile, "I can say to that what Mario said, 'I have had all the follies—all.' But I'll tell you more about it later."

"About the follies?" he suggested, smiling.

"No, the prints. I don't talk of my follies. It's enough to commit them. I leave the talk to the world, and to judge from the reports I hear of myself the world is quite able to take care of it."

When, in the drawing-room, coffee and cigarettes were passed Rita took both. As she lighted her cigarette from the silver spirit-lamp, Busini came over to her.

"I thought you were not smoking any more?" he said in Italian.

"Then, *caro mio*," she retorted gayly, "I have not altogether lost the power to surprise you." She blew smoke at him.

"Your lower register!" he said with grim significance, and turned away.

"Beast!" she called after him. But she was not disturbed. She winked at Parrish, explaining, "He is trying to be as awful as he can to-night. It makes him furious when he cannot annoy me. As a matter of fact my lower register is better than it ever was." She appealed to the others: "Isn't my lower register better than ever?"

"Indeed it is, Rita darling!" exclaimed Mrs. Fernis. "It never was so rich!"

"Isn't it, Hermann?"

"Absolutely!" declared Krauss. "Like your figure, my dear, it continues to improve. When you are sixty I shall no longer be able to resist you. We shall go to Venice."

"Your voice is superb—superb!" put in Schoen without waiting to be asked. "But for saying so I want an orange."

"Great goose!" she said, slapping at him with the green-plumed fan.

"I do want an orange," he insisted.

"Really? What for, insatiable monster? Haven't you had enough to eat?"

"I do not want it to eat. I w orange and a hairbrush. I will d for you."

"Very well, child, you shall hav Ring."

She indicated a push button n door. Schoen rang and gave his order to the butler, who went aw soon returned with the orange and t brush.

"Come and see this, Rita. Come body!" cried the pianist, going ove instrument and sitting down up bench before it.

They gathered about him. Taki orange in his right hand he began to quickly back and forth over the blac at the same time playing an accor ment with his left, producing a cha little air.

"Something of your own?" asked I as he finished.

"His own?" echoed Busini with a "Chopin's own! The Black Key St

"The orange is my part," said S amiably.

"Do it again! Do it again!"

The artist, who was like a large, boy, did it again, evidently enjoyin trick greatly.

"Let me do!" cried Busini, crowdi way up to the piano.

"Wait," said Rita. "What's the brush for?"

She held it up, a lovely thing of gold enamel with little wreaths of roses or back on a field of blue.

"Ah!" said Schoen, assuming the terious air of a magician as he put d the orange and took the brush from hand. "Now you shall see! This is perh my chef-d'œuvre."

Again his large left hand ran over bass keys, while with the brush, held in right, he played the Ride of the Valkyr pressing down upon the keys with bristles. His auditors were filled w enthusiasm.

"Wonderful!" laughed Krauss, appla ing. "You must stop giving recitals Carnegie Hall, where your art is not p haps fully appreciated, and go into vau ville—three or four thousand dollars week!"

Even Busini was lost in admiration, f getting for a time to sulk.

"Now let me do!" he cried, seizing t orange and elbowing Schoen to the end the piano bench.

His first effort was not entirely succes ful.

"No, no!" cried the originator of th trick. "Not that way! You hold it to tight. Let it roll in your palm."

He tried to take the orange from Busi in order to illustrate, but the latter clun to it as a child clings to a toy.

"*Aspitto!* Let me have my chance. I wan to do!" And he began again. "There!" he exclaimed, delighted, as after some prac tice he began to get it. "Now I do better This is more like!"

"The bass! The bass!" admonished Schoen, eager to help. "It isn't only the orange, Luigi. You must get the bass too!"

"I don't know the bass. I play it by ear—hearing you."

"Look—like this!" Schoen showed him the chords.

Busini attempted it again, still without perfect success.

"Amateur!" said Rita.

"But this is the first time I try!" pro-tested the conductor, and made a grimace at her. Then putting down the orange he said, "Now give me the hairbrush."

"It's just what you need!" Rita said with a laugh.

The other did not grasp the jest at once.

"Oh," he retorted, passing his hand over his upstanding locks, "it is my beautiful hair you do not admire this evening, *carissima*. And you used to admire so greatly." He shrugged.

"You misunderstand, Luigi," she said with mock ardor. "To me your hair will always be beautiful. It will be a beautiful memory even after it is gone. For you, my dear, it is the back of the brush."

As the others laughed the face of the Italian lighted with sudden comprehension. He clapped his hands.

"Ah, *je comprends! C'est ça!* That is very droll. Oh, very droll, Rita!" And to the others, who had understood from the first, he began to explain: "You see what she mean? She mean I am naughty boy; I ought to have the *bastone*—the spank!" He illustrated, hitting the palm of his hand

The Prize Tomato Soup

A culinary study—you'll enjoy it

For your own sake, try this fine example of the Van Camp cookery. We are making some soups you should know.

They are based on prize French recipes. A famous chef from Hotel Ritz in Paris brought them to our kitchens.

Then culinary experts—men with college training—have worked here for years to perfect them.

The materials are grown to our order, from specified seeds, on studied soils. Thus we get the ideal flavors.

Countless blends are compared, until all agree that the soup has reached perfection. Then formulas are fixed, each with minute directions. So every soup forever is exactly like the model.

This is done in the world's finest kitchen, with every modern aid.

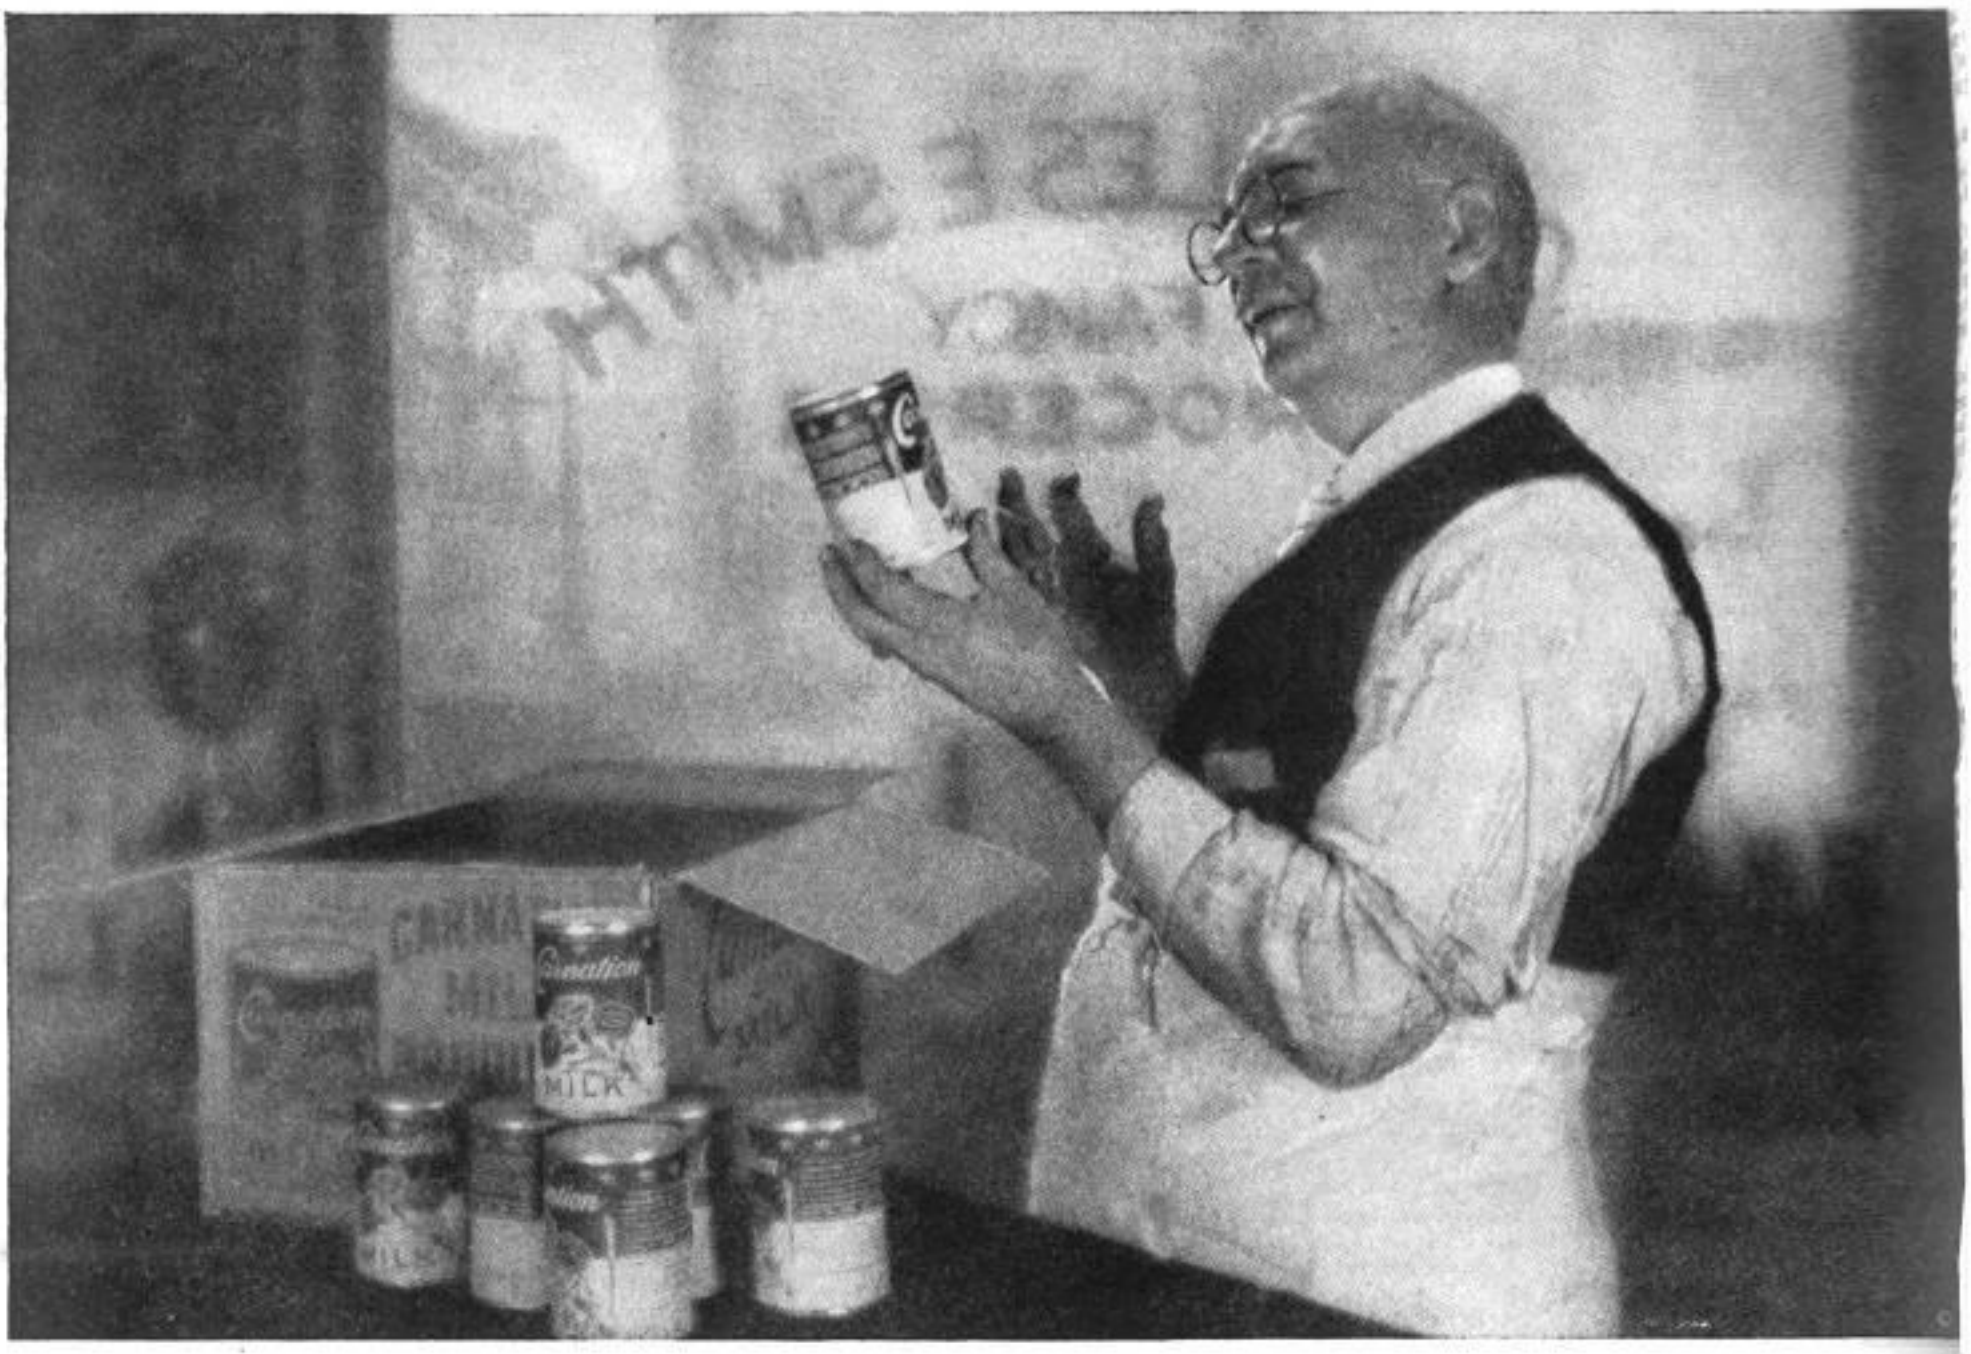
It is done by culinary masters, including a Domestic Science Expert of nation-wide repute.

It is done as you would do it had you the same materials and facilities.

The soups have a home-like flavor.

These Van Camp creations are adding delights to millions of home tables. If you fail to get them, you miss more than you know.

As an example, ask your grocer to send you Van Camp's Tomato Soup. Do this in fairness to yourself and to us.



10c per can

Other Van Camp Products include

Pork and Beans	**Spaghetti**	**Catsup**	**Chile Con Carne**
Evaporated Milk	**Peanut Butter**	**Chili Sauce**	**All Kinds of Soups**

He has sold it now for twenty years

FOR more than twenty years Carnation Milk has been known for its purity and for its high quality. Use it in your home for every milk purpose. To reduce its richness to that of whole milk add an equal part of water to one part of Carnation. Add more water if you want thinner milk for cooking. You will find Carnation Milk is convenient, and economical. Send for the Carnation Cook Book. It contains over one hundred tested recipes.

CARNATION MILK PRODUCTS COMPANY, 432 Consumers Building, CHICAGO; 532 Stuart Building, SEATTLE

Boiled Soft Custard—2 eggs, 1¾ cupfuls water, ⅔ cupful Carnation Milk, ⅛ teaspoonful salt, 2 tablespoonfuls sugar, ½ teaspoonful vanilla. Beat egg yolks slightly, add sugar and salt, then add milk diluted with water. Cook in double boiler and stir until mixture thickens and a coating is formed on spoon. Chill and flavor. Serve in sherbet glasses and place the stiffly beaten whites on top. This recipe serves six people

he back of the brush. Then, to Rita, ingly: "No wonder everybody fall with you, *chérie*. You are beautiful, other women. But you have *esprit*. is what ——"

a interrupted him, singing:

"*Pourquoi serais-je belle*
Si ce n'est pour être aimée?"

es, from Louise," said Busini, "but tone low." He struck a key several with one finger, then a chord.

ie has absolute pitch, you know," Fernis told Parrish in an awed tone.

bsolute pitch?"

es." She turned to Rita, saying, "Get to show Mr. Parrish, Rita dear."

sini was quite willing to exhibit his ge gift. Going to the other end of the and turning his back he named one another the notes making up each of chords struck on the piano by Schoen. e sat down afterwards, amid exclama- and applause, he seemed to be in better or than at any time during the evening.

VII

HE two bars from Louise made Parrish eager to hear more.

Aren't you going to sing to us?" he d Rita.

He had not meant the request to be over- rd by the others, but the sudden silence ich ensued about them, and the eyes ed to her, showed him that he was not e in awaiting her answer.

"Yes," she said after an instant's hesi- tion, "I'll sing." The beads on her gown ttled pleasantly as she rose and moved to piano.

"Rita must like you very much," Mrs. rnis said to him in an undertone. "She most never sings for her guests."

"But no one has asked her to," he re- rned. "I've been waiting, thinking some- e else would do it; someone who knows r better than I do."

"We don't ask her."

"I ought not to have done it, you mean?"

"You didn't know the unwritten law."

"She could easily have said no."

"Not to you, evidently," said the lady ith a certain air of coy intimation.

She had made him uncomfortable, but forgot that a moment later when, after triking a chord, Rita let her golden voice ll the room:

"*Drink to me only with thine eyes,*
And I will pledge with mine ——"

Her head was thrown back slightly, and her gaze rested, while she sang, upon the upper part of the tapestry across the room. But when at the end of the song she allowed her eyes to fall he found them meeting his. It was only a swift glance she gave him, but it thrilled him. She had looked first at him! Then, as their eyes parted, he rebuked himself. "Idiot!" he thought. "She looked at you only because it happened to be you who asked her to sing."

Before the applause had stopped he was at her side. She had risen and closed the cover over the keyboard.

"It was the loveliest thing I ever heard!" he said, glowing with sincerity. "But I am afraid I did wrong to ask you."

"Admirable!" came Busini's voice across the room. "But why? Why not sing something good?"

"That is a good song," she replied indifferently. Then, to Parrish, "I felt like singing to-night. This sort of day makes me feel like it."

"Spring!" he answered with a sigh. "So it does me!"

"And you don't sing?"

"Not a note."

"Perhaps you have some other mode of expression for the springtime?" she suggested with a little smile.

"Auctions," said he. "I buy all sorts of curios I don't want."

"Why not the thing they call interpretative dancing? Have you tried that? Judging from pictures in the magazines, spring is the season in which to wrap a necktie around the brow and prance barefoot through the park with a tablecloth."

"One must get up at dawn for that," he objected, echoing in his tone the mock gravity of hers.

"Or stay up all night," she amended.

Mr. and Mrs. Bickford, who had sat through the evening like people entertained and a little mystified, came up in time to catch the last words Rita spoke.

"That's what *we* mustn't do," said the lady. "Alex is at his desk every morning at 9:30. Example, you know." Whereupon she and her husband said good night.

"Is anybody going our way?" Bickford said, pausing at the door.

It was unnecessary for him to say which way theirs was. The Bickford house, on a Fifth Avenue corner, across the park, was celebrated throughout the city for its curious tower, its arches, balconies and strange protuberances, resembling gigantic goiters carved in stone. This invitation resulted in the departure of the Schoens and Mrs. Fernis, who were soon followed by Krauss. "Perhaps I can drop you, Mr. Parrish?" he suggested.

But before he could answer, Rita replied: "I've asked Mr. Parrish to stay behind. I want him to see my print collection."

"You, Merrick?" invited the banker. "You, Busini?"

Merrick accepted, but Busini shook his head.

"Thank you, no," he replied. "I also will stay and look at those print."

Parrish heard this with a feeling of disappointment, which, however, Rita almost instantly dispelled.

"No, you won't!" she said to the Italian; and though she said it with a smile her tone was definite enough. "You would never look at my prints before. Now you can go home, my dear!"

"Home, Sweet Home," Busini answered, giving her a slanting smile. "That is another song, silly like the one you sang. Home is not always attractive." His shrug expressed a certain resignation. "Good night, beautiful Rita." He kissed her hand. Then, bowing formally to Parrish, he said: "Good night, sir. I believe you will enjoy those print. I am inform that the collection of mademoiselle is large. Some examples, I believe, have merit. Perhaps others not so good. But that might be due, sometimes, to a selection too sudden." He looked at Rita as he finished: "Mademoiselle's temperament is like that. For deciding she is very quick."

Parrish was vaguely annoyed, for, although he was not certain of Busini's meaning, he sensed an indirection of some kind. He bowed formally and Busini walked toward the door.

"There is this about my collection, Luigi," said Rita as he moved away: "When I find in it something not so good as I had believed it to be I quickly get rid of it. Good night, *mon ami*."

Moving to the doorway she pressed a push-button. A bell sounded faintly from a distant part of the house.

"Come," she said, turning to Parrish, "the prints are in the sitting room on the floor above."

As she led him up the stairway they heard the soft, metallic sound of the front door as it closed behind Busini.

Rita paused and leaning over the balustrade called: "Pierre!"

"*Mademoiselle?*" He came running up. "*Laissez la lumière là bas.*"

"*Bien, mademoiselle. Merci.*" He turned and descended toward the lower hall.

VIII

RITA'S sitting room bore no resemblance to the other rooms that he had seen. It was smaller, and there was about it a modernity that was aggressive and startling. The carpet was of solid black; the panel moldings on the deep-ivory walls were picked out in lines of black and nasturtium color, and the same striking combination appeared again in the mantelpiece and in the hangings at the doors and windows. Two deep, comfortable couches standing at either side of the fireplace were upholstered in black velvet, and might have given a too somber note but for the brilliant pillows of taffeta in solid colors with which they were equipped.

"How do you like it?" she asked, observing that he looked about.

"It is very striking."

"Be frank. I've just had it done. I'm not sure I like it myself. I fell into the clutches of a decorator, a very clever and persuasive woman, who wants to do the whole house."

"Don't let her."

"I don't intend to. This sort of thing seems to me abnormal—like Strawinsky's music. I'm having a frightful time, though, keeping her out of my bedroom. She wants to give me black-and-gold walls—originality, you know. She says my bedroom isn't original, but I tell her sleep isn't original either."

Parrish smiled.

Do You Ever Go To Milwaukee, Toledo or Ft. Wayne?

AN UNUSUAL treat awaits your arrival in each of these cities. It will be found in the form of an excellent hotel service by an organization trained to give the greatest service possible and with the utmost courtesy.

One Keenan custom is that the clerk calls your room immediately upon your arrival so that we may be sure of doing everything possible to make you comfortable. Our guests must have every service that it is within our ability to extend.

This spirit is reflected by all who attend you while you are with us. It is, of course, only one of many things which make people return to our hotels year after year.

Reservations Wired Free

We gladly wire reservations from one Keenan Hotel to another, so that you may be assured of excellent accommodations. In dining rooms of the Keenan Hotels you receive appetizing food with excellent service. Café and room rates are reasonable.

Notice the names carefully and when you are in any of these cities, go to one of the following hotels. You may feel sure of satisfaction.

"Heart-Break House"

A true story of a home that came back

"WE discovered it when we came out into the country to rest three years ago—a pathetic little house with its weather-beaten sides, sagging porch and broken eaves.

"Almost daily that summer we passed it in its nest of weeds and brambles. By and by we began to call it 'Heart-Break House.'

"One day we stood before it in the twilight and John said, 'That house haunts me; I believe it has a soul. What a wonderful place if some one would fix it up.'

"'Let's,' we said simultaneously and 'Heart-Break House' was ours! Ours to fix up! Ours to heal of its 'Heart-Break.'

"What joy we had in the work! We repaired the neglected porch, the sagging eaves, the tumbled-down fence. We painted inside and out; cut down the weeds and planted flowers.

"If you could see our little home today you would believe in modern miracles. The white painted fence stands up with dignity; the gravel path leads to a neat, well painted self-respecting house that proclaims home and love in its every line. Inside, white woodwork, varnished floors and 'grandmother' rugs; a kitchen whose shelves and shining crockery speak of care and taste and common sense.

"Something has made us healthy and contented. Maybe it is God's sunshine, and work, and dear companionship in our own home; maybe, who knows, the magic was wrought by that blessed paint brush."

Is *Your* House Worth Saving?

EVERY time you are tempted to put off painting ask yourself that question. Is your house worth saving? If it is, do not neglect it. Delayed painting means loss—there are thousands of "Heart-Break Houses" to prove it. Save the surface and you save the house. Paint! ***But be sure the paint you use is the kind that saves.***

There is a Sherwin-Williams paint, varnish, stain or enamel for every surface that needs protection. Each is the right finish for its purpose. Each has proved its dependability over a period of half a century.

There is a Sherwin-Williams dealer near you.

Send 50c. (65c. in Canada) for *The Home Painting Manual*, the most complete work on painting ever compiled. 170 pages of text; 27 color plate pages. Address 601 Canal Rd., Cleveland, O., Dept. B435.

Sent Free.—Set of eight color plates, showing modern effects in interior decoration and attractive combinations for exterior painting. The Sherwin-Williams Co., 601 Canal Road, N. W., Cleveland, O.

It won't be harmed —it's Brenlin

The window shade of lasting beauty

Through all the constant strains of everyday usage Brenlin *wears* —two or three times as long as an ordinary window shade.

It sturdily withstands the attacks of sucking and snapping winds. Its rich colors resist fading and will not show water spots.

That is because the material from which Brenlin is made is finer and more closely woven—like strong linen in texture.

And because this fabric contains none of the chalk or clay "filling" that crumbles and falls out, causing cracks and pinholes in ordinary window shades.

Also—because the rich colors are of the highest grade, and are applied *by hand* by experts.

Every step in Brenlin-making is a step for longer wear.

And rich and beautiful in a wide range of colorings is Brenlin. It is supple, not stiff, yet always hangs straight and smooth. Its endurance will surprise you.

See Brenlin Duplex, made for perfect harmony with a different color on each side.

Look for the name Brenlin perforated on the edge. If you don't know where to get this long-wearing window shade material, write us; we'll see that you are supplied.

Scratch a piece of ordinary window shade material lightly. Tiny particles of chalk or clay "filling" fall out. BRENLIN has no filling.

"How to shade and decorate your windows correctly" —free

We have your copy of this very readable and instructive booklet on how to increase the beauty of your home with correct shading and decoration of your windows. Send for it. Actual samples of Brenlin in several colors will come with it.

For windows of less importance Camargo or Empire shades give you best value in shades made the ordinary way.

THE CHAS. W. BRENEMAN COMPANY, INC., CINCINNATI, OHIO
"The oldest window shade house in America"

Factories: Cincinnati, Ohio, and Camden, N. J. Branches: New York City, Philadelphia, Dallas, Texas, and Portland, Ore. Owner of the good will and trade-marks of the J. C. Wemple Co.

HAND MADE **Brenlin**
the long-wearing WINDOW SHADE *material*

(Continued from Page 101)

"How is it done now?" he asked. "Rose color, I suppose."

"French blue and gray."

"That sounds nice."

"Would you care to see it? It's just back there." She indicated the door.

"Yes, I should like to."

"Come, then."

He noticed again the rattling of the beads as they passed down the hall. It was a sound, disturbing but agreeable. The bedroom was spacious. The French blue of the velvet carpet ran up into the window hangings, the portières and the canopy and covering of the bed, all of which were of taffeta. The bed was large and much carved, with panels of basketwork let in at head and foot. All the furniture was of a cold gray tone a trifle lighter than that of the walls, and the only color in the room other than blue and gray was in the gold of picture frames and small articles on the dressing-table, in the pink roses filling a bowl upon a table and the small design of rose wreaths with which the silken draperies were bordered.

On a table conspicuously placed, Parrish noticed a large photograph of Busini. That, however, would have seemed to him more significant had not this room, like the sitting room and the drawing-room downstairs, contained so many other framed photographs. Whatever truth there might or might not be in the gossip about Rita and Busini, she was evidently not in the least sensitive about it; nor about that story of her affair with a monarch, either, for the picture of that potentate with a friendly inscription in his handwriting stood on the table in the sitting room.

"Oh, don't let the decorator-lady touch this room!" he exclaimed after a brief survey.

"You like it?"

"It's exquisite. Let the decorator do her own bedroom in her own way. This room expresses you."

Indeed, it seemed to fit her as a jewel case fits its gem. Into his mind there came a vision of her as she must look in that bed when the maid brought her breakfast in the morning. He was sure she had her breakfast there, and that, doing so, she made a picture to delight the eye of an old-time French engraver. She would be propped against a mountain of soft pillows, and would wear a boudoir cap trimmed with blue ribbons and little knots of roses, from beneath which locks of that dark wavy hair would escape to nestle on her shoulder. She was not the sort of woman who would look tired in the morning. Far from it! She would be pink and lovely like a baby just awake. From the moment her eyes opened there would be that brightness in their depths. She would see the sun streaming through the curtains and would smile.

He turned to the door again.

"You were going to tell me how you became interested in prints," said he as they moved through the hall in the direction of the sitting room.

"It was the summer before I first sang Butterfly. I wanted a rest and change, and I thought a trip to Japan would give me atmosphere for the part. Well, it gave me a taste for lacquer and jade and prints, at all events."

They were in the sitting room now, beside a table on which were several large portfolios bound in Japanese silk and fastened with little pegs of ivory.

Rita opened the cover of the uppermost portfolio and began to turn the cardboard sheets on which the prints were mounted.

"This light is poor," she said, pausing after they had looked at two or three of the pictures. "Let's put them on the floor under the tall lamp."

As Parrish carried the bulky volume over and laid it on the rug in the lamplight Rita took a cushion from the couch, tossed it to the floor and dropped down upon it.

"I'll turn for you," she said. "You can stand. That ought to give you about the right distance."

The first prints were primitives—a Gonshiro, several Moronobus and early Harunobus, interesting as examples of the art in its beginnings; but presently she came to works by later masters—Utamaro, Yeishi, Toyokuni; superb compositions splashed with rich soft colors like those brocades.

Rita knew about prints. The s was generally good; where there w perfections she recognized them, p out that this one was weak in colo one a late impression made after the blocks had been trimmed at the ed that another had been creased, or to mended.

But though his interest in this a genuine enough, and though many of prints were worth seeing, Parrish fo increasingly difficult to give them h tention. How may a man yield his to minor constellations when in th is Venus, brightest and most beauti stars?

Continually his glances wandered the printed images to the lovely livin age bending over them. In the soft of the lamp the beads on her gown s like the jewels of some fabled princess o East; her flesh was luminous and rosy; cinating lights and shadows played thr the soft waves of her hair.

By the time the first portfolio had b run through he was aware of strain. Ca ing the portfolio back to its place upon table, and bringing the second, he c gratulated himself on having so far b coherent. But there were four portfol Too many!

Now she was showing him Hokusai the Thirty-six Views of Fuji.

Muttering something about Hokus detail, he flung a cushion to the floor a dropped down beside her. Yet here, wi out looking at her directly, he continu to be disturbed. Every time she turne page he was aware of the white lovelin of her arm and shoulder near him.

Presently he began to feel somethi like an electric current. It seemed emanate from her arm and jump across his. Did she feel it too? Apparently n for she continued calmly to turn the prin commenting upon them as she went alon

"Let's stop!" he heard himself exclai

He had no sooner spoken than the crit cal part of his mind came into play, tellin him that kind of talk would not do at al Suppose she were now to ask him why h wished to stop looking at the prints—what would he say to that? If he had good sense he would say he had a headache—and go home. But would he do that? Or would he blurt out recklessly some further wildness?

But Rita did not ask him. She did not speak. She reached out and closed the portfolio. She had turned her head and was looking at him. She did feel that current! Her eyes told him so! He gazed into them with straining eagerness like that of one who seeks to penetrate the depths of some unfathomable sea.

"Why—they're blue!" he murmured.

The shadow of a smile showed in them. He leaned a little more. Now he could see nothing but her eyes. The rest of the world was nebulous. He was shipwrecked on those sweet blue seas.

Rita descended with him to the lower hall as he was leaving. On a carved Italian chest reposed his coat, hat and cane. As he started to slip into the coat she stepped behind him, and taking hold of the collar helped him on with it. Then she gave a touch to either shoulder—a touch of adjustment given as if she loved to give it.

He turned quickly, and as they stood there silent for a moment he felt her fingers working softly at the edge of his lapel. How sweet to have her doing that! There was a fragrance in her hair against his cheek.

"My beautiful!" he whispered. "Oh, my beautiful!"

She raised her eyes to his, and in a voice low and lovely sang again in French the passage from Louise ——

"Why should I be beautiful
If it is not to be loved?"

"Rita," he murmured, "I love you so!"

"It's spring," she answered, smiling.

"No, it's you! I'm mad about you!"

"You think so."

"I know! Tell me, do you care for me as I do for you?"

She patted his cheek.

"Rita, you do care, don't you?"

"Don't you know?"

"There is no excuse today for foot trouble in any form" —*Dr. Wm. M. Scholl*

Modern science offers immediate and permanent relief for all foot ailments

Have you been enduring painful foot trouble because you have believed there is no escape from it?

Have you tried "cures" of one form or another and found them wanting? Have you, in other words, lost hope of ever being rid of foot ailments—are you accepting them as a matter of course?

No matter what form of foot trouble you have—whether it is tired, aching or tender feet, irritating corns, enlarged joints, callouses on the bottom of your feet, cramped toes, weak arches or an extreme case of flat foot—there is available to you a scientific remedy or appliance that will bring you certain, positive relief.

Today seven persons out of ten have something wrong with their feet.

Science is overcoming these handicaps

In earlier days foot troubles were practically unknown. Today they have attained so much importance, as regards the health and comfort of the average individual, that scientific men are giving them serious attention and study.

Among the first to recognize this tendency was Dr. Wm. M. Scholl. During the last twelve years he has specialized almost entirely on foot troubles and their correction.

From the beginning Dr. Scholl has based his research on a study of the underlying causes of foot ailments. Thousands of cases have been examined and treated. And out of this experience have developed appliances and remedies which go to the fundamental causes of, and relieve and correct, every known form of foot trouble and foot discomfort.

Of greater importance to the public, perhaps, is the nation-wide organization which Dr. Scholl has built up whereby these remedies and appliances are made available to foot sufferers everywhere.

In thousands of shoe and department stores the country over are men—trained Practipedists—who have been carefully instructed in Dr. Scholl's methods. In these stores Dr. Scholl's appliances and remedies are selected, fitted and supplied with an intelligent understanding of the specific foot trouble to be corrected.

Sure relief from foot troubles

No matter what your foot trouble may be, Dr. Scholl's Foot Comfort Service offers you immediate and certain relief.

For every form of foot ailment—tired, aching feet, weak or fallen arches, tender heels, corns, bunions, callouses—Dr. Scholl has devised a scientific appliance or remedy.

If you are one who has despaired of finding relief from foot suffering, take new hope in Dr. Scholl's Foot Comfort appliances and remedies.

You CAN have relief. Today foot suffering is wholly needless. Go to the shoe or department store in your town that is headquarters for Dr. Scholl's Foot Comfort Service and ask to see the man in charge. Tell him of your foot trouble and let him demonstrate to you free—how you can have relief.

Positive relief for tired, aching feet, weak arches, weak ankles

Dr. Scholl's Foot-Eazer gives you immediate and permanent relief from tired, aching feet and limbs, weak ankles, cramped toes and the weariness induced by weakened and falling arches. Scientifically designed to remove the excessive strain upon the feet and to rebalance the body's weight. Eases feet, body and nerves. Comfortably worn inside any shoe

Dr. Scholl's Zino-pads—special size for corns, callouses, enlarged or under joints. Put one on, the pain is gone. Antiseptic, healing, waterproof; give quick and lasting relief. Sold by shoe dealers and druggists, 35c per box

Pains or callouses there? Dr. Scholl's Anterior Metatarsal Arch Support corrects callouses, tenderness or cramps caused by weakening of the arch ***across the ball of the foot***

Don't let your heels run over. Dr. Scholl's Walk-Strates, worn inside the shoes, distribute the body's weight so that the heels wear evenly and regularly. 40c per pair

NOTE: If you cannot locate the Dr. Scholl store in your city, send us the coupon below and we will send you the name of the nearest store.

Outfit! There's downright magic in the artful skill of the Mimeograph when it is reinforced by the crafty Mimeoscope. Twins! A thousand duplicates of a drawing this outfit will produce in less than that many seconds. No cuts! No delays! Merely trace the design upon the illuminated Mimeoscope on a sheet of stencil paper, and print! And typewriting may go on the same page. All the unnumbered thousands of industrial and educational institutions throughout the world which know the fine economy of Mimeographic printing may now benefit by the artful easiness of Mimeoscopic drawing. All kinds of charts, maps, cartoons, designs, factory diagrams, together with letters, bulletins, instructions, sales messages, etc., leap in quick thousands from the ready Mimeograph —at negligible cost. Twin savings for others—why not for you? Send for Booklet "S-4," A. B. Dick Company, Chicago—and New York.

at did not satisfy him.
low much?" he demanded.
e raised her lips. Ah, that was better!
When am I to see you again?" he asked.
n you dine with me to-morrow night?"
To-morrow night I sing."
Supper, then, afterwards?"
I'm sorry—I've promised to go to
necourt's birthday party."
When, then?"
he thought for a moment.
I'll telephone," she said.
le wrote on a visiting card his address
his telephone numbers uptown and
n.
When will you telephone?"
To-morrow."
Of course. But what time?"
Before I go to the opera."
That would be around six?"
She nodded.
"Oh, my dear," he said in a low eager
ce, "I'll be waiting all day for that
!"
He opened the door, but paused reluc-
at on the threshold.
She gave him a gay little wave of dis-
ssal, saying "Good night."
"I love you!" he said, and closed the
avy door behind him.
In the vestibule he paused until the
aber lights within were extinguished.
hen he walked toward his limousine,
hich was standing at the curb.

IX

AS HE journeyed homeward thoughts of Rita sang through his mind. Yesterday morning he had called life monotonous. Yesterday morning! He had not even met her then! He had come to her house a few hours since, all but a stranger. Of those who were there he had known her least. How long ago that seemed!

Life monotonous? Life's little periods of dullness were nothing but a background, like the gray wall of a gallery against which splendid pictures show more splendid still. In the gallery of his life there hung but one picture now. Rita! Rita of the golden voice! Rita, young, brilliant, famous, beautiful, all that was desirable! Rita, who in one splendid blinding flash had let him know she cared for him! For him!

He tried to conjure up her likeness, to visualize her face. But the features at which he had so lately gazed in adoration would not come into focus for him now. In his mind he could see her strong little hands, her tapering arms, her shoulders; and he could see the color of her; the pallor of her skin, the red of her lips, the glistening white of her even little teeth, the shimmering black of her hair, the deep blue of her eyes. But try as he would, he could not harmonize these elements and make them blend into one clear and satisfying image.

The failure disappointed him. It was that way sometimes, though, when one tried to think how certain people looked. Why? he wondered. Why was it that the likeness of one person should be vague when a perfect picture of another could be summoned to the mind at will? Take, for example, Alice. He could always make himself see Alice. He had only to think of her. He could see her now almost as clearly as though she stood before him in the flesh.

Alice! His heart sank. There was a situation to be faced! That couldn't go on. He must find some way to break with her. Cruel? Yes. But he had not willed it so. It was life. Life was cruel; crueler to women than to men. It ought not to be so, but it was.

How was the thing to be managed? Alice was so sweet; she needed him so. What would become of her? Like a black cloud the sense of his responsibility, the responsibility he had always striven to avoid, rolled down upon him.

But this was no time to be wrestling with the problem of Alice. It was a problem to be met in the full light of day, when he was at his best. For the present he must put Alice out of his mind. He did put her out of his mind. Over and over again he put her out. He perspired with the effort of it. But always she came back. Through mental doors of which he had no knowledge until they opened at her touch, she reappeared and reappeared, a silent, gentle, terribly insistent ghost.

(TO BE CONTINUED)

THE PSYCHOLOGY OF THE SUCKER

(Continued from Page 11)

and it will go direct to a reliable house in Wall Street. What's more, the stock will be delivered.

The man who does that is not a sucker and has no part in this discussion. The sucker wants to get mysterious and trim somebody. He likes to watch the big blackboard with its rows of numbers. He likes to hear the click of the telegraph instrument and be able to impart some wise observation on industrial conditions to the sucker sitting next to him. He dotes on knowing that people in his neighborhood are whispering to each other that he is a stock speculator. As a matter of fact he hasn't the slightest idea of what it's all about.

I am not particularly proud of my experience, but I am no reformer. The best you get out of that penitent reform stuff is to give somebody a laugh. I have been active in the sucker market all my life. I've tried my darnedest to study the minds of suckers and learn what makes them tick. I'm simply giving you the result of my observations.

I really believe it would be a serious deprivation to rob suckers of their opportunities to give somebody their money, would make them genuinely unhappy. They don't want sound business men and reformers interfering with their games and pastimes, and they are not going to have them either.

I have an old friend, part owner in a bucket shop, who was an incurable devotee of faro—the bank, as it is called among professional gamblers. No matter where he goes this elderly man must play against the bank. One night in Chicago it was reported to a group of his friends that the old fellow was up against a crooked game down the street and that the dealers were taking him good. Two friends went down to rescue him.

"Say," whispered one of them as they called him from the table, "are you crazy? Don't you know this game isn't on the level? It's one of the crookedest joints in Chicago."

"I know that," he said fretfully, "but what's a fellow going to do? It's the only one in town."

I'm telling you the truth when I say that nine suckers out of ten will fight you back when you try to show them where they are being robbed.

The war and the activities incident to it increased the output of American suckers tenfold. I have noticed in the magazines and newspapers editorial comment to the effect that the investment in Liberty Bonds had taught the people to be investors in sound securities, the impression being that it was a good thing.

Maybe so, but I want to tell you that in selling Liberty Bonds as was done by drives and patriotic speeches the Government innocently created more suckers than were ever known in the history of the world. I'd hate to know the gross suckerage of this country right now.

Do you know that salesmen of bunk stocks and promotion schemes had regular follow-up schedules on the heels of the Liberty Bond drives and took the newly created investors the way Grant took Richmond?

Around one city in the Middle West that gang took out eight million dollars in a single month!

The clipping of the first coupons was the signal for the round-up. The people, you know, liked that idea of clipping coupons. It looked such an easy way to make money. Their feeling was: "How long has this been going on and me not wise?"

The fellows with the bunk oil stocks went at them like this:

"Yes, the government bond is a great thing. But that 3 per cent! Doesn't that make you laugh? Why, they are investing that money in big-paying securities and foreign obligations, while you are only

Announcing
PALMA
The New Remington .22 long rifle cartridge of remarkable accuracy

REMINGTON UMC

ANOTHER Remington achievement. Palma .22's have been tried out by expert target shots in all parts of the country—and have received unqualified endorsement for exacting target work at all ranges.

No matter *where* you buy them, Remington Palma .22 long rifle cartridges are always the same—every single cartridge in every single box *exactly alike* in shooting qualities.

When you ask your dealer for Remington Palmas you get the identical cartridge used by experts in establishing world's records.

To the hunter, also, who likes to pit his skill against long range shots at a squirrel's head or a chance at a crow—Remington Palma .22's offer steady, unfailing accuracy and maximum power.

These are the cartridges to give you the full benefit from the accuracy of your Remington .22 rifle—the best possible results from any make of rifle.

The Remington .22 Rifles

Solid Breech—completely enclosed.

Hammerless—no chance to catch hammer on clothes, fences or twigs.

Safety Devices—same as in the Remington high power slide action rifle so popular with big game hunters.

No. 12 A—22-inch Remington steel round barrel, straight grip. Price $22.00.

No. 12 C—24-inch Remington steel octagon barrel, half pistol grip. Price $25.55.

When Havoline was Young

A queer looking outfit, isn't it?—judged by the standards of the present. But it's a true picture of the "horseless buggy" as it was nearly twenty years ago, when the motor car—and Havoline—were young.

Since 1904 Havoline Oil has played an important part in the automobile industry in America. Havoline engineers and chemists were solving problems of automobile lubrication when a two cylinder, twelve horse power car with "detachable tonneau" was considered the acme of perfection. They have kept pace with—yes, a step ahead of—improvements in motor design and in lubrication.

For every car on the road in 1904 there are a hundred today. For every car lubricated with Havoline in 1904 there are a hundred so lubricated today. Havoline Oil has always made good.

The Havoline Sign, displayed by dealers who sell Havoline Oil, is a *good* sign for car owners to follow. Look for it when you need motor oil.

HAVOLINE OIL

(Continued from Page 107)

ng the crumbs. Clip coupons, yes. why not make it 7 or 8 per cent in- l of 3?"

he sucker, asking for more details, ld be shown a list of stocks that paid where from 7 to 9 per cent. Also there the additional chance of the stock pling in price.

Oh, no, no, no—you don't need any ey, not a cent! Just deposit your Lib- Bonds as security and we will issue the stock. In other words, you can s make your Liberty Bonds earn you dditional profit of 4 to 5 per cent in- d of simply lying up in some bank lt. Get the idea? Or you can simply for this stock in Liberty Bonds."

hey did get the idea. It was mighty ple. Few of those people realized that erty Bonds were negotiable—not reg- red in the name of the holder. They e just the same as money. Millions of ds were hypothecated and even sold s way—all being lost to the original lders.

Now can you imagine a man or woman ing a good Liberty Bond to buy a tricky stock?

I may do an injustice by referring to all stocks as bunk stocks. Of course there e some real oil stocks that have proved od investments, but not many. In 20, for instance, the stock of three thou- nd oil companies was put on the market. f these companies 98 per cent were of the me-on variety.

Self-Trimming Suckers

The oil stock is the sucker's favorite. hose stories of the old family that was topped on the way to the poorhouse and urned into millionaires did the trick. The dea of thousands of dollars running right ut of the ground every day, once you hit he spot, brings up old stocking bank rolls hat have been buried since the Civil War.

Even the wisest guys fall for that. In ther industrials something has to be nanufactured, but in oil—why, all you've got to do is bore a hole, and there it is, running right out of the ground! No bother—nor nothin'.

It makes little difference to some of the confirmed suckers that the concern with which they are dealing has no standing. They are just like my old faro friend. Many of them sneak around and line up with a trick outfit by preference. They think they will get a bigger profit. Anyway, they've got to get into something where they can invest fifty or a hundred dollars. They must take a flyer whether it be reliable or not.

In the real crooked bucket shops—the crudest form of them—every convenience has been arranged for letting the smart sucker trim himself. He likes to do that. It is worth a great percentage of what he loses to be regarded as a person of wide information and intelligence. Here he is:

"Had you noticed the accounts in the newspapers of the big building boom that has just started in France, and also in the manufacturing centers of this country?" our floor man asked of the self-satisfied customer who had casually dropped in to look at the board.

"Sure. Well—that is, not carefully, but ——" he stalled.

As a matter of fact there had been no such news.

"Well, tell me, just what does that mean—what should be its influence on the market?" innocently asked the floor man, all the time glancing pointedly at the last quotation on steel, which was falling.

"Naturally," the customer enlightened us, "there will be a lot of steel bought. A man has to be no clairvoyant to see that. It is elemental. What is steel now?"

That was enough. To steer him on a falling stock was not hard. He put in a hundred-dollar order, which was promptly bucketed. He was wiped out the next day, but what of it? To that man it was worth something to be regarded as wise and farseeing.

Most of the stock really bought for delivery in a bucket shop is on the installment or partial-payment plan. It is not to be delivered until the last payment is made, and the price to be paid is that of the market at the time of placing the order. You can see how many chances that offers for taking the customer. The stock can be manipulated for a month or two before he ever gets it—if he ever gets it at all. It is when a number of these partial-payment fellows insist upon delivery of their stock that the bucket shops get into trouble.

The real job of brokers, whether they be genuine or tricky, is to get in touch with suckers. Once they are hooked a large percentage of them stick. The most effective means of reaching them, naturally, is by the sucker list.

These lists of names are first made up from telephone directories, the theory being that when a man has a private telephone he must have a little something else. At any rate, he is somebody in his community. After the first or second try-outs these lists are carefully revised and the more promising names retained. They are added to from year to year.

The sucker list of one concern in New York that failed sold for forty thousand dollars. A list-distributing company bought it and sold copies to new companies being organized for stock-selling campaigns. A good sucker list is easily worth five thousand dollars to a new oil company. I even know of one financial investigator connected with the detective bureau who paid five hundred dollars for a copy just to get a line on the innocents who were being trimmed and who could furnish evidence.

A financial investigator, by the way, is a man who makes a business of representing cautious investors who want accurate information about the standing of certain concerns. Usually he is wise to the ropes and is feared by fly-by-night companies and bucket shops. A new investor would often do well to read the report of one of these authorized investigators before going in too deep on a strange proposition.

The average citizen in an outlying section or right in the city likes to have an important man call him up on the phone. It makes him feel just a little chesty. The salesmen prey on that feeling.

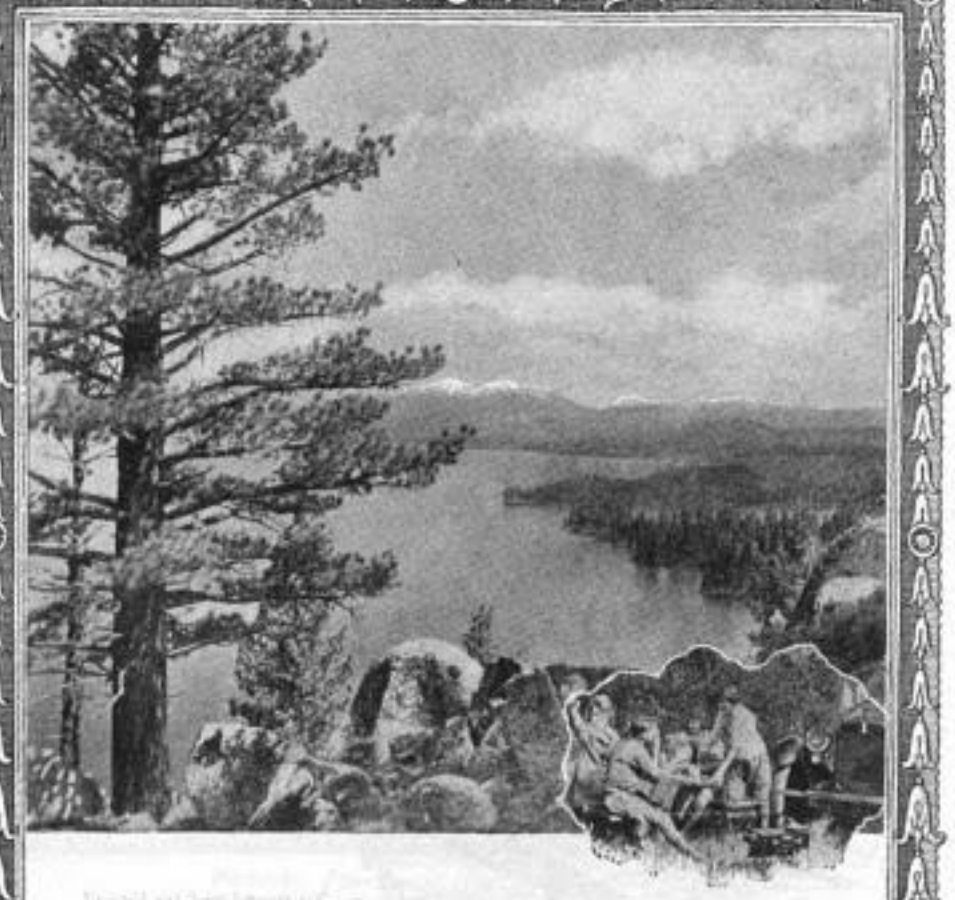
In Brooklyn there was a school organized once for training boys out of high school in what they call the art of telephony—they pronounce it te-leph-ony, with the accent on the second syllable. Try it out and see if it doesn't sound nifty. The idea was to teach these boys how to approach a prospective customer over the phone and then, of course, to sell him something.

"This is the president of the Native Bank, New York. . . . Yes. . . . Exactly. Knowing your interest in the industrial outlook I have taken the liberty of calling you at home," and so on.

The Love of Taking Chances

That sounds pretty good, doesn't it? Yes, the bank president himself called up. That is angel food to the born sucker.

Pretty soon others will be calling up. Then the citizen will quietly take a flyer at a bucket shop to see how it goes. Take it from me, it will go.



About the best that a poor wage-earning sucker gets for his bit is the attention he attracts while reading the stock-market report and looking wise on the car, going home. His family stops all newspapers that haven't a good market report. They all read the tables, and soon—well, they think they know more about stocks than anybody in the world.

These people have read how a one-hundred-dollar share of stock in the original telephone company, organized to help out Doctor Bell, is now worth four hundred thousand dollars or something like that. You can't fool them, not on your life!

I heard a motorman on one of the waiting cars laugh indulgently at the thought of how stupid our forbears were not to have seen that opportunity. This motorman, at the time, was considering going in for fifty dollars on a manless airplane company that some promoters were trying to put over. That is no joke, by the way—that manless airplane company.

Up in Harlem there is an old man of a scientific turn of mind with considerable money. These fellows went up there and took him for ten thousand dollars. It was explained to him that but a few scientific men were to be let in on the scheme, which had for its purpose the trimming of the Government. All patents had been protected and the Government would have to buy at the company's own terms.

And that old gentlemen to this day resents any efforts to put him right. He firmly believes that the manless airplane will supersede the wireless as the invention of the age. Folks, there you have a sucker born in the purple. I reckon, at that, there is royalty in suckerdom just as there is peasantry.

My Greatest Summers

all were spent in Southern California

By An Easterner

THAT may seem strange to you. I, too, once thought—before I spent a summer there—that Southern California was a place to go in *winter*, not in summer.

And yet I know no other that offers such a wealth of summer fun, such complete recreation because of *complete change*, or—strange as you may think it—a summer climate so attractive in all ways!

I have spent summer after summer there, and in a three months' stay slept under blankets ninety nights.

What Do You Do?

You motor, if you wish, for 4,000 miles on paved highways as smooth as city streets through a country unlike anything you have ever seen—unless you've been there.

You play golf on inspiring courses, some of the world's best. You stay at beautiful seashores at the foot of mountain ranges, or in the wilderness at mountain camps.

You view a great desert, like Sahara, and drive back to one of the world's largest cities for your dinner at a famous restaurant or hotel.

You visit great National Parks and Forests—see giant trees, stupendous panoramic views. Or you go quietly and fish in mountain lakes and streams or at world-famous ocean fishing grounds.

You hike, you ride horseback, you breathe deep and you enjoy a sort of youthfulness that you haven't felt, perhaps, for years.

And all within a *few hours* of a great *metropolitan center!*—an easterner who doesn't know hardly can conceive of this.

Different and Enchanting

The enchanting difference is what lures me and the other thousands who go there in the summer from the east.

It's that difference which renews your youth, changing your viewpoint if you're "run down." You become absorbed, fascinated, relaxed to perfection. The greatest cure for "nerves" you've ever known.

Summer? An amazing summerland—you'll never spend a more delightful, restful, interesting summer anywhere.

Ask any railroad ticket office for further information, or mail coupon below.

Special, low-rate, round trip fares beginning May 15th—*No more War Tax.*

Plan now for this summer. Let the family have this great change and great trip.

Southern California is America's ideal summer as well as winter resort. Average temperature at noon: June, 66 degrees; July, 70 degrees; August, 71 degrees; September, 69 degrees.—The 44-year record of the U. S. Weather Bureau.

To round out its line of high grade bituminous coals, The Consolidation Coal Company recently added to its holdings 28,000 acres in the Pocahontas regions of Virginia and West Virginia and 11,500 acres of block coal in Kentucky.

Fuel for the Railroads

The railroads of America in 1919 consumed 119,000,000 tons of bituminous coal, according to **the records of the Interstate Commerce Commission.**

Next to labor, coal is one of the major costs of rail transportation and the great railroad systems of the country, in their striving to keep down operating costs, have given much attention to coal quality and to coal economy. These great railroads are governed in their coal purchases not only by the convenient location of the mine but by the suitability of the fuel itself. They demand for their crack trains a supply of fuel that can be relied upon to maintain schedules.

The fact that Consolidation Coal is being used today in the locomotives of some of the Nation's most famous limited trains is a result of the economy records made by our coals.

EMPIRE COAL COMPANY LTD., SHAUGHNESSY BLDG., *Montreal, Quebec.*

A little narrow-faced, henpecked-looking man came into my place one day to tell me about a concern he was going in on to manufacture gasoline out of the mud on the marsh islands of Jamaica Bay.

I liked this little old fellow, and shook my head.

"Better lay off that stuff," I cautioned.

"You," he came right back, "are just as ignorant as the old people who thought Doctor Bell crazy when he tried to raise funds for his telephone. Gee! If my grandfather had known as much as I do now he could have taken two or three hundred dollars and run it into a million. You remember also the fellows who laughed at Henry Ford when he was trying to borrow money to start his automobile."

"But there ain't many Bells and Fords," I suggested.

"But are you so stupid that you can't realize that gasoline is going to be the motive power of the world? Don't you realize what it will mean when they can make it out of mud? Have you no imagination?"

"Sounds good, but I'm not so sure they'll ever make it out of mud. Are you?"

Getting the Pikers' Money

"There you are!" he said, waving his arms despairingly. "That's exactly what they said about Doctor Bell, Marconi and all of them. But you can't discourage me. It'll never be said of me that I didn't have more sense than my father and grandfather."

And that's all there is to it. He put his money in, and also that of his wife. What's more, there's no living financier, orator or prophet who can convince that little old fellow that he isn't going to make a fortune.

They really did try out that experiment with the mud, but nothing has come of it, so far. They had the inventor in court the last I heard of it.

The sucker is always ready to go one step further if he can think himself a part of a big scheme. He dotes on being in a secret pool formed by the big financiers to trim the unwary. Handle him mysteriously and he will go the length of his bank roll. Never does it occur to him that he is unwary.

This tendency to grab at a mysterious tip of something big in the wind also makes the big offices of legitimate stock-exchange brokers one of the choice feeding grounds of the bucket shops.

Clerks, telephone operators and stenographers create deep impressions in their neighborhoods by relating what Mr. So-and-So dropped to-day.

"Why, I heard Mr. Smith, the president—yes, the president—say only this morning ——" And away it goes to the next-door neighbor.

Immediately little wage earners hurry down to the bucket shops with fifty-dollar orders.

These clerks, of course, haven't money enough to trade in the regular market, and besides they don't want their employers to know they are using information picked up in the office.

They go in mostly for puts and calls, a practice more common in the smaller cities than in New York. In other words, they simply bet that a certain stock will go up or down. Officially these puts and calls are called options to buy or sell a certain stock at a fixed time in the future. A call is to buy and a put is to sell. That is pure gambling.

One common method of trading in puts and calls is simply this: John J. Sucker puts up fifty dollars for an option to buy or sell so many shares of steel at the market price June first. If at that time the price is lower or higher he either receives the difference or pays the difference. John J. bets them fifty dollars that he can outguess them, in other words. The best guesser wins. There is never any intention of these speculators actually to buy stock certificates for investment.

At that, John J. is apt to be much wiser than the sucker who actually invests in bum stocks. He simply follows the game as one does the races. Some of that kind become shrewd enough to beat it.

Samuel S. Sucker, out in the small towns and cities, is the better mark for the fellow who organizes a fake company for getting rich in oil or something. Samuel likes to outthink his neighbors, who haven't any vision for the future. He'll stick to show them that he was wise. There are several ways of encouraging him. My former pals have seen to that.

One of the best schemes for n the already drained oil sucker is t merger. Several concerns, knowin psychology of their clients, tried th and it worked beautifully. All ov country there are suckers holding bl stock in oil companies that were abs worthless. These had been checked recently revised sucker lists. It had long time since they were trimmed, the judgment of the expert producers would certainly be wanting a little action. So literature was sent to carrying, among other gems, this c phrase:

"We feel that you could not be co to permit your money to remain in de dormant nonproducing oil stocks wit further investing. You would like t that money put to work."

It was explained that a new merger been organized to take over these productive stocks and consolidate t into a productive one, new stock h issued to those holding shares in se companies, the names being given. would entail the outlay of no cash w ever, except the nominal charge of 2 cent for transfer and expense. The s would simply be transferred.

"That," said Mr. Sucker to Mrs. Suc "sounds like real sense. We certainly c lose, and there is a big chance of gain Suppose the transfer fee does amount ten dollars? We are already in several hu dred dollars. It amounts to *nothing*."

But Mr. Samuel S. Sucker didn't figu that if thirty thousand holders of de stock made such a transfer to a new co pany, also dead, it would mean $300,0 to the organizers in transfer fees and e penses—a nice little bank roll.

No, he figured that a man who would do that had no business acumen.

Several of these mergers were organize and the suckers gently milked again. The liked it too. There was a novel enjoymen in looking at the new stock certificates an in importantly placing them in a safety deposit vault or maybe the old trunk.

The Tipping Bureau

The main support of the sucker trimmers, the ease with which they can work, is the fact that no one understands stock speculation. They never will. To the average person it is always a mysterious way of making money without working for it.

There is no real difference between the race-track sucker and the stock-market sucker. Just a different form, that's all. Always it is the prospect of getting money without working for it. Nobody ever stops to think who produces the money to keep these institutions going.

At the outset I mentioned that I had once been a tout. I was for a short time only.

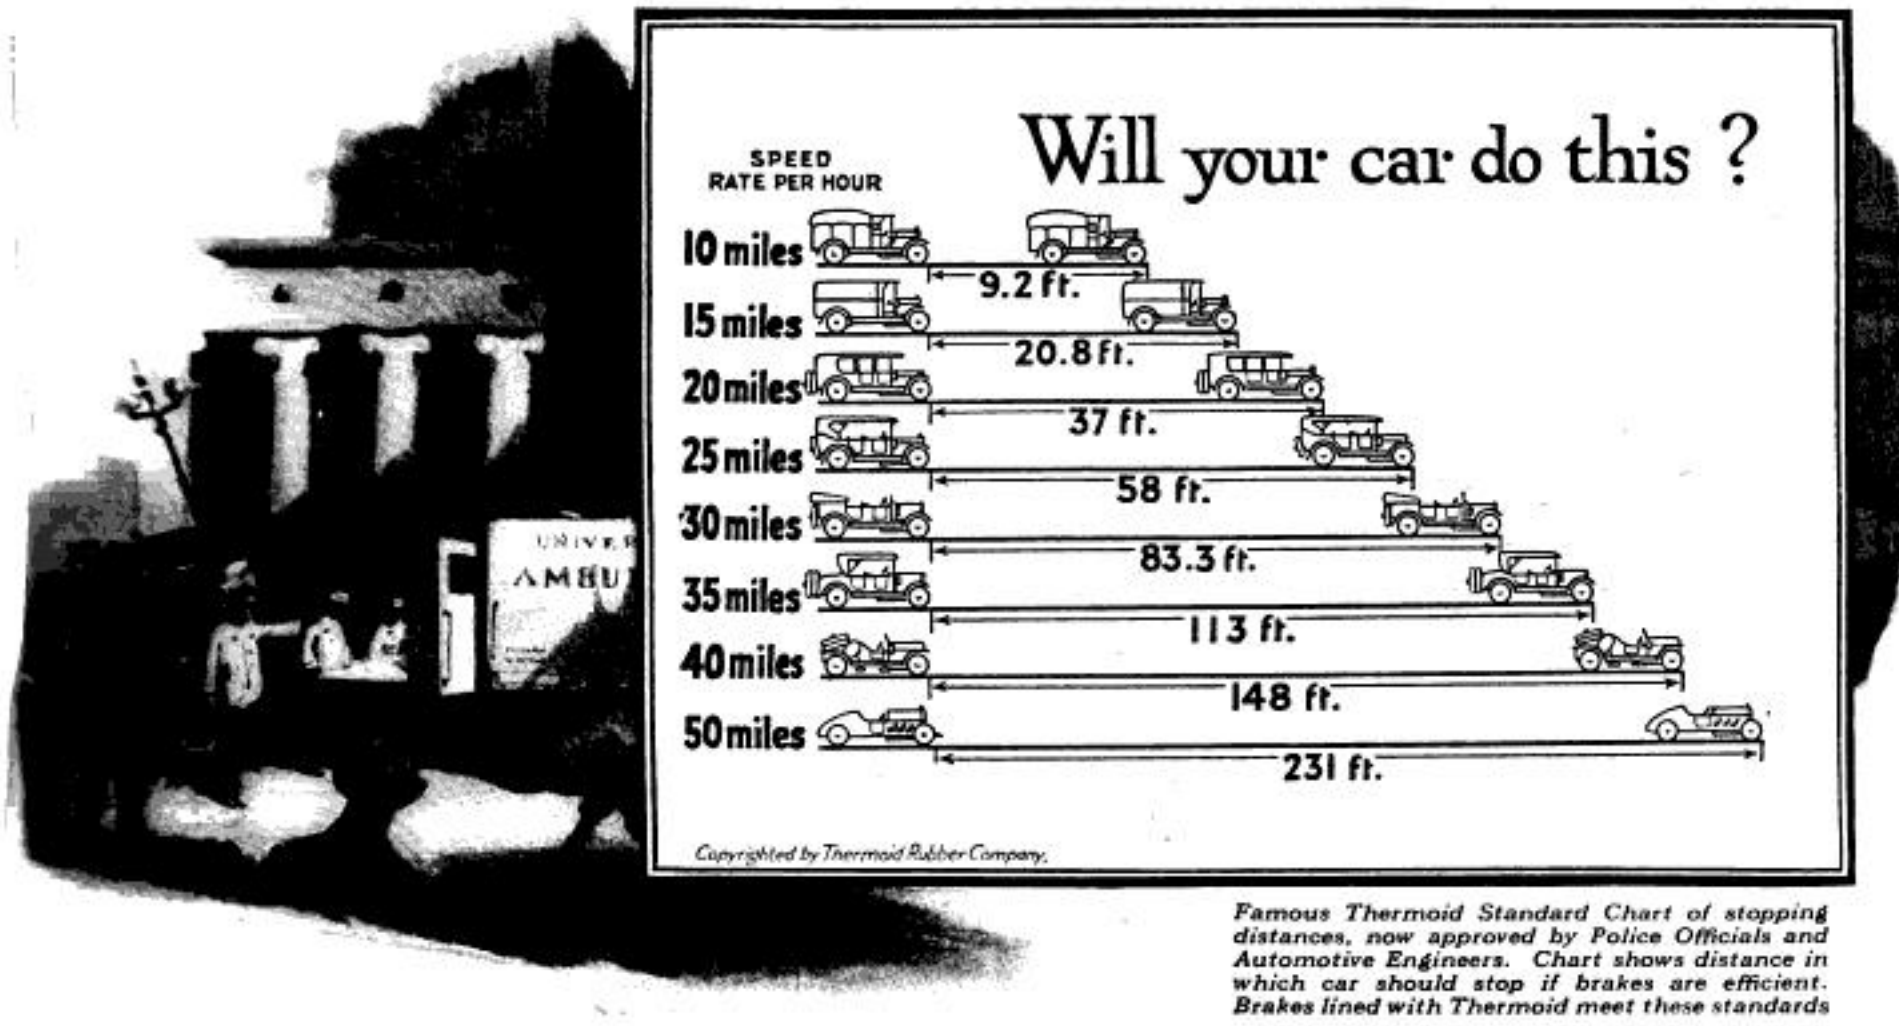
My turn of mind was to stay in the office and take my bit in commissions. I have seen the suckers taken, though, and their minds work on the race track just as when going after a secret oil stock.

I acted as business manager for a tipping bureau once. It was run by a former jockey. The business was to sell tips on the races—one best bets. This jockey, of course, was supposed to be on the inside—wise as a treeful of owls. His explanation of the fact that he didn't make all the money for himself was that he needed outsiders to help him finance the big killings. They fell for it easily.

We advertised in the newspapers and did a good business selling tips on the daily racing cards. These tips cost anywhere from two to five dollars. We had lots of subscribers. Sometimes our tips would win. If they didn't it could always be explained as a bad ride, change of weather or something.

Our main killings were made by ribbing up suckers whom we sized up as having good-sized bank rolls.

One day I admitted a prosperous-looking man to the presence of the former jockey, who occupied a back office, very private.



"The ordinary card is pretty good," the jockey told him, "but we've got a very special thing on that must be pulled off in a hurry. Just how much would you be willing to bet on a good thing?"

"Well—why, I've a couple of hundred to bet."

"Oh," smiled the jockey, "that's out of the question. We can't talk business. Now if you could bet five hundred—why,

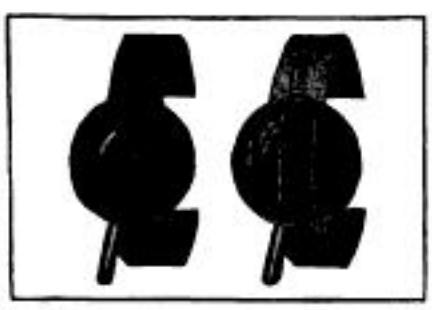
Famous Thermoid Standard Chart of stopping distances, now approved by Police Officials and Automotive Engineers. Chart shows distance in which car should stop if brakes are efficient. Brakes lined with Thermoid meet these standards



2 out of 3 motor accidents *occur under* 15 *miles an hour*

TWO out of three of those wrecked cars you see along the road were smashed when they were going *slowly*. Reports indicate that out of the 600,000 motor accidents of last year, approximately 65% occurred at fifteen miles an hour—or less.

Safety isn't a matter of how fast you are going, but how quickly you can *stop*. The chart above shows how quickly you should be able to stop your car if your brakes are in proper working order. At 15 miles an hour you should be able to stop at 20.8 feet—less than two car lengths.

Don't rely blindly on brakes that may fail you just at the critical moment. *Have your brakes inspected by your garage man at regular intervals.*

Perhaps a slight adjustment is what they need. Or they may need new brake lining. Ordinary woven lining wears down quickly and unevenly—it may fail unexpectedly. It grabs and slips after the first few hundred miles. Unless frequent adjustments are made you can never be *sure* that your brakes will hold.

Ordinary woven lining

Notice the loosely woven texture.

Wears down quickly and unevenly.

Loses its gripping power as it wears.

Thermoid Brake Lining

Hydraulic compressed.

Notice the compact texture.

Wears down slowly. Gives uniform gripping surface until worn wafer thin.

40% more material—hydraulic compressed

To insure efficient brake action at all times Thermoid Hydraulic Compressed Brake Lining has been perfected which wears down slowly and maintains its gripping power even when worn as thin as cardboard.

In each square inch of Thermoid Hydraulic Compressed Brake Lining there is *40% more material* than in ordinary lining. This additional body gives a closer texture, which is made tight and compact by *hydraulic compression* of 2,000 pounds.

By an exclusive process—*Grapnalizing*—Thermoid is made to completely resist moisture, oil and gasoline. Even during long rainy seasons it is unnecessary to readjust your brakes. They cannot grab or slip.

Because of its wearing qualities and unfailing efficiency, the manufacturers of 50 of the leading cars and trucks use Thermoid.

Don't take any more chances with faulty brakes. Have your brakes inspected regularly. And next time they need relining, be sure to specify Thermoid.

The new Thermoid book, "The Dangers of Faulty Brakes," is the first complete publication on the subject ever printed. It tells you how to keep your car within safety limits. Sent free. Write to-day.

CHEVROLET
for
Economical Transportation

WHY CHEVROLET IS BECOMING THE MOST POPULAR AUTOMOBILE IN AMERICA

Public favor changes when reasons for a change are obvious. Public opinion as to the most popular car of the future *is* changing.

Users of low-priced motor transportation are demanding completely equipped automobiles, modern in every respect, with nothing left to buy but the license plate. The New Superior Chevrolet is FULLY EQUIPPED, including modern 3 speed and reverse sliding gear transmission, standard service and hand brakes, electric starter, demountable rims, water and oil pumps, and speedometer.

In addition to completeness, buyers insist on real economy in four important essentials. They demand *low gasoline consumption; low oil consumption; low repair costs; long tire life.* The New Superior Chevrolet excels in these particulars.

Twenty-five miles on each gallon of gasoline is not uncommon for a New Superior Chevrolet. It excels in oil economy as well. Repair costs are low because every Chevrolet part is built to give long life under hard conditions.

These are a few of the reasons why public favor is increasing toward the Chevrolet—why it is becoming the favorite low-priced car of America. Chevrolet distribution is practically universal. Cars can be bought from over five thousand dealers located in almost every American community, and abroad, and their number is daily increasing.

You owe it to yourself to examine the New Superior Chevrolet, the car which is establishing new standards in the medium and low price field.

rou realize that we've got to fix cer-
iders, and—well, a lot of details?
t this."
showed the man a peculiar electric
y, and let him touch it. He got a

ow!" laughed the jockey. "If that
you jump like that, what do you
e it will do to a horse? This horse
all right, but he gets sulky and we
to stir him up."
man bet his five hundred. The
ran second. The man came in to see
went wrong; not angry though.
Why," said the jockey, "that's the
est piece of luck that ever hit a guy
e world. I'll say it broke me. I
d in my whole bank roll on it. A
like that wouldn't happen again in a
sand years."
What was it—what went wrong?"
Why, would you believe it? Just as
ockey pressed the button on his saddle
ve the old nag the final jolt, that other
e swerved against him and—I'll be
goned if the wire didn't break and lose
nection."
Did you claim a foul?" asked the
er anxiously.

"Claim a foul? Why, man, don't you know if we'd claimed a foul and the judge had examined that saddle we'd have all been ruled off the track and put in jail?"

That fellow came in the next week to go in on another killing. A month later, notwithstanding his losses, he bought an interest in the concern.

I'm going to give a little advice, in the firm belief, though, that not a single sucker will pay the slightest attention to what I say:

Unless you have more than a thousand dollars don't invest in anything less secure than a government bond. Only the big fellows can afford to gamble. If you decide to put in an order for stock wait until you have enough to deal with a brokerage house of standing—one that your banker would recommend, for instance. Stay away from race-track bookmakers unless you can afford to bet for fun—not profit. It isn't in the cards for you to make a living trimming men whose profession it is to trim you.

I say this in the hope that I may help some young sucker before he is ripe. The confirmed sucker—well, he will go right on to the crack of doom. Old Paul had it right.

THE UPRISING GENERATION

(Continued from Page 30)

arrow secluded one. He leaned toward
and dropped his hand to my shoulder.
d just at that instant Tot Romney's
llow roadster, with Tot driving and Sylvia
th her and Mary Gale on the outrigger,
me dashing around the corner.
They gave a cheer when they saw us.
an snatched away his arm, and narrowly
oided a smash. They saw that too. And
didn't mind, idiot that I was! Because
w they would have to believe anything
told them about Gran's crush on me.
They were gone out of sight in another
inute, but the meeting had a funny effect
n me. I wanted to go home, and go
uickly. I'd gained my point, do you see?
stablished my affair with Gran, in the
ght of my friends, and of course I was
hrough, so I demanded to be taken back.
"But I say—look here!" said Gran.
'Could we go over to the club for tea?
They're playing the Diamond Cup finals,
you know. There'll be a mob. Come on!
After all, what harm, eh?"
"No," said I. "I want to go home. I
haven't seen that cup, but I don't care
about it anyhow. I think it is awful of Mr.
Sartelle to give a gold cup incrusted with
jewels for a challenge trophy! Disgusting
bad taste!"
"Well, look here!" said Gran, awfully
keen. "When am I going to see you
again—to-night?"
"Of course you will!" said I. "I'm
coming to the dance with G. G. Third.
But you can cut in right away. Boys like
that bore me terribly!"
"Righto!" was all he said. "And by
the way, you're all wrong about the Dia-
mond Cup. It's a beauty, really. I have
it in charge, you know. I play nursemaid,
and put it to bed every night. But I'll
keep it out of the safe and show it to you
this evening!"
"All right," said I. "But don't be sur-
prised if I steal it to get myself out of
hock!"
Then we laughed, and I ran into the
garden. Just in time, too, for I could see
from afar that mother's limousine was stop-
ping in front of the house.
That evening I climbed into my party
clothes with more pleasure than I had done
for a long while. I really consider it re-
markable that I can still find a certain
amount of fresh, almost girlish pleasure in
the prospect of a dance. Of course I am
very careful to conceal this fact, as it
would look so silly. But I almost danced in
anticipation while Celeste got me into a
ducky petal gown of orchid chiffon that
hung about me like a loose flower. I was
really pretty-pretty, and enjoying my ap-
pearance thoroughly when mother marched
in to inspect me before I slipped away.
"Who is taking you to the club?" she
asked.
"G. G. Third," said I.
"That's nice," said mother. "He's a
dear boy. I like to have you go with him,
Pet. He's a suitable age, and they are
such nice people."
"He's a flathead!" I said tartly. "All
his brains are in his feet!"

"He is a very desirable young man from every point of view—every!" said mother in that perfectly transparent mid-Victorian manner of hers. "I am glad to see you encourage him, dear."

"I don't encourage him; I fight him off!" said I. "Mother, there is no earthly use in your keeping up these delicate and subtle hints about my marrying G. G., because I wouldn't marry the poor fish if he was the last man on earth!"

"Pet," said mother gently, "I wouldn't try to influence you for the world, dear—but they are such desirable people. And I'd like to see you settled."

Celeste had left the room by now, and mother came over and put her hand on my arm confidentially.

"Listen to me, Pet!" said she. "This afternoon I heard something about Granville Messinger paying you a good deal of attention—I hope there is nothing in that, my dear?"

"No, nothing!" said I, awfully annoyed. "And if there were—good heavens, where's the harm? Marriage needn't make a man a—a hermit, need it?"

"Pet!" said mother in a tone which made my name sound like anything but an endearment—"Pet! I forbid your having anything to do with that Messinger man! If you don't obey me I'll speak to your father!"

"I tell you there is nothing in it!" I said angrily. And just then Celeste came back to say that G. G. was waiting, and so, grabbing up my cloak and fan, I made my escape.

The club looked wonderful that night, and the dance was a special one, being held in celebration of the tennis finals. G. G. Third told me on the way over that Rosemere had won and that we would keep the Diamond Cup. He was awfully keen about it too.

Everybody seemed to be cackling about that cup and I began to be interested in it—little dreaming how violently concerned with the darned thing I was eventually to be.

Well, the clubhouse was a blaze of glory when we got there, and it was going to be some party, I could see that.

I felt full of pep when I joined Sylvia and Tot in the dressing room, where they kidded me enviously about Gran.

Well, the party that night was a riot! Never have I seen such a jam as turned out, and the gathering was considerably more than damp. There was the tennis championship to celebrate, you see, and from the very first toddle, which Gran Messinger cut in on extremely promptly, I got more of a whirl than I'd had since my coming-out ball, and I'm not exactly unpopular either. I wasn't hung up once all evening.

Later in the evening I discovered that Gran was getting pretty well lit up, and I was relieved when after a few blundering steps he suggested that we stop dancing and that he show me the Diamond Cup.

"I hid it in the trophy room," he said. "They locked the room for the night at

SETH THOMAS

REPARATIONS all made—everything started on time—*by a clock that was fifteen minutes slow.* So the guests are met with apologies and an embarrassed hostess has her evening spoiled.

One hundred and nine years ago something happened in America that made such embarrassments forever needless. In that year Seth Thomas began making accurate clocks.

Stop at a jewelry store today and ask the Jeweler to show you Seth Thomas Clocks. He *likes* to show them and to tell how many have gone out from his store into homes of good taste, and how seldom they ever come back for repairs.

A Seth Thomas Wedding Gift is a lifetime reminder of the giver's good judgment.

An excellent clock—a fine movement in a hand-rubbed mahogany case, plain or carved. Strikes hour and half-hour on a rich cathedral gong. It is 27½ inches long. Prices from $27 to $45.

SETH THOMAS

"Clean Hands in Business"

It is Thirsty Fibre (millions of him in each ScotTissue Towel) who absorbs four times his weight in water and is responsible for that essential, thirsty, absorbent quality found only in ScotTissue Towels.

"CLEAN Hands in Business"—What does that mean to you? What a wonderful thing it is that Thirsty Fibre stands for clean hands in business—both physically and morally. We are trying to make Thirsty Fibre and Clean Hands in Business mean the same to you and all who use ScotTissueTowels.

Thirsty Fibre personifies the spirit of Clean Hands in Business efficiency in your washroom.

A ScotTissue Towel is not inanimate paper. Thirsty Fibre makes it a living impulse of absorbency—thirsty at the slightest contact with water.

ScotTissue is a real towel that really dries. Soft, white, comfortable—it is so different from all others that the imprinted ScotTissue on every ScotTissue Towel is really an unnecessary identification to the person who has once used them.

Thirsty Fibre—His Biography is a most delightful little book. It is sent free upon request.

suppertime, but I've got a key—look here—let's go have a look!"

"All right, lead on!" I said gayly.

I didn't mind going off the floor, because the party was petering out a little by now anyway. And so, tucking my arm in Gran's, we started along the corridor to the far end of the clubhouse.

Now our country club is the finest on Long Island, and although it has no living quarters it is an immense building with everything else in the world in it, and the trophy room is on the ground floor in a wing way off by itself, facing on a very quiet part of the grounds. I mean there is no driveway or path running near it, but only shrubbery and that sort of thing.

The room itself is awfully unusual, but very good-looking, having been built especially to hold the club trophies, and so forth. There are compartments for these, with heavy glass doors that lock, sunk into the walls between the three windows which overlook the grounds. This room is practically a safe deposit, but well camouflaged with nice comfy chairs and carved panels and ceiling and so on, and you'd never think it was a sort of vault, to look at it.

During the day it is open—just a part of the clubhouse, you know, where one can smoke or read, but at night they lock the heavy door into the corridor, because there really is a whale of a lot of stuff in there—the Dalton trophy, and no end of cups and things, which would require a truck to move off.

With a good deal of fumbling Gran used his key. Inside it was awfully dark and mysterious. You know how weird a familiar room can seem at night. It gave me a nasty sensation for a minute, like a wind from a tomb or something, until Gran switched on the light, and then it was just the trophy room—as commonplace and reassuring as you please.

"Look here—I'm supposed to have this put in the safe," said Gran, going over to one of the glass cupboards, "but I kept it out to show you, as I promised."

"That was dear of you!" said I.

Gran took one of those big shiny boxes that come from jewelers out of the cupboard and put it on the table between the two lamps. Then he took the cup from it and removed its flannel nightie. I gave a gasp when I saw it. Really, it was a lallapalooza—a peach!

Standing about a foot high, it was as graceful and lovely as if it had been made by that old Italian chap Cellini, and like some of his things it was all covered with a beautiful design and incrusted with jewels. Of course it was a perfectly ridiculous thing to use as a tennis trophy, but aside from that it was a wonder. As it stood there reflected in the dark wood of the table, catching the light and throwing it back like a prism, it seemed almost alive. I clasped my hands and squealed with pleasure.

"There—look here now, didn't I tell you it was a pip?" said Gran, coming around to my side of the table and seating himself beside me on the couch. "It's as unique and lovely as you are!"

His eyes fastened on me and his hand slid along the sofa and covered one of mine. Then he tried to kiss me. He smelled horribly of whisky and stale cigarettes and a faint perfume that he uses.

My very soul went sick with terror, but I couldn't scream—I couldn't breathe, even—and in an instant, like a flash of light, I knew I hated Gran, that I loathed him.

It seemed hours that I fought him off, but I suppose it was only a moment. Then he saw I really meant my struggle, and let me go. The instant he loosened his hold I shoved him back upon the couch and left him all rumpled up, in one corner, while I ran for the door. It was locked.

I turned on him furiously, panting with fear and anger. With my back to the door I commanded all my strength to make that red-faced pig obey me.

"Open this door at once," I said, "or I will scream!"

"Scream your head off!" said Gran, picking himself up with an ugly look on his face which changed him entirely. He was no more like the cynical frivolous Gran I had known then, than anything! He was a stranger. "Scream your head off!" said he. "Nobody will hear you out there! Can you even hear the music?"

I listened intently. He was right. I could hear the orchestra, but only faintly. And if I did scream, what then?

"If you didn't mean it why did yo it?" he said. "Look here—I'm go teach you a lesson, you little fool! going to teach you not to play with you don't understand—see?"

We had moved away from the doo but all of a sudden Gran made a dash his face still ugly and purple and wit horrible sneer upon it. With a quie ture he unlocked it and stood for stant with his hand on the knob.

"I'm going to leave you locke here!" he said. "It'll give you a cha think!"

And with that he was gone, closin door after him. I heard him lock it o outside, as I stood there absol paralyzed with fright. Then gradua came to my senses. My head was enough now, heaven knows, and I bega reason things out.

The first thing I did was to try the to make sure Gran really had locked it

"But," I thought incredulously, won't leave it that way long. Why, can't! He wouldn't dare! He'll c back and let me out soon. He's just tr to scare me, and I won't let him!"

So I made myself sit down again on big couch, and tried to compose my But I didn't do a very good job. I could sit still. Very distantly I could hear music from the ballroom rising and fall in faint throbs. I seemed utterly cut from the world in that quiet room. And time slipped by and Gran didn't come ba it began to be rather horrid. I looked my wrist watch. Quarter of two! W the crowd would be going home pret soon now, and then he would have to co and let me out!

But another fifteen minutes ticked aw and still he didn't show up. I began to g really worried. Suppose he had anoth drink or two, as was more than likely, a then forgot all about me?

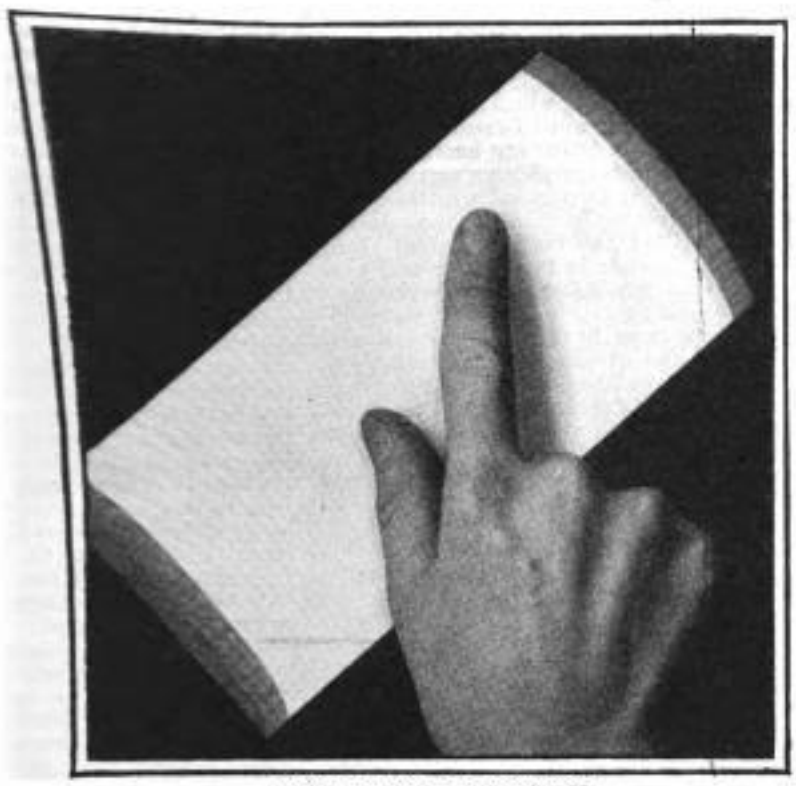
"Nonsense!" I told myself. "Buck u old girl, he can't forget a thing like tha He'll be back in a minute, or G. G. wi come looking for me. Why, this can't la much longer!"

Then I remembered with a little chill tha I had expressly forbidden G. G. to do any thing of the kind, and with this though came a sharp wish that the day of chap erons was back again so that this couldn' have happened to me. Then I laughed and tried to comfort myself with the thought that I was most certainly having a real adventure. But somehow I did awfully wish mother had come along to this hate ful dance, and the adventure failed to intrigue me in the least.

At quarter past two I began to think that the interval since the last dance had been unusually long, and in five minutes more I realized that the orchestra would not play again that night. Then I began to hear cars leaving the club. Their honking came to me, muffled, from the extreme opposite end of the building and from the driveway several hundred yards below. The party was over and Gran had not come back! I grew absolutely frantic, and running to the door pounded on it with my fists and called with all my might.

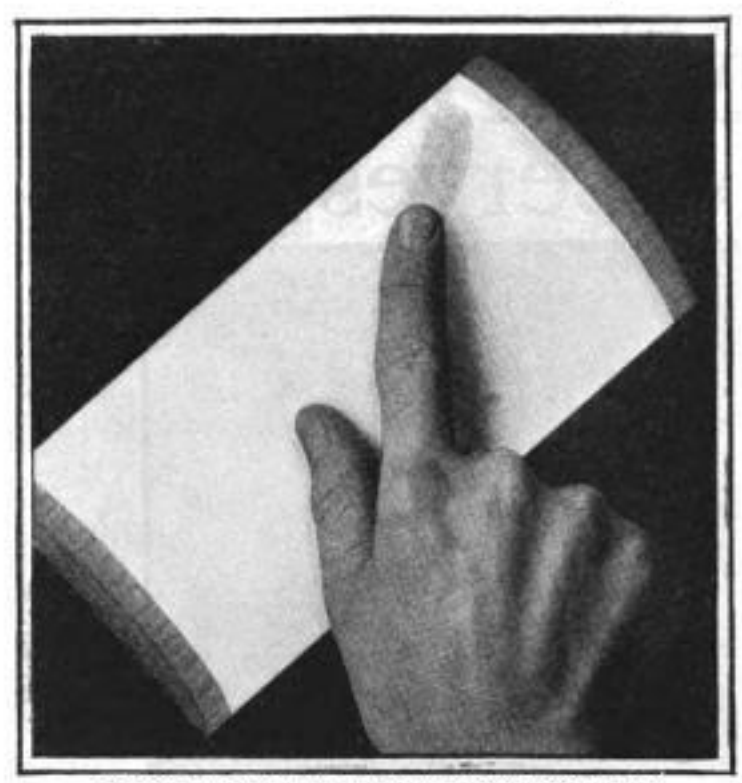
"Let me out! Let me out!" I cried.

But I might as well have saved my strength. Apparently nobody heard me, although I kept it up for goodness knows how long, with intervals of listening for some response, listening uselessly.



Then I thought of the windows. I was so stupefied that I had not thought of them before. I would climb out and beg a lift in somebody's car before they all got away.

Great goodness, but those windows were heavy! There was only one that I could manage to unlock, and when I had got it open, and lifted the sash, I found an iron shutter outside, one of those corrugated things such as shops put up at night; and to my horror I saw that it was locked with some kind of fastening that I couldn't understand. The more I tried to open it the less I could. I only succeeded in bruising my fingers badly. I crouched on the sill, rumpled and wretched, as the last of the cars went away and a dreadful silence fell. Then I heard a noise outside the building, and sat up to listen.



Thunder! Crash after crash. And then the rain came, sweeping and rattling against the iron shutters. I closed the window and went back to my place on the sofa. What was the use of struggling? I was worn out—simply exhausted. There was no bell in the room, and no house telephone; I had made sure of that.

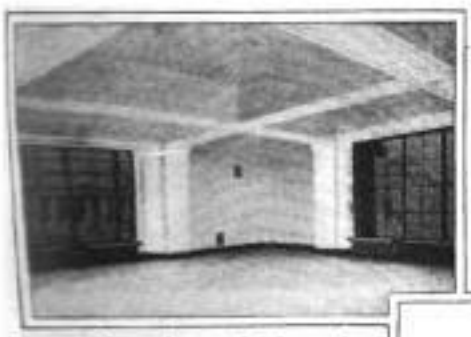
BARRELED SUNLIGHT



ORDINARY FLAT FINISH WHITE PAINT

Rub your finger firmly over a surface coated with Barreled Sunlight. It will not leave a mark. Then note the smudge which will be left when this test is applied to a similar surface coated with ordinary flat finish white paint.

Any dealer who carries Barreled Sunlight will supply you with test panels for this interesting experiment.

If you ever buy paint—

you should know this important test

Massachusetts Institute of Technology.

Barreled Sunlight was selected by the world's greatest technical institute for use in its own buildings.

Hotel Ambassador, Atlantic City.

One of the many famous hotels in which Barreled Sunlight is now used.

White woodwork in the home that stays spotless—painted with Barreled Sunlight.

Can you tell, when you buy white paint for walls or woodwork, how it will look in six months or a year?

Will it be soiled, spotty—ready for another coat? Or white and clean as when first applied?

Make the simple test illustrated above. It will show you how readily ordinary flat finish white paints collect dirt—and how completely Barreled Sunlight resists it.

Such paints become soiled so quickly because their surface is actually full of pores—tiny holes invisible to the naked eye but clearly seen under the microscope. These pores catch and hold the dust and dirt particles. Permanent smudges and spotty gray places soon result.

Barreled Sunlight is a white paint made by the exclusive Rice Process, which produces a smooth, lustrous finish that resists all forms of dirt. Its unbroken, even surface offers no lodging place for dust particles. Even if soiled after years of service, walls and woodwork coated with Barreled Sunlight can be washed like tile.

That is why Barreled Sunlight is being used today in buildings of every description—hotels, apartment houses, office buildings, stores and industrial plants. Ideal also for woodwork in the home and for the walls of kitchen, bathroom, laundry, etc.

Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. Easy to apply. Flows freely and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels.

When painting over an unpainted surface use Barreled Sunlight Undercoat.

If your dealer does not carry Barreled Sunlight have him communicate with us for name of nearest distributor.

Why *every* car deserves one—

WITH the BOYCE MOTO-METER you are protected—protected against unnecessary, costly repair bills.

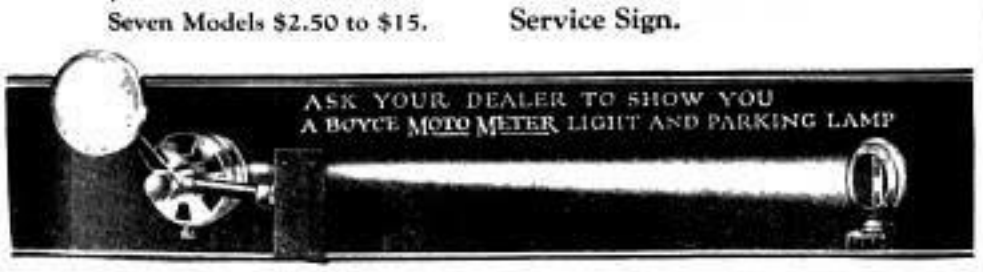
You *know* whether your motor is too hot, too cold, or operating safely. Your mind is always at rest. No guessing at the amount of water in your radiator, or the oil in your crank case.

The BOYCE MOTO-METER actually detects approaching motor trouble fifteen to twenty minutes before you or Ralph De Palma can.

That's why the BOYCE MOTO-METER is on the radiator caps of over three million of the finest cars in both America and Europe.

BOYCE MOTO METER

"Your Car Deserves One"



The instrument shown on the left is the De Luxe Model. Recommended for use on all high grade cars.

Your garage or dealer carries the BOYCE MOTO-METER in stock, or can quickly obtain one for you.

Seven Models $2.50 to $15.

Trade with the dealer who offers service. Look for the BOYCE MOTO-METER Service Sign.

(Continued from Page 114)

With every nerve raw I curled up on the lounge and sat miserably blinking at that gleaming golden cup, which seemed to wink at me mockingly, until I cried like a little girl, and almost broke my heart over the silly fool I had been. With a sort of opening of my mind I saw what a rotten way I had been looking at life, and how badly, dangerously, I had been behaving! Lots of things mother had said over and over about what she called good behavior, and that I had thought so silly and old-fashioned, came back to me with a new meaning, and I began to understand them. I began to realize, too, that there were reasons for lots of conventions that I had called antiquated, and that probably they were the result of people's experience—maybe some experiences like the one I was having.

And then, at a little before three o'clock, when I felt as though I just simply couldn't stand anything more, there was a terrific crash of thunder, and a moment later the lights went out.

How long the room was in darkness I don't know. In my exhaustion I must have fallen asleep, because the next thing that I knew clearly I was sitting bolt upright and listening intently to a sound that had nothing to do with the storm. The room was still pitch black, but somewhere close by I could hear a stealthy noise. It was like somebody using a key, very quietly and uncertainly. My heart nearly stopped, but after a moment I knew it wasn't a key. The sound came from the window. Someone was trying to break in.

I couldn't move. I couldn't make a sound. My heart started pounding so hard that I felt as if it would burst out of my body. Slowly and softly I heard the window raised and a faint thud as the person who had opened it entered. I clenched my hands tight but I could not stir. The round disk of a pocket light jumped out of the darkness, and danced about the room, touching everything, it seemed, except me, as the owner moved swiftly away from the window, searching the walls, and finally lighting full upon the Diamond Cup. As it flashed into view there was a smothered exclamation from the intruder.

"The cup!" he said. "What luck!"

On the instant I found my voice and screamed, and as I did so, as suddenly as they had gone out the lights came on again, and I found myself looking into the barrel of a revolver.

It took me a full minute to realize that the burglar was most awfully surprised at seeing me. He hadn't expected to find anybody there, I guess, except perhaps a night watchman, and he hadn't taken the trouble to cover his face with a handkerchief, the way burglars are supposed to. He didn't even look very much like a burglar, except for the gun in his hand, for he was a pasty-faced young man, with cheap shabby clothes, and one would not have glanced at him twice unless he happened to be pointing a revolver at one. As it was, I got a good long look—and believe me, I will never forget him!

"Hold up your hands!" said he, backing toward the door and trying the knob. A wave of amazement swept over his face as he did so. "Locked!" he said. "Well, don't try to open it! Stay as you are, and don't yelp again or I'll shoot!"

He came over to the table now, and seized the Diamond Cup, never taking either his eye or that dreadful gun off me. Then he backed to the open window, through which the first faint streaks of dawn were now shining, and knelt beside a suitcase on the floor. Keeping me covered still, he opened the bag with one hand and put the cup inside. Then he stood up and made me a sarcastic little bow.

"Unheard-of luck!" he said. "The Sartelle Cup and the pleasure of your acquaintance—thank you for a couple of pleasant surprises! Now just oblige by keeping that pose. Good morning!"

He stepped backward out of the low window and vanished from sight, while I stood there with my hands over my head and my mouth so dry with fright that my tongue stuck to it. The whole thing had only taken a very few minutes, but to me it seemed like hours. Then at last I remembered that I could move; that I needn't stand there in that silly position any longer. And what was even more important, I realized that the window was still open—I could get out!

Honestly, when that registered on my tired brain I didn't think of a single other thing. All I wanted in the world was t[o] home. If only I could get home and [g]into my own bed and cry myself to s[leep] I never even remembered there must [be a] watchman somewhere about and th[at he] ought to give the alarm! If I had but [known] so what a lot it would have saved us! But I only saw the open window. I tuck up my hair before I stuck my h[ead] out of it, though, and powdered my n[ose] too, mechanically. Queer, how instinc[tive] that was. I thought of my nose a[uto]matically, but I forgot about the watchm[an].

Outside the daylight was grow[ing] stronger all the time, and the rain h[ad] stopped. I looked cautiously about a[nd] stepped out of the window onto the gr[ass] but there was no one in sight. And s[o] just ran and ran, like a crazy thing, o[ver] the broad wet lawn and through the shr[ub]bery to the public roadway; and there, [of] all people in the world, who should co[me] along in his car but G. G. Third, his p[er]hair all askew, and his coat turned up [to] hide his evening clothes. Naturally, wh[en] he saw me he stopped.

"Pet Torrington—in the name of Ha[ven] what are you doing here?" he said.

"Oh, G. G.! I've had such a terrib[le] night!" I gasped, climbing into the se[at] beside him. "For heaven's sake take m[e] home—quick! Take me to the east gat[e] I've got to get in without their seeing m[e] Oh, if only I can get in and to bed witho[ut] anybody knowing! Oh, G. G.!"

And like a silly fool I broke down an[d] cried again.

"Lucky thing for you I played pol[o] over at Dickey Bowe's!" said G. G. "I don't like this—not half! What have you been up to, Pet?"

But I wouldn't tell him. I just simply couldn't. All I could do was cry in spasms. G. G. wasn't very comforting, I must say, but he did drive me home and let me out at the little east gate.

"Thanks, G. G.!" I managed to gasp. "I'll—I'll explain all about it sometime! If only I can get in before the servants are up!"

Well, I got in before they were up, all right. There wasn't a soul in the garden; that sort of reproached me, it looked so fresh and wet and bright. Nor was anyone stirring in the quiet house. The stairs squeaked dreadfully, no matter how carefully I walked, and it just seemed as if I would never reach my room. But at last I did, and threw open the door with a sigh of relief. And there was mother, waiting in a dressing gown, and very wide awake indeed.

"Pet!" said mother, getting to her feet in a mixture of relief and annoyance. "Do you know that it is nearly six o'clock? Where have you been?"

"At the club, mother," said I. And there was something in her manner that immediately made me sound confused and guilty. And I guess I looked pretty dreadfully too. "I've been at the club until a few minutes ago."

Of course that was a foolish way to begin my explanation, but I was too tired to realize how anxious mother was, or how queer my statement seemed to her.

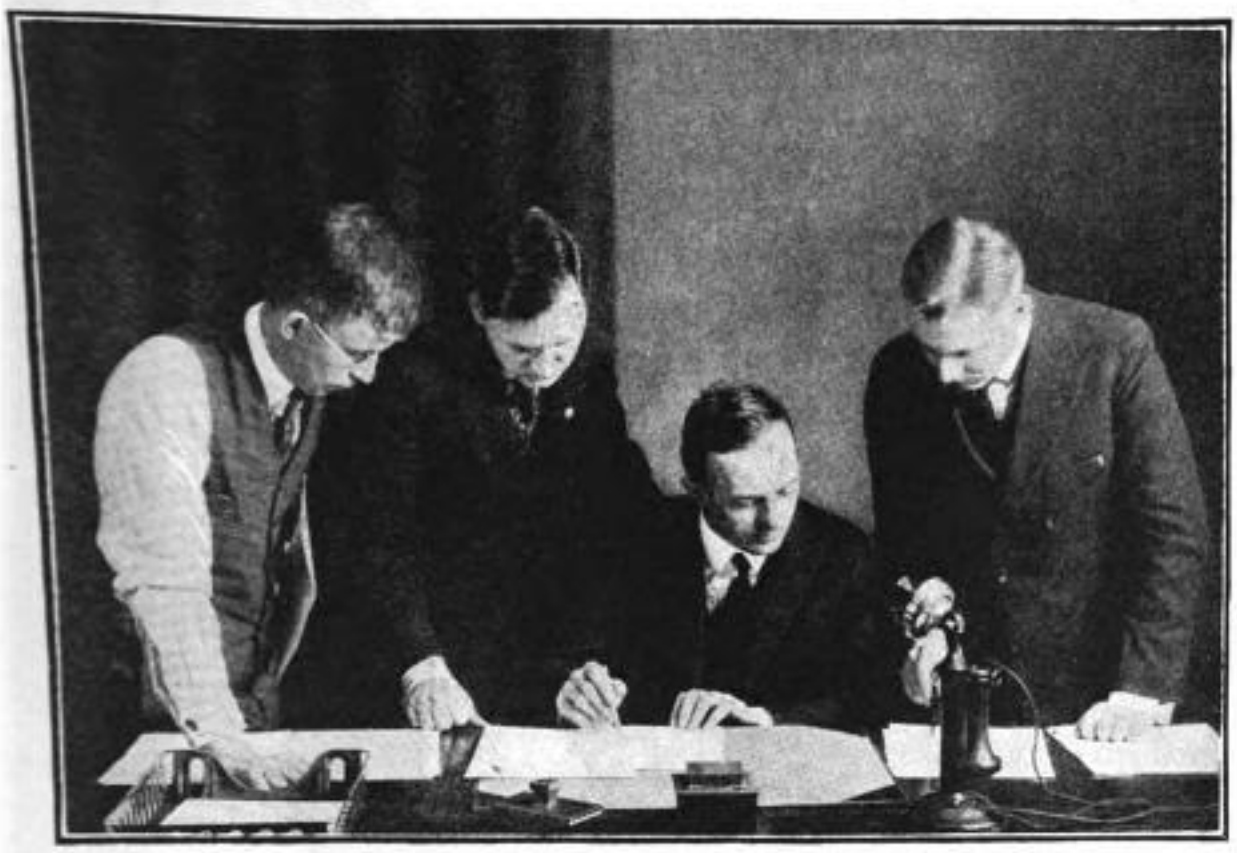
"Nonsense!" said mother. "You have not been at the club. The dance was over at two o'clock. Your father telephoned."

"But, mother ——" I began protestingly. She cut me short.

"Pet Torrington!" she said severely. "It will be much simpler for you to tell me the whole truth. Oh, my dear, I have always said that this wild freedom you girls insist upon would have some dreadful ending!"

"Mother, I tell you I've been at the club!" I said. My fatigue disappeared and I felt awfully indignant at being questioned in that tone. "I've been at the club; I was locked in the trophy room by—by accident!"

"Locked in the trophy room?" repeated mother. "And pray, how did you get out?"



"A burglar let me out!" I said.

"A burglar!" said mother. "My dear child, do you expect me to believe such a story? You are accidentally locked in the trophy room, and an obliging burglar turns up and lets you out. And then, instead of arousing the household as soon as you get here—and by the way, you haven't mentioned how G. G. happened to be on the spot to bring you home—instead of arousing the household, you slip quietly up to your own room! A likely story! Now, Pet, there is no use in trying to

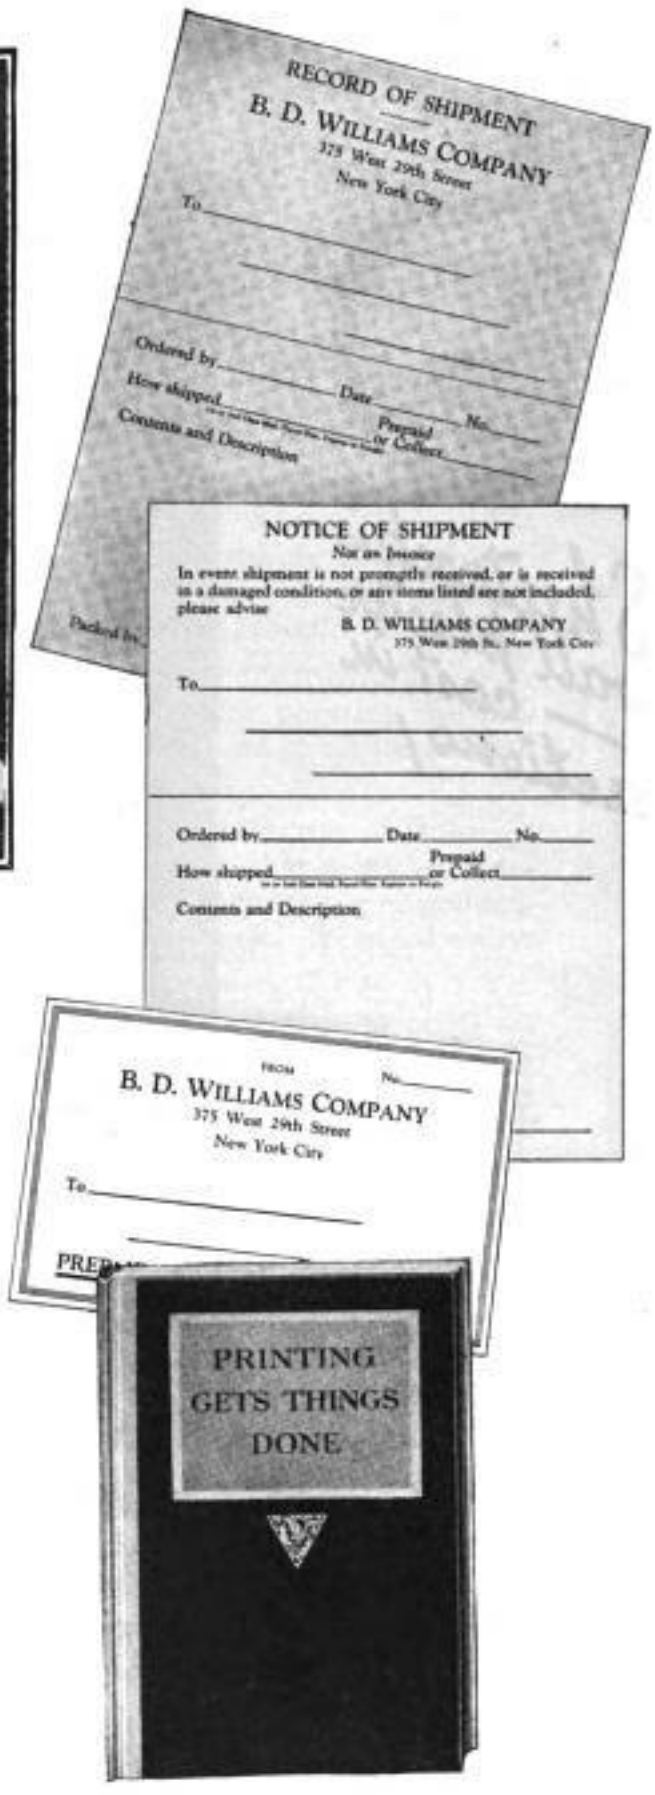
Send for our Book: **Printing Gets Things Done**

Does This Sort of Thing Cost You Money, Too?

Here is one of those office post-mortems in **which** several agitated men try to fix the **blame** for a mistake. The mistake cost **money**—so does the post-mortem.

The way to prevent these "how-did-it-**happen**" conferences is to put down on paper **what** is to be done, how it's to be done, **when** it's to be done, and who is to do it. **Then** the thing gets done, and usually it's **done** right the first time.



"**Put** down on paper" properly means put **down** on a printed form, devised to take care of **that** particular job—to see it through **from** start to finish, with a clear record of every step taken.

Business houses which carefully design the forms they use have the least trouble with **things** going wrong, with delays and explanations. For them, "Printing Gets Things Done." Use printed forms. Your printer can help you design and construct these forms, because we keep him liberally supplied with copies of the forms that big business houses have found useful and buy printed on Hammermill Bond.

Hammermill Bond is a very suitable paper for business printing. It is made in twelve colors as well as white, is of standard quality and finish, and is recognized by printers and business firms as the utility business paper.

Our book, "Printing Gets Things Done," proves that printing does that very thing. It is worth reading and may possibly contain suggestions that will help you. We tried to make it helpful, anyway. Sent on request.

HAMMERMILL PAPER COMPANY, ERIE, PA.

HERE is a form which in triplicate serves as a shipping-label, as instructions for shipping, as a notice of shipment, and as a record of shipment. This form and many others are explained in our book, "Printing Gets Things Done."

Look for this watermark—it is our word of honor to the public

Sheetrock is wall plaster cast in sections!

Insert shows the actual thickness of Sheetrock

ONE of the great merits of Sheetrock is that ***it will not warp.*** It stays flat, smooth-surfaced and rigid all the years you have it on your walls and ceilings. Being made of rock, it is not affected by atmospheric changes, heat or cold; so it never pulls away from the supports, never bulges, shrinks or buckles. Its USG Patented Edge insures tight, even joints. It is highest grade gypsum plaster, cast evenly and uniformly three-eighths inch thick, and ***it cannot warp.***

Sheetrock has other qualities exclusively its own. It is fireproof. It comes in broad ceiling-high sheets that are easily handled, easily put up, by any good carpenter. All he has to do is nail the Sheetrock directly to the joists or studding. It takes any decoration, wall-paper, paint or panels. The use of Sheetrock Finisher with it assures perfectly flat, unbroken surfaces. Your dealer in lumber or builders' supplies has Sheetrock. "Walls of Worth" pictures its uses; write us for a free copy.

give me. You are holding something g—what is it?"

"Oh, mother—I'm telling you the th!" I cried. "Don't look at me like t, mother! I'll tell you all about it! nny Messinger locked me in! There!"

"But why?" said mother, with such a hetic, worried look in her eyes that I ke right down and told her the whole y, only toned down a little, about how been a silly fool and led him on, and he'd got drunk and angry and locked in the trophy room, and the rest. ther listened quietly, but although I was fully earnest about it, when I'd got ough I could see that while she wanted adfully to believe me she didn't—not ite. And I couldn't blame her entirely, ause as I told it the whole thing seemed unreal and silly that I sort of doubted it yself and got to fumbling about for words d sounding sort of false and artificial, en to my own ears.

"Well, dear, that is a most extraordinary ital!" said mother when I finished. "I rdly know what to think, I'm sure! You ung people are entirely beyond me. ch a thing simply could not have hap- ned in my day, and I hope it will satisfy ur father. I shall have to tell him, of urse. At any rate we can do nothing out it just now. You had better get a ttle sleep, my child."

And with that she left me, sadly. But I idn't sleep. Instead I lay on my bed and ssed about and wished to goodness I was a convent or some place where the older omen just simply made you behave! I ished I had never come out. I wished was dead! But most of all I wondered hy on earth I had ever thought it would e delightful to be wicked. After a while I uldn't stand it, so I got up and had a ath and put on a crisp pink gingham to ive me courage; and believe me, I needed t, because after breakfast, which was not actly a love feast, with mother tearful nd father grimly silent, and my married ister Rosamond, who had apparently been ummoned for the inquest, sweetly su- perior; well, after breakfast they herded me into the library and closed the door, nd sat solemnly looking at me as if I were some strange new kind of animal, while they made me tell my story all over again.

When I got through dad tapped his vest with his eyeglasses and pursed his lips just as if it were a directors' meeting, and I was a financial problem. But at least he didn't get hysterical, like mother and Rosamond.

"Well," said dad doubtfully, "this is the deuce of a story! I'd like to believe the child, and in justice to her we ought to have Messinger over. That's only fair. I always thought the fellow was a rotter, anyhow. However, incidentally, there's the Diamond Cup. He's responsible for it, and he will have to get Pet's evidence sooner or later. Better have the whole nasty business over at once. Carrie, will you telephone and ask him to come here as quickly as possible? Don't say what for; just ask him to come."

"Very well," said my mother, "I will. Just as you wish, Edward. I'm sure you know best."

I will never forget that awful half hour of waiting, when we all sat around and, like that famous parrot, thought but hardly spoke. I was miserable as could be, although I tried to appear aloof and indifferent. But inwardly I was wretched. Anyhow, it would certainly be a great comfort to have Gran clear me and set the family's mind at rest. And just as I had reached this cheering conclusion and my spirit had begun to come back, Parker announced the Messingers.

Do you get that? Mr. and Mrs. Messinger! I'll say I hadn't counted on her putting in an appearance; no, nor wanted her to, either! But there she was, her nervous eager face darting quick looks around from under a big lavender hat that wasn't a bit becoming, and keeping an eagle eye on Gran. He was all shaved and white-flanneled, but looked pretty seedy around the eyes after his last night's party. And yet he had the nerve to swagger in gayly, just as if nothing at all had happened. However, that was only front. Knowing what I did, I could see that underneath this manner he was terribly nervous, and if Vivian kept an eye on him he was watching her anxiously too. Everybody knew how much afraid of his wife Gran was, and when I saw them come in together that way it gave me a sort of lost feeling, even before she spoke.

"I thought I'd just run over with Gran," said Vivian in that poisonous sweet way of hers. "It seemed so unusual, his dropping over here this early—I wanted to be in on whatever it is!" She laughed sharply, and looked us all over in turn, with those swift daggerish glances of hers.

"So sweet of you, dear!" mother murmured automatically, and then we all sat about for a moment in a ghastly silence until father cleared his throat and spoke.

"Mr. Messinger, it is necessary for me to ask you a few—ah—very important questions!" dad began. "The first one—ah—is—ah—did you see my daughter at the country-club dance last night?"

"Why, yes, of course!" said Gran, his smile a little pale, if you know what I mean.

"At what time did you see her last?" dad went on. "Please be sure. I have a special reason for this question."

Gran shot me a swift glance before replying.

"Why, yes, I can answer that," said he easily. "It was about one o'clock."

"Where was she?" said dad, leaning forward eagerly.

There was a tense silence in the room now. Gran hesitated ever so slightly, and there was a faint flush on his forehead.

"I—it was on the front steps of the clubhouse," said he. "She was just leaving with G. G. Third."

I could hardly believe my ears. The room seemed to be going around. He couldn't have said that—he couldn't! But he had. Dad pursed up his lips and frowned. Mrs. Messinger was watching her husband intently.

"Are you sure of that, Messinger?" said dad.

"Absolutely!" said Gran lightly. "Why not? What on earth are you driving at? What's all this about, anyhow?"

His manner was perfect. I never saw anything to equal it. Why, I almost believed him myself.

"See here, Messinger," said dad, now terribly serious, "I want you to be very sure of what you are saying. A great deal depends on it. Are you certain you did not see her again after that?"

"Certainly!" said Gran, apparently as surprised as could be. "She left the club, I tell you! I went back to the ballroom and danced for half an hour, and then went home myself."

"With whom did you dance?" said dad.

"With me," said Vivian unexpectedly. "I came in late from the Wentworths' dinner. We had one dance and went home. We didn't see Pet. I'm sure she had gone, because I always notice her—she's so very popular!"

Well, it was too astounding for words! So that was why Gran hadn't come back! With a shudder I remembered that it had been about one o'clock when he locked me in! This was awful, awful! I tried to speak, but I couldn't.

"Humph!" said dad. "Well, Mr. Messinger, how about the theft of the Diamond Cup?"

"The theft of the Diamond Cup!" exclaimed Gran. "Look here—I say, have you all gone quite mad here this morning, or what? The Diamond Cup hasn't been stolen. I know where it is this very moment."

"I understand it was stolen from the clubhouse last night," said my father slowly.

"Perfect nonsense!" exclaimed Gran, getting to his feet. "The Diamond Cup is kept in my own safe at night. It isn't even left at the clubhouse. By Jove, I know how you got that idea—you've heard that the trophy room window was found open this morning. Of course! Great Scott! How quickly things spread in a community of this kind! The steward telephoned me about it two hours ago. But nothing was taken, I assure you. If anyone broke in they didn't steal a thing. The trophies and all are quite all right—really!"

"Then I beg your pardon, I'm sure," said father. "Mr. Messinger, I am sorry to have brought you over on a fool's errand. Will you and your wife excuse us? Something important came up, and we thought you could help. But I see there has been a mistake somewhere."

Well, they left after that. And I hadn't uttered a word of protest. I was too stunned. I felt exactly as if I had been hit over the head with a mallet. But when they were gone I came to life.

"It's not true, what he says!" I cried. "Make him show you the cup—dad! mother! Surely you will take my word

Nature and Osteopathy —Allies

$C_{600}\ H_{960}\ N_{154}\ Fe_1\ S_3\ O_{170}$

NATURE is indeed wonderful. This imposing chemical formula describes the composition of the normal coloring matter of the red corpuscles in your blood.

With this amazing formula for particles so minute, think how unerring the precision of adjustment that must be maintained in the normal body!

But often some external force—a jolt, a little wrench, or a change in environment—throws Nature's delicately arranged machinery out of true adjustment. It cannot always recover by itself.

A notable example of this is seen in the fracture of a bone. Nature can knit the parts together and is ready to begin the process as soon as the fracture takes place. But she cannot do the "setting".

When bones, muscles, nerves or organs are deranged or out of adjustment, there is need of correction. The Osteopathic physician does the setting—or adjusting, as he calls it—and then Nature does the knitting or the curing.

The Osteopathic physician contends that Nature's finely combined formulas provide all the curative powers needed by the body. In other words, the introduction of chemicals is unnecessary if Nature is allowed to compound her own prescriptions.

Therefore, the Osteopathic physician, prepared by his four years of specialized training, seeks to place all parts in order for proper performance of their duties. Then Nature immediately sets about the curing which she is divinely equipped to do.

Osteopathy is the science of healing by adjustment of the body, more specifically of the spinal column.

The Osteopathic Physician is trained through four separate school years of nine months each, in all branches necessary for correct diagnosis and processes fundamental to healing.

State laws universally recognize Osteopathy as a thoroughly responsible and capable system of healing.

Bureau *of* Osteopathic Education

An interesting booklet will be forwarded to those who care to know more about Osteopathy. Address the Bureau at 1103 F. & M. Bank Bldg. Fort Worth, Texas

against that man's? I'm telling you the truth—honestly I am. You must believe me!"

"Daughter, daughter, I don't know what to think!" said my dad, walking up and down distressedly while mother cried into one of those old-fashioned, substantial handkerchiefs of hers. "I don't know what to do!"

"I think you'd better have that young idiot G. G. Third over," put in Rosamond.

"All right, have him over!" I cried. "But he's got nothing to do with this. Or call up Dickey Bowe and ask where G. G. was last night until twenty minutes before he brought me home!"

Father was caught by my last sentence. He picked up the telephone. Then he gave the number. And after a few questions he hung up with a puzzled air. "The child is right," said he. "Dickey Bowe says that young Graithwaite was there from twelve o'clock last night until after five this morning. So that's that!"

There was a little pause, during which I stood there, sullen and defiant and mad—oh, goodness knows how mad I was!

"I think you had better go to your room, Pet," said mother at last, "and stay there until I send for you. I want to talk to your father privately."

Well, of course there was really nothing else for me to do. So I went up, feeling pretty sick, I don't mind saying, and shut myself in. Scarcely had I done so when the telephone rang in my sitting room. As it didn't stop after a few minutes I answered it.

"Pet!" said a male voice. "This is Gran. For my sake, Pet, bring it back! Let me pay your bridge debts—but bring it back!"

"Bring what back?" I said stupidly.

"Why, the cup, of course!" said the voice impatiently. "Look here, that was a fool, childish thing to do! I'll meet you on Ketchen's Point in half an hour, and you bring it with you."

"But I haven't got it!" I said incredulously. "Gran Messinger, you beast! Do you actually think I—oh, you must be mad! A burglar took it. How on earth do you suppose I got out of that room? You know perfectly well I couldn't open the window myself! And besides, to think that you should dare—oh, it's too terrible!"

"Do you actually mean a burglar took it?" said Gran. "Then ——"

"He most certainly did!" said I. "And as for meeting you anywhere, ever again, I hate you and I will never even speak to you so long as I live! So there!"

And with that I hung up, and went and flopped down on the window seat and thought hard. This was unspeakably awful! Gran had actually thought me the thief, and had tried to protect me from my family by that lie an hour earlier; also to protect himself from his wife by saying I had left before she arrived. Why, no wonder none of them would believe me! I could not prove that he had locked me in the trophy room; and if I could prove it they would think I had stolen the Sartelle Cup! Oh, but I was being well punished for my foolish flirtation. It wasn't a bit of fun to be bad. I had been all wrong about that! It was ghastly! But what could I do now? What? I jumped up and began walking frantically up and down, trying to think. But I couldn't think of anything except that I wished to heaven I'd been born and raised in 1870 or in Turkey.

At noon Celeste brought me some luncheon on a tray, but I was so wretched that I couldn't touch anything except a couple of lamb chops and some baked potato and a little ice cream. And when they were all gone I seemed to feel better, somehow, and could think more clearly. And then suddenly I realized that there was one person, and one person only, who could clear me of both charges. The burglar! I must somehow catch that burglar and force him to tell the truth!

For several minutes after I thought of this I danced about the room with joy. Then I began to realize that catching him might not be altogether easy. This thought was depressing, but I refused to let it down me, for I was a desperate woman. However, it was certain that I could not catch him alone. I would need help. There was no use in appealing to my family, they had proven that pretty conclusively, I thought with bitterness. Besides, they had forbidden me to leave my room, and being practically locked in a person's room is distinctly hampering in such a situation. But fortunately they had not as yet removed my telephone, and so I at once proceeded to use that—my only **weapon**, one I call it.

The first place I **called was** the station, where I gave **a full** descripti the burglar and **everything, only** le out about Granny **Messinger, of** c and saying I had **been locked in** by dent.

I'll say I started **a riot in that** station, all right. **I expect they** h had any excitement **like it since** mond's dog was poisoned—**and then** Rosamond who was **excited. I even** of my entire next month's **allowance** as ward for the burglar's **capture.** Of c I didn't have the **allowance yet,** b hardly thought the **family would** go s as stopping it, no **matter what** they lieved I had done. **And as nobody** else reported the burglary **I hung up** with full satisfaction of having **created** *a ter* sensation.

Then I picked the **receiver up** again called Ted Stonewall. **I didn't** *feel sure* how Ted would take it **after the way** I treated him; but I **ought to have** kno

"Ted," said I, "**this is Pet.** *I'm* terrible trouble."

"Yes, I suppose so!" **said Ted** gen "I'll be right around."

"Oh, Ted, you're a dear!" I cried. "I I'm locked in my room. **That is,** *pra* cally. I'll have to sneak **out.** *Be* at east gate with the flivver in fifteen m utes, will you, and wait **until I show up**

"Sure!" said Ted. "**Gee,** you must in wrong to want that!"

I didn't stop for a come-back at *that, b* hung up and flew around getting mys ready, made a crawl-off, and was waiti in the lane when Ted and the *tin Liz* came rattling up.

"Hello! All aboard!" said Ted, and hopped in. The flivver ground *its teet* and away we went.

"Drive along the backest back road yo can find, please, Ted," said I. "*I* have lot to tell you, and I don't want to meet soul! Not on the flivver's account, bu because I must think!"

"All right, dear," said he, and for a litt while we rode in silence, Ted giving me al the time in the world to start talking in my own way, which was mighty kind and swee of him. But somehow I couldn't begin Not at least until a big yellow roadste came whirling around the corner. It was Tot Romney's roadster, and Tot was drivi ing, and she had Sylvia Glenning with her And as we came abreast, and had to pass slowly on the narrow road, both girls cut me dead!

At first I couldn't grasp it, and then all at once I saw things in a flash. G. G. Third had been talking! The beastly little cad! So the news was around already. But that Sylvia and Tot, of all girls, should do such a thing to me! Why, I had expected them to be simply green with envy, and crazy about my adventure, and now —— I couldn't get over it at all; particularly as I was perfectly innocent. Something rose up in my throat and choked me at this evidence of how conventional they were at heart, and first thing I knew I was crying wildly, and Ted had stopped the flivver and I was doing it on his shoulder and blurting out the whole story.

"There, there, dear!" he said in his heavenly kind way. "They are a lot of stupid beasts not to see you are as innocent as a kitten!"

"Then you believe me?" I gasped. "You take my word?"

"Don't be silly. Of course I believe you absolutely," said Ted briskly. "And I'm going to help you all I can. Cheero, sweetie, we will clear it up, you'll see! Believe you? Certainly, you poor little dear!"

Well, I was so grateful to Ted that I didn't even mind the sweetie, and as we drove on again, through the back country and over roads where only a flivver could go with safety, we laid a lot of plans about catching that thief, and my confidence and self-respect just simply returned in jumps.

And then, about twenty-five miles back in the country on the most awful road, but with the loveliest views, and where we hadn't passed a single car and were apparently only the second flivver that had traveled that way since the rain, the most amazing thing happened.

We were talking quite happily about various things when on rounding a curve what should we see but an overturned car, evidently the one which had been through ahead of us. It was lying on its side, and from the tracks in the deep slippery mud you could see that it had skidded badly and

Digitized by Google

big elm tree that sort of jutted out roadway. There was not a soul pparently, but just the same it gave rid sick feeling to look at it.
t Scott! What's all this?" said wing down and skidding pretty mself.
certainly was an awful bit of road. n—oh, then we saw a foot sticking a beneath the wreck. There was pinned under it!
urse we stopped at once and Ted out and ran to help. I felt simply r words, because I can't endure the blood, but I made myself behave, right out after him and ran over, ause of course I wanted to be of here was a man pinned under that right, and he was alone, but I had round to the far side before I saw was, and then I nearly died, for the is my burglar—the very same pasty- young man who had broken into the

ren knows he was no beauty and the t hadn't improved his appearance, ay that he looked like an angel from to me is putting it pretty mildly. sing metaphorical, of course, because in a physical sense he looked simply ghastly, being pastier, than ever, with both legs pinned under the car, and one of them, as we found out afterward, quite broken. He was conscious, though, as Ted bent over him, and as I came up I could hear him say: "Thank God! Say, feller, I been here ever since last night, and you are the first ——"

Well, that is as far as he got just then with his few well chosen remarks. I didn't give him a chance to go on and thank Ted. With a yell I pushed that astonished young man aside, making a dive for the injured man's right pocket, and coming to my feet with a shout of triumph and his gun.

"Great heaven, Pet Torrington!" gasped Ted. "What is it?"

"It's my character!" I shouted, dancing around and waving that blessed gun—rather dangerously perhaps. "This is my chaperon that was with me at the club last night! And there is his bag. Never mind his legs yet, Ted—open the bag!"

And while our prisoner lay and cursed, Ted tore the suitcase open; and there, praise be, lay the Sartelle Cup, twinkling and winking up at the brilliant sunlight. To think that I had ever called it names!

The Poets' Corner

When We Had Our Rights

USE, ye Boozemen! Red-nosed men,
ntraged citizens! Listen, then,
e I break your hearts
a tale that starts
in the I Can Remember When:

a man might trade a whole week's pay
glorious jag that would last all day;
derful day and a wonderful night,
ding a free lunch and a fight.
d when at last
glad hours passed—
swooning Nature could stand no more,
uld fall asleep on the sawdust floor,
his weary head in the cuspidor.

was the days! And I drop a tear
e mournful grave of that Yesteryear.

ever you think of the sinful way
waste our jack on a Saturday?
cing the wages on grub and shoes
ch once on a time would have bought good booze!

cynical one, ne'er shake your head!
dime that you spend for a loaf of bread
uld have bought you a schooner of foaming beer
the joyous days of a vanished year!

r old songs! Dear old fights!
k in the days when we had our Rights!

golden days! When a yegg could make
barrel of hooch from one rattlesnake,
a rubber boot and a drug or two,
d pass it over the bar to you
en a throw; then, deft and brisk,
mming a carefree ditty, frisk
r Sunday suit from tie to pants
d kick you out to lie in a trance
d sleep it off in a watering trough
ll the gang came round with the ambulance.

hem was the days! Them was the nights!
'e lost our dough and our liver and lights
nd an eye or so—but we had our Rights.

fine, fellow Suckers good and true!
omewhere a Voice is Calling You!
omewhere a yegg is catching cold,
in the night with a piece of old
ty gaspipe! While he biffs
r old scared commuting stiffs
the bean, he pensive sighs,
ping his poor bleary eyes
an absent way as he wonders when
'll get him back on the job again.

all we then endure to behold his pain?
all his weeping rise to the stars in vain?
all the poor yegg's tears, like the summer rain,
Water a land that is crass and crude
And sown with the seeds of ingratitude?

Shall we tamely sit by our bank account,
Watching it mount and mount and mount?

Shall we hold our peace when the Suckers then
Tell how they got it in Goucher's Den—
Knockout drops in their pail of hops—
Back in the I Can Remember When?

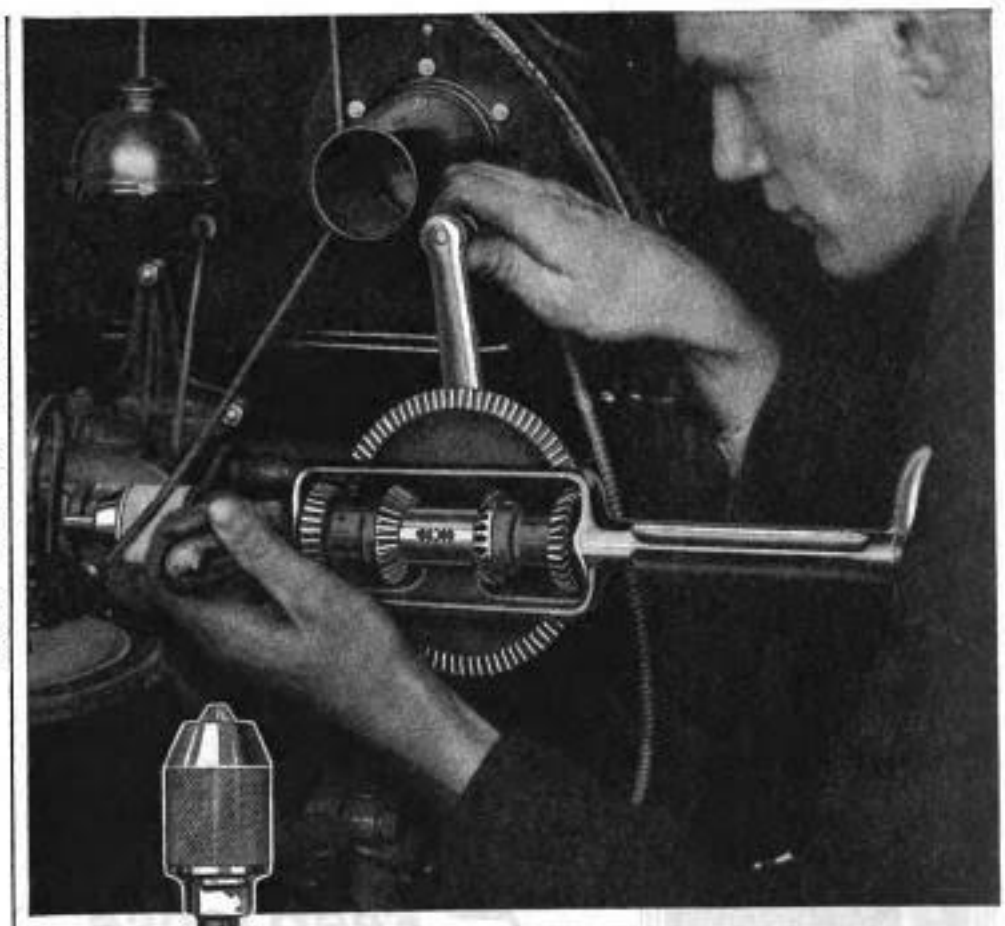
Shall we ever forget sweet days gone by
When we went home loaded with drug-store rye
And woke Wife up with a crack in the eye,
And a bump in the nose when she started to cry?

Dear dead days! Dear dead nights!
When the yeggs and the Suckers had their Rights!
—Lowell Otus Reese.

Shellback
(Corrected With Apologies)

GIVE me the mainsail's bloodstained bunt,
And night, and a black Cape Horner;
The fo'c'stle hands who curse and grunt—
Keep you your chimney corner!
Keep your book with its printed page,
And its verses of poetry;
Mine the men of the Golden Age,
And the wrath of a blasted sea.
You keep the little things of life—
All your prayers and your hymns of praise;
Give me the Horner's piercing knife
And the hurricane's awful rage.
Give me my pals, who drunken go
Where the watchful crimps are lying—
Lads whom never a home shall know
Till the gentle time of dying.
Keep the books of the wise men's word,
And mouth all their soft words over—
Give me the scream of the white sea bird,
And my God when my work is over.
—Bill Adams.

Ballade of Inayne the Fair



INAYNE the lovable, the fair—
I wish that I could add, the wise—
One sees your picture, debonair,
On every magazine one buys.
Artist with cover artist vies
To paint again and yet again,
In many-fashioned garb and guise,
My cold and faultless-fair Inayne.

In raiment marvelous and rare,
One sees you making goo-goo eyes
At young men tall and square and spare;
Or knitting socks, or baking pies,
Or playing golf, or casting flies,
While treating Cupid with disdain.
You never seem to really care,
My cold and faultless-fair Inayne.

Of thrills you do not seem aware;
You never show the least surprise;
Your calm and graven-image air
Love, anger and delight defies.
Your pulse beats never fall nor rise;
Your roses never wax nor wane;
Your grace and beauty none denies,
My cold and faultless-fair Inayne.

L'Envoi

Oh, Lady of the Cover Page,
One seeks the soul of you in vain,
In spite of all your vogue and rage—
My cold and faultless-fair Inayne.
—Thomas Lomax Hunter.

When you have to drill where you "can't!"

When somebody says, "You can't drill in that narrow space"—get out a "Yankee" Ratchet Breast Drill No. 1555 and DO IT!

This drill has an ingenious ratchet mechanism with five different adjustments. One adjustment is the famous "Yankee" DOUBLE Ratchet which permits *continuous* drilling, even if you have but an inch of space in which to move the crank back and forth. It cuts both "going and coming."

Two speeds. By shifting lever at base of hub, you can instantly change speed without removing drill from work.

No. 1555 (illustrated)—Length 17 in. Three-jaw chuck for round shank drills up to ¼ in.
No. 555—Length 17½ in. Two-jaw chuck for round shank drills up to ¼ in.

"YANKEE" Ratchet Breast Drill

Saves your muscles. Saves your time. Like all the "Yankee" Drills it will do what other drills can't do because no other drills have the "Yankee" Ratchet. A finger touch on ratchet shifter changes adjustment to Plain Drill, Left-hand Ratchet, Right-hand Ratchet, or DOUBLE Ratchet. In fifth position gears are locked for changing drill points.

Some other "Yankee" Tools

Spiral Screw-drivers
Quick Return Spiral Screw-drivers
Ratchet Screw-drivers
Plain Screw-drivers, 1¼ to 30 in. blades
Ratchet Hand Drills
Ratchet Chain Drills
Ratchet Bench Drills
Plain Breast Drills
Automatic Push Drills
Ratchet Tap Wrenches
Bench Vises, removable base

TOOL BOOK Mailed Free

Illustrates and describes all the ingenious "Yankee" Tools for saving time and labor. Write for it today!

"YANKEE" Ratchet Hand Drill No. 1530

for small holes in tight quarters

Only 10½ inches long. Weighs only 1¼ pounds. Yet this efficient little drill has all five adjustments of the big "Yankee" Breast Drills and Hand Drills. Works in cramped spaces where other drills cannot be used at all. Single speed. Holds drills up to 3/16 inch.

Dealers everywhere sell "Yankee" Tools

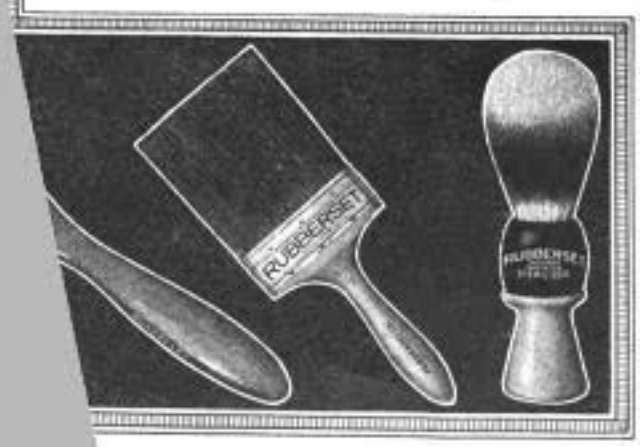
the SAFETY TOOTH BRUSH

—take THIS brush into your CONFIDENCE —keep loose bristles out of your system!!

"every bristle gripped EVERLASTINGLY in hard rubber"



they can't come out!

And to the everlasting grip at the butts of the bristles is ADDED the famous "in-between trim" at the tip of every bristle tuft. It is the trim that science so exactingly devised—that years of use so positively approved—that dentists so heartily endorse. It is the trim that enables you to clean so thoroughly between the teeth, behind the teeth, and in every nook and crevice of the gums. You will find it in every RUBBERSET Tooth Brush, in every style and size and in all stiffnesses of bristle.

Have you yet found THE ONE BRUSH that suits you better than any other? It's in the generous RUBBERSET assortment. Your dealer should be able to assist you greatly. If his stock is limited, tell us your desires and we will gladly see that they are fulfilled.

THE PRINT OF MY REMEMBRANCE

(Continued from Page 17)

Barrymore said, "Great! Let's have another!"

This second-story room was let for three dollars a week. I engaged it when Smythe left toward the end of September. It was a fine room for the money, being nearly twenty-five feet square and having three windows at the front. Among its few drawbacks were the simplicity of its furnishing and a rich, permeating odor of Italian cooking, never absent and especially high at the flood of the gastronomic tides. Barrymore thought that anybody ought to be able to write in such rich and redolent quarters, away from all distractions and calls, and when the rear room on the same floor, separated from the front room only by the customary wardrobes and marble washstands of that period, was vacant he rented it at the same price.

On his first day as a tenant he brought in two reams of soft printing paper, typewriter size, and two dozen plain wood pencils already sharpened and made of a grade of plumbago suggesting stove polish. They had retailed at ten cents a dozen. He declared his intention of starting in the next morning to write a play. But he didn't come that morning or any other morning. His wife predicted that such would be the case. She said their own apartment, wherever it happened to be, was strewn with stray leaves on each of which was written, "Act One, Scene One. A Ruined Garden."

Some five or six years later, when I had built a home and was living at New Rochelle, Barrymore came out one night to read a play he had completed. We had to explain the burst of laughter that greeted him from my wife and me as he began to read, "Act One, Scene One. A Ruined Garden." Not only did Barrymore never work in that Twenty-fifth Street room but as far as I know he never came to it but once.

This failure to use the room is not astonishing when we remember Barrymore's way of living then. Rather than store his four or five trunks of valuable costumes which he was apt to need at a moment's notice, he kept them in a little hall bedroom on Twenty-eighth Street in a house managed by a Mrs. Higgins. The room also contained a little iron bedstead and washstand. Barrymore never occupied it, but to disagreeable persons he gave it as his address. Mrs. Higgins was instructed to say always that Barrymore had just gone out, and occasionally some wastrel transient, on an order from Barry, slept there. In conjunction with one or two actor friends, he had a flat on Fourth Avenue. I think this was really the place where he preferred to sleep and to get his breakfasts. Mrs. Barrymore was traveling with the Crane company at that time, and when she came to the city Barrymore took an apartment with her at some hotel. During one of these engagements their joint address was the old Sturtevant House, so that with the room back of mine Barrymore quite honestly had four private addresses.

One blizzard night, walking away from The Lambs Club on Twenty-sixth Street, I was stopped by a shivering boy of twenty who asked for a dime to get a bed. I took him with me, showed him into this back room. The boy looked at the sofa.

"There?"

Four Homes, but No Bed

I said "No," pointed to the roomy and well-furnished bed and left him stammering his thanks. About three o'clock in the morning I was waked by somebody striking a match and turning on the gas. Barrymore, dripping from the storm, stood in the middle of the floor.

He nodded to the back room and said, "What's all this in there?"

After collecting my thoughts a moment I said, "That's a little philanthropy of mine."

"Well, where am I to sleep?"

"What's the matter with the Fourth Avenue flat?" There was some friend there. "What about the Sturtevant House and Georgie?"

Barrymore said, "Ethel is over from Philadelphia to visit her mother, and I've been turned out."

"What about the room at [illegible]gins'?"

"King Hall has that this week."

I couldn't help laughing at t[illegible] of America's favorite and best-p[illegible] with four apartments for which h[illegible]ing rent and no place to sleep.

I said, "I don't know what yo[illegible] to do, old man."

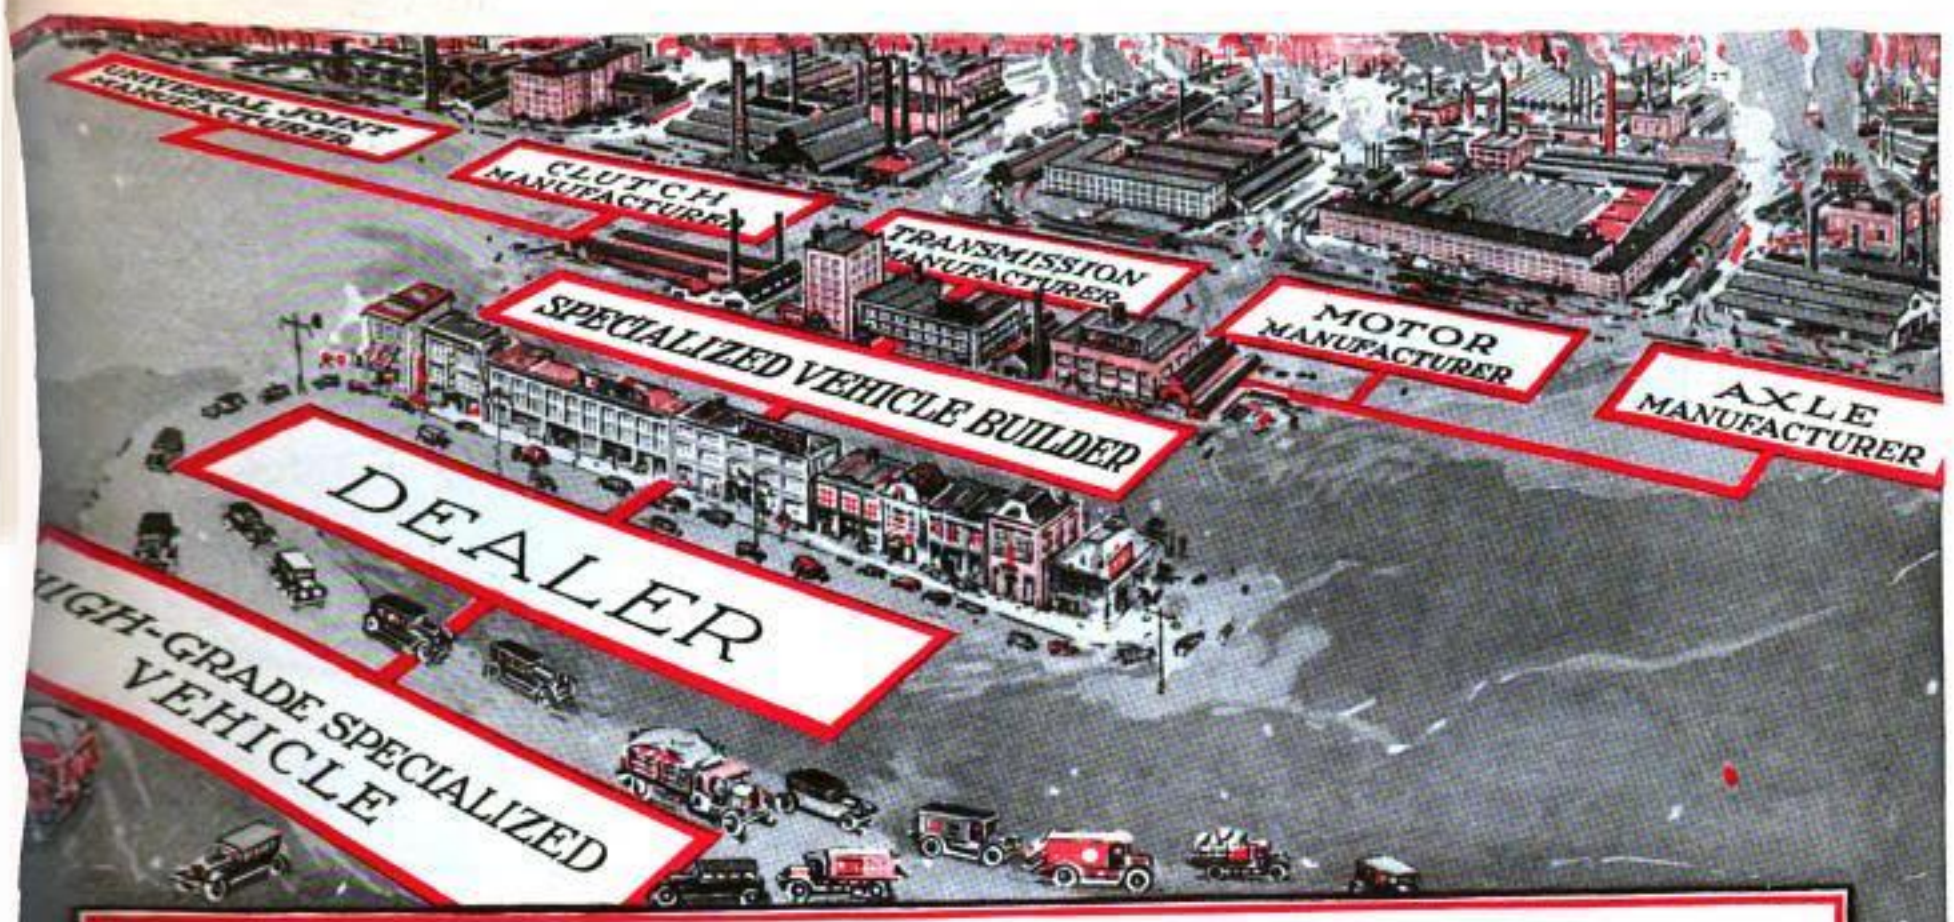
"I do."

He shed his outside clothes and bed with me.

Barrymore at that time was pl[illegible] one-act piece, A Man of the Wor[illegible] ously referred to as the contrib[illegible] fused for publication when offere[illegible] my reportorial duty on the Post-[illegible] Somewhat dissatisfied with his op[illegible]ties at the Madison Square The[illegible] was considering an engagement[illegible] under the management of J. M. Hi[illegible] casting about in an effort to devise[illegible] a play that would show to best adv[illegible] the Barrymore qualities. My ass[illegible] with him and the little circle about[illegible] this time put a decidedly new tw[illegible] my way of thinking of the theater[illegible]

Barrymore had written and prod[illegible] Helena Modjeska a story of Russ[illegible] called Nadjesda, which in the op[illegible] many had been handicapped by the[illegible]ity of its dramatic incidents. It was[illegible] of that kind that he wanted fro[illegible] Somewhere from the South there[illegible] newspaper item of two men wh[illegible] fought a duel by drawing lots from[illegible] with the understanding that the ma[illegible] got the marked card was to suicide[illegible] and other incidents coming to our[illegible]tion at that time, all equally unus[illegible] bizarre, combined to make a story w[illegible] under the title of Reckless Temple, [illegible] mitted to Barrymore and Hill, and, [illegible] by their enthusiasm, wrote in that Tw[illegible] fifth Street room.

The Old Lambs Club



I had now become a member of[illegible] Lambs. At the clubhouse I passed [illegible] than half the time I permitted myself a[illegible] from my writing. The Lambs was the[illegible] its fifteenth year, and contained the[illegible] element in the profession. It was a g[illegible] honor, privilege and education to be[illegible] ceived on equal terms by its then mem[illegible] ship, a total professional number of[illegible] hundred, which included such men as [illegible] ter Wallack, Dion Boucicault, Steele M[illegible] kaye, Mark Smith, Robert G. Ingers[illegible] Otis Skinner, the Holland brothers, Geo[illegible] Edmund and Joseph, and others worthy[illegible] the standard that these names indicate.

A table d'hôte dinner was served for [illegible] cents at the large club table, where the m[illegible] were like members of a family. There w[illegible] a notable musical contingent and oth[illegible] between courses the popular songs of t[illegible] time. The gayety of such youngsters [illegible] Harry Woodruff, Cyril Scott, Fritz Wi[illegible] liams, Francis Carlyle and Ned Bell was [illegible] memorable as the wise talk of such elder[illegible] as Steele Mackaye and Frank Mayo. Fu[illegible] was spontaneous and unconstrained. A[illegible] one of these small dinners I began my pe[illegible] acquaintance with Otis Skinner. He ha[illegible] come in from a trip on the road, was greete[illegible] with shouts and lifted glasses, and became[illegible] the place on the impromptu program fitte[illegible] it he stood in the doorway, and answering[illegible] the men's demand recited Béranger's When[illegible] We Were Twenty-One. I shall always[illegible] remember the romantic picture of that[illegible] virile, Moorish-looking youngster, and the[illegible] sentiment with which he read "Flo, my Flo,[illegible] was a coryphée."

The Lambs was then at 34 West Twenty-sixth Street, between Broadway and Sixth Avenue; the house an old-fashioned five-story, twenty-five-foot-front brownstone dwelling with high stoop, under which was a basement entrance. It was like its adjoining houses in external looks and faced similar buildings on the north side of the street. Those respectable neighbors eyed it with distrust. Leaving The Lambs and walking east to Broadway you passed the St. James Hotel on the corner. On the other side of Broadway was Delmonico's, running through the short block to Fifth Avenue. The block was and still is short, because these two great thoroughfares nedge

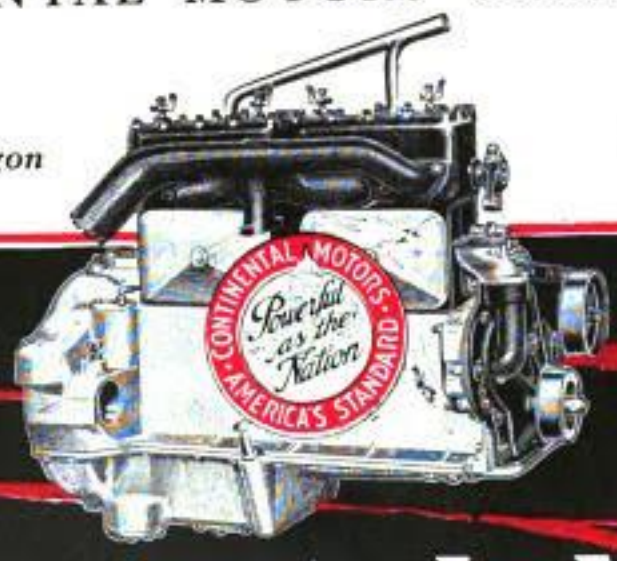
Three-fold responsibility guarantees genuine SPECIALIZED vehicles

Back of the dealers who are selling genuine SPECIALIZED cars and trucks and back of the manufacturers who are building them, are the great unit specialists of the automotive industry. Thus, in every high-grade SPECIALIZED vehicle, the motor, the clutch, the transmission, the axles and other component units are *individually* guaranteed by the separate organizations that produce them and *collectively* guaranteed by the car or truck builder and his dealers.



It follows, therefore, that the purchase of a genuine SPECIALIZED vehicle is protected by *more* than the responsibility of the car or truck builder. Each unit embodied in such a vehicle is KNOWN to the purchaser. It is proven from the standpoint of performance. It is backed by parts-distributing stations that dot the world. And its complete dependability is guaranteed by the skill, the reputation and the resources that stand behind it.

Any car or truck you buy represents an investment now for future returns in transportation. Only a SPECIALIZED vehicle can protect that investment with the triple responsibility of the dealer, the vehicle builder and the unit manufacturer.

To insure the soundness of your investment, therefore, purchase a genuine SPECIALIZED vehicle. And in so doing, identify the car or truck you select by the motor of sovereign excellence, the motor that everywhere is recognized and guaranteed by the supreme insignia of SPECIALIZATION—the Continental Red Seal.

Everymeal *Everyday* Sunshine Biscuits

Tak-hom-a Biscuit, the Sunshine Soda Cracker, is sold only in packages with a red wrapper

From the Thousand Window Bakeries

A Story of Appetizing Appeal

Let Tak-hom-a Biscuit tell you a story that words cannot express.

When you open the package, the light, golden color invites you to eat.

Fill a plate with these Sunshine Soda Crackers and serve with the soup.

Their crackly crispness and even, fresh flavor fulfil the promise of their tempting appearance.

Leave them on the table and watch them disappear all through the meal.

And when the table is cleared, how few cracker crumbs you will find.

Tak-hom-a Biscuit splits-in-two without crumbling.

n is the park called Madison Square,
ger fountain in the center and the
Gaudens bronze of Farragut on the
west corner.

ing this square on all four sides in
were beautiful and impressive build-
ach with its history fairly mellow and
th their uniform sky line that could be
ed without suggesting curvature of
pine.

have eyes and never to see the sky is
slowly and unconsciously immersed
tter. Where no vision is the people
, and the vision of this nation is born
nourished and reinforced and sus-
d from modest houses that are de-
d and which face four ways to the
her and from which men and women
n easy angle at the sky. Someone has
further than this and said that a view
e horizon is necessary to the sanity of
ye. In thirty-three years Industry
a capital I has torn down the old
onico's, the old St. James, the Worth
Hoffman houses, the Fifth Avenue
d and the handsome homes of modest
ht., and replaced them with cubes of the
ring kind that make central New
k City a gridiron of box cañons.
1889 Madison Square had just won
a Union Square, nine streets farther
h, its claim to be the theatrical center.
as the smart and modern spot, although
y of the actors of the comic-page, fur-
med intensity still haunted the older
to. And at Fourteenth Street there
still considerable theatrical power and
ation. Under the old Morton House
d. Hill still managed the Union Square
ater. One street farther south was the
r, where Crane's long run in Sydney
enfeld's Senator and other plays was
ccur before the passing of that historic
se. North of Union Square, where now
nds the lofty Century Building, was the
tely, hospitable Everett House; while
the east was Riccadonna's, famous for
ghetti and the patronage of the Salvinis,
her and son. These, with the Academy
Music, then run by E. G. Gilmore, and
ny Pastor's own theater just behind it,
t up their ancient claim for attention.
t the fashionable town was moving
rth.

At Twenty-fifth Street two tides of easy
menaders joined in their downtown
ift, and returning there divided for the
rtherly walks. Every fine afternoon
her than matinée days members of the
ck companies of Daly's, Palmer's and
e Lyceum theaters, and members of
her combinations of nearly equal im-
rtance, moved in leisurely manner and
most small-town neighborliness through
e comfortable throngs of well-dressed
d fairly intelligent Americans, to whom
l of them were known by sight. Fashion-
le New York was out in private rigs with
veried coachmen and tigers; there were
o trolley cars, no motors. The busses on
fth Avenue were drawn by slow-plodding
orses.

Life itself had a gentle pace, social inter-
course a more genial temperature. Friends,
neeting, stopped to exchange a word; men
n groups told stories, laughed; policemen
lid not ask them to move on. The molds
f form, the glasses of fashion were John
Drew and Herbert Kelcey, Robert Hilliard
nd Berry Wall. Equal centers of interest
nd prompters of good nature were Barry-
more, Coghlan, Goodwin, Hopper, Digby
Bell, Dixey, Charles Stevenson and Frank
Carlyle. A certain challenge went with
Ted Henley or Lackaye.

An Old Landmark

Some day it will be as respectable to write historically of the fine barrooms of that time as it was for Dickens in his day to write of the taproom; and even now I must venture something, because to leave them out is to attempt a portrait with half the face concealed. Any one of those important men just named could be stopped in that parade and under the pretense of business or pressing communication enticed for a moment's misleading conference into one of those convenient snares.

In the St. James Hotel, behind and above the glassware, was a picture of three dashing cavaliers, plumed hats, flowing cloaks, swords and all; portraits in costume of Billy Connor, hotel proprietor and erstwhile manager of John McCullough; of Charles W. Brooke, distinguished lawyer, orator and *bon vivant* of the day; of Louis N. Megargee, newspaper writer of Philadelphia and New York, all intimate friends of the talented Moses P. Handy of Clover Club celebrity. This picture had the kind of draft and influence of Maxfield Parrish's Old King Cole, painted in after years for the late Knickerbocker Hotel café, with the difference that King Cole came from the nursery with the reputation of having quite shamelessly and in *haute voix* expressed his preferences, whereas the St. James trio depended entirely upon the law of associative suggestion.

One habitué was Jerry Dunn, a handsome fellow strongly suggesting in appearance former United States Senator J. Hamilton Lewis, though Dunn was rather a silent person. He had, however, killed a man with a revolver. Another sport was Pat Sheedy, who managed John L. Sullivan. It was in that saloon, the story ran, that when Sullivan proposed to beat up Sheedy with his fists Sheedy, not unprepared for the attention, had pushed a derringer against Sullivan's body and asked him not to do it.

Brass Rail Conferences

Some politicians came there. General Sheridan—Silver-tongued George, as his Republican friends called him—lived in the hotel.

On the next block south from the St. James was the Hoffman House café, perhaps the finest in the world. The proprietor was the handsome, melancholy, gray-haired Ned Stokes, who had killed Col. Jim Fisk on account of the notorious Josie Mansfield. It was said Stokes always slept thereafter with the light burning in his bedroom. In this café, guarded by brass rails and plush ropes, hung a heroic canvas by the great Bouguereau, a painting of several nymphs trying to throw a fighting satyr into the water. This prophetic symbol was years before the general adoption of woman suffrage.

In the theater the prizes are to magnetism quite as much as to ideas or antics. Of the three factors, magnetism is the hardest to define. To call it attraction is but to change the substantive. To call it personality is only to befog it. To recite the reasons for my own explanation of it or to support my case adequately in the controversy those reasons would provoke would take half a volume. I therefore omit reasons, and avoiding controversy issue only my belief that the force is electrical; that its possessor is not its generator but its medium, and that the voluntary transmission of it is exhausting. The truly effective actor cannot simply wipe off his grease paint and turn in to slumber.

Our Faversham, our Hacketts, our Marlowes, our Cohans, our Drews of three actor generations, our Barrymores of two, with the admixture of the Drew strain, our like artists of repute, as well as those yet undiscovered and uncelebrated, cannot after a night's play set the psychical brakes and come to a dead center. Like a machine before the stop, the human organism before the normal nerve rate, must slow down. For this retardation the ample apartment with trained butler or equally trained maid and the presence of understanding comrades who quit at the first suppressed yawn is ideal.

For an income unequal to such provision the proper restaurant, the club, the café of the Hoffman kind, is invaluable. Let us not chide that immortal coterie at the Mermaid Inn, nor Chris Marlowe, nor Ben Jonson, nor Will Shakspere, nor criticize too severely that other at the Cheshire Cheese of which Garrick was so often the center and Doctor Johnson the mentor.

Into that old Hoffman House café from the Madison Square, the Fifth Avenue, the Lyceum, three theaters within a radius of two blocks, actors easily drifted. Those of Palmer's, Daly's and the Bijou had but little farther to come. The writers met them. For some obscure reason—as slightly higher price or the watchful eye of the house man, Billy Edwards, ex-champion prize fighter—only the better element of the men about town frequented the place. A group of players and playwrights at a table were uninterrupted. Men nodded to them, or joined them if invited, but they did not intrude.

What wise conferences were many of those expert discussions of current or projected plays; what condensed experience; what discovered and tested rules; what classifyings of situations; what precedents

Food Dangers of Early Spring

SPRING is a treacherous season. The weather is extremely variable. Warm days follow cold days abruptly. A variation of 20° is often enough to start decay in food, to incubate millions of germs.

It is false economy to rely on weather and spoil food. Food is expensive; ice costs only a few cents a day. Before the weather gets hot, ice melts slowly; one good size cake will keep the ice box cold for days.

Besides, food kept with ice is crisper, fresher-flavored, more nutritious.

Read what Dr. Evans, the well-known health authority in Chicago, says:

"Food keeps very well when the temperature of the food compartment is 45°. When the temperature is 60°, milk spoils before the bottle is emptied."

How *often* the temperature rises above 60° on a mild spring day.

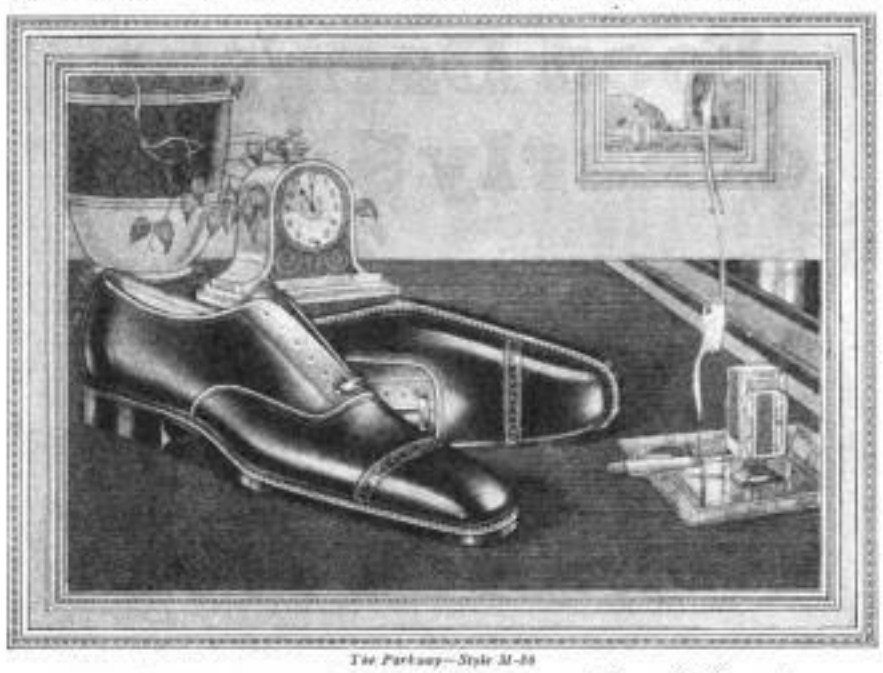
The well-informed housewife takes ice the year 'round. She would not risk the dangers of an outdoor window box. That exposes food to germ-laden air, and to alternate warming and cooling—the worst condition for keeping food wholesome.

Start now to protect your food against sudden spoilage and loss of flavor by taking ice regularly.

Patronize an Ice Wagon that Bears this Emblem

It is your protection. It means that your ice dealer is a member in good standing of the National Association of Ice Industries, and is pledged to give you

Ice Which Is Pure
Correct Weight
Careful and Courteous Service



The dealer whose wagons carry the Association emblem is a responsible business man, permanently, located in your community, with *capital* invested in the ice business. Suggestions from ice users for improving the service of any member will be welcomed at headquarters.

The Mark of a Modern Home

and likenesses; what traditions, conventions, experiments, suggestions; what a winnowing of ideas by what vigorous, original, challenging, prolific fellows; and in what free interchange in an atmosphere and temper stimulated to just that degree of exaltation that can bridge and blend and give an overtone and group consensus! Truly, "Wisdom is justified of her children."

For more private and smaller conferences, among other places, there was also Browne's famous old chophouse on Twenty-seventh Street just off the Broadway corner; one stone step to the hallway and a turn to the right for the parlor dining room with its little tables to which a third chair could be drawn; the hot-water dishes for the mealy Welsh rabbit and the pewter mugs for the musty ale.

I first saw Paul Potter there, rewriter of French comedy at the time, but afterwards author of The Conquerors, Trilby, Under Two Flags, and adapter of a half score of farces. He looked an oldish young man then as, thirty years later, after the unmanageable cropped hair turned white, he looked a youngish old one. Barrymore made him join us, and then rallied him on his theories until daylight. Paul Potter was always a bookworm. Why study life when it is all so thoroughly written and pigeonholed and catalogued by men so superior to any of us? And Paul knew all the indexes, including the Expurgatorius. Diderot was his guide, and his laws were immutable. Paul remade plays as an Italian worked in mosaic, or he thought he did.

After that first meeting he met me at long intervals in America, in London, in Paris, and without astonishment in a seemingly uninterrupted intimacy, with both hands out in greeting and with perplexed eyes; but whether in luck or in trouble, always with the self-deprecating, boyish, white-toothed smile. At Foyot's on the Rue Vaugirard, the French senators from the palais opposite, equally with the bowing waiters, saluted him as Monsieur l'Américain.

I saw him last in New York in the early spring of 1921, one afternoon in a Turkish bath on Forty-second Street. I first inquired quietly of the attendant, and having made sure of the solitary sleeper talked loudly enough to rouse him. The grave, emaciated face, simple as one of Shakspere's forest rustics, took on its waking smile as he asked "Gus? Gus?" and sat up in his sheet, as sunny as a boy at a swimmin' hole.

"How are you, Paul?"

He chuckled with the merriment of it.

"Why, Gus, old friend, I'm dying!" And then he laughingly told me how desirable diabetes was as a way to finish. One had to go sometime. The doctors gave him only a few weeks longer. "See? It's the swelling of feet and ankles that keeps me in here most of the time, but the boys all know me and don't mind me lying around. Soon after this stage one goes into coma and—it's all over." And he laughed again, his forehead wrinkling under his thick white hair. The next day they couldn't wake him.

I hate to jam old friends into their coffins this way, but with only twelve of these articles one has to do it or hurt some of their feelings by leaving them out. But back in Browne's in 1889 Paul told me that, as Diderot had printed for him, our plays are written backwards; that is, constructed like a mystery story, from the solution backward to the enigma. Of course, it was helpful to know that, and I've told it to dozens of youngsters. Who was it said the unpardonable thing, the one base thing in life is to receive benefits and to confer none?

Very Close to Palmer

There came into New York that winter a typical Southerner in speech and appearance named Col. Edward Alfrend. His home had been Richmond, Virginia. Other citizens of that place reported that because of his courtly manner he had been called Count Alfrend. The colonel was about sixty years of age, tall, suddenly portly at the meridian, with prominent features, and a walruslike white mustache, which with the important consciousness of an English guardsman he stroked to hold the floor in the pauses of his discourse. His ambition was dramatic authorship. His most prominent friend in the theater was A. M. Palmer, above whom in physical stature he towered some seven inches. He spent many hours in Mr. Palmer's office when it was evident to other callers that Mr. Palmer w insisting on it.

Reporting these interviews outsi colonel frequently said, "I am very A. M. Palmer."

After a couple of years, with the ance of Mr. Augustus Pitou, who sig joint author, he produced under t of Across the Potomac his only pla Palmer's office Alfrend met Barry and Barry, amused by the old gentle punctilious manner, his pomposity mediocrity that warranted predi carried Alfrend about with him in leisure hours. One of Barry's gentle f wishing to embroider a sofa pillow, a l ope activity then not fallen into ne asked me to draw in outline on a squ silk a profile of herself and one of B more. After I had drawn her own p I said, "How close to that do you wan profile of Barry?"

The lady said, "About as close as Alf is to Palmer."

Barrymore introduced the colonel t and insisted on my sharing for the acquaintance his own enthusiasm. L Barry found a furnished flat, fourth fl on Thirty-fourth Street between Seve and Eighth avenues, with three bedroo a little parlor, dining room and kitch The tenant wanted to sublet it furnis for forty dollars a month. Barrym thought it would be an ideal arrangem if we three—he, the colonel and I—sho take this flat and live there. We ente upon its occupation. A rotund, matro negress, the janitress for the building, the housework and prepared our bre fasts. Other meals we took outside. don't remember a happier period.

The Colonel's Complaint

When the spring came and the fish we running so thick in the North River th one could buy a five-pound shad with r for thirty-five cents, Gen. George Sherida having sent old Sarah word the night b fore, would appear in time with such a fi in a brown paper; and as Sarah, under h instructions, prepared it and put it on th breakfast table he would discourse upon and the expert way to separate the fis from the bones with all the savory interes of a Colonel Carter.

During those five months in the Thirty fourth Street flat I wrote two plays, both under arrangements with Manager J. M Hill; one for Sydney Drew, which wa never produced; another adapted from the German, which was produced more than a year later under the title of A Night's Frolic, with Helen Barry, an English actress of more than masculine stature, in the principal rôle, which fortunately required that most of her scenes be played in the uniform of an officer of the chasseurs. That event lives principally by the association of one of its least important members at that time, a singularly active, optimistic, dark-haired lad of some nineteen or twenty years named John L. Golden. It is difficult to avoid his name now among the Broadway white lights with his presentations of Turn to the Right, Lightnin', Thank You, and so on.

After a while Barrymore's enthusiasm for the flat subsided noticeably, and with the coming of the summer we abandoned our arrangement. We were the only theatrical ménage in the building, so I doubt if we could have maintained our occupation much longer, because during our last month there I heard the colonel, whose point of view old Sarah understood perfectly, tell her to ask the lady on the floor above what the devil she meant by moving furniture around at eleven o'clock in the morning. The colonel seldom slept more than six hours, at that. He wrote his plays from books of the vintage of the Deserted Village. They were pitifully short, but filled with long soliloquies, and all of them written for Barrymore. Barrymore listening to one of these and looking to me for help would have been an inspiring subject for When a Feller Needs a Friend; but with his diplomatic skill he always protested himself an unworthy exponent. One spring day on Broadway Barry and I, walking together, saw Wilton Lackaye approaching us with menace in every lineament.

When we met him he said, "See here, what do you two fellows mean by sicking the colonel onto me?"

After leaving the Thirty-fourth Street flat which we three men had leased I

P-A-X THE PRIVATE AUTOMATIC EXCHANGE

for AUTOMATIC ELECTRIC SERVICES

At Your Finger's End

General Offices

Sales Department

Factory Foreman

The Automatic Electric Services of the P-A-X—Code Call, Conference Wire, Interior Telephone, Watchman Service, Emergency Alarm—places every man and every department at the "finger's end" of every other man.

The P-A-X has a single type of service station—the private automatic telephone. It's a sturdy, always-dependable instrument that in no way supplants nor connects with outside telephone service.

The P-A-X is so flexible—so adaptable—that it creates its own services in every organization.

It's a significant fact that those very institutions which you know as *leaders*—which have earned your Good Will by service rendered—are P-A-X-equipped. Listed in this group are such business organizations as manufacturers, wholesalers, steel mills, railroads, department stores, publishing houses, banks and government offices.

We believe a personal conference with one of our field engineers will be enlightening. He will survey your needs and make recommendations. Write or telephone our nearest office.

MONARCH

TRADE  MARK

Coffee Salesmen Wanted!

Reid, Murdoch & Co., internationally known as Coffee Importers and Food Manufacturers, announce—on their 70th anniversary—a further expansion in the opening of a new Eastern plant with headquarters in New York.

Splendid Opportunity for Retail Clerks

If you are one of the best retail grocers in your community and can advance no higher in your present position, this announcement offers an unusual chance to make a worth-while connection where you will enjoy a wide field of endeavor and a splendid opportunity for growth. We want capable, ambitious, energetic salesmen in the following cities:

Maine
Augusta, Bangor, Biddeford, Calais, Houlton, Lewiston, Portland

New Hamp.
Berlin, Concord, Dover, Keene, Laconia, Manchester, Nashua

Vermont
Burlington, Brattleboro, Bennington, Montpelier, Rutland, St. Johnsbury

Massachusetts
Boston, Brockton, Fall River, Gloucester, Milford, Northampton, Salem, Springfield, Worcester

Rhode Island
Providence, Bristol, Pawtucket, Westerly

Connecticut
Bridgeport, Hartford, Middletown, Norwich, New Haven, Putnam, Waterbury, Windham

New York
New York City, Albany, Auburn, Binghamton, Rochester, Schenectady, Utica, Syracuse, Jamestown, Elmira

New Jersey
Jersey City, Newark, Camden, Atlantic City, New Brunswick, Paterson, Phillipsburg, Trenton

Pennsylvania
Bethlehem, Johnstown, Lancaster, Philadelphia, Reading, Williamsport, York

Delaware
Wilmington, Dover

Maryland
Annapolis, Baltimore, Cambridge, Hagerstown

Maryland
Cumberland, Frederick, Salisbury

Dist. of Col.
Washington

Virginia
Alexandria, Danville, Norfolk, Lynchburg, Richmond, Roanoke, Staunton, Petersburg, Charlottesville

No. Carolina
Asheville, Durham, Charlotte, Greensboro, New Bern, Raleigh, Wilmington, Winston-Salem

So. Carolina
Charleston, Columbia, Anderson, Greenville, Florence, Spartanburg, Sumter

A Good Line for Retailers—and Salesmen

MONARCH COFFEE

Over 2,000,000 lbs. sold by our Chicago House during December, 1921

MONARCH TOMATO CATSUP
MONARCH SALAD DRESSING
MONARCH BAKED BEANS
MONARCH SWEET PICKLES
MONARCH PINEAPPLE
MONARCH MILK

None Better At Any Price

Two hundred successful salesmen now travel out of our Chicago House. These men, our executives and department managers served an apprenticeship in retail grocery stores. We want 200 more like them in the East. Preference will be given to men with records of success in retail stores, and under 35 years of age. References required from present employer. Only applications made in person will be considered. If you are a "comer," looking forward to a future with great possibilities, come and see us. We start shipping from New York May 1st.

REID, MURDOCH & CO.

882 Third Avenue (Bush Terminal) Brooklyn, N. Y.

A Battery That Deserves Your Faith

IT is the pride and policy of the Westinghouse organization to do and build things exceptionally well, and to guard Westinghouse quality with more than ordinary zeal. Westinghouse Air Brakes, automatic signals and other world-recognized Westinghouse achievements have reflected this policy through decades of Westinghouse history. To be permitted to share the Westinghouse prestige, Westinghouse Batteries must be good enough to uphold it.

For the battery now in your car seventeen hundred Westinghouse Service Stations offer you Westinghouse Attention. Get acquainted!

One quality battery—the best Westinghouse can build! "Oversize," reasonably priced, and backed by a guarantee unequaled in liberality.

WESTINGHOUSE UNION BATTERY CO., Swissvale, Pa.

WESTINGHOUSE
BATTERIES

(Continued from Page 126)

roomed at The Lambs Club until I left it to take an apartment with my wife at a hotel. The sojourn at The Lambs was rich in experiences which would fill a volume of small talk, smaller even than this. One item that, notwithstanding its diminutive proportions, I feel justified in describing was of a parrot. Parrot stories do not amuse me, because as a rule so palpably invented; but as Maeterlinck has written some association between happiness and the bluebird, I will tell of this green one's occasional power.

The club at this period was not prosperous; in fact quite the contrary, and the newly organized Players had begun to draw from it many of its best members. The only other permanent lodger in the house in that fall of 1890 was the owner of this parrot, John B. Miley, a graduate of Dublin University. Mr. Miley's business was to sell wholesale, on commission, fine liquors handled at that time by the old-established house of Roosevelt & Schuyler. Miley was proud of his business and of his wares, and as self-respecting as if a discerning monarch had just given him the knighthood recently conferred upon an eminent English distiller. The parrot had been with him in many years of convivial associations that may be inferred, but it had learned nothing demoralizing; no profanity, no greetings, no call for biscuits; but laughter of every variety, from a complimentary chuckle to the hysteric and pained abandonment that needs help.

Miley occupied the little hall bedroom, second floor front, in which Bishop had died. He was an industrious person, and went early to his business. Alone in the club, downhearted for important personal reasons that must not take attention here, each morning as I reached Miley's room I was greeted by a formal, complimentary little laugh from the parrot. It was my custom to push the door farther open, speak to the bird, and sometimes sit on the bed and invite his specialty. That little formal laugh of his, encouraged by my echo, voluntary only at first, would grow in volume and expand in character until it revived somewhat of all the merry and maybe dissolute hours of exhilarated companionship that Miley's trade and temperament had won; laughs of a superior clientele, but punctuated occasionally by guffaws of chance and cheaper acquaintances, and by concerted crescendo effects spraying into broken vocables as some falsetto, tearful enthusiast regurgled the point of the story. I was a poor amateur compared to Polly, but together we could fill all the windows on both sides of Twenty-sixth Street with matrons and housemaids, sympathetically agrin and curious as to the disorderly convocation at The Lambs. It was a great way to start the forenoon, and required several unpleasant letters of efficiency experts to dissipate Polly's fiat sunshine.

Doing Hack Work on Salary

In the spring of that year the reputation of The Burglar on the road and A Man of the World at the Madison Square Theater had influenced Mr. Palmer to ask me to become connected with that fine playhouse. Dion Boucicault was then under a regular retainer to patch or adapt for Mr. Palmer any imported play that might need it, and also to give him first option on any original work, subject, of course, to usual royalty terms. Boucicault wished to retire. After a study of the rather limited field, still more limited in approachable material, Mr. Palmer offered me the Boucicault desk at a salary of fifty dollars a week the year round. He had been paying Boucicault one hundred, and told me I could follow the theatrical custom and say outside I was getting the same; but that never became necessary. It was stipulated that I was at liberty to produce Reckless Temple and The Correspondent, which J. M. Hill had respectively for Barrymore and Sidney Drew. This Madison Square engagement was a substantial addition to income, was good publicity and a fine business address. I was then thirty-three years old.

I wrote at Mr. Palmer's request A Constitutional Point for Mrs. Booth, who needed a one-act play. Mr. Palmer thought the public wouldn't understand it. Eighteen years later I expanded it to four acts and called it The Witching Hour. For Mrs. Booth's immediate need I wrote another one-act play called Afterthoughts, which she did successfully.

Reckless Temple did not succeed in York, and after sixteen weeks on the Barrymore came back to Palmer's Ma Square Theater, where, anticipating those events, I was at work upon a with parts in it for all the company, in ing Barrymore. About making that there is in my opinion a story of some chological as well as pathological inte

Men differ in degree, perhaps in kin their capacity mentally to see forms, ability to draw faces from memory me to think that I have at least the ave faculty. Sometimes in the dark, wit external claim upon the optic nerve, t mental pictures seem faintly objec Their definition is not perfect. Ag the reddish-gray background that el eyelids bring there will appear in cont lines of a lighter gray. These lines are fixed. They move. At times, when t take on resemblance to a face, imagina running just a little ahead of the vision muster them into proportions of per drawing, and memory can manage th into portraits. It is a fact in pathol that under fever nearly everybody s these shapes. In drowsy daylight, figu of the wall paper grow fantastic, move have expression. In his most exci moments, Martin Luther, it will be membered, could not banish the image the devil from the wall of his cell, and th used to be shown a spot where he had thro his inkwell at this negative invocati become objective.

How Alabama Was Written

After the production of Reckless Temp and some attendant dissipations and d mands upon me physically, and when was in a run-down condition, this facul of such seeing was feverishly augmente Under the doctor's orders I had resume strictly regular hours, not the easiest s covery in The Lambs. One night befo the club was completely quiet I was tryin to go to sleep in the dark. At the pian downstairs E. M. Holland was playing melody, then popular, called Down on th Farm. These lines in the dark of which have written assembled into definite shap and I could see before me more plainly tha many a stage set shows in theatrical ligh two posts of a ruined gateway, one standing the other fallen, crumbled. I recognized the picture as of a gateway I had seen in Talladega some six years before, but had not consciously thought of since. As I looked at it with some amusement an old man walked through it, stood a moment, and was joined by a young girl who took him by the arm and led him obliquely out of the picture. Two or three times this little action was repeated so definitely that it was impossible for me in any way to connect it with imagination, although the association between Holland's tune, with its rural, sentimental color, and this picture is fairly evident.

There was nothing unpleasant about this visional intrusion, nor was there such persistence that I felt driven to Luther's protest. This little gateway and its two figures played somehow through my dreams. In the morning I found myself interested in the relationship of the two people, partly trying to divine, but rather drifting with their story. After a day or two the result was a one-act sketch. This I had typed, and carried it to Mr. Eugene Presbrey, stage manager for Mr. Palmer. Presbrey was enthusiastic about the little piece, but told me it was a mistake to play it in that form. He reminded me that The Burglar had some of its New York effect dulled by having first been done as a one-act play, and insisted that I had in my possession the nucleus of a fine big story. He saw at once in the characters a part for Stoddart and another for little Miss Agnes Miller, who was the ingénue of the company at that time. There were other parts for Barrymore, Ned Bell and Harry Woodruff.

Under Presbrey's encouragement, using the sketch as a third act, I wrote the four-act play Alabama. I had fun with the Southern colonel in the piece, whom I called Colonel Moberly and whom I endowed with all the formality and pomposity of our Colonel Alfrend. There was a boy's part for Harry Woodruff, and a fat square for Charles L. Harris, the splendid comedian who had been with us in Reckless Temple. At my suggestion, after hearing the scenario, Mr. Palmer added Harris to his company and used him in two or three plays that were produced before we finally reached Alabama.

Digitized by Google

Ed Holland liked the idea of the colonel
itten for him, and as he and Woodruff
eady had some hint concerning certain
nes in which they were together they
n began to greet each other in Southern
lect and manner. The membership of
e Lambs, ignorant of the reason for this
sumption, but amused by it, caught its
ntagion, and in a little while the club was
parently an organization of two hundred
uthern colonels all shooting cuffs and
oking phantom but magnificent mus-
ches.

The play was finished under pressure in
nuary and read to the company on the
ge. Presbrey, familiar with it, was not
that group but in his little office near
e entrance to the dressing rooms.

As Mrs. Booth left the theater she leaned
er the closed lower half of Presbrey's
tch door and whispered to him, "Rotten,
ank you!"

When we reached rehearsals she de-
ded to play the part written for her and
was given to May Brookyn, from whom
e reclaimed it shortly after the piece was
oduced. After rehearsing Alabama a
ek Mr. Palmer lost faith in it and re-
aced it with one of his English plays.
his attack and retreat was repeated twice.
ut after there had been three English
ailures the rehearsals of Alabama in a
pirit of desperation went on to its produc-
ion on Wednesday, April 1, 1891.

In these varying moods Mr. Palmer lost
aith not only in the play but in its author,
nd one dark day told me that when the
ear of our contract ended, which would
e in May, my engagement as dramatist
xtraordinary—that was my title; I don't
know why—would cease. But he added
that he was sending on a first tour through
the country Mr. E. S. Willard in The
Middleman, and that if I liked I could go
ahead of him as publicity man. He would
pay the salary I had earned with Bishop,
one hundred dollars. It felt like a slip
backward, but as a newly married man I
took it. The plan was for me to leave New
York Sunday, March twenty-ninth, and
have two weeks in Chicago before Willard
opened.

By earnestly protesting that I didn't
need all that time I got Mr. Palmer's per-
mission to wait until early Thursday morn-
ing, and thereby on Wednesday night see
Alabama open.

Shortly after his installation as Vice-
President of the United States Theodore
Roosevelt was one of six men who came to
the home of Brander Matthews to meet at
lunch Mark Twain, recently returned from
a trip abroad. Colonel Roosevelt was most
entertaining throughout the luncheon with
reminiscences of Cuba.

Pertinent to one of these he turned to
Mark Twain and said, "As an old Con-
federate soldier, Mr. Clemens, you must
have noticed the nervousness of the brav-
est men upon going into battle."

Mark took his cigar from under his white
mustache, and with a dreamy squint re-
plied, "Oh, yes, I know that nervousness
of brave men going into battle, and I had
the quality of maintaining it all through
the engagement."

The Watchers in the Gallery

The playwright never gets so experi-
enced that a production is not an occasion
of nervousness. An inexperienced one
whose play has been set aside three times
because of the manager's distrust has more
nervousness than the brave man going into
battle. On the first night of Alabama mine
was augmented by an almost panic condi-
tion of Mr. Palmer. Although quite un-
known to anybody that mattered, I sought
a further obscurity by standing behind a
post in the gallery. A similar timid figure
in the shadows across the aisle attracted
my attention. It was Mr. Palmer. When
the first curtain fell with mingled laughter
and applause, the most desirable response
a company can ask for, Mr. Palmer looked
at me, his eyebrows lifted in an inquiry
mixed with astonishment.

Friends of Mr. Palmer will remember his
regular features and intellectual and dis-
tinguished expression; also his large, pale
eyes. He also had rather full gray side
whiskers, decorations not so uncommon
then as since the introduction of the safety
razor.

These facial forms and effects, his white
lawn tie and his look of shocked surprise
carried the uncomfortable suggestion of
some interrupted mortuary function. Four
or five curtain calls and the mood in which
the audience had taken this blandest of
our four acts gave me courage to go to the
balcony for the second one.

With similar but more pronounced re-
sponses after that, and finding that Mr.
Palmer had also ventured down to my
level, I threw all caution to the wind and
said, "I'm going to see the rest of this per-
formance from the ground floor."

When the play was over it seemed to me
we had been in the presence of a success,
but Mr. Palmer was not able to lift his
spirits from the depression of the disastrous
season, so that despite the congratulations
of many friends I went to bed uncertain.

My wife and I at that time were in our
first apartment in the old Oriental Hotel,
opposite the Casino. As we had to take an
early train for Chicago, we agreed not to
look at any of the papers until we should
have had an undisturbed breakfast and
were alone together on the train, speeding
from police detention. I gave her the
paper in which I felt I would get the most
considerate treatment, and took myself
the one I believed most hostile. Its very
headlines disarmed me. I looked up and
met an enthusiastic glow imparted by the
notice she had read. We hurriedly went
at the other papers. The press was unani-
mous. Alabama seemed the surprise of the
season, and was characterized in terms al-
most too laudatory to refer to except by
proxy.

In Chicago, as Willard's advance man,
my calls at the newspaper offices were ex-
citing, owing to telegraphic reports about
the New York first night, and the dramatic
men were kind. But that day an ailment
that had been threatening became acute,
and I had to submit to an operation under
ether that put me in bed for the next ten
days. During that time the men on the
Chicago papers gave me all the help I could
take. I was told that whatever I got to them
concerning Willard would find space. Thus
encouraged, I dictated to my wife long
specials for each paper, which she carried
to the offices, and I doubt if any theatrical
attraction ever went into Chicago or any
other American city with better publicity
than those generous fellows handed us.

Alabama Makes a Hit

Presbrey kept me informed of the play
in New York, where it was doing capacity
business, and the royalty checks made me
think of the first time I had ever sat in an
overstuffed chair. We got the New York
papers every day; the ads and paragraphs
were fine, and some of the papers carried edi-
torials about the play, inquiring if New
York managers had not made mistakes in
leaning on the imported article when native
subjects seemed so acceptable. And then
in the midst of all of it came a long tele-
gram from Nat Goodwin asking me to write
a serious play for him, to choose my own
subject, and offering a royalty of 10 per
cent of the gross receipts, with an advance
of twenty-five hundred dollars. I agreed
to do it.

With the Willard company Mr. Palmer
came into the city, delighted with condi-
tions in New York and heartily approving
all those he found in Chicago. I passed the
credit for the display to the men to whom
it belonged, especially to a young writer
named Kirke La Shelle, whom Mr. Palmer
engaged that week to take the place with
the Willard company which for sufficient
reasons I was giving up. La Shelle later
became a theatrical captain and produced
for me Arizona, The Earl of Pawtucket,
The Bonnie Briar Bush and The Education
of Mr. Pipp. Mr. Palmer asked me to for-
get his terminating our contract and to go
on under the old arrangements for another
year. He consented to my writing the play
for Goodwin, which he excepted from the
optional claims of our Madison Square
agreement.

There were more checks from New York,
and this twenty-five hundred dollars from
Goodwin. I was able, with a cane, to get
about comfortably. I had been away from
St. Louis for twenty months. We went home
to see the folks. Crossing the Eads Bridge
in the morning I got to thinking of Whit-
lock, alias Jim Cummings, who robbed the
Missouri-Pacific express car to cancel the
mortgage on his mother's home, and I felt
ashamed of myself. My mother then lived
in a rented place. I didn't tell her my in-
spiration, but we went together and picked
out a house.

Editor's Note—This is the eighth of a series of twelve articles by Mr. Thomas. The next will appear in an early issue.

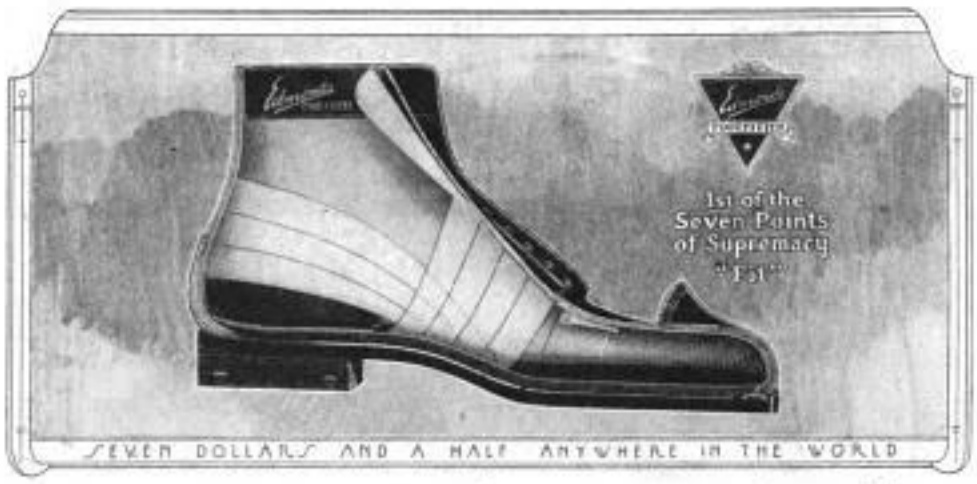
CHAMPION SPARK PLUG CO., *Toledo, Ohio*

You Can Do This—Comfortably

—in Brighton-Carlsbad without having the buttons snap off, the seams tear out or the cloth pull apart. Comfort is our specialty—we think it is the first requisite of a *sleeping* garment.

But we don't forget style, and whether you wish a plain old-fashioned night-shirt, or an oriental looking pajama (or anything between), you will find a Brighton-Carlsbad to suit your fancy.

Every fabric imaginable, from hand-loomed silks from China to staple native cloths.



You will find distinctive features about Brighton-Carlsbad which set it apart from ordinary sleepingwear and cause it to be the favored night garment of the fastidious. *Ask for it by name!*

Our "Nightie Book," sent free, tells about our entire line for all the family.

"Foot-Fitters" *Support the Feet Like a Doctor's Bandage*

Edmonds "Foot-Fitter" Shoes are called "Foot-Fitters" because they actually support the feet like a doctor's bandage. You enjoy a restful feeling the moment your feet slide into a pair of these well fitting shoes.

"Foot-Fitters" are built on combination lasts and patterns which are certified by America's foremost last makers. They are higher and narrower at the arch, and when laced hold the feet securely in a comfortable and natural position.

Perfect fit, with long shoe-life comfort, is but one of seven desirable points of supremacy which make these shoes an unusually good dollar value buy. This is not an idle boast, as you will testify after you have worn your first pair. Go to the exclusive "Foot-Fitter" dealer in your town and see why these shoes are superior. Write for the address of "Foot-Fitter" dealer nearest to you.

THE DARNED LITTLE BOLSHEVIK

(Continued from Page 9)

"I must say they don't appeal to me much, en masse," Ann remarked dryly as we glided by the suddenly silent and speculative groups of youngsters who, when we left the electric, came slowly toward us in groups, like curious young calves. Their scrutiny annoyed Ann.

"Those largest ones might certainly be taught manners," she objected with irritation. "They stare like little cannibals. Ouch!"

For at this juncture we both stumbled over Jenny's broom.

Jenny had been sweeping the steps of the baby cottage and, paralyzed with Ann's beauty, had neglected to remove her broom from our path. Straightening from an investigation of her bruised foot, Ann saw Jenny. The two stared at each other with equal wonder—the tall, beautiful woman, perfect in her white sport clothes, and ugly little Jenny in red calico.

Then Ann said to me slowly, "How can such things be possible?"

I should have laughed, except that Jenny's cross-eyed gaze held such a reverence of admiration. For Jenny was indeed homely beyond all telling. Tiny bright blue eyes set wrongly under a protruding forehead, spindle legs, straggly reddish hair, a sun-tortured skin and the merest indication of a nose combined in no measure to offset the unattractiveness of her faded red apron and scuffed shoes. She looked the embodiment of immortal Irish impudence.

Mistaking Ann's expression for one of pain, Jenny unconcernedly asked—of me, since one does not directly address the queen, "'S she hurt herself?"

"No," corrected Ann with her colossal lack of humor; "you hurt me, because you left your broom in the path—you ugly little thing, you!"

Horrid words always seem to gather added venom from beautiful lips. I had seen Ann's big, homely husband shrivel under her careless tongue, just as little Jenny now did. Looking at her in a dumb sort of way the child backed away from her, the desperation of a trapped animal in her eyes—and all its primitive viciousness.

"Yes, an'—an' I bet you're as ugly as me—inside of you!" she retaliated, and fled.

Ann stooped slowly and picked up the worn, dirty broom.

"Why don't you add that she has expressed your own views?" she prodded my silence.

"Well, I must say that this exhibition doesn't especially recommend you for motherhood," I evaded testily. "Go on in and tell Mrs. Evans I sent you to look at the babies. I'm going to find Jenny."

But Jenny was not to be found. Jenny was one of the problems of the children's home, where she had taken residence at the age of two months. She was now seven years old, and in all that time I had never heard one favorable report of Jenny. As a baby she rocked the institution by day and by night with her wails, and of late years all plots, uprisings and insurrections were traced to her nimble wits and horrible capacity for finding weak spots in the government of the home.

"She's a born Bolshevik," a matron had once despairingly told us at directors' meeting, and the name had grown to Jenny. But a seven-year-old Bolshevik can have a very vulnerable little heel, and my heart ached when I thought of the way Ann's unkind words had shriveled up her pertness and brought out that look of furtive meanness.

Failing to find her, however, I went back to the baby cottage, where Ann was waiting for me on the steps.

I knew she was in no mood to be interested in anything except her ruffled feelings, and though Mrs. Evans was chatting pleasantly to her she was quite evidently and rudely not listening.

When I approached she said abruptly, "Did you find her?" And at my negative reply she said to Mrs. Evans, "Will you please call the little girl who was sweeping here when we came in? I wish to apologize to her."

This from Mrs. Bangor Ellington Stevenson! It was small wonder that Mrs. Evans lost speech.

"I spoke to her very sharply," added with her quick irritation. "P call her."

"Oh—I'm sure, Mrs. Stevenson, tha deserved it; she—she's really alway need of correction."

"Yes?" said Ann, looking at her a who is not fond of them looks at wo "Will you please call her?" Ther something about Ann that makes you her while hating her. Moreover, Evans knew that Ann's generous ch meant half its existence to the home. an incoherent mutter she disappe rapidly into the cottage, from the of which loud calls of "Jen—ee!" sounded.

I utilized these moments by telling that she was ridiculous and unkind would only further humiliate the child. listened silently, with an aggravating that died away when Jenny came spin toward us beside the plump and cur Mrs. Evans, who hastened to say chee "This is Mrs. Stevenson, Jenny. wishes to speak to you."

Ann looked steadily at the child, speaking.

"I—I didn't go to do it," mumb Jenny sullenly in acknowledgment of introduction, directing her cross-eyed g not toward Ann but to me. "Honest didn't go to say it."

"Then you don't really think I am u inside?" questioned Ann in a rather dis pointed voice, which seemed to turn M Evans' emotions into active little inse that raced over her fat face. Jenny plant herself, shabby shoes well apart and han on her swaying hips.

"You bet I do! I meant I didn't go say you was," she made explicit correctio and transferred her gaze, unwavering, Ann.

Mrs. Evans uttered a horrified gasp, b one simple gesture from Ann silenced h further demonstration and sent her ling ingly into the cottage. Jenny swayed a A ripple of slow-coming laughter—re laughter, such as seldom left Ann's throat broke prettily into our silence. It brough apprehension into Jenny's defiant fac Then Ann dropped to her knees in front o the startled child and took the red calic shoulders tightly in her long, beautifu hands.

"You're an honest little thing!" sh cried in the clear, quick voice of her girl hood.

"I am ugly inside; you're perfectly right. And it's much worse to be ugly inside than outside. But if I take you home with me perhaps you can make me prettier inside and I can make you prettier outside. Would you like that?"

As a statue of idiocy I should have taken all the ribbons. Jenny, however, adjusted herself to the whirl of events with really remarkable poise. She twisted her head and looked down at the white hands so tightly clasping her shoulders, first one and then the other.

"I ain't old enough to work for anybody," she demurred. "Pretty soon, when I'm twelve, I'm going to work for a ranch lady."

"Oh, I mean for you to be my little girl. My—my little daughter."

Again Jenny stared down at that white hand.

"Do you mean 'dopt me?" she asked incredulously.

"Yes," said Ann.

"Not just like I was born at your house?"

"Yes," said Ann.

"Hu-umph," commented Jenny after a long pause—and giggled.

It was a mirthful giggle of real humor, and it made her, in some intangible manner impossible to describe, complete mistress of the situation. Ann stared at her wonderingly—possessively. It seemed to me I could see her metamorphose her impulsive, passionate determination to make retribution to Bangor into desire for this homely child. Jenny, after a perplexed glance at me, who had collapsed on the cottage steps, changed her humorous grunt into a negative one.

"Hunh-unh," she decisively settled the matter. "Hunh-unh, I don't want to

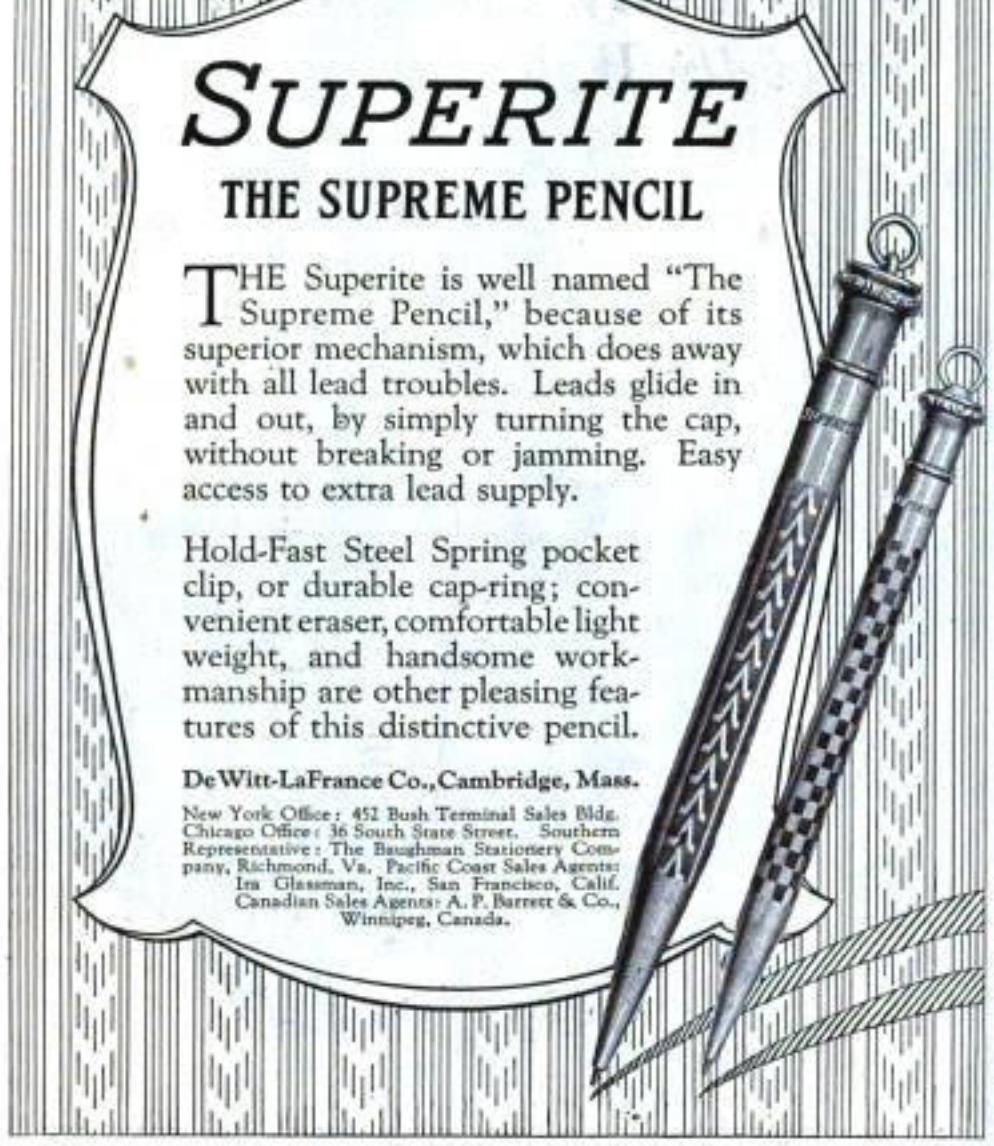
SUPERITE



THE SUPREME PENCIL

THE Superite is well named "The Supreme Pencil," because of its superior mechanism, which does away with all lead troubles. Leads glide in and out, by simply turning the cap, without breaking or jamming. Easy access to extra lead supply.

Hold-Fast Steel Spring pocket clip, or durable cap-ring; convenient eraser, comfortable light weight, and handsome workmanship are other pleasing features of this distinctive pencil.

DeWitt-LaFrance Co., Cambridge, Mass.

New York Office: 452 Bush Terminal Sales Bldg. Chicago Office: 36 South State Street. Southern Representative: The Baughman Stationery Company, Richmond, Va. Pacific Coast Sales Agents: Ira Glassman, Inc., San Francisco, Calif. Canadian Sales Agents: A. P. Barrett & Co., Winnipeg, Canada.

ALLEN'S

(Continued from Page 130)

Pretty soon, when I'm twelve, I'm going to work for a ranch lady. The girl that sleeps next to me wants somethin' fierce to be 'dopted. She's got pretty hair. It curls."

"But I don't want to adopt anyone except you," said Ann.

Jenny quickly switched to new tactics, her manner magnificently casual, as if she refused adoption by rich women several times a day.

"You'd get awful sick of me. Honest you would. I'm a mean kid. An' lots o' times, when my face gets dirty, I'm uglier than I am now."

"The homelier you get the more I'll love you, Jenny. You don't understand that, do you? But it's true."

These earnest words gave Jenny a new light on the situation.

"Say! You don't need to care if you said I'm ugly. I don't care. 'Tain't nothing. I like to be ugly. I can make the little kids yell. I'll run over an' get Molly. She'll be nice to 'dopt."

"No, Jenny," Ann said with remarkable and childlike patience; "I don't want anyone except you. I'm sure you'll like it at my house."

"Nope," said Jenny. "I don't want to—thank you."

Of course Ann's determination and desire were cementing more closely every instant. They made a strange picture—Ann kneeling in front of the child, clasping her shoulders, her beautiful face vivid with earnestness; and strange little Jenny staring back at her like some old, old little creature that a wizard's wand had turned into grotesque youth for a whimsy.

"Suppose you try it just for one week," Ann suggested, smiling. Ann's smiles are sweet, but Jenny was adamant.

"Nope. It's my week to sweep."

"Oh, but, Jenny, couldn't you sweep the next week and come to me this one?" Ann was adding a coaxing note to her voice, which, with the smile, made Jenny weaken. I understood Bangor's helplessness as I watched her. She was the most lovable thing I'd ever seen.

"Well—but what'd I do all week?" asked Jenny, like one going under a spell.

"Oh, you'd have a fat pony to ride, and we'd buy some dolls, and—and you could play with the dogs ——"

"—like dogs," Jenny condescended sur-

THIS chapter is devoted to the pa
from this story—of me. I may fi
necessary to return later, but you wi
member that I warned you in the
paragraph about the viewpoint and
technical details.

With my passing there passes also
year.

III

MR. BANGOR ELLINGTON ST
ENSON was waiting on a sech
road until a limousine should leave the
gateway of Mrs. Ann Carleton Stevens
beautiful grounds and glide down the
bon roadway toward the country
where Mrs. Ann Carleton Stevenson
that day giving a charmingly appoi
luncheon to twenty of society's yo
matrons. He had discovered this from
morning paper at his hotel.

While he waited he was pretending t
enjoying the view. But he knew the dr
doubted him; the man's furtive glar
at the sleek white bull terrier which
Stevenson's constant companion sugge
that he was thinking of past experie
in the bootlegging line. Perhaps this

For Stevenson did not look like a man
paid taxi fare by the hour to sit still
enjoy views. He looked more like a m
who enjoyed prize fights, chorus girls
expensive food. In fact, these were some
the things Stevenson had been experime
ing with rather extensively for the l
year—but to no avail. There was no
trying to forget Ann—the pain of lov
her had gone too deep.

There are people who say, boasting
that this thing of letting love get the b
of you is ridiculous—mere poet's twadd
they read about love and talk about lo
and lay down laws about it. But they ta
only to make clothes for their nakedne
and they read only for patterns to fashi
their garments. There are other peop
whom love has arrayed in her possessi
mantle, but they are a silent folk. Th
have a knowledge past conjecturing, a
nimble words would fail to do it hono
Because of their silence many of the less
loving think them cold or indifferent.

Bangor Stevenson was one of these. H
was homely, ungainly, and absurdly sens
tive. Helpless with love, he had mad
a mess of happiness. He had though
that, loving, he could buy love. He ha
hoped that gentleness would breed grati
tude; instead it had made him a beggar. Bu
with all his bitterness, his love endured
He had no illusions about Ann; no blin
love could have lived under her selfishness
her intolerance and her exquisitely refined
passion for cruelty. His love was all seeing
and all accepting.

To-day he had come for a glimpse of the
small world he had built about this woman
whom he loved, because he was again leav-
ing the country. Ann herself he did not
want to see. When she had left for her
luncheon party he would walk quickly
through the gardens and hurry away.

Finally, when her limousine flashed
down the roadway, he gave the bull terrier
into the keeping of the curious chauffeur
and walked down the hillside. Standing in
the wide gateway he looked with emotion-
less eyes upon the beauty he had made to
grow on what had been a bleak brown
hillside of Point Loma.

The proud Spanish house looked from
its deep-set eyes upon a vista well worthy
of its regal gaze; there are no bluer waters
in all the world than those of San Diego
Bay, which lie like beds of lapis lazuli, sky
patterned, around twin islands. Above the
bay rise the climbing hills where the sun-
loved city lingeringly leaves the sea and
stretches like a yawning giantess back to
the sage-scented mesa, beyond which blue
mountains carry their color to the sky.

West of the house, behind the hills, one
could hear always, listening, the great
triumphant sea song of the Pacific. Stand-
ing there Bangor Stevenson waited for its
steady rhythm to touch his ears.

"Oh, damn it all!" he muttered, and
quickly fell to whistling a light tune.

Twelve years before he had stood in
almost that same place and had looked
upon a bleak ten acres spotted here and
there with dusty greasewood bushes. And
one lone young eucalyptus tree grew on a
small knoll. Because of that tree he had
bought the place. It had risen from the
hillside—slender, white trunked, solitary,
its long whispering leaves turned edgewise

gun. It seemed the very spirit of
And it had reminded him of Ann,
id, graceful girl he had bought to be
e. Now the tree was a queenly thing,
y in its maturity, its naked limbs
the long leaves above the whispering
s into the high singing winds. Dis-
l now, and self-sufficient, it was more
ver beautiful. And the big ungainly
rith his large loose lips and brow-
eyes and absurd speck of a nose felt
oat choke as he looked at it.
e, long ago when the house was in its
ng, some little careless tenderness of
had won him out of his self-conscious

ly and painfully conscious of his un-
ness and of her lack of love for him.
many times in the darkness, or unseen,
d put his arms about the tree, and the
of it and the whispering of its leaves
given him strange comfort. He wanted
to go over and touch it, but he was not
.
tween him and the tree a red-headed
girl in a brown linen frock was playing
a putter, a golf ball, and Butterscotch—
Yorkshire terrier. He had wondered
Ann had kept Butterscotch when she
his other dogs to New York.
e sauntered across the lawn, swinging
oft gray hat in one hand and his cane
he other, but neither the long-legged
e girl nor Butterscotch paid him any
l as he approached. The golf ball, how-
, sped forward and gave him a right
m greeting on his gouty foot.
Why didn't you dodge it?" yelled the
-headed child, advancing leisurely, But-
cotch scampering beside her.
tevenson stood, storklike, and invoked
gods of profanity, his unprintable re-
rks gradually silencing themselves be-
the deepening wonder on her face.
"Why—why, you're him!" she finally
ped, her crossed eyes seeming about to
nb over the bridge of her nose under
ir thick-lensed glasses. After the brief-
pause she gave a sudden leap forward
d, dropping the putter, possessed herself
htly of his hand so that his hat fell to the
ound, where Butterscotch fell to investi-
ting it with reminiscent sniffs and grunts.
"You have changed it! You have
anged it! You have!" yelled the red-
aded child as explosively as a repeating
p gun. "Haven't you changed it?" she
manded, ceasing her gyrations and pois-
g before him like an animate question
ark.
"So you have just informed me," he re-
lied heavily. If an ichthyosaur had at-
ched itself to him and conversed similarly
e could have been no more at a loss.
"An' mother thought you couldn't do
:!" she reflected with a gasp of escaping
eath.
"Couldn't do what?"
"Why, change it. She said you couldn't.
She said that somethin'—God, I guess—
ept you from it."
"Kept me from what?" Stevenson's
ne-track mind was finding this a tangled
trail. Who the devil was this imp?
"Kept you from changing it," the imp
reiterated.
"From changing what?"
"Why, my goodness—your mind!" It
was quite evident that his perspicacity was
descending in her estimation, but she added
cheerily, "Oh, but won't she be tickled,
though!"
"Who? Who are you talking about?"
Apprehension was beginning to prick
through his stupidity. The odd, leggy crea-
ture was still possessed of his hand and she
began gyrating again, her jubilant words
dropping more slowly as if trying to pierce
his bewilderment.
"Why, mother. I'm Janet True Steven-
son. I'm new since you went away. You'll
be my father now. And I'm glad. I think
it's nicer to have a father."
Stevenson stared at her, his small brown
eyes eating their way out from their over-
hanging brows. "Good Lord! Are you what
she adopted?"
"Yep," said Janet, too absorbed in her
intent scrutiny to carry on with her con-
stant enemy—grammar. After an instant
she added, "An' she loves me too; even if
I ain't pretty."

This remark was taking the thunder from his very thoughts.

"Oh—you, you don't say," he muttered, recovering his hand by insistent effort, and bending over the dog, who was now attacking his legs with violent affection. He petted him and mumbled things at him, keenly and uncomfortably conscious of the child's steady, measuring gaze.

"He's my dog now," she said as he straightened. She had picked up the putter again since he seemed so unfriendly about having her hold his hand. "Mother kept him for me because he's homely and you're homely and I'm homely."

In spite of himself a smile broke up the fierceness of his features at this solemn information. He had been deeply and primitively angered, as men always are when bewildered.

"We're a well-matched triumvirate, for a fact. So she makes fun of your looks, too, does she?"

What a beastly thing for Ann to do—to take a child like this as a vent for her miserable passion to inflict pain. But Janet True seemed amazingly untouched by it.

"Nope," she answered him; "that's why she likes me—'cause I'm ugly. I'm better'n I used to be. She's making up to me for how she treated you. You see I'm making her prettier inside and she's making me prettier outside. You'll be awful glad you've come back. You see if you ain't."

For a fleeting instant it occurred to Stevenson that this was some ruse of Ann's, some little clever, confidence-gaining trick so characteristic of her, that always left its scar, once it had worked itself out. But the child's trembling excitement dispelled the suspicion quickly. He cleared his throat, but his words were thick.

"But I haven't come back—to stay," he said.

"Then what did you come for?" she challenged with Irish alacrity.

"Perhaps I came to get Butterscotch."

"Ah, you never."

"We-ell, perhaps I came to see how the trees were getting along."

"That tree?"

She jerked about and pointed at the eucalyptus tree with the putter. Stevenson felt as physically startled as if she had hit him with the club. He felt himself go painfully red under the questioning scrutiny of Janet's crossed eyes. He did not answer, but she accepted his expression for an affirmative.

"Mother said you liked that tree. She does too. Sometimes she comes out and puts her cheek right up against it—like this." She demonstrated grotesquely with the putter.

"Wha-at?" he said.

"Yep," she insisted cheerily; adding an astute "sometimes she cries too."

Stevenson threw back his shoulders and took himself firmly in hand. Smiling with massive unconcern he spoke, not to the child she was but to the knowledge she seemed so weirdly to possess.

"My dear young lady, if you survive for fifteen years, as I did, you will learn that your—your—ah—mother's tears are because things are denied her, not for the things themselves. If she wishes me to come back, as you say, it's merely because she knows I never will."

This was a little difficult to follow. Janet True reached up with both hands and adjusted her glasses more securely. What she understood of the argument left her entirely unimpressed.

"I bet you do!" she wagered blithely. "I bet you can't help it. Once I ran away, but I only got a little ways. I thought I jest hated her—but I didn't. An' you don't hate her, do you?"

"Has she ever told you I hated her?"

"Nope. She thinks you like her—all right. But she thinks you can't change your mind. I don't see why. I change mine lots of times. I heard her tell Mis' Williams, that time when your picture was in the paper with the chorus girl's, that you didn't care any more about that chorus lady than she cared about the iceman." Her words were tripping over one another in her eagerness. "An'—an' she told Mis' Williams that it was all her fault, an' she said you were the love-li-est man that ever lived; an'—an' lots of other nice things. You—you jest stay to dinner and see how good she is."

Bangor Stevenson took himself yet more firmly in hand. His unfriendly features assumed the finality of a locked door. He coughed, and looked at his watch, and finally found a businesslike voice.

"Thank you. I've no doubt it would be interesting—very interesting. But I'm

A Friendly Place With A Friendly Welcome

You can probably find it just around the corner from where you live.

Or you can find it in any city to which you may travel. It is never distant, never inapproachable, never dull or prosy, always interesting, always entertaining, a friendly place with a friendly welcome.

It may be large, or it may be small, but always it gives *more* amusement for the money than any form of entertainment the world has ever seen.

It is the motion picture theatre, your amusement, everyman's entertainment. You owe it to yourself to visit it regularly, often!

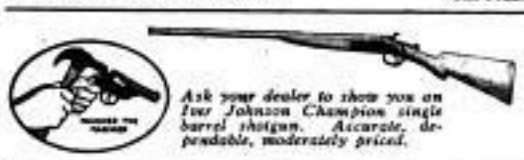
IVER JOHNSON
SAFETY AUTOMATIC
REVOLVER

"Help!"

Could you answer a call for help, meet a criminal, handle him without danger to yourself? Unarmed, you'd be helpless. Armed, you could uphold law and order.



Keep an Iver Johnson in your home. No fear of accident—knocks, jolts, jars, thumps cannot discharge it. You can even "Hammer the Hammer."

When needed, the Iver Johnson responds with lightning quickness to the *intentional pull* of the trigger.

Hammer and Hammerless models in all calibres. Regular, Perfect Rubber, and Western Walnut grips. If your dealer hasn't the particular model you want, write us.

FREE! Two interesting booklets full of information. Send at once for the one that interests you.

IVER JOHNSON'S ARMS & CYCLE WORKS, 7 River Street, Fitchburg, Mass.
New York Office: 99 Chambers St. San Francisco Office: 717 Market St.

Ask your dealer to show you an Iver Johnson Champion single barrel shotgun. Accurate, dependable, moderately priced.

Ride an Iver Johnson Truss-Bridge Bicycle. Strong, speedy, easy-riding and durable. Models and prices to suit everyone.

THE PERFECT METAL BUILDING

ERECTED in a few hours. Adaptable to hundreds of uses. An entirely new idea in metal building construction—the *interlocking joint* which eliminates every objectionable feature of old-type metal buildings.

This joint insures a building strong, rigid and durable, simple and light in construction, quickly erected or taken down, and weather-proof. Swartwout Metal Buildings are also fireproof, rust-resisting and inexpensive.

The patented joint locks itself together, forming its own frame. It requires no fastenings. One man and a helper can easily erect a Swartwout in one day. It makes the ideal building for garages, tool houses, bunk houses, storage houses, offices and for hundreds of purposes on farms and industrial plants.

Send for catalog and prices

IF you need a small building for any purpose whatever, before you buy or build by old-fashioned methods send for the Swartwout Book of Metal Buildings. If there is no dealer in your town, we will ship direct immediately upon receipt of order. The Ohio Body & Blower Co., 9100 Detroit Ave., Cleveland, Ohio.

"With the interlocking joints"

sailing for Japan to-morrow, and I must be getting along. From what you tell me I think you must be a very efficient interior decorator—very." He turned, hesitated, and turned back to her. "It would be interesting—that is, do you mind telling me if your—mother"—the word was difficult, seeing the child and thinking of Ann—"that is, is she ever affectionate? I mean—does she ever kiss you?"

He was increasingly embarrassed over her lack of embarrassment at such a simple question.

"She would if I liked it. I don't like kissing much; only when you say good night, or something special, like I'm hurt, or she goes to a party like she has to-day. But she'll kiss you lots if you come back. I know she will. Sometimes she kisses your picture, and I don't think you're as homely as it is. Honest, I don't."

"Wh-what picture?" stuttered Stevenson, swept into a simplicity as transparent as the child's. He had avoided pictures as painstakingly as the plague.

"It was jest a little one. Butterscotch is in it too. You're grinning and all squinty in the sun. An' she had it made great big, an' it's got a nice frame on it an' she keeps it right on her dressing table. The frame's silver. D'you want me to get it?"

"No!" said Stevenson.

"We-ell, you look like you don't believe me."

The opportunity was not given Stevenson to decide whether he did or did not believe her, for a strange pulse-stilling whine of terror made them both sharply aware of advancing disaster. Butterscotch had departed. They both stared after him as he made his frantic way in a wabbling black blotch toward the kennels, his absurd legs carrying him all too cumbersomely toward safety. For across the lawn flashed a white streak of lightning with thorn-pointed ears. Stevenson's white bull terrier had become bored with inactivity and escaped from the chauffeur.

Words are much too clumsy things to keep pace with what happened. Janet True immediately contributed a shriek of such shrillness that it seemed visible—like a jagged line of light, and from that moment the world became a trilogy of color to the paralyzed Stevenson—black ahead, white rapidly overtaking it, and red—a shrieking redness—amazingly pursuing both. Never had he witnessed such speed in human legs. Janet True was not running; she was traveling—as does sound. And the golf club traveled with her menacingly.

Stevenson was not aware for some time that he also was in motion. But male sounds, probably from his own throat, though mechanical, were adding themselves to Janet True's screams.

Then—white and black mingled—a horrible confusion! With miraculous rapidity red entered the chaos, unfearing; hadn't she personally conducted many a dog fight—triumphant? She made an indelible memory on Stevenson's consciousness as she chose her moment, her red head thrust forward, her body like a taut brown wire. The putter ascended far above the swirling mass of black and white, poised, chose a fatal spot of attack on that proud white head, hung aloft—fell! And the dogs became again separate entities—the one returning to and the other departing from the things of this life.

When Stevenson found himself transplanted to the scene of action the English bull lay on its back, its legs jerking. And Janet True was huddled, moaning, over Butterscotch. Servants were materializing out of the quiet house.

For more than a year the only love that had touched Stevenson was the loyal love of that fierce white dog. It had come into his valiant loneliness with a power beyond describing. And now this red-headed child had killed him.

He stretched out his long arm and his fingers closed on tough brown linen. It was good to feel her wiry weight as he lifted her into the air. She looked like a dangling June bug. And she made no sound. He shook her gently at first, then less gently. Her spectacles sped through the air, followed by treasures from her pockets.

"You little devil, you little devil!" his voice made music for her motion.

The servants had suddenly stopped. They stood like pillars of salt, staring. Their gaze cooled his blood. It rested on something behind him.

"Mother!" wailed the weight on the end of his rigid arm. He loosed it, and Janet True dropped limply to her wavered, gurgled and stood still.

There, at the end of his arm, when murderess had been, her face white an eyes harder than gray granite, stood A his wife. She was dressed for her hun party in a simple perfect gray gown deepened the color of her eyes and bro her vivid auburn hair into wonderful trast.

She had lost her hat. It lay behind on the green lawn. She stood there l ing at him, and the shame of his exist broke out on him like a rash.

"Oh, mother!" he heard Janet Tru in a frightened little choke.

Ann turned, making a queer thr sound of tenderness. Stevenson stare her, fascinated out of his misery as he love come into her eyes—deep, yearn maternal love.

It came with the ease of a miracle, w the softness of evening clouds, with light of the highest stars. And the r headed child put her shaking, spindl little arms about her waist and burro her face in the soft gray dress, while A kissed the top of her head, holding her cl and murmuring to her.

Stevenson's face went slowly to an u pleasant yellow color. He could not ta his eyes from Ann's two long white hand outlined possessively on the child's brow linen back. How could this woman Ann, the woman who had been *his* wif He lost all thought of himself in his pri itive wonder of it all.

But all too quickly the woman he h known returned. She put the child fro her gently. She straightened and fac him. And with a sick wave of heat I knew himself for the hideous, beastly thi she had always made him feel. But sh said very little.

"Take your dog, you contemptible cow ard—and go," she said.

Stevenson winced visibly. Not that he words mattered. He didn't really hea them. It was the inexpressible way i which she could summon all your weak nesses, your faults, your shames and sicken you with them. She did it by the very look of her.

He stood there stupidly. She made a faint gesture toward the dog.

"M-mother!" said Janet True in a shrill little voice. It was a cry of alarm. It brought a strange swift flame of color to the woman's face. "Why, mother," the child burst out again and hurried swiftly on, "don't! Don't look that way! You're being awful—jest awful! He'll go 'way again. I've jest told him you wouldn't ever be mean any more, and that—that you kiss his picture an' want him to come back. An' now—now—you're being mean. You are, mother, you are. I don't care if he shook me. He—was jest mad 'cause I had to hit his dog. It was kinda fun—bein' shook—honest it was. Oh, mother, don't act mean to him! Act true to him like you want to!"

The man and woman stared at each other helplessly while the blood drained away from Ann's face, but before her lids fell Stevenson saw again that light that is as steadfast and unfailing as the high stars. It was the first time he had ever seen love come into her eyes for him. When silence came after Janet True's frenzied outburst a little surrendering smile touched her lips. She held her arms out to him.

"Oh, Bang! Isn't she—wonderful? I'll try so hard to be good. D-d-don't go away any ——"

Then, conquered by her emotions, she sank for the first time in her undisciplined life into a swoon at his feet, where she was entwined instantly by Janet True's mad little arms.

Stevenson did not attempt to loosen the child's fierce embrace. He picked the two of them up together and carried them into the house, explaining to the terrified Janet that her mother had only fainted.

Andrews, who had rapidly reassembled himself from one of the pillars of salt, was holding the door open for them, his eyes awed and gratified at a miracle which was taking place on the lawn. Surely it was quite comprehensible that the Lord could not allow such a dog to be taken off in such an unseemly fashion.

But it is a tale of lifelong telling with Andrews, in whom a proper respect for English terriers was as deeply bred as his reverence for old England, how Stevenson with his arms full of women was beguiled away from a fitting regard for good dog flesh.

"Time," said Aristotle to his pupil Alexander, "dissolves all things." In this third chapter of Elgin's new art-cycle, "Krónos" shows how Alexander applied this philosophy to the strategic dissolution of the mighty city of Tyre.

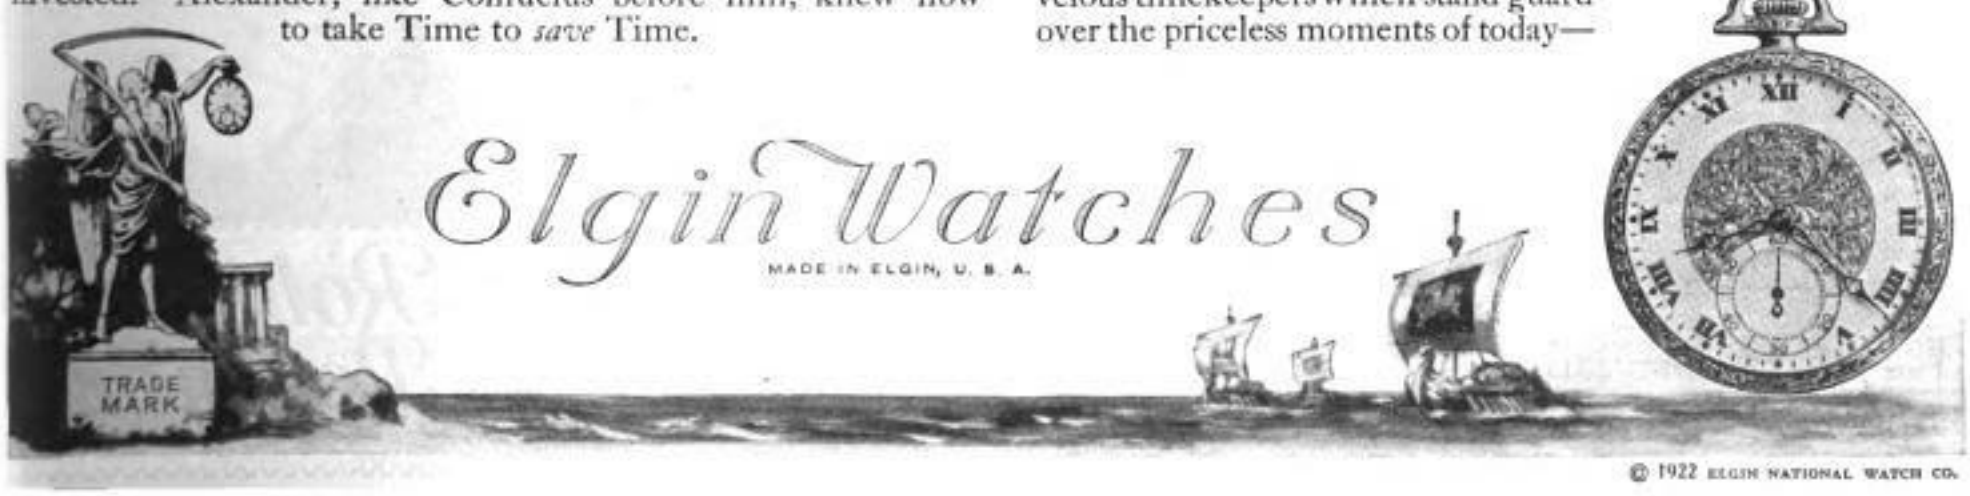
*...er, Alexander's amaz-...siege of the city of Tyre, ...B. C. * * * Below, at ...st, an Elgin of today: ...terial, construction, ad-...ustments and service fully ...ured by Elgin Guaranies.*

The Value of Time

By Krónos

Paintings by
HAROLD DeLAY

ALEXANDER the Great, setting out at twenty to conquer the world, found the city of Tyre blocking his path to glory.



In Tyre he saw the key to the vast Persian empire. Its massive walls had withstood the battering of centuries. Solidly intrenched on an island half a mile from the shore, it was heavily guarded by the Phoenician fleets—while Alexander had only land forces.

Calling together his engineers, the youth settled down to such a siege as never was on land or sea. Under an incessant bombardment from the island, he calmly proceeded to build a great pier straight across the ocean's floor—a pier that stands to this day.

Tradition says that when his generals murmured at the delay, Alexander answered, "I *must* wait—for *I am in a hurry!*" Seven months of incredible toil bridged the gulf and made him master of the seas. Hammering his way into Tyre, he opened an easy gateway to the empires of the East. His campaign of the next few years proved that his seven months had been well invested. Alexander, like Confucius before him, knew how to take Time to *save* Time.

The boy of twenty taught the world a lesson that will be remembered to the end of Time. Before his birth, Antiphon declared that the sacrifice of Time was the most costly of all sacrifices—after his death, Theophrastus called Time "*the most valuable thing a man can spend.*"

Step by step, the world draws nearer to a practical recognition of *the Value of Time*—and of the inestimable service rendered to mankind by those marvelous timekeepers which stand guard over the priceless moments of today—

Are you a sensitive person?

NATURALLY, you are. Every person of culture and refinement possesses those finer sensibilities that mark the gentleman and gentlewoman.

And particularly are such people sensitive about the little personal things that so quickly identify you as a desirable associate—socially or in business.

Attention to the condition of your breath ought to be as systematic a part of your daily toilet routine as the washing of your face and hands. Yet how many, many men and women neglect this most important item.

The reason is a perfectly natural one. Halitosis (or unpleasant breath), as the scientific term has it, is an insidious affliction that you may have and still be entirely ignorant of.

Your mirror can't tell you. Usually you can't tell it yourself. And the subject is too delicate for your friends—maybe even your wife or husband—to care to mention to you. So you may unconsciously offend your friends and those you come in intimate contact with day by day.

Halitosis (unpleasant breath) is usually temporary, due to some local condition. Again it may be chronic, due to some organic disorder which a doctor or dentist should diagnose and correct.

When halitosis is temporary it may easily be overcome by the use of Listerine, the well-known liquid antiseptic, used regularly as a gargle and mouth-wash.

Listerine possesses unusually effective properties as an antiseptic. It quickly halts food fermentation in the mouth and dispels the unpleasant halitosis incident to such a condition.

Provide yourself with a bottle today, and relieve yourself of that uncomfortable uncertainty as to whether your breath is sweet, fresh and clean—Lambert Pharmacal Company, Saint Louis, Missouri.

For HALITOSIS use LISTERINE

(Continued from Page 134)

For as they passed through the door, Janet True announced in a muffled voice from Stevenson's shoulder:

"Say! Your dog's comin' to life! I guess God's resurrectin' him for you."

And Stevenson replied lightly, near to flippantly:

"Well, a dog or two, my dear, is nothing—nothing at all, to what He's resurrected for me to-day. He must just be throwing the dog in for good measure."

IV

IT WAS some months after this that Janet True's eyes were operated upon. The day after the operation Ann sent for me to come to see her.

The maid took me directly upstairs, where Mr. Bangor Ellington Stevenson himself softly opened the door for me and in an emotional whisper warned me not to make a sound.

"She's asleep. First time since the operation. Isn't she the game little brat now? Never cried once."

We tiptoed through to another room, where Ann, white and tired, sat rocking beside a low bed on which lay a straight, still little figure with bandaged eyes. Ann was singing—a wordless wandering melody that only mothers know, and its sweetness swept the last vestige of worldliness out of her husband's face. While she was still singing, not knowing us there behind her, he felt impelled to share the wonder of it all with me, though I scarcely knew the man at the time.

"Ever see Ann look so fine?" he hissed at me. "Know why? Janet True's going to have a little brother—ah, our own, you know. Yep; surest thing. Darned little Bolshevik wants one, so that's what she's going to have."

And, as it turned out, that is just what she had.

V

THIS chapter is for those who have wondered why Ann came back just at the moment when the story needed her. It was because she forgot the favors for her luncheon party.

THE COVERED WAGON

(Continued from Page 23)

along a hillside or a marshy level; but it was for the most part a deep-cut, unmistakable road from which it had been impossible to wander.

Stretching out, closing up, almost inch by inch, like some giant measuring worm in its slow progress, the train held on through a vast and stately landscape.

Game became more abundant; wild turkeys still appeared in the timbered creek bottoms. Many elk were seen, more deer and very many antelope, packed in northward by the fires.

A number of panthers and giant gray wolves beyond counting kept the hunters always excited.

The wide timberlands, the broken low hills of the green prairie at length began to give place to a steadily rising inclined plane. The soil became less black and heavy, with more sandy ridges. The oak and hickory, stout trees of their forefathers, passed, and the cottonwoods appeared. After they had crossed the ford of the Big Blue—a hundred yards of racing water—the soil was sandier; the grass changed yet again.

They had rolled under wheel by now more than one hundred different varieties of wild grasses.

The vegetation began to show the growing altitude. The cactus was seen now and then. They were passing from the Prairies to the Plains.

Shouts and cheers arose as the word passed back that the sand hills known as the Coasts of the Platte were in sight. Some mothers told their children they were now almost to Oregon.

Two thousand Americans, some of them illiterate and ignorant, all of them strong, taking with them law, order, society, the church, the school, anew were staging the great drama of human life, act and scene and episode, as though upon some great moving platform drawn by invisible cables beyond the vast proscenium of the hills.

XVII

AS THE long columns of the great wagon train broke through the screening sand hills there was disclosed a vast and splendid panorama. The valley of the Platte lay miles wide, green in the full covering of spring. A crooked and broken thread of timber growth appeared, marking the moister soil and outlining the general course of the shallow stream, whose giant cottonwoods were dwarfed now by the distances. In between, and for miles up and down the flat expanse, there rose the blue smokes of countless camp fires, each showing the location of some white-topped ship of the Plains.

Over all shone a pleasant sun. Now and again the dark shadow of a moving cloud passed over the flat valley, softening its high lights for the time.

"Look!" exclaimed Wingate, pulling up his horse. "Look, Caleb, the Northern train is in and waiting for us! A hundred wagons! They've camped over the whole bend."

The sight of this vast reënforcement brought heart to every man, woman and child in all the advancing train. Now, indeed, Oregon was sure. There would be, all told, four hundred—five hundred—above six hundred wagons. Nothing could withstand them. They were the same as arrived!

As the great trains blended before the final emparkment men and women who had never met before shook hands, talked excitedly, embraced, even wept, such was their joy in meeting their own kind.

Even so, the Missouri column held back, an hour or two later on the trail. Banion, silent and morose, still rode ahead, but all the flavor of his adventure out to Oregon had left him—indeed, the very savor of life itself. He looked at his arms, empty; touched his lips, where once her kiss had been, so infinitely and ineradicably sweet. Why should he go on to Oregon now?

As they came down through the gap in the coasts, looking out over the Grand Island and the great encampment, Jackson pulled up his horse.

"Look! Someone coming out!"

Banion sat his horse awaiting the arrival of the rider, who soon cut down the intervening distance until he could well be noted. A tall, spare man he was, middle-aged, of long, lank hair and gray stubbled beard, and eyes overhung by bushy brows. He rode an Indian pad saddle, without stirrups, and was clad in the old costume of the hunter of the Far West—fringed shirt and leggings of buckskin. Moccasins made his foot-covering, though he wore a low, wide hat.

He jerked up his horse close at hand and sat looking at the newcomers, with no salutation beyond a short "How!"

Banion met him.

"We're the Westport train. Do you come from the Bluffs? Are you for Oregon?"

"Yes. I seen ye comin'. Thought I'd projeck some. Who's that back of ye?" He extended an imperative skinny finger toward Jackson. "If it hain't Bill Jackson hit's his ghost!"

"The same to you, Jim. How!"

The two shook hands without dismounting. Jackson turned grinning to Banion.

"Major," said he, "this is Jim Bridger, the oldest scout in the Rockies, and that knows more West than ary man this side the Missoury. I never thought to see him agin, sartain not this far east."

"Ner me," retorted the other, shaking hands with one man after another.

"Jim Bridger? That's a name we know," said Banion. "I've heard of you back in Kentucky."

"Whar I come from, gentlemen—whar I come from more'n forty year ago, near's I can figger. Leastways I was borned in Virginny and must of crossed Kentucky sometime. I kain't tell right how old I am, but I reck'lect perfect when they turned the water into the Missoury River." He looked at them solemnly.

"I come back East to the new place, Kansas City. It didn't cut no mustard, an' I drifted to the Bluffs. This train was pullin' west, and I hired on for guide. I've got a few wagons of my own—iron, flour and bacon for my post beyant the Rockies—ef we don't all git our ha'r lifted afore then!

"We're in between the Sioux and the Pawnees now," he went on. "They're huntin' the bufflers not ten mile ahead. But when I tell these pilgrims they laugh at me. The hull Sioux nation is on the

My short cut to a perfect memory

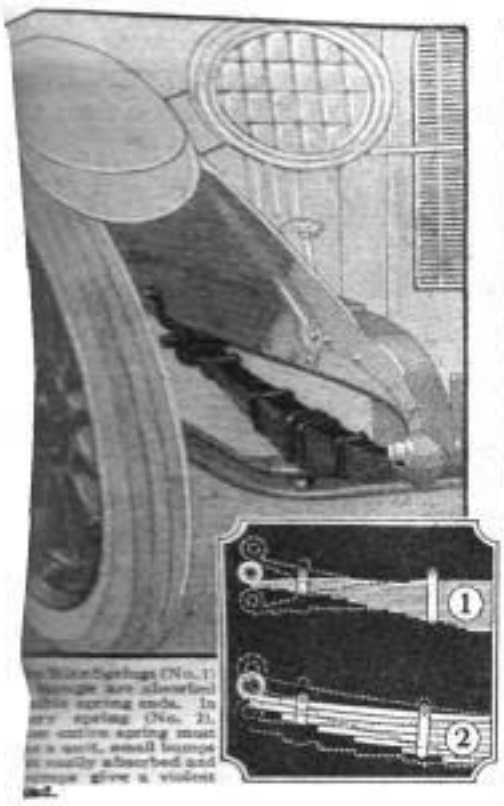
LET ME tell you a *method* that never lets me miss an engagement, neglect a task, or forget *an idea*. Every thing I have to remember I jot down in my Robinson *Reminder*. Outside it looks like any good note book. The big idea is inside. *Each* page is divided into separate perforated coupons—a coupon *for each* note. You jot the note down, do it, tear the coupon out clean, *and forget* it. That leaves *live notes only*. And that's the big feature of the Robinson Reminder—there's no dead stuff to bury current notes. *Every* note's alive, waiting to be done.

Let a Robinson Reminder be your never failing memory.

Robinson Reminders in all sizes and styles, from the vest pocket size at 25 cents to the gold cornered, genuine seal leather at $2.50; special ladies' size very convenient for shopping. Pad in back for permanent memoranda in addition to couponed pages.

Every Robinson Reminder is well made, durable, good looking. Nothing finer for gifts or souvenirs from individuals or business houses. Special line for advertisers. Robinson Fillers are obtainable everywhere; buy a dozen with your Reminder. Be sure you get the *original* Robinson Reminder sold and recommended by all good dealers.

ROBINSON MANUFACTURING COMPANY
WESTFIELD, MASS.



The Robinson Readi-pad is a handsome metal desk stand with the perforated coupon pad, perpetual calendar and pencil groove.

Flexible Spring Ends —that Absorb Bumps

Increase the Life of Your Car Thousands of Miles with Ride Rite Springs.

The springs with flexibility to absorb all bumps, glide smoothly over large bumps, and strength to withstand the shock of heavy impacts.

Because of the unique design and scientifically accurate combination of an unusually large number of thin leaves and a bound plate, Ride Rite Springs take up all bumps in the flexible spring ends. As bumps increase in size the action is carried toward the center of the spring so that all bumps are absorbed without throw, snap or jar.

Equip Your Car with Ride Rites

Learn real riding comfort—blot out the jars and jolts that interfere with pleasure, eliminate the vibration that racks the frame and destroys the motor.

Ride Rite Springs save operating cost—give more miles per gallon of gas and add 100% driving pleasure and riding comfort.

Standard equipment on several popular and well known cars. There is a set designed for your car.

"The Joy of Easy Riding," a meaty little booklet, gives six definite tests to judge riding comfort. Your copy is ready. It is free.

Harvey Spring & Forging Co.
Dept. 4 Racine, Wis.

Designers and manufacturers of automobile springs. Makers of the famous guaranteed Easy Riding Ballau replacement springs for all cars.

—for twenty years Harvey Engineers have concentrated on one thing: better spring design. Ride Rite Springs are the natural result of this concentration.

Harvey Racine Ride Rite Springs

Make Rough Roads Smooth

spring hunt right now. I'll not have it said Jim Bridger led a wagon train into a massacree. If ye'll let me, I'm for leavin' 'em and trainin' with you-all, especial since you got anyhow one good man along. I've knowed Bill Jackson many a year at the rendyvous afore the fur trade petered. Damn the pilgrims! The hull world's broke loose this spring. There's five thousand Mormons on ahead, praisin' God every jump an' eatin' the grass below the roots. Women and children—so many of 'em, so many! I kain't talk about hit! Women don't belong out here! And now here you come, bringin' a thousand more!

"There's a woman an' a baby layin' dead in our camp now," he concluded. "Died last night. The pilgrims are tryin' to make coffins fer 'em out'n cottonwood logs."

"Lucky for all!" Jackson interrupted the garrulity of the other. "We buried men in blankets on the Vermilion a few days back. The Pawnees got a small camp o' our own folks."

"Yes, I know all about that."

"What's that?" cut in Banion. "How do you know?"

"Well, we've got the survivors—three o' them, countin' Woodhull, their captain."

"How did they get here?"

"They came in with a small outfit o' Mormons that was north o' the Vermilion. They'd come out on the St. Jo road. They told me ——"

"Is Woodhull here—can you find him?"

"Shore! Ye want to see him?"

"Yes."

"He told me all about hit ——"

"We know all about it, perhaps better than you—after he's told you all about it."

Bridger looked at him, curious.

"Well, anyhow, it's over," said he. "One of the men had a Pawnee arrer in his leg. Reckon hit hurt. I know, fer I carried a Blackfoot arrerhead under my shoulder blade fer sever'l years.

"But come on down and help me make these pilgrims set guards. Do-ee mind, now, the hull Sioux nation's just in ahead o' us, other side the river. Yet these people didn't want to ford to the south side the Platte; they wanted to stick north of the river. Ef we had, we'd have our h'ar dryin' by now. I tell ye, the tribes is out to stop the wagon trains this spring. They say, too, many women and children are comin', an' that shows we want to take their land away fer keeps.

"From now on to Oregon—look out! The Cayuses cleaned out the Whitman mission last spring in Oregon. Even the Shoshones is dancin'. The Crows is out, the Cheyennes is marchin', the Bannocks is east o' the pass, an' ye kain't tell when ter expeck the Blackfoots an' Grow Vaws. Never was gladder to see a man than I am to see Bill Jackson."

"Stretch out!"

Banion gave the order. The Missouri wagons came on, filed through the gap in order and with military exactness wheeled into a perfect park at one side the main caravan.

As the outer columns swung in, the inner spread out till the lapped wagons made a great oblong, Bridger watching them. Quickly the animals were outspanned, the picket ropes put down and the loose horses driven off to feed, while the cattle were close herded. He nodded his approval.

"Who's yer train boss, Bill?" he demanded. "That's good work."

"Major Banion, of Doniphan's column in the war."

"Will he fight?"

"Try him!"

News travels fast along a wagon train. Word passed now that there was a big Sioux village not far ahead, on the other side of the river, and that the caravan should be ready for a night attack. Men and women from the earlier train came into the Westport camp and the leaders formulated plans. More than four hundred families ate in sight of one another's fires that evening.

Again on the still air of the Plains that night rose the bugle summons, by now become familiar. In groups the wagon folk began to assemble at the council fire. They got instructions which left them serious. The camp fell into semisilence. Each family returned to its own wagon. Out in the dark, flung around in a wide circle, a double watch stood guard. Wingate and his aids, Banion, Jackson, Bridger, the pick of the hardier men, went out for all the night. It was to Banion, Bridger and Jackson that most attention now was paid. Banion could not yet locate Woodhull in the train.

The scouts crept out ahead of the last picket line, for though an attack in mass probably would not come before dawn, if the Sioux really should cross the river, the horse stealing or an attempted stampede might be expected before midnight or soon after.

The night wore on. The fires of willow twigs and *bois des vaches* fell into pale coals, into ashes. The chill of the Plains came, so that the sleepers in the great wagon corral drew their blankets closer about them as they lay.

It was approaching midnight when the silence was ripped apart by the keen crack of a rifle—another and yet another.

Then, in a ripple of red detonation, the rifle fire ran along the upper front of the entire encampment.

"Turn out! Turn out, men!" called the high, clear voice of Banion, riding back. "Barricade! Fill in the wheels!"

XVIII

THE night attack on the great emigrant encampment was a thing which had been preparing for years. The increasing numbers of the white men, the lessening numbers of the buffalo meant inevitable combat with all the tribes sooner or later.

Now the spring hunt of the northern Plains tribes was on. Five hundred lodges of the Sioux stood in one village on the north side of the Platte. The scaffolds were red with meat, everywhere the women were dressing hides and the camp was full of happiness. For a month the great Sioux nation had prospered, according to its lights. Two hundred stolen horses were under the wild herdsmen, and any who liked the meat of the spotted buffalo might kill it close to camp from the scores taken out of the first caravans up the Platte that year—the Mormons and other early trailers whom the Sioux despised because their horses were so few.

But the Sioux, fat with *boudins* and *dépouille* and marrowbones, had waited long for the great Western train which should have appeared on the north side of the Platte, the emigrant road from the Council Bluffs. For some days now they had known the reason, as Jim Bridger had explained—the wagons had forded the river below the Big Island. The white men's medicine was strong.

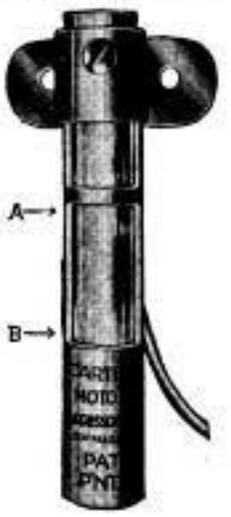
The Sioux did not know of the great rendezvous at the forks of the Great Medicine Road. Their watchmen, stationed daily at the eminences along the river bluffs of the north shore, brought back scoffing word of the carelessness of the whites. When they got ready they, too, would ford the river and take them in. They had not heeded the warning sent down the trail that no more whites should come into this country of the tribes. It was to be war.

And now the smoke signals said yet more whites were coming in from the south! The head men rode out to meet their watchmen.

News came back that the entire white nation now had come into the valley from the south and joined the first train.

Here, then, was the chance to kill off the entire white nation, their women and their children, so there would be none left to come from toward the rising sun! Yes, this would end the race of the whites without doubt or question, because they all were here. After killing these it would be easy to send word west to the Arapahoes and Gros Ventres and Cheyennes, the Crows, the Blackfeet, the Shoshones, the Utes, to follow west on the Medicine Road and wipe out all who had gone on west that year and the year before. Then the Plains and the mountains would all belong to the red men again.

The chiefs knew that the hour just before dawn is when an enemy's heart is like water, when his eyes are heavy, so they did not order the advance at once. But a band of the young men who always fought together, one of the inner secret societies or clans of the tribe, could not wait so long. First come, first served. Daylight would be time to look over the children and to keep those not desired for killing, and to select and distribute the young women of the white nation. But the night would be best for taking the elk dogs and the spotted buffalo.



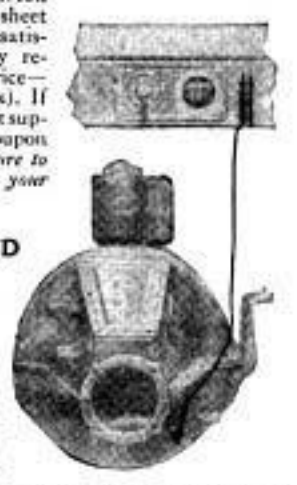
Accordingly a band from this clan swam and forded the wide river, crossed the island, and in the early evening came downstream back of a shielding fringe of cottonwoods. Their scouts saw with amazement the village of tepees that moved on wheels. They heard the bugle, saw the white nation gather at the medicine fire, heard them

Buy This Mechanically Perfect and Accurate CARTER OIL GAUGE for your Ford or Chevrolet (490 and F.A.)

GUESSING at your oil supply costs real money. You either waste money buying too much oil or you run the risk of burning out bearings when you let your oil supply run too low. You may intend to "crawl under" and open the petcocks but you neglect it.

Install the Carter Oil Gauge and your engine will work better. In addition, *you will save money on your oil and upkeep costs.*

Attach the highly polished, nickel-plated Carter Oil Gauge to dash or instrument board, thread the connecting tube through any hole in dash and attach to lower petcock with an elbow as shown in illustration.



Liquid in gauge glass is actuated by flow of air in connecting tube, *i. e.*, as oil in crankcase rises, air in connecting tube is forced up, causing liquid in gauge glass to rise, and vice versa. No oil flows from crankcase thru tube and glass gauge. When liquid in gauge is at "A" (see cut) the oil in crankcase is at upper petcock level; at "B," it is at lower petcock level.

No plungers, corks, or other moving parts to get out of order. Operates in all kinds of weather and outlasts life of car.

CARTER PRODUCTS

Each gauge is packed in attractive carton with instruction sheet and guarantee of satisfaction or money refunded. Retail price—$3.00 (inc. war tax). If your dealer can not supply you, use this coupon and order. *Be sure to mention name of your supply dealer.*

SONNEBORN PRODUCTS

This Roof Will Not Leak!

It is made leakproof by a durable one-piece covering of Stormtight.

A Stormtight roof does not need constant repainting or repairing, for it will remain leakproof, without cracking or peeling, for many years.

It's never too late for Stormtight.

Even your old worn-out roofs, which leak badly, can be covered with Stormtight, and you will save the great cost of re-roofing—hundreds, perhaps thousands, of dollars.

Stormtight

FOR USE ON ANY ROOF IN ANY WEATHER

is needed on your roof *now—before leaks start.* It will cover nail holes, laps and seams, which are always weak points where leaks occur. *And, unlike paint, it lasts.*

Anyone can brush Stormtight on the roofs of houses, factories, garages and outbuildings.

Buy of your dealer, or write to us, if he has not yet stocked it.

Write for "Leakproof Roofs" and testimonials covering years of use.

chant their great medicine song; then saw them disperse; saw the fires fall low.

They laughed. The white nation was strong, but they did not put out guards at night!

For a week the Sioux had watched them, and they knew about that. It would be easy to run off all the herd and to kill a few whites even now, beginning the sport before the big battle of to-morrow, which was to wipe out the white nation altogether.

But when at length, as the handle of the Great Dipper reached the point agreed, the line of the Sioux clansmen crawled away from the fringe of trees and out into the cover of a little slough that made toward the village of tepees on wheels, a quarter of a mile in front of the village men arose out of the ground and shot into them. Five of their warriors fell. Tall men in the dark came out and counted coup on them, took off their war bonnets; took off even more below the bonnets. And there was a warrior who rode this way and that, on a great black horse, and who had a strange war cry not heard before, and who seemed to have no fear. So said the clan leader when he told the story of the repulse.

Taken aback, the attacking party found cover. But the Sioux would charge three times. So they scattered and crawled in again over a half circle. They found the wall of tepees solid; found that the white nation knew more of war than they had thought. They sped arrow after arrow, ball after ball, against the circle of the white tepees, but they did not break, and inside no one moved or cried out in terror; whereas outside, in the grass, men rose up and fired into them and did not run back, but came forward. Some had short rifles in their hands that did not need to be loaded, but kept on shooting. And none of the white nation ran away! And the elk dogs with long ears, and the spotted buffalo, were no longer outside the village in the grass, but inside the village. What men could fight a nation whose warriors were so unfair as all this came to?

The tribesmen drew back to the cottonwoods a half mile.

"My heart is weak," said their clan leader. "I believe they are going to shoot us all. They have killed twenty of us now, and we have not taken a scalp."

"I was close," said a young boy whom they called Bull Gets Up, or the Sitting Bull. "I was close, and I heard the spotted buffalo running about inside the village; I heard the children. To-morrow we can run them away.

"But to-night what man knows the gate into their village? They have got a new chief to-day. They are many as the grass leaves. Their medicine is strong. I believe they are going to kill us all if we stay here." Thus the partisan.

So they did not stay there, but went away. And at dawn Banion and Bridger and Jackson and each of the column captains—others also—came into the corral carrying war bonnets, shields and bows; and some had things which had been once below war bonnets. The young men of this clan always fought on foot or on horse in full regalia of their secret order, day or night. The emigrants had plenty of this savage war gear now.

"We've beat them off," said Bridger, "and maybe they won't ring us now. Get the cookin' done, Cap'n Banion, and let's roll out. But for your wagon park they'd have cleaned us."

The whites had by no means escaped scatheless. A dozen arrows stood sunk into the sides of the wagons inside the park, hundreds had thudded into the outer sides, nearest the enemy. One shaft was driven into the hard wood of a plow beam. Eight oxen staggered, legs wide apart, shafts fast in their bodies; four lay dead; two horses also; as many mules.

This was not all. As the fighting men approached the wagons they saw a group of stern-faced women weeping around something which lay covered by a blanket on the ground. Molly Wingate stooped, drew it back to show them, and even Bridger winced.

An arrow, driven by a buffalo bow, had glanced on the spokes of a wheel, risen in its flight and sped entirely across the inclosure of the corral. It had slipped through the canvas cover of a wagon on the opposite side as so much paper and caught fair a woman who was lying there, a nursing baby in her arms, shielding it, as she thought, with her body. But the missile had cut through one of her arms, pierced the head of the child and sunk into the bosom of the mother deep enough t her also. The two lay now, the shaft t fixing both; and they were buried t and they lie there still, somewhere nea Grand Island, in one of a thousand known and unmarked graves along Great Medicine Road. Under the ash a fire they left this grave, and drov hundred wagons over it, and the In never knew.

The leaders stood beside the dead wo hats in hand. This was part of the of empire—the life of a young woma bride of a year.

The wagons all broke camp and wen in a vast caravan, the Missourians no the front. Noon, and the train did halt. Banion urged the teamsters. Bri and Jackson were watching the many nal smokes.

"I'm afeared o' the next bend," Jackson at length.

The fear was justified. Early in afternoon they saw the outriders turn come back to the train at full run. Beh them, riding out from the concealment a clump of cottonwoods on the near side the scattering river channels, there peared rank after rank of the Sioux, m than two thousand warriors bedecked all the savage finery of their war dre They were after their revenge. They h left their village and, paralleling the wh men's advance, had forded on ahead.

They came out now, five hundred, eig hundred, a thousand, two thousand stron and the ground shook under the thunder the hoofs. They were after their revenge eager to inflict the final blow upon t white nation.

The spot was not ill chosen for the tactics. The alkali plain of the vall swung wide and flat, and the trail cross it midway, far back from the water and s quite to the flanking sand hills. While few dashed at the cattle, waving the blankets, the main body, with workman like precision, strung out and swung wid circling the train and riding in to arro range.

The quick orders of Banion and hi scouts were obeyed as fully as time allowed At a gallop, horse and ox transport als were driven into a hurried park and some at least of the herd animals inclosed. The riflemen flanked the train on the danger side and fired continually at the long string of running horses, whose riders had flung themselves off-side so that only a heel showed above a pony's back, a face under his neck. Even at this range half a dozen ponies stumbled, figures crawled off for cover. The emigrants were stark men with rifles. But the circle went on until, at the running range selected, the crude wagon park was entirely surrounded by a thin racing ring of steel and fire stretched out over two or three miles.

The Sioux had guns also, and though they rested most on the bow, their chance rifle fire was dangerous. As for the arrows, even from this disadvantageous station these peerless bowmen sent them up in a high arch so that they fell inside the inclosure and took their toll. Three men, two women lay wounded at the first ride, and the animals were plunging.

The war chief led his warriors in the circle once more, chanting his own song to the continuous chorus of savage ululations. The entire fighting force of the Sioux village was in the circle.

The ring ran closer. The Sioux were inside seventy-five yards, the dust streaming, the hideously painted faces of the riders showing through, red, saffron, yellow, as one after another warrior twanged a bow under his horse's neck as he ran.

But this was easy range for the steady rifles of men who kneeled and fired with careful aim. Even the six-shooters, then new to the Sioux, could work. Pony after pony fell, until the line showed gaps; whereas now the wagon corral showed no gap at all, while through the wheels, and over the tongue spaces, from every crevice of the gray towering wall came the fire of more and more men. The medicine of the white men was strong.

Three times the ring passed, and that was all. The third circuit was wide and ragged. The riders dared not come close enough to carry off their dead and wounded. Then the attack dwindled, the savages scattering and breaking back to the cover of the stream.

"Now, men, come on!" called out Banion. "Ride them down! Give them a trimming they'll remember! Come on, boys!" (Continued on Page 140)

Up Against a Stone Wall!

A REAL wall of massive masonry, unyielding and built to last for ages. A heavy car plunged into it, head on—bounded back, unharmed! This actual and supreme test was made before a camera on February 10th, 1922.

The parallel contact bars of the Weed Spring-Bar Bumper took the onslaught, cushioning the shock pound by pound as they were pressed into the ample rebound space—the "deep chest"—until the last ounce of energy was absorbed.

Then the powerful, resilient steel bars asserted their strength and the unhurt car recoiled from the wall, without discomfort to the occupant. The parallel bars returned to their natural position, without a mark save the slight abrasion made by the stones. The bumper remained the same decorative protector that not only gives full security but adds to the distinction of any car.

This super-test confirms the evidence of every-day experience, proving the scientific design and construction, in which the fullest advantage is taken of arched steel construction, of the enormous benefit of the over-plus flexion space—the "deep chest"—and of the wide buffing area.

Weed Spring-Bar Bumpers are protection recognized by insurance companies for which they will substantially discount their collision insurance charges. In many instances the saving on the first year's premium thus involved pays for the bumper.

The name "Weed" on a bumper commands the same confidence, carries the same assurance of quality and maximum efficiency, that it does on Tire Chains.

The makers of Weed Spring-Bar Bumpers and Weed Tire Chains also make the Twinbar Spring Bumper for those who demand the maximum in protection at the minimum of cost

(Continued from Page 138)

Within a half hour fifty more Sioux were down, dead or very soon to die. Of the living not one remained in sight.

"They wanted it an' they got it!" exclaimed Bridger, when at length he rode back, four war bonnets across his saddle and scalps at his cantle. He raised his voice in a fierce yell of triumph, not much other than savage himself, dismounted and disdainfully cast his trophies across a wagon tongue.

"I've et horse an' mule an' dog," said he, "an' wolf, wil'cat an' skunk, an' perrairy dog an' snake an' most ever'thing else that wears a hide, but I never could eat Sioux. But to-morrer we'll have ribs in camp. I've seed the buffler, an' we own this side the river now."

Molly Wingate sat on a bed roll near by, knitting as calmly as though at home, but filled with wrath.

"Them nasty, dirty critters!" she exclaimed. "I wish't the boys had killed them all. Even in daylight they don't stand up and fight fair like men. I lost a whole churnin' yesterday. Besides, they killed my best cow this mornin', that's what they done. And lookit this thing!"

She held up an Indian arrow, it's strap-iron head bent over at right angles. "They shot this into our plow beam. Looks like they got a spite at our plow."

"Ma'am, they have got a spite at hit," said the old scout, seating himself on the ground near by. "They're scared o' hit. I've seed a bunch o' Sioux out at Laramie with a plow some Mormon left around when he died. They'd walk around and around that thing by the hour, talkin' low to theirselves. They couldn't figger hit out no ways a-tall.

"That season they sent a runner down to the Pawnees to make a peace talk, an' to find out what this yere thing was the whites had brung out. Pawnees sent to the Otoes, an' the Otoes told them. They said it was the white man's big medicine, and that it buried all the buffler under the ground wherever it come, so no buffler ever could git out again. Nacherl, when the runners come back an' told what that thing really was, all the Injuns, every tribe, said if the white man was goin' to bury the buffler the white man had got to stay back.

"Us trappers an' traders got along purty well with the Injuns—they could get things they wanted at the posts or the rendyvous, an' that was all right. They had pelts to sell. But now these movers didn't buy nothin' an' didn't sell nothin'. They just went on through, a-carryin' this thing for buryin' the buffler. From now on the Injuns is goin' to fight the whites. Ye kain't blame 'em, ma'am; they only see their finish.

"Five years ago nigh a thousand whites drops down in Oregon. Next year come fifteen hundred, an' in '45 twicet that many, an' so it has went, doublin' an' doublin'. Six or seven thousand whites go up the Platte this season, an' a right smart sprinklin' o' them'll git through to Oregon. Them 'at does'll carry plows.

"Ma'am, if the brave that sunk a arrer in yore plow beam didn't kill yore plow hit warn't because he didn't want to. Hit's the truth—the plow does bury the buffler, an' fer keeps! You kain't kill a plow, ner neither kin you scare hit away. Hit's the holdin'est thing ther is, ma'am—hit never does let go."

"How long'll we wait here?" the older woman demanded.

"Anyhow fer two-three days, ma'am. Thar's a lot has got to sort out stuff an' throw hit away here. One man has drug a pair o' millstones all the way to here from Ohio. He allowed to git rich startin' a gris'mill out in Oregon. An' then ther's chairs an' tables, an' God knows what——"

"Well, anyhow," broke in Mrs. Wingate truculently, "no difference what you men say, I ain't going to leave my bureau, nor my table, nor my chairs! I'm going to keep my two churns and my feather bed too. We've had butter all the way so far, and I mean to have it all the way—and eggs. I mean to sleep at nights, too, if the pesky muskeeters'll let me. They most have et me up. And I'd give a dollar for a drink of real water now. It's all right to settle this water overnight, but that don't take the sody out of it.

"Besides," she went on, "I got four quarts o' seed wheat in one of them bureau drawers, and six cuttings of my best rose-bush I'm taking out to plant in Oregon. And I got three pairs of Jed's socks in another bureau drawer. It's flat on its back, bottom of the load. I ain't going to dig it out for no man."

"Well, hang on to them socks, ma'am. I've wintered many a time without none—only grass in my moccasins. There's outfits in this train that's low on flour and side meat right now, let alone socks. We got to cure some meat. There's a million buffler just south in the breaks wantin' to move on north, but scared of us an' the Injuns. We'd orto make a good hunt inside o' ten mile to-morrer. We'll git enough meat to take us a week to jerk hit all, or else Jim Bridger's a liar—which no one never has said yet, ma'am.

"Flowers?" he added. "You takin' flowers acrost? Flowers—do they go with the plow, too, as well as weeds? Well, well! Wimminfolks shore air a strange race o' people, hain't that the truth? Buryin' the buffler an' plantin' flowers on his grave!

"But speakin' o' buryin' things," he suddenly resumed, "an' speakin' o' plows, 'minds me o' what's delayin' us all right now. Hit's a fool thing, too—buryin' Injuns!"

"As which, Mr. Bridger? What you mean?" inquired Molly Wingate, looking over her spectacles.

"This new man, Banion, that come in with the Missouri wagons—he taken hit on himself to say, atter the fight was over, we orto stop an' bury all them Injuns! Well, I been on the Plains an' in the Rockies all my life, an' I never yit, before now, seed a Injun buried. Hit's onnatcherl. But this here man he, now, orders a ditch plowed an' them Injuns hauled in an' planted. Hit's wastin' time. That's what's keepin' him an' yore folks an' sever'l others. Yore husband an' yore son is both out yan with him. Hit beats hell, ma'am, these new-fangled ways!"

"So that's where they are? I wanted them to fetch me something to make a fire."

"I kain't do that, ma'am. Mostly my squaws——"

"Your what? Do you mean to tell me you got squaws, you old heathen?"

"Not many, ma'am—only two. Times is hard sence beaver went down. I kain't tell ye how hard this here depressin' has set on us folks out here."

"Two squaws! My laws! Two—what's their names?" This last with feminine curiosity.

"Well now, ma'am, I call one on 'em Blast Yore Hide—she's a Ute. The other is younger an' pertier. She's a Shoshone. I call her Dang Yore Eyes. Both them women is powerful fond o' me, ma'am. They both are right proud o' their names, too, because they are white names, ye see. Now when time comes fer a fire, Blast Yore Hide an' Dang Yore Eyes, they fight hit out between 'em which gits the wood. I don't study none over that, ma'am."

Molly Wingate rose so ruffled that, like an angered hen, she seemed twice her size.

"You old heathen!" she exclaimed. "You old murderin' lazy heathen man! How dare you talk like that to me?"

"As what, ma'am? I hain't said nothin' out'n the way, have I? O' course, ef ye don't want to git the fire stuff, thar's yer darter—she's young an' strong. Yes, an' perty as a picter besides, though like enough triflin', like her maw. Where's she at now?"

"None of your business where."

"I could find her."

"Oh, you could! How?"

"I'd find that young feller Sam Woodhull that come in from below, renegadin' away from his train with that party o' Mormons—him that had his camp jumped by the Pawnees. I got a eye fer a woman, ma'am, but so's he—more'n fer Injuns, I'd say. I seed him with yore darter right constant, but I seemed to miss him in the ride. Whar was he at?"

"I don't know as it's none of your business, anyways."

"No? Well, I was just wonderin', ma'am, because I heerd Cap'n Banion ast that same question o' yore husband, Cap'n Wingate, an' Cap'n Wingate done said jest what ye said yerself—that hit wasn't none o' his business. Which makes things look shore hopeful an' pleasant in this yere train o' pilgrims, this bright and pleasant summer day, huh?"

Grinning amicably, the incorrigible old mountaineer rose and went his way, and left the irate goodwife to gather her apron full of plains fuel for herself.

UP IN THE AIR

(Continued from Page 7)

operated to afford the greatest good to the greatest number.

Doctor Easton, of the Westinghouse Company, has kept in as close touch with radio as anyone, and he holds that radio possesses possibilities of entertainment and instruction not yet comprehended even by those who are familiar with wireless developments to date. The radiophone receivers of to-morrow will be as different from the sets now used as present-day motor cars are different from the first machines that were built. Radio bulletins will make it possible for practically the whole nation to follow a Harvard-Yale football game so closely that a distant listener will know a Yale back has circled the Crimson's right end and is tearing down the field and has not yet been downed.

One great value of radio is that it will bring its message to the group in the isolated farmhouse as quickly and satisfactorily as to the dweller in the heart of a great city. The members of a family living miles from a railroad and receiving mail but once a day will likely profit most of all from the development of the radio telephone. In the past a farmer's family could find little to interest them on long winter evenings if they had grown tired of their phonograph records and were situated too far from town to reach a moving-picture theater easily. Now they can all cluster around a radio-telephone set, and first on the program they can hear a story for the children, a tale of fairies, cleverly prepared and told to please the little folks and send them to bed in a happy mood. Then comes the news of the day, and in a few minutes the farm folks have been acquainted with the high spots of the day's world affairs. Next comes a concert or a song recital, and then the evening ends with an interesting address by some distinguished leader in business or public life. In the morning the farmer may hear market and crop reports, government agricultural bulletins, weather forecasts and the official time. On Sunday, if the weather is bad and the family are unable to get to church, the complete religious services of some selected church, located a hundred or more miles away, can be heard. It is simply impossible to estimate what the value of the radiophone will be to those of our people who are cut off from the outside world.

It is difficult if not impossible to find anyone who is well versed in electrical matters who does not see an expanding field for radio. Doctor Steinmetz, the electrical wizard at Schenectady, expressed to me his belief in a bright future for radio for broadcasting, and stated that as the art advances it will be possible to use many more wave lengths than we can now use, due to the ability we shall gradually acquire to control with greater accuracy the wave length and to confine it absolutely within specified bounds.

In the Realm of Surmise

The engineers of the American Telephone and Telegraph Company are deeply interested in the use of the radio telephone as part of a commercial system of intercommunication. It is their belief that the practical field for radio telephony lies in connection with those situations where it is impracticable to employ wires, as in the case of communications between moving vehicles, from ship to ship, from ship to shore, from airship to ground, and similar classes of service. All these fields are being explored, and in time they may be developed into useful auxiliaries to the wire service.

The telephone experts also recognize the possibilities of radio in furnishing a one-way broadcasting service which will handle news, music, speeches and the like, from a central station. They say that the number of wave lengths available for this service is limited, but that they are preparing to furnish this broadcasting service to such an extent as may meet the commercial demands of the public.

There is much that is not understood about wireless, even by the most highly trained students of the subject. People who profess to know very much about radio are rare specimens these days, for strange results that have been little expected and less understood have been occurring with disturbing frequency in recent months. Just why and how radio is so greatly affected by atmospheric conditions is not entirely clear. An amateur in New Jersey, using only a modest transmitting outfit, sent a wireless message to a friend less than a hundred miles away, and was clearly heard in Scotland. Many similar happenings have proved that when atmospheric conditions are just right the wireless waves will carry literally to the ends of the earth, while on other days, when conditions in the atmosphere are unfavorable, even the most powerful transmitting set will experience difficulty in sending its message long distances through the ether.

And speaking of ether, here again we come up against a problem that is perplexing. We know less about ether than we know about electricity, and that's not very much. The common theory is that ether is a universal electromagnetic medium, and it is the strain that exists or is made to exist in it that constitutes what we call electricity. At any rate, without ether it is supposed there would be no such thing as electricity, and without ether it is hard to see how there could be any such thing as radio, assuming it is this medium that carries the wireless waves. According to the present conception the ether fills all space and exists even within the densest bodies, whether they are soft and heavy, like lead, or hard and brittle, like the diamond. It is the ether that carries radiant energy of all kinds, including the waves which transmit light. Just as the discovery of radium and its application to life and industry are giving us each day a better understanding of the properties of the atom, so will the use of radio and the study of wireless phenomena give the world a clearer conception of electricity.

Matter and Ether

It is the ether that is the connecting link between what we know as things material or physical and things spiritual. The life impulse of motion in matter is thought to be produced by the impulses of the etheric motion. What we visualize as matter is perhaps atomized etheric units engulfed in unatomized etheric atmospheres in motion. We talk of the earth's atmosphere as being etheric, and of course this is perfectly true. But if we carry the thought a step farther it is plain that what we call the air is but a body of ether, without beginning or end, and in it float atomized units of oxygen, nitrogen, and so on, which float in the ether because of their rotative motion. Some day we shall better understand the relationship between what we call bodies in motion and what we call ether in motion. Nothing on the horizon at the present time holds forth greater hope of adding to human knowledge along this line than do the study and development of radio.

From the very beginning of time man has been devoting himself seriously to the task of analyzing and imitating the wonders of Nature. When the first man uttered the first word a perfect wireless apparatus was put into operation. The Creator placed in each of us a sending and a receiving set. It will be a long time before human skill will be able to build a radio receiver that will be able to select the desired wave lengths with such delicate distinction as does the human ear. At the present time, in practical operation, it is difficult to select one radio message from another unless there is a difference of about thirty meters in the length of the two sets of waves. The big development in the near future of wireless will be the perfecting of receiving sets that will materially narrow the wave bands and enable the radio operator to adjust his apparatus to various sets of wave lengths that do not differ from one another by anything like so much as thirty meters. What the end will be it is not possible to predict, and it is because of this uncertainty that no one can foretell just how many broadcasting stations will be able to operate in any prescribed area.

In sending a message by wireless the radiophone transmitter must vibrate electrically at a certain rate, which is determined by what is called the inductance and capacity of the circuit. The electrical vibrations flash out through the ether in ever-widening circles, at the speed of light, which is 186,000 miles a second, or the equivalent of 300,000,000 meters a second. In order to determine the length of the waves sent out it is only necessary to divide the speed in meters at which the disturbances travel by

Cards easily added or removed. Note card on back of holder, doubling capacity.

These Records are KARDEXED

60,000 Up-to-date Users in Over 300 Lines of Business

Put your present filing cards in Kardex and their value has been increased. They present facts and figures in plain sight always, saving 50% to 75% of busy clerks' and executives' time.

Kardex your blind perpetual inventory, sales, advertising, production, payroll, ledger, credit and other records into plain sight. Use your present record cards or use new up-to-date Kardex forms.

Card holders easily added or removed, singly or in groups.

Each Kardex steel unit Kardexes 500 to 3,000 of any size record cards or ledger sheets, so that any card is instantly visible. By using backs of card holders, this capacity is doubled. Kardex units stack together for any number of record cards up to 1,000,000. You can make entry or refer to either side of any card without removing it from its transparent-tipped holder.

Write for KARDEX booklets. Send samples of cards you now use or ask for new Kardex card forms. If not convenient to write a letter, use the coupon below.

the frequency of their recurrence. If the transmitting set is vibrating at a frequency of 833,000 a second, then by dividing 300,000,000 by 833,000, we get 360, which figure gives us the length of the waves in meters.

Everyone understands that the ether which surrounds us is literally filled with noises, and the radio beginner likely at first will not understand just why, if this is true, he can adjust his receiver to hear a certain speech or song that is being sent out through the air. The plan used to eliminate radio interferences is easily understood if one will only undertake a simple experiment that is familiar to all musicians. Press down the forte, or loud, pedal of a piano, so that the strings are released, and then whistle some note or sound a note on a violin. The sound waves from your mouth or from the string of the violin will instantly set the corresponding piano string into vibration, which can be immediately determined by both the ear and the fingers. It will be noted that the string which is being excited will vibrate while no other string in the piano will be much affected. If the note you whistle or produce with the violin is made to ascend or descend in pitch it will be found that the piano string vibrates with greatest amplitude only when the note you produce is in agreement with the pitch of the string in the piano. Similarly radio-broadcasting stations adjust their instruments to send off waves of a given length, and the messages that are sent out are caught and heard only by receivers that are tuned to that same wave length. Furthermore, the receivers so adjusted will not be affected by messages of other wave lengths.

On practically all receiving sets is a dial which permits the operator to tune his instrument to whatever wave length he desires, provided it lies within the range of his machine. It is therefore certain that before long the broadcasting stations will adopt certain wave lengths for each particular kind of feature that is transmitted to the ether, and no one else within a certain area will be permitted to use exactly these same waves. One wave length will be used for market news, another for financial notes, a third for news of world affairs, while other waves will carry speeches and music. When this time comes—and it is not far distant—the dial on each receiving set will have engraved on it such titles as Crop Reports, Sporting News, General News, Children's Stories, Church Services, Classical Concerts, and so on. The owner of one of these radiophone receivers will simply set the dial on his apparatus to whatever feature he desires to hear, and at stated intervals during the day or evening the desired message will be caught and heard.

The Mystery of Dead Areas

There is very little doubt but that the members of certain industries who are vitally interested in each day's market quotations or other important facts bearing on their businesses will arrange to use radio service, paying the telephone company or some other broadcasting organization a stipulated sum for such daily service, which will be sent out once or twice a day at a prescribed time. Already certain industries have taken this matter up in earnest, and there is little doubt but that the dream of such service will be a realized fact before long. In this way radio will bring the fellow in the little town as close to the market as the man who sits in an office on Wall Street in New York.

Let no one think, however, that all this kind of development will come smoothly and without a ripple of opposition from established news agencies and other organized bodies with which the radio will mildly compete. For instance, one large news service of international scope recently discovered that news for which it charged small newspapers a nominal fee was being sent out by radio, and several country papers were getting a splendid service for nothing at all. In cases of this kind the parties concerned will be compelled to make arrangements and take such action as will be necessary to safeguard the interests of news companies engaged in a legitimate business.

With 750,000 radio sets actively in use here in the United States, and with several million people directly interested in the comparatively new art, it is certain that great speed will be made in advancing the business to a level of permanent usefulness and stability. Not all the discoveries be made by experts working in great l ratories. A half million young men, m with a fair knowledge of electricity, play a live part in the progress of w less. Already I have heard of two secti of the country that are said to be "des Why, no one seems to know. Bearing this same phenomenon is the experienc a young fellow in Southern California, w in trying to send a message by radio t friend in San Francisco, was heard in city of Washington, several thouss miles away, whereas he couldn't re San Francisco, only a few hundred mi away. Since the ether carries the ra waves, and, as stated, the ether exists the densest granite, it is altogether pr able that the ground is a conductor wireless waves, very much as is the air.

Doctor Steinmetz tells me that the theo that wireless waves may travel throu the ground as well as through the air well in accord with accepted electrical la He explained that a return circuit must provided, and that inasmuch as the sendi antenna and the receiving apparatus a both connected to the ground there is reason why the ground may not be t conductor for the return circuit or ma not even carry wireless waves itself. Pe haps one reason some places are dead because there is a break in the return ci cuit. There will be any number of prob lems of this kind that will arise from tim to time and that will make interestin points for amateurs as well as profes sionals to speculate upon.

Obstacles Surmounted

Each day, practically speaking, sees new step forward in radio. Most amateur who have become familiar with the workin of their sets have an intelligent understand ing of audio frequency amplification, but radio frequency amplification has bee more or less of a mystery. Now it is found that the radio frequency amplifier is a desirable aid, especially to amateurs who are using a small antenna and a somewhat unfavorable receiving location. Such operators, by merely inserting one or more stages of radio frequency amplification, can build up the weak currents that previously had passed through their detectors without being rectified, until they are capable of producing a loud signal. Audio frequency amplification can now be used to boost these signals to any desired intensity.

Amateurs living close to trolley lines have found that the sparking from the passing trolleys greatly interferes with the satisfactory operation of their receiving sets. One observant radio fan discovered that he could eliminate the greater part of the disturbance from the trolley by arranging his aërial so that it runs at right angles to the trolley wire. Another investigator found that with single-strand aërials, set up in different directions, the interference from the trolley is almost completely removed. This is a type of the kind of information that will be forthcoming from day to day, and with several thousand newspapers throughout the country engaged in a wild scramble for every radio fact or wrinkle that is new and helpful it is a safe bet that the advances in the art will come with record speed.

Then we must not overlook the fact that the universities in many states have added the study of radio to the school curricula. In some of the colleges radio clubs have been established, and these keep open house every night to give the students an opportunity to practice the operation of both receiving and transmitting sets. In half a dozen states the agricultural colleges are broadcasting weather reports and crop and market news. Very few of the colleges have gone in for amusing the public, it being their claim that they are academical, not theatrical. The schools of technology are using radio outfits primarily for experimental purposes in connection with their courses on the theory of radio engineering. Out of these colleges will come much of benefit.

As is always the case in the development of a new industry, the radio business is having to contend with the activities of a multitude of fakers who are doing the art incalculable harm. Companies are being organized to float all kinds of so-called wonderful radio inventions, 90 per cent of which have no merit or practical use. In one instance a crook advertised

In his Car nearly Six Years

The Gould Battery shown below began service Dec. 17, 1915. On Nov. 10, 1921, Mr. H. D. Snyder, Maryville, Mo., stated: "Been using it right along, day and night, until this afternoon." Affidavit and battery in office of Gould Storage Battery Co.

Longest Life by Owners' Records

DREADNAUGHT
(Reg. U. S. Pat. Off.)

Gould Endurance Contest

The slogan "Longest Life by Owners' Records" is based on the average long life record established in the recent nationally advertised Gould Endurance Contest by standard type Gould Batteries on various makes of cars—the average among all Gould owners entering the contest being 4 years and 1 month.

Gould Battery

Why the Gould has Long Life

Definite proof of the long life of Gould Batteries was established by a National Endurance Contest among Gould owners. The reason why Gould Batteries live long is equally definite. There are four fundamental factors:

1—Dreadnaught Plates

The famous long-life Dreadnaught Plates, made from an exclusive formula, are the foundation of Gould Quality. Their rugged stamina made possible the Gould National Contest Average Record of 4 years, 1 month.

2—Gould-made Oxide

Long life plates demand good oxide. To insure uniform high quality, all lead oxide used in Dreadnaught Plates is made in the Gould Oxide Plant. No other battery manufacturer makes his own oxide.

3—Armored Separators

Rubberized wood separators—combining the ideal porosity of wood and the acid resistance of rubber—are an exclusive patented Gould feature. *Long-life* separators side-by-side with *Long-life* Dreadnaught Plates.

4—One Quality Standard

Gould Batteries, whether for the Ford or the Rolls-Royce, are made to one standard only—Dreadnaught Quality. Every Gould for every car has the famous Dreadnaught Plates and Armored Separators, and bears the Dreadnaught trademark.

A Famous Battery Family

Gould Storage Batteries are specially designed and built for Farm Lighting Plants, Motor Boats, Electric Trucks and Vehicles, Home Radio Receiving Sets and Emergency Wireless, Railway Signal and Train Light Systems, Submarines, Mine Locomotives and Industrial Trucks.

GOULD STORAGE BATTERY CO.

a receiving set for sale at an absurdly low price, and asked all who were interested to come in and see a demonstration. Several hundred sets were sold on the strength of the splendid results obtained, but the unwary purchasers did not know that while they bought a crystal receiver, which they believed had supplied the great volume of sound which came from the loud speaker, the currents that produced the satisfactory results had come from a vacuum-tube detector and five stages of amplification which the trickster had secreted under the counter.

Everyone proposing to purchase and install a radio set should take time and investigate carefully before parting with his money. There are three general classes of receivers, of which the crystal set is the cheapest. Next comes the vacuum-tube set, and finally the vacuum-tube set employing the regenerative principle. This last-mentioned receiver is the most satisfactory, although of course it is the most expensive. It is not often that a crystal set will do good work, and frequently it is necessary to buy several pieces of mineral before a good crystal is secured. Few crystal sets tune up sharply, and all of them have a very limited range. Many people in Brooklyn using crystal sets are unable to receive radio features sent out by the broadcasting station in Newark, less than fifteen miles away. Vacuum-tube sets are twenty-five to fifty times as efficient as are the crystal sets. In using a vacuum tube it is well to bear in mind that it adds only a very little to the cost to add regeneration.

Receiver sets range in price from ten dollars to $250. A high-grade apparatus of standard make, useful within a radius of twenty miles, can be purchased for $32.50. This apparatus produces sounds that are clear, but not loud, unless the owner is very close to the broadcasting stations. An average receiver set having a range of several hundred miles can be purchased for seventy-five dollars complete. This set requires an ordinary dry cell, a special dry battery, and a sensitive element known as a vacuum tube, which costs $7.50 to replace. In fact, if the receiver of this set is used for long periods each day the vacuum tube and the dry cell must be renewed once a month at least. If the prospective user of radio wishes to receive messages over a range of a thousand miles he must pay from $200 to $250 for his set, which requires two batteries, costing three dollars, three vacuum tubes, costing six dollars each, and a storage battery. The dry batteries and the tubes require periodic renewing, and the storage battery, if used constantly, must be recharged once a month. With this last instrument a loud speaker can be used, enabling everyone in a room to hear the messages without the use of ear phones. Such a device costs from ten dollars to $100, depending on the quality and volume of the sounds it produces.

When Radio Becomes Common

In the case of the crystal detector it is necessary to adjust one of the members of the set until a sensitive spot is found on the large crystal. This detector has to be readjusted each time it loses its sensitiveness. In comparison with this, the vacuum tube is far more constant and positive in its operation, and is adjusted by means of a rheostat, which controls the flow of filament current. The vacuum tube is far more sensitive than the crystal, and is always more satisfactory.

In the matter of the receiving aërial it should be remembered that the better the receiving apparatus the smaller the aërial required. In some cases amateurs use nothing more than twenty-five to fifty feet of magnet wire, concealed behind the molding of the room in which the receiving set has been installed. Of course the range of a receiving set is materially extended if a larger aërial is erected.

Some people believe that the development of radio telephony will be only a little less important in its effect on our lives than the invention of printing. In the amusement field it will be second only to the motion pictures. When radio broadcasting has been developed a little further it is certain that a dozen or more different kinds of features will be sent out concurrently on different wave lengths, so that the members of any family owning and using a radio receiving set will be able to choose from a variety of features that particular lecture or other number on the program which strikes their fancy. Radio has an advantage over the press because its action is immediate. It is also superior to the telephone and the telegraph, for these reach only specific points, while wireless telephony covers an area.

It is not too much to say that the radiophone will tend to develop the people of a nation into one family and will serve effectively in removing such obstacles to international amity as the boundary lines that separate nations. Radio enthusiasts predict that wireless broadcasting will uplift the popular taste in music and the spoken drama; it will link up the officials of the government with the citizens they are supposed to serve, and the result will be that reactions to great issues will be direct, swift and powerful. In the matter of communication it is the nearest approach to the instantaneous that human minds have ever conceived. It brings a distant voice to our ears and causes the diaphragm of the telephone to vibrate simultaneously and in unison with the vocal cords of the speaker. If the President were to speak in a great auditorium in Washington his voice could be made to reach the ear of a listener at a radiophone in New York more quickly than the same words would reach the ears of those members of the President's audience in the auditorium sitting in the last row of the gallery.

The Scientific Fans

A lot of folks are fearful of the future of radio in those fields of communication where it appears to fit, because wireless messages cannot be sent in privacy. Let no one doubt but that this handicap will soon be overcome. Already instruments have been invented which send out messages in code with tremendous speed, and other machines decode these messages at the receiver. People picking up such messages would not be able to understand them, and certainly would not be able to decipher the code in time for it to be of any practical use. All such code machines will be able to alter the code they use whenever it is found desirable to do so.

Then there is another instrument which will soon be on the market and which will send out the voice so greatly distorted that anyone listening in would hear nothing more than an unintelligible hash of words or sounds. With this instrument goes a receiver which is designed to pick up the gibberish and convert the sounds into intelligible language. With such inventions available, it is safe to say that the ether will soon become as safe a conductor as the cable or the private wire.

The development of radio telephony has already advanced to the point where it is purely a public matter, and the whole future of the art or industry must be shaped in accord with the principle of the greatest good for the whole people. The great trouble that now appears will be in controlling the army of ambitious amateur enthusiasts who really mean to do no harm, but if permitted to operate at will would soon choke up all the receivers in their neighborhoods. Many of these fans, who are more interested in being heard than in hearing, entirely overlook the fact that the great mass of the public is not imbued with scientific interest but is wholly concerned about being entertained, and it is this great majority of our citizens who will have the last word to say with reference to the rules and regulations that must be prescribed for radio.

Though the entertainment uses of radio appeal most just now to the average layman it will not be long before everyone will comprehend the true worth of this new art as a commercial and industrial asset. Though it is entirely possible, when atmospheric conditions are favorable, to talk across the continent or for even greater distances over water, such long-distance communication by radio is far from being dependable, and day in and day out is not to be compared in reliability, service or economy with the transmission of messages by wire. However, for a one-way broadcasting service, to reach a great number of people in a limited area, radio offers an interesting as well as a promising field.

The first important commercial broadcasting station is now being erected on top of a twenty-four-story building in the downtown section of New York City. This station will be operating within a few weeks, and will use an antenna 100 feet

Silk Hose Economy!

Silk Hose Economy!—Iron Clad No. 903 are beautiful, pure thread, silk stockings with 8-inch elastic hem top and cost but $1.50 a pair (East of the Rockies), strongly made with four ply heel and toe, and high spliced silk heel. And the back seam and fashion marks give all the appearance of full fashioned hose.

Ask your dealer for these handsome durable hose. Get several pairs. If he doesn't carry them, order direct, enclosing remittance and stating size (8 to 10½) and colors desired. Your order will be promptly filled postpaid.

Cooper, Wells & Co.,
212 Vine St., St. Joseph, Mich.

"Iron Clad"

high. This important distributing station will be equipped with the latest developments, including the use of electrical filters and new methods whereby, as the business grows, several wave lengths can be sent out simultaneously from the same point, so that the receiving stations may listen at will to any one of the several services. This will be the first station that will handle the distribution of news, music and other features on a commercial basis for such people as contract for the service. The company will provide no program of its own, but simply will supply a channel through which anyone with whom it makes a contract can send out his own program. It will lease its radio facilities just as wire facilities are now leased to newspapers, banks and other concerns.

The station will cover a radius of 150 miles, and it is estimated that within this area there are already 35,000 receiving stations, which provides quite an audience for those using the service. In this same area are more than 11,000,000 people, so that if the service proves popular it is only reasonable to suppose that the number of receiving stations will be vastly increased. It is not too much to say that at least the immediate future of commercial radio telephony depends largely on the success attending the operation of this first station. If the idea catches hold and if there is not too much interference in the ether from other stations this initial experiment will doubtless be followed by the establishment of a system of stations throughout the country, so that from any central point the same news, music or other program can be sent out simultaneously through all these stations by wire and wireless with the greatest possible economy.

The possibilities of radio are endless. The appeal is universal. The radio telephone has developed in a few months from a schoolboy's toy to a household apparatus of value and a business device of merit. It is an invention with a definite field and a useful future; a war necessity and a peace asset. Soon there will be more radiophones in use than pianos, and who dares say it will not be as much a household utility in the future as the telephone, the bathtub and the kitchen stove?

Statement of the Ownership, Management, Circulation, Etc.

REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912

OF THE SATURDAY EVENING POST, published weekly at Philadelphia, Pennsylvania, for April 1, 1922.

State of Pennsylvania } ss.
County of Philadelphia }

Before me, a Notary Public in and for the state and county aforesaid, personally appeared George H. Lorimer, who, having been duly sworn according to law, deposes and says that he is the Editor of THE SATURDAY EVENING POST and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

NAME OF	POST OFFICE ADDRESS
Publisher, The Curtis Publishing Company	Independence Square, Philadelphia, Pa.
Editor, George H. Lorimer, Wyncote, Pennsylvania.	
Managing Editor, None	
Business Manager, P. S. Collins, Wyncote, Pennsylvania	

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

Edward W. Bok, Merion, Pennsylvania
William Boyd, Wynnewood, Pennsylvania
Philip S. Collins, Wyncote, Pennsylvania
Cyrus H. K. Curtis, Wyncote, Pennsylvania
Cyrus H. K. Curtis, Trustee under the will of Louisa Knapp Curtis, Wyncote, Pennsylvania
John Grubbs, Wyncote, Pennsylvania
Edward W. Hazen, Haddam, Connecticut
George H. Lorimer, Wyncote, Pennsylvania
C. H. Ludington, Ardmore, Pennsylvania
Ethel S. Ludington, Ardmore, Pennsylvania
Fredrik F. Meyer, Farmers' Loan and Trust Company, New York City
E. W. Spaulding, Ridgewood, New Jersey
Public Ledger Company, Philadelphia, Pennsylvania

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but, also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also, that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona-fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is: (This information is required from daily publications only.)

THE CURTIS PUBLISHING COMPANY,
GEORGE H. LORIMER, Editor.

Sworn to and subscribed before me this 28th day of February, 1922.

[SEAL] W. C. TURNER,
Notary Public.

(My commission expires April 1, 1923.)

NOTE.—This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

ORIENTAL Superstition?—Perhaps so—but at least an interesting relic of Asiatic Antiquity. Alleged by the Chinese to be almost uncanny in its power to bring to the wearer GOOD LUCK—Health, Happiness, Prosperity, and Long Life.

This odd looking ring excites great interest when observed on your finger. *Go to your local jewelry store at once* and ask to see this odd CHINESE GOOD LUCK RING and obtain a copy of its *history*.

None genuine without the Σ stamped inside the ring

Increase Your Pay
Within the next few months!

Are you sacrificing the best years of your life to a routine job, in the thought that you must *stand in line* for promotion—that you can advance only at the shuffling pace of the rank and file? The man who depends on *length of service* for advancement rarely gets beyond the information desk.

Why throw away your future in a low-pay job, when you can qualify, in a comparatively few months, for a high-salaried position as a business specialist?

Thousands of men with no better start than you have doubled and tripled their incomes by home-study business training under the LaSalle Problem Method. During a period of only three months, 1,089 members of LaSalle Extension University reported definite salary increases as a result of training under this remarkable method. *The average increase per man was 56 per cent.*

If "half as much again" would look good to you *within the next twelve months*, and if you have the stamina to do the work, check the training that interests you, sign and mail the coupon NOW. It will bring you full particulars, together with details of our *convenient-payment plan;* also your free copy of "Ten Years' Promotion in One." "Get this book," said a prominent Chicago executive, "even if you have to pay five dollars for it." We will send it *free*.

Make your start toward that bigger job TODAY.

THE LIBERTY OF THE JAIL

(Continued from Page 15)

"Sure, that's easy!" assented T. Otis jauntily. "I should be a lawyer myself."

"Well," continued Lefkovitsky, "when a bond is given, conditioned on the debtor's remaining within the jail limits, that lets the sheriff out. The bond takes his place, so to speak, and if the debtor escapes or goes outside the jail limits the creditor cannot sue the sheriff, but must sue the surety on the bond. Now freeze onto this: As any defense open to the sheriff in an action for an escape is likewise open to a surety in an action on the bond, if the debtor comes back before the action is begun the action falls; the creditor has lost his right to sue."

He looked around triumphantly.

"Well, what of it?" asked Mrs. Crabb. "What are you driving at?"

"I'm driving at just this: No action can be commenced legally except by personal service of the summons and complaint upon the defendant, on a week day, within the state. Therefore in any event your husband could go away on a Sunday, and so long as he came back within the jail limits before midnight no action could be commenced against the surety, no matter where he went."

"I see that," she nodded. "But Otis can't wait till Sunday comes to spend the week-end at Atlantic City with me and get back the same day. There would be nothing in that."

"Of course not!" agreed Lefkovitsky. "He don't have to wait for Sunday. Just let him take Mr. Fosdick with him when he goes, and he can leave New York on Thursday or Friday and come back Monday afternoon. Tutt can't begin an action on the bond while Mr. Fosdick is outside the jurisdiction, and he can't begin it at all after your husband has come back inside the jail limits. If they go away and come back on the same train everything will be all right."

"Well, I'll be damned!" ejaculated Mr. Fosdick in bewildered admiration.

"Certainly looks good to me!" said T. Otis. "What do you think, ma—my dear?"

Mrs. Crabb smiled appreciatively at Mr. Lefkovitsky, now entirely satisfied that she could keep her money and have her Otis, too, over the week-ends.

"I think," she replied, pressing the bell with sudden decision, "that anything as slick as that is worth a round of drinks. Grape juice, Martin."

While this distinguished group were engaged in the foregoing conversation upon Riverside Drive, Ephraim Tutt was sitting in one of the wards of Bellevue Hospital beside a cot upon which a human form was strapped immovably to an iron frame. Wallace Barrington was going to recover, but he would be a cripple for life; he, his mother and his children dependents upon public charity unless the law came to his aid. He was thirty-two, had been an expert in his line, a hard-working man of ideals. Now he was little more than an inanimate object. And the thought of what he had been and what now he was, the sudden collapse of his little universe, the crushing of all his hopes, were mirrored in the despairing eyes he fastened upon the old lawyer's kindly face.

"So you're not to worry," said Mr. Tutt encouragingly as he felt beneath the chair for his stovepipe hat. "Your mother and the children are going right on living in the apartment, and there is a woman who comes in every day to do the cooking and take care of them."

"But who pays her?" asked the man in the frame hoarsely. "I had practically nothing in the bank."

"Oh, that's all right!" Mr. Tutt assured him. "The money is being advanced against the fifty thousand dollars which T. Otis Crabb will eventually pay you."

"How soon will that be?"

The lawyer wrinkled his nose and winked at the picture of one A. Lincoln upon the wall above the bed.

"I'm hoping he'll arrange to pay it in about ten days," said he cheerily.

"I shall never be able to thank you enough," whispered Barrington, closing his eyes.

But by the time the old man had reached the elevator the cheerful expression upon his face had vanished.

"What did you tell him that for?" he muttered. "You're a damned old liar, Tutt! Now, by thunder, you may have to support that family for the rest of natural lives!"

He and Mr. Lefkovitsky passed— did not recognize—each other on their home.

IV

"AND ten," said Mr. Joshua Carman just like that, with his forefi advancing two blues into the field of ba An unemotional person, Carman, gr superintendent of one of the big rail terminals. It was the regular Saturd night session of the so-called Bible Cla the Colophon Club, 11:54, and six min to go.

"I run," cravenly remarked Col. Clay Jones, the next in order.

"*Ich auch!*" echoed M. d'Auriac, Paris, who had run up from Washing

"And even I!" squeaked the tiny l bear known as Peewee Cadwalader.

All laid down their hands and turn towards the Hon. Ephraim Tutt, w elongated features expressed neither nor joy.

"I cal'late," muttered the colonel M. d'Auriac as he clipped a fresh ci "that if no one is shy there should be exa five hundred and twenty-three bones that cemetery."

"Seven thousand eight hundred a forty-five francs—at to-day's rate," nod the Frenchman. "*Beaucoup d'argent!*"

"And ten," said Mr. Tutt, placing t more blues—his last—upon the leani tower in front of him. "Farewell, de little ones!"

"Making in all five hundred and thirty three," murmured the Peewee.

Mr. Carman thrust his cards jauntil into his collar at a certain sanctified spo adjacent to his right ear. He had just tw more blues. Nobody else had much of any thing. It was all in the pot. He and Tut had each drawn but one card.

"And ten," he whispered as if in a ecstasy.

The minute hand of the clock on the mantel had slipped to within two minute of midnight. Mr. Tutt pulled back hi sleeves and deftly removed the huge sin cular onyx buttons ornamenting his cuffs

"Are these good for a raise?" he inquired

"Sure!" nodded his adversary.

Mr. Tutt placed each one upon the spot of a pile of blue chips.

"And ten!" added the railroad man, shoving in his last.

The circle formed of the players from the other games in different parts of the room drew closer about the green table. All had frequently seen Mr. Tutt depart minus everything but his clothes.

"Well," moaned the old man, "though great is my faith in the hand which our distinguished military guest has dealt me, unfortunately I cannot walk home in the nude. However, I have one last resource. I will throw in my old tall hat and my ivory-handled cane—a sacrifice, you will admit, for I have used each of them over thirty years—as equivalent to a raise. And since you have no more chips, Carman, I will bet the entire lot against a favor."

"A favor?" repeated the railroader, wrinkling his forehead.

"That's a new one to me!" remarked the Peewee.

"Simple enough," explained Mr. Tutt, as if playing for a favor were an ancient and familiar custom of the game, although he had invented it on the spot. "If he wins he gets my all—except my skin and bones; if I win he has to do me a favor."

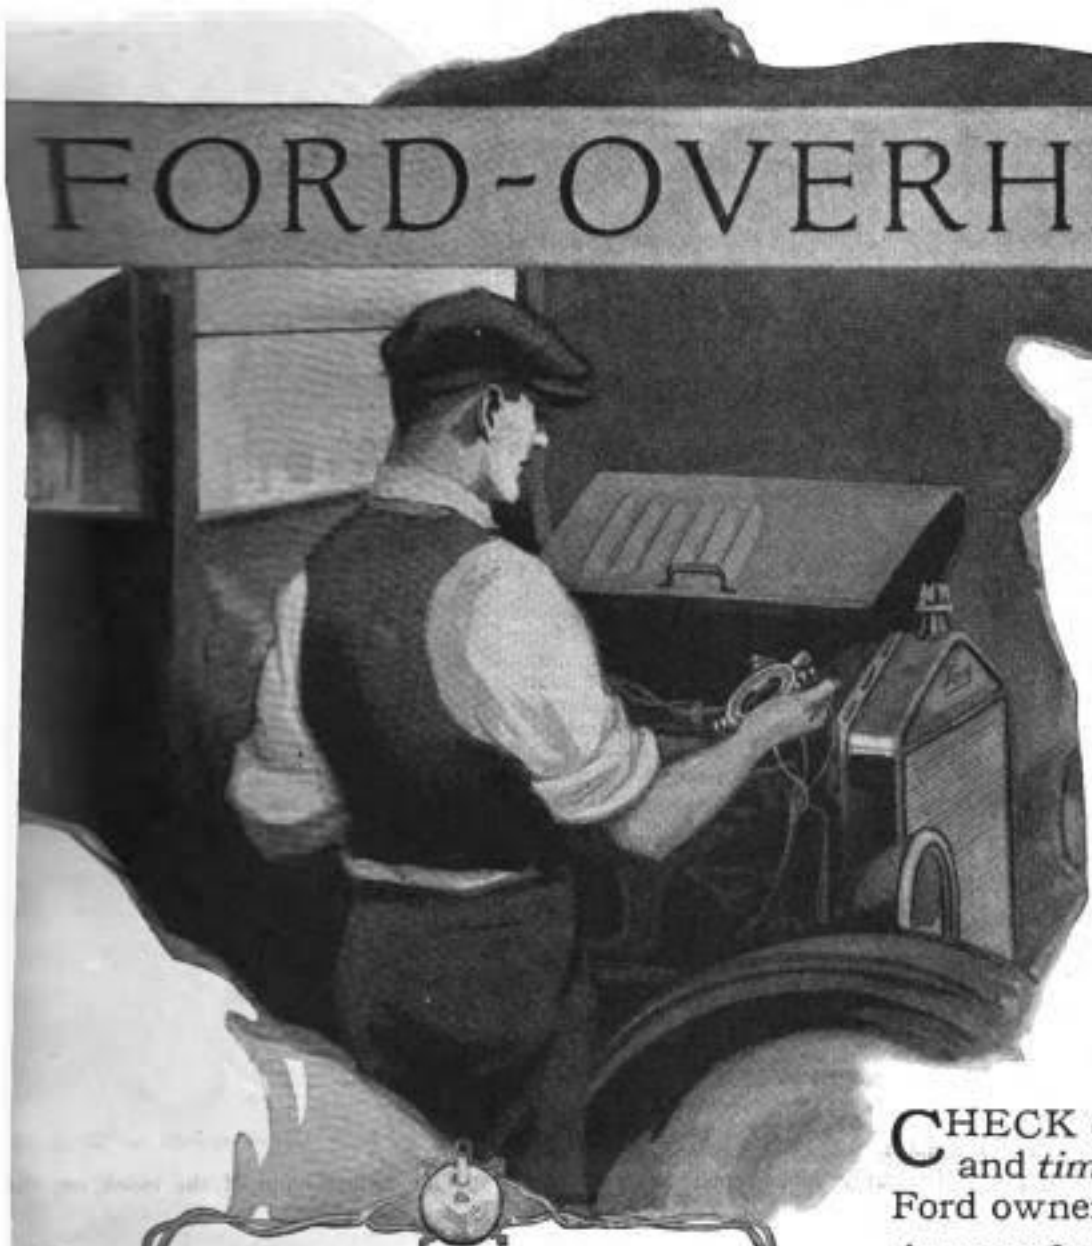
"What sort of a favor?"

"Oh, anything reasonable. Just a favor."

"Done!" agreed Carman. "Take notice, gentlemen, the Honorable Ephraim Tutt and I are now playing for the pot, plus his cuff buttons, tall hat and cane, with a phantasmagorical, diaphanous and elusive thing y-cleped a favor on the side. I call! He calls! We call each other!"

He removed the cards from his collar with a beat-that-if-you-can gesture and spread them face up before the crowd.

"Marjorie, Minnie, Molly and Maud!" he murmured exultantly.



Mr. Tutt bent over and examined the ladies with interest.

"Dear me! Dear me! Nice girls, very!" he commented, spreading his own hand. "Joshua, Jephthah, Japheth and Jehoshaphat!" he chuckled, matching each queen with her own king.

FORD-OVERHAUL TIME

Is *Yours* Ready for the Road?

Scraping carbon, grinding valves, tightening nuts—Overhaul Time!

*Ford owners bustling about their garages, grease-smeared and happily busy, their household chores postponed—Signs of Spring! Millions of Fords are being groomed, greased and garnished for the season—**is yours?***

CHECK over your Ford's *ignition*—plugs, wiring, coils, and *timer*. It's vital to engine performance—too many Ford owners don't realize how vital.

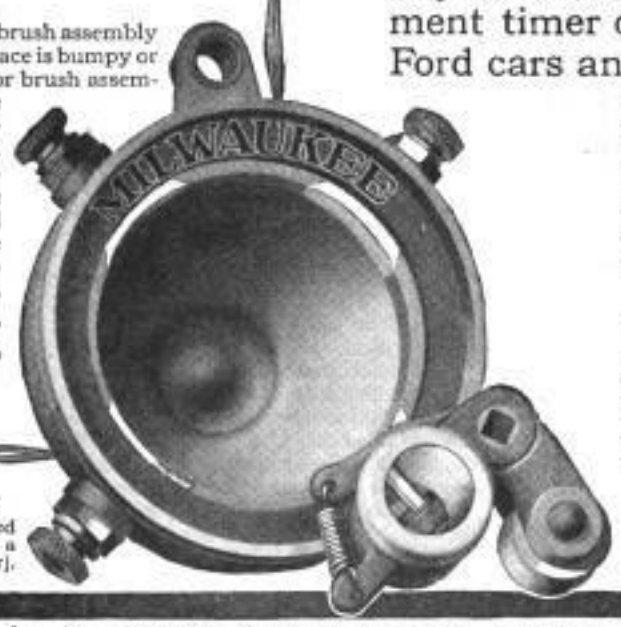
A worn, faulty, or unreliable timer will make the best Ford engine labor, misfire and carbonize like an old "junk".

Play safe! Start the season with a new timer. The cost is only a detail—the best you can buy, the Milwaukee Timer, costs no more than a tank-full of "gas"!

You will notice at once the improvement it makes. Each cylinder gets a hotter spark—your engine starts quicker, pulls harder and steadier, and stays cleaner (most of the carbon burns up instead of baking in).

Sixteen years of ignition engineering are back of the Milwaukee Timer's simple, smooth-running design and super-accurate workmanship. Compare it point by point with any other and you'll see why it is the standard replacement timer of the world—in general use everywhere, in Ford cars and trucks, and Fordson tractors.

How to Revive Your Ford's Ignition



Coils. File vibrator contact points smooth, see that they meet squarely, and set all evenly to a gap of $\frac{1}{32}$ inch. Your Ford dealer will willingly test them for even tension. Have this done.

Plugs. Disassemble all spark plugs, wipe porcelains clean, examine closely for cracks. Better replace porcelains if they have gone over 5,000 miles. Scrape plug body clean, reassemble and set gap at $\frac{1}{32}$ inch.

Wiring. Examine for oil-soaked, frayed or exposed places. Better replace entire "harness" if in doubt. Seldom worth while to repair with tape, etc. See that fan or fan belt cannot rub wires.

Timer. Remove case and brush assembly and examine for wear. If race is bumpy or irregular, contacts loose, or brush assembly badly worn, replace with complete new timer—one you know is good. Oil thoroughly—follow manufacturer's directions. See that wires are attached *firmly*, and that advance rod is set for correct advance and retard action.

Above all, don't "try out" any complicated or cheap timers. Play safe!

The short-circuit-proof timer! Contact points sealed and anchored in their machine-cut grooves by a special method [patent applied for].

Each Milwaukee Timer is rigidly tested, mechanically and electrically, before packing. It fits perfectly, runs freely and quietly—and its durability is famous. *Ask any garage mechanic* about the Milwaukee Timer. Sold by garages, auto supply, and hardware stores everywhere. PRICE **$2.00**

"Buy Where You See This Sign"

Dealers: This steel "silent salesman" is sent free to you, postpaid, on request. Holds complete timer. Attractive and effective. Write for yours.

THE GENERAL CORD TIRE

Kiddies' Coloring Contest
$500 Cash

For best colorings of cars in the big double-page advertisement of General Tires on pages 96 and 97 in this paper.

53 Prizes

First Prize $150; Second Prize $75; Third Prize $25, and fifty prizes of $5 each.

Conditions

1 *Coloring may be done with water colors, crayons, inks, or any coloring material.*
2 *Must be done by boys or girls under 12 years of age.*
3 *Entry blank must include signature of an automobile owner vouching for age.*
4 *Coloring must be done without the aid of any older person.*
5 *Colorings must be delivered to the General Tire dealer in your city before May 1st, 1922. He will enter you in contest and forward your coloring to the Contest Judges for The General Tire and Rubber Company at Akron, Ohio.*
6 *Prizes will be awarded on artistic merit of colorings and will be announced in one of the June issues of this paper.*

----Entry Blank----

Your Name .....
Age .....
Address .....
City and State .....

Certificate of Age

The above contestant is under 12 years of age.

Signature .....
Street and Number .....
City and State .....
Make of car owned .....

This entry blank, properly filled out, must be attached to the back of your coloring when you deliver it to the General Tire dealer in your city.

$3 down brings genuine
UNDERWOOD

Yes, only $3 down puts this genuine standard Shipman-Ward Rebuilt Underwood in your home. Then—small monthly payments, or if convenient, pay cash. Either way you get the *world's standard* typewriter at a big cash saving.

WHY PAY RENTAL?

Think of it! You pay little more than rental, and the machine is yours! We offer the same three models of the Underwood Typewriter which are being made and sold by the Underwood Company today. The only difference is that Shipman-Ward machines are priced lower and are rebuilt like new by experts. You can't tell them from brand new machines. Visible writing—the FULL LINE of typewriting is visible at all times. STANDARD 4-ROW SINGLE SHIFT KEYBOARD. Two color ribbon, back spacer, stencil device, automatic ribbon reverse, tabulator, etc.

TEN DAYS' FREE TRIAL

See for yourself! Try the typewriter ten days. You must be satisfied or the entire transaction won't cost you a penny. Act today. Get our big illustrated catalog and full particulars. Write NOW.

(Continued from Page 146)

There was a wild cheer from the onlookers as Mr. Tutt gathered in the pile upon the table. The clock was striking twelve.

"And now," said Carman with a grimace, "what is this favor I've got to do you?"

The old lawyer slowly replaced his sleeve buttons.

"I haven't lost you yet!" he whispered to them. "Why, I don't know, Carman. It is Sunday morning. Whoso hath an ox or an ass which hath fallen into a pit is entitled to have him hauled out on that day, as I read the Scriptures. Let's walk along together, and if you should care to stop in at my house maybe I could give you a drink of—h'm!—malt extract."

"I sure will!" said Carman, who, as we said, was in the railroad business.

▼

"PRAY pardon the simplicity of my welcome, Carman," remarked Mr. Tutt as he relieved his guest of his overcoat and hat, suspended them from one of the arms of the hat tree in the front hall, and preceded him up the rickety stairs of the old house on West Twenty-third Street to the library. "This being the Sabbath, my manservant and my maidservant are both resting."

He turned on the gas and ignited it with a safety match. Mr. Carman, who had played poker with Mr. Tutt every Saturday night for over fifteen years, but had never visited the old man at his home, looked round the study with interest. It was so just like Mr. Tutt himself! There was a sea-coal fire in the grate and a kettle steamed on the hearth; ancient engravings and a couple of colonial portraits hung upon the walls, which were covered with what Mr. Carman decided was the ugliest paper he had ever beheld; the carpet was threadbare—Turkey red; a horsehair sofa stood at one end of the room, and between the windows a high colonial secretary, while on each side of the marble mantel reposed two horsehair-covered walnut armchairs whose bottoms sagged to within an inch or so of the floor.

"Sit down, Carman," directed Mr. Tutt.

The railroad man looked suspiciously at the hammocklike seat of the nearest armchair.

"Damn if I think if I once sit down I shall be able to get up again!" said he simply.

"Sit down!" repeated Mr. Tutt. "Will you have hot toddy, port, Madeira or sparkling Burgundy?"

He turned to the escritoire, the glass doors of which were lined with faded green silk, and, unlocking it, disclosed a small but complete collection of bottles of all shapes and sizes. Mr. Carman sank instantly into his allotted hole.

"Burgundy!" he answered hoarsely with a light in his eyes.

Mr. Tutt, opening the lower half of the escritoire, took out two glasses with hollow stems, and having placed these carefully upon the rug between the two chairs excavated from the rear row a dusty bottle, the cork heavily wired and wrapped in scarlet tin foil. Then he slowly lowered himself into the chair opposite Mr. Carman, which, owing to his own length and the nearness of his seat to the floor, gave him the appearance of a partially folded pocket knife, but enabled him to grasp the bottle firmly between his knees.

"Who's doin' the favor now?" inquired Mr. Carman significantly.

"Pop!" said the bottle. "I am!"

Mr. Tutt held it for an instant above the ashes as the contents creamed over the neck, and then carefully filled the glasses upon the rug.

"There are," he remarked sadly, "exactly five glasses of wine in that bottle. However, I am not particularly thirsty, and—there is another bottle."

"Here's luck!" said Mr. Carman.

"Here's misery, marital infelicity, chilblains, financial ruin, rheumatism, indigestion, sciatica, arteriosclerosis and all the murrains, plagues and evils known to ancient times and to modern man, upon one T. Otis Crabb—damn him to everlasting hell!"

He lifted his bubbling ruby glass, eyed it critically and slowly emptied it.

"One!" he said, wiping his mouth with the back of his hand.

"Ah—one!" echoed Mr. Carman. "Tutt, I'll do you a favor every Saturday night if you press me."

Mr. Tutt reached to the humidor on the near-by table and tendered his guest a cigar, and while Carman was lighting it filled the two glasses again.

"Well," he remarked, "here's to the favor!"

"The favor!" nodded Carman.

"I suppose," said Mr. Tutt, "that being a railroad man you agree with Mr. Bumble that the law is an ass."

"I don't know the man, but he's certainly got the right idea," returned his guest.

"I'm up against a legal farce," went on the old lawyer. "I've got a judgment of fifty thousand dollars against a miserable swine that ran down and nearly killed a client of mine, and I can't make him pay a cent, although his wife has all kinds of money."

"Can't you arrest him for the debt?" asked Carman.

"I have! But he got a friend of his to go on his bond for the liberties of the jail. His wife put up the security and now he goes anywhere he wants."

"You mean if you put a man in jail for debt he don't have to stay there?"

"That is precisely what I mean. If a New York judgment debtor who has been arrested gives bond in the requisite amount and keeps within the boundaries of Manhattan Island he can disport himself freely from the Battery to the Harlem Canal, and from the Hudson to the East River, eating at Delmonico's and sleeping at the Waldorf, spending his mornings in Central Park, his afternoons at the movies and his evenings at the theater, and still technically be in prison, for he is within the jail limits as defined by law. And at the end of six months he's free for good and all!"

"That's a good thing to remember," affirmed the railroader.

"Also this," continued Mr. Tutt. "You might use it sometime. If the imprisoned debtor can induce his bondsman to leave the jurisdiction in his company and return at the same time that he does—or later—he can disregard the jail limits entirely and go to Atlantic City or anywhere else for a few days every week, just as my man is doing."

"You don't say! Is he now?" exclaimed Mr. Carman sympathetically.

"He is! But he takes his surety with him and brings him back on the same train, so that there is no way for me to begin an action on the bond until there is a good defense; namely, that the debtor has returned."

"What wise guy worked that out?"

"Mr. Aaron T. Lefkovitsky."

"He's a great man. I'd like his telephone number and office address," said Mr. Carman. "Well, this is all very interesting, but what has it got to do with me?"

Mr. Tutt stroked his lean lantern jaw and gazed meditatively at the empty glasses.

"That remains to be seen," he murmured. "That remains to be seen. How about that other bottle?"

Mr. Carman instantly showed new signs of life.

"Ah," he exclaimed, "who is this miserable wretch? Tell me all about him!"

VI

"OH, BOY!" exclaimed T. Otis Crabb, elongating himself deliciously upon the sands in front of the Traymore at Atlantic City in a snappy, sleeveless, white-and-green one-piece bathing suit. "This is certainly some jail!"

Mrs. T. Otis, also in snappy bath attire, which, it must be confessed, exposed her limbs to great disadvantage, glanced coyly at him from under her purple-and-vermilion sunshade.

"You'll come down again next week, dearie?"

"Right-o! Fozzy says he can leave town on Thursday and stay over until Tuesday. That right, Fozzy?"

"Surest thing you know!" replied his elegant associate, stretching in sympathy.

"Lefkovitsky's a very clever fellow," yawned T. Otis. "All samee he's shown me a way to beat him out of his bill if he tries to do me."

"I hope that he isn't too smart," said his lady. "I'd hate to lose fifty thou on a cripple."

"Bet your life the cripple will never see a cent of your money!" assured Fozzy. "Even I, with my subatomical admixture of brains, am able to cognate the proposition that you can't serve papers on a man in the state of New York if he isn't there, and that if the return of the dear departed to the jail limits before the papers are

served is a good defense to an action T. Otis and yours truly can ride up and down from town to Atlantic City all summer without anything to fear from that old geezer who tried the cases against you."

"Old Tutt's not much of a lawyer," remarked T. Otis, lighting a cigarette.

"He got the verdict," countered Fozzy.

"But not the money!" laughed Mrs. Crabb. "We've got that!"

"Any lawyer can get a verdict for the plaintiff in a damage suit," declared T. Otis. "But it takes a real one to collect a judgment."

"My idea of a real lawyer is Lefkovitsky," said Fozzy. "If I ever get into trouble I'm going to him. Think of his being able to cook up a way for you to spend most of the summer down here and yet be in jail all the time! Yet it's simple enough. Anybody might have thought of it. We go away together and we come back together, and your comin' back makes it useless to serve papers on me. Ha-ha! Bean work! Bean work!"

"Only," warned Mrs. Crabb, "you boys must be very careful to come back at the same time."

"Oh, yes, ma—my dear!" her husband assured her. "We've got all that dope down cold. We go together and we return together, like Siamese twins. In the words of the famous song by O. W. Holmes, 'Nothing shall sever our friendship ever!'"

"That's right, or it might cost me fifty thousand," smiled Mrs. Crabb.

Number 1112 is the snappy train leaving Atlantic City at 2:40 on Monday afternoons that snappy fellows like T. Otis take back to New York City—when they are in jail for debt. It is a flyer—leaves Manhattan Transfer on the Jersey side, where you change for lower New York and Brooklyn, at 5:24 and then ducks down through the double-barreled tunnel under the Hudson and shoots into the lower level of the big station on Thirty-fourth Street at 5:40. When there is a big rush of homing jailbirds No. 1112 runs ten cars, and—through the tunnel—two engines, for the grade beneath the river silt is heavy; a long train, a very long train, indeed; nearly, if not quite, a full quarter mile.

Number 1112 was the train T. Otis and his friend Fozzy took that same afternoon, and as usual they beat it for the forward smoker with two other dashing fellows for their regular game of bridge. T. Otis had lost only sixty-eight dollars of his wife's money by the time they reached Manhattan Transfer, and the party were so engrossed in what they were doing that none of them noticed the strange little group of three who boarded the train just before it started across the devastated regions beyond Jersey City preparatory to plunging beneath the river. They still had sixteen minutes to play, and T. Otis wanted to win back Lucretia's sixty-eight dollars if he could.

"Speed it up, boys!" directed Fozzy. "Gimme the pasteboards. It's my deal."

He dealt rapidly. Gaunt factories and piles of soft coal flicked by the windows. The porter turned on the lights.

"Sixteen minutes more!" said T. Otis as they picked up their hands. "I'll make it. Two on hearts."

At that precise instant a very elegantly dressed young gentleman touched him on the shoulder, almost as dashing a fellow as T. Otis himself, and bending over mysteriously whispered something out of the corner of his mouth.

"I'm going to play it alone," announced Fozzy.

"Good!" laughed T. Otis, with an equal air of mystery. "I'll be dummy the next couple of hands." He grinned expansively and winked. "Lady wants to speak to me back there."

Thus like a lamb led to the slaughter did T. Otis trot after Bonnie Doon back even unto the last car. For of all the words of tongue or pen there are none so irresistible to a dasher, a masher, a wise one, a devil, as "Say, there's a girl in the last car who wants to know if you're going to speak to her." And, be it remembered, there were three long days until Thursday.

Thus, as No. 1112 dropped beneath the cellars of the western bank of the Hudson, T. Otis worked his way at Bonnie Doon's coat tails through the nine other cars, his heart beating with high expectancy.

Over in the terminal building, at his desk in Room 223, sat Mr. Joshua Carman, the general superintendent, obligated by his word of honor to do Mr. Tutt a favor. Mr. Carman represented the third, or "What-Then," side of the old lawyer's triangular problem, and without him this story would have remained unwritten. For no one else could have done what he, stifling his official conscience, was about to do for Mr. Tutt. Entombed like an Egyptian astrologer in the center of a pyramid, he, nevertheless, had his finger on every train on the terminal system. What he said went, and what he stopped stopped.

"By the Lord," he muttered, "I wonder if any other fellow in my place ever had the nerve to do a thing like this before! All the same," he added to himself, "the rules say 'emergency,' and who's to be the judge of what an emergency is if I'm not?"

All the time he had his eyes on the clock.

"Five-twenty-four—she's just pulling out of the Transfer," he remarked with what in a prima donna would have been described as a slight tremolo. He reached nervously for a cigarette and lighted it.

"Five-twenty-six — twenty-seven — twenty-eight ——" His heart was really thumping, for he felt like a schoolboy about to pin something on the teacher's back. "Charlie," he shouted to a bald-headed youth, "get me Forty."

Charlie unhooked the receiver.

"Line's busy, chief," he replied.

Mr. Carman felt a curious prickly sensation steal up his arms and over his shoulders.

"Forty" is the train locomotive dispatcher, the official who directly controls train movements and through whom orders are customarily given by the supervisor, or on occasion by the general superintendent.

Five-twenty-nine! Number 1112 was well down in the tunnel by now. He would have to give the order directly to the Train Director in the A Tower if he was to be in time to help Mr. Tutt. There wasn't a fraction of a minute to lose, either. Feverishly he grabbed the telephone.

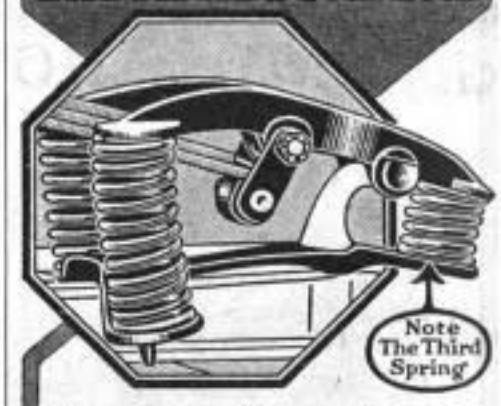
"Give me A Tower," he ordered. "And hurry!"

Johnny McNaughton, up in the big signal-bridge Tower A, on the "Island Platform" at the Manhattan opening of the tunnel, was sitting, pipe in mouth, his eyes fixed on the board which, like an animated cartoon, shows the movement of every train by a tiny green light that creeps along and stops and creeps along again. Johnny was the man who actually controlled every signal, could start or stop or deflect any train upon the system—the train director, the man at the switch—accountable to no one but the general superintendent, the supervisor, the dispatcher—and God.

Evensong on a Monday afternoon is a busy moment for Johnny McNaughton, and trains are following one another both ways through the tunnel every few moments. The little green light that was 1112 moved to the spot that represented the Manhattan Transfer, stopped and started again.

Johnny knew her passing time was five-twenty-four, and that in another sixteen minutes the little green light would have slipped by all the tunnel signals on the diagram, and that he could look into the mouth of the east-bound tunnel and see her headlights as she came roaring through. Unconsciously he looked into it now—that round deep hole with the signal over its mouth—the signal repeated every thousand feet or so through the tunnel, by which he could control all trains. It showed red. That meant that the signals were set clear, green, against the trains coming towards him—towards the east—the terminal; set clear for Number 1112 now in the tunnel; and the little green light indicated that she was well underneath the river—nearly halfway between New Jersey and New York—just passing Signal Number 904. Suddenly the telephone beside him shrilled.

"Hello, Johnny! This is Mr. Carman," came the voice of Carman. "Throw all tunnel signals against east-bound traffic, and hold the movement three minutes. I want to stop 1112 before she reaches Signal 903."



"Right!" snapped the towerman, grabbing his lever.

Coincidently the little green light on the diagram stopped between 904 and 903, exactly in the middle of the tunnel.

"Wonder what that's for!" commented Johnny.

That identical phrase issued but a second later from the grimy lips of Sam Burke, engine driver of Number 1112, as, having

BURPEE-JOHNSON FloatAforD SHOCK ABSORBERS

Demand—and get this "third" spring

This "third spring" is a patented feature—no other type of shock absorber has it. Before buying any shock absorber for your Ford, see the FloatAforD. The two big spiral springs take the down-thrust while the "third spring" cushions the rebound and absolutely prevents sidesway.

FloatAforD Shock Absorbers do not bind or clamp the Ford springs in any way. There is no twisting strain forward or backward. Ford springs have full liberty of action just as Ford engineers designed that they should. We positively guarantee against spring breakage.

FloatAforDs are correct mechanically and most comfortable to ride upon. Save tires, springs, fuel and reduce wear on the whole car. Very moderate in price.

10 Days' Trial—If not satisfied, these absorbers will be taken off and your money refunded. Types for Ford car and trucks. Sold by all Ford dealers.

Dealers—Any Ford owner sees the superiority of the FloatAforD at a glance. Write about territory.

Before buying any shock absorber get—

"Better Than Having an Allowance"

Says Miss Belle Doster of Pennsylvania, to whom we have paid, in one month,

$150.00 EXTRA

"It is better than having an allowance," says Miss Belle Doster of her work as our local representative in a Pennsylvania town. It's better because it gives her the satisfaction of being independent; because it keeps her in contact with interesting people and broadens her circle of friends; because it establishes her reputation as a capable woman of business; because it pays her extra money every month—sometimes as much as $150.00—for spare-time work alone.

Part-Time Work That Pays Well

Even if you are busy throughout the day you can still earn generous profits by caring for local new and renewal subscriptions for *The Saturday Evening Post*, *The Ladies' Home Journal* and *The Country Gentleman*. Miss Doster is a careful home-keeper; yet she has in a single day earned more than $25.00, just by using the telephone in her odd moments.

You will find people ready to subscribe wherever you go! Has anyone ever asked you for your subscription to any one of these three widely popular publications? No? The chances are that your friends and neighbors and acquaintances have likewise never been asked. And the chances are that many of them would be glad to forward their orders through you if you were to suggest their doing so. The coupon below will bring full details of our offer to part-time local workers. It involves no obligation.

No Experience Needed

You need no experience to be successful—many workers earn $25.00 a week extra, and even more, from the very start. No investment required, no red tape to go through, no obligation assumed. If you have any odd moments, let us make you a cash offer. Use the coupon below NOW.

THE CURTIS PUBLISHING COMPANY
486 Independence Square, Philadelphia, Penna.

Gentlemen: Please send me the details of your offer. I'm interested in work like Miss Doster's, but I assume no obligation in making this inquiry.

"We Bring The Brush Store To Your Door"

NORTH RIDGE BRUSH CO.
DEPT. E. FREEPORT, ILL.

slid by Signal 904, he saw 903 an eighth of a mile ahead turn from green to red. Curious how men's minds work in the same way!

"Wonder what that's for!" he ejaculated to O'Carroll, his helper, as he jammed on the brakes and brought his train to a standstill midway between the two signals.

"Hello!" remarked Algie to his partner in the smoker at the same moment. "Train's stopped! Gives us time for another hand!"

Before he could deal the cards a red-headed youth with a large assortment of freckles bobbed up unexpectedly at his elbow as if from beneath the train.

"Say, are you Mr. Fosdick?" inquired Willie Toothaker, the ubiquitous office boy of Tutt & Tutt, with his usual ingratiating smile.

"That's me, son!" nodded Algie. "What can I do for you?"

"Just let me serve you with these papers," answered Willie, suddenly slapping a package of documents upon the dashing fellow's shoulder. "It's a summons and complaint in an action brought against you for fifty thousand dollars as surety on the bond of T. Otis Crabb."

Mr. Fosdick laughed rudely.

"No use, young feller-me-lad! You can't serve me when Crabb is already back in New York."

"But he ain't, young feller-me-lad!" grinned the irrepressible William. "See that signal—Number 903? Well, you're in New York all right, but he's still in New Jersey—back in the end of the train."

T. Otis, following hard on the heels of Bonnie Doon, had just threaded his way through the last Pullman, stumbling inconsiderately against the passengers who were engaged in putting on their wraps and closing their bags, in his eagerness to see the lady who had sent for him. But T. Otis never bothered about how much he inconvenienced other people.

"She's in that last chair on the left," floated over Bonnie's shoulder.

"I don't see her!" replied T. Otis excitedly, hardly aware that the train had suddenly come to a stop.

"She's got her back to you," expla Bonnie, stepping to one side. "Go ahead."

T. Otis hurried on to the end of the and bending coquettishly over the bac the last chair found himself staring into wrinkled face of old Mr. Tutt.

"How d'y'do?" remarked the lawye "What sort of a game is this?" ga T. Otis, suddenly feeling very ill.

"Game, my dear sir?" murmured Tutt innocently. "Game? I don't un stand —— Oh, now I remember You're the man who owes my cl Barrington, fifty thousand dollars, a you? Oh, yes, of course!"

T. Otis sank weakly on the arm of adjacent seat.

"What a wonderful tunnel this is, it?" rambled on Mr. Tutt. "Marvel bit of engineering *skill!* Reaches all way from New Jersey to New York. N if you'll just look out of the end win there you can see Signal 904. You ar are still in the state of New Jersey, w the forward half of the train is already New York."

He glanced quizzically at the yell features of the judgment debtor.

"By the way," he said, "haven't y been rather careless about violating y jail liberties? I feel *quite sure* that process server has already served pap on your bondsman—in the state of N York."

T. Otis collapsed into the chair a pressed his fists to his temples.

"Look here," he gasped, "is that right Mr. Tutt bowed punctiliously.

"Quite so," said he.

"And is this going to cost my wife thousand dollars?"

"Beyond the shadow of a doubt!" Tutt assured him.

"That fool Lefkovitsky!" wailed Otis. "I wish I'd stayed in jail!"

"I'm glad you didn't," answered Tutt. "The Barringtons need the mon

"Well," muttered Crabb as the started and he staggered to his feet, know one thing: I won't go back to lantic City! I'd rather stay in jail for rest of my life!"

REO SPEED WAGON

Can Any Other Duplicate This Reo Motor?

One of the earlier Reo Speed Wagons, made in 1915, has an authenticated record of more than half a million miles!

That means the wonderful Reo motor must have withstood the alternate stresses of more than 2,348,000,000 explosions and impulses; crank shaft must have revolved more than 1,174,000,000 times, while each cam must have withstood the wear of lifting its valve 587,000,000 times!

For, we are assured the original crank shaft and cam shaft are still doing the work.

That is a performance so wonderful—a record so amazing—that we know you will find it difficult to believe.

Yet the proof is yours for the asking, the information comes from the owner.

There is a reason for that performance—it is just what that motor was developed to do.

We use the term "developed" because that matchless power plant could have resulted only from long years of development, based on ripe experience.

It is the product of evolution—not inspiration.

And the dominance of the Speed Wagon in every field of hauling and delivering is evidence of the survival of the fittest.

For, every inch of the ground was hotly contested.

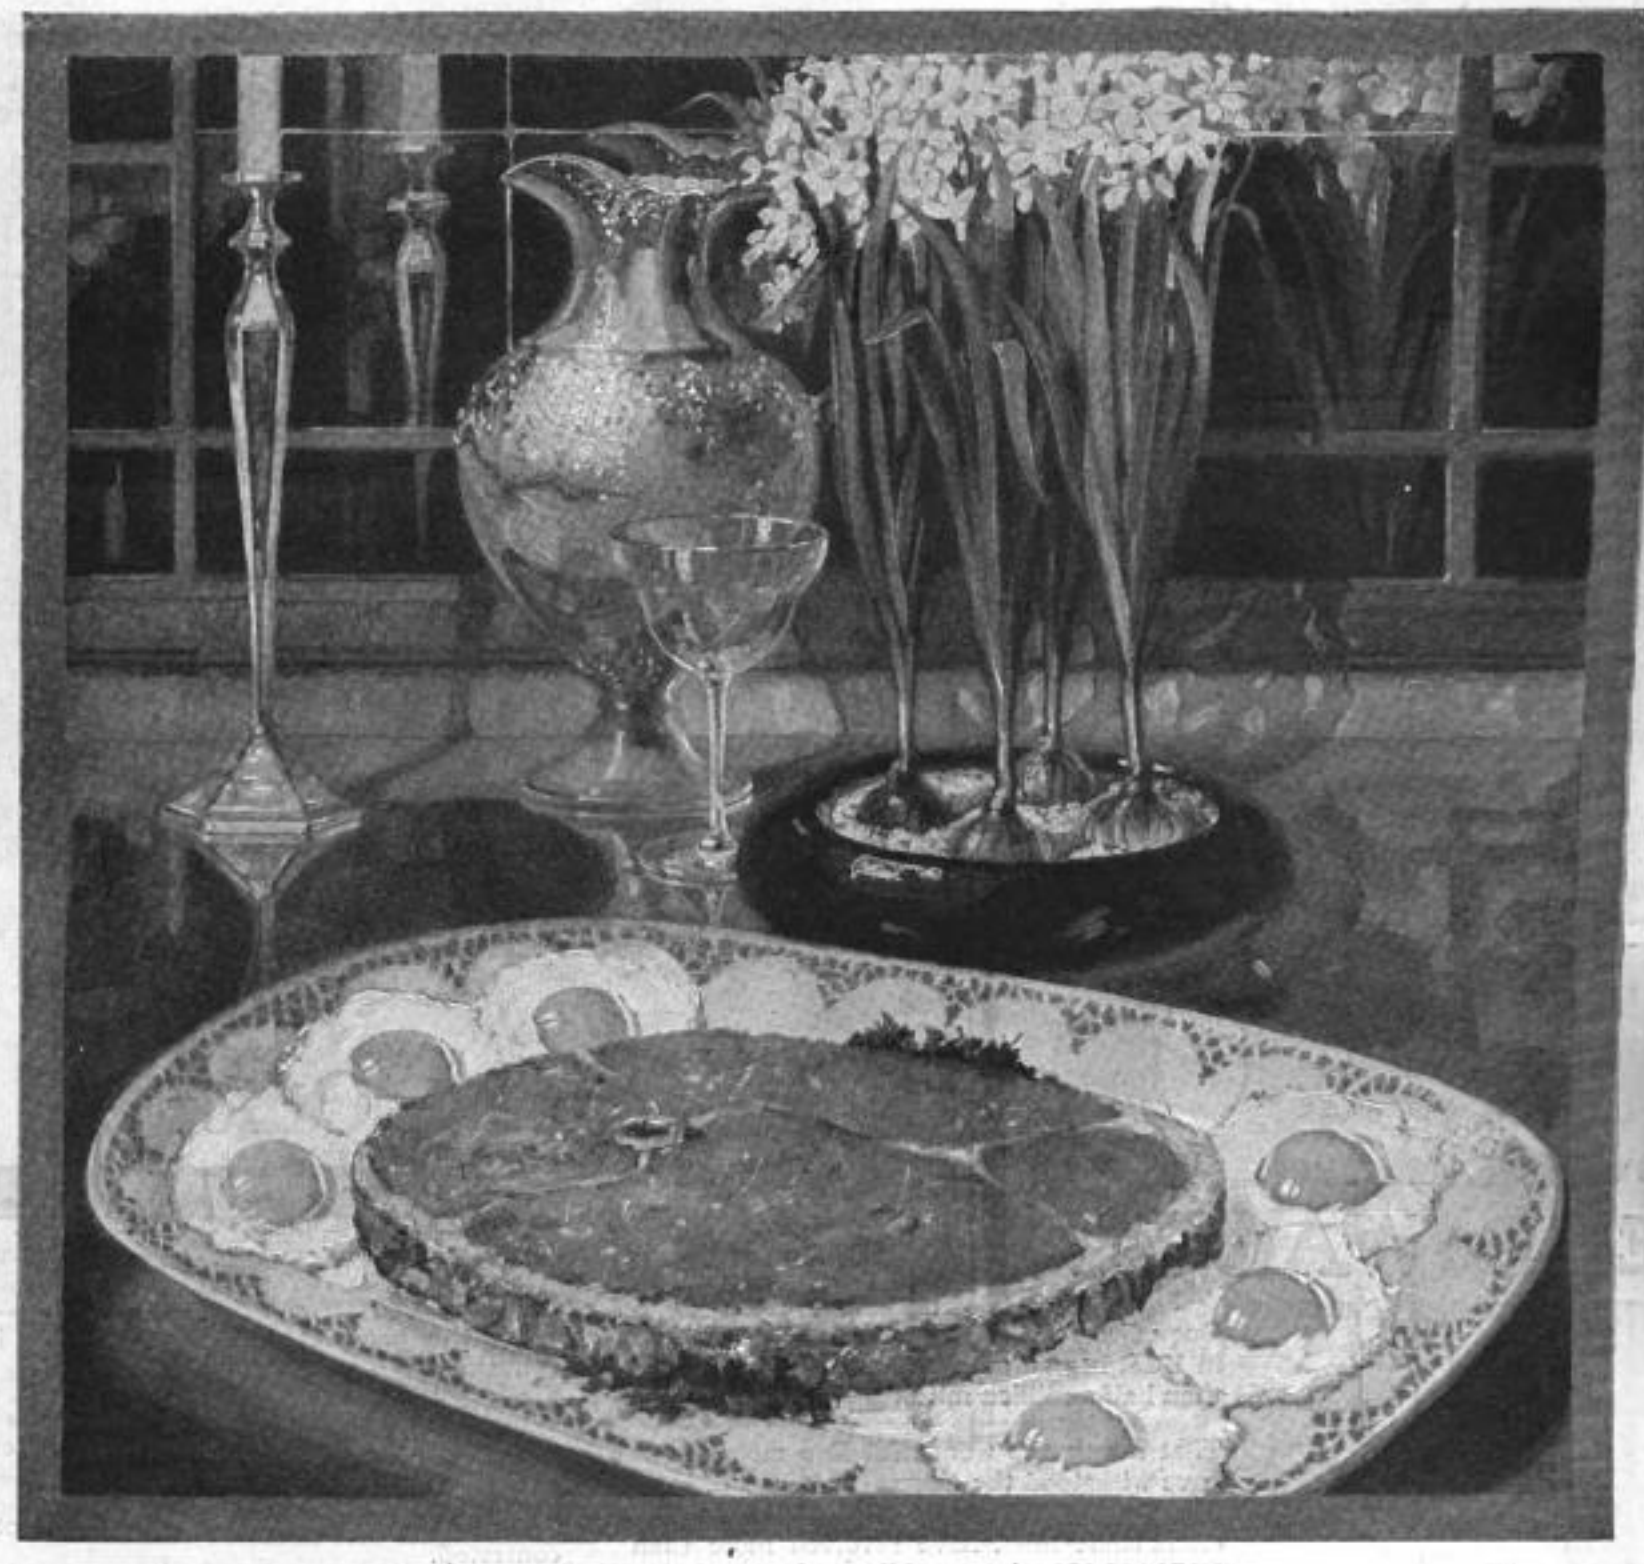
Each invasion of a new field of carrying, was opposed by many types and makes of motor trucks. Reo stamina won in the supremest tests.

Reo construction justified itself.

Crank shaft, cam shaft, connecting rods, timing gears, bearings, all are "50 per cent oversize," according to ordinary standards.

Intake valves located in cylinder-heads; exhaust valves, offset; spark plugs scientifically placed—this motor not only develops tremendous power for its size, but reciprocating parts are built to sustain those excessive strains.

We maintain no other truck can do the work of a Reo Speed Wagon—mainly because we know of no other such power plant.



Reo Motor Car Company, Lansing, Michigan

This Floor is Like a Duck's Back

THE floor of Marconi's Restaurant, in Baltimore, is Armstrong's Inset Marble Tile Linoleum.

This floor is impervious to grease and dirt, and is easier to clean than any other kind of floor. It is watertight, sheds water like a duck's back, and is permanent.

Important points, all of these, when floors are selected for restaurants, cafeterias, hotels, and public buildings.

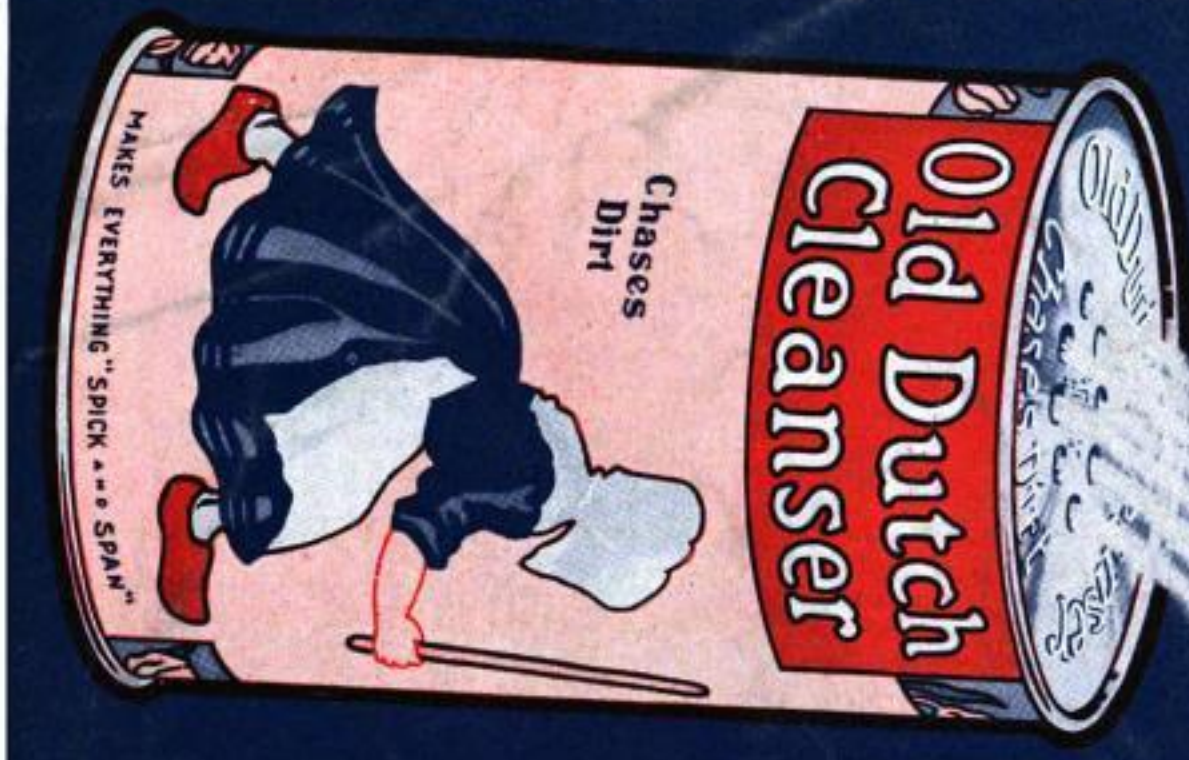
This is a handsome floor, too. Its harmonious colorings please the eye. In any good store, you can see many other artistic designs especially suitable for stores, offices and public buildings. Also plain colors—brown, gray, green, tan, blue or black.

A floor of Armstrong's Linoleum requires only ordinary care. Waxing and polishing keep it in perfect condition. It will give lasting service under the hardest usage. Linoleum—made chiefly of cork—is elastic and springy under foot—comfortable to walk on and stand on.

If you are planning to build, or to lay new floors, consult your architect, contractor, or any good linoleum merchant about Armstrong's Linoleum. We shall be glad to send him data and specifications for laying.

A good way to install linoleum is to cement it down firmly over a layer of high-grade deadening felt. Laid this modern way, a linoleum floor remains as tight and smooth as the day it was put down.

Our free book, "Business Floors," contains photographs of installations, plates of colors and designs from which you can choose, and directions for installation and care of linoleum floors. Write for it. All Armstrong's Linoleum is guaranteed to give satisfaction.



Look for the CIRCLE "A" *trademark on the burlap back*

Westclox

Partners in success

TIME! There's never enough for all you want to do. But if you say the word, your Westclox will gladly tuck an extra hour on your morning. Or time your day to help get more things done.

Westclox go out into the world—thousands of them every day—with a full appreciation of their duty to you. That's drilled into them at the factory. They can't get into the shipping room until they're competent to merit your trust.

They're built to be partners with you in success. Friendly, helpful assistants—metal, it is true, but with steady heartbeats that let you know they're with you, watching, working every minute.

America is a Westclox that has been helping folks get up in the world for thirty-six years. A competent alarm that rings and runs on time—$1.50.

Pocket Ben is a sturdy, long-lived watch built for men and boys who want a dependable timepiece for the pocket—$1.50. Like America it wears the trade mark, Westclox, on its dial and six-sided orange-bordered tag.

WESTERN CLOCK CO., LA SALLE, ILLINOIS, U.S.A.

Factory: Peru, Illinois. *In Canada:* Western Clock Co., Limited, Peterborough, Ont.

Big Ben, $3.50 · Baby Ben, $3.50 · America, $1.50 · Sleep-Meter, $2.00 · Jack o' Lantern, $3.00 · Pocket Ben, $1.50 · Glo-Ben, $2.50

In Canada: Big Ben, $5.00; Baby Ben, $5.00; America, $2.00; Sleep-Meter, $3.00; Jack o' Lantern, $4.50; Pocket Ben, $2 00; Glo-Ben, $3.50

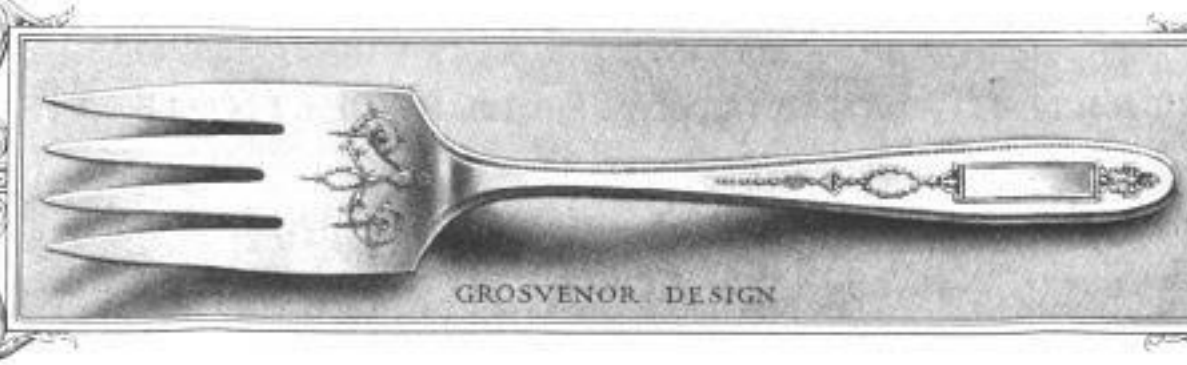
COMMUNITY PLATE

Teaspoons $3.75
Set of Six

At your service
for 50 years



"'How lily pale, yet proud she stands.'

Some of those old poets, Bess, could decidedly flip a phrase. But they'd need new adjectives — a whole army of 'molten golden words' — if they saw *you* as a bride. Speaking of superlatives, you'll 'adore' the chest of COMMUNITY Barbara picked out for you. A symphony in silver, she calls it.

BOB.

P. S.—You were surely a beautiful bride."

HE RETURN TO NORMALCY

By Alice Duer Miller

ILLUSTRATED BY CHARLES D. MITCHELL

RANGE, unnatural onventions were grow- ng up about divorce, Cora reflected. The xpected you to appear pletely indifferent to a hen once your decree nted as it had assumed be uniquely devoted to long as the marriage . Here she was, sitting in her little apartment; bitten her toast, poured r coffee, opened her a dinner invitation, a rom her architect about ans for her new house, or her brocade slippers, ouncement of a picture tion, and —— As she the last envelope from sition on the morning aper her eye fell for the ime on the account of tine Bing's illness.

t was said at the Uni- Hospital, where Mr. was taken late last night, is condition was serious." sketch—almost an obit—of him followed: "Val- e Bing was born in 1880 . Albans, a small town on Erie. He began life as inter. At twenty-one he me editor of the St. Albans rier. In 1907 he came to York." She glanced along ily. "Great consolidation ewspaper syndicate fea- s—large fortune—three s married—the last time liss Cora Enderby, of the ninent New York family, whom he was divorced in s in October of this year." hing was said about the other wives; that seemed ural enough to Cora. But id not seem natural that man, who for two years made or marred every in- nt of her life, was ill—dying, haps; and that she like any er stranger should read of casually in her morning per.

She did not often think idly of Valentine—she tried t to think of him at all—t now her thoughts went ck to their first romance. those days—she was barely enty—she had been in con- t with her family, who represented all that was conservative in old New York. She had anted work, a career. She had gone to see Valentine in his office, armed with a letter introduction. He was a tall red-haired man, long armed and large fisted, with intense ue eyes, clouded like lapis lazuli; he was either ugly or rather beautiful, according as ou liked a sleek or a rugged masculinity. For an instant she had had an impression—he only time she ever did have it—that he was a silent being.

She had told her little story. "And as I really don't know much about writing," he ended, "I thought ——"

"You thought you'd like to do newspaper work," he interrupted with a sort of shout.

He explained to her how newspaper writing was the most difficult of all—the only kind that mattered. What was the object of writing anyhow? To tell something, wasn't it? Well, in newspaper work —— On and on he went, the torrent of his ideas sparkling and leaping like a mountain brook. She was aware that she stimulated him. She learned later that he was grateful for stimulation, particularly from women.

Almost immediately afterward, it seemed to her, he was insisting that she should marry him. At first she refused, and when her own resistance had been broken down her family's stood out all the more firmly.

They regarded two divorces and a vulgar newspaper syndicate as insurmountable obstacles. But a family had very little chance against Bing, and he and Cora were married within a few months of their first meeting.

On looking back at it she felt that she soon lost not his love but his interest. He would always, she thought, have retained a sincere affection for her if she had been content to remain the patient springboard from which he leaped off into space. But she wasn't content with any such rôle. She wanted to be the stimulus—the excitement of his life. And so they had quarreled and quarreled and quarreled for the two horrible years which had just ended in their divorce.

And now he, so vital, so egotistical, so dominating, was dying; and she, the pale slim girl whose charm to him had been the joy of conquering her, was alive and well and happy. It would annoy Valentine to know that she was happy—fairly happy—without him.

She wondered whether she should call up the hospital, or go there herself to inquire about him. Wasn't it possible that he would send for her? After all, it was only the other day that she was his wife. And at that instant the telephone rang.

She heard a suave voice saying, "Is that Mrs. Bing? Mrs. Enderby-Bing? This is Doctor Creighton, at the Unitarian."

Half an hour later she was at the hospital. She had expected to be hurried at once to Valentine's bedside. Instead a little reception room was indicated. At the door a figure was standing, head raised, hands clasped behind the back. It was Thorpe, Valentine's servant.

"In here, madam," he said, opened the door for her, and closed it, shutting her in.

The sight of him destroyed the last remnant of Cora's self-control. He seemed like a little bit of Valentine himself. Thorpe had been with them on their honeymoon; she could see him waiting at the gate under the turquoise dome of the Grand Central Station, with their bags about his feet, and their tickets in his hand—so cool and competent in contrast to their own excitement that first day.

She hurried into the room. It is not to be expected that a hospital should waste sun and air on mere visitors, and yet the reception room, painted a cold gray, and dimly lighted by a shaft, was depressing. Some logical interior decorator had hung one large

He Had Come for the Photograph, Which He Now Took Gently Out of Margaret's Unresisting Hand

Digitized by Google

brown photograph on the wall. It was a copy of the Lesson in Anatomy.

Cora sat down and covering her face with her hands began to cry. A kind voice said in her ear, "I'm afraid you've had bad news."

Looking up Cora saw that a middle-aged woman was sitting beside her, a woman with comfortably flowing lines and large soft brown eyes and hair beginning to turn gray.

"I'm afraid my husband is dying," answered Cora simply. She thought it better not to mention divorce to a person who seemed like the very genius of the family.

"Why, you poor child," said the other, "you don't look old enough to have a husband."

"I'm twenty-four," replied Cora. "It's almost three years since I was married."

"Of course," said the other. "It's just because I'm getting old that everyone seems so young to me."

She smiled and Cora found herself smiling too. There was something comforting in the presence of the older woman; Cora felt assured that she knew her way about in all simple human crises like birth and illness and death.

Suddenly as they talked Cora saw the face of her companion stiffen; Thorpe was ushering in another woman, sleek headed, with a skin like white satin, wrapped in a mink cloak. Evidently the newcomer was painfully known to Cora's friend, though the mink-clad lady gave no sign. She sat down, holding the blank beauty of her face unruffled by the least expression; and as she did so Doctor Creighton entered.

"Mrs. Bing," he said. All three women rose. The doctor glanced at a paper held in the palm of his hand. "Mrs. Johnson-Bing, Mrs. Moore-Bing, Mrs. Enderby-Bing."

Even in her wild eagerness to know what the doctor had to tell them of Valentine's condition Cora was aware of the excitement of at last seeing those two others. Phrases that Valentine had used about them came back to her: "A cold-hearted unfaithful Juno"—she in the mink coat. "She was so relentlessly domestic"—Cora glanced at her new friend. Yes, she was domestic—almost motherly. Cora's friendly feeling toward her remained intact; but toward Hermione—Mrs. Moore-Bing—who had so deceived and embittered Valentine, her hatred flamed as it had flamed when Valentine first told her the story.

How could she stand there, so calm, drooping her thick white eyelids and moving her shoulders about in a way that made you aware that under the mink cloak they were as white as blanc mange. "She must know," Cora thought, "that I know everything there is to know about her. Valentine had no reserves about it. And Margaret, from whom she took him; and Thorpe, whose testimony in the divorce case ——" Instinctively she took a step nearer to Margaret, as if wishing to form an alliance against Hermione.

Meantime the doctor was speaking rapidly, apologetically: "You must forgive me, ladies. I might have arranged this better, but time is short. You must help me. Mr. Bing's condition is serious—very serious. He keeps demanding that his wife come and nurse him. He believes we are keeping her from him. His temperature is going up, he is exciting himself more and more. We must give him what he wants, but ——" The doctor paused and looked inquiringly from one to the other.

Mrs. Johnson-Bing smiled her quiet maternal smile. "Poor Valentine," she said; "he was always like that when he was ill."

There was a pause.

"But you don't help," said the doctor. "You don't tell me which one it is that he wants."

"Well," said Mrs. Moore-Bing in her cool drawl, "as I'm the only one who left him against his will I'm probably the only one he wants back again."

Cora would not even glance in the direction of such a woman. She had been kept silent heretofore by the trembling of her chin, but now she managed to enunciate: "Mr. Bing and I were divorced only a few months ago. Until October, you see, I was his wife."

The logic of this, or perhaps his own individual preference for a slim elegant young woman, evidently influenced the doctor. He nodded quickly.

"If you'll come with me, then ——" he began, and turned toward the door, but there Thorpe was standing, and he did not move.

"If you'd excuse me, sir," he said, "am I right in thinking it will be bad for Mr. Bing if we mistake his wish in this matter?"

"Yes, I'd like to get it right," said the doctor.

"Then, sir, may I say it's not Mrs. Enderby-Bing that he wants, sir?"

"What makes you think that?" said Doctor Creighton.

"I could hardly explain it, sir. Twenty years of being with Mr. Bing ——"

There was an awkward pause. The obvious thing to do was to ask Thorpe who it was Bing did want, and something in the poise of Thorpe's head suggested that he was just waiting to set the whole matter straight, when hurried footsteps were heard in the hall, and a nurse entered—an eager panting young woman. She beckoned to Creighton and they spoke a few seconds apart. Then he turned back to the group with brightened face.

"At last," he said, "Mr. Bing has spoken the first name. It is Margaret."

Cora caught a glimpse of Thorpe quietly bowing to himself—as much as to say, "Just what I had expected."

Mrs. Johnson-Bing rose.

"My name is Margaret," she said, and left the room with the doctor.

Hermione rose, too, hunching her cape into place. "Well," she said without taking the least notice of Thorpe, who was opening the door for her, "that's one chore you and I don't have to do. He was bad enough healthy—sick he must be the limit."

Cora did not so much ignore Hermione as she conveyed in her manner as she turned to Thorpe that everyone must know that whoever might be the object of Mrs. Moore-Bing's conversation it could not be herself.

"Tell me, Thorpe," she said, "what do you think of Mr. Bing's condition?"

"Mr. Bing is ill, madam—very ill," Thorpe answered immediately; "but not so ill as the doctors think."

"No?" said Cora in some surprise.

"No, madam. Mr. Bing, if I might use the expression, yields himself up to illness; this assists him to recover."

He opened the door for her at this point, and she went out of it.

She returned home not so emotionally upset but more depressed than before. There was a core of bitterness in her feeling that had not been there when she went to the hospital, and at first she found it difficult to discover the reason for this. Was it anxiety at Valentine's illness? No, for he was a little better than she had feared. Was it the realization that those two former wives, who had always seemed to her like shadows, were, in fact, living beings like herself? No, for they had turned out to be more unattractive, more utterly unsuitable to Valentine than she had imagined. It was true that her taste, her sheltered selectiveness—a passion which mu brought-up women mistake for morality—was at being in the same room with Hermione, but a certain satisfaction in finding her to be worse Valentine's highly colored descriptions of her. Margaret, she felt no jealousy of her, even thoug been chosen. No one could be jealous of any kind, so old and so badly dressed.

It came to her gradually as she moved about unable to look at her plans, unable to read, una anything but encourage the toothache at her hea was like a memory of all her later relations with The reason was Thorpe—Thorpe's instant convic it was not she whom Valentine wanted. Why sure? He had been right; Thorpe was always ri twenty years he had made it his business what Valentine wanted. That was Thorpe's ide function of a good servant. He had always qui consistently followed this line, while the wives lowed others. Margaret had been concerned wi was best for Valentine; Hermione had thought of what was most agreeable to herself; Cora ha only to preserve the romance of her love. Thorp cialty was knowing what at the moment Valentine for, and then in getting it. Thorpe had survived a

Cora could understand a sick man having a fanc nursed by Margaret, but Thorpe's conviction th Cora, could not be the wife called for had a deep more lasting significance. That was the thought tha her heart ache.

She tried to take up her life where she had left morning, but everything had paled in interest—ev new house. She had bought a little corner of land, the city limits but near the river, surrounded by She saw wonderful possibilities—a walled garden river view within twenty minutes of the theaters recognized certain disadvantages—the proximity of road track, and the fact that the neighborhood wa unkempt; she enjoyed the idea of being a pioneer. now, though the plans were lying on the table, she d open them. It was as if that hour in the hospita married her again to Valentine, and there was no vivi left in the rest of life.

For ten days the bulletins continued to be increa favorable, and then—a sign that convalescence ha in—they ceased entirely.

Cora found the silence trying. With the great que of life or death answered there was so much else tha wanted to know—whether he had been permanently w ened by his illness; whether he would now be startin one of his long-projected trips—to China or the South China had always fired his imagination. Twice durin short marriage they had their trunks packed for C Had he been softened, or fr ened, or in any way change the great adventure of al dying?

There was one person could tell her all these thi and that was Margaret. W out exactly formulating a Cora went to the hospital day and inquired about h The girl at the desk answe as if Valentine were alread personage in the hospital.

"He's getting along spl didly now. His wife's with hi

"I wonder," Cora heard h self saying, "whether Mrs. B would see me for a minute."

She retired, rather frighte at her temerity, to the recepti room, where the Lesson Anatomy still dominated t wall. "Margaret won't mind she kept telling herself. "Sh so kind, and, anyhow, sh more like his mother than h wife." It was on this materna quality that Cora depended.

There was a footstep in th hall. A statuesque figure molde into blue serge stood in th doorway—bare-headed wit shiny bronze-colored hair elab orately looped and curled. I was Hermione.

"You wanted to see me?" she asked in her drawling, re constructed voice. She did no at once recognize Cora.

"No," said Cora, "I certainl did not want to see you. I thought it was Mrs. Johnso Bing who was here."

MEN WHO FAIL

By Albert W. Atwood

A TIME when business effort is still concentrated to a notable degree upon the elimination of superfluous human factors be pertinent to inquire why so many men get ahead or make good. It is purposed not so much why the few succeed as why the many fail. This e merely turning about a very old subject. But it is looked at in such a way; and, besides, when men or even toward the end of a period of retrenchment reorganization, which means the survival of the , they are more interested naturally in not slipping n the pleasurable but perhaps untimely and impracoccupation of dreaming about the ts of success.

s difficult to deal with the subject lividual success and failure withlatitudinous preaching. Even if opic does not carry one to mystic ses or along the road of a charlatanism it lends all too readily to a tone ous, solemn warning and rtation. Everyone loves to other people advice, and e who have a sense of humor it at once that it is the pest thing they have to as well as the easiest of or sports.

lthough a vast literature, posed of books, correspond- e courses and magazine newspaper articles, has wn up in the last twenty rs on the subject of success, re is exceedingly little that e can be new therein. For re is a copy-book wisdom of ages. Most of the wise say- s, saws, precepts, rules, prin- les, theories and practices on ich a successful life is sup- sed to be built have come wn to us from the past. In e same way the reasons for ilure are just as old. No one n improve on William James, alph Waldo Emerson, Ben- min Franklin, and back of em the Bible and the ancient ilosophies.

It is doubtful if the most mous of modern captains of dustry can hand out to a ading public of eager and mbitious youth, through the killful medium of a sympathetic interviewer and feature writer, any wise bit of advice hat has not been anticipated by poets, philosophers and prophets, men who speak eternal truths in words of living ire.

But the vocabulary changes somewhat; the form of expression and the vernacular even more. Men use different expressions and different symbols. The illustrations, the cases, of one age mean comparatively little to another, although the underlying thought may be the same.

Formidable Specifications

THE young man who has just been fired from a bank or other business corporation may find that the Hebrew prophets really said more of a mouthful concerning his qualifications and shortcomings than did even the employment manager who gave him his walking papers the day before yesterday. But naturally the remarks of the latter seem to have more immediate application than those of the former. The boss upon whom one depends for a living, and perhaps fears, is a much more imposing figure than the dim, vague name of a seer who lived several thousand years ago, even though the remarks of the boss are perhaps a rather poor imitation of the wisdom of greater men.

Thus the ideas that run through this article may not be new. They have been gathered in the last few weeks from interviews with twelve individuals: The president and also the personnel director of one of the largest financial institutions in the country, which employs several thousand workers; the director of an employment agency or bureau dealing with the highest class of workers only; the vice president in charge of personnel of one of the chief public-service corporations in the country; the assistant to the president of the same concern; the vice president of a nation-wide chain-store organization; the vice president of a New York bank, who has had extensive experience as well with a large government organization and with great bodies of college men; an experienced industrial-plant manager; the assistant to the president of an industrial corporation of world-wide scope; a partner in an international banking firm, who is also a director in several of the country's great industrial corporations; the head of a most successful and enterprising advertising agency; and an author whose world-wide travels have brought him into intimate personal contact with many thousands of men all the way from doughboys in the trenches to kings and prime ministers.

He Promptly Lost a Small Fortune

The ideas gleaned from these sources depend for their justification upon no impossible originality. If they are worth relating it is solely because they come first-hand from active participants in the business game, and because they are based upon individual cases and individual experience.

Now it is sometimes said that there are as many reasons why people fail as there are individuals. But such a remark, though natural enough and a wholesome antidote against too sweeping a simplification of the subject, is both misleading and careless. Ordinary common sense and experience, as well as science, point toward the classification of men as well as natural objects. Exceptions pop up to most rules, but there are rules, and the world would be a chaos without them. It is a poor teacher who does not soon learn to recognize a few well-defined types among the pupils in a class at school.

But there is danger also as soon as we begin to build up rules. Many articles and books have been written about success which mention anywhere from twenty to thirty essential qualities, the secrets of success, corner stones, keys, alphabets, and all that sort of thing. Anyone who reads such articles and books, or who pursues courses and systems of home education, character building, memory training, self-analysis, concentration, and the like, cannot but envisage a paragon, a creature of unattainable perfection. Such advice is very often too confusing and baffling to be of much help. No one can be a paragon, or wants to be.

An excellent book on the training and handling of employes says that the essential qualifications of a successful business executive and leader must be: "Character; creative, sober imagination; sound judgment; courage; a sense of humor; ability to cooperate, to understand men, and to organize; receptivity; courtesy; expert technical knowledge."

To put it mildly, this is a tall order, but it is almost literally nothing as compared with many other lists of necessary qualities or qualifications. To succeed, one is told that he must have honesty, character, health, industry, will power, energy, initiative, imagination, self-control, common sense, judgment, confidence, dependability, reliability, ambition, loyalty, courage, a good memory, application, knowledge, reasoning power, concentration, alacrity, accuracy, power of observation, tactfulness, courtesy, perseverance, thrift, resourcefulness, enthusiasm, cheerfulness, a good disposition, a good appearance and personality, and that he must be able and willing to assume responsibility. Personally, I should think a young man would simply curl up and die when confronted with these lists, or advice made up of such ingredients, and that he would admit he was defeated before he began.

No, men cannot be shown where they are weak or failing to make the most of their opportunities by hurling at their teeth great long schedules of an impossible perfectibility. Such methods lack the necessary light and shade. There is no contrast. It is like a continuous diet of maple-nut sundaes. Few human beings can take in so many ideas all at once. If you tell a man that he needs to change his life in twenty different respects it means nothing to him. One is quite enough. Unless experience can be boiled down to a few, a very few ideas, and unless the individual cases to be related in this article drive home a few, and only a few points, it might better have been unwritten.

Measures of Success

IN REAL life men are made or undone by the way in which they meet the concrete situations which arise. A firm but wise and tactful employer in a single flash of criticism may enable an employe to climb from failure to success. There can be only discouragement in a lengthy schedule of defects. A producer of goods, whether he be a manufacturer of silk stockings or a short-story writer, can usually be told in a few words what is wrong with his product.

Besides, though it is misleading to say that there are as many reasons for success and failure as there are individuals, yet there is danger always in stressing any list of qualities, because all sorts and conditions of men prove to have the qualities needed for success, "the cautious and the daring, those given to detail and those negligent of detail." As one impartial and experienced observer has said:

"Some heads of large organizations keep every thread in their own hands, and not only plan the large outlines of their ventures but look to every detail. Others intrust almost all administration to subordinates, and keep themselves free to think, plan, confer. There are those who keep strictly to 'their business,' the particular branch of industry in which they have embarked; and again there are those who launch freely into new and varied enterprises. No one key opens the doors of success."

First, of course, it is necessary to define success and failure. This is no place to discuss such fundamental questions as to whether success should be measured by money, position, reputation or by such tests as happiness and contentment. But it may be pointed out that, even considering only what is called business success, men are sometimes superficially classed as failures merely because their heads have not risen above the crowd.

The small country merchant, provided he gives good service, extends his business and makes a comfortable living, may by any sane standard be just as successful as the

'TAIN'T RIGH

By George Pattullo

BY goodness, but Fortune often plays scurvy tricks, sir! She will shower her favors on a worthless fellow, raising a beggar from the dust to set him among princes, and at the same time watch with a coldness the striving efforts of a patriot to better his condition. 'Tain't right!

In my opinion this Benito Servin was nothing short a bum, yet to-day he is rich and powerful, whilst you see before you a penniless exile, devoid of everything but honor. Just luck, sir—nothing else—the Ruler of the Universe, who cares for fools, had him in his keeping. How else can you explain it?

This Servin possessed what we call crazy courage, which often led him to attempt things he was in no way fitted to do. "I am the pluckiest one of the whole bunch," he would say. "See for yourselves!" And then he would prove it sure enough.

He even dared to raise his eyes to the haughty Señora Adela Tostado, a lady in the saloon business at El Sauc who also owned a great plantation thereabouts known as Tres Hermanos. My, it was an earthly paradise, that hacienda, where fat cattle dozed pleasantly in the afternoon shade and high-tailed calves romped across greenery of the pastures because everything looked nice to them. In the cool of the evening, when the perfume of flowers mingled with the soft breezes, the pretty little girls from the village would promenade on front of the house, with their hair down and glancing sidewise at you out of their violet eyes. I think violet eyes are very beautiful. What is your opinion, sir? Yes, those shy creatures seemed to say "The night is very agreeable, is it not? Wel-l-l?"

Tres Hermanos seemed like heaven to poor tired soldiers, exhausted by fighting the treacherous enemy and going hungry half the time, and many officers in the army of Dario Pez would willingly have terminated the sad bereavement of the Widow Tostado. But the lady was of a cold, imperious nature, sir, who suspected they were after her lovely money, and they made little progress. And from the day this Benito Servin arrived on the scene the unlucky fellows lost every liking for the job, for Servin knew nothing of the ways of civilization. No, he was a tough guy.

Such was the selfishness of his disposition that he endeavored to run off anyone he considered might have the same intention he did. What do you know about that! And he did this with a ferocity also.

"*Para el valiente se hizo la belleza*," he would say. "None but the brave deserves the fair. So keep out of my way, or I will cut off somebody's ears."

Worse still, he treated the object of his attentions with a roughness. Instead of serenading the lady, or expressing to her by ardent glances and sighs and moans how sweet her image made the scenery appear to him to be, this *hombre* displayed the instincts of the brutes the very first time he set eyes on the Señora Tostado. That was in the saloon at El Sauc, and Servin was strutting up and down the place like he owned it, staring at everybody with insolent eyes, when Adela espied him. Seeing him thus, she muttered, gloomy, "Well, I like that! Huh!" and began to wonder who this son-of-a-gun thought he was, anyhow, and where did he get that stuff.

"Hi, you! Who made you *jefe* of this town?" she cried. "Hey? How do you get that way, *hombrecito?*"

Benito turned and eyed her from head to toe while she stared at him the same. It was exactly like a couple of dogs glaring at each other and waiting for a chance to get a hold. The instant their glances crossed, it was as though two swords crossed, sir, or two currents of electricity. Everybody in the saloon could feel it and we all paused to watch the pair.

The widow was breathing short and leaning a little forward; a smile of contempt for this bum curled her lips, and she emitted a sniff of derision. It seemed to anger this Benito Servin.

"You look at me that way again," he said between his teeth, "and I will sock you on the nose."

The Señora Tostado, she only laughed. Seemingly gratified by the effect she had produced, she walked up close to Servin and snapped her fingers in his face like this, turning her shoulder against him.

"That for you, you miserable runt!" she exclaimed queenly.

Everybody expected the *pelado* would now make good his threat and sock the señora on the nose, sir, but he did not. Instead he turned around and inquired of the room in general, "Has this nagging crow got a husband? I would deal with him. Men are my meat."

Somebody spoke up and told Servin the lady was a widow.

"She needs a man," he said; "one who will learn her not to get too fresh."

To which the señora retorted displeasingly, "Listen at him! What does he know about a man? In these parts, *muchachito*, men don't make such big talk, but let their actions speak. You may be cock of your own back yard, but you'd best not crow around here."

"Is that so?" said Benito. "Well, a good rooster crows everywhere. And I am one. Go fetch me a mescal, woman. And be quick about it."

"You're drunk already. I verily believe you have been taking *marihuana*, rascal! My, but aren't you the tough guy!"

"Yes, I am," admitted this Servin. "I am a tough guy—Benito Servin, the black cloud of his enemies. I am a tiger of the mountains. Where I come from they grow fighters—not scented stiffnecks. Do you know what they do when a child is born in my country?"

"I know what they ought to have done in your case—sure—yes. Ha, ha!"

"Well, when a child is born in my country the mother throws him up against the wall, and if he doesn't dig his nails in and stick there—why, that child is unworthy and is tossed to the hawks. Go fetch that drink, woman. I am thirsty."

The Señora Adela, she informed him of a suitable destination without no intermediate stops.

"That will do," answered Servin, very severe. "That will be about all from you. Try to act like a lady. If I was your husband it would be my pleasure to beat you every morning."

"If—if—if!" jeered the señora, angered by the laughter of the guests, but unable to think up any answer.

"Well," continued the fellow, and he grinned, "I may do it some day if I take the notion."

"Ha!" cried the widow. "That is a good one. Any time I want a husband ——"

"And any time I want a wife," cut in Benito Servin, his eyes doing lightnings, "I'll send for you. You'll come too!"

In my opinion Servin went too far on a first acquaintance. What do you think, sir?

The Señora Tostado was evidently of that mind, because at this juncture she entirely lost patience and attacked Benito w furiosity. tect himse prevent scratching eyes he sei by the wris they stru body to bo two wrestle while thus in a tight em who should the saloon bu Maclovio Z of Dario staff. Now Z fancied hi the favored of all Adela mirers, and he beheld adored one i squeeze of an he let out a b of rage and upon Servin.

But the cately mus dandy was match for wildcat of the wilderness, and Benito soon had him less on the floor, in which position he was preparing finish the business with a knife thrust where it would complish the most good, when I sprang to the colon rescue. At the same moment a squad of soldiers enga in patrolling the street burst in and arrested all of That's what a peacemaker usually gets, sir.

"What!" cried Dario Pez when we lined up before h next morning. "You amaze me, Don Francisco! T runt was getting the better of the colonel? It is imp sible! Colonel Zapien is twice his size and a fine fighte he has told me so himself."

"Nevertheless, the colonel would not now be among Excellency, had I not intervened in his behalf."

The general kept silent a moment, eying Benito Serv And Benito Servin, sir, gave him back look for look.

"H'm," said Dario Pez at last. "What was the troub about?"

"I am planning to marry the Señora Tostado, *general*," spoke up Servin, "and we were discussing th matter of the betrothal when this criminal crow made a attack on me with suddenness."

By goodness, what a lie!

"What? You marry the Widow Tostado! Why, sh would have to shake the blankets every morning to fin you."

"And," I added, "the prisoner has neglected to mention that the lady does not yet know of his intentions."

"Indeed!" exclaimed Dario Pez. "You interest me Don Francisco. The fellow seems to be —— Where do you come from, rascal?"

"From the mountains."

"And what are you doing here?"

"I came to help your army. In my country they grow fighting men, Excellency. And I am the best fighter in the whole bunch."

"Sure—I used to drink mescal, also," said Dario Pez, "but I don't judge a mule by its bray, *hombre*. We will see about you. How do I know that you are not lying? You may be a spy, or a Red Flagger, for all I know."

"No, Excellency, you wrong me. See—here is a letter from your ally, General Urbina. In it he tells what sort of a guy I am."

The general took the letter, turned it around and around, and scrutinized the writing very carefully.

"Well, that seems to be all right," he admitted. "Urbina must think a lot of you. It seems to be a long piece. But one is a fool to believe in recommendations. They are either given by prejudiced friends or with the purpose of getting rid of importunities. A man should recommend himself by his behavior, *compañero*. Remember that. Here, Don Francisco, put this away among your papers."

Well, I glanced at the letter, sir, and by goodness, it was nothing but a bill of sale for a goat!

"General," I cried, "you have been deceived! This is not from Urbina. It concerns the fate of a goat only, and means nothing." At that, Dario Pez's eyes began to roll and the veins in his neck swelled up.

"What!" he thundered. "The son-of-a-gun has tricked me? Order a firing squad to be made ready, Don Francisco. I will give him a pill of my making."

of the mountains.
And listen to me, *amigo*—a close mouth catches no flies.
Understand?"

"Sure."

"As for you, Colonel Zapien, I don't expect members of my staff to mix in saloon rows or get into fights with peons; but if they do, it's up to them to take care of themselves. Enough of this childish business—you are like two cake sellers, quarreling for a position on a corner. And another thing, Zapien—don't try to hide behind your rank in affairs of the heart. Do you hear?"

"But, Excellency ——" began the colonel, a pale green with fright.

"If a soldier is insubordinate have him arrested, and if guilty he will be shot. But in love, Zapien, it is every man for himself. And I will not have my officers taking advantage of their rank with the pretty girls." By goodness, we were afraid to look at one another, sir, for we could all remember numerous occasions on which the general had ranked us out of the pretty girls.

When they had been led away—"Tell me, Don Francisco, is not this Señora Tostado very beautiful?"

"Very beautiful."

"But I have heard it said also that she is disagreeably virtuous and possessed of a shrewish temper. Is it not so?"

"She has been a widow three years, *mi general*."

"And with all that property! Wow! She must be a devil, Don Francisco. It is very strange. Did not her late husband come to a bad end? It seems to me I heard something to that effect."

"Señor Tostado perished with a suddenness."

"Yes?"

"She stabbed him."

"But probably Señor Tostado deserved it? He had done something to displease her, yes?"

"The señora surprised him with another lady, sir."

"Still ——" murmured Dario Pez, pursing his lips, and he rubbed his hands thoughtfully. I knew what he was thinking about, sir—that this was a sad ending for so trifling a matter.

Well, we remained at El Sauc several weeks while Dario Pez sent couriers throughout all the surrounding country, gathering his forces for a great blow he purposed delivering against the enemy in the North. Ah, sir, those days at El Sauc and Tres Hermanos! We had to work hard, yes; but every afternoon we had horse racing and cockfights, and the band played in the *kiosco*, and the young girls would promenade with their hair down and decorated with flowers. And when they passed a handsome officer they would blush. By goodness, I like to see a girl blush. Do you not, sir?

For a while I did not see nothing more of Benito Servin, because the general kept me so busy. We were growing very much in need of money, sir. He wanted dollars with which to pay his boys, and the question of where to raise them occupied his mind day and night. Often I have seen him pause in a game of cooncan with Captain Banda to stare at the floor, even when he was winning; and at such times Dario Pez would run his fingers through his hair and murmur, very thoughtful, "Ah, ah! *poderoso caballero es Don Dinero, hey, amigos?*" A powerful gentleman is Mister Money. And then in his absent-mindedness he would cheat, and Banda feared to draw his attention to this remissness.

The captain reported that Servin was an excellent soldier and had already beaten up the best fighters in his command, and he planned to promote the fellow to be a sergeant. One day I dropped in at the Señora Tostado's saloon for a bottle of beer, she having received a shipment of same. And who should come clinking in behind me, with bells on his spurs, but Benito, as bold as a yearling bull. He sat down at a table in a corner, and then Adela espied him.

"Oho, little boy, so here you are again! I thought you were in jail. What! They have made you a soldier? Dario Pez is sure enough getting hard up for men!"

"Yes, I am a soldier. Listen to me, woman—you see before you a poor *pelado*, a man without education or graces, but who aims to climb the ladder of fame. Yes; one of these days the name of Benito Servin will ring throughout Mexico. So fetch me a drink. It is very hot."

"Listen at him!" retorted the lady sneeringly. "Well, let me tell you this, *hombrecito*—somebody else can serve you—not me."

And she walked queenly away. Servin, he did not say nothing and he did not endeavor to reason with the woman. What is the use? No; he just sat there and smoked his cigarette and rolled his eyes around, and drank mescal until he was perspiring very nice.

As for Señora Adela she kept her distance, but maintained a close watch on her unwelcome guest. As she walked around and around among the tables every little while she would mutter "Huh!" very gloomy, and the looks she darted at this Benito Servin ought to have burned him like fire.

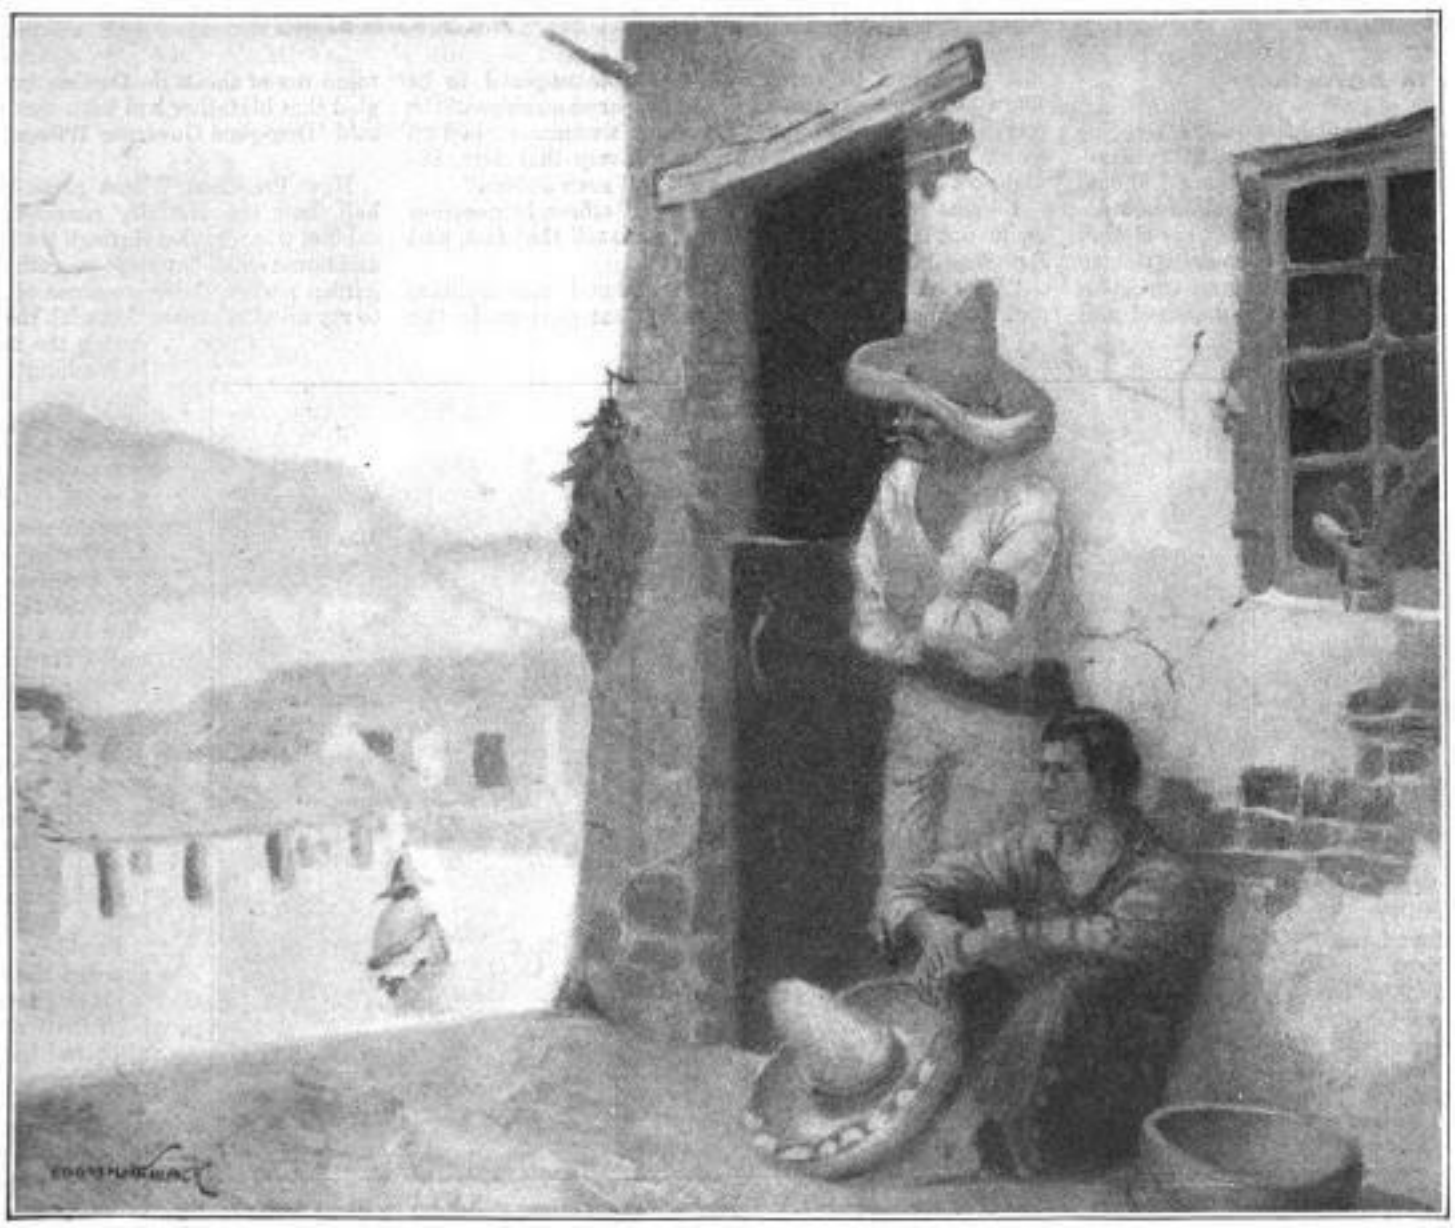
"Ah-h-h!" she exclaimed, with a hissing, seating herself beside me, "I could kill that man—yes."

"Is it permitted to inquire why, señora?"

"Because," said Adela, "I hate him. Is it not enough?"

"More than enough. But what makes you hate him so? In my opinion he does not deserve a thought from you. He is too insignificant."

"Insignificant? Why, you are crazy, Don Francisco! Have you not seen his eyes? Look at him now—just look at him! You might think I was dirt under his feet—the son-of-a-gun!"



Servin was leering at her across the room as though the woman amused him, sir.

"He is nothing short a bum," continued Señora Tostado. "That is what he is. He is not worth that!" And she snapped her fingers. "I would have him thrown out, only it would start a fight and hurt business. This rooster is not afraid of nobody."

"Why do you not drop a hint to Colonel Zapien to remove him from annoying you, señora?"

"Who? Zapien? This *pelado* would assuredly kill him, Don Francisco. Yes, indeed; he is a tough guy. Why, do you know what he has done? He has succeeded in driving

OUR OFFICIAL FAMIL

RECOLLECTIONS OF A CABINET MINISTER'S WIFE

By Mrs. Josephus Daniels

GOVERNOR WILSON is going to ask Mr. Daniels to be Secretary of the Navy." The news was plumped at me by a caller in Washington, a man who said that for reasons of conscience he himself was declining the appointment as Secretary of War.

Was I overcome by joy, or tears, or anticipation of the days to come? Not at all. My very first thought was of Mr. Daniels clasping a high silk hat over his heart and standing on a ship, the American flag waving over his head. I knew that, deep-seated in his heart, there was patriotism, but a patriotism that had in it too much of reverence and sacredness to lend itself easily to those formalities which are demanded of a Secretary of the Navy.

A little later my mother, whom I was visiting, came to my room and wanted to know whether I was laughing or crying. Laughing, I said. The picture of Mr. Daniels and the tall silk hat was still in my mind, and with it a knowledge born of twenty-six years of being comrade to my husband. I realized that there were breakers ahead. Precedent might make its demands. But I knew that there would be a breaking of precedents.

There came to me also the memory of that night a quarter of a century before. As a young bride I had gone to hear my husband, then editor of a weekly newspaper in Raleigh, North Carolina, speak at a little school in a neighboring community. The presiding officer at the meeting was the school principal, an old Confederate soldier.

His introduction of Mr. Daniels ran like this: "The greatest honor for an Englishman is to introduce his Wellington. The greatest honor for a Frenchman is to introduce his Napoleon. The greatest honor for a Northerner is to introduce his Ulysses S. Grant. The greatest honor for a Southerner is to introduce his Robert E. Lee. But a greater honor than any of these is mine to-night, that of presenting to you the young statesman, Josephus Daniels, who is known on two hemispheres." Just then the old soldier apparently realized that the fervency of his oratory had carried him too far, for he threw his hands out in a wide gesture and added, "Or will be."

Lessons in Discretion

LITTLE did I think that night that I should ever be going to Washington with that "young statesman" as Secretary of the Navy; or that for eight years there I should be called upon to decide such problems as I shall now describe: What to reply when a queen says that her clothes closets are dusty. How to feed fifteen hundred women at a reception when eight hundred have been expected. Where to find the time to make from two hundred and fifty to four hundred calls every week. What to do when a lady blurts out a government secret at a tea. How to act when a vase of flowers tips over upon the guests at a very special dinner. What to reply when ladies ask for one's husband's shirt tails to make into aprons for a bazaar. How to act at the embassy of a country which is at war, when spies are being discussed and suddenly all the lights go out.

Least of all was I thinking that night of what it would mean every minute of every waking hour of every day for eight years to be a woman in public life.

It was months later, on a ship in the Pacific Ocean, when in my honor the band played Dixie and I applauded only moderately, that the President of the United States put into words what the woman in public life must never for an instant forget.

"You see, Mister President, I try not to be too enthusiastic," I explained, and Mr. Wilson leaned across the table and said: "You are right. It is the little things like that which count most in the estimate which people form of us."

I had another bit of advice which I remembered all through the years in Washington. There once lived in my state of North Carolina a man who had been governor of the state, a United States senator, and ambassador to a foreign country. He had been known to me from childhood, for he served in the same company with my father in the Civil War. His wife has tasted the joys of public life to the fullest. And it is characteristic of her that in all the years no one has ever heard her make an unkind remark about another person.

When she came to my home in Raleigh to bid me good-by she said, "I can trust you not to do anything wrong; try not to say anything wrong."

I made up my mind that day that though the wife of a public man must run the risk of seeming inane she must guard her tongue more dearly than her life, and be like a Halloween pumpkin, just eyes, nose, mouth, with the light shining through.

Many times the wisdom of this course was brought home to me. Once in particular I remember during the days of the war when many of us had to keep secrets, secrets which I am now privileged to reveal. It was not supposed to be known that armed guards were to be placed on ships of the merchant marine, when at a reception a woman rushed up to me and said, "Isn't it perfectly lovely that Mrs. So-and-So's husband is to be on such-and-such a ship!"

I knew that the wife of the naval officer in question could not have been so indiscreet as to tell that fact, and I professed ignorance for myself.

"Why, don't you know?" exclaimed the woman, and I replied, "I try not to know what goes on in the Navy Departme

of the gentlemen pre
remarked, "You all
mind me of the little Daniels boy, who, instead of b
glad that his father had been made Secretary of the Na
said 'Dog-gone Governor Wilson!'"

How President Wilson came to abolish the inaugu
ball, how the carefully concealed personnel of the
cabinet was revealed through the invitations to a luncheo
and how a small boy slept peacefully through a president
garden party—these are some of the incidents that co
to my mind in connection with the White House festivit
during the first few years of my st
in Washington. Those of the follo
ing years, when there was anoth
mistress in the White House, I sh
describe later.

When the announcement was ma
that President Wilson would not a
cept the usual ball on the night of h
first inauguration, in 1913, the cou
try wondered and speculated an
searched for the reason. Those of
who knew something of the stron
quiet figure in the background
Eleanor Wilson, and of the ambition
she had cherished for her husband
understood that to her this was
dream reverently come true, and tha
she could not bear to have its sacred
ness tarnished by the fripperies an
frivolity, the new dances just then
coming in, the selling of invitations,
the folly and empty heartaches of a
ball.

President Wilson had carefully
guarded the secret of who was to be
in his cabinet, and each man who had
been invited to take a portfolio had
respected his wish and aided in the
concealment. To the wife of an ed-
itor, who knew the signs of the times
among those with printer's ink on
their fingers, it was interesting on the
morning of the inauguration to watch
in the press gallery those men who

Almost before luncheon was d President Wilson went out to the review- nd, followed by the members of the cabinet eir wives. To me it was a keen disappoint- to learn that the midshipmen, who are ally dear to me always, since two of my ers have been midshipmen, had already d in review. As newcomers we were the ts of interest to people gathered there that and we ourselves were much concerned in st glimpse of those rules of precedence which give o many of the most amusing stories connected with ington and which I shall describe later. Especially we interested in watching the diplomats and United s senators who had witnessed many of these proces- and were in consequence rather bored.

The White House Gardens

THAT morning the late Lord Bryce, then ambassador o this country from Great Britain, had made Mr. Dan- and myself very happy by a letter in which he recalled acquaintance with . Daniels and ex- sed his pleasure that y were to be brought o still closer associa- n in Washington.

Another incident of day was a telephone ll from Mr. Page, en a nine-year-old y jumped up and an at my elbow and ed:

"Is it Thomas Nelson age? Is it Thomas elson Page?"

The effort to quiet m and to conduct an telligent conversation ith Mr. Page finally came too great to be orne, and I asked Mr. age if he would speak o the boy. Eagerly latching the receiver he boy called, "Mr. Page, have you ever written anything else as good as the Two Little Confederates?"

"No, I never have," declared Mr. Page, whereupon the boy went away appeased.

After that inauguration-day luncheon there were many informal entertainments to which we were bidden at the White House, as well as the official affairs which are a regular feature of every year.

© BY CLINEDINST, WASH., D. C.

Mr. and Mrs. Daniels and Three of Their Boys at the Reception Given in Honor of Admiral and Mrs. Dewey in the Garden at Single Oak

Mrs. Wilson was very fond of music and often the invitation was for some unexpected treat of singing or playing. Once I recall that it was a surprise concert by a Russian choir, the first I had heard, and there will ever linger in my memory the great united note of harmony in which it was well-nigh impossible to distinguish the individual voices. She also had great love for art and flowers, and it was her pride and joy to make the appropriation for the improvement of the White House grounds go as far as possible. She built two new gardens, one a rose arbor, the other a pool of water lilies. She frequently invited callers to go with her into the gardens and see how the flowers were progressing. I remember one particular occasion, after a meeting of the women of the cabinet, when she asked me to remain and took me all over the grounds. It was after Mrs. Wilson's illness had started, but long before any of us realized that it was to have a fatal termination, that we were invited for moving pictures in the White House garden one June night. Cabinet children were not bidden on this night, we understood, but something happened which had taken place on other occasions. Just as on the late afternoon of the day of the marriage of Miss Jessie Wilson to Francis Bowes Sayre, when there came a message from the White House that Miss Wilson wanted the boys at her wedding, so this afternoon there came a telephone that Mrs. Wilson desired our sons with the other children of the cabinet to see the pictures. We had with us a very young guest from North Carolina, and we asked permission to include him in our party.

Eleanor Wilson McAdoo

Mrs. Wilson's Thought for Others

THE cinema was very long, the garden was dark and fragrant, and the small guest went fast asleep. The next morning one of his young hosts very much embarrassed him by remarking, "No one can say after you grow up to be a man that you have never slept at the White House."

It was not only in social affairs that Mrs. Wilson made herself felt. She was deeply interested in the welfare of the crowded portions of Washington City, and she wanted very much to have the alleys cleared out and the filth replaced with parks. Almost on the last day of her life President Wilson sat by her bed and wrote a letter for her to Congress asking that an appropriation be made to establish a small park in the center of one of these blocks. The money was given, and now when visitors go to Washington they find at the foot of Capitol Hill near B Street and Maryland Avenue a model alleyway with trees and flowers, where those whose houses face inside the square may still have a glimpse of the beauties which God intended for the enjoyment of all mankind.

One of my husband's predecessors as Secretary of the Navy paid more than his salary for the rent of the house in which he lived in Washington. Another former cabinet member, after weeks of weary hunting for a home for his family, found one that suited their needs and was also adequate for the social demands which, no matter how simple the desires of the Federal official, are imposed upon him by his office.

He asked the rent, and was told seventy-five hundred dollars. Whereupon he sank into a chair and looked off into the distance for some minutes. At last the real-estate agent became restless.

"Are you thinking that the house will do, Mister Secretary?" he ventured.

"I am wondering," was the response. "If out of my salary of eight thousand dollars I pay seventy-five hundred dollars in house rent, how shall I spend the other five hundred dollars?"

Of all the women who ever went house hunting I was probably the most ignorant. All my life I had lived in the same house in Raleigh, North Carolina. There they tell the story of a man with three daughters, two of whom married and brought their husbands to live at home. When the third daughter was asked in

THE BOYS

By MARY BRECHT PUL V

ILLUSTRATED BY JAMES H. C

THE two letters and the little green book came in the same mail, and Helena could hardly contain herself in patience until James came. Directly she heard his ring she hurried down the broad flight of stairs, quite forgetting her usual last feminine glance into her mirror, as a vain female woman preparing for her very special man. She headed full tilt for the haven of James' arms, which not incapably and not at all automatically infolded her, sweeping her to an obbligato of mingled odors—tweed, tobacco, cold air and masculinity—quite out of contact with her temporary problems and her material setting into a wall-less garden of complete content. Infolded her so capably and with so little of the automaton that only the protesting crackle of the letters and an outraged squeal from the little book recalled her. She drew away with a sigh.

"My sweet girl! My dear love, what is it?" inquired James, a little flushed and not at all inexpertly.

"You're so lovely, Jamie—my precious old Jim! You surprise me every time. I don't blame 'em—some of these modern kittens, for liking 'em the way you are, I mean—an old relic like myself ——" And she reached up and touched James' kind brown face, which Nature had elevated nearly six inches above her own.

"But I can't linger over this, darling Jimmie. Not now. Because I've got a problem."

"A problem, is it! Well, and I'll bet a dollar dog I know what it's about. It's about the heaven-born. It's about your sons—one or both. The brats, I should say. I've listened to the saga of the brats, by heaven, until I know it backward. Only my great love for you, madam——"

"You don't know this part of the saga—yet," she sighed. "Come in and sit by the fire and be kind to me. And I'll turn the light, so it's kind to me too."

"I might remark that kindness is unnecessary to a lady with a golf bogey of one-twenty and who can look in the evening like Melusina in that silver-colored dress."

"But who has two big handsome galumphs of sons to trouble her," sighed Helena. "Marry at eighteen and be Methuselah at forty-four."

It might be remarked that there was no trace of Methuselah in the lady who had pressed James Trulow into an enormous stuffed chair, and now, seated by him, was preparing a barrage made of the little green slender book and the two fat letters for him. In fact, James Trulow, who was as creditably and unashamedly in love with the wearer of the straight slim Melusina frock of silvery rough silk as though they were both twenty years younger, could have found nothing at the moment to please his eye better than Helena with this mounting pink in her cheek and her pretty profile with its classical twist of brown hair bent over her worry point.

And indeed there was something to be said for James' taste. For if a flapper may be represented by the opal—reacting in the exposure of the harshest sun, only to vivid hues and brilliant colors—there is something to be said for the moonstone also, which has a steady and very lovely light, and—in a setting of crushed silver—may be preferred by some.

Helena was James' moonstone; and the thing was not inappropriate, since James himself was not an opal. By no means.

He stretched out now, a brown grizzled man, his long legs thrust gracefully from the depths of a big blue chair, inhaling his cigarette smoke, blowing out fluffy rings, perfectly aware of the pretty woman he had lately kissed, half-minded to rise and repeat the performance only for the inhibitions imposed by her occupation.

"A Problem, Is It! Well, and I'll Bet a Dollar Dog I Know What It's About. It's About the Heaven-Born"

About them Helena's living room offered an endless appeal of restful quiet and charm, made of walls of unobtrusive sand color with quiet mezzotints, more of the fat blue chairs, a Chinese rug of deeper azure, a white mantel with a witch's fire of thorns, low stands of books and plants, a piano with a harp leaf raised.

Just above their heads on the mantel was an excellent replica of the four bronze horses of the Quadriga, with their implication of the timeless, the superior, the utterly cognizant.

They offered in the cheerful mundane surroundings an arresting note like a stilling hand lifted above sudden clamor, dwarfing for the moment any petty material aspect that would assert itself before the experience they represented.

Helena momentarily catching this note, as she often did, forgot her perplexities for a fleet second, then, realizing the clutch of the material, sighed, straightened the first letter and laid it on Jim's knee. The horses of the Quadriga were all very well, but they represented the abstract; and there was still the concrete. There still remained—the boys.

"Beansy," she announced, "has been suspended. From the Bryarson School."

She paused with a sort of tragic sigh and James did his best.

"Well," he said, "but rather usual thing? I, m Once—we hazed a fellow over three weeks I ——"

"This is entirely differ Helena quickly. "You wi by the letter. Read it."

Then after the fashion she prevented his readi telling him what was in it

It was, she explained, th of Beansy's behavior at a d faculty and trustees had honor of the heads and pres the school associations. B president of the athletic tion—an honor at seventee half—had of course been and all had gone well until Anderson, one of the trust up to speak.

"I've met him." Helena jected. "Fat, fifty and pomp very rich. Fawn-colored spats, bay window and gol no children, but uses the B as a child, a protégé. Well, a I've heard before how bo boys get at the dinners w speaks. That's not the poin point is that Beansy got up he was two-thirds throug speech at the dinner and i him. And the other boys—th of the associations—cheered. was the awful part. No r Jim—you can see that. That awful thing about the childr day. Not that you'd ever ha pected Beansy—he's always very conservative—and he a spark of humor. He gave Whistler's Mother on my last day because he said it always him think of me, and every ye the last three, on Mother's he's written me the most bea and terrible letters, all full of ments about his gratitude t and the sacrifices I have mad him. Really, Beansy never gav a bit of trouble—before. He w good as an India-rubber baby. I'm sure he gets the sentiment cards and booklets, and of cours sends a white carnation in each Well—you wouldn't suppose — Helena paused, sighed again.

"And yet," she went on, " child has certainly been chang He's thinking queer things. O at Christmas when he was home went up to the wall motto in room—Cousin Annie Edwa made it with her pyrography needle, oh, ages ago!—y know the thing of Browning's:

"The year's at the spring,
And day's at the morn;
Morning's at seven;
The hill-side's dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in His Heaven—
All's right with the world!

"And he tore it right off my wall and when I asked h why, he said because it wasn't true. 'But,' I said, 'i true. Morning does begin at seven, and hillsides do g pearled with dew, and I've seen plenty of snails sitting o thorns.' And he told me not to be facetious! He said course it was the last two lines. He said anybody who ha any brains or ever read anything knew the world was al wrong and it was no use bringing God into it. At seven teen, Jim. He said in the interest of freedom it was sill and unintelligent. And so he tore it off my wall. Bu I ask you is that freedom—mine, I mean—for Beansy to d that to my wall, to forcibly take away Cousin Annie Edwards' burnt-wood gift? Not that I hold a brief fo snails. But Beansy! I might have seen it heading thi way. And yet I'm so taken back. If it had been Henry Henry was always reactionary and radical, and very de termined. He used to cry for things and, when that didn't

hold his breath and beat his head on the carpet. for the doctor once ——"

ight point out, Helena, that you left off with telling ansy—er—Harold had insulted the trustee, Mr. son, and if you don't object to switching back to the rack—just exactly what was it about?"

seems," said Helena, "that Mr. Anderson made a deal of money during the war—war babies, you —oh, in a perfectly legitimate way, but the thing got You know young people in a school—well, there's sort of undercurrent! Beansy told me about it be- Not that Mr. Anderson wasn't patriotic, and all er—well, the way lots of them were patriotic, you I mean he made lots of speeches and stood up for ational anthem, and bought Liberty Bonds, but— the war babies were there. And—that's the awful errible thing about young 'uns, Jim—you can't gloze ing over for them. They're so uncompromising and adly unforgetting. They'll look right into your eye, you think you've got everything beautifully painted nd say, 'Yes, but ——' In short, they're the hardest e in the world to fool. Well, the war babies have been g some time—and Mr. Anderson got up to speak and oke about the war. And it seems he got on a very horse. Anyway, he made some gilt-edged remark t the boys. The beautiful boys, he called them, who out into battle so gallantly, like young knights in en armor, to fight for an imperishable ideal, their ts aflame with righteousness. And Beansy ——

Well, with his awful hero worship for Henry, and the of Henry's service, and Henry's book of poems about truth about the war, and all Henry's friends and their e of mind, since they got back, Beansy said 'Bah!' t out loud. And Mr. Anderson stopped and looked nd and said, 'Do I hear someone speak?' and Beansy up, clutching his napkin and said, 'Yes, sir, you do. oke, sir. I said, "Bah!" sir.'

Then Mr. Anderson said, 'Will you explain your re- k, young man?' And Beansy said, 'I will, sir. What ant, sir, was that we went out to battle because you t us, sir.' Jim, Beansy was twelve when we entered the r, but of course he was being Henry and Henry's friends the time. 'We went to war because it was our duty to port you when you asked us to do a piece of dirty work. t I doubt if you can ever send us again, sir.'

"Can you imagine it, Jim? Well, there was a terrible uproar and a lot of talk. Beansy was asked to apologize, and he wouldn't. They were going to expel him, then Mr. Anderson interceded—that was galling to Beansy—and they've given him a month to reconsider and he swears he won't; and the top form swears he shan't; that if he's put out they go with him."

"And Beansy has written you his decision ——"

Helena faced James tragically.

"Beansy has written me nothing, Jim. He's written to Henry. The school—Mr. Paterson, the headmaster, has given me the story, and notice of Beansy's return. And I've got a letter from Henry. Beansy wrote to him at once. And Henry is coming home to talk it over. And he's bringing Moresby Girard. To talk it over with him! Fancy, as though it should need any talking over! For no matter about the war babies, nor how right Beansy may be, Mr. Anderson is his superior officer. He was his host, besides, and Beansy behaved like an ill-bred nasty little boy. That's all. If we are to have freedom, Jim, doesn't it work both ways? Hasn't Mr. Anderson the right to be cheaply forensic if he chooses—or even illogical? If one individual has a right to force his standard on another hasn't Mr. Anderson the right to express his, when he's invited to? Beansy doesn't have to believe what he said—any more than he has to believe in Cousin Annie Edwards' wall motto."

"Mostly, freedom's a one-way ticket when you're Beansy's age," Jim said dryly.

"And sending straight for Henry, Jim! What can we expect of Henry? And bringing Moresby Girard into it. As though it were a matter of sacred principle. Oh, of course, Moresby and Henry! Gaiety has their pictures this month with six others—a whole page of Our Young Modern Thinkers. Because of Henry's poems and Moresby's novels. I know it's remarkable—the things they write. I know it's remarkable for Moresby at twenty-two to have written Outlaw and Unafraid.

"They're amazing books, and full of horrible truths, as very young people see truth; in—well, a sort of physiological way. Because, I suppose they've found out all about themselves so recently, and can't wear their knowledge lightly. Oh, beauty's in them too! A lot of beauty. Physiology and beauty and the plain names of things all mixed together. That's what strikes you so! They make me think—Moresby and Henry's kind—of little boys with their eyes full of dreams throwing mud balls at the teacher."

"The teacher!" snorted Jim. "They'll tell you about the teacher!"

"Oh, I just meant life, Jim; and some of the rules. I know you can't teach 'em anything. If you point out that you've lived longer they only jeer and ask you what you made of your living. They'll say, 'See the mess you turned over to us!' As if one didn't learn more from one's messes than one's successes. Still, what can you expect from children?"

"Youth," quoted James, "is a disease that cures itself."

"It's tough now and then on the nurse while they're healing," sighed Helena.

"You, yourself," Jim continued, "at Henry's age—twenty-four—were married; the mother of a child."

"I wasn't trying to fix the world; I had a job and I attended to it."

"But that"—James opened his case and selected carefully a new cigarette—"is what they claim they're doing—isn't it? Fixing the world—isn't that what they're going to make their job?"

"Oh, yes. And they've begun well enough. The world's listening to them. That's a great deal. They don't get snubbed the way we did. And I know they're clever. Henry's A. E. F. book has been called the truest war verse we had, and the Post Digest has made him a literary editor. He has a new book of verse just out. This is my copy. I got it to-day. I'll read you something." Helena opened it at random. "This is what may be expected of our Henry just now:

"COCOTTE

"She came—white poppies in a shaking wind,
All silver chaliced on their gracile stems,
I thought of this when first she spoke to me,
There on the road to Ems,
The long, long road with shadows dropping, bending
From poplars tipped with gold—and night descending.

"Oh, there was in her face her whole young being—
Dark pools her eyes, dim now with sweet unseeing;
Like blood, her mouth, in her white blanchèd face.
Oh, bitter blood, steeped from her heart's young grace.
She had a wisdom, from the Sphinx's day—
She hailed me on my way."

THE GENTLE CRIMINAL

By Wilbur Hall

ILLUSTRATED BY J. E. ALLEN

"When I Learn to Shoot the New Revolver I Have Bought by Mail Order I am Going to Hold Up the Overland"

THE time came when Gideon Worrick chortled to think what the people of Derbyville would do and say if they could only know what was in his mind. Suppose, for example, that he should stand up in the Young People's League meeting on any Sunday night and remark: "When I learn to shoot the new revolver I have bought by mail order I am going to hold up the Overland."

Or, again, if he should lean close to the grille in the cashier's window and say to one of the State Bank's leading customers: "Better draw your money out of here, my friend, for on one night soon I am going to embezzle and abscond with every penny in the vault."

Of course no one would believe him. Of the twelve hundred and odd souls comprising Derbyville, Gideon was exactly the last anyone could have suspected of possible faithlessness. This careless acceptance of him, by unanimous consent, as so trustworthy and honest that he could not do wrong, no matter how much he might want to, coupled with the common conclusion that he would never want to at all, was the trouble. Gid resented being taken for a machinelike man of probity, as old Bije Linder in his rare moments of sobriety might have resented the offhand finality with which he was awarded a life position as the village drunkard. The sensitive man may crave recognition of his human frailties as insistently as of his attributes of divine strength.

The cashier had been born on the river below Derbyville, and had lived in and around the mountain town all his thirty-eight years. He was the community's most trusted man, but far from being its most popular. He was a pattern of respectability, but not respected. Instead of being influential and a leading citizen he was a born treasurer. His application to duty was noteworthy, so they did not look to him for brains. His willingness was notorious, wherefore they gave him no opportunity to use initiative. His morals were unassailable, and they supposed that he lacked spirit. No one ever thought of him as a chairman, a president, an orator of the day, a marshal of the parade, or even as a committeeman on ways and means. But whenever there were moneys to be paid in, kept, paid out and accounted for Worrick was your man. As a treasurer Worrick was a Derbyville institution.

In his younger days this confidence in him had pleased Worrick, but when he found it unaccompanied by any of the more flattering and warming sentiments it began to pall. He revived somewhat when, at thirty-four, he was made cashier of the State Bank, after twelve years of unremittingly faithful service; but he found that the promotion made no change in his status in the community. He was not such a fool as to think old Warren Selfridge, the president and principal owner, had made him cashier for any reason save that he would work harder for less money than anyone to be had who could be as safely trusted. Selfridge, while always the despot of the bank's affairs, had been in the habit of consulting Brown, the former cashier, more or less freely, and had often taken his advice. Not so with Worrick. He was never consulted at all; merely trusted. Selfridge considered him—and found him—as faithful as an adding machine; as safe as the time lock. He was given ten dollars more a month and treated exactly like a bookkeeper. The iron began to eat into his soul.

At first his rebellion was in the form of dark thoughts hastily banished. Later he entertained these malignant mental visitors—gradually came to inviting them. He contemplated high and dreadful crimes, not as possibilities, but as dreams. He liked to imagine tying Warren Selfridge, against whom he had not the slightest animosity, hand and foot and locking him in the vault, taking the money in the cash box, swaggering down Main Street and up Mendocino with a revolver in each hand, blazing away; or setting the library afire some time when there was a strong west wind which would carry the flames thundering through the business section, gutting it; or getting drunk at the pool room—where it could be done, he heard—and staggering through the town, shouting profanity. He could work himself into quite a state by thinking such thoughts.

Quite abruptly this random and frankly impracticable cogitation—meaningless and harmless in itself—was crystallized, and began to harden into planning at the meeting held to wind up the affairs of the committee in charge of Derbyville's third annual home-coming-week celebration. Because of attempting to outdo all previous committees, this one had exceeded its appropriation and had come out with a deficit. Now a deficit on the books of a committee charged with staging a public celebration is always a grievous thing, and there is no subscription list more difficult to explain and to obtain signatures on than one calling for contributions with which to pay for what we know colloquially and inelegantly as dead horse. Every committeeman in America knows that. The committeemen in Derbyville, after the third annual home-coming festival, knew it well. They had been a trifle apprehensive for weeks, but, as is characteristic of committees, they had hoped for the best. When Gideon Worrick presented the final statement of accounts and showed them, in his neat red figures, a shortage of $348.74, they looked at one another unhappily and then, as one, turned to look at their treasurer.

He was a very thin man, with a thin and somewhat melancholy face. His hair was thin and of a reddish hue, so that one might have been forgiven for thinking that what he displayed was a copper-colored scalp devoid of hair. He had slight, light eyebrows, and these, framing light blue eyes, gave him a bald and v expression that di less than justice. had a thin, long neck and a very prominent Adam's a which moved up and down when he swallowed, as a tu gobbler's head does when he gobbles. Gideon had a f for light clothes, and these made him look more thin he was, and did not favorably affect the colorless char of his face. Most blond men redden easily; Gideon got sunburn when exposed, and grew white when ang embarrassed. He was impeccably neat, which may tended to heighten the tedious monotony of his etiola

Perhaps it was partly because he was so neat and wash out that he irritated the committeemen as they looke him. He leaned back, furtively paring a finger *nail*, waited for the chairman, Hugh Drury, to say bri "All right, Gid, we'll talk this thing over. Much obl for coming."

Instead the chairman cleared his throat and obser "That's funny."

"Your idea of funny maybe," Doc Neal, the town d tist, snapped acidly. He was notably sharp-tongu "It's not mine."

Mrs. Gordon remarked, "Dear me, I wouldn't h been so shook up by a hundred or so short. But th hundred—how much did you say, Mr. Worrick?"

"Three hundred forty-eight seventy-four."

"My land!"

"But what for?" someone else demanded crossly.

"There are the vouchers," Gideon said, indicating t pile.

"Oh, drat the vouchers!" Doc Neal broke in. "If y think this committee is going to waste half the night loo ing through a stack of receipts and canceled checks you crazy! Don't sit there like an eel and make faces! Gi us some idea about this shortage, can't you?"

Gideon wanted to make an angry retort. But he cou not think of one. Wearily he drew the sheaf of pape towards him and began to thumb them over.

"The fireworks cost more than Mr. Drury thought th would, in the first place," he remarked tonelessly.

"How's that?" the chairman interrupted. "Wait minute, here! I never said anything about how much th fireworks would cost. I'm a dry-goods man, not a pir wheel expert. What do you mean—I thought?"

"I have your original estimate here," Gideon said with little more spirit.

But they refused to examine it. They passed to th next item. Every item got under someone's skin. By a perfectly human process of thought the five members o the committee began to look on the man who exhibited their financial difficulties to them as the man responsible for them. In three minutes the treasurer was like a

Things Were Happening Too Rapidly for Him"

pt on the stand, bullied by counsel gry and importunate creditors. k grew angrier and angrier, but he : the sort of man to show it. There- ey redoubled their faultfindings.

Neal finally snatched at some of oks and papers and began to claw y through them, sniffing and biting In a moment, interrupting some- e, he ejaculated:

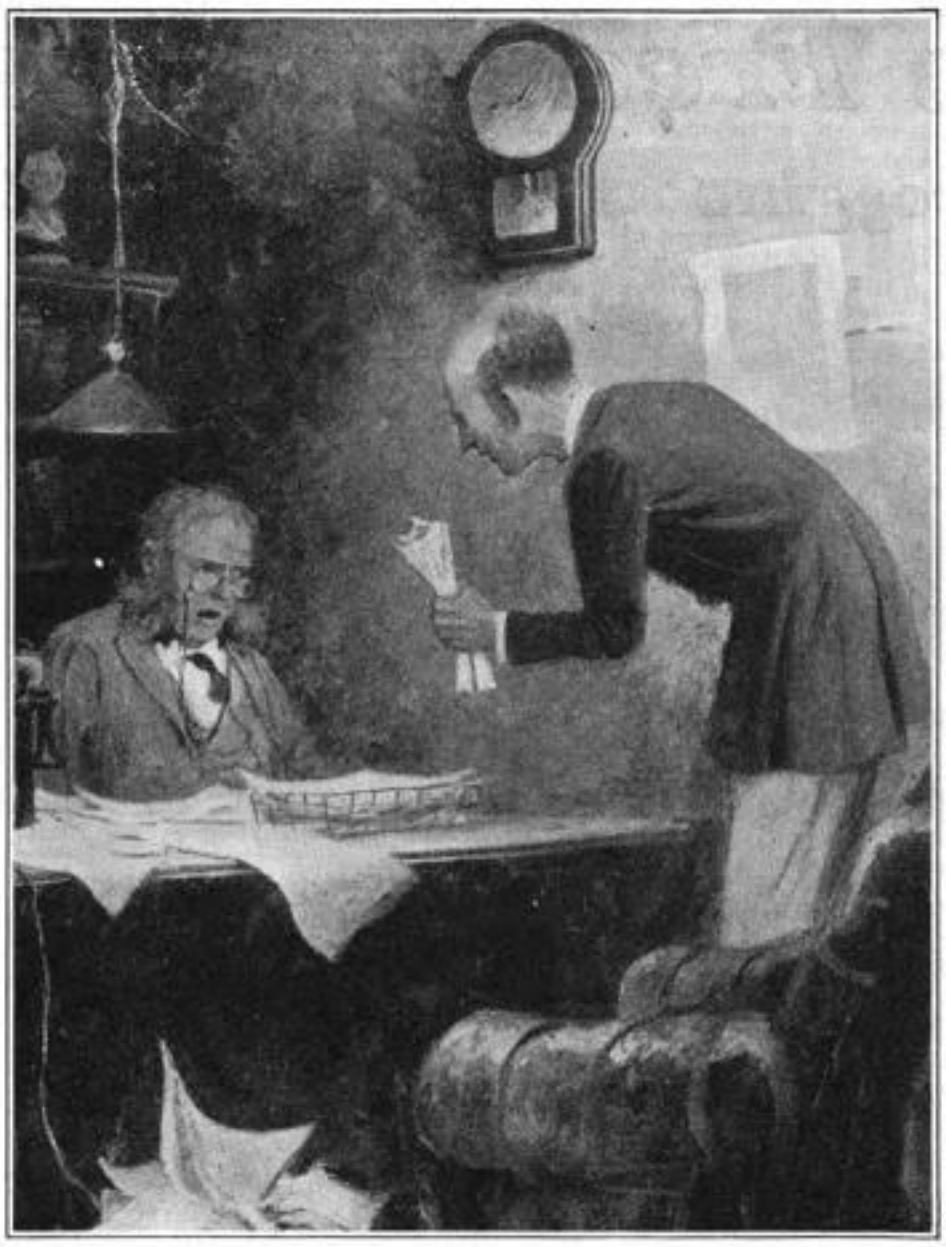
w what the Sam Hill does this bill Worrick? Curtin & Laird, San sco: stationery and supplies—nine ve. What was that for?"

e letterheads and envelopes the ittee ordered," the treasurer replied tonously. "And, oh, yes—ninety- nts for this account book."

hich account book?"

he one I kept the accounts in—

e dentist took it snappishly. He ran ough. He leaned back, throwing the to the table.



h, very well," he said in a resigned of voice. "If our treasurer forgot he wasn't a member of this com- e and went out on his own hook out authority and spent money that ——"

What way?" Gideon demanded.

That way! Account books! Fancy gs! Pretty covers! A hundred pages e book and not twenty of them used. a wonder you didn't buy yourself a fountain pen to keep 'em with." He ed to the other committeemen. "This hat comes, I suppose, of having a man can be a sort of treasurer suddenly gining that he can be the chairman and general manager and the committee lf all rolled into one. It's sickening!"

Gideon Worrick, for the first and last e in his life, leaped to his feet, over- ing a chair and striking the table h his fist. He reached for his hat and pped it on his long head defiantly.

"That's all I'm going to take from ybody here," he said in a thin voice at suggested tears. "I've worked ghts and even Sundays on this festival business, and I've queezed the pennies and cut down expenses and used my n things, and I've never had a word to say about raising e money or appropriating it or allowing it or spending it, lthough I could have done better than some of you did ore than once; and I've been trod on like a doormat, and ever thanked and never appreciated and never given a least word or a decent job, and now I'm all through and done for. You can take your books and your deficit and your faultfindings and you can go to the grand jury with them, if you please; but I quit, now and forever. I've been the last treasurer of anything that I'm ever going to be in this town, and you can put that down to stay. Not ever again!"

The President's Glasses Fell Down on His Nose and His Mouth Opened. He Looked at His Cashier in Stupefied Amazement

He walked out, trying to slam the door. But he could not be dramatic, even in such a moment. The door knob caught in his coat pocket and tore it, and the door closed quietly and decently.

Gideon walked down Mendocino Avenue with tears of rage and impotence in his faded blue eyes, and for the first time began to wonder seriously how a man entered upon a life of crime. His speculation from that moment began to take tangible form. He began to consider practical ways in which to commit some startling felony, partly for revenge on the mean-minded people of the little town, partly to demonstrate to them that he was something more than a smoothly operating machine, and partly to startle them out of their complacent custom of classifying people and putting them into pigeonholes. He was sick and tired, he told himself, of finding himself labeled, and always summarily pushed back into his particular rut when others conceived that he was getting out of it.

Derbyville was a small town, with no particular present reason for being. Its genesis had been logical, for in the very early days two great sheep and cattle ranches had made a common boundary of the road of which Main Street was a piece. The Derby Ranch had long since passed with its founder, but the Van Lythe Ranch stretched for miles and miles in three directions from the town. The trouble was that old Frank Van Lythe, a headstrong and fiery gentleman, had never forgiven the first settlers for naming the town for his rival, Jesse Derby; and though the latter had been dead for years, and though the Derby Ranch was scarcely a memory any more, Van Lythe did his business in San Joaquin and in San Francisco, and avoided whenever he could entering Derbyville even to board a train or to load steers. If Van Lythe ever died—which some deemed doubtful—his sons might come to the village and help to make it quite a place. But until then Derbyville marked time.

Warren Selfridge, president of the State Bank and Gideon's employer, was a poor banker; but he was good enough for the town. He was easy-going, trustful, absent-minded and lazy. His father had founded the bank, and Warren had taken it over in time as a matter of course. For forty years he had been its head, and it had gone up and down with the country and the times, always making him and his wife a living, which was all he desired and more than he, on the rare occasions when he reviewed its condition and prospects, could reasonably expect. It was not what an economist would have called sound, many times, but no one worried about that. The state bank examiner's deputy disliked stopping at the Stratford Hotel, and therefore he always notified Warren Selfridge when he was going to call, and the banker would take him out to the comfortable family home two miles from town as his guest. It happened once or twice a year, therefore, that kindly, domineering, bustling little Mrs. Selfridge and fat, indolent, good-humored Warren Selfridge were both putting their houses in order at the same time and in honor of the same visitor.

Gideon Worrick and a bookkeeper were the sole employes of the State Bank. For a long time after Gideon's elevation to the cashier's desk old Henry Peacock had divided his time between the bank and Patterson's General Store; but the purchase of a small automobile and a tour or two had changed the Selfridges' habits materially. With a tent rolled upon the running board and a kit of miscellaneous cooking utensils and a box of easily portable foodstuffs in the tonneau, they had become gypsies almost as though by reversion to type, and for weeks at a time Gideon Worrick was left in charge; in charge, that is, to the extent only of being abandoned with the work of keeping the institution running. He had no authority, could use no discretion, could act positively on nothing. "If anything came up"—that was the phrase—he always had on his desk the itinerary of the wanderers and strict and inviolable instructions to wire the president and await orders from him.

Worrick had not resented this state of affairs actively until the incident of the deficit in the funds of the home-coming committee. This incident pointed the subordinacy of his position and he began to chafe, brooding over the lack of confidence shown in his ability—if not in his honesty—by Selfridge. His troubles assumed unduly large proportions in his mind. Very definitely he made up his mind to revolt, and gradually his rebellious inclinations took the form of a criminal program. He only wondered whether or not he had the spirit actually to carry out his plans. If he did have there would be amazement and consternation in Derbyville, for he would strip the bank clean, and with its funds take every penny belonging to half a

Charles Frederic Goes Eas

By C. E. Scoggins

ILLUSTRATED BY WILLIAM MEADE PRINCE

"Step Up, Gentlemen! First Come—Ugh!—First Served!"

SUDDENLY, though the pale and chilly moon had not yet faded in the dusk of dawn, the gangs on Tiscua Fill were electrified into amazing energy. Tiburcio bounded from gang to gang, visibly and vocally the diligent foreman; and rasp and clatter and thump, rattle and crash and bang; the cañon rang to industry redoubled. For two mounted figures had appeared on the cañon trail, and the fat one in white breeches, who rode with knees hunched high, would be J. C. Bailey himself, lord of the Bailey Construction Company.

The checker cocked a cynical eye and yawned and went on making marks on a sheet of paper. He, the checker, held J. C. Bailey in the mild contempt that is due a tenderfoot—witness those tight white breeches, that ridiculous postage stamp of an English saddle, as if the mountains were a city park! He, the checker, had been in Mexico three years already, and knew the country. Yes, even as Jonah knew the whale.

He sat at the high exposed end of the great fill muffled to the ears in a red blanket—it is cold in Tiscua Cañon at dawn, and seems colder because you know how much hotter it will be when the sun blazes up; and a checker's work is not so violent as to heat the blood. Nor is it complicated. On a dozen tracks, from either side of the cañon, dump cars shuttled, tilting their contents roaring down the dumps, and for each car he made one mark on his sheet of paper. Almost anybody with a civil engineer's degree can make marks on a sheet of paper.

Tiburcio, the diligent foreman, paused beside him with stern admonitions.

"You, *checador, alerta!* On the job now!" said he in effect. He further addressed the checker as Charley, which is more cutting than it sounds—meaning, humorously, a Chinaman. The checker didn't mind. A checker has no dignity; and his name, though Tiburcio neither knew nor cared, was Charley.

Tiburcio bounded away. A diligent foreman cannot waste all his time on a checker. The horses, scrambling up, topped the fill and turned toward the dump, but the checker did not rise. On the contrary he pulled his battered hat over his face and hunched the blanket closer about his ears. A civil engineer is perfectly competent to hold a checker's job, but he is not necessarily proud of it.

"How many cars go already?" demanded J. C. Bailey in his tenderfoot Spanish.

"Fifty-two," reported the checker in a slightly better variety of the same language.

"What!"

A checker, you understand, is paid to be honest. He is paid a whole peso and a half a day, which is seventy-five cents in money, though he has nothing to do but sit all day on a comfortable rock and make marks on a sheet of paper.

"Tiburcio!" bawled J. C. Bailey, and Tiburcio galloped out, hat in hand. "Tiburcio, this *checador*, he *dice* that they've got out *cincuenta y dos* cars already, before day. 'Taint possible!"

Tiburcio, ever so anxious to please, was baffled by the fact that the great man's Spanish was somewhat diluted th English.

ke the voice of the second horseman:

her, don't be silly, talking Spanish at that man. ou see he's an American?"

man?" said J. C. Bailey. "Oh, um!"

See now how habit betrays you into humiliation. The checker was apprised by the voice of the second horseman that she was not, accurately speaking, a horseman at all; wherefore his legs mechanically hoisted him to his feet and his hand on its own responsibility pulled off his hat. The blanket slipped from his shoulders. He snatched at it too late.

"Um!" said J. C. Bailey, seeing what the blanket had covered.

"Hello, Mr. Bailey!" said the checker brightly. "Have a good trip in the States?"

And right at his elbow a car dumped and a virtuously industrious voice bawled "Number Two!" But the checker did not move. Across the cañon floated a musical howl of "Eleven!" But the checker, his tally sheet forgotten in his hand, the wind of dawn frisking unimpeded through his calamitous raiment, stood simmering in shame, his eyes helpless on the sweet, grave face of the girl who gazed so curiously on him.

It is bad enough to go on your uppers, to come down to a checker's job and be caught at it by a fat, sleek, offensively wealthy tenderfoot like J. C. Bailey; but to have a girl, an American girl, a girl like that, see you there and pity you ——

"Um," said J. C. Bailey. "Haven't I seen you before?"

"I shouldn't wonder," admitted the checker. "I have boned you for a job as often as I could get to you. My name is Gray."

"Um. I remember. Engineer, ain't you? What you doin' here?"

"Checking," explained the checker.

"I mean, how come? What for?"

"A peso and a half a day."

"Um," said J. C., and thrust an impulsive hand into his pocket. "Here! For the love of Pete, buy yourself a new shirt anyway!"

"Will you kindly go to thunder?" said the checker in cold fury, and sat down and fished vaguely for his blanket.

"You impudent pup!" said J. C. Bailey.

Now Tiburcio, looking from one to the other, caught his cue. Beyond a doubt the great *jefe* was rebuking that checker, who, all unheeding of the frantic voices of car dumpers, sat gazing at the lovely señorita who wore pants. Tiburcio knew and treasured a few explosive words in English. "Pup" was a new one, a good one.

"You, *checador*," cried one who chimes virtuously the voice of authority, "a then hired to sleep? Hav no ears? Loafer! Block Pup!" But unjustly the of authority turned on his diligent foreman.

"Hey, you!" sputtered Bailey. "*Donde—donde*—where the blinkety-blank b do you get off, talking to a man that way? Huh?"

Tiburcio missed a priceless opportunity to enrich vocabulary with English words; he was stunned.

"Gray," said J. C. Bailey, "give this fool your t Tell him to put another checker on the job and be dam to him. You come on to town and see me. I'll give y job that's fit for a white man, by glory! if I have to in one. Cl'k! Cl'k!"

With wrathful cluckings and thumping of the heels breathing through the nostrils he hauled his horse ar and set off. The girl followed. Over her shoulder nodded and smiled as if that checker were anybody at The sun had popped up, dazzling, cheering, chasing thin chill of dawn; and all about him righteously in nant voices were bawling "Two!" "Six!" "Eleven "Nine!"

II

THIS is how Ishmaelites are made. The original Ishm no doubt, coming to the notice of some impulsive m arch of that olden time, was given a job that was neith fish, flesh nor fowl, neither boss nor honest son of toil, so th men unjustly judged him. It is not down in the Book th a woman scorned him; but a woman finished the cro of poison ivy for Charles Frederic Gray.

The new job was so new that nobody, not even J. Bailey, who invented it after as much as twenty minute thought, knew the name of it.

"Here's the idea," he said in the important calm of h office in Tequila: "You're an engineer, and you got a ce tain amount of construction experience, haven't you?"

Charles Frederic felt this to be modest enough. H nodded.

"And you're young and husky. Now, me, I'm old an fat. Riding does me up."

"Ought to use a Texas saddle," said Charles Frederic.

"Use any kind you want to. Here's the idea: Wh can't you ride down one end of the line while I go down th other, look over the work in each camp, meet me her every week or so and report? Save me half my riding."

"I can," said Charles Frederic, dazzled.

To be sure, there isn't any regular job called superin tendent's eyes, and he wasn't assistant superintendent because he hadn't any authority; and the pay, it de veloped, was only fifty a month and found. But it was an important job anyway.

"You want to go easy," J. C. warned him. "Most of the camp foremen are hard-shells, old-timers that were build ing railroads when you were eating your dinner out of a bottle. You're young, you got to admit that. Don't make 'em sore. Don't swell around. Just get the dope and report."

You didn't need to tell Charles Frederic to go easy. Even fifty a month is wealth when you have been six months on your uppers, and the pride of a decent job is as tingling wine.

He went easy. He went superlatively easy—at first. He listened respectfully to the theories of the old-timers and offered none of his own, wherefore the old-timers found

"Soda water," said the pious Oscar,
oiging Lon Dickey.
"Licker!" declared Dickey. "And
o spotter can make me say dif-
ent!"
"Huh?" said Charles Frederic
lankly.
"Yes, huh!" said Dickey, getting
o his feet. "Git out of here before
e throw you out!"
Plainly here was no merry jest.
Charles Frederic's jaw went gently
lut; a spot of white appeared over
either cheek bone.
"You'll what?" he begged. "Say
that over again—slow!"
"You heard me," said the sullen
Dickey.
"Run along, sonny," repeated Hub
Franklin. "We'll buy our own, thanks
just the same."

And then Charles Frederic's hands relaxed and his face went from the white of anger to the red of misery. He had to keep the peace with these men. His job depended on it. And if J. C. fired him now there would be no other job; he would have to leave Tequila; and never again—never again would there be evenings in a peaceful courtyard where jasmine breathed its fragrance under the stars and the sweet slow voice of comradeship spoke of many things. He grinned, though the effort hurt him to his heels.

"Put up your battle-axes. I'm not on the warpath just now. Dickey, I was looking for you. Step over here a minute, will you?"

"If you got anything to say," said Dickey, "say it!"

"Have it your way. You're running high in both your rock cuts. Bailey says look out for that. It costs a lot of money to skin a hard-rock cut afterward."

"When was Bailey in my camp?"

"T'e ol' man, he ain't naver lef' t'is town t'is week," put in the helpful Oscar. "T'is kid, he ——"

"I'm telling you what Bailey said," snapped the kid, blinking to clear the atmosphere of red.

"All right, all right," said Hub Franklin; "we hear you. I reckon Lon'll tend to it. That all? Good night."

"Good night," said Charles Frederic through his teeth.

In those few seconds the street had changed. The moon still bathed romantic walls and barred windows, flooding the ancient cobblestones with liquid shadow; yonder the hills rose mysterious, challenging, lovely against eternal blue—a brave world, but all unfriendly now. A spotter, a spy, a bearer of dishonorable tales! That was what they thought. And what was he? A messenger boy!

He came to the street where J. C. Bailey lived and turned into it. His hobnailed boot heels woke furious echoes in that peaceful thoroughfare, but he strode unheeded and unheeding past the very elbow of a youth who worshiped at a lady's window bars. Across the street from J. C. Bailey's house yet another youth stood in the shadow against the wall, craning and murmuring sweet nothings to a maiden who leaned to him from the balcony above; and at Charles Frederic's shoulder a mirthful voice drawled, "Ah! Whither in such haste, industrious sir?"

III

YES, and the moon was high. The scent of night-blooming jasmine was in the air, and it was Pat herself who sat within the barred embrasure of the window, the shadow of the grating broken on her white dress, her clear eyes laughing under their tender, whimsical brows. His humiliating status had not changed, had it? Yet he was comforted. The lump of bitterness melted in his throat.

"I've been sitting here," she confided, "envying those damsels with the long-distance swains. There's devotion for you! They don't seem to mind us a bit, do they?"

"Envying them? 'Od's bodikins! By my halidom, but this shall not be!" he declared, and swept off his hat in a bow of courtliness. He placed one hand upon his heart and extended the other—the one that held the hat—as in ardent pleading. "Señorita," he begged with fine tremolo effect, *appassionato*, "one smile! One little tender thought! Thou knowest that without thee the sun is dark and the days are very long ——"

But he could not carry it off. His own words conjured up reality, the empty days that waited him if he must go away from her. For he was no immortal lover, facing heroic obstacles. He was a youth who lived in a world of too, too practical things; whose very bread depended on a job of humility and scorn. He choked—and grinned.

"How do you like my samples, lady? Will I do?"

"Encore!" she applauded softly; but he stood awkwardly before her, grinding his heel on the stone pavement and seeking vainly some safe and not too banal word. "Listen!" she said, nodding. "Can you hear what he says?"

"Yes," he admitted, and no more. For it was love that murmured there across the street, no less than in the ancient orchard of the Capulet; love, on this azure night, that whispered at a thousand windows; and he, Charles Frederic the unworthy, must be dumb. There were no fierce male relatives to fight, no dragons to kill. There was only the fat and kindly J. C. and a job that paid, precariously, fifty dollars a month and found.

"I—I liked your samples," she said.

Did she not know how beautiful she was? The darkness behind her made her clear face a cameo, gave her gray eyes a depth of tenderness in which Charles Frederic was lost. He meant to speak lightly, to play the game with her; but his voice was husky in his throat.

"*But, soft! what light through yonder window breaks?*
It is the east, and Juliet ——"

And madness took him wholly. No poet was this Charles Frederic Gray, but the man who shaped those lines was so. He knew that his hand, which had gripped a cold window bar, held both of hers; very small they were to yield so much of strength and comfort. He heard his voice as though it were not his:

"*It is my lady, O, it is my love!*
O, that she knew she were!
She speaks, yet she says nothing: what of that?
Her eye discourses ——"

And her eyes fell, and lifted bravely again to his. Her face was unaccountably very near the bars; it was with no sense of violence that he took her in his arms and kissed her. He had forgotten that he stood in a village street, forgotten that he was despised of men. It was as though he held the ineffable fragrance of jasmine in his arms. He released her and stood back, trembling.

RITA COVENTR

By Julian Street

ILLUSTRATED BY HENRY RALEIGH

X

ARISING at nine the morning after Rita Coventry's party, Parrish felt that he had visited the boundaries of sleep but had not for a single moment crossed them. He had lain in his bed with eyes closed, his mind whirling in a wild but not unpleasant phantasmagoria, neither real nor dream. Having bathed, dressed and breakfasted he appraised his feelings. He was not fatigued, but felt upon the contrary a slight exhilaration, like that of one who in the morning continues to be buoyed up by last night's alcohol.

As he was about to leave his apartment the telephone rang. Of course it would be Alice. He did not want to talk with Alice now. His first impulse was to have Ito say he had left for the office. Yet somehow he did not want to do that either. It did not seem fair, and he wished to be as fair with Alice as the circumstances would permit. Besides, was there not a chance of its being Rita? Only the faintest shadow of a chance, to be sure, but —— He had a vision of her sitting in that pretty bed of hers with a telephone instrument in her hands. Suppose she had awakened thinking of him, and was calling up just to say good morning!

Quickly he turned back and answered.

"Good morning, dear."

Of course he had known it would be Alice. She wanted, as usual, to chat.

"I hope you had a good time last night?"

"Oh, good enough."

"The prints were nice?"

"Yes."

"A large collection?"

For some curious reason he thought of Busini.

"I'll tell you about it tonight," he said. "We'll go out to dinner. I must run now. I'm short of time."

"I'll see you about five?"

"No, I have an appointment late in the afternoon. I'll not get there much before seven."

"Earlier if you can," she said in that sweet voice with its faint note of wistfulness.

"Yes—of course." As quickly as he could he terminated the conversation.

Ah! Now he knew what had brought Busini into his mind. A phrase used by Alice had recalled the parting utterance of the Italian: "A large collection."

Last night he had sensed an indirection without grasping its significance. Stupid of him! Yet in fairness to himself, how could he have understood it then? Busini had, at that juncture, foreseen more than he himself would have dared to foresee, and had prophesied in sneering parable. Not very flattering, certainly, to be likened to one carelessly selected print out of a portfolio-full! And as to the double meaning in that reference to Rita's collection—that only showed how far a jealous man could stoop.

Jealousy! That clearly was at the bottom of it all. Doubtless there was a certain amount of truth in the gossip connecting Rita's name with that of the conductor. But however that might be, it was self-evident that she had discarded him. What other meaning could one read into her retort to him as he was leaving her house? She had answered his parable in kind, telling him that when she found an unworthy item in her collection she got rid of it at once, and she had pointed the shaft with a good night. That barb must have lacerated!

What if some of these tales were true? What if it were true that Rita had cruised the Mediterranean in the royal yacht? What if, as they said, she had used the private car of Tilghman Keppler? What of it? In one sense was not all that to her credit? By her gifts she had lifted herself from obscurity and made herself a personage, with the prerogatives of a personage. She was too big to play the game according to the rules laid down for ordinary women. She could make her own rules. Moreover these stories concerning her supposed love affairs were always based on rumor alone. It was "They say ——" "A friend of mine tells me ——" "I have heard ——" And it was not, upon the whole, harsh gossip, but rather amiable, or even hopeful. People talked about her, but they were proud to know her—prouder, it sometimes seemed, because of these very stories. She was sought after by the aristocracy of brains and achievement.

She herself was frank enough. What had she said to him last night? "I have had all the follies." A confession, surely, but one showing in what light she looked upon the past. No sentimental adventure, he took it, had ever seriously scarred her heart. Just affairs—follies. Busini, for instance. If she had ever cared deeply for Busini she could not have dismissed him last night so ea As for the king, it was policy for an opera s be gracious to a king; or for the matter of any very rich man who was a patron of the ar like Hermann Kra Tilghman Keppler.

In his own case, heaven, there could such motive! He a were merely man and It was as a woman, prima donna, that shown herself to woman fearless, enge ous. More than tha met as man and wom dom meet, on an abs equal footing. There be no raking up of h on either side. Let th past bury its dead. Th found each other. Life future, now, for both o With such radiant refl his mind was filled headed for his office.

He Saw Himself With Rita in Foreign Places Amid Spectacular Surroundings

XI

THAT afternoon, as day before, he found seething on Fifth Av Twice on his march up he stopped; first at a flo where he selected a great of roses for Rita; then haberdasher's—for at the human, like the feat male, is fain to celebrate brilliant plumage.

Beyond the surging walk mob he saw, as h the shop, a green-and-y bus go lumbering down street.

It was a new bus shi with fresh paint, looking all the world like a double-decked flower abloom with pretty f under pretty hats.

A flash of blue and s amid the swifter moving t fic near the center of street drew his eye to a hel roadster which by the loo it might have emerged a ment since from behin plate-glass show window. unaccompanied young wom at the wheel, so conscio debonair, had also that pearance of fashionab costly freshness.

"Behold us—spring m els!" car and driver seem to chorus.

There was something ve nice about a roadster. It cupied a place in motordo not filled by any other type of car. He would have to g a roadster after things picked up a little in the Street.

"Taxi?" invited the chauffeur of a prowling pub vehicle.

Glancing up, Parrish saw that the cab, though by means new, was resplendent with varnish freshly put o

Spring! And Rita! But he would not hear from Ri until six.

Half past five found him sitting in his library by th desk on which the telephone reposed. There wasn't an news in the papers any more. A weak market was n news certainly; and for the rest there was only the usua assortment of robberies, murders, fires, motor accidents divorces. He dipped into several editorials, but found no interest in them. Even his favorite frivolous column, Peek-a-Boo, yielded him but a single smile.

He threw the paper aside. Now at any instant the tele phone would ring. Was Rita sitting waiting, too, he won dered? Would she call him exactly at the appointed time?

Ah, six! The clock was striking. He reflected that women were sometimes peculiar in these matters. What was it about them that made them like to keep men wait ing? Even Alice, least artful of her sex, had kept him

Digitized by Google

t once or twice when he first knew her. Woman Well, if it pleased Rita to make him wait a little, means let her do it. He could endure it, though ality was, in his eyes, one of the high virtues. It taken Alice long to find that out. Rita, too, would etter when they had known each other for a while. rief intervals his eyes lifted to the face of the grand- s clock which had for so many years told off the at Blenkinswood. The hands were bending to a ngle now. He wondered whether, on that sleepy old tion, time had ever dragged itself away so slowly. ps the clock was fast. He compared it with his . No, it was right.

rose and paced the rug. Something must have hap- to delay her. She was a busy woman. Innumerable might have come up—unavoidable things. She have callers and be waiting eagerly for them to go. again it might be that she was one of those women are by nature careless about time. He had heard it hat artistic people were oftentimes that way. To her, ight mean merely the general neighborhood of six. aps she was now having tea. She had told him she dined on evenings when she was to sing. Or perhaps as adding the last touches to her toilet. She had to go rémecourt's birthday party afterwards. How lovely would look! He wished that he might see her. He ed that he knew Frémecourt. He had never liked that asso. He looked so gross.

ontinuing to pace the rug he became engaged with the ern, following it with his feet. There was a place in orner where he had to take a short step or else go over the border. In his present frame of mind this annoyed . In the back of his mind was an incoherent wish that rug had been a little shorter or a little longer to match length of his stride.

ould she have misunderstood the arrangement? Could have thought he was to call her? No, it had been her posal. "I'll telephone"; those were her words.

promise was a promise. What would become of busi- s—his brokerage business, say—if everyone were care- about verbal agreements? A person's word ought to as good as a promissory note. Here it was, seventeen nutes after six! Something must be the matter. If she not telephone by half past six he would ring her up. He k the telephone directory and looked for her name. ree Coventrys were listed, but she was not among them.

As the half hour struck he called Information and asked for Rita's number. But he did not get it. It was a private wire, Information said; the number could not be divulged. When he tried to argue with the switchboard sibyl she cut him off.

Either Larry Merrick or Hermann Krauss would undoubtedly be able to tell him the number, but for some obscure self-conscious reason he did not wish to ask them. He would do it if he had to, but would try Mrs. Fernis first.

A maid answered. Mrs. Fernis was out, she said. He requested her to look up Rita's number on Mrs. Fernis' telephone list.

Well! At last he had found a girl who was obliging and intelligent! She gave him the number, whereupon he thanked her quickly and hung up the receiver before she had a chance to ask his name. Now he would find out what the matter was!

But he did not find out. Pierre the butler, who answered Rita's telephone, informed him blandly that mademoiselle was not at home.

"How long since she went out?" Parrish was ashamed of the question, but he burned to know.

"I really can't say, sir. Is there any message?"

"No," growled Parrish. "Or rather—yes. Ask mademoiselle to call me up whenever she gets in." For safety's sake he gave his number.

"Mademoiselle will be late, sir."

"I know she'll be late. It doesn't matter how late she is. Kindly give her my message."

"Yes, sir."

He disliked that blond young servant. Probably he did know when Rita went out. It stood to reason that he knew. But trust a butler not to tell you anything, whether there is anything to tell or not.

It was almost seven. He was due at Alice's, yet here he was, not even dressed for dinner. He went to his room. He did not feel like dressing. He did not feel like going out. He did not feel like seeing people. He did not feel like talking to anybody. But he must hurry. If he didn't get out of here pretty soon Alice would be calling up.

XII

ARRIVING at Alice's building he did not go to her apartment, but had the hall man telephone to her that he was waiting. Almost immediately she descended.

"Why didn't you come up?" she asked as they drove away.

He made his lateness the excuse.

"I was beginning to worry," she said.

"For heaven's sake, why?"

"You're usually so punctual."

"Well, I couldn't help it. I was delayed. I'm sorry."

His tone was almost brusque. He was gazing straight ahead through the front window, but was aware that she turned to look at him as she replied gently:

"Of course I know that."

"Why are you finding fault then?"

"Finding fault?" she repeated, astonished and hurt. "I'm not finding fault, dear. It's only that you mean so much to me, and with all these accidents they have in the streets ——"

She gave a little shudder and left the sentence unfinished. He was ashamed.

"I ought to have let you know I was delayed," he said in a kinder tone, still without looking at her, "but I didn't want to take the time to telephone. I was thinking we could have a quick dinner and go to a show. They say this new thing Gladys is pretty good."

"Oh—the theater?"

"I thought it would be pleasant, yes." Then he acknowledged the disappointment he detected in her voice by adding, "but if you'd rather not we don't have to."

"No; I want to do whatever you want," she put in quickly. "I just thought—you've been away, and all—I thought we could go back after dinner, and you could smoke and we'd talk. I got such a lovely present to-day too. I want to show it to you. Margaret sent me the sweetest picture of herself and the children. You know the little girl is named for me."

"Yes," he said.

"And it's getting on towards eight," she continued. "We'd be late for the theater. But if you ——"

"Doesn't matter how late you are for a musical show."

"No, certainly not; and we needn't eat much."

"Still," he said, "if you really don't want to go ——"

"No, no! I'm glad to, honestly. Just so we're together, I don't care." She touched his hand. "Oh, Dick, you don't know how nice it is to see you!"

"It's nice to see you too," he returned, pressing her fingers. Then, grateful to her for giving him his way, as

THE COVERED WAGO

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

XIX

MOLLY WINGATE was grumbling over her fire when at length her husband and son returned to their wagon. Jed was vastly proud over a bullet crease he had got in a shoulder. After his mother's alarm had taken the form of first aid he was all for showing his battle scars to a certain damsel in Caleb Price's wagon. Wingate remained dour and silent as was now his wont, and cursing his luck that he had had no horse to carry him up in the late pursuit of the Sioux. He also was bitter over the delay in making a burial trench.

"Some ways, Jess," commented his spouse, "I'd a'most guess you ain't got much use for Will Banion."

"Why should I have? Hasn't he done all he could to shoulder me out of my place as captain of this train? And wasn't I elected at Westport before we started?"

"Mostly, a man has to stay elected, Jess."

"Well, I'm going to! I had it out with that young man right now. I told him I knew why he wanted in our train—it was Molly."

"What did he say?"

"What could he say? He admitted it. And he had the gall to say I'd see it his way some day. Huh! That's a long day off, before I do. Well, at least he said he was going back to his own men, and they'd fall behind again. That suits me."

"Did he say anything about finding Sam Woodhull?"

"Yes. He said that would take its time too."

"Didn't say he wouldn't?"

"No, I don't know as he did."

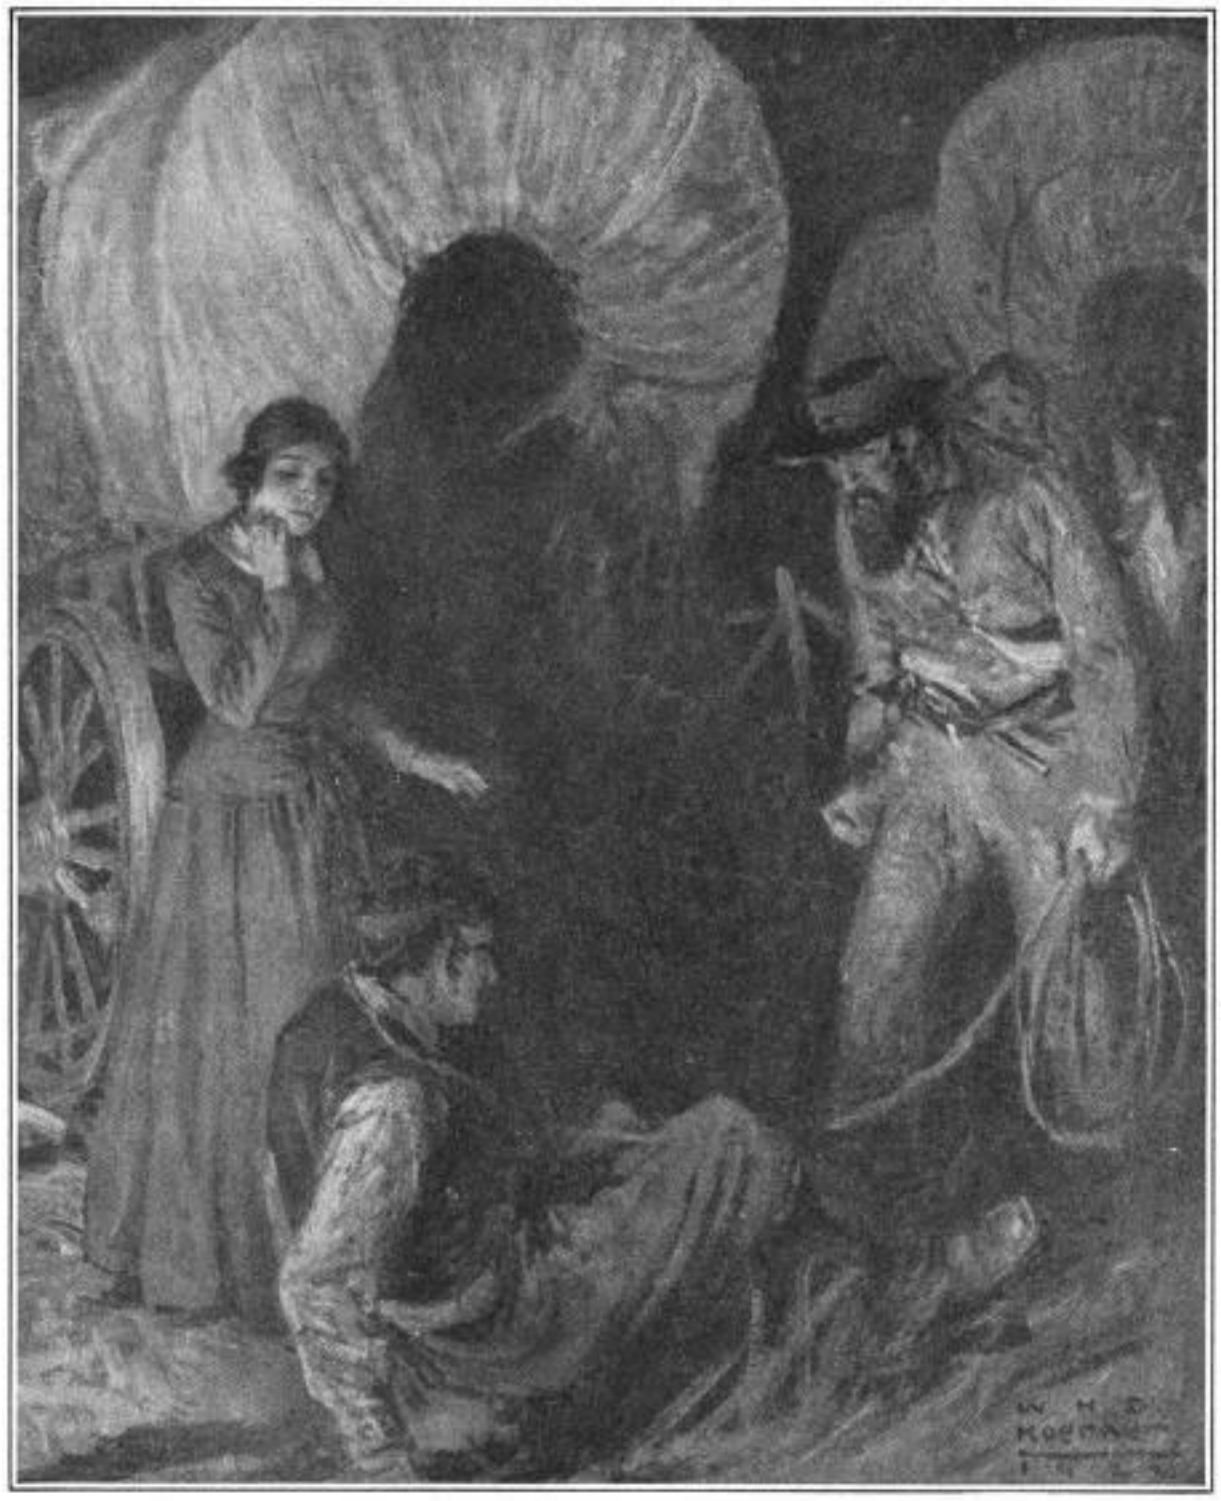
"Didn't act scared of it?"

"He didn't say much about it."

"Sam does."

"I reckon—and why shouldn't he? He'll play evens some day, of course. But now, Molly," he went on, with heat, "what's the use talking? We both know that Molly's made up her mind. She loves Sam and don't love this other man any more than I do. He's only a drift-about back from the war, and wandering out to Oregon. He'll maybe not have a cent when he gets there. He's got one horse and his clothes and one or two wagons, maybe not paid for. Sam's got five wagons of goods to start a store with, and three thousand gold—so he says—as much as we have. The families are equal, and that's always a good thing. This man Banion can't offer Molly nothing, but Sam Woodhull can give her her place right from the start, out in Oregon. We got to think of all them things.

"And I've got to think of a lot of other things too. It's our girl. It's all right to say a man can go out to Oregon and live down his past, but it's a lot better not to have no past to live down. You know what Major Banion done, and how he left the Army—even if it wasn't why, it was how, and that's bad enough. Sam Woodhull has told us both all about Banion's record."



"You didn't ever get so far along as to talk about that!"

"We certainly did—right now, him and me, not half an hour ago, while we was riding back."

"I shouldn't have thought he'd of stood it," said his wife, "him sort of fiery-like."

"Well, it did gravel him. He got white, but wouldn't talk. Asked if Sam Woodhull had the proof, and I told him he had. That was when he said he'd go back to his own wagons. I could see he was avoiding Sam. But I don't see how, away out here, and no law nor nothing, we're ever going to keep the two apart."

"They wasn't."

"Here, Miss Molly," said He, "This Thing is Somethin' Major Banion Sont in ter Ye by Me. We Find hit Stuck in the Mud"

"No. They did have it out, like schoolboys behind a barn. Do you suppose that'll ever do for a man of spirit like Sam Woodhull? No, there's other ways. And as I said, it's a far ways from the law out here, and getting farther every day, and wilder and wilder every day. It's only putting it off, Molly, but on the whole I was glad when Banion said he'd give up looking for Sam Woodhull this morning and go on back to his own men."

"Did he say he'd give it up?"

"Yes, he did. He said if I'd wait I'd see different. Said he could wait—said he was good at waiting."

"But he didn't say he'd give it up?"

"I don't know as he did in so many words."

"He won't," said Molly Wingate.

XX

THE emigrants had now arrived at the eastern edge of the great region of free and abundant meat. They now might count on at least six or seven hundred miles of buffalo to subsist them on their way to Oregon. The cry of "Buffalo! Buffalo!" went joyously down the lines of wagons, and every man who could muster a horse and a gun made ready for the chase.

Of these hundreds of hunters, few had any experience on the Plains. It was arranged by the head men that the hunt should be strung out over several mil Missourians farthest down the river, the ot the westward, so that all might expect a chance in an enterprise of so much importa

Banion and Jackson, cordance with the fo promise to Wingate. h tired to their own train after the fight with the The Wingate train therefore looked to Bric their safest counsel matter of getting meat. worthy headed a band best equipped men and his own part in full char A wild figure he made rode, hatless, naked t waist, his legs in Indian gings and his feet in m sins. His mount, a co cayuse from west of the R ies, bore no saddle beyo folded blanket cinched on a rawhide band.

For weapons Bridger ried no firearms at all, bore a short buffalo bo the Pawnees—double-cur sinew-backed, made of th silient *bois d'arc*, beloved wood of all the Plains tri A thick sheaf of arrows, ne sharpened, swung in beaver quiver at his b Lean, swart, lank of hair, had small look of the w man left about him as he r now, guiding his horse w a jaw rope of twisted hair playing his bow with ha dozen arrows held along with the fingers of his hand.

"For buffler the bow's best," said he. "I'll show afore long."

They had not too far to At that time the short-gr country of the Platte Val was the great center of t bison herds. The wallows in thousands, the white alk showing in circles which most touched edge to edg The influx of emigrants h for the time driven the her back from their ancient for and watering places, to whi their deep-cut trails led dow worn ineradicably into th soil. It was along one of th great buffalo trails that the now rode, breasting the li of hills that edged the Platte to the south. When the topped the flanking ridge a marvelous example of wil abundance greeted them. Bands of elk, yet more numer ous bands of antelope, countless curious gray wolves, mor than one grizzly bear made away before them, although by orders left unpursued. Of the feathered game the had now forgot all thought. The buffalo alone was of in terest. The wild guide rode silent, save for a low India chant, his voice at times rising high, as though importunate

"Ye got to pray to the Great Speret when-all ye hunt, men," he explained. "An' ye got to have someone tha can call the buffler, as the Injuns calls that when they hunt on foot. I kin call 'em, too, good as ary Injun. Why shouldn't I?

"Thar now!" he exclaimed within the next quarter of an hour. "What did Jim Bridger tell ye? Look-ee yonder! Do-ee say Jim Bridger can't make buffler medicine? Do-ee see 'em over yan ridge—thousands?"

The others felt their nerves jump as they topped the ridge and saw fully the vast concourse of giant black-topped, beard-fronted creatures which covered the plateau in a body a mile and more across—a sight which never failed to thrill any who saw it.

It was a rolling carpet of brown, like the prairie's endless wave of green. Dust clouds of combat rose here and there. A low muttering rumble of hoarse dull bellowing became audible even at that distance. The spectacle was to the novice not only thrilling—it was terrifying.

eneral movement of the great pack was toward
ey; closest to them a smaller body of some hun-
at stood, stupidly staring, not yet getting the wind
assailants.
enly rose the high-pitched yell of the scout, sound-
charge. Snorting, swerving, the horses of the
followed his, terror-smitten but driven in by men
whom at least knew how to ride.
thly as a bird in flight, Bridger's trained buffalo
losed the gap between him and a plunging bunch
buffalo. The white savage proved himself peer of
age of the world. His teeth bared as he threw his
to the bow with a short, savage jab of the left arm
oosed the sinew cord. One after another feather
, clinging to a heaving flank; one after another
dripped red with the white foam of running; then
ter another great animal began to slow; to stand
, legs apart; soon to begin slowly kneeling down.
ring swept ahead, the dying lay in the wake.
insatiate killer clung on, riding deep into the surging
rolling humps. At times, in savage sureness and
, he did not ride abreast and drive the arrow into
gs, but shot from the rear, quartering, into the thin
ack of the ribs, so that the shaft ranged forward into
testines of the victim. If it did not bury, but hung
s the animal kicked at it convulsively, he rode up
ith his hand pushed the shaft deeper, feeling for the
s the Indians called it, with short jabs of the im-
d missile. Master of an old trade he was, and, stimu-
by the proofs of his skill, his followers emulated him
their own weapons. The report of firearms, muffled
e rolling thunder of hoofs, was almost continuous so
as the horses could keep touch with the herd.
dger paused only when his arrows were out, and
bled to himself that he had no more, so could count
a dozen fallen buffalo for his product. That others,
ded, carried off arrows, he called bad luck and bad
ting. When he trotted back on his reeking horse, his
er dancing empty, he saw other black spots than his
on the short grass. His followers had picked up the
ot so ill. There was meat in sight now, certainly—as
as a half dozen unhorsed riders and three or four
nded buffalo disposed to fight.
he old hunter showed his men how to butcher the
alo, pulling them on their bellies, if they had not died thus, and splitting the hide down the back, to make a receptacle for the meat as it was dissected; showed them how to take out the tongue beneath the jaw, after slitting open the lower jaw. He besought them not to throw away the back fat, the hump, the boss ribs or the intestinal *boudins*; in short, gave them their essential buffalo-hunting lessons. Then he turned for camp, having no relish for squaw's work, as he called it, and well assured the wagons would now have abundance.

Banion and Jackson, with their followers, held their hunt some miles below the scene of Bridger's chase, and had no greater difficulty in getting among the herds.

"How're ye ridin', Will?" asked Jackson before they mounted for the start from camp. Banion slapped the black stallion on the neck.

Kit Carson

"Not his first hunt!" said he.

"I don't mean yore hoss, but yore shootin' irons. Whar's yore guns?"

"I'll risk it with the dragoon revolvers," replied Banion. "Not the first time for them, either."

"No? Well, maybe so they'll do; but fer me, I want a hunk o' lead. Fer approachin' a buffler, still-huntin', the rifle's good, fer ye got time an' kin hold close. Plenty o' our men'll hunt thataway to-day, an' git meat; but fer me, give me a hunk o' lead. See here now, I got only a shotgun, cap an' ball, fourteen gauge, she is, an' many a hide she's stretched. I kerry my bullets in my mouth an' don't use no patchin'—ye hain't got time when ye're runnin' in the herd. I let go a charge o' powder out'n my horn, clos't as I kin guess hit, spit in a bullet, and roll her home on top the powder with a jar o' the butt on top my saddle horn. That sots her down, an' she holds good enough to stay in till I ram the muzzle inter ha'r an' let go. She's the same as meat on the fire."

"Well," laughed Banion, "you've another case of *de gustibus*, I suppose."

"You're another, an' I call it back!" exclaimed the old man so truculently that his friend hastened to explain.

"Well, I speak Blackfoot, Crow, Bannock, Grow Vaw, Snake an' Ute," grumbled the scout, "but I never run acrost no Latins out here. I allowed maybe so ye was allowin' I couldn't kill buffler with Ole Sal. That's what I keep her fer—just buffler. I'll show ye afore long."

And even as Bridger had promised for his favorite weapon, he did prove beyond cavil the efficiency of Old Sal. Time after time the roar or the double roar of his fusee was heard, audible even over the thunder of the hoofs; and quite usually the hunk of lead, driven into heart or lights, low down, soon brought down the game, stumbling in its stride. The old half-breed style of loading, too, was rapid enough to give Jackson as many buffalo as Bridger's bow had claimed before his horse fell back and the dust cloud lessened in the distance.

The great speed and bottom of Banion's horse, as well as the beast's savage courage and hunting instinct, kept him in longer touch with the running game. Banion was in no haste. From the sound of firing he knew his men would have meat. Once in the surge of the running herd, the rolling backs, low heads and lolling tongues, shaggy frontlets and gleaming eyes all about him, he dropped the reins on Pronto's neck and began his own work carefully, riding close and holding low, always ready for the sudden swerve of the horse away from the shot to avoid the usual rush of the buffalo when struck. Since he took few chances, his shot rarely failed. In a mile or so, using pains, he had exhausted all but two shots, one in each weapon, and of course no man could load the old cap-and-ball revolver while in the middle of a buffalo run. Now, out of sheer pride in his own skill with small arms, he resolved upon attempting a feat of which he once had heard but never had seen.

Jackson, at a considerable distance to the rear, saw his leader riding back of two bulls which he had cut off and which were making frantic efforts to overtake the herd.

TROUPIN' WITH THE TENT

By L. B. YATES

ILLUSTRATED BY TONY SARG

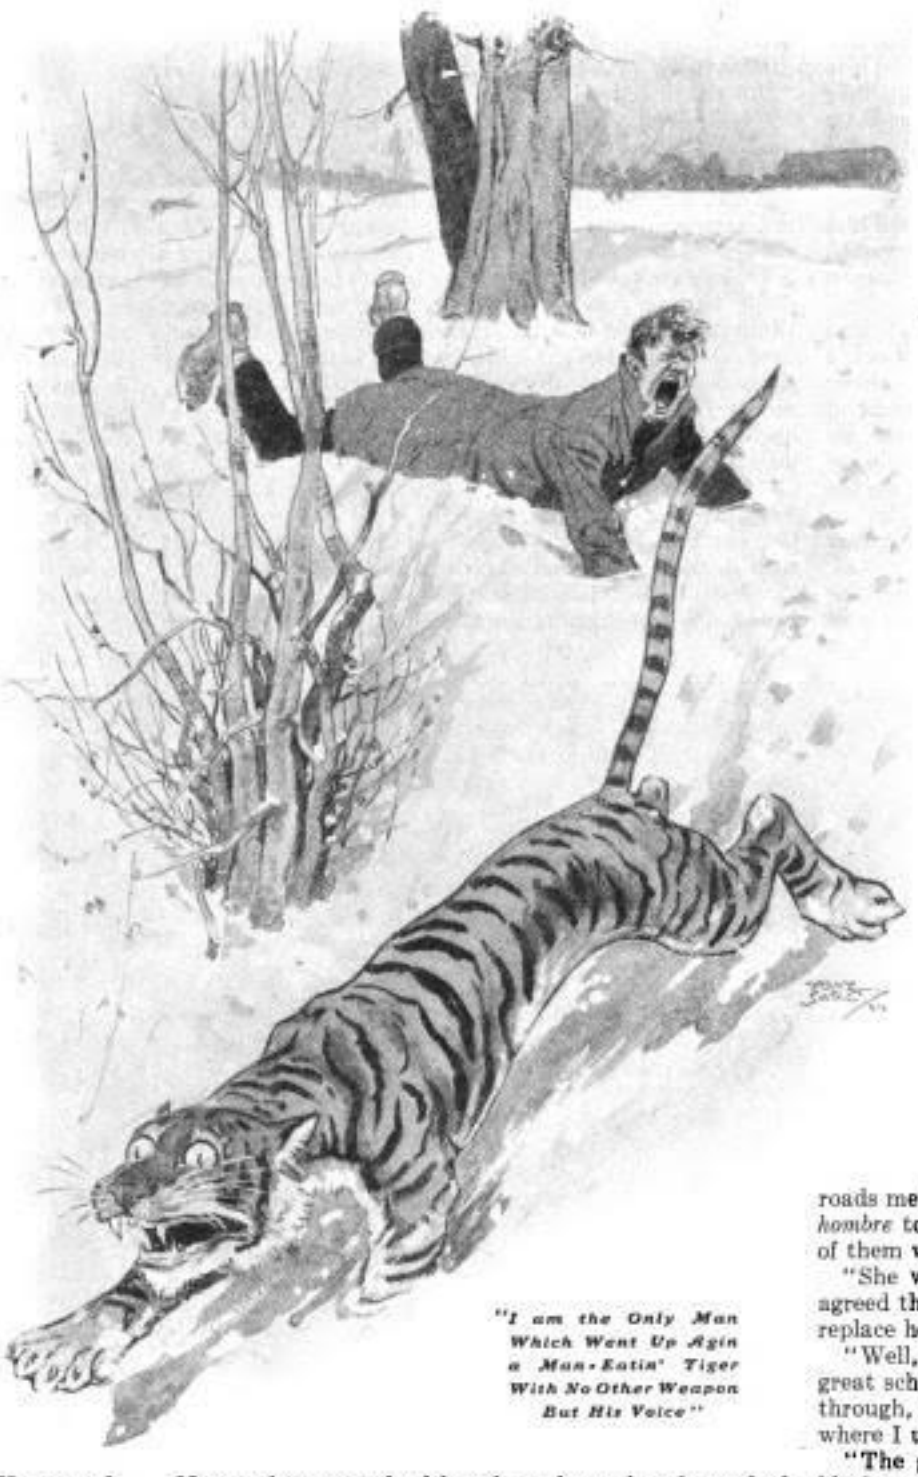
IT WAS on the evening of a very peaceful Sabbath, and the tents were pitched down in a little pocket of the mountains not far from where the sluggish Big Sandy clings close to the borders of Kentucky and West Virginia. Back in the mysterious bypaths of those hills they tell you how old-time feuds and clan battles almost dating from Revolutionary days are still smoldering and upon occasion burst into lambent flame.

And, as I say, the canvas of the circus was jammed in between the hills in such a small space that instead of being parked as the conventional tent show it was strung out along the banks of a little creek which felt its way from some hidden spring and percolated quietly through the valley. Higher up one could see the corkscrew bridle paths winding in and out among the stunted vegetation which grew along the mountainside. In this country all journeys are made on horseback. The women of the mountains still come to the little stores riding behind their men on the ancient pillion. Yet, strange to say, thirty or forty miles farther down, where the country is flat, horse riding is almost a lost art and the atmosphere of the settlements is polluted by the unhealthy stench of gasoline.

Perhaps you will ask yourself how a circus big enough to need ten cars for its transportation could possibly get patronage in a little hamlet like this. But circus men will tell you that sometimes a locality with nothing to recommend it except a few scattered houses will afford a good day's business. At daylight the next morning our patrons commenced to come on foot and on horseback. They fairly oozed out of the big hills. Frequently the beast they bestrode was carrying a double burden, sometimes a triple one. The mountaineers are always circus crazy. They took in everything, from the pit show in which Rhoda—that mysterious girl who is alive—holds forth, right through the kid show and candy stands, then into the main tent for the full performance, staying for the after show or concert. Not only did they do this but most of them came again at night and went through the various attractions all over again.

And, as before stated, it was an off evening and most of the performers and attachés of the circus were lying out on the banks beside the pleasant little creek. It struck me as I looked at the scene what a marvelous setting it would have made for a theatrical production dealing with the activities of the little-known world of the circus. A group of men and women were resting comfortably, stretched out on the greensward just behind the dressing tent, and I joined them. You don't hear the doings of the outside world discussed to any great extent by those of the circus. Word of mouth is limited to what might be called family gossip, because when people move to a new location every day, food for interesting conversation is never lacking.

"Somebody was sayin' you was goin' to pull out for the big town, Sleepy," exclaimed one of the group as I walked up. He was addressing a tall young fellow who lay sprawled out face downward on the grass.



"Yep," drawled Sleepy Stevens, as he lifted an unshaven face and rested it in the broad palm of a calloused hand. "Oh, yes, I am a-goin' to walk away to-morra."

A Wandering Son in Good Standing

MR. STEVENS, be it said, was first assistant to the train boss. He was reputed to be a marvelous mechanic. The speaker arose from a recumbent to a sitting position and wound two long sinewy arms about his knees, while the little old fat clown dog who had been snuggling close to him staggered to his feet and voiced a wheezy protest.

Obadiah the trained goose, who had been greedily nipping the lush grass on the banks of the stream, came forward with outstretched neck and hissed belligerently. The clown dog wabbled a few feet toward him, intent on giving battle, emitting as he did so a series of asthmatic barks. He was a jealous-minded scamp and admitted neither sacred oxen nor feathered actors to close communion with the human members of the show.

"It's all regular and right," continued Sleepy Stevens, as one who would combat argument. "I give the boss fair warnin' two weeks ago to-night. After we had loaded the show and was ready to pull out of the yard I sez to the boss, sez I, 'Guv'nor, I'm a-goin' to drag my freight two paydays from now. Do I get my hold-back?' Fair and square I give him notice."

"I am the Only Man Which Went Up Agin a Man-Eatin' Tiger With No Other Weapon But His Voice"

No one interrupted, although twelve pairs of ears had been listening to Sleepy's valedictory.

"An' the boss he sez," continued the prospective pilgrim, "the boss he sez, 'Sleepy,' sez he, 'of course I'm a-goin' to give you your hold-back if you want to go, but you ain't a-goin' to step away, is you? You ain't got nothin' against the show, have you?' sez he.

"'No,' sez I, 'it's a first-class outfit to troupe with, an' the big show don't run no better cook tent,' sez I, 'but it's ju-t this way,' sez I."

"Well, Sleepy, if you like it on this show, what do you want to go away for anyhow?"

It was a woman's voice coming out of the gloom.

Sleepy shifted his position until he faced the speaker. He tilted back a broad-rimmed but battered black hat from an ingenuous boyish face, and emitted a half chuckling laugh.

"Why?" he ejaculated slowly. "Why do I hit the grit, eh? Oh, I dunno! I jest had a yen to go down Cincy way an' see what was doin'."

"When you get there and find out what is doin', what then?" persisted the woman.

"Oh, when I land there," responded Mr. Steven unbelievable optimism, "when I light off of the rat old Cincy I'll be all right."

"Yes?"

"Uh-huh. I'll just go an' buy me a Billy Boy a out what shows is slated around that country, a-course I kin join out again."

"Sleepy don't ever stay with a show more t month," volunteered a voice at my elbow. "Befo season closes he'll be on every show in the country. T old Sleepy. But he's a fine fellow and everybody give the good word."

And all unwittingly, perhaps, Sleepy Stevens had reading from the ritual of the Wandering Sons. It wa old blood of Ishmael talking. The desire to go forth in the world an what was to be seen had filtered a way down.

It was an honorable lineage, mencing with the first quest of the Grail and ending where a burro pa a frying pan and pick ax in the last rush to the Black Butte.

"Sleepy's all right, he'll be back b the season's over," voiced the little who presided over the destinies of "up town" wagon.

"The first time I seen you you with a mud outfit," broke in the hostler. "They was just five wagons, I mind you was ballyhooin' for a which didn't have no legs. You doin' a land-office business."

Circus people have a peculiar way shifting from its base the subject m ter under discussion.

Mamie, the Legless Wonder

THE little man at the other side of t circle laughed. "I was while it lasted he affirmed; "there was days when wouldn't have given John D. Rockefell a pleasant smile. But she blew!"

"She didn't walk away on you?" queried the boss hostler, laughing at h own witticism.

"Not exactly," returned the other "she were what you might call ab ducted."

"Yep?"

"That's what she were," he reiterated "You see, it was thisaway: After th night show I uster have one of the can vasmen carry her to the bunk wagon. We was playin' a hick town an' he come for her just as usual one night, but he never reached his destination. He must have grabbed a rattler, because 'twas at a junction where two little old jack-leg roads met, but I never seen her again. They tell me this *hombre* took her down to Cuba, and joined out with one of them winter circuses."

"She were quite an attraction an' it was some loss," agreed the pit-show impresario. "I suppose you couldn't replace her very handy?"

"Well, it looked that way at first, but I thought up a great scheme. I hired a girl in one of the towns we went through, and I cut two holes in the exhibition platform where I used to exhibit the legless wonder.

"The girl stuffed her legs down the holes and I had black curtains surrounding her body, and it was as perfect an illusion as you ever seen. Everybody thought it were genuine.

"I was shakin' hands with myself an' rakin' in the coin with both mitts, when blooey! a blame red-headed kid come along and put me out of business."

"Ah! He did, did he?"—this from the boss canvasman. "All the trouble I've had in my life has been with red-headed kids. Whenever ye see a guy rope cut an' one side of the top floppin' like a frostbitten mushroom you can bet your boots that Santy Claus has put a jackknife into some red-headed kid's stockin'."

"Yep," continued the boss of the wagon, "I had noticed a young carrot-top loafin' around the kid show all the afternoon and I didn't pay no attention to him until Mamie, the legless wonder from the Peruvian plantations, let a yell out of her that pretty near blew the big top away. An' at one and the same time I hears howls of anguish from underneath the platform.

"'What in thunderation is it, Mamie?' sez I. 'Are you seein' things?'

Digitized by Google

"They Drew Big Crowds Until They Had a Dispute Amongst Themselves"

Seein' nothin'!" sez she. 'Some rabbit is makin' a ashion out of the calves of my legs!' sez she. 'Come pull me outta here!' sez she. 'I think I landed on his ,' sez she.

'What are you talkin' about?' sez I.

Talkin' about?' sez she. 'Some scorpion musta got in r the platform. He stuck pins in my ankles. I kicked ard as I could and I think I landed,' sez she. 'Don't hear him yawpin'?'

What could I do? I jumped on the platform and yanked Mamie till I got her out. Meantime the red-headed kid mbled through the curtains and was boo-hooin' to t the band. When Mamie said she landed on his pan didn't tell no lie; both of his eyes were black, and he bleedin' at the nose like a stuck pig.

"I'll tell my pop,' he squeaks at me. 'I'll tell my pop see what happens to you.'"

From Thirty Days to a Life Sentence

[JUST grabbed that brick-dust twin by the shoulder, laced him for the door of the side show and give him a ft kick to speed him on his way. But that wasn't the last it, because about half an hour afterwards a big husky ner with a tin windshield nailed to his wishbone come ng and didn't do nothin' but drive me an' Mamie down the booby hatch an' before the beak. We was charged th assault and battery, obtainin' money under false pre-nses and vagrancy. The sentence of the court was ten ys in the coop on each separate an' distinct count. I gged like a dog to be permitted to pay a fine, but the stice wouldn't hear of it. Mamie an' me spent thirty ys on the inside a-lookin' out, an' by the time they turned loose the show was headin' for the Pacific Coast."

"And what became of Mamie?" inquired the woman ho sat back in the shadows.

"Oh, her? Ah, yes. Mamie, eh?" replied the manager of he "up town" wagon. "Oh, yes—the last I heard of Mamie he had put up a hundred and fifty jars of asparagus, a raft f canned cherries, and a whole parcel of raspberry jam. She ays the wheat looks fair but needs rain and that we'll ave a good crop of oats if the dry spell don't hang on for nother week. Whenever Mamie starts a argument with me when I'm laying around home in the wintertime an' tries to tell me what a terrible example I am, all I got to say is: 'Well, Mame, that's all right, but you ain't no Pearl of Pekin yourself, an' don't forget that I took you out of jail an' married you. I don't think it's up to you to be so proud and haughty.' That always wins the argument for me."

"I call that downright mean," ventured a woman's voice.

"Well, perhaps it is," agreed the other, "but it always gets the important money in the family handicap. I don't have to pull it more than once in a season."

"If a guy could grab himself a real good freak his fortune's as good as made," exclaimed the reserve-seat ticket seller; "but of course that's like findin' a gold mine."

"Talkin' about famous freaks, I guess the Siamese twins led the procession so far as old-time attractions were concerned. But the best one I remember was Lucy Zaratta the Mexican Midget. She was so small that she could get inside an ordinary tall hat and just peek over the brim. I figure the Tocci Twins rank second. They were Italians having one body, two heads, four arms and two legs. They talked five languages, and the remarkable part of it was that one head would be talking French while the other jabbered away in either Italian or English or Spanish, as the case might be.

"Then there was George Gilchrist, who came from Mexico. He was the first wild man I ever heard of, and was a great drawing card. The toes on his feet and the fingers on his hands were like horns and his nails were half a foot long. When in public he walked on his hands and feet like an ape; as a matter of fact I guess the calloused hands and feet were really a growth of warts, but everybody thought it came from using his hands and feet so much in propelling himself around. As a matter of fact Gilchrist had a fairly good education and could walk upright as well as you.

"Jo-Jo the Dog-Faced Boy was really a Russian Jew, who came to this country when quite young and was featured by Barnum, Bailey and Hutchinson. Jo-Jo was supposed to be an imbecile, but he had lots of sense. I heard that he got married in later years and had a family."

"Didn't you never have no other fake after you got through with the Mamie experience?" interrogated the clown.

"I always will claim I had the best one on record," returned the man addressed, "but the worst of it is you can't depend on 'em. One time I gotta hold of two one-legged men, one having lost his right leg, the other his left. I harnessed them together and of course when fully dressed they looked like as though they had two heads, one body and four arms. They drew big crowds until they had a dispute amongst themselves about their respective share of the salary and separated. In the main, however, the day of freaks in the side show is pretty well a thing of the past. People look for entertainment now; in fact, in every walk of the show business they demand more than something to stare at."

"I wonder," broke in the man who looked after the props, "if that Jane which used to play the calliope will blow back."

"Can't never tell," vouchsafed the side-show man oracularly; "she were a towner, and you can't never depend on them. I heard her folks sent for her, mother sick or somethin'."

"She told me one day as how she played the organ in the First Methodist Church of her home town," ventured Shorty the acrobat. Shorty did the high dive for life besides being the understander for the famous Shortall Acrobatic Troupe.

"You wasn't exactly opposed to that dame, was you, Shorty?" This from Sleepy Stevens.

"She were a right nice girl; and if I was I wasn't the only one on this show which might have been dippy about her."

The girl back in the shadows laughed. "Look out, Shorty, you're hittin' below the belt. Sleepy isn't the woman-hater he bills himself to be."

"I have joined out with everything on wheels from wagons to carnival caravans," stormed Mr. Stevens, "but I ain't been attached to no show run by old Dan Cupid yet."

"Well," combated the acrobat, "that ain't your fault, Sleepy. You bank too much on them eyes you got in your nut, and a gallus way of goin'. It's language which mostly wins the womenfolks."

Big Returns From Small Towns

"WELL," responded Mr. Stevens, "you win a argument, Shorty. Was you tongue-tied all the time that gal was on the show?"

The little old town where we were playing had no sidewalks or streets. We did not give a parade because we couldn't. The railroad just ran through the town and disappeared in the dent of the big hills beyond.

If you talked to a Broadway impresario and told him that you could take ten or fifteen cars into a cross between a woodpile and a water tank like this, and that you could not only get expenses but on top of that a profit of some seven or eight hundred dollars, he would possibly imagine he was listening to the cheap claptrap braggadocio one so often hears on the Great White Way.

"Meantime the Red-Headed Kid Scrambled Through the Curtains and Was Boo-Hooin' to Beat the Band"

Well, the circus I am speaking of took exactly $7744 in the week, and that was about an average business. The day's receipts ranged from $1700 to as low as $460.

But as the show has to take into consideration winter expenses and getting ready to go out the next season, you can figure that the daily expense is $100 a car.

For ten cars this makes the running expenses total $1000 a day. Anything over that can be called clean profit. Here we have an expense account of $7000 as against an intake of $7744. This would leave a balance of profit on the week of something over $700. So you see that even the circus game is not so tremendously profitable as it is cracked up to be. Under average conditions you cannot expect week in and week out to get much more than this; sometimes, indeed, bad

PHILADELPHIA, APRIL 22, 1922

Our Army on the Rhine

OUR Government has made a claim for reimbursement for costs of maintenance of the little American army in Germany. The sum demanded is $241,000,000. We have addressed the claim to the Reparations Commission, desiring that this sum be allotted to us out of the first billion marks reparation payments. This billion gold marks is worth about $243,000,000, so we are asking for it all. In all, Germany has paid about $2,200,000,000 reparation—in ships, coal, mines, kind and services—so that the American claim does not in itself look avaricious. This reparation has been collected by the Allies from Germany under a treaty that we have refused to ratify. Many Americans have wondered why we keep an army of occupation in Germany. On reading this bill the ex-Allies may also wonder why we do so! Our bill is much higher per man than those of the ex-Allied Governments, because pay and subsistence are very high in our Army. If the accounts returning from the Army of Occupation are to be believed the cost is worth while. What with good food, attractive quarters, plenty of pretty women to dance with, little drill and no Eighteenth Amendment, the situation of the American soldier on the historic Rhine is in the material sense not onerous.

How is this bill to be paid? Only in one of three ways: The Allies may send us German goods; they may keep the German goods and send us their own goods; or they may send us gold. In gold, of course, the average American would reply. But if the ex-Allies cannot find the gold now to balance their trade with us, how can they find more gold to cover this bill? Every man knows that in the final analysis this bill can be paid only with German goods.

In the five years before the war our average imports from Germany were worth about $175,000,000, our exports to her about $300,000,000, a balance of trade in our favor of some $125,000,000. The principal goods in the imports were aluminum, apparatus, brasses, bronzes, coppers, brushes, buttons, carbons, cement, chemicals, dyes, drugs, clocks, chocolates, confectionery, cottons, porcelains, filaments, explosives, feathers, flax and linen, fish, furs, gelatin, glassware and optical goods, jewelry, hides, cutlery and other metal goods, magnetos, paper and pulp, photographic supplies, pencils, seeds of clover and other grasses, sugar-beet seed, silks and artificial silks, malt liquors, wines and cordials, mineral waters, starch, tins, toys and zinc. Mostly finished goods.

Many of these goods before the war were virtual monopolies. Since that time we have established plants for their manufacture. Some of these goods belonged to what are called key industries. Our antidumping bills are directed against some of them. The Eighteenth Amendment keeps out a few. Let anyone familiar with conditions in the factories of this country, knowing the state of stocks in the hands of dealers and the state of mind of the consuming public, picture what would happen if more than a prewar volume of German goods was to be sent to us in payment for the keep of our soldiers. That would make The Watch on the Rhine entirely too expensive a tune for us to sing. Secretly the British and the French are enjoying our dilemma, though on the surface they are annoyed. The Germans are enjoying the situation openly.

Inside Information

ONE of the poorest reasons for envying the rich and powerful is their supposed infallibility in the purchase of investments and in stock-market operations. To the small capitalist, whether investor or speculator, a veritable halo encircles the head of the great banker or corporation executive, not so much because of what he has as on account of his assumed opportunity to get in on good things or to beat the market. But there is not a shift or eddy in the current of business life, not a tornado or the gentlest of showers, whose passage does not disclose enormous losses sustained by the rich and powerful.

There is no lesson that people need so to take to themselves as that the keeping of money is a very different thing from making it. One does not have to be a Wall Street banker, a corporation director or an insider of any kind, to be careful, thrifty and the reverse of foolish. Moralists are troubled at the great rewards that have fallen into the laps of a few movie stars and baseball players. But the situation will take care of itself to a greater extent than is imagined by critics whose mental reactions are hasty and superficial. Those who have not the strength of character to resist the sudden inrush of wealth will quickly enough lose it, and even among those whose moral fiber is strong enough will be many whose business judgment is lamentably weak.

In every group of the suddenly enriched—bootleggers, movie stars, war profiteers, oil operators, trust magnates of the early 1900's and railroad kings of the '90's—there has been or will be a natural and inevitable process of winnowing. Wealth has been made in this country in countless ways and by men of types so various as to defy description. But wealth has no great sticking qualities, and the mighty have fallen again and again. They have been cleaned out by playing the market and by sticking to their own business. They have lost fortunes by staying in one line of business while it dwindled away, and they have lost fortunes by going into new lines.

Much is said of the opportunities which this country affords and of how the lowliest may rise to wealth and fame. But perhaps it is just as fortunate that so many who rise are unable to maintain their position. It is fortunate that "whosoever hath, to him shall be given" is so far from being a universal truth. It is a consoling thought that one does not have to be a millionaire, a captain of industry or in any sense an insider, but only an average everyday citizen, to enjoy the benefits of common sense, care, thrift and ordinary good judgment.

Dead Horses Cannot Pull

AN ATTITUDE which has gained popularity in the last year or two is more pungently expressed by the story of the banker with a glass eye than by volumes of eloquent speeches against the money power. The banker said he thought the would-be borrower's balance sheet was all right, "but one never can tell. Now you couldn't tell from looking at me that I have a glass eye. Which do you think it is?"

"The right," replied the borrower.

"Yes, but how did you know?"

"I knew it must be a glass eye because it had a gleam of human kindness in it."

But unfortunately banks which operate on the sentiment, generosity and heart-throb stuff rare of any service to the community in the long r peculiar sense the first duty of a bank is to remain It has not helped the farmers in parts of the N to have so many banks fail in their behalf. It c argued that thousands of Boston residents are an off because Mr. Ponzi went to smash with thei while attempting to prove that banking could be co for the common people on a scale of magnanimit before dreamed of.

The banker is under a three-fold obligation. these, of course, is to the community in which h and his discharge of that duty may not always be or compounded of the highest measure of intelliger judgment. But critics who charge him with these too easily forget his other obligations. He is accou for every penny of deposits, responsible for them on an immediate cash basis, although to earn any in his business he must invest or loan these deposits all sorts and conditions of men to use in a variety of all of them involving human risk and chance. Is wonder that he is careful, that he exacts at times rate of interest?

But this is not all. No bank is worth the confi of a depositor to the extent of a single dollar unles stockholders themselves have contributed a consid sum upon which substantial profits are earned. For the ability to earn these profits which proves to depositor that the promise of the bank to return his f upon demand is backed by more than empty w Banks in this country differ from nearly all other cor tions in that the liability of the stockholders is doubl par value of their holdings.

These are simple, elementary facts. But there are t when they are easily overlooked and purposely forgot Progress should be made in banking as in every other of human endeavor. But the history of money and ba ing would seem to indicate that loud protestations aga the "usury" of commercial banking, together with spe banking programs involving political, social and phil thropic features for special groups of people, usually m in the end no other than unsound banking, and that in t means merely that the depositor loses his money.

From Glut to Scarcity

WOOLS are divided into two main groups—merin and cross-breds. Merino wools are finer and adapt to the making of the most prized cloths. Cross-bred wo are coarser and inferior from the standpoint of maki cloths. When the war closed, a heavy accumulation wools, largely cross-breds, lay in British hands. The c of 1920 added to the store of stocks. The clip of 1921 w below the normal level of consumption.

The glut in lower-grade wools and the consequent fall price, together with decline in price of mutton, result in liquidation, followed by reduction in breeding. In 19 the count of sheep in the world was some 530,000,000, which some 200,000,000 were in the British Empire. Th count in 1921 had fallen to some 440,000,000, of whic some 185,000,000 were in the British Empire. In 191 the sheep of the British Empire were 38 per cent of th world stock, but they produced three-quarters of the com mercial wool. In 1921 the sheep of the empire were 4 per cent of the world stock, but they produced four-fifth of the commercial wool. In this four-fifths of the tota supply is two-thirds of the fine wool. Therefore, whether certain United States senators like it or not, the British Empire controls the wool markets of the world.

In the meantime the use of fine wool has proceeded while consumption of inferior wool has lagged behind. If the present pace of consumption of fine wool is continued and the prewar consumption of lower-grade wool resumed, the world with the present count of sheep will face a scarcity of merino wool within a year, and a succeeding scarcity of cross-bred wool within another year. Prices will rise, and the breeding of sheep will be stimulated. With high prices, consumption will be depressed and a new equilibrium established.

BUCKET SHOPS AND HOW TO AVOID THEM

By Richard D. Wyckoff

DECORATION BY GUERNSEY MOORE

ALL STREET, in the minds of many people who are not acquainted with it, is pictured as a group of overfed plutocrats entirely surrounded by ey. To a large extent Wall Street is responsible for view, for it has seldom taken any pains to defend ; instead, it has assumed a position of too proud to . It is this attitude which has permitted most peo- to kick Wall Street around without any retaliation the party of the first part. Nevertheless, I believe it is time for the real Wall Street to come out of its , turn the works inside out, and prove how closely the k Exchange, those whose operations are centered in around it, as well as the public, are bound up in the ent and future welfare of the country.

his bucket-shop situation, for example, is one that has wn out of the neglect of many vital issues. The Street permitted it to drift along from one stage to another, dently believing that the bucket shops would effect ir own cure. Such has not been the case.

n a previous article I denoted some of the earmarks of ucket shop. Most of these related to the many and rious ways in which they approach and secure the con- nce and patronage of a prospective client. I will now deavor to explain some of the other earmarks, which come more apparent after the client has begun dealing th the bucketeer.

Once you get into his clutches you are regarded as grist r his mill—merely one of many victims from whom the st dollar is to be extracted. You may be poor or wealthy, d or young; business man, doctor, clerk, widow or rphan; he is taking values from so much human ore. Some ockets are richer than others. Ice water runs in his veins. e is not concerned with the mental, physical or financial istress growing out of his rascalities.

The Bucketeer's System

BACK in the mind of this scoundrel who is "advising" you what to buy and sell is a scheme by which he hopes reduce your bank account to the vanishing point; hence, very bit of advice and every move he makes is not in your terest, but in his own. So, though he may begin by mak- ng a fictitious profit for you—that is, report some transac- tions which "already show a profit"—he is doing this only to lead you on, get you to put up more money, have more confidence in him, and in other ways prepare you for the final killing.

The bucketeer does not always follow the same routine. He has many ways of accomplishing a result. One which requires less finesse than some of the so-called pool opera- tions previously described is to load you up and keep you loaded. Following this method he not only induces you to trade on a small margin but in case the stocks which you buy advance in price and you thereby have a profit on paper he promptly sees to it that you use this paper profit to buy more securities. In this way he keeps you spread out so thinly that the first little dip in the market catches you and wipes out your margin. Hence the small-margin inducement already mentioned has two advantages to the bucketeer: It first leads you to trade with him because you can do so with a little money; and next, it is a simple means of making you lose your money so that he wins.

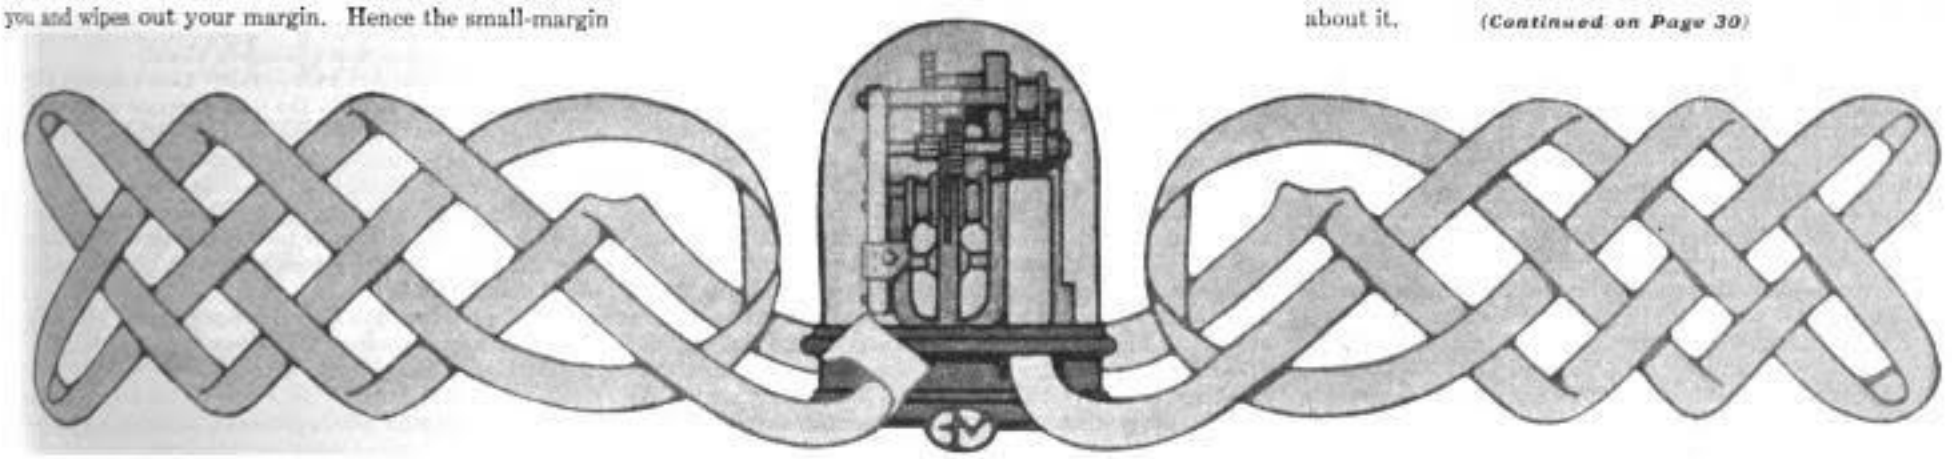
Note the difference between your "friend" and a legiti- mate broker with a New York Stock Exchange member- ship: When you call on the latter or write a letter for the purpose of opening an account with his firm you find that instead of the paltry $500 margin on 100 shares which the bucketeer requires, this Stock Exchange firm wants you to deposit from $1500 to $2500. You say you cannot afford it. They appear to be overcharging.

Let us look into this question of margin and the position occupied by your broker in relation to yourself and your transactions. First of all it must be understood that when you engage a broker you are appointing an agent. As your agent the broker is authorized by you to make certain pur- chases and sales of securities for your account and risk. If you wish to purchase 100 shares of stock, at $100 a share, the total cost would be $10,000; but if you have not this much money at the time, you ask the broker to carry the stock for you on margin. You hand him your check for $2000—which is the margin—and he supplies the remain- ing $8000 with which to make up the purchase price. To all intents and purposes the $2000 you deposit is in part payment of the full amount. You may or may not intend to pay the balance in order to obtain full possession of the hundred shares of stock, but it is your privilege at any time either to pay up this balance or to let the account run along on margin.

The purpose of the margin is to protect the broker against loss in this transaction which he has made for your account. If the stock for which you paid $100 a share should decline in price to $90 a share he would probably call upon you for another $1000 in order to keep the original amount good. If the stock rose to $110 you could withdraw $1000 out of your original $2000, because your stock would be worth $1000 more.

The broker may not have all the money necessary to supply the $8000 which you require to complete your pur- chase. He therefore takes your certificate of stock to his bank and borrows about $8000 on it; so that ultimately your transaction is financed by his bank, with the broker acting as a go-between. The bank requires him to keep his margin good, and he must—if he is a legitimate broker who executes your order and carries your stock for you—require you to keep your margin good; otherwise he would run the risk of losing a considerable amount during violent market fluctuations in your stock.

From this it will be seen that no legitimate broker can afford to carry such a transaction on a margin of $500, because he would have to supply the $1500 difference between the cost—$10,000, what he borrows—$8000, and your $500. It would take an enormous amount of capital to carry any substantial number of clients on such terms, and it would involve a risk that would be out of proportion to the small amount of commission which a real broker receives for executing your order. The bucketeer, who has no financing to do, requests a $500 margin because that amount seems attractive to you. The legitimate broker in asking proper protection for himself is in reality working in your own interest as well when he says "Put up plenty of margin," for he knows that you will thus be protected against the ordinary fluctuations of the market.



In between the time when your account is opened with a bucketeer and you go out with the tide or are sent to the cleaner's he has various other little tricks which expedite your finish. If you are living in a distant city and he knows you are not in a position to watch the market closely he may encourage you to send your orders by telegraph, for this method frequently means delays which are difficult for you to prove, and it permits him to fill the order at a price which is to your greatest disadvantage. For example: If you wire him an order to buy 100 Chandler Motors, and the price of the stock is 70 when your telegram arrives at his office, he will not execute it and report back to you that he has bought 100 shares at 70; he will hold that telegram perhaps one, two or three hours, and if, in the meantime, Chandler sells at 72 or 73, you will get it at whatever figure is the highest. In the office of one Consolidated Exchange house which failed a couple of years ago it was the custom, when conditions would permit, to hold all telegraphic orders until the close of the market and then fill these at the highest prices of the day if they were buying orders, and the lowest prices if they were selling orders. This is only one style of crookedness which is designed to make you a fluent loser.

No Profits Allowed

IN PLACING orders to buy or sell with bucketeers you frequently find them covering their tracks by saying, "We thought we had better not buy just then," or "We over- looked that order," and other evasions on trades which might have been to your advantage. They do not want you to realize any actual profits after they have built up your account by inducing you to deposit all your available funds. It is too much for you to expect that they will aid you. As an outsider you know very little about the busi- ness, and are almost powerless in their hands. It will therefore be seen how vital it is, if you are trading in stocks, that you place your account with a broker whose character, financial strength, standing in the community and method of handling his business are beyond criticism.

Contrast the attitude and the assistance given by the honest brokerage house, which realizes that it can make money only through the commission you pay for the exe- cution of your orders on the Stock Exchange or a dealer's profit on investment securities which they sell you. Such a firm is always extremely desirous that you be successful in your investment and trading operations, because if you are not they will lose your business; consequently they aid you in every possible way, are sincere and conscientious about it.

THE UPRISING GENERATION

SAY IT WITH FLOWERS

By Nina Wilcox Putnam

ILLUSTRATED BY MAY WILSON PRESTON

THE members of the older generation do cling to their antiquated ideas in such a pathetic way!

And to me the most ridiculous of these is their conviction that the ambition of every deb is to become a wife, though of course what she really wants is to be a widow.

All the girls in my crowd proclaim this frankly, although none of them, so far as I know, have decided how to achieve the delectable estate of widowhood without a whole lot of preliminaries. However, nobody denies that there is a certain magnetic 'something about a widow which registers with the men.

In the dim dead past of my own extreme youth three years ago, when I was a mere flapper of fifteen and awfully worried about my ears, which the family constantly alluded to as being like little pitchers, and which, though they were then, alas, unconcealably large, my bobbed and permanently waved hair of to-day mercifully makes of little account—well, at any rate in those vanished days of my prankish childhood I used to be rather impressed by what my sister Rosamond and her chums said about being a bride. Whenever they had failed to shake me and, giving up the effort, talked freely in despair and my presence, I gave great attention to their words, for I was a thick-skinned youngster, eager and thirsting for knowledge and ready to experiment with everything forbidden from chewing gum to playing with the all-the-year-around boys from the village, especially Ted Stonewall, with whom I was even then having a secret affair consisting mostly of an exchange of green apples, but which was thrilling me to the core just the same.

Standing as I was with anything but reluctant feet where womanhood and girlhood meet, I shuffled said feet in a toddle of eager expectation around after my sister and Elsie Brown and lapped up everything they said about white satin and orange blossoms and whether tulle or real lace was the more becoming. The poor saps! They talked this stuff over in as much secrecy as I would permit them, and evidently, as I recall the impression on my childish mind, thought that to be a bride was the end of life. And so it was for their half generation. It took a newer, more vigorous age, meaning my own, to see beyond the white satin and the voice that breathed o'er Eadam.

To Rosamond and Elsie, who promptly and satisfactorily achieved their crowning ambition the first year they were out, a bride was the most intriguing feminine figure in the world. But to me there seems something so frightfully temporary about being a bride. Why, even the Episcopal service takes only twenty minutes! And then, even when she gets back to the house, the poor bride is only allowed to shine for a brief hour at best before they whisk her upstairs and take away her wedding gown and hustle her into a *tailleur*, and that's the last of her white-and-shining glory, for I'll tell the world there is nothing so flat as a wedding dress when it reappears as a useful dinner frock. Yes, the bride's glory and her costume last but for a fleeting hour, whereas the widow—oh, daddy boy! That snappy little bonnet with the becoming crêpe veil, the slenderizing black dresses and the pearls for tears can be strung on and on indefinitely. A bride flares up for a moment and is promptly extinguished, but a widow, if she gets that way young enough, is good for twenty years. Besides, as I have remarked, there is a certain something about a young widow. Anyhow, every girl in my bunch is wild to be one.

When the Job Was Finished the Professional Widow Looked Like Something That Had Escaped From the Accident Ward

I suppose I am in a way responsible for the introduction into our set of this new ideal, and of course I myself acquired it through that dreadful week when Marilyn Morelle chaperoned me, and when Little Arthur came to visit. Well, ghastly as that experience was, what I learned from it I have learned. With all the panning we debs get, no one can say we ever pass up any first-hand knowledge or slither through our experiences without becoming wiser for them. And as usual this particular experience was the result of one of mother's semiannual efforts to protect me from any experiences whatsoever.

Of course at eighteen I am perfectly well able to look out for myself, but there are two people who can never seem to realize this—mother, the sweet old priceless, and that pest, Ted Stonewall. When one of them isn't picking on me for some technically harmless bit of self-expression, the other one is. And when they both perform on the same day it is more than any reasonable person can endure. I should think they would see how dangerously it bores me, and yet they both love me, or claim to. Blind stuff that! Love, you know, to the older generation and its adherents means a constant butting in and spiking the loved object's pleasure at every opportunity. That this is an obsolete conception of the term I had tried, with a good deal of patience, to get over to Ted on the very same day mother telephoned for Marilyn.

Ted had come over at a ghastly hour—my diamond wrist watch regis barely 11:30—and I was just finishin coffee on the breakfast porch when dreadful flivver of his stopped unde front portico. I knew it was Ted's cause the only other flivver which c to the Edward Torringt Long Island estate with regularity is J. Smither's, Clams & Lobsters, and uses the tradesmen's entra So when the faint infant artil of a fliv died gaspingly ou front I knew very well who parked it there, and so plenty of time to gulp down one remaining hot waffle throw myself into an att tively unconscious attitude, fore Ted came romping in li big St. Bernard dog. He's like a St. Bernard—no sens humor and always rescuing p ple who don't particularly w to be rescued, without cons ing them first. When he ente I was deep in a book, fr which I looked up with lang grace. "Hello, sport!" I s with a yawn. "Totter in a park yourself! Coffee?"

"Nix!" said my young gia looking about him wrathful "I don't lunch until twel thanks."

"Lunch, my eye!" I reprov him. "This represents my str gle back to life after a big nig That was some cozy little part eh, old topper?"

"Pet Torrington," said T solemnly, ignoring my remar "I thought you told me yo father insisted on your gettin up for breakfast."

"Well, I'm up, aren't I?" said defensively. "Anyone ca see that!"

"Must be a great satisfactio to your dad," replied Ted "Let's see, he goes to town o the 8:41, doesn't he?"

"You sound so suburban, Ted!" I drawled. "I suppos it's the effect your new farm i having upon you. Do you ge up with the carrots and beet nowadays?"

"You need not laugh at that farm, Pet," said Ted in his sober way. "You are going to live on it some day, you know."

"Out among the truck gardeners? Not much!" I hooted.

"That district is going to be very fashionable before long," retorted Ted. "I'm not in real estate with my dad for nothing. It was a darn good investment—my first, dear. What I mean, I own a home, and I'm going to make the ground pay for the house—our house. I wish you would not laugh at it, Pet. Even the carrots and beets are no joke. They are going to help clear the place."

"Ted Stonewall, you are a scream!" I replied sadly. "You take an awful lot for granted!"

"How do you mean?" he demanded. "After last night there is only one thing I can take for granted—that you are going to marry me."

This was so naïve that I laughed aloud.

"Ted, old precious!" I shrieked. "Don't be such a tusk! Solid bone—solid bone! Do you suppose a girl marries every boy she does a little petting with?"

"Constance!" thundered Ted, using my given name for the first time in years, and in a tone which sent a sort of cold chill of fear down my spine. Perhaps in my tormenting of him I had really gone too far this time. "Constance! Don't tell me you have done that sort of thing with any other man! Don't!"

"Well, priceless, don't be so peppery about it!" I replied rather shakily, I confess. "It doesn't mean a thing."

"Look here, dear!" said Ted half incredulously. "You don't mean it seriously? Of course I'm not so green but that I've heard a lot about that sort of thing, but I haven't

If you would prove the love sincere
You've vowed to me tonight,
Go get that Dipper—bring it here—
Its size for soup is right.

Spoon-time

Dip your spoon into a steaming, stimulating plate of Campbell's Tomato Soup. You'll relish each savory sip. Even the aroma is a prod to drooping appetites. Consider Campbell's not only as a proper introduction to the dinner, but also as the main support of lighter repasts.

Campbell's Tomato Soup

is a skilful blend of the tonic juices and fruity parts of fresh, firm, red tomatoes, sun-sweetened on the vines; golden creamery butter, sweet and smooth; palate-pleasing spices, added with a professional sense of proportion by the Campbell's chefs in the spotless Campbell's kitchens. Who wouldn't love Campbell's Tomato Soup?

21 kinds **12 cents a can**

Cream of Tomato

Heat separately equal portions of Campbell's Tomato Soup and milk or cream. Be careful not to boil. Add pinch of baking soda to the hot soup and stir into the hot milk or cream. Serve immediately. Many prefer to use evaporated milk for an extra-rich, thick Cream of Tomato.

Campbells' Soups

LOOK FOR THE RED AND WHITE LABEL

gone in for it myself. I suppose because I'm village people and not really in your set, and my sort of folks don't mess around like that, cheapening their most tender relationship. I suppose you will consider that a quaint notion. I consider it only decent. I kissed you last night because I mean to marry you. And I won't permit any other man to touch you."

"Permit?" I said icily, getting to my feet. "That is not a word I like, especially when used in that tone."

"Look here, Pet Torrington!" said Ted, going very white. "Are we engaged, or are we not?"

"You know very well my mother wouldn't dream of allowing any such thing!" I replied. "She wouldn't even let you come here if she suspected ——"

"I'm not asking your mother," said Ted. "I'm asking you. For six years I haven't looked at any woman but you, and I have the right to know where I stand. Are we engaged?"

"Well, sort of," I replied reluctantly. "Oh, Ted, let it go at that! I don't want to be definitely tied up to anybody. I'm having too good a time. I want some experience of life. Of course I am fond of you, but ——"

"But you won't come out and tell the world!" said Ted, altogether too quietly.

"Not yet!" I cried. "I want to be free!"

"So you think it's nice to be engaged, or sort of half promised to me, and meanwhile go around with other fellows, and that that sort of thing is all right?" said Ted.

"Of course I do!" I retorted peevishly. "Honestly, Ted, you might have been distilled in 1841."

A look which somehow disturbed me more than I cared to admit even to myself came into Ted's eyes. He squared his shoulders and picked up his cap. He became, for Ted, positively debonair.

"All right!" said he. "I guess I've been an old-fashioned fool. I'll try to bring myself up to date. But just remember this when the occasion pops up—that sauce for the goose is also an alibi for the gander!"

And at that he beat it without even so much as a kiss! But I didn't let his not kissing me or his darkly veiled winter-weight threat disturb me for long. I knew Ted thoroughly, and I was as sure of him as I was of mother. What he had said was true. He had never even looked at another girl since the day he gave me that first apple over the back fence. He was mine, absolutely mine, and I knew from past experience that I could trust him anywhere. Oh, I wasn't worried about holding Ted securely! What was eating me was the fact that I had hurt him by the lie I had told concerning my other parties. Of course I would hate to have it get around how completely innocent my drives between dances had always been, and how very mild my flirtations on dark porches. So far, the men had not spread a word about it. Believe me, a man may kiss and tell, but he never brags about his failures!

Yet some devil in me made me want Ted to worry. When he was away from me I was simply crazy about him, but when he was there it was so easy to torment him that I could not resist getting right on the job. And now the very moment he was gone—back to the vegetables, I suppose—I wanted to run after him and tell him it was all a silly lie. But I couldn't. Principally because just as I made a half-hearted start for the doorway it was filled by mother, and from the look in her eye I knew that life had again insisted upon interfering with her well-regulated existence.

Mother is that way. When she has mapped out a program for the week—dinners, luncheons, a bridge morning and a Russian famine concert, and so forth—she expects to pull off her schedule ruthlessly, and if somebody develops a funeral or breaks a leg, or it's a garden party and the Lord decides on rain, mother takes the disruption as a personal insult and deliberate injury. This morning I could see first crack that her favorite Maréchal Niel roses had deliberately refused to bloom in time for Tams, our old family servant who has been with us nearly a year, to use on the table on Friday, as per agreement, or that some similar dire calamity had overtaken her. She carried a sheaf of opened letters, topped by a telegram, and dropping all but the latter upon the breakfast table she seated herself and fluttered the wire at me.

"Pet!" said she. "The most upsetting thing has happened! You know my old friend, Mrs. Elihu Cornwallace?"

At mention of this name I got a queer mental picture. It was of mother as a little girl, in a much-ruffled, long-waisted dress, bangs and white stockings and something called a pinafore, playing with the minister's daughter, a red-headed girl in equally impossible clothes. They were sitting on the minister's front steps engaged in the impeccable and altogether feminine game of jackstones. Automatically I said "Daisy Duncan" aloud.

"Yes!" beamed mother, ecstatic for an instant. Then the troubled look returned. "Of course I have not seen Daisy since her marriage," said she. "But we have written each other regularly, and I have often suggested her sending Little Arthur on here for a visit."

This was really rather appalling. I knew of Little Arthur. For years I had seen a cabinet photograph of him on mother's dressing table—an enormous, fat and husky human pie of five, positively bursting out of a shou unmowed curls and a Fauntleroy suit of velvet.

"Mother!" I exclaimed. "Not Little Arthur!"

"Of course I am delighted to have the only child c old playmate come on and stop with us indefinit mother continued. "I'm sure Little Arthur will be a brought-up young man and a most desirable companic you, my dear. Incidentally, I understand that the (wallaces are the richest people in Indianapolis, not the money means anything to us. But that he should just at this time is certainly most upsetting. He'll be to-morrow."

"His arriving at any time will upset me if he has gr up true to that tintype!" I retorted. "Outside of t what's wrong with the date? If I must have that moun of young Western manhood about, why not now?"

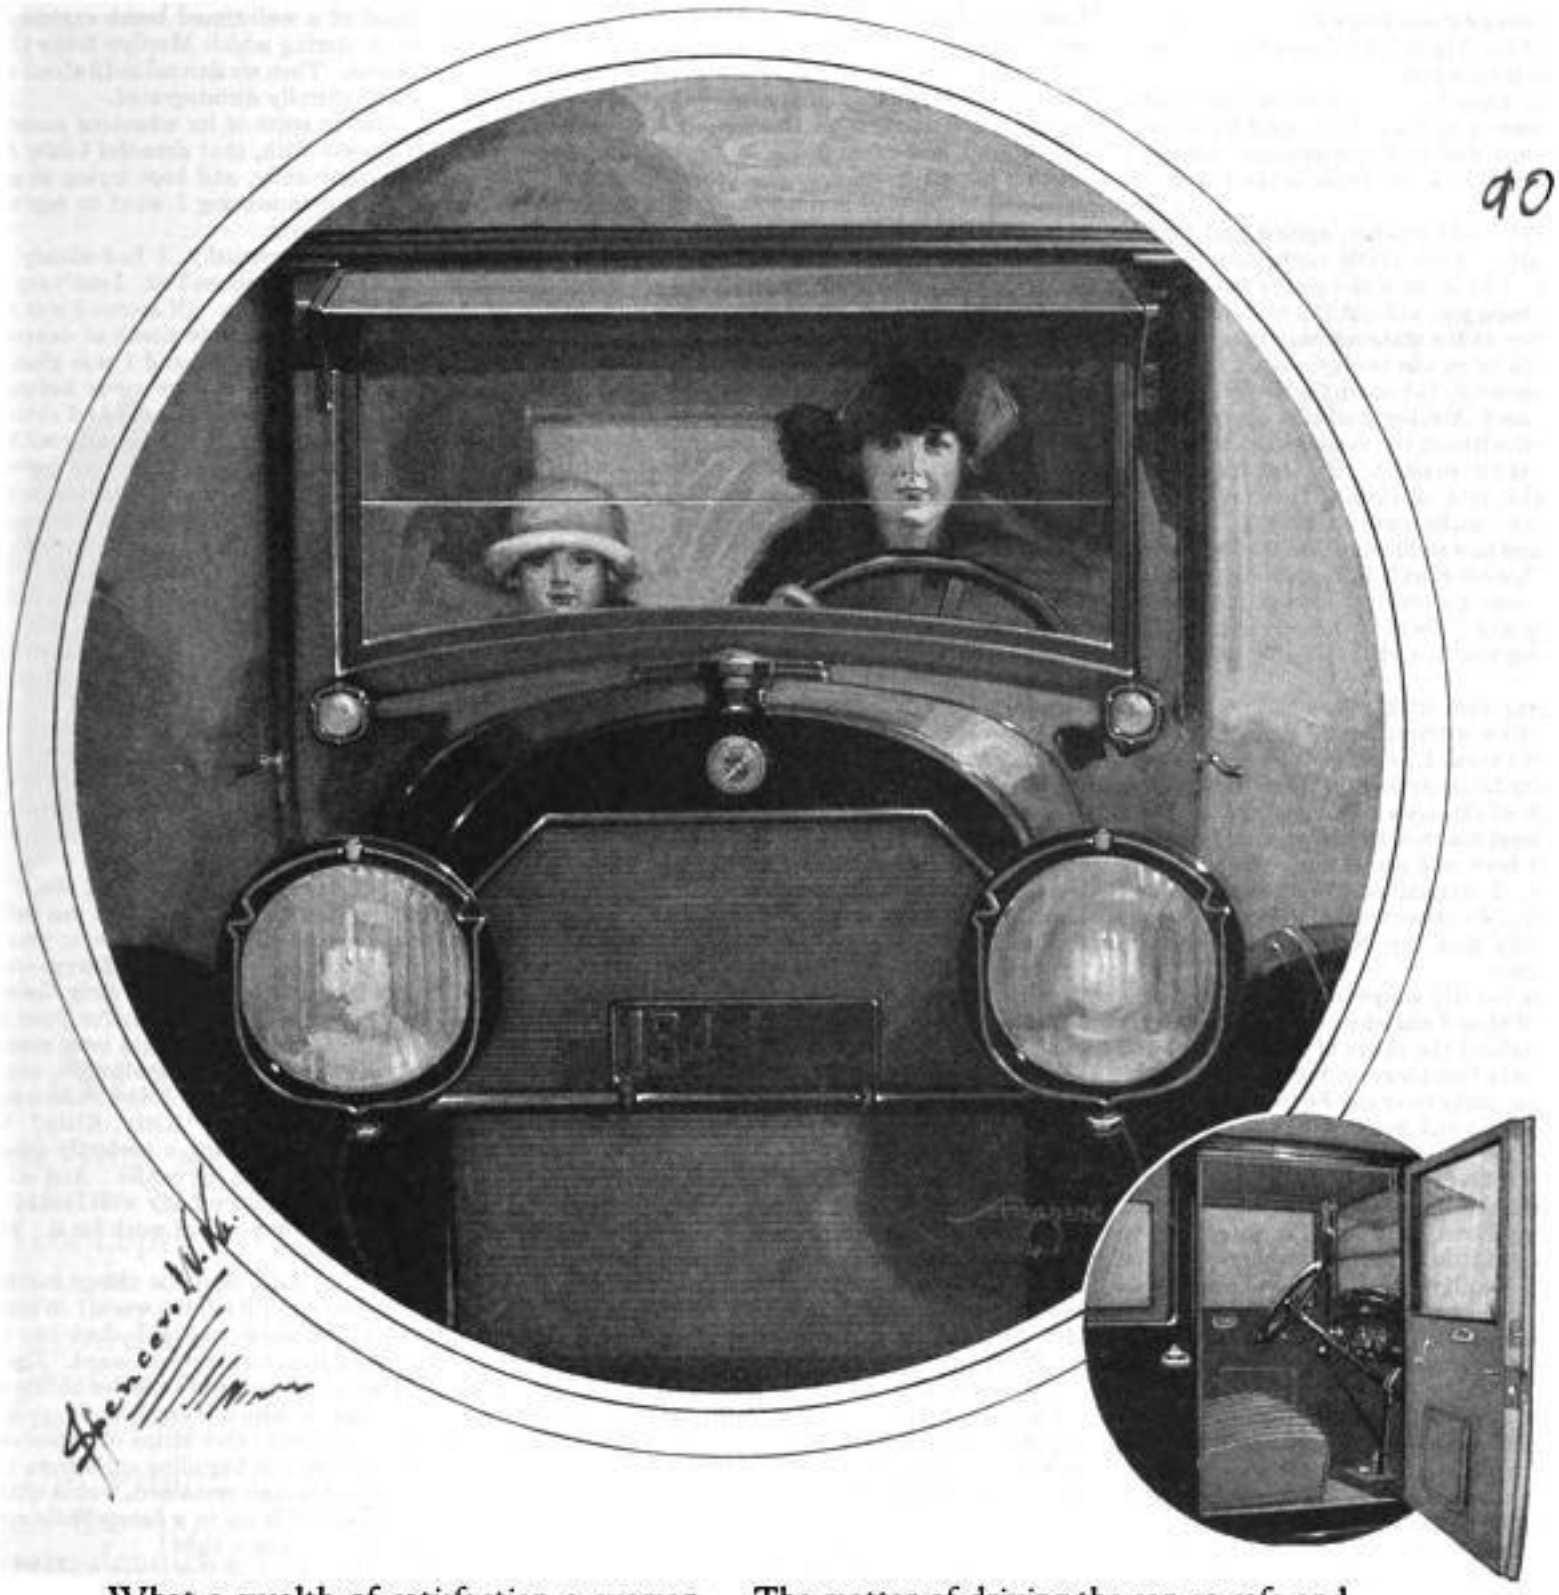
"Pet!" said mother. "You seem to forget that father and I are starting on our motor trip to Car to-morrow morning!"

"Well, and what of it?" I asked.

"A chaperon, my dear, a chaperon!" replied mot "I can't very well go away and leave you unchaperoi I've telephoned your sister Rosamond, but she c possibly get away."

"Thank heaven!" I murmured.

"So I have done the next best thing," said mot "I have sent for poor dear Marilyn."



Now Marilyn was a widow. The lucky man was— rather, I should say, had been mother's first cousin. of course Marilyn was pretty old. She must have been least thirty-six or seven, as mother had often plaintiv pointed out, when she was reluctantly obliged to recogn Marilyn's existence. This usually occurred only wh Marilyn wrote that the interest on the mortgage was agi due. I had never seen the widow myself, but you can ima ine how I was shot with dread at the idea of adding her the household when I tell you that none of the women our family ever referred to her except as poor dear Marily and that although she lived only as far as Jersey City, a mother sometimes talked to father vaguely to the effe that "we must have poor dear Marilyn out for a vi sometime, Edward. It is our duty really." She nev made good on the proposition. I didn't have to be a min reader to know that Marilyn must be an awful hick, an of course she was poor. What is more, the house on whi the mortgage interest fell due so often was admitted frame! Oh, boy, I could see she would make an ide chaperon—from mother's point of view! I would be luck if she didn't wear health shoes and rubbers and try t

What a wealth of satisfaction a woman takes in the dependability of her Cadillac.

There is no other single trait, of all the wonderful traits of the Cadillac, that quite equals it in her esteem.

She realizes thankfully that no thought of the car need intrude for a moment to mar her enjoyment.

Her mind is at rest, she is free to rejoice in the fine buoyancy of the Cadillac, its suggestion of soaring grace.

The matter of driving the car, so safe and simple and easy it is, adds a sportive zest to her pleasure.

And as the miles unroll, the joys of Cadillac travel grow more precious because of the serenity and security she feels.

This is the quality that is even more than beauty, or luxury, or the social prestige of Cadillac ownership.

This fine dependability, always the cardinal fact of the Cadillac, finds even higher expression than before in the new Type 61.

make me wear them too. My holiday looked as if it were going to be pretty well cramped.

"Mother!" I said severely. "You know that was a mean trick! For years you have been shirking Cousin Marilyn's visit, and now you wish her onto me and sneak off to Canada. I should think one freak in the house at a time was enough!"

"That will do, Pet!" said mother, arising and hastily assuming her busy air. "I am really sorry to miss poor dear Marilyn's visit. She is, as I remember her, a most estimable woman. I hope you will not fail to show her the courtesy of meeting her at the station to-morrow. She and Little Arthur will both be on the twelve o'clock train."

Do you see how hopelessly far apart the present generation and the old one are? Mother walked away with that as her final word, and without the remotest idea that she had completely ruined my holiday. She and dad were to be gone for two weeks, and, of course, I had planned to sort of just drift about—make some visits, show myself a big time generally—and now suddenly I was tied up as tight as a deb of '09 in her hobble skirt! It was simply maddening! However, there was no use my kicking any harder. Mother would simply say "There now, dear, your mother knows what is best for you!" and that would be the end of the conversation.

Mother was sending that hick cousin out to give the poor creature a good time without herself doing any of the dirty work. Very well then, I would give poor Marilyn a good time. And as for Little Arthur, he'd have to take his chance with the rest of the crew. For if I had to entertain those two I at least was not forbidden to add to the crowd. Nothing had been said about my inviting nobody else at the same time. I determined to sink my hicks and sink them thoroughly. In other words, I decided to surround them completely with my own particular bunch, and give them the razoo.

No sooner had this sweetly simple solution of my difficulties presented itself than I snatched the telephone from where it was hiding behind the skirts of a bisque doll and got my side kick, Sylvia Glenning, on the wire.

"I'm having a house party over the Fourth, old-timer," I said, "and you must not fail me."

"But I'm having one of my own!" objected Sylvia. "Tot Romney, Jed di Silva, Tommy Barnes and Rotter Cairey and—oh, yes, Ethel!"

"Bring them all over here!" said I. "I'm going to have two aces. One is called Little Arthur Cornwallace and the other is a girl named Marilyn Morelle. I will add G. G. Third and—oh, yes, Ted Stonewall!"

"You old priceless!" gasped Sylvia. "We will be there!"

"Dinner at eight to-morrow night," I said grimly, and hung up.

And then I sat for a while in gloomy silence. If that crew of strong men and wild women didn't send my two intruders scurrying for shelter I was a poor guesser. This house party was going to make history if I could arrange it. I called the general store down in Rosemere Village.

"This is Miss Torrington speaking," said I. "I suppose you have stocked up for the Fourth of July? Well, I want all the fireworks you have—all! And please be sure to send lots of red fire and plenty of very noisy crackers." After which I felt better.

But by the next morning when I set out for the railroad station to gather in the freaks I had about as much pep as a wet ostrich feather. For of all the smart towns on Long Island, Rosemere is undoubtedly the smartest, and draws a crowd which would put your eye out, especially over a holiday and week-end combined; and this was Friday, and Monday would be the Fourth and—well, you can imagine the sort of mob I had to face. Simply everybody who was anybody would be there meeting friends, and it seemed as if I had been appointed to furnish a laugh. It was beastly, simply beastly of mother to let me in for a situation like that! All the way down from our place, riding in solitary grandeur in the blue limousine and trailed by the suburban car for the trunks, I could just picture what was going to happen. There would be the shoals of gleaming cars, the gayly dressed crowd parading the platform of the pretty little vine-covered station—the Warringtons, Tot Romney, Sylvia, the whole bunch meeting regular people, with good-looking luggage and all that, and ragging each other, and probably staring at me while Cousin Marilyn waddled down the platform, with very likely a straw suitcase and a string bag in either hand, and she would smack me on both cheeks, and then we would rescue a big hulking goof of a backwoodsman with a wide-brimmed hat who would say "Pleased to meetcher!" And this, of course, would be Little Arthur!

I simply writhed at the thought. How could mother be so cruel? Oh, the things parents force upon us, and then expect us to love and respect them!

Well, at any rate, dreadful as these visions were, they did not affect the speed of the limousine's excellent motor, and I joined the happy throng at the station just before the train arrived.

Never will I forget the agony of the next few minutes. I scarcely know how I lived through them. Automatically I exchanged greetings with a few friends, and coming upon Sylvia Glenning did manage to keep my head sufficiently to grab her by the arm and hiss "Eight o'clock to-night" into her passing car. To my relief she nodded, for I was suddenly overcome with the ghastly thought that if she saw what I had come down to meet she might renig on moving her party over to my house. Ted had not even answered my note of invitation, and I was worried by the thought that everybody might go back on me. Sylvia was cordial, however, even though she broke away from me immediately, for by now the train was puffing and panting out in front and passengers were pouring from it.

I hid myself behind one of the columns of the shed and combed the pack for my pair of aces. But for a long while none of the arrivals seemed to meet the specifications. Once, indeed, I saw a middle-aged woman who filled the bill; but when I approached her smilingly that common Mrs. Gabler, whom nobody knows, darted in ahead of me.

"Pardon me, but this is *my* cook," she said firmly, and I fell back rather dashed.

The crowd began to thin out, and I saw it would be wise to get a little action. So I started darting up and down the platform looking about. But no freaks. The mob began to melt amidst the roar of motors, suddenly, as it does at a railway station, and then way down the platform I saw Ted Stonewall in knickerbockers and a gray flannel shirt completely surrounded by crates of young carrots and beets from that awful farm of his, and Ted was talking to a young woman in deep mourning. As Ted caught sight of me he said something to her and she turned around.

She was a widow. But at first glance that meant nothing to my fevered brain. All I saw was that she was a blonde, very pretty, with a lovely slim figure which her long black veil set off to perfection. Snappy? Some snap! Shoes, hat, a French bag of dull beads, a string of pearls and, as I drew nearer, a pair of appealing blue eyes and a peach of a make-up. Her age might have been anything from twenty-five on.

"Here is Miss Torrington now," said Ted as I approached. "Pet, this lady was looking for you."

Immediately the lady put out both hands in a graceful, impulsive gesture.

"I am Marilyn," said she. "Rippin' of you to ask me out, my dear!"

For a second I could scarcely speak. Then I heaved a huge sigh of relief. I felt as if an enormous weight had been lifted off my shoulders. This was a woman one could take anywhere! She was an asset, not a liability!

"Why, you're a peach!" I cried enthusiastically. "Gee, but I'm glad! How are you, and everything? Ted, this is Mrs. Morelle, my cousin, who is going to be with us over the Fourth."

"My name is Stonewall," added Ted, shaking hands.

"You have been so kind, Mr. Stonewall," said Marilyn, switching those light-blue lamps on him as gratefully as if he had just slipped her a new car or saved her from drowning or something. "I'm so glad we shall be seeing you again."

"You've got nothing on me there!" said Ted with a laugh. "Do I move over this evening, Pet?"

"I'm glad you have found out that you can come," I said a trifle coolly. "Dinner is at eight."

And then I steered Marilyn away, found the second man and watched her stack a whole pack of luggage checks into his hand while I broke the bad news about Little Arthur to this stunning young visitor of mine.

"I'm afraid Arthur is an awful piece of work," I said. "They have simply no end of money, but they are undoubtedly trimmed with hay. I suppose he missed this train."

"There is a lost-looking male grasshopper whom nobody seems to have claimed down the platform there," said Marilyn. "I talked with him in the train coming out. Nice kid."

I glanced in the direction she indicated and shook my head incredulously. For marooned in the midst of a perfect flotilla of luggage stood a small pale young man who looked as if he had aged suddenly at seventeen. He had on an immense Panama hat and the tightest-waisted coat I have ever beheld. In fact, all of his clothes would have done credit to a chorus man, from his Italian lacework brogues to the magnificent orange necktie which flamed brazenly beneath his weak chin. All of a sudden I realized that it must indeed be Little Arthur. It had to be. Nobody else could have needed his millions so badly. At once I dashed over and demanded the whole truth, and his watery eyes were as grateful as a lost dog's for the rescue.

"Oh, how awf'ly good of you!" he said, holding out a wilted hand. Around the wrist glinted something which I thought at first was an identification tag. But it wasn't. It was a bracelet!

"Not a bit good. Glad to do it," said I, lying cheerfully. "Come along!"

And then he followed me as if I were Mary and he had been born a lamb.

Well, dinner that night was a riot. Sylvia's crowd, together with my own, filled the house like a brimming cup, and my house party started off with all the restraint and quiet of a well-timed bomb explosion. The dinn feast, during which Marilyn broke the stems of t glasses. Then we danced until about three, when just naturally disintegrated.

But in spite of its whacking success I was no To begin with, that dreadful Little Arthur had me continually, and kept trying to get me alone

"I got something I want to say to you," he over and over.

Really, eventually, I had simply to walk out creature. But not so Ted. I can't say that he overs me with attention. Of course I was relieved, beca rule Ted bores me to death at dances by hanging simply all the time, and I was glad to have him for once. Still, I have never before seen him d much in any one evening. And curiously enough, a regular ace, and danced mostly with Marilyn, wh otherwise have been hung up, for she didn't kn crowd and was so much older, too, although she wa pretty good-looking at night—if you cared for he I had begun to go cold on it myself.

When we went upstairs later she slipped her through my arm and drew me into her room. willingly enough, because by now I was beginn realize that she would bear watching, and I wan know more about her. A nice chaperon my *moth* provided me with, I must say!

Well, in Marilyn's room a sleepy maid aroused and helped Mrs. M. out of her filmy and brief black gown.

"Why do you wear black, Marilyn, dear?" *I* "I thought your husband had been dead simply year years."

"My weeds, dear girl," said she, "are the only we of the penniless creature you see before you. Then certain something about weeds, you know. Men it. My weeds are my only dowry—my, as you might only inheritance from poor dear George."

"But you look so young for your age, honey!" I "I should think you would have married again!"

"Kitty, Kitty!" said Marilyn, seating herself bef dressing table simply laden with creams and bottles boxes and lotions. "Kitty, Kitty! Well, I'm not su fool as to stop being a perfectly good widow unless made well worth my while. And so far I haven't h chance to meet anybody who looked good to me. As my continued youth, I work for it. You just watch, ki give a look!"

Well, I did. And the things her maid did to Mar were enough, I'll tell the world! When the job was finis the professional widow looked like something that escaped from the accident ward. She had on a chin str a nose mold, surgeon's plaster at the corners of both ey the lids of which were heavily greased, and across forehead were other strips of adhesive. The maid had moved the two beguiling curls from the nape of her ne taken what hair remained, wet it with some kind of to and twisted it up in a funny little spill on the top of head. She was a sight!

"Do you do all this every night?" I gasped, impress Marilyn nodded dumbly.

"Madame cannot speak when she is like deese!" t maid explained. "A lot of trouble, non? But it ees grand success, n'est-ce pas, mademoiselle?"

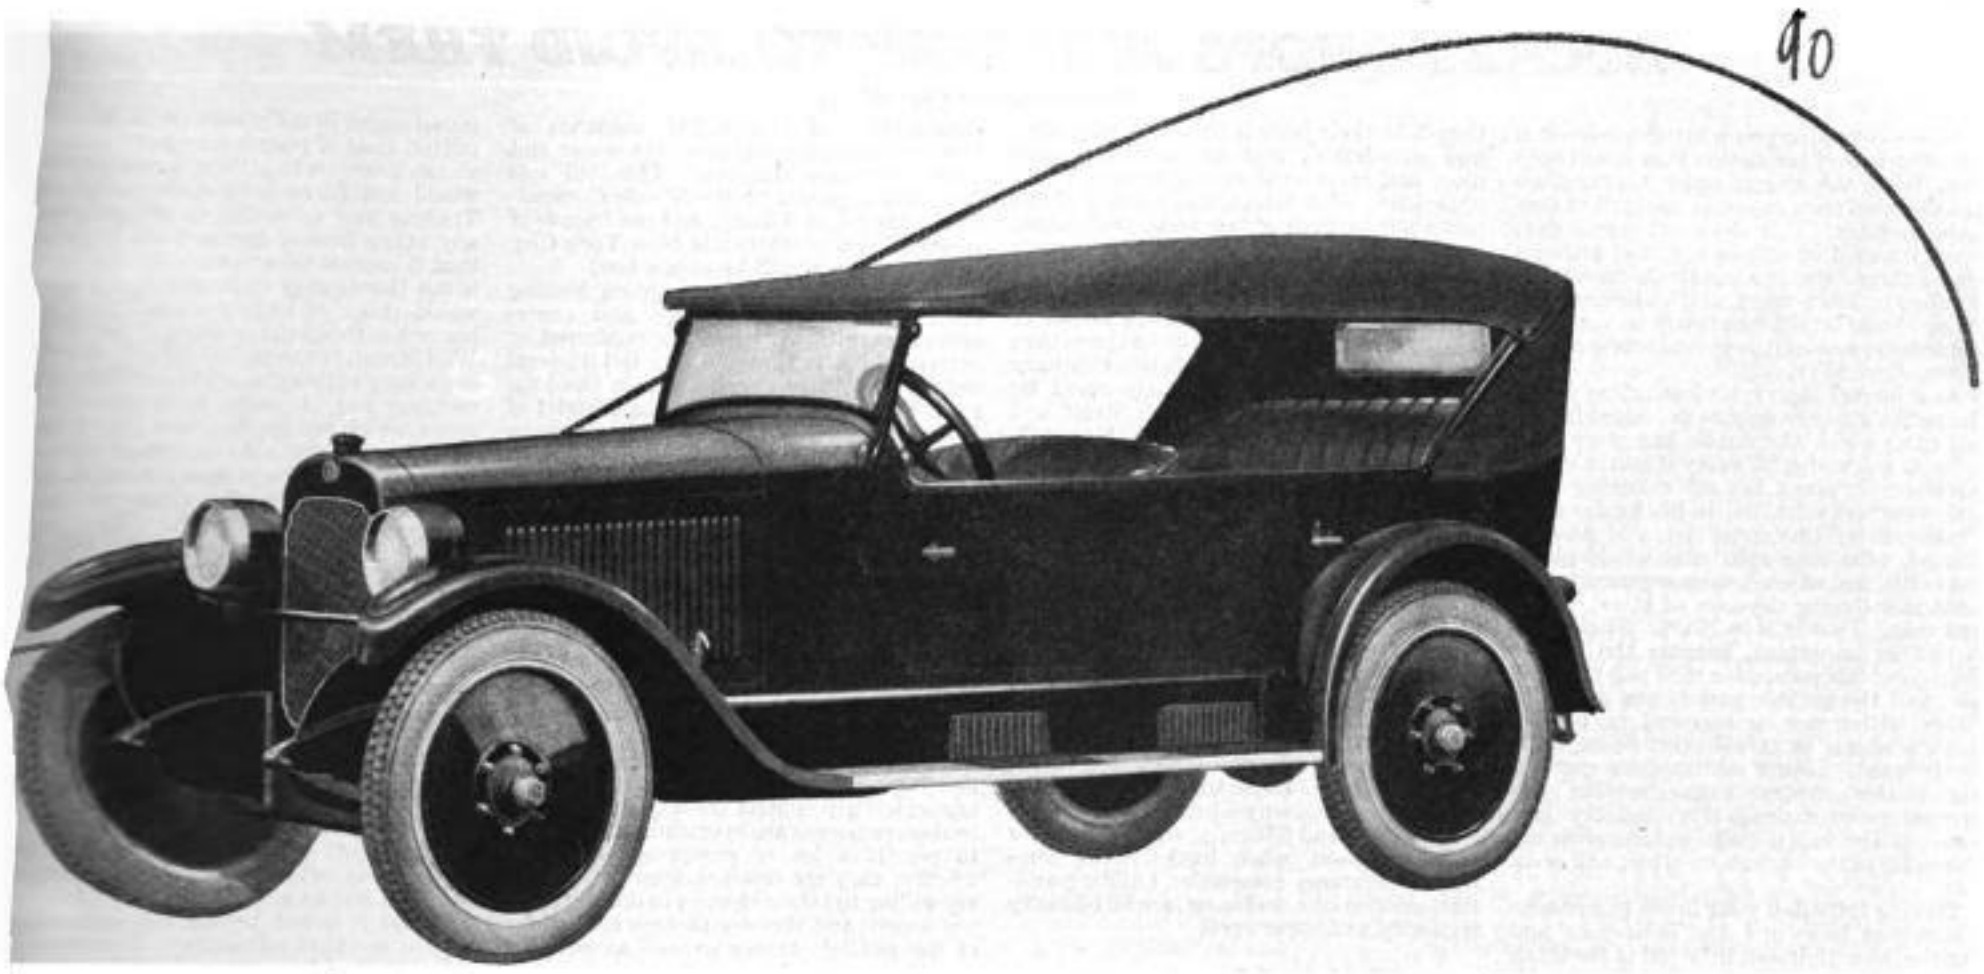
And I had to grant her a lot. It was a miracle, that what it was, for with this get-up on something indefinab stole out of Marilyn's face, through the plasters and a and showed her true age. She must have been forty! could have sworn to it! But all I did was throw up m hands and rush off to bed in hysterics. The old thief Going around fooling decent young men! Ugh!

The next day things began to thicken. Ted, who ha said he would be obliged to run out to the farm every day did so, and took Marilyn along with him. Both Sylvia an I heard him promise to send her in a bouquet of whatev she admired most out there as he helped her into hi flivver. Silly ass!

I didn't have any heart for tennis that morning, but I played doubles with Sylvia, Jed and Rotter, because that soft clam of a Little Arthur had the nerve to spring an invitation to a solitude *à deux* on me before lunch.

"I say, won't you, Pet?" he pleaded in his piping voice. "There is something I want to say to you."

"Not now. I've got to play tennis," I answered irritably, and beat it for the club with the bunch, although a nice cool drive into the country would have pleased me much better, even if it had been taken in a flivver.



But worse was to come. At lunch Ted was polite, but Marilyn was gushing to me. And any girl knows what that means!

"Oh, you ought to see the darling young beets he grows!" she said with one eye on Ted to find out how this was getting across. "Simply miles and miles of them—too lovely! And he's such a sweet host. He's been so good to me. And he is a wonderful farmer!"

"Yes, he must be, dear," I answered sweetly. "Farmers are generally familiar with weeds, aren't they?"

A New and Finer Kind of Six-Cylinder Performance

Until you see the New Series Chalmers Six, you can have no real conception of the wonderful value it is.

Until you drive it, you cannot know the great new advance it represents in fine six-cylinder performance.

All the splendid properties for which the six, as a type, is prized, are here developed to a nearer point of perfection.

The power-flow is even more smooth; the blending of cylinder impulses more complete; the acceleration more spirited; and the flexibility is pure delight.

Not only the famous Chalmers engine, but the entire car, has been the subject of a solid year of engineering scrutiny and refinement.

This is, in our opinion, the finest-performing six we have ever built —a car of enticing comfort and surpassing beauty.

Every mile you travel in it confirms again the remarkable value indicated by its size and appearance, and the details of its finish and equipment.

All Models Equipped with Disc Steel Wheels and Cord Tires

Five Passenger Touring Car, $1395; Seven Passenger Touring Car, $1495, Roadster, $1345; Coupé, $1995; Sedan, $2295. These prices f. o. b. factory, Revenue tax to be added

Chalmers Motor Car Company, Detroit, Michigan
Chalmers Motor Company of Canada, Limited, Windsor, Ontario

BUCKET SHOPS AND HOW TO AVOID THEM

(Continued from Page 23)

When they give you a bit of advice it is with the honest conviction that it will help you. When you give an order it is executed and reported back to you at the earliest possible moment. This does not mean that every transaction will be reported within a few minutes, because some stocks have what is called a slow market, and to force a purchase or sale would be greatly to your disadvantage, just as it is in real estate or any other commodity.

As a bucket shop is an institution where the public's money may be deposited freely, but from which the public has great difficulty in extracting it, every resource of the bucketeer is spent toward retaining cash and securities intrusted to his tender care. Trainloads of literature, acres of postage stamps, telephone calls that would girdle the earth, and other means are used to the limit in inducing deposits of stock, bonds and cash. That is Step No. 1. Step No. 2 is just as important, because the bucket shop considers possession nine points of the law, and the greater part of the money is either withdrawn or secreted in private bank accounts or safe-deposit boxes, or is freely spent. Liquor seldom came quite so high in this country; women seldom have dressed more expensively; and the jazz music of the day is quite in tune with the character of the bucketeer—loose and reckless.

Having intrusted your funds to someone whom you know not but believe in, and desiring to withdraw a little out of the total, you find him making excuses. He doesn't like to see you missing these good opportunities, or the stock you want to withdraw is being transferred and it will be along in a few days, or there is some little irregularity in the account that needs straightening out, or he has a rush telephone message for you which says "Get into this quickly." Please note one of the most distinguishing earmarks of the bucketeer—he will not let you have your own money. You must pry it out of him. In most cases you have to go there, demand it, and threaten trouble before he will give up. If you write him a letter and say "Please transfer my account" to this or that other broker, he will make the same kind of excuses—more of them. If all his clients asked for their money he would close up, because the money has disappeared. What was left in recent failures was a mere patch on what they had before the deluge of withdrawals by their clients.

An Epidemic of Failures

Within the last few months many people who were dealing with bucket shops have telegraphed or written to them, "Please transfer my account to Blank & Co.," naming another house. Such requests filed with a New York Stock Exchange house would have resulted in an immediate transfer, for to delay in such matters is to cast reflection upon the credit of the house. In the case of the bucket shops, days, weeks and months have passed without any result except a string of excuses designed to keep the cash and securities in the hands of the bucketeer. Had these people taken the trouble to go to the main office of the bucket shop and demand their property, their loss might have been avoided in many cases. The liabilities of failed bucket shops consist largely of amounts of money and securities due clients who had demanded them but could not obtain them.

The New York State law makes bucketing and trading against a customer a felony. But though the newspapers have been filled with bucket-shop failures and bucket-shop crookedness there has not been any noticeable increase in the population of the Tombs Prison since the exposures began.

In the early part of last November things bucket-wise were comparatively quiet along the Rialto. Under the surface the situation had been growing more unhealthy; the pirates were becoming bolder; but few suspected that the Street was about to witness a series of explosions such as had never before been recorded. The publication of articles showing in minute detail all the inner workings of the bucket shop was the little match that touched off the bonfire. The first evidence of this was the withdrawal of cash and securities from a number of bucket shops by clients who had not realized the character of the houses with which they had been dealing. Then they told their friends how and why they had withdrawn, and as there appeared more and more evidence of hesitancy and opposition with which the bucket shops met their increasing demands, the clamor became so loud as to awaken numerous sleeping neighbors who rubbed their eyes and found their own houses afire.

Here and there bucket shops began to fail. Others came along—two or three, then more—each day until along in late February and early March loud reports could be heard from all quarters of the Street and the house of cards came down with a crash. The New York district attorney found his office transformed into a collection agency. The grand jury found many indictments. But the sheriff found that a general exodus had taken place to Canada and parts unknown. The house cleaning had begun.

It was then my privilege to publish the principles on which it seemed that the proper regulation of the brokerage business should be based. It was my firm belief, based on many years' observation of the situation, that the banking laws of New York State should be so altered as to bring stock brokers under the supervision of the State Banking Department. There appeared no reason why a broker, who acts as a depositary and fiduciary, should be under no supervision, when banks, trust companies, insurance companies, building-and-loan associations, and so on, are all officially regulated and supervised.

Projected Legislation

It seemed imperative that every individual, firm or corporation acting as a broker or dealing in or lending money on securities within the state be licensed by the State Banking Department, and that a staff of auditors with long Wall Street experience be appointed to examine every brokerage firm's books and affairs at frequent intervals.

Happenings along in February bore every indication that the best element in Wall Street was awake to the situation. The president of the New York Stock Exchange expressed a realization of the responsibility put upon the Exchange by the presence of all the millions of new investors who had learned to buy securities during the Liberty Loan campaigns, and announced that the time had come when the Exchange members must collectively assure themselves as to one another's affairs, as to the firms which were carrying stocks on margin for the public, the relation between their free capital and their commitments, and so on. President Cromwell stated that he would "never be satisfied until we have carried our effort for safety so far that insolvency caused by improper dealing shall never occur among Stock Exchange firms; . . . that the stocks bought for clients must be carried not only by members of the Stock Exchange but by all brokers who have the remotest connection therewith."

Legislators in Albany and Washington also became thoroughly aroused to the evil which had been exposed, and several constructive bills were presented. Some are meeting opposition, principally on account of the licensing feature. It is claimed that the Martin Law of New York State, 1921, if properly enforced, would prove effective in stamping out the bucket shops, but it lacked the little detail of funds with which its provisions might be enforced.

A bit of legislation which at mid-March looked the most promising and which might well be followed both by other states and by the Federal Government, was embodied in the Katlin Blue Sky Bill, which provided for licenses, which were to be obtained from the superintendent of banks; examination of books and accounts of brokers; revoking of licenses for cause; and other necessary features. This bill was favorably reported by the Senate Committee on Banks, at Albany, and the friends of a clean financial district in New York City sincerely hope it will become a law.

The consensus of opinion among leading congressmen, state senators and representatives with whom I have conferred or corresponded is that nothing but Federal legislation will prove effective in the long run. This was illustrated in the District of Columbia. When the blue-sky laws were passed in Maryland the Wallingfords all flocked into the capital; also by the migration from New York City to New Jersey when the local bucketeers began to fear prosecution. The author of the Betts Bill, which was recently up for public hearing at Albany, writes: "The reason I introduced the bill was because I discovered that the so-called blue-sky laws in the Western States had driven so many of the crooks out of those states that they were all flocking to New York, which was becoming their Klondike."

What we need in New York State and every other state in the Union is a Federal law which will control the way in which all brokerage houses are operated. It is absurd to permit a lot of irresponsible people, whether they are crooked, ignorant or simply willing to take a chance, to open brokerage houses and thereby become custodians of the public's money as well as advisers as to how the public should speculate and invest in securities. Just imagine what our banking situation would be if those who are now operating bucket shops should abandon that pursuit, and—if the laws would permit—open banks and begin to take in and pay out. How long would it be before the commercial and financial interests of this country would be on the rocks?

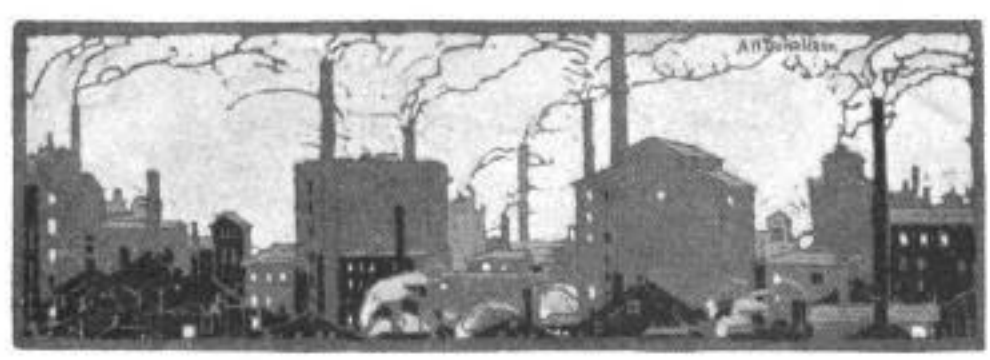
It is well for Wall Street and the whole country that the New York Stock Exchange now realizes its responsibility to the public and to the investment interests of the American people; that it owes a duty to those who deal in its securities, especially to the small investors. Admitting that it is primarily organized to provide facilities for buying and selling stocks and bonds, it has, chiefly by reason of recent disclosures, found itself in a position where it must, to the very utmost, control the dealings in the stocks and bonds which it has listed, and so extend this control that no one can employ its facilities in any scheme for taking advantage of the public.

A Great Opportunity

The New York Stock Exchange now faces the greatest opportunity of its career. Many more people are to-day buying stocks and bonds than ever before. Many more corporate securities are listed on the New York Stock Exchange than at any previous period. It is the one big market for American railroad, industrial, petroleum, mining, public utility and other kinds of securities. Buyers and sellers from all over the world express themselves in the prices which they bid and ask for stocks and bonds on the big floor. Banks everywhere value listed collateral by the prices there quoted. The Exchange should now take steps which will place it in such an unassailable position that when this is done and fully realized by the public there will remain little or no basis for the organization or operation of houses which illegitimately may attempt to deal in New York Stock Exchange securities.

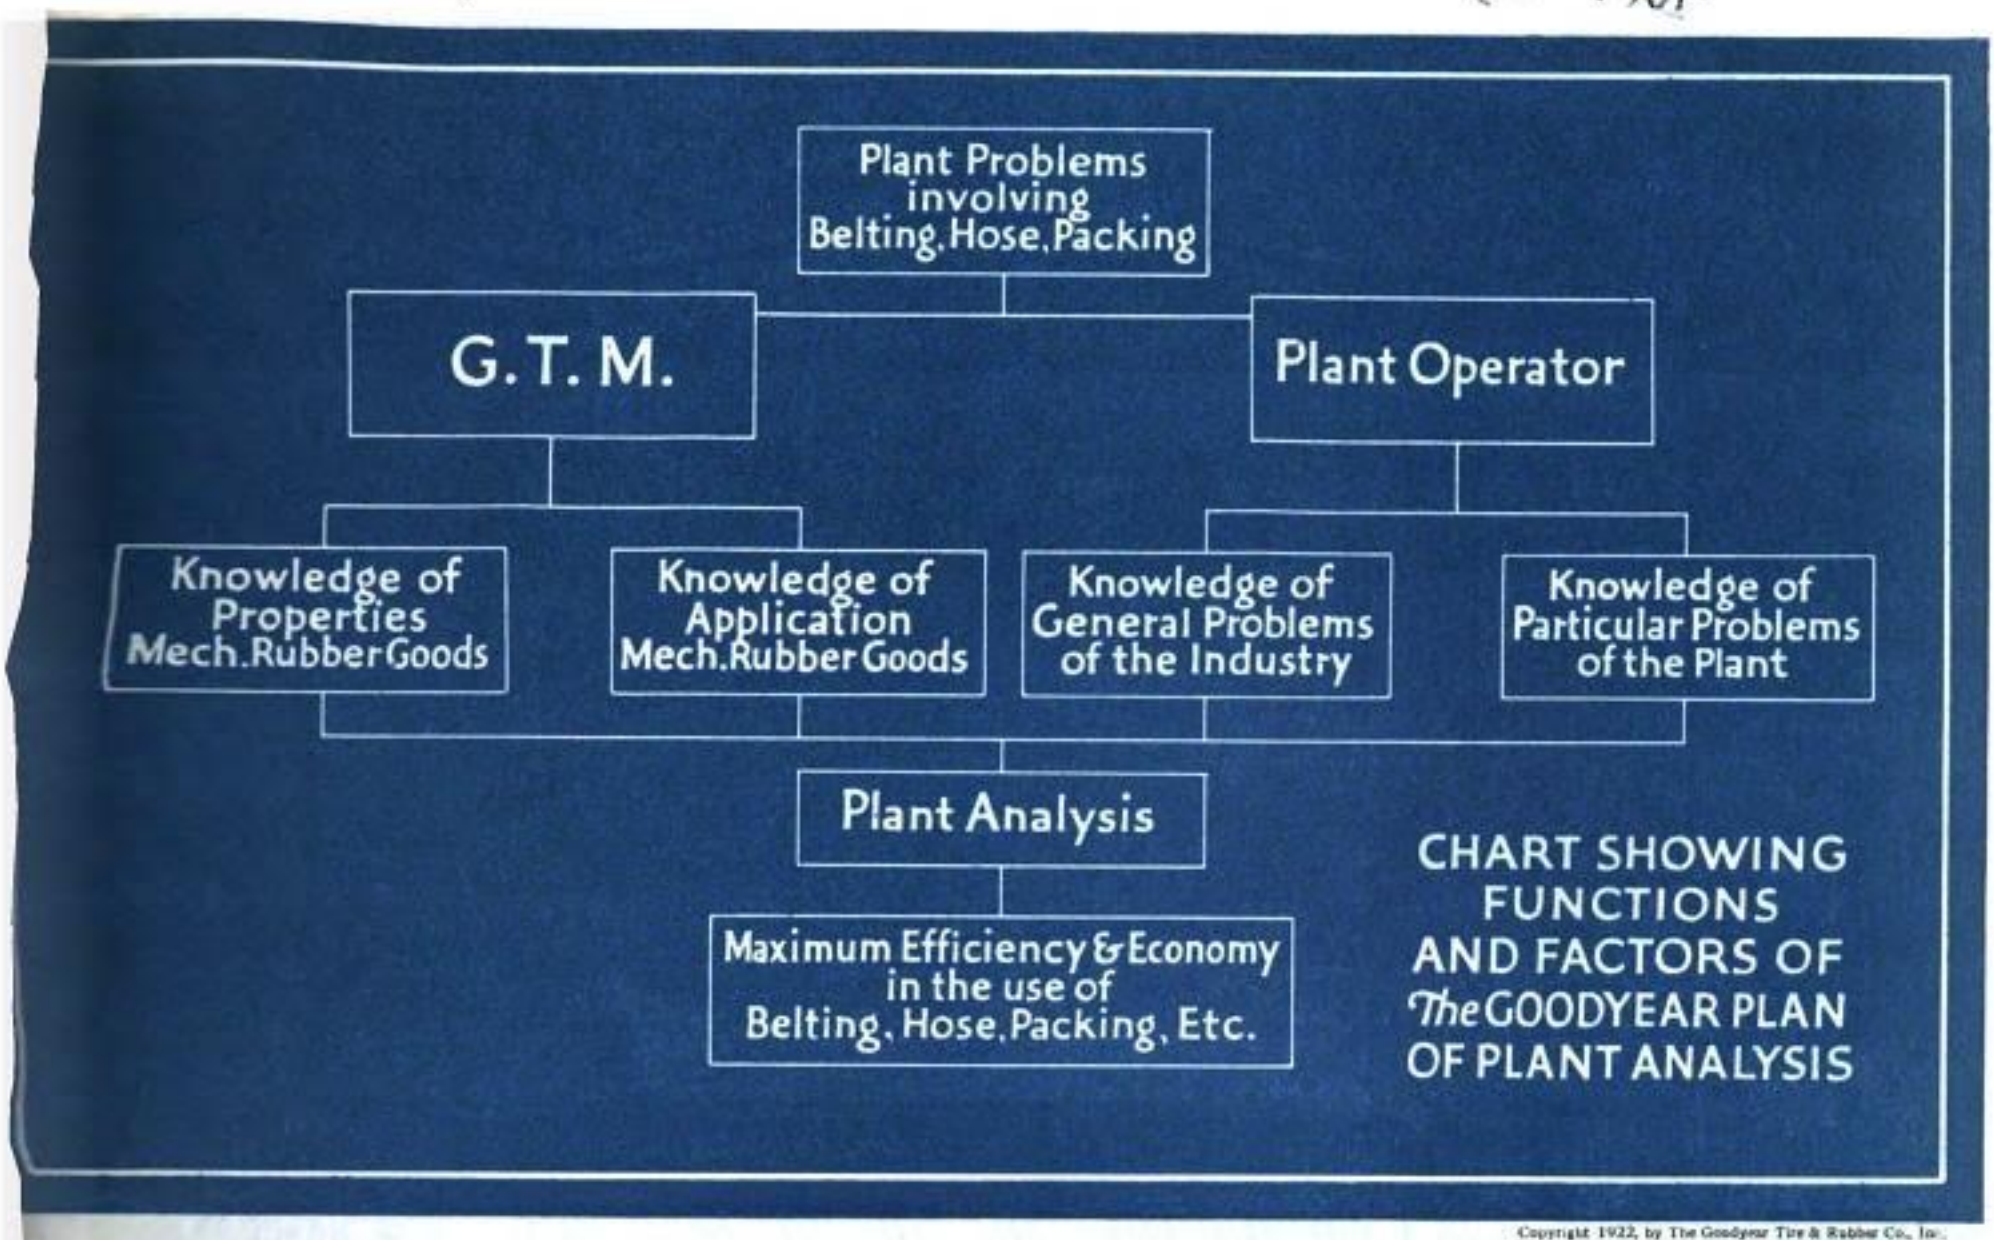
Though the Stock Exchange can provide the necessary facilities, there is one thing that the public must do for itself, and that is acquire a certain amount of trading and investment intelligence, for it must be admitted that if people who patronize bucket shops knew what they were about they would not have been such blind victims. Trading and investing in securities is like any other line of business in this respect, that it cannot be successfully followed if it is not thoroughly understood. Few people would think of setting up as doctors or lawyers without the necessary training, but Wall Street, in the public mind, seems to be something entirely apart from the rules and customs and, I might say, the ethics of business, which are applied to any other business or profession. As in other lines of endeavor, particularly for the reason named, it is the comparatively few who make great successes and the many who fail because of, largely, of their own ignorance, incapacity or unwillingness to master the rudiments of investment. What most people want is a tip to buy something, and as a rule they will not only refuse to expend their efforts in learning how but they will not spend their money.

I have no desire to stimulate the speculative instincts of the American public, because these tendencies are already altogether too potent in the minds of our people, many of whom prefer to gamble than to speculate intelligently or to invest at all. Henry Ward Beecher said: "I hold that a man who is long-headed, who foresees and judges more accurately, has an advantage over his neighbor, and it is not accounted immoral for him to use that advantage, because he is individually better fitted for the business, and it inheres in him by a law of Nature that he has a right to the whole of his legitimately applied. If one man or two men, looking at the state of the nation, look at the crops, at the possible contingencies and risks of climate, at the condition of Europe; in other words, taking all the elements that belong to the world into consideration, are sagacious enough to prophesy the best course of action, I don't see why it is not legitimate." Nevertheless, the best interests of the public lie on the investment side of Wall Street, and by "investment" I mean the placing of money for income and possible increase in value of the securities purchased.



Time to Clean House

The wide diversity and character of industries now listed and being listed on the Stock Exchange show an increasing tendency of important corporations to establish a market for their securities where millions of people can pick up their daily newspaper in any part of the country and see just what their property is worth; and with the additional advantage that any stockholder, large or small, can take any such listed securities to his bank, in any part of the country, and borrow money on them at current rates of interest—a fact which distinguishes New York Stock Exchange securities from all others.



Not only have the railroad, public utility, manufacturing, commercial and banking corporations established plants and properties in every state in the Union, but their stockholders are also scattered throughout the length and breadth of this land and in every country on earth, so that these vast properties are neither located nor owned in Wall Street.

Wall Street being the heart of all these activities, it is more than essential that the financial district become the source of the education of American investors if it is possible to open their eyes to the necessity and the advantages thereof. The literature and advertising of many investment houses are becoming more strongly flavored with the desirability of thrift, investment knowledge, intelligent investing; and this is well, because statistics prove that only a small percentage of Americans of either sex in their later years are financially independent—something like four out of one hundred—and at the age of sixty-five, and in many cases long before that time, the majority are dependent upon charity or their relatives for support.

As I see it, therefore, the problem of Wall Street is to clean house, keep it clean, improve facilities, give service, guard and insure the public, encourage individuals to educate themselves in the technic of the security market. If all this be done we shall be well on our way to the goal—a nation of intelligent investors.

Plant Analysis Service — and the G. T. M.

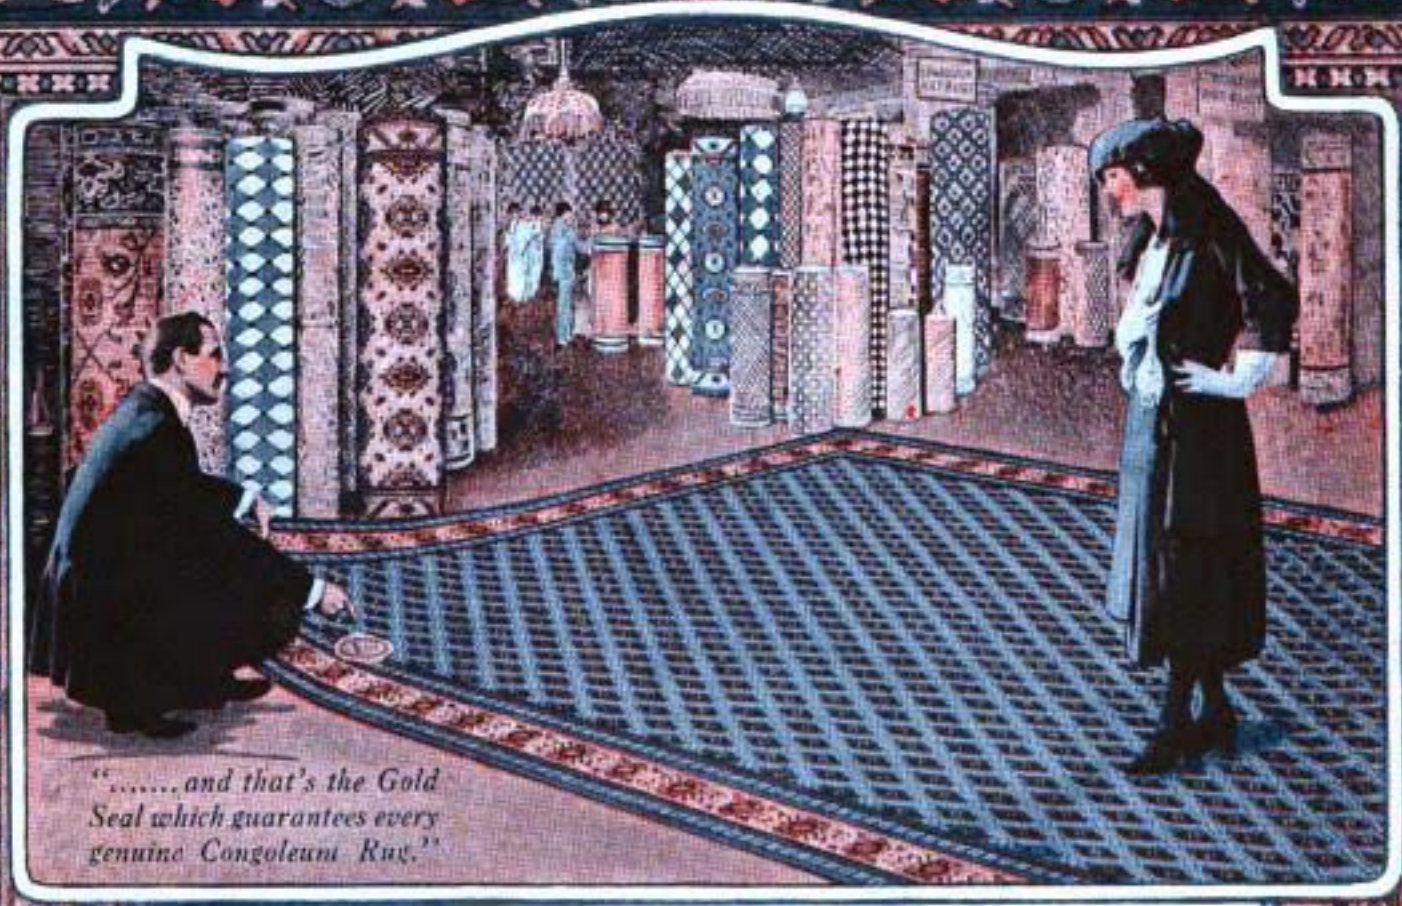
Look at this chart. It pictures, in the language of the plant superintendent and the industrial engineer, the place occupied by the G. T. M.—Goodyear Technical Man—with relation to your belting, hose and packing problems.

It identifies the G. T. M. for what he is, the tested link in the chain of service connecting your need for efficient plant operation, and your knowledge of the special working conditions of your plant, with the Goodyear Plan of Plant Analysis and the products Goodyear makes for industrial use.

You have seen on these pages example after example of the efficient and economical performance of Goodyear mechanical goods that were specified to their work by the G. T. M. These reports make up a body of convincing evidence, we think, as to the honest effort made by Goodyear to build the best possible product for certain operating conditions. The part the G. T. M. has played in each of these instances has been one of responsibility, seeing that the user gets out of the product in useful work all the value of the materials and workmanship put into it.

The G. T. M. is an expert in his line. He knows the properties of good mechanical goods. He is trained in the science of their specification and application. His work takes him into many plants, in many industries, so that he is familiar with most transmission and conveying problems, and is a practical authority on many of them.

When he comes to your plant, he comes as a friendly analyst of your operating problems, your troubles, maybe. He doesn't pretend to know it all. He takes the advice of your superintendent and engineer. He gives close attention to their experienced knowledge of your particular working conditions.



His sole object is to fit what he knows about belting, hose or packing to the demonstrated conditions of service in your plant. If he can find out what you need, and Goodyear can furnish it, he will recommend it to you, and after its installation he will follow it up with a sincere service.

Isn't it logical that a belt, or other equipment, that is constructed right in the first place, and then is specified intelligently to the work it is to do, is much more likely than any other product is to serve you longer and better, with freedom from trouble, and return to you the full value of its utmost efficiency and economy? The Goodyear Analysis Plan is based on that reasoning, and the G. T. M.'s work is to insure that you get the equipment that will serve you longest and best.

There is a G. T. M. in your neighborhood. Call on him for an analysis of your mechanical goods problem, whether it involves a single unit or an entire plant, a conveyor or a transmission, a hose or a packing equipment. For further information about the G. T. M., and his work, or the kind of service Goodyear products give in your particular industry, write to Goodyear, Akron, Ohio, or Los Angeles, California.

"……and that's the Gold Seal which guarantees every genuine Congoleum Rug."

The Rug displayed is Gold-Seal Art-Rug No. 508

Gold Seal Congoleum—the guaranteed rug

When you are buying a *Gold-Seal* Congoleum Art-Rug the most important thing to remember is to *look for the Gold Seal.* It's printed in green on a gold background, and pasted in a corner on the face of the rug. Ask the salesman to point it out to you.

Beware of Imitations

We urge you to do this because this Gold Seal is your protection against inferior rugs that may resemble *Gold-Seal* Congoleum in outward appearance, but do not possess the durability and economy of this popular floor-covering.

The Gold Seal is your assurance that you are getting a genuine Congoleum Rug—the rug which is sold with a pledge of "Satisfaction Guaranteed or Your Money Back."

Gold-Seal Congoleum Art-Rugs possess practical qualities which appeal to every housewife. They have a smooth, waterproof surface that is made spotless with just a few swishes of a damp mop.

Congoleum Rugs never kick up at the edges as woven rugs do—always lie flat without fastening.

Note the Low Prices

6 x 9 feet	$ 8.10	9 x 10½ feet	$14.15
7½ x 9 feet	10.10	9 x 12 feet	16.20

The rugs illustrated are made only in the four large sizes. The small rugs are made in other designs to harmonize with them.

1½ x 3 feet	$ .50	3 x 4½ feet	$1.50
3 x 3 feet	1.00	3 x 6 feet	2.00

Owing to high freight rates, prices west of the Mississippi and in Canada are higher.

OUT-OF-DOORS

Maryland Game Laws

ERRING to comment on the former istence of many county and local in the state of Maryland, a president state game commission of that state hat within the last ten years Mary- has abandoned local legislation in of state-wide laws, and that the y laws have been pretty much wiped Many disinterested sportsmen have d long and faithfully to bring game ions in Maryland to this better status. land has a state-wide hunting license, ll as state-wide laws; for the resident dollars and ten cents, the nonresident dollars and twenty-five cents. The nt county license is one dollar and nts. All hunters while hunting must on the left arm a sleeve band with mber corresponding to their hunter's se. The open season and bag limits of state seem to be logical and modern. eaking of open seasons, it chances that writer often is asked for suggestions as ates for fishing and shooting seasons. n't suppose any one man is wise enough ll how to increase the fish and game of erica by merely setting dates, and, of rse, the only way we really can increase fish and game is to stop killing; but e dates are worse than others, and con- ting dates are always bad. For instance, pose Wisconsin or some other state ws pickerel fishing a month before it ws bass fishing. The result is that many s are taken illegally anyhow. We used have in Illinois and in other states a dove son which began in August, and a chicken son which began in September. The ult was that by September first there re no chickens.

Broad, simple, concurrent dates for all ecies of fish found in one water, all species game found in one habitat, giving a little l taking a little, will in the end usually rk out better than a number of dates d to suit the habits of the different ecies, or to suit the wishes of avid sports- n. It seems to me we shall have to come a month or two months' shooting in the ll for any or all kinds of game before we t down to the actual saving of our upland ds and other animals. There is no royal ad about it—we shall have to content our- lves with shorter seasons and smaller gs. America is not the same country it ed to be, even twenty years ago. Indeed, am not sure but that Doctor Hornaday's an of alternate open and closed years on l game will before long seem much more ndurable than it does to-day. The present **ystem cannot run on much further.**

Special Spectacles

IN A RECENT periodical I saw further proof of the curious inventiveness of the out-of-door crank. Everyone knows that the rear peep sight is the answer for that fuzzy look of the open sights when you get to be seventy or eighty years old. This student has invented a peep sight which stands very close to the eye, with a small aperture which seems to sharpen the vision, so that the sights are seen as clearly as ever. But what could he do with his revolver, held at arm's length, away out yonder from the eye?

He could not find the aperture if he tried. So he sat down and took an old pair of spectacles, and for the right eye fitted in a piece of black tin with a small hole drilled in it opposite the pupil of the eye. The hole was punched with a large darning needle.

The inventor says, "Now the sights of the revolver are both seen very sharp and distinct, as well as the target." He says it works.

The human eye is a curious thing, not understood by many shooters. Indeed, the whole principle of wing shooting is understood very little by the average shooter, no matter how expert. Theoretically the right eye lines up the barrel and the left eye covers the field and the object to be struck. In practice, however, a man may establish some sort of accommodation between a left eye which still sees fairly well and a right eye which does not. He has some kind of least common denominator in his eyes or in his mind somewhere. He pulls up his shotgun, lines up on his flying bird and kills it, though he does not know just how. Of course, when it comes to shooting a rifle, the shooting eye has got to be doctored if it does not see the rear and front sight clearly and the object of aim also. The open sight is better so long as we can use it, but the aperture sight becomes useful when the three objects are not all clear in line. You can make a spectacle or a lens by poking a little hole in a piece of paper. I think, however, that a great many men shoot a rifle on running game much as they do a shotgun—by pointing with the stock and barrel at that mentally imagined spot which represents the accommodation of the two eyes. It sounds difficult, but any rifleman knows he can shoot with both eyes open and kill deer.

The Great Explorers

NOT long ago there was erected at Charlottesville, Virginia, a monument to the two greatest of our American explorers, Meriwether Lewis and William Clark—the only monument, it is believed, which these two splendid young Americans ever conjointly have received, at least so far as falls within my personal knowledge. The monument is a gift of Mr. McIntire, of Charlottesville, and Charles Keck was the sculptor. The height of the pedestal is fourteen feet, the height of the bronze figures eight feet four inches. The chief inscription reads:

> BOLD AND FARSEEING PATHFINDERS WHO CARRIED THE FLAG OF THE YOUNG REPUBLIC TO THE WESTERN OCEAN AND REVEALED AN UNKNOWN EMPIRE TO THE USE OF MANKIND

Below the inscription are the thirteen stars of the thirteen original states, and beneath them the statement:

A TERRITORY OF 385,000 SQUARE MILES WAS ADDED TO THE COUNTRY BY THE EFFORTS OF THESE MEN—AN AREA LARGER THAN THE THEN EXISTING SIZE OF THE UNITED STATES

Around the base of the bronze figures are bas-reliefs of Lewis and Clark entering a council of Indians; the Indian guide, Sacajawea, returning to her tribe; Indians admiring the huge negro of the party; an Indian dance; a buffalo hunt in which Lewis and Clark joined.

Naturally very much interested in this monument by reason of my own personal interest in early Western exploration, I have examined it with considerable exactness. It shows Lewis carrying what might very well be a Harper's Ferry musket, ramrod and all, which does not in the least resemble the frontier rifle of a hundred years ago. Regarding this detail I wrote to a gentleman in Charlottesville, who says that the sculptor was of the belief that Lewis and Clark should not be shown as hunters, and for this reason he has Lewis carrying a musket. This, although both figures are in fringed buckskin and not in army uniform. This gentleman also says that he has seen a picture of Lewis in Indian dress, painted by St. Memin, and showing him with a Kentucky rifle about as tall as he was. He adds, however: "The army musket in use at that time was rifled and a very powerful weapon—better, I should think, for buffalo and grizzly than the small bore. It is told that on several occasions, when pursued by grizzlies, the hunter loaded his rifle while running, which would be a pretty difficult operation with the smaller gun with its long barrel, tight bullet, slender ramrod, patches, and so on. On first thought one would infer that they used the rifle in general use by the pioneers, but I am inclined to doubt it. They were United States soldiers. There must be some record of the Expedition's equipment, but I have had no time to look it up."

It is sure that Capt. Zebulon Pike, Western explorer of about the same date, used the small-bore rifle, for in his narrative he constantly makes mention of its lack of knock-down quality on large game.

It is stated that none of Meriwether Lewis' descendants now living around Charlottesville know anything about his rifle, although they have other relics, including his spyglass. I think it may be stated as safe that all members of the Lewis and Clark Expedition carried the frontier rifle of their day, no doubt in the larger caliber which antedated the later squirrel rifle in that form of firearms in America. At the time of Lewis' melancholy death at the Grinder cabin, in what is now Lewis County, Tennessee, his bodyguard, Pernia, disappeared with his rifle and his watch. This man was later found in New Orleans in possession of both these articles by a relative of Meriwether Lewis, to whom he surrendered both without any protest. Of the history of the rifle from that time on I know nothing. I am of the belief that the counterpart of such a piece would have looked better in a monument intended to be descriptive of the heroes of America's greatest expedition of discovery.

The Coming of the Horse

IN THE American Indian Magazine Mr. Clark Wissler gives some very interesting facts about the first appearance of the horse in Western America. Of course that animal came over with the early Spaniards. Mr. Wissler states that many of Coronado's horses escaped around 1540 while he was making his great expeditions; also that De Soto's followers abandoned their horses when they took to boats and ascended the Mississippi River in 1541. Cortez brought horses to Mexico twenty years before any came into what is now the United States. The first French horse came over in 1647, the first English horses reached New England in 1629. In Virginia wild horses were rather a nuisance in 1669. When La Salle went down the Mississippi in 1681 he met Indians riding horses where St. Louis was going to be. By that time, the author thinks, all the tribes south of the lower Missouri River had become horse Indians. The Hudson Bay Company, in 1754, around what is now Edmonton, Alberta, met Blackfeet who were well supplied with horses. It is difficult to think of a Western Indian otherwise than as a mounted man.

Do Animals Reason?

MY OLD-TIMER up in Alaska, prospecting, also makes me happy once in a while with some first-hand natural history. He says: "I have seen an article about animals, say, dogs and bears, having reasoning power. That is nothing new to me, for I have had plenty of time to study dogs, and if they can't reason they ought to be killed, for they are worthless. I have two sledge dogs, half wolf, and it is wonderful what they will do. I have seen my leader locate a trail with six feet of snow drifted over it, and do many other things that would make an ordinary man guess. I have traveled twenty-eight hundred miles over my trap lines in the past winter, and have never seen them pass a trap or a snare yet. They always know where the next set is—and find it, although it would be lost if they would go a few feet farther down the trail. As to bears, they will find the weakest place in the cache quicker than a man would—they always find the easiest place to break in. I find it also very interesting to watch my foxes."

After a day of Work or Play

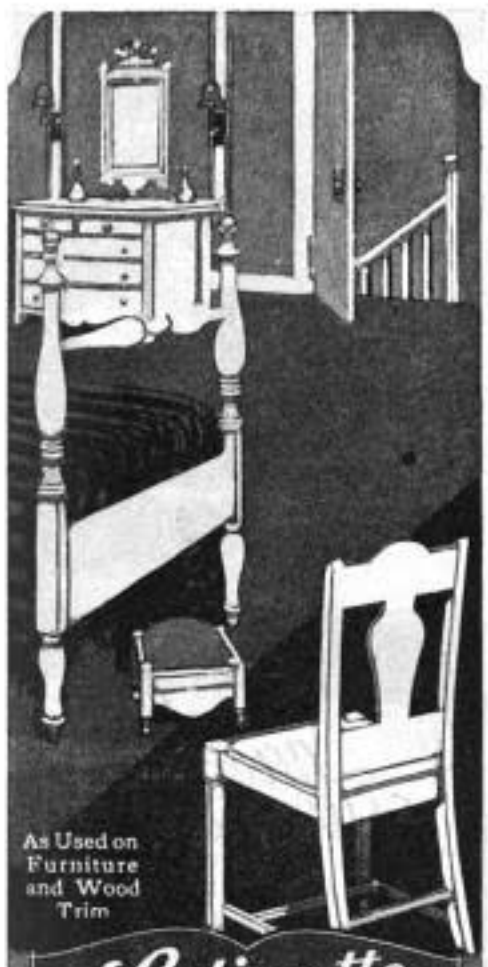
Your tired, irritated skin needs invigorating—toning up—to offset the ill effects of the wind and grime to which it has been subjected.

Give it a refreshing treatment with warm water and Resinol Soap. This relieves the pores of their accumulated dust and oil,—permitting them to function properly. It generally removes excess oil and reduces the unsightliness of facial blemishes.

Now watch the tired lines disappear and the gray pallor give place to a healthy glow. Once more you are ready for the evening with a complexion that is radiant and charming.

You make no mistake when you select Resinol Soap for daily use. It is—

Ideal for the hair
Unexcelled for the bath
Incomparable for the nursery



At all drug and toilet goods counters.

Send for free trial size cake, Dept. 7-E, Resinol, Baltimore, Md.

Resinol Soap

Satinette ENAMEL

Everything Enamel Should Be

FOR the lasting beauty of your woodwork, furniture, stucco, plaster, metal, stone or cement, be sure it is enameled with SATINETTE—the Immaculate Finish of Distinction.

Age only mellows SATINETTE—frequent washings cannot mar it. Because its surface is hard, smooth, and free from dust-collecting irregularities, its sanitary features recommend it for use in hospitals, laboratories, dairies, kitchens, pantries, etc. Its beauty makes it the one choice for home and public interiors of distinction.

Architects endorse SATINETTE. —Your painter will be glad to use it. Get it from your hardware or paint dealer. It will be a pleasure to send the SATINETTE pamphlet with full information.

STANDARD VARNISH WORKS
90 West Street New York City
55 Stevenson Street, San Francisco, Cal.
506 Oakland Ave., S.W., Grand Rapids, Mich.
Foreign Branches: London, Paris, Melbourne

Manufacturers of world-accepted standards in *Varnishes Enamels and Allied Specialties*

Elastica Varnishes
For every architectural and household purpose.

Kwickwork Auto Enamel
Can be applied one day and the car used the next.

Koverfloor
The liquid floor covering you lay with a brush.

TROUPIN' WITH THE TENTS

(Continued from Page 21)

weather comes along and on the week you will run perhaps two or three thousand dollars behind, and when the season closes like as not the owner finds himself facing a deficit instead of a profit. Really good showmanship consists of hooking up your show so that the intake will consistently offset the expense.

Of course this does not take into consideration a fire or a wreck or a blow-down. A blow-down means new canvas, which taken all around will cost a show of this kind $3500 or more. It is not infrequent that a sleeper may get on fire and burn up, the replacing of which, provided the running gear is left in good shape, will cost anywhere from $2500 to $4000; or there may be a wreck on the road, when perhaps three or four cars, or for that matter nearly the whole show train, may have to be rehabilitated.

The expense of this falls almost invariably upon the pocketbook of the showman, because railroads in their contracts very explicitly covenant that they will not be responsible for any mishap to the train from any cause while it is on the rails of their division.

A Menagerie at Large

In the years gone by, of course, circus owners have brought suits against the roads for various torts and breaches of contract. Very few were successful in holding a verdict in their favor after it has been passed upon by the higher courts.

"I'm lookin' for a big day's business tomorra," interjected the ticket taker. "You can't tell nothin' about a tank like this unless that you are bound to be surprised either one way or the other. Of course I rather we was playin' closer to Broadway, because hikin' over these hills sure does put the wagons on the toboggan."

"One time," reminisced Sleepy Stevens, "I joined out with a show in the fall of the year, and as it was goin' to winter in California I stuck along after closin' day because they wanted a guy which would be handy junin' up the show train when we was layin' off.

"Along about the end of this season the equipment was pretty well shot to pieces and I says to the boss that he had better lay off a few days and let me look over the cages, 'because,' sez I, 'some of it was put together with carpet tacks, and,' sez I, 'if anybody throws a kiss at it it'll melt away like a snowball in July,' sez I.

"'That'll be all right, Sleepy,' sez he. 'Don't you worry none. You ain't one of them calamity *hombres*, is you?' sez he.

"'Not exactly,' sez I, 'but ——'

"'But nothin',' breaks in the boss. 'Lemme tell you somethin', Sleepy: we have had pessimists an' hard-luck-story tellers an' sob artists and distributors of the old doleful dope since time began, but there was only one of 'em ever got his moniker on the roster of the big league. His name was Jeremiah,' sez he, 'an' I guess they figured one of him was enough, because in all that time from Demosthenes to Jack Dempsey he has held the undisputed championship for gloom, and his record for the calamity stakes over a distance of ground has never been approached, much less beaten.'

"'Well, it's up to you,' sez I. 'It's your show an' it won't worry me if you has to pass a dividend,' sez I."

"At that, I bet you landed in winter quarters all right," interjected the acrobat. "I mind the time I was with the Kassack outfit. You would have took your oath we couldn't get to the next town, because we didn't have a car that wasn't sagged down in the middle, an' no self-respectin' junk dealer would have made a bid for the runnin' gear. But we went through the season without a bobble, an' when the band played Home, Sweet Home the old man sold the whole blame train to a movin'-picture outfit which wanted to stage a honest-to-goodness realistic railroad wreck."

"They staged it all right, I betcha," volunteered Sleepy.

"That's what they did," confirmed the acrobat. "I slipped down to see that event myself. I was always anxious to know what would have happened if another train was to hit us when we were on the road."

"Well, you found out?"

"And then some," said the acrobat. "This sensation were staged in Arizona. It was fixed so as two trains would meet head on. Half of our cars was hooked on to one engine and half to the other. They give 'em a start of about half a mile and then the engineers jumped off. Some of the folks thought they would be safe if they stood off a couple of hundred yards from the scene of the collision, but old Shorty knowed better. I took up a position fully a mile away as the crow flies, but even then an old mattress out of the sleepers hit me in the solar plexis an' I took the count. The rest of 'em had a considerable baptism of old junk. The he-doll which was the hero of this movie outfit ain't never been the same since. They picked up parts of that show train as far west as San Burdoo."

"How did you get along with your train, Sleepy?" interrogated the boss canvasman.

"Oh, we run all right till we got goin' through the tunnels in the Cascades," responded Mr. Stevens, "then we telescoped the back end of a freight train which was stalled. It were just as I said it would be."

"Yep?"

"Yessir; the flats with the cages on 'em doubled up like a jackknife, an' while you could clap your hands the mountains was full of nothin' but strange beasts of jungle and plain. Tigers, leopards, lions, monks and everything on the show got loose except Bon the Baby Hip. No railroad wreck ever happened could jar that bird into action.

"Luckily enough, nobody back in the sleepers got hurt, so we all got busy tryin' to round up the menagerie. If it wasn't that we had a cowboy outfit with us, which was headin' for California for the Big Rodeo day at Los Angeles, we would be lookin' for 'em yet. But they got busy with their ropes and secured most of the big cats, which wasn't such a hard job as you may think, because the snow was three or four feet deep and most of 'em anchored their own selves. Finally they was all rounded up, but when we counted noses we found that Grover Cleveland, the swellest Bengal tiger which was ever in captivity, was still missin'. And the old man sent us all back to rout him out of the brush. I didn't hunger for a job of this kind, but I went along. I knowed from experience that when it comes to big cats you don't want to monkey with no tigers. If I had of met up with that bird I was a-goin' to sidestep him an' politely wish him well, so when I got out of sight of the cars I just picked me a nice spot an' lay down in the snow. I figured I would let the others do the sloppy sleddin'."

Scaring Off a Tiger

"Well, Sleepy, you was playin' safe anyway—I will give you credit for that."

"I just thought I was," responded Mr. Stevens, "but I was only kiddin' myself. I was like a guy that would start for the North Pole with a straw hat an' a Palm Beach outfit. I was layin' there listenin' to 'em rough riders hollerin' and yellin', when I hears a low growl a few yards to one side of me in the brush.

"'Holy Saint Dog!' sez I. 'I'm cast for the leadin' part in Daniel in the Den of Lions, an' I always knowed the reporter which went out on that yarn got soused before he reached the scene of operations.'"

"You beat it, I suppose," laughed the acrobat. "I'll bet, Sleepy, you was a race track full of speed."

"I couldn't have run if I wanted to," confessed Mr. Stevens. "As it was, I was cold enough outside layin' in that snow, but I am a liar if I didn't freeze inside too. I went out of the hero business right there. Every time them cowboys would yelp old Grover would growl an' I could tell by the sound that he was comin' closer and closer to me. I was like a ostrich, I buried my head in the snow an' waited. I lived a thousand years an' then some. Finally I couldn't stand it no longer, so I poked my head up. You would never guess, neither, what I did see, because that tiger was about two feet away from me lookin' me right in the eye. There was a woman oncet out Chicago way which won a prize at the butchers' picnic for bein' able to shout louder than any skirt on the grounds. I don't want to boast, but I made her sound like a undertaker arrangin' the pallbearers at a swell funeral.

"I let a yelp out of me which all the boys claimed afterwards could hev been heard by the President in the White House; an', say, do you know, I am the only man w went up agin a man-eatin' tiger wit other weapon but his voice, and he b down that hill through the deep snow as if I had been armed with a machin loaded with barbed wire an' pavin' st Yes, sir-ree, they can talk about conqu big cats with the human eye, but gi the voice. Ast any married man if I right."

"This here talk about Willard wa another chance at Dempsey jars me," h in the clown, who was billed in big bl faced type as the Boy Jester from O homa—the funniest fellow alive! He regarded in the dressing tent as a p authority on sports and pastimes. "E They don't never come back."

"Oh, I dunno. I've seen 'em do a re engagement," vouchsafed the boss can man quietly. "There ain't nothin' run rule except what you see on the blackbo in the little red schoolhouse."

"Say, pop, I never seen you yet that didn't get on the yon side of a argumen protested Oklahoma. "You think they eh? Well, now, for instance, who did ever see come back? And I gamble y know all the riders an' kinkers of y time. Just gimme one specific case and throw my hand into the discard."

"I seen somethin' which you and other Joey will ever see," returned the cient one solemnly. "I was on the lot t night that Jimmy Vokes come back."

"Jimmy Vokes—who was he? I ne heard of him."

"No," muttered the old man; "I exp you didn't. There ain't over half a doz men in the business to-day which ev heard of Jimmy Vokes, but just the sa he did what you call a comeback, and if y was to live a thousand years you'd nev see one like it in no man's country."

A Real Trouper

The veteran ceased speaking and rose his feet. "Well," said he, "I guess I'll on over and hit the hay."

"Aw, don't go yet, pop!" chorused th crowd. "Tell us about this here Jimm Vokes. Don't pay any attention to Okl homa."

"What'll be the use?" quavered the an cient one. "None of youse knowed him I don't suppose any of youse was bor when Jimmy was the star equestrian of th Jobson Show."

"Old Guv'nor Jobson that just died?

"Naw—it were his father, the origina William Jobson. I joined out with him. This latter statement was made with a little pride.

"Well, well. But go on, pop, spin th yarn. What's the use of bein' a grouch?"

The oracle resumed his seat in the littl circle and lit his pipe, puffing thoughtfully for a few moments before taking up his parable. He was evidently rehearsing in his mind what he was going to say.

"I don't want to criticize anyone," he began slowly, "but when you come to talk about riders, Jimmy Vokes started when they all left off. Day in, day out, he could outride anyone I ever seen. He had everything, as you might say; and what's more he could do three somersaults in the leaps."

"There ain't nobody done the leaps for twenty years," interrupted the star of the Shortall Troupe.

"That's what they ain't," returned the old man, "but you can bet that on the old Jobson show everybody was billed for the big act. Clowns, acrobats and equestrians—it didn't make no difference. The boss used to say that he didn't carry no tourists, which perhaps is the reason that we don't have 'em nowadays. They was the most popular act the circus ever had."

"They're too blamed dangerous," broke in the clown, who in his professional capacity impersonated a rube policeman. "Who wants to get his leg or his back broke just to show that he kin turn a twister over four elephants an' half a dozen baggage horses? There ain't nothin' in that."

"No, that's what they all say," agreed the canvasman. "That's what's the matter with every business nowadays; they're all specialists. A show has to carry so many people that it's mighty few of them don't eat a hole in the old man's bank roll. But Jimmy Vokes wasn't one of that kind; he were a real trouper."

As all fine motor cars should, the Peerless bears within itself the elements that go to make a good investment.

The power and speed of a wonderful eight-cylinder engine, a high degree of economy, luxurious comfort—all are brought into proper relation and balance.

But greater than all the rest—contributing even more effectively to lasting satisfaction—are the quality and the staunchness that belong so particularly to the Peerless.

It is these that enable the Peerless to render such continuous service to its owners; to free them so completely from unexpected interruptions and delays.

It is on only the continuity and length of service that the returns of any motor car investment can safely be reckoned.

It is on that basis that the Peerless demonstrates, over a period of years, its good value to its owners.

In the judgment of Mr. Collins and his associates, the Peerless value, in the present market, is so pronounced that it will repay the most rigid examination and the closest comparison discriminating buyers care to make.

THEODORE F. MacMANUS

Seven Passenger Touring Car, $2790; Four Passenger Roadster, $2790; Four Passenger Coupé, $3500; Five Passenger Sedan, $3650; Seven Passenger Sedan, $3790, Seven Passenger Sedan-Limousine, $4060; F. O. B. Cleveland

The Peerless Motor Car Company has been acquired and is being operated by R. H. Collins and his associates

8900 miles on this

Las-Stik TUBE PATCH

—Patched tube Still going strong

The patch was applied to a *blowout* in about two minutes' time. After traveling 8900 miles it could not be torn off with a pair of pliers. The tube tore first; this tear was patched, and the tube is back in service.

Protect yourself today with a Las-Stik outfit. You can mend a 17 inch blowout or dozens of small punctures. No gasoline required, no vulcanizing, no tools.

Las-Stik is the only pure white (pure gum) guaranteed patch with the trade-mark stamped on every inch. Extra quality, air-tight Holland backing protects the uncured sticky side, keeping the patch sticky, elastic and fresh three years. It lasts as long as the tube when applied.

DEALERS: Write on your letterhead for sample can and send your jobber's name. Put the below pictured display on your counter and tie up with, and cash in on, this advertising.

JOBBERS: Las-Stik being pure rubber does not deteriorate in three years. Consequently it makes good for consumer, dealer and you. Our sales policy protects you. Write.

Las-Stik Patch Mfg. Co., Hamilton, Ohio

Complete outfits, 50 cent and $1.00 sizes

Look for this display on your dealer's counter

(Continued from Page 34)

The old man again relapsed into silence. The crowd seemed to sense that it would not do to question him further. They would give him his own time and the story would come of itself.

"As I said, Vokes was a real rider," he resumed after a lengthy pause. "But he had one failin'—that was licker. Jimmy drank like he did everything else, just as hard as he could; sometimes he would lay off of it a month or so, but then he would break out again. The remarkable thing about it was, it didn't appear to hurt his ridin' none. I have seen him fill an ordinary glass with whisky and drink it off like you would water; then he'd get up and ride just as good as ever.

"Sometimes he would go on a prolonged bat and wander off somewheres, but the folks around the show didn't worry—they knowed he'd blow back at the next stand. But one time Jimmy went and he didn't come back. After a few days the guv'nor got real worried and he sent one of the twenty-four-hour men to try to dig him up, but he had disappeared as if the earth had swallowed him."

Jimmy Vokes Comes Back

"Weeks and months went by, and still no word of Jimmy Vokes. We had made up our minds we would never see him again, and was just about to close the season in Texas when one night at the evenin' performance and just as the principal act had finished, the worst-lookin' tramp you ever seen in your life come through the entrance, made a bolt for the center ring and did a flyin' leap on to gray Jenny's back, which was the mare Jimmy always used for his finish.

"Most of the show folks thought it was a new act the old man had signed up, because in those days there wasn't many rube riders an' whenever anything new come out you could bet old man Jobson was among the first to grab it. Well, this tramp started to do a hurricane ride. I have seen 'em all, but this feller did forwards an' backs an' rode a horse every way a human bein' could ride him, from his head to his tail. The crowd went wild; they had never seen anything like that before; but while they was applaudin' an' yellin' their heads off the tramp rider disappeared. You might of thought we would have knowed him first off, but we didn't because he had two weeks' growth of beard on his face.

"As I say, he went out through the back door, and from that day to this we have never seen or heard of him. We knowed it was Jimmy, though, because someone picked up a battered old black hat beside the ring, and his name was punched in the leather sweatband."

The old canvasman finished and for a moment or two the little gathering was lost in thought. Could it be that they were following along a mental back trail and journeying with the prodigal?

In more sophisticated circles it might have been called a silent tribute, but the people of the circus have no particular name for an expression of profound sympathy. It is possible to have a human heart even if one lacks the attributes of a conventional soul; the circus always understands, and they interpreted the story of Jimmy Vokes.

"Playin' Texas was no joke those times, eh, pop?"

The old man nodded. "We used to call it a foreign country," he exclaimed. "When we got over the border an' wanted to write back we used to date our letters 'United States of America.' Everybody toted a gun, an' shootin' scrapes were as common as movin'-picture theaters nowadays. I can remember our ticket wagon was loaded with firearms and boxes of ammunition. All the protection we got was what we could give ourselves. I won't say as we was lily white, either, because we carried an outfit of gamblers with the show. The authorities knew that. Nine out of every ten of 'em was paid for protection. Sometimes they gave it to us, sometimes they didn't, but they all held us up.

"I mind one time some towner went up against the shells in the connection and lost a couple of hundred dollars while you are battin' an eye. I was behind him when he reached for his gun, an' I grabbed him around both arms so as he couldn't use it. Then the town marshal come along and took him away to the calaboose. I needn't tell you we had paid that marshal for protection.

"Well, we thought there was nothin' more to it, but later in the evenin' it appears they turned this towner loose an' he went and got his gang. After fillin' them with red licker they started back for the lot. In them days, I must tell you, when a resident of Texas went after you with a gun he didn't waste no time argufyin'. The first thing we knowed, this *hombre* an' his pals opened fire on the menagerie, just the same as if they was regular troops suppressin' a riot.

"The old man was in the menagerie when the shootin' started.

"'Get the guns! Hustle to the wagon an' get the guns!' he shouted. An' believe me, they did. I was one of the canvas crew then. When the fight got fairly started he hollered at me to start tearin' down."

Pulling Out Under Fire

"We struck that canvas, big top, menagerie, horse and cook tent, an' all while the battle was goin' on. Bullets was flyin' in all directions, but the old man never stopped a minute. I guess no circus before or since was loaded on the cars quicker than ours. Then the high sign was given the boys an' we climbed aboard. The engineer pulled out, hell bent for election. He didn't stop neither until we got over the line at Texarkana. If you think it wasn't a real battle I'll tell you for your information that we was nine men short when we called the roll, an' I heard on good authority afterwards that seventeen Texans had croaked with their boots on.

"We never went back to Texas while the old man was alive, although no charge was ever brought against him, because everybody knew that the Texans started it, and so far as we was concerned we was only defendin' ourselves. Yep, that's thirty-nine years ago, an' Texas don't look or the same place as when I was a boy

"What was the funniest thing y seen on a show, Oklahoma?" inqui boss of the side show.

"Oh, I dunno," returned the clo have seen so many funny stunts t hard to give one of 'em a name, but one time I was with a wagon show the hick towns of York State. A fell along one day an' wanted to join o clown; if you listened to him he co everything, from singin' to produ the boss signed him up—four dollars and cakes. Figurin', of course, tha couldn't clown he could drive stake

"This feller was a sure rube an' him his first tryout in the concert. I a song he wrote himself and he w just as he was, blue overalls and breakfast hat. All the props he had wisp of hay which he held tucked un arm. He sang somethin' that ran lik

"I went to town the other day
To get some books and toys,
For dad and mammy think I a
The finest of their boys.

"At the end of every two lines he do a breakdown. Everybody on the come in to see him perform, and h handed them a laugh. Billy Cross wa us then and it was too good an opport for him to lose.

"He stole up behind the rube wh was right in the middle of this song a the bunch of hay on fire. Well, you the rest. Talk about tyin' a can to a tail! This guy lit out of the tent li had been shot out of a gun, and tha the last we saw of him."

Sleepy Goes His Way

Away up the railroad track a fr train whistled. It was one of those low hoots that echo and reverberate a the little valley. Sleepy Stevens rose shook himself.

"Thar she comes, an' she's headin' w he ejaculated. "I guess I'll be on my folks."

"Why, we thought you wasn't goi start till to-morrow, Sleepy," voiced side-show boss.

"Well," returned Mr. Stevens, "I aim to ride the cushions, but conside the weather I calculate I'd be more c fortable in a furniture Pullman with side doors open. Guess I'll pull out. long, folks. Good-by."

He turned to go, pushing his battered down over his eyes.

"Good-by, Sleepy, old boy. Good luc echoed the crowd as the slim figure dis peared in the dusk.

Later we noted the same form silhouet against the sky away up on the ridge alo which the railroad ran. A long arm sh heavenward in parting salute, and a m low voice came down to us: "Good-b everybody! Good luck!"

And then as the cars rattled past we s a lithe figure lurch toward them and d appear.

"Old Sleepy made her on the run," com mented the clown. "Good old Sleepy!"

A Non-skid Tread that LASTS

THE Lightning Streak tread of the Carlisle Tire LASTS because it is *inset*. It can*not* wear *off*. Carlisle Tires will not leave you without protection after 4,000 miles.

CARLISLE Tires *keep* COOL and the rubber of the treads is not aged by *internal* heat. These tough, *live* treads grip wet, slippery pavements until the tread is worn right down to the *rope* carcass.

THE depth of the *in*set tread design is practical because with Carlisle patents the tread and body are *actually* vulcanized into one piece of rubber.

THE *in*set tread design gives smooth contact with the road. For this reason Carlisle tires steer as easily as smooth treads and can be used on front as well as rear wheels.

A MAXIMUM efficiency is obtained by interchanging your front and rear tires after the first seven thousand miles.

THE smooth road contact and the remarkable resiliency of Carlisle Tires give unusual easy-riding qualities, easy steering, reduced road friction, and more miles per gallon of gasoline.

THE *in*set, non-skid Lightning Streak tread design is but one of the seven fundamental and basic features in tire construction, resulting from Carlisle patents, that make—

slip too low on the south end and too high on the north."

"Yeh? What would you do about it?"

"Tilt the cross heading," said Charles Frederic listlessly.

"Well," snapped J. C., "have I got to see to every little thing? Why didn't you tell Lon Dickey to tilt it then?"

"All right," said Charles Frederic. "I'll tell him."

The girl, Pat, you will understand, was at this time practically nothing in his life. It was mere habit that made him lie awake that night, remembering how her eyes used to crinkle with comradely laughter, pursuing the fragrance of jasmine where no jasmine was.

When he climbed into the saddle he was thinking "Oh, what's the use?" and the weariness of weeks was on him; but he rode to Camp Four and told Lon Dickey to tilt the cross heading.

"Who says so?" demanded Dickey, speaking plainly.

"I do," said Charles Frederic.

"Yeh?" said Dickey, speaking yet more plainly. "Since when do I take orders from you?"

It was too much trouble to explain.

"If you feel like arguing the question," said Charles Frederic, fixing Mr. Dickey with a blurred and poisonous eye, "you might begin right now. You heard what I said?"

Dickey glared. But he did not find the glaring pleasant; plainly this fellow Gray was in no reasonable frame of mind.

Dickey muttered, "I hear you," which was not much to admit.

"All right," said Charles Frederic. "I'll be back before it's ready to shoot. I want to see it."

That, of course, was where his brief delusion of authority began. The camp foremen did not, to be sure, bring on the summer rains, but they indulged every other perversity they could think of. The telephone line was down, and Charles Frederic began to feel like a cat climbing a slate roof. He came to Eleven and found that a slide had carried three stations of side-hill cut-and-fill and five mule carts into the Rio Verde; saw the swollen green flood gnawing merrily at the remnants of the fill, while no man toiled.

"Get your men out there and save the rest of that fill!" he raged at Oscar. "Are you crazy?"

Oscar was not crazy; he was merely drunk.

"Rain," he explained. "Tak' a trink, you tam spotter, and mebbe you feel better!"

No, it was Charles Frederic who was crazy. He took the bottle from Oscar's trusting fingers and hurled it whistling and gurgling through the door into the river. And while Oscar stuttered reproachfully he caught up a rope from the floor and basely assaulted Oscar and bound him to his bunk and set two of Oscar's own men to guard him. That was on Saturday.

Through the night, with torches that hissed in the stinging rain, he stood over a gang of drillers who sank holes in a ledge of rock high above the crumbling grade. On Sunday they shot the holes and rolled the rock down and blocked the gnawing of the river. On Monday he released Oscar. Oscar, weeping, promised faithfully to slay him, Charles Frederic, as soon as he, Oscar, felt better; but Charles Frederic paid little attention. He could not remember a time when everybody had not hated him. He would go and see if Lon Dickey had properly tilted that cross heading, and then he would sleep.

The six-foot burrow of the tunnel was driven deep under the point of an overhanging hill, the chambers of the cross heading forming a T. From afar he saw men already trotting up the hill, bearing kegs of powder. He pushed into the black hole and found the cross heading quite, quite horizontal.

"Take that powder out!" he commanded briefly. "Take it back to the powder house."

Lon Dickey, seeing the line reversed, appeared.

"You giving orders to my men now?"

"You're fired!" said Charles Frederic. He had given many orders already; one more made little difference. "And if you think you're not fired," he added, "try giving just one more order in this camp. Try it—and let me hear you!"

The men halted, watching them—the Señor Dickey very red, the other, the young *jefe* who came horseback, muddy and white-lipped, glaring from bleared and sunken eyes.

"I'll see the old man about this," said Dickey.

"Right!" said Charles Frederic.

Three days he remained unmolested, in full majesty of command. The cross heading was finished and loaded; with his own hand he jerked the battery that sent a two-hundred-foot tongue of smoke and flame belching across the valley; he saw the point of the hill lift and disintegrate and go roaring down, climbed the still smoking grade and saw that the slip had properly occurred. Then, being very weary, he tossed all night in his unlawful bunk and rode indifferently to his reckoning.

The camps he passed were idle—all idle. Was it Sunday already? No, it was only Wednesday or Thursday. A strike? He abandoned the effort of thinking. He was tired, burned out with vengeful and destructive emotions.

In the office J. C. Bailey, a fat figure of retribution, rose grimly behind his desk.

"Oh," said Charles Frederic, "you not gone yet?"

"Really," said J. C., "I don't know why I stayed. You don't need me hanging around, do you? Running the work all on your own, I hear. Hiring and firing and every little thing."

"I've quit," said Charles Frederic.

"You said it just in time," said J. C. Bailey.

VI

IT IS not a festival for Ishmaelites, that Glorious Fourth. Americans, employed and unemployed, were forgathered in Tequila, and in bass and tenor and barytone the eagle screamed; but one American was missing. Still, there was Oscar the Swede; there was Joe Ribera, who had once lived a whole year in California; and if these did not count for half an American apiece, for good measure there was the Señor Don August Hermann, proprietor of the Red Rose, who, though born beyond the Rhine, professed on this day great reverence for the Stars and Stripes. So you might say the Americans were all there.

On a balcony above the Red Rose the Señora and Señoritas Hermann listened with interest to the sounds of revelry by day. They were not born beyond the Rhine; they were born this side the Rio Verde, and they pronounced their name 'Errman; but they had a tolerant eye for these stalwart if uncivilized gringos who brought the railroad and prosperity to Tequila, and the jingle of the family till was music in any tongue.

Yes, there was noise in the Red Rose, chiefly vocal; but throats tire. Through the door erupted little Andy Burch and Long Henry Hines, brandishing, with innocent and festive intent, large blue revolvers. If a heedless architect had placed a balcony between them and the open heavens, why, that was not their fault, was it?

Pow—bang! Pow—bang! Pow! exploded the forty-five of Mr. Burch and the thirty-eight of Mr. Hines, to the glad accompaniment of bass roars and tenor yells. Hooray for those dear United States!

Plaster showered down upon them. With one contralto whoop and three soprano shrieks the ladies somersaulted backward and evacuated the balcony.

"Oh, my gosh, Hennery, we've killed a woman!" moaned Andy, clutching Mr. Hines.

But the floor was fortunately thick. While they leaped into the street to apologize for casualties Mrs. Hermann reappeared, three shades whiter than normal, but smiling, every daughter accounted for. Andy and Henry mopped their brows and repaired to the bar for restoratives. They were greatly shaken.

From his window in the *mesón*, two blocks away, Charles Frederic saw and grinned. He saw, too, how Henry's arm fell carelessly across Andy's shoulder as they disappeared; and then a frightful, shameful fact hit him amidships. He was twenty-six years old and he was crying.

He turned from the window lest some passer see him there, like a convict behind the bars, an outcast gazing into paradise. He had promised himself that he would sleep, but you can lie staring at a blank ceiling only so long. He had tried to read, but the superhuman feats of handsome heroes could not shut out the sounds of riotous good-fellowship that was open to everybody but Charles Frederic Gray. He paced the room to and fro, to and fro, grinding a bony fist into a bony palm.

At length, moving softly for some r he took up his hat and went out, pace measured strides down the street and p into the Red Rose. The noise perce abated. The crowd made way for hi he came to the bar, his hard eyes m nowhere a friendly glance, his cheek white.

"Hallo, Mr. Gray!" cried Herman fessionally cordial. "What for you?

"Anything. Have a drink, H Hines?"

"Ain't drinkin' just now, thanky," tered Andy, uncomfortable.

"We ain't broke yet," declared Henry. "Set 'em up again, Hermann me and Andy."

"Have a drink," said Charles Fre "I'm asking you just once *more*."

"Cordial cuss, ain't he?" confided H to the gathering at large.

But little Andy, seeing how the mouth of Charles Frederic jerked at corners, relented.

"I'll have a drink with you, Gray," he, and pushed over a glass and seiz bottle. "Say when, ol'-timer!"

Charles Frederic did not say when. dared not. He felt again that sham stinging in his throat, that unmanly ti ening of the diaphragm. He had armed against anything but kindness.

"Hey!" said Andy. "'Smatter now?

"What's it to you?" cried Charles F eric furiously. "Here's—here's how!"

He lifted the glass—and the tip of a liard cue slipped over his shoulder flipped it from his fingers.

"Yah, you tam spotter!" said the w of Oscar the Swede.

Charles Frederic turned. The men stood between them stepped hastily as Oscar himself was not reassured by t grim and hollow-eyed visage. Hastily swung the cue and struck. The light, sti ing tip fell harmlessly in Charles Freder hand.

He gripped it and jerked. Oscar, holdi the thick butt, sat back on his heels a pulled. Charles Frederic felt the tip sl ping and pushed, pushed hard, so that wi the sudden drive of a sinewy shoulder a the force of Oscar's own pull the bu rammed into his Swedish midriff. Osc grunted once and toppled backward und a billiard table and knew not what pass thereafter.

Charles Frederic himself knew h vaguely. He saw a short, broad-blade knife appear as by magic in a swarthy hand He struck at it with the cue and heard Jo Ribera's fervent voice somewhere. Anoche hand snatched the cue from him and hi own fist smacked heartily into the face tha belonged to the hand. A heavy body wa upon him. He flung it off and drove at t broad vest of Sunday black, Hub Frank lin's. After that was the storm, a storm o shadowy arms and shifting bodies and faces that bobbed up and vanished. His head rocked. He was suddenly happy—heaving, smashing, stamping, not scorning even to kick whatever shin presented itself.

Absurdly he was shouting, "I'll go easy!"

He laughed aloud at the exquisite humor of that phrase.

"Step up, gentlemen! I'll go easy! First come—ugh!—first served!" He trod on a leg that squirmed and pitched him about, nose to nose with little Andy. "Hi, Andy! What say? Le's go easy!"

He did not know how Andy's brain was reeling from a half somersault inflicted by himself, Charles Frederic. But Andy knew. Andy set himself and swung earnestly upon Charles Frederic's jaw.

When the fog lifted, the scene had changed. There was a street, with cobble-stones and everything. Everybody in the world, thought Charles Frederic, was bruised and sore. A million arms and legs ached; a million brains throbbed and a million men were sick. He rose and groaned and sat down again.

People went incuriously by him. They knew that this was the *fiesta* of American independence and they were familiar with the effect of strong waters. Ponderous heels rounded the corner; J. C. Bailey, summoned by a forbearing police to quell the riot, gazed on the wreck of Charles Frederic and snorted.

"H'mf! So you're the guy that was tearin' down the house and throwin' it out-doors!"

"I think," said Charles Frederic thickly, "they threw me out."

J. C. Bailey pushed in through the swinging doors. He saw what he saw, and limply

Oakland

An open letter to the Ten Million Automobile Owners

OAKLAND MOTOR CAR COMPANY
PONTIAC, MICHIGAN

Oakland

An Open Letter to the
Ten Million Automobile Owners!

As an owner of an automobile you are interested in the progress of the industry — for your motor car is one of your prized possessions.

You depend on it a great deal. It carries you, your family and your friends. In your business, you find it one of your most valuable assistants. For recreation, it brings the country to you, the brook, the lake, the sports field or the woods -- your car brings all out doors to you.

Why wouldn't you be interested in automobiles in general!

You are. And because you are, we are going to tell you about a new automobile, a dependable motor car, well balanced as to looks and performance, power, style and comfort.

This model establishes a new standard of motor car value in mechanical superiority, in beauty of body design, in completeness of equipment and in economical operation.

We are calling this New Oakland, Model 6-44 and we have had it under preparation for a long time. It is finished and in production.

It is an overhead-valve six-cylinder automobile - which is admitted to be the ideal power plant. And you are going to be interested in everything we say, for we know that as an automobile owner you are familiar with automobiles and want to know all about new designs and models.

This new Oakland motor develops forty-four horse power - in operation it is smooth, and it should be, for we have built this power plant with painstaking care, from the very beginning. The cylinder walls are "honed" to glass like smoothness and fitted with oil-sealing piston rings of exclusive design. The camshaft is driven by an adjustable Morse Chain which is silent and positive in action. Bronze-backed bearings are used - a type used on the highest priced cars. We guarantee the motor for 15,000 miles against excessive oil in the combustion chamber. And this motor is

- 2 -

economical. 18 to 25 miles per gallon of gasoline is not an uncommon thing.

We stand back of this new car. We know the design, the material selected and the construction. And we are sure of the day-in-and-day-out service of this whole chassis. It will render good service.

The owner wants a dependable chassis, and it is without doubt the most important item in the selection of a car, but beauty is almost of equal importance and we have provided this chassis with a variety of body designs - Touring Car, Roadster, Coupe, Sedan and a Sport Car.

A body style for every requirement! And each design a credit to the builder. The lines are pleasing - symmetrical, and the body is well made, in our shops, of metal on wood, properly insulated. The upholstering will please you, even to the angle of the cushions - and we have been equally careful with every detail associated with a fine, strongly built, body. Many, many coats of paint have been put on to stay. And the finished body, its appearance, and general characteristics remind you of the most exquisite coach work.

Other features include Drum-type adjustable headlights; new high nickeled radiator; Walnut instrument board with silver-faced glass-covered instruments and genuine leather upholstery in all open models.

The closed body equipment includes Plate glass windows, Rear view mirror, Perfection heater, Gabriel snubbers, Walnut steering wheel, Visor, Windshield cleaner, and Dome light.

The chassis features include 115 inch wheelbase, 6 1/2 inch frame, 32 x 4 non-skid Cord tires, Alemite lubrication, Hotchkiss drive and Brake equalizers.

Quite an automobile, you will admit. We think so well of it that we believe the ten million motor car owners of this country should know about it.

The price! - we almost forgot to tell you, we have been so busy reciting the quality, - but the Touring car lists $1145.00, Roadster $1120.00, Sport Car $1265.00, Coupe $1685.00 and Sedan $1785.00, at the factory.

Yours very truly,
Oakland Motor Car Company

"The Sunshine of the Night"

(Continued from Page 40)

he leaned against what was behind him. The doors yielded and he danced backward across the sidewalk.

"Gray!" he gurgled. "Gray, if you love me—did you use an ax?"

But nobody was there. J. C. charged in again, and the ladies Hermann, trembling on their balcony, heard a sound very strange to follow upon slaughter. They scurried to the stairs and saw men whose discolored and rapidly closing eyes gazed upon neighbors under whose noses red handannas dripped yet more red; men with puffed lips who howled at men who caressed their own midsections and grinned, albeit feebly; a fat man in the last stages of apoplexy who gazed from festive raiment torn to gore imperfectly removed and whooped and gasped for breath—men who, with every visible cause for sorrow, laughed.

It is well known that all Americans are crazy.

That sound, filtering down the street, distracted Charles Frederic from the intricate business of navigating a sidewalk that was only ten feet wide, so that a building bulged treacherously at him and thrust him sprawling into the street. He clambered back. The street was wider, but on the sidewalk there were window bars to cling to when the earthquakes came.

Let them laugh. He was going away—away.

Marvelous, though, how the scent of jasmine soothed the rocking and weaving of the street. He closed his eyes and breathed deeply, anchored to the security of window bars. A hand clutched his arm.

"Leggo," he mumbled. "I'm all right. Lie down a minute, that's all. Sleep."

"No!" cried a voice. "Oh, please! Can you hold on a minute—just a minute? I'm coming!"

You could not fool Charles Frederic. She was not there. There was only a shady street, admirably steady because of the scent of jasmine; and a pock-marked man in cotton clothes, bareheaded, who issued from a door and came leaping at him. He did not care for pock-marked men in cotton clothes. He closed his eyes and at once he heard her voice again.

"Walk," it commanded.

He felt his legs moving woodenly under him. He passed into cool dimness and softness. The universe wheeled briefly; he opened his eyes and saw that pock-marked face suspended strangely against the ceiling. It was a villainous face.

"Pat," he mumbled in alarm, "where are you?"

"Here."

A hand touched his face and there was comfort.

"Don't go away. Just be there."

He heard the sound of water and winced under the shock of cold on his face. The pock-marked visage above him had now sprouted eyeglasses and whiskers; it made him dizzy to look at it; and horrible smells killed the fragrance of jasmine. Merciless fingers caught his wrist and a stab of pain shot up his arm. He wrenched it free.

"Pat!" he appealed, groping.

"No, no! Oh, you'll hurt your poor hands!"

He saw her then, and her lovely face was all twisted with weeping. In his dream he thought clearly that he mustn't alarm her.

"Don't cry," he said soothingly. "It won't hurt much."

She vanished; but he could hear her voice, crooning; and the fragrance of jasmine came to him again, and warmth and peace and comfort. Night fell very swiftly. He was murmuring, "You do! You do love me a little, even if you despise me, don't you?"

And dimly—in his dream—he heard her answer, "Oh, I do! I ought to be ashamed of myself, but I do, I do!"

He woke. Two queer white bundles lay across his chest. He moved a hand to investigate them, and they moved. They were his hands. His face felt stiff and strange. Ah!

At a little distance a shaded light glowed upon a pleasing scene—to wit, a girl sewing. Now he saw with shame how his heavy boots rested on a dainty coverlid. He swung them to the floor and sat up.

"Gee," he muttered, "you must have thought I was drunk!"

She was watching him, her hands poised. Her eyes looked big and solemn. She shook her head, ever so slight a movement of negation.

"I thought you were half killed," she said. "How—how do you feel?"

"Rotten!" he said happily, for it came to him that it was not a dream. It was Pat, Pat herself, and there was no glass between them now. He got to his feet, and she watched him as a mother watches a baby's steps. He laughed.

"You said you loved me," he cried. "Don't you remember, girl? You've got to remember!"

He stumbled on an unheeded hassock. She flew out of her chair and caught him, as a very small mother might catch a very large and unwieldy baby.

And he caught her as a man gathers up his heart's desire.

"Say you remember!" he implored, speaking fiercely into her hair. "Say it!"

"Of course I remember." Her voice was small and muffled. "But you can't really respect me—the way I just threw myself at you."

"Must have been while I was asleep. No fair! Do it again," he urged. "Woe is me, I wasn't looking the first time!"

"I mean—that night at the window. I just made you make love to me. I wanted you to, and you did; and then you—you said you mustn't. It served me right, but why did you?"

"Oh!" said Charles Frederic.

"You aren't—engaged to anybody else, are you?"

"No!" said Charles Frederic with violence.

"Then it's all right," she sighed, and lifted her face.

"Is it?" said the caustic voice of J. C. Bailey.

He sat in plain sight beyond the door, a green eye shade proclaiming that he toiled.

"It is!" affirmed Charles Frederic. hands, being in plaster casts, were cl but his arms were strong enough f practical purposes—that is, to hold daughter of J. C. Bailey. "Pat," he "I'm out of a job, but don't you care go and get one, a decent one this time then ——"

"Still running things your own w way," said J. C. Bailey. "Consult me in a while, why don't you? I reckon wouldn't consider a job as assistant su intendent?"

"This is no time to be funny," Charles Frederic coldly.

"I reckon," said J. C., "you don't k how funny you look then. But wh funny about that job? What did you t I was breaking you in for all this time?

"If you mean that," said Charles F eric, dizzy with all the wrongs that swarm back upon him, "you might have told You might have told me! Letting the think I was a spotter; letting me th I was no good!"

"How could I tell you," argued J. "when I didn't know it myself? You young, you got to admit that. How I know you could swing the job?"

"How do you know it now?" counte Charles Frederic harshly.

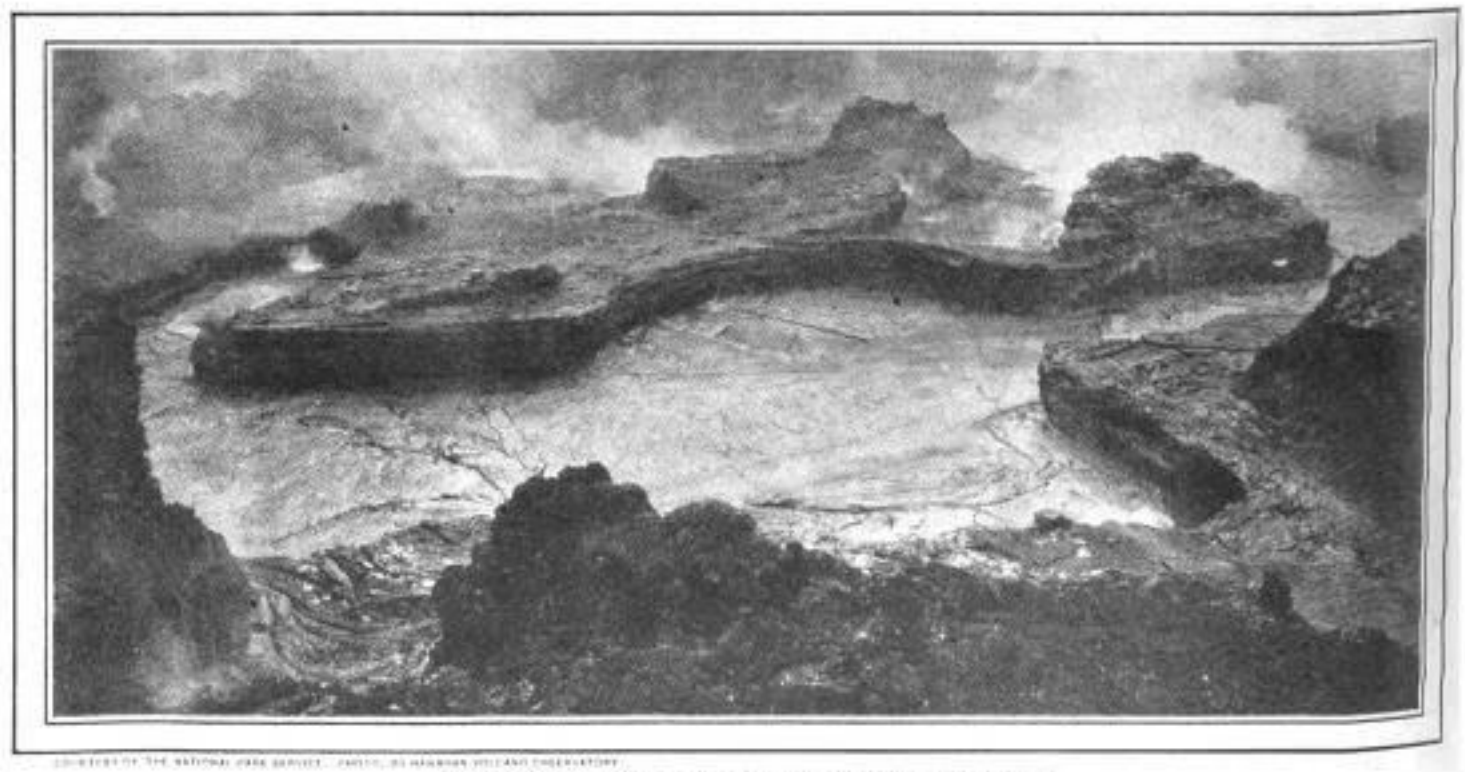
"Well, you did, didn't you? Just grabb it and swung it all on your own little hook

"And quit just in time to keep fr getting fired!"

"Well, I was mad. I admit that. B you know how I am, Charley; you ought to go off halfcocked that way. You g no call to get mad and quit every time bawl you out."

J. C. spoke plaintively. He pushed his eye shade and swung round in his cha and grinned.

"You'd 'a' died," he confided. "Ot from under a table crawls this—what's h name?—this Swede, and he starts yodelli about his troubles. And some more of 'e pipes up, all about how you come bulgi into their camps and makin' 'em sit up an beg and roll over and play dead.



"'Boys,' I says, 'I'm sorry for you, I am A young feller ain't got no right to act tha way, bluffin' a bunch of real leatherneck like they was children. Go on talkin', boys, I says; 'you're tellin' me right where t find the man I been lookin' for.' Well now, have I got to go back there and tel 'em you turned up your nose at the job?"

"I guess you'd better," said Charle Frederic heavily. "They won't stand for me. I got started wrong."

"You make me tired," said J. C. Bailey. "A fat lot you know about it! You got 'em eatin' out of your hand right now. Any hard-shell loves a scrapper; anybody knows that. All you got to do is go easy and use your head, and you'll get along as easy as shootin' fish. Just go easy, that's all."

Now for some reason Charles Frederic's battered face relaxed, and he grinned. He looked down at his bandaged hands, at the anxious, tender eyes of the girl at his shoulder; and his chest filled to the scent of battle and the fragrance of jasmine under the stars.

"Yes, sir," he said. "Quite so."

THIS Spring, drive an Oldsmobile Four. You will enjoy the feeling that comes with riding in the best looking, the best performing and the most economical 4-cylinder car made—regardless of price.

You will enjoy this car because it is so much more than just beautiful. It is pleasureful—comfortable in its perfect riding qualities—enjoyable because it handles so easily.

Of course, there are particular reasons for this—a spring suspension almost equal to its wheel-base is one—the exclusive design of its frame construction is another. It is a restful, easy-riding, roomy four-cylinder car, equally easy to handle in city traffic or tough cross-country driving. Its wheel-base is 115 inches—unusually long for a four-cylinder car.

And it is economical—principally because of the supreme care with which it is built, but basically because it is Oldsmobile. Oldsmobile's twenty-four years of experience in engine design has evolved the surprising gasoline and oil economy of this 4-cylinder motor.

There is an Oldsmobile dealer near you—with an Oldsmobile Four that he will be proud to show. If you wish, we will send you a specially prepared little booklet entitled "Speaking of Power," and our dealer's name and address, whether you are figuring on buying an automobile now or not.

Ask your nearest Oldsmobile Dealer about the General Motors extended payment plan

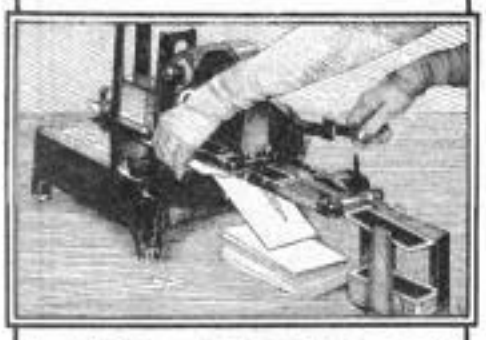
DOUBLE
the Business-getting Power
of
Your SALES-DOLLAR!

The Address-Press



In this house lives Smith—a $2,000 foreman. Yesterday his firm made him superintendent—doubled his pay—and now he's ready to buy many things he never before could afford.

In this house lives Jones—an $8,000 manager. Yesterday his firm was forced to cut his salary in half. He'll hardly be buying anything for a time.

Today the same changing conditions affecting Smith and Jones as individuals govern the buying-power of entire communities—cities—States. How to keep concentrating on the collectively prosperous "Smiths" without wasting money on the "Joneses" should be every wise sales-executive's foremost thought;—a problem most speedily and economically solved the Direct-Mail way—*with an* ELLIOTT ADDRESS-PRESS.

Any statistical organization can keep you posted as to localities where selling is good because industry is active. Stencil the names of people or firms in such localities into Elliott Address Cards. Then—when run through the ELLIOTT ADDRESS-PRESS (as shown above)—these cards will *automatically* address sales-letters, advertising circulars, etc., to these "able-to-buy" prospects—whenever you wish—*at a speed of 60 per minute.*

Elliott Address Cards serve also as complete and handy one-piece *Index Cards.* They contain no metal, come in 8 different colors, and you can write on their fibre frames.

Addresses can be stencilled into these cards in your own office *on any typewriter.* Changes in mailing lists are thus made instantly. These are the main reasons why the ELLIOTT ADDRESS-PRESS SYSTEM is everywhere revolutionizing business-getting methods, by making Direct-by-Mail solicitation *really profitable.*

THE BOYS

(Continued from Page 11)

"Is that all?" asked Jim. "Doesn't Henry state his reply?"

"That will do!" cried Helena. "You know what Henry's like—a neatly folded handkerchief. Even Moresby calls him Galahad; this is merely observing life. *La Vie!* And, of course, romancing it—though Henry would shoot me through the head for saying so. Here's another—Spring. They still do that one.

"Oh, April is a baggage,
Oh, April is a slut.
She kisses as she goes her way
In furrow, field and rut.
Her petticoat's a tattered cloud,
Her stocking's down at heel.
She staggers on the windy hill
With a drunken gypsy peal.
There are tears upon her eyelids,
There's a violet in her hair,
You see the trollop sweetheart—
everywhere!

"Gracile stems, bitter blood, sweet unseeing, staggers, drunken peals, trollop sweethearts! What ails Henry, Jim? Rather pretty stuff here and there—but such strange words. The whole book—it's called A Bowl of Green Pomegranates—is like that. His A. E. F. book was so full of that sort of thing too. Beauty, impolite language and profanity. And a lot of discontent, too, all mixed together."

Helena turned her slim foot so that her little slipper caught the fire glow.

"That part's all real—I know that. The discontent and the cursing. You're bound to get it out of a draft war. I've listened and talked with the boys at the Legion and the hospital. They think we didn't guess—women sitting rolling bandages in our comfortable parlors, and men like you, making utilities; I won't count men like Mr. Anderson, fattening war babies—what we were doing to them. It wasn't mud nor bad chow, nor cooties, nor death, as Henry says, but some principle they think we invaded and violated; something monstrous we worked out. That's what makes them so scornful of us—they won't forgive us. I've watched their faces on Armistice Day. They're proud of having done their duty well, but scornful of the duty. They say we didn't go! But they forget that even if we didn't—we sent them!

"That's why Moresby Girard, who went out in No Man's Land under a frightful barrage to bring in his buddy, and why my Henry, who has a citation, won't talk about the war—at least with us who stayed at home. That's why they hold our old patterns in contempt. That's why," she swept on, "Henry and Moresby Girard will prevent Beansy from apologizing to Mr. Anderson. It's a blow at what they call hypocrisy.

"And I ——" She stopped, then went on. "Well, I'm in difficulties on my own account. Because of you, Jim. For I've got to tell them—about you, about us! That's always hard for a woman. Her sons resent her being anything but their mother; and Henry, for all his radicalism, keeps his father as a sort of fetish. He only saw him when he was a little boy, and he's made a sort of romance of him."

Helena sighed. "I ought to have given them an idea—before Christmas or last summer. How stupid that they didn't guess! It's because they've put me on the shelf forever. And now, I don't see how. Well, I've got to break it—and it isn't an opportune time. But it's bound to come out anyhow."

"I'm afraid it is," said James mildly, "unless you intend to be wholly bound by the decision of the heaven-born. I had always hoped, though, that even in the event of their refusing their blessing, an elopement ——"

"James," said Helena, and she took his hand in hers and squeezed it—"James, I would be boiled in oil before I gave you up, much as I love my pig-headed independent bairns. Nevertheless, I am abashed by the idea of telling 'em—my young men. Oh, I'll have to! I'll find a way, I suppose; lead up to it gently. But Henry! I'm afraid Henry will be rather awful. He believes in anything new, except for the old."

"Have you," asked James, "taken counsel with anyone else?"

"Marriage," He Proclaimed, "is Changing! It is Changing Every Day"

"Only with Norah. She is my friend as much as my servant. She has been with us ten years. And she wouldn't discuss it. She says she's too busy."

"Busy?"

"Cooking." Helena smiled. "She's making regiments of pies and huge quantities of gingerbread. The thick, dark, sticky kind that Henry loves."

II

THE train which was to bear to Helena her brace of returning godlings—Henry connected with it by a branch road—came in at 4:10, and precisely at 4:06 Helena tooled her neat five-passenger sedan into the parking space at the left of the station platform, in the oval of hard black cinder where a central bed of brown parched vegetation survived a last year's memory of bright coleus and geranium. Through a thin screen of bare poplars the western sky offered a suffusion of lavender and pink and a silhouetted range of near-by smoke-stacks, spewing languid floating curls of blue-white smoke.

The steel rails of the four-track road sparkled a hard-ice black in the cold sun, stretched away, tightening, narrowing, like a black-ribbed fan receding to a remote blue speck of union in the horizon. Out of this horizon point would come the godlings—in on the snorting 4:10.

Helena perceived now that old Mr. Leafy, with an empty coat sleeve, was waving his good left arm at her, his gnarled hand clutching at a tangle of yellow dispatches as he bent over a baggage truck, and that a considerable crowd beyond him had gathered to meet the 4:10.

On the edge of this group, arm in arm, lost in an intense feminine absorption, were two young girls, fresh colored, pretty, smart looking, in hats of velours, apricot and jade green, respectively, above their opossum sports coats. And when Helena recognized the hats she figuratively raised her wide blue coat sleeve and smiled into it.

"I told Leah Raymond yesterday the boys were coming, and now Tot has an errand down here. Brought Ann Kimball. Oh, well, youth calls to youth. I wish Ann and Henry ——"

She saw that her little turban was shipshape in the horizontal mirror bar, the peacock blue wing lying tidily against her hair; then locking her wheel she climbed out.

The green and apri
hats hurried up at on
"Mrs. Tilden, how
you do? Isn't it a lov
day? Not going aw
are you? Mother s
me down here to see if
express package had co
They're so slow with their d
liveries."

It was the taller, darker o
explaining elaborately. He
ena's eyes were on the oth
girl as she answered—the pr
tier one, she thought.

"Tottie—and Ann too
How do you do?" Sh
simulated a charming su
prise. "It is a nice day, isn
it? And, no, I'm not going anywhere. Can
down to meet Harold and Henry. They'r
coming home and bringing a friend, Moresby
Girard."

Tot Raymond gasped. "Moresby Gir
ard, who wrote Unafraid! He's wonderful
Simply wonderful! And Henry too! I'm
afraid of Henry these days, Mrs. Tilden
It must be wonderful to have a son like
that!"

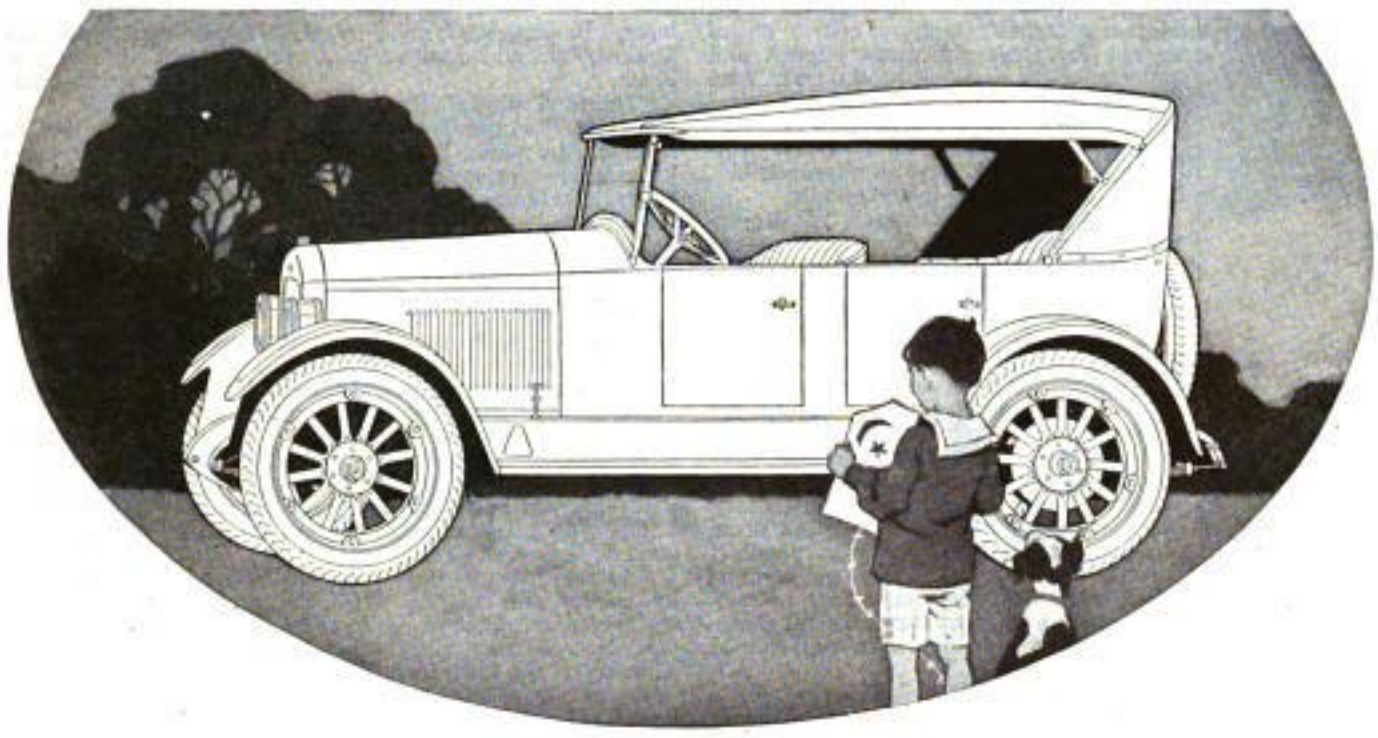
"It is," bragged Helena.

And she referred to the little green book—quite proudly.

"Now why did I do that?" she asked herself as she moved away. "I don't like Henry's verses. I don't understand 'em—or, yes I do—but I don't know why he writes things like that. And yet—I brag, brag, brag! Proud as Punch—and yet I'd like to spank him. But I talk about him—at the club, to everybody. And look what I said to Mrs. Everfew, who told me she had counted forty-one cuss-words in Henry's war verses, and said she didn't want her library table littered with curses. I'm not consistent, indefensible—because it's my Henry. Perhaps because —" Her sense of humor bubbled up at the memory of two lines from In Memoriam — "Because 'I only love, I cannot understand.'"

There was more truth than poetry, literally, in this.

Helena had extricated herself from the girls as quickly as possible with an invitation to dinner for the following evening—had drawn away almost exclusively, as though grudging an invasion of her privacy of expectation. She was like a queen preparing herself for a special audience, and when she saw a man chalking up a delay of three minutes on the bulletin board she stared resentfully down the ribs of the gray black steel fan, with an impatient spiritual clutching, an outrunning of her mind to the point of their approach.



It was always so when the boys came back after absence. There was an almost actual pain in the first moment before reunion. As though these lives, which had been begun and nurtured in her own, which had derived their tissues and their significance from hers; whose individual liberty had brought first a physical and later a mental pang, came back for reamalgamation with their source and the process brought with it a certain pain—a certain

Real Six Cylinder Comfort for $1065

A car that runs easily, smoothly and quietly does not punish itself on the road. There you have the supreme advantage of the good six. It is a mechanism of inherent balance with overlapping impulses that reduce vibration to the minimum.

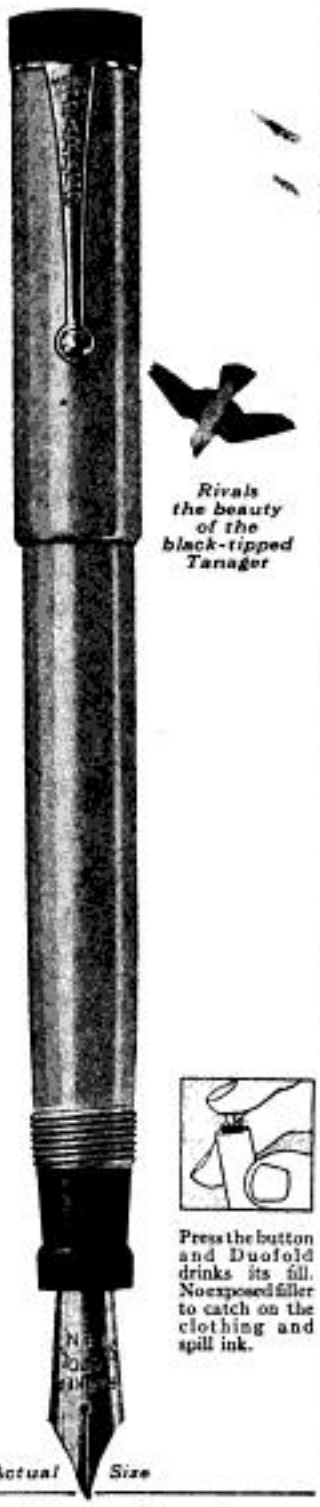
And now comes the opportunity to enjoy this great engineering advantage for only a trifle more than one thousand dollars. For the Jewett is a truly fine motor car, built by specialists in six-cylinder construction, the Paige-Detroit Motor Car Company.

Though the Jewett is amazingly low priced you will quickly learn that it has been produced without a single compromise. It is equipped with a Paige built 50 horse power motor—a larger power plant than you will find in any car of the same price class.

Its frame, clutch, transmission and rear axle are all perfect mechanical units designed to supplement one another in a union of vast strength and efficiency. Its springs are unusually large and scientific distribution of weight assures the steadiest of riding qualities.

It offers, in brief, just those elements of fine co-ordinated engineering that you have always associated with the finest and most expensive motor cars. For this reason the price of $1065 is a sensational achievement.

It is a car of beauty, distinction and wholesome comfort. It is neither too large nor too small for a family of five full grown adults. And as we have said, it is a *real* six built and endorsed by men who have always made quality their first and last consideration.



See it in the showroom of the nearest Paige dealer.

The Touring Car $1065, f. o. b. Detroit

Rivals the beauty of the black-tipped Tanager

Do you know another pen you can pass from hand to hand, have it suit all and hold its original point?

Press the button and Duofold drinks its fill. No exposed filler to catch on the clothing and spill ink.

Actual Size

Chinese-red barrel with smart black-tipped ends—resembles fine lacquer—handsomer than gold!

A 25-Year Over-size Pen

With a point like a smooth jewel bearing

THIS Classic of Fountain Pens was created by Geo. S. Parker, inventor of the leakproof "Lucky Curve." It took him 30 years to perfect it, but it took America only six months to make it the leading seller at hundreds of prominent pen counters. Step up to the first one you come to and see its lacquer-like beauty.

Grasp it! Get the business-like feel of its fit, weight and balance in your hand.

Compare its over-size barrel with the ordinary pen to note how much more ink the Duofold holds.

Then write with this Native Iridium point set in extra thick gold—so smooth it needs no "breaking in"—so hard and life-enduring we can guarantee it 25 years for wear and mechanical perfection.

We are supplying dealers as rapidly as possible with this 25-Year Pen. But if you don't find it near-by, give your dealer your order subject to your approval after trial. Or write us giving your dealer's name.

wistful torment, because it marked so inexorably a merely temporary point of contact in a natural progress of withdrawal.

Helena walked up and down, now impatient, a sudden tension on her, with only an abstracted recognition of her surroundings. But at last the three minutes dragged a last limping foot. The 4:10 came thundering in, convoyed by a grimy oil-stained blue-and-black individual quite unaware of his special privilege. Through the lacing crowd Helena saw three youths dismounting, and an engulfing wave of tenderness swept her. She wanted to run forward, the silly mist in her eyes, and cry out, kissing them, "My darlings! Mother's big boys! Mother's lambs!" Only, of course, out of respect for their ridiculous bigness and importance she wouldn't have dared. Also now, on an occasion with special implications, there must be a different note. She drew on her knowledge of the grand manner and permitted them to approach her. Beansy, she saw, was in the middle.

"Beansy," Helena reflected, "is dramatizing himself. He is enjoying this—the naughty brat! And look at his big feet—nearly a yard long! And his round little-boy face with his ridiculous red cheeks! And that camel's-hair scarf I gave him! He looks nice in it. He has the loveliest complexion, and boys usually don't. That's right—brag, woman. Even to yourself."

She saw that the iniquitous Beansy was supported on the right by his brother, Henry, poet and editor, carrying now a small week-end bag and a literary-looking brown-leather portfolio. Henry as usual was as shipshape and shiny as possible. He was a mild, precise, brushed-and-combed youth with very slick hair, very conventional dress and great tortoise-shell cheaters striding the bridge of a well-shaped nose.

On Beansy's left walked one a little less methodic of apparel—Moresby Girard, that gay insouciant novelist, who was sounding the clarion of radical thought for his generation and ringing the curfew for all social structures previous to 1917; whose editorials on freedom appeared in all the younger magazines, and whose poem beginning:

I sing of my hatred of ancient repressions,
I sing of my hatred of days that are dead,

was pretty generally regarded as a potential classic. Well, Moresby corresponded rather more clearly with his doctrine. His clothing—his coat especially—swung with a lightly raffish air suggesting a complete liberation from silly trammels. Even his tie was casual, and his hat—a worn velours fedora tipped at a not ungraceful angle—smacked of liberalism. His hair, too, was striking—a vivid sorrel, clipped less closely than the others; and a mustache of similar hue, hardly larger or less vivid than a Parmachene Belle, rode his upper lip.

All three young men unhatted when they saw Helena, and she permitted herself a three-foot advance.

"Boys! Henry! Harold! And Moresby Girard!" she said graciously, though with utter gravity.

The radicals were slightly taken aback. She offered no salute, save to press on Beansy's forehead a brief grave caress, indicative at once of his status of black sheep and of her complete maternal indulgence—within limits.

Some of the bumptiousness immediately left Beansy's shoulders. He fell in with his companions rather meekly as Helena, turning, indicated the sedan. The gay hats had crept up on her left—still presumably hunting the express package. These Helena now completely ignored; as also Mr. Leafy, whom she passed perfunctorily, together with several acquaintances. To command the situation quickly and gravely was her point; not to let them perceive emotion, but rather an abstract attention to principle.

It was very hard. Difficult to be inhuman—not to squeeze Beansy's arm or to cuddle to Henry a moment. She packed them quickly into the car, but not before Moresby Girard had inhaled deeply.

"The air here is admirable," he said gravely. "What a contrast to the city!"

"I'm so glad you find it so. Of course you don't get it as clear and pure here as you will at the house; we're in the west end, away from the industries. We have a lot of industries here. You know, lock works, cork works, silk mill, shoe factory. We're the city, too," Helena claimed. "Eighty-five thousand; and that"—she made a circular gesture indicating more remotely a distant gray triangle of roof—"that—those buildings are our waterproof fabric factory—raincoats and umbrellas. One of our biggest enterprises—made a lot of the army coats. Moved over from Astorvale two years ago. I believe they've nearly doubled their output since they were brought over; without any increase in overhead either."

"Output! Overhead!" cried Henry. "Have you joined the Board of Trade, mother, or the Industrial Association? A lot Moresby cares about raincoats and umbrellas."

"Well," said Helena as she took the wheel, "it's one of the nicest factories we have. In fact, it's owned by Mr. James Trulow," she added with a faint irrelevant blush.

"James Trulow," Henry thoughtfully repeated. "James Trulow—I seem to remember the name. When I was up here last summer for my two weeks didn't he call at the house a lot? A lean gray old codger ——"

"Lean! Codger!" cried Helena. "He weighs one hundred and eighty-two in his socks, and he's as fit as a fiddle. He's a—friend of mine"—she choked a little—"and a very fine gentleman. And he isn't old. Only five years older than I am."

"Well, but, mother, even that ——"

Helena almost ran into a tree and Beansy emerged from his new humility.

"Mother, you don't seem like you did last time. Sort of—kind of different. Do you think you ought to be driving the car? I mean, do you think your nerves are as good as they used to be?"

"As they used to be!" Helena bit her lip, colored and laughed. "Oh, don't you worry, laddie. There's life in the old hoss yet. Now, Moresby, if you bend close I'll rubberneck the town for you. We haven't much to offer—we're a bourgeois lot, you know that. But still—that's the City Hall and the Municipal Building over there, where our wheels go wrong; that's the First Presbyterian Church, where a precious lot of our Victorian hypocrites assemble every Sunday; here's the new Celadon Theater, where we're shown that the wages of sin is death, every day; and here's the Southern Market and I've got to get out for bread and cheese and meat."

Mr. Parr and Mr. Orvis left their respective places of business and supported Helena to the car with her packages—to see the boys.

If Helena had repressed her own raptures it was vicarious joy, a true Freudian sublimination, to see Mr. Parr, in his butcher's apron, offer a picnic-ham hand and compliment her on her jewels—beam at her rosy Beansy in his camel's hair, the glossy Henry in his serious cheaters—and their ruddy gala friend.

"Glad to see you back, boys!" old Mr. Orvis cried in greeting, equally interested, filling interstices around their feet with parcels of raisins and apples and schweitzer.

"Boys!" cried Henry as they left the market and old Orvis' friendly clasp. "Don't they realize we're not boys? Don't they realize we're grown up and are men—with the minds of men—doing the work of men?"

"You'll never be men to me, darlings—really," thought Helena secretly.

"I can't move, for all this truck," said Beansy boredly.

"It isn't truck. It's food, Beansy. Norah's going to cook it into good square meals for you."

"Meals!" said Moresby Girard. "I've been eating at a little Italian place on Twenty-eighth Street. Rather a good cuisine—and of course a chap that's eaten all kinds of chow overseas can stomach a lot—but still, frankly I'm tired of the stuff! A square meal! If there's anything of the sort lead me to it."

"Norah can certainly sling a nasty apple pie," cried Beansy joyously, as Helena turned into the home street—a wide span of hard blue-gray under arches of bare drooping maples and elms.

Comfortable middle-class homes lined it—stucco, limestone, red brick. Just ahead a broad span of graystone dwelling offered, wings thrust out from the sides, and the dying light was refracted in prismatic splinters from the long many-paned windows, glimpsed through two unusually large maples.

They stopped here and the sedan suddenly erupted, in a fury of luggage, long legs, brown-paper parcels.

"We'll take it all, Moresby. Your[s] too. Give mother an arm."

"I don't need an arm."

Helena, forsaking the car, sprang up the wide step. Norah had emerged [at] widespread door and welcoming cries.

Beansy, laden, and Moresby with [his] repudiated arm well occupied, passed [to] side, Norah shooing them affectionate[ly] Henry more sedately followed with [the] bags, and him Helena ambushed beyo[nd] the others' range.

She caught him by the coat lapels j[ust] inside the door, kissed him, held him fa[r] her.

"Henry," she said earnestly. "I'm glad as glad to have you home, dear. couldn't begin to tell you—only you know it—it really wasn't necessary for Bean to write—and ask you—about the thi[ng] he did."

"I'm the head of the family, mother."

Henry was grave above the bags, a[nd] Helena winced.

"But to bring Moresby in—a dear bo[y] but so unnecessary."

"Moresby's not a boy, mother." Th[e] light fell through a western window, l[it] Henry's face to a pale, earnest, almost a[s]cetic beauty. "Moresby, like myself, is [a] man—and has had a man's experience There's a principle involved. If my fath[er] were living I am sure he would see ——"

"Your father was a gentleman, Henry The principle of courtesy is involved, and—and there would be only one sort of advic[e] he could give—one kind of instruction."

Henry sighed.

"That is why we came home. We perfectly understood how you would feel Beansy took a wrong method, true—bu[t] he expressed truth, or truth as he believes it. You can't violate the truth by apologizing for it. That would be falsehood—to oneself, to the integrity of one's mind. You must stand by truth and self-expression—at any cost, mother. Well, it's a thing we've got to discuss—just how Beansy is to stand by his truth and its expression. I don't see how he's to yield. I'm against that. These bags are heavy, mother. Oh," he added impatiently, "if you knew us at all! If you ever read us—with any intelligence! If you read Moresby Girard's papers—The Cult of the Individual, The Individual as the Unit, The True and New America, Self-Expression and the New World. If you read me, even my papers in the Post Digest, for instance: Our Modern Liberty and The Passing of an Old Fetish. If you read my books ——"

"I do read your books, dear. The little yellow war book and the little green new one too. And I'm as proud as—lend me one of your words, dear—as proud as hell! They're wonderful, Henry, and I can hardly believe that you've grown up and can write books. It seems like yesterday you were playing marbles and getting your nose wiped! Oh, of course I know you were in the war, but that was because your body was fit. But you're getting away so fast—too fast! Oh, I know boys become men quickly and some of them have done wonderful things. Bryant—with Thanatopsis. Only nineteen."

"Bryant! Thanatopsis," Henry paled, groaned. "Really, mother ——"

"Keats, Chatterton," Helena hurriedly added—"great for their period." She apologized, blushing. "But we were talking of Beansy, dear. Now, you have so much influence. Support me in this—can't you see Beansy is a mere child? Not half educated. Look at his arithmetic. He'll have to have some arithmetic—even if he's free. He must go back to school, Henry. I ask it of you as a favor—as your mother ——"

"Isn't that like a woman! You approach a discussion of principle through the emotion, when you see that you fail of logic. But logic—a discussion among men ——"

"Well," cried Helena with a touch of spirit, "there isn't any reason why all the men have got to be such brand-new ones. I—I have asked an older one to help me—a friend I—I value"—she blushed—"who thinks as I do; who has a good mature mind, well balanced ——"

"Well balanced!" Henry coughed.

"Mr. James Trulow," Helena swept on, and Henry started.

"The man who makes raincoats and umbrellas? You would ask a perfect outsider ——"

"He isn't an outsider—exactly! Henry"—Helena wrung her hands together—"I think I ought to tell you —— Oh, Henry, I really must let you know ——"

1847 ROGERS BROS.
SILVERPLATE

Seventy-fifth 1847 Anniversary

FOR WEDDINGS or any occasion or celebration calling for gifts of silver, it is well to remember that 1847 is the identifying mark of the brand of silverplate which this year celebrates its own 75th Anniversary. This long service record is positive proof of highest quality.

For anniversary gifts, in particular, choose "1847 ROGERS BROS." In beautifully decorated Gift-Boxes and Anniversary Chests, it makes a most appropriate gift—one which can be added to each year by other pieces in the same pattern, each piece adding to the value of the others.

Sold by leading dealers. The Heraldic Pattern is illustrated. For illustrations of other patterns, write for folder R-90 to International Silver Co., Meriden, Conn.

Henry was utterly contemptuous. cowlick lifted itself from the glossy of his head, stood up disturbedly. mmal friend, a mere acquaintance, to discuss with us the welfare of your d's sons."

, Henry!"

lifted a protesting hand, but swept up the stairs with his bags Helena dejectedly entered her living where the fire crackled and her easy- and piano waited. She sank dispirit- into the biggest blue chair.

k, Jimmie, old dear—I don't see how tell 'em. I'm afraid of 'em—that's uth. Big cowardy cat! But I've got darling—and won't they be awful! just tell it. If only the time were propitious. Only, of course, it would be—with Henry! And now it's just hard. Just too awfully"—she for adjective, levied on the younger ation's opulence—"just too awfully hard," she sighed.

III

had made, Helena realized, watching group, exactly no advance what- in two days' time. Dinner was ed now—a dinner to which Tot Ray- and Ann Kimball and James Trulow been bidden—and they had all ad- ed to the living room.

Helena herself, mentally spent with two s of almost incessant argument and ding with Beansy—alone or with a rt of Henry and Moresby—sat by the ight. Beansy lay semisprawled on a low couch, where he could act as an ndant on the talking machine. Jim had ther of the chairs, and Tot occupied a faldstool, sitting with linked hands, ching the gold of the flames in her vel- brown eyes, eyes turned up now, in nkest worship for Moresby Girard.

Moresby stood in a graceful straddle ghtly beyond the middle of the mantel- ece, with one elbow touching the advanc- g feet of the four horses of the Quadriga. he horses with their polished metal surfaces d secure advancing pose were exceed- gly apt to Moresby himself, whose grace d security of manner repeated their as- rance like a designed motif. He looked e a young red-gold viking in mufti while he firelight brought out a line of pure gilt round his young head, set off radiantly his Parmachene Belle, which moved abruptly p and down under the pressure of his loquence.

Helena was not heeding his eloquence at e moment. She had listened to it, off and n, for forty-eight hours. Now she watched through the archway the figures in the all—Henry and Ann Kimball. They had olled back the rugs a little earlier and Henry had undertaken to teach Ann the evised tango of New York, while Beansy wooed the muse. But now, though the music had died away by two minutes, it ap- peared that Henry was still dancing with Ann, or, at least, was about to dance with Ann—for he had not changed the dancing position at all. He stood there with his arm about Ann, quite unaware of it—the arm— apparently; as one who has laid down some trifling article on a mantel, say, and will presently remember it. Ann didn't seem to mind being a mantel at all. They stood there, the two young things, depending no doubt on the insecure camouflage of Hel- ena's biggest fern, which, however, basely betrayed them, and their two faces were as eloquent as a town crier's call.

Helena sighed. Henry might be an editor and a modern poet whose clamor was su- periority to any sort of toil and for com- plete freedom, but he was heeding the siren now. He was enjoying one of those effer- vescences known in Beansy's parlance as a case—and without any attempt to stuff cotton in his ears! Ann was a case, too— clearly—and a very beautiful case. She was a flowerlike sweet young thing, looking like a white rose to-night in her snowy Georgette, and Helena took up the concept of an eventual conclusion or permanence to their cases.

Supposing Henry grew serious, married Ann!

It was so wholly appropriate, so log- ical, that she sighed. She could quite visualize all the predestined steps in the sequence. Henry, married, a family man, responsibilities, aging, graying; Ann, a wife, a mother, the rosebud blown to full petal, fading. It was a pattern, so usual, so inescapable, as life had been lived, that a pang of mutinous regret rose in Helena's heart. She saw the wilding youth, the illu- sion, the beauty of these two untouched inexperienced spirits slowly, surely being stamped and conformed as with a species of die—to a certain cohesive unity with— pattern. Cut like cookies. She caught oddly for a moment in a complete wave of feeling an utter understanding of the recal- citrant protest in these modern children against what they observed to be an insidi- ous and terrible destruction. A complete sympathy with restless revolt—revolt as voiced now by Moresby! Using the Quad- riga horses nonchalantly to support him he was waving his arm again and talking about marriage. Moresby had not experi- enced it, but he knew about it.

"Marriage," he proclaimed, "is chang- ing! It is changing every day. Our divorce laws are doing so much, of course; but more and more it is changing by the will of the individual. Adjustments are made from within. Naturally these were brought about by a new economic status for women, but they would have come anyway, through man's realization of his essential freedom and right to choose his life for himself. Woman, too—there is no reason why mar- riage will continue with us much longer as it has in the past. It will be at best, frankly, a partnership, whose tenure depends on the desire of both parties. In fact, the new order will probably dispense with the old type—marriage, *per se*. There isn't a real necessity for it at all. There is no necessity for anything except one's self-expression. If a marriage happens to do that—let it stand," Moresby's arm indicated permis- sion. "If not—some different adjust- ment ——"

It seemed to Helena that—or was it the effect of the fire?—the off Quadriga horse winked its eye at her. One lustrous eyelid dropped slowly down behind Moresby's bright head in a brazen cynical wink. Tot Raymond, still worshiping, drooped slightly forward; Tot, scarred veteran of hockey and tennis fights—who yet, as Helena knew—was collecting a hope chest. James was looking down his cigarette. Beansy ate gingerbread.

She reflected now, looking at James, on their affection; on their plans for life to- gether; their peculiar affinity of taste and temperament—in sport, in books, in con- versation. She loved her Jim. She ought to get up now and taking his old head between her hands defy the whole pack. This was her moment. She ought to cry, "Well, then— here's a fine example! James Trulow and I are going to do both. Express ourselves and be—*per se*. We're going to be married in the good old-fashioned way."

But Moresby went on talking and flour- ishing:

"I tell you it's a wonderful thing. The new marriage—er—the whole new rela- tionship of the sexes as it's being worked out—in the new school of expression! The new love! Take the case of Carl Kirschmer and Alida Paxon, for instance. Carl's the socialist writer and Alida does illustration; theater stuff, too, after the Reinhardt Method. Well, when they did it—it was Alida who put it up to Carl. He'd been around—well —— Oh, I mean in Europe, quite a bit. There was a little girl, too, Julia Freedmann, and they got over that. Well, Alida asked Carl to go with her to Miami; and he did. And on the way back—Pete Edwards heard her—she asked him how he'd like it for a permanent thing. And Carl was no end fond of Alida, so they got married, and it's been the greatest success. I saw Alida in New York this week. She was having her lunch with Kirby Williams. Carl's gone over to Italy to do some work."

"That"—James Trulow took his cigarette from his mouth—"that is your idea of mar- riage, as you would apply it to yourself?"

Moresby cleared his throat.

"Oh, I'm merely a bystander, a writer, a spectator. You've got to dissociate your- self from emotion—look at life in the large." Moresby spoke respectfully enough, but his glance at James clearly said, "You old umbrella man!"

"You're beautiful, anyhow!" thought Helena, watching Moresby, with his cock- sureness, his fire, his young pomposity. "And you're a golden liar—only you don't realize it."

She remembered the rescued buddy in No Man's Land and the bad shrapnel scars on Moresby's legs. She had knowledge of a young sister whom Moresby was helping through school, and she looked at him limned with the halo of light, and thought of Mr. Anderson, the trustee, who had called him and his kind "young knights in golden armor going out with an imperish- able ideal"—the thing that Beansy had said "Bah!" to. Yet the thing was in a measure true at least of Moresby's type, of Henry's. Their ideal was, of course, truth, as they proclaimed. And yet, what was their truth? Duty to themselves, they shouted loudly. Yet, at the scratch, what precisely did each one count as himself? What was a man's self, the exact embrace of his ego? What allegiances did he create for himself out of his environment—stick to at all odds? Always had. Always would.

Helena understood now why the Quad- riga horse had winked—wise old traveled beast who with his mates had seen the world so often remade, so many empires fall—and rise: Alexandria, Rome, Con- stantinople, Venice.

The talk drifted on. Henry came in, walking tenderly and close to Ann. He, too, claimed favor for the latter-day matri- monial order—the experimental, for the free. He, too, had known, he said, of very successful instances.

He was acquainted with at least three personally. Guy Howell, who did reviews in Benke's Magazine, and Matilda Estey, who acted. They met once a week only. And there was Kent Bishop and Batika Price—they weren't—well, they hadn't bothered with convention at all. They were simply for each other—for as long as they could hold each other!

Helena's eardrums ached, she had tried to remember all the terms and concepts that had whirled in the air these two days—begotten of Beansy's unfortunate episode.

They had included Puritans, Victorians, repressions, morons, Œdipus, Electra, so- viets, blocs, communism, futility, individual choice, hypocrisy, self-expression, the new world, the new poetry, and the new love— oh, a great deal about the new love!

She had been called an old fogy three times.

And Norah reported that the pie and the gingerbread were nearly finished.

"'Life,'" Moresby was quoting now, "'is, after all, an idiot's tale, told dancing down the wind.'"

And Helena, remembering the pies, looked at him in astonishment.

Jim, frankly bored, removed his cigarette.

"After all, though, it isn't danced alone— is it? Rather what you'd call a morris dance, isn't it? I mean you take it with a whole lot of company doing the same fox trot. That—helps a little, doesn't it?"

"Raincoats and umbrellas!" Moresby's eye and little mustache sneered, and Helena let everything go, to recall that they hadn't progressed a bit. The issues were unchanged. Beansy had been unpardonably rude, and vowed he wouldn't apologize. She insisted, and Henry and Moresby opposed. Not an inch gained—a complete impasse. And— she hadn't told them about Jim.

A clock chimed somewhere and Tot, her eyes drugged with the new freedom, stag- gered upright. Ann and Henry were still looking at each other. They would—de- clared Moresby and Henry—see the girls home, and Beansy whisking the last crumb declared for bed.

To Jim, lingering, Helena was pensive and subdued, even at the jeering "Rene- gade!" in his eyes; and afterward she stood a moment in the lowered lights of the house, still weary. But when she realized that Beansy must by now be in bed she went and knocked on his door. Not that she had any hope of success greater than the night before.

She went in and tucked up the long length of him and kissed his drowsy eyes and one great apple cheek.

"Darling," she said, "of course I've come to heckle and bully you. It doesn't seem to do any good, but I want you to listen to me and go back and tell Mr. Anderson ——"

"Apologize to the old coot! Mother, I can't; I'm not sorry."

"Not sorry for differing from him, if you like—but for being nasty and utterly out of place, Harold."

Beansy curled a long arm around her.

"You're a pretty old thing, mom—do you know it? But I can't go back to An- derson. I'd be going back on everything— on all the fellows too. Henry's right and you're wrong—though it'll play the dickens with the track."

Helena sighed and went to fresh attack. She might, of course, use duress. She could cut his allowance, force displeasure—but the modern boy had great resources—there

ALADDIN Thermalware JARS-DISHES

Keep Foods or Liquids Hot or Cold

Now—a Thermal Jar for Carrying Foods or Liquids!

Four-inch opening permits packing fried chicken, potato salad, large pieces of meat, ice cream and other foods. Or carry a whole gallon (16 cups) of hot coffee, iced tea, lemonade or cold water.

A bigger, better thermal jar for motoring, camping, hunting and fishing, picnics and outings, as well as for the home, office, hospitals and hotels.

Unusually rugged. Heavy glass inner, beautifully silvered, joined to steel jacket by patent Thermalware seal. High thermal efficiency. Insulated sanitary glass stopper instead of cork. Easy to clean. Capacity and durability considered, the lowest price Thermal bottle you can buy.

Here's the New Aladdin Thermalware Dish

No More Cold Dinners!

Prepare soups, stews, vegetables, puddings, desserts, griddle cakes in advance, serve **piping hot** at meal time. Foods kept hot during entire meal, even though some members of the family are late.

Bake or cook food in insert, place it hot in insulator (outer receptacle) and put on insulated cover. **Instantly sealed by vacuum.** Released by touch of air-vent valve. Satin or Polished Silver, Polished Nickel or Copper. Ideal Gift.

Heavier Oil than "E"?

First count the cost

Heavier oil than Gargoyle Mobiloil "E" in your Ford engine nearly always causes a drag on the engine. This means loss of power.

Heavier oil than Gargoyle Mobiloil "E" cannot begin so quickly to feed to every friction surface when the engine is started.

Heavier oil than Gargoyle Mobiloil "E" is not well adapted to the Ford splash system of lubrication.

Heavier oil than Gargoyle Mobiloil "E" cannot so thoroughly reach and protect your upper cylinder walls, piston rings and piston pin bearings.

Heavier oil than Gargoyle Mobiloil "E" cannot flow as quickly and freely through the header pipe.

Heavier oil than Gargoyle Mobiloil "E" cannot get so perfectly between the bearing surfaces.

Heavier oil than Gargoyle Mobiloil "E" will not burn so freely from the ignition points of the spark plugs.

Heavier oil than Gargoyle Mobiloil "E" nearly always leaves a heavier carbon deposit.

* * *

Every mechanical factor and operating requirement of your Ford engine calls for oil of the body, character and quality of Gargoyle Mobiloil "E." No heavier or lighter oil can give such protection or such economy.

When changing to Gargoyle Mobiloil "E" do not flush the engine with kerosene. A part of the kerosene will remain in the splash troughs and tend to destroy the lubricating qualities of the new oil. Draw off the old oil after engine has been running and while hot.

In the differential of your Ford use Gargoyle Mobiloil "CC" or Mobilubricant as specified by the Chart of Recommendations.

IN BUYING *Gargoyle Mobiloil from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container.*

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Fords. If you drive another make of car, send for our booklet, "Correct Lubrication."

VACUUM OIL COMPANY

was Henry to back and help him, too, and a maternal breach would mean a heartbreak.

There were other schools, as Henry suggested, but here, too, Beansy himself was recalcitrant. He was tired of school—done with it. If he left Bryarson he left 'em all.

Helena looking at his young ignorant beloved face, his sprawled virile length, felt her utter futility. She presently left his room with a sense of defeat, and later when she heard the others return she forbore to go and kiss Henry good night. No use milling it over with her other young bullhead. Better to find a way—some new, fresher fashion of persuasion.

IV

THE new way came abruptly clear, like a bolt from the blue. Old Mr. Haggard, the fishman, gave it to Helena the following morning, along with three pounds of chicken halibut for baking:

"I seen your boys, yestiddy, Mrs. Tilden. My, they're big good-lookin' fellers, an' I'll bet you're as proud as Punch! I hear they're as smart as all get out, too, and get things printed in books—but I guess you don't need to feel hurt any if they are so growed up. You look like you was young enough yet to have your fling as good as any."

"To have your fling as good as any!" Helena, outside the shop, almost staggered under an inspiration that brought a relief as clean cut and instant sharp as white lightning.

She put herself and the chicken halibut into the sedan and turned the sedan's nose to Breitmann's Popular Department Store, a place at which she seldom shopped. Here, with a bare pause before an array of wax ladies in popular paper-back editions of Fifth Avenue de luxe bindings, she spent an excited half hour of purchase. Thereafter she sped straight for the waterproof-goods factory and the reticent sanctum of James Trulow.

It lacked but a half hour to lunch when she reached again the privacy of her room, untied sundry parcels, slipped out of her quiet pale-gray Jersey-wool one-piece. For an instant remembering her bronze horses, the blue and cream harmonies of her lower rooms, she blenched. Then, like a diver about to test unknown depths, she resolutely clad herself.

Gold slippers and stockings, the former crystal-beaded; a magenta frock, very short, of the kind Vionnet originally called a petal dress. About her waist she girded a broad band of brilliant watermelon-green satin with an ample sash; and added finally what the Breitmann saleswoman called a necklace of genuine vegetable ivory dyed in alternate blue and orange beads. There was still fifteen minutes' margin as she sped quickly downstairs.

Beansy was nowhere in sight, but Henry and Moresby Girard were sprawled, talking, in the living room. An odor of baking molasses permeated the halls and a plate of Norah's gingerbread, fresh baked, sat, not unnoticed, between the young literati.

They sprang to their feet as Helena entered, and greeted her with the unseeing eye of affection. But only for a second.

Henry literally howled, "Mother! Mother! What in the —— Wh—what ails —— What on earth ——"

"What do you mean, dear?" asked Helena.

She seated herself, her hands passively lying in her magenta lap, and looked at her firstborn.

"Mean! Look at your clothes! Look at your dress! Have you gone out of your mind?"

"My mind! My clothes! What's wrong with my clothes?" cried Helena.

"Why—why, look at you! Why, the way you're dressed. Why, they're a curse! Why, they're a crime! Why, they're an offense—to the æsthetic eye. To good taste. For the Lord's sake—what do you mean by this?"

"I—I know they're—different," said Helena in a low voice.

"Different!" Henry became speechless.

"I know," said Helena quickly, "that you've never seen me like this before, dear. That's because—well, that's because I've dressed like other people—as I haven't wanted to dress—at all! I—I've always wanted to wear colors—bright colors, all together—lots of 'em. People—other people don't usually. I've always thought I—I had to do what others thought was appropriate. I mean—pay some attention to—what you just said, Henry—the—the æsthetic—to good taste. That doesn't it, dear, in clothes—dressing tain agreed-on ways of—of handling and form—and color. So you don't people's sense of beauty? I mean ing in such a way that if everybo lowed your example you'd get the amount of peace—nervous peace.

"But what do I care what other want—in my secret heart? Only a years I've been a kind of slave. I lieved—fighting myself—that I was And now that I've heard you and M it came to me like a flash of ligh evening. That's why I didn't ev good night to you. All my life"—He voice grew low, penetrating—"all I've had a repression—a suppressed for magenta."

The color poured suddenly into H face.

"Oh," he cried, "I suppose you you're being funny, mother! You'd make fools of us, mother. You'd h horse us. You'd hold us up to derisio

"If I could hold you up to deri would only serve you right, sonny. T what you've been doing to us, the generation, for a long time. But I'm jesting. No, no! Oh, Henry, let's not of clothes! They're only a beginning beginning of a liberty I never dream should enjoy. I want to speak of somet else. Sit down, Henry! Sit down, More I want to tell you something. I was tell you—about Mr. James Trulow."

The name produced a curious effect. complete suspension, a silence fell, Henry, very pale, rose slowly, grimly, approached his mother, with almost like grace.

"James Trulow!" he cried in a h breathy voice. "A-ha! So I was rig My instinct was not wrong. I've wate it—last summer, and at Christmas, now. And now—it's come. You're going to be foolish."

Helena lifted a pleading hand.

"Oh, Henry, don't blame me, too mu I've never done anything except along old settled lines—like other people. H could I—I be different, until I had he everything explained ——"

Henry was not attending. He had moi ened his lips, swallowing hard.

"And so it's come to this. James Trulo You—you would replace your husb— father—with James Trulow. You wou marry—again!"

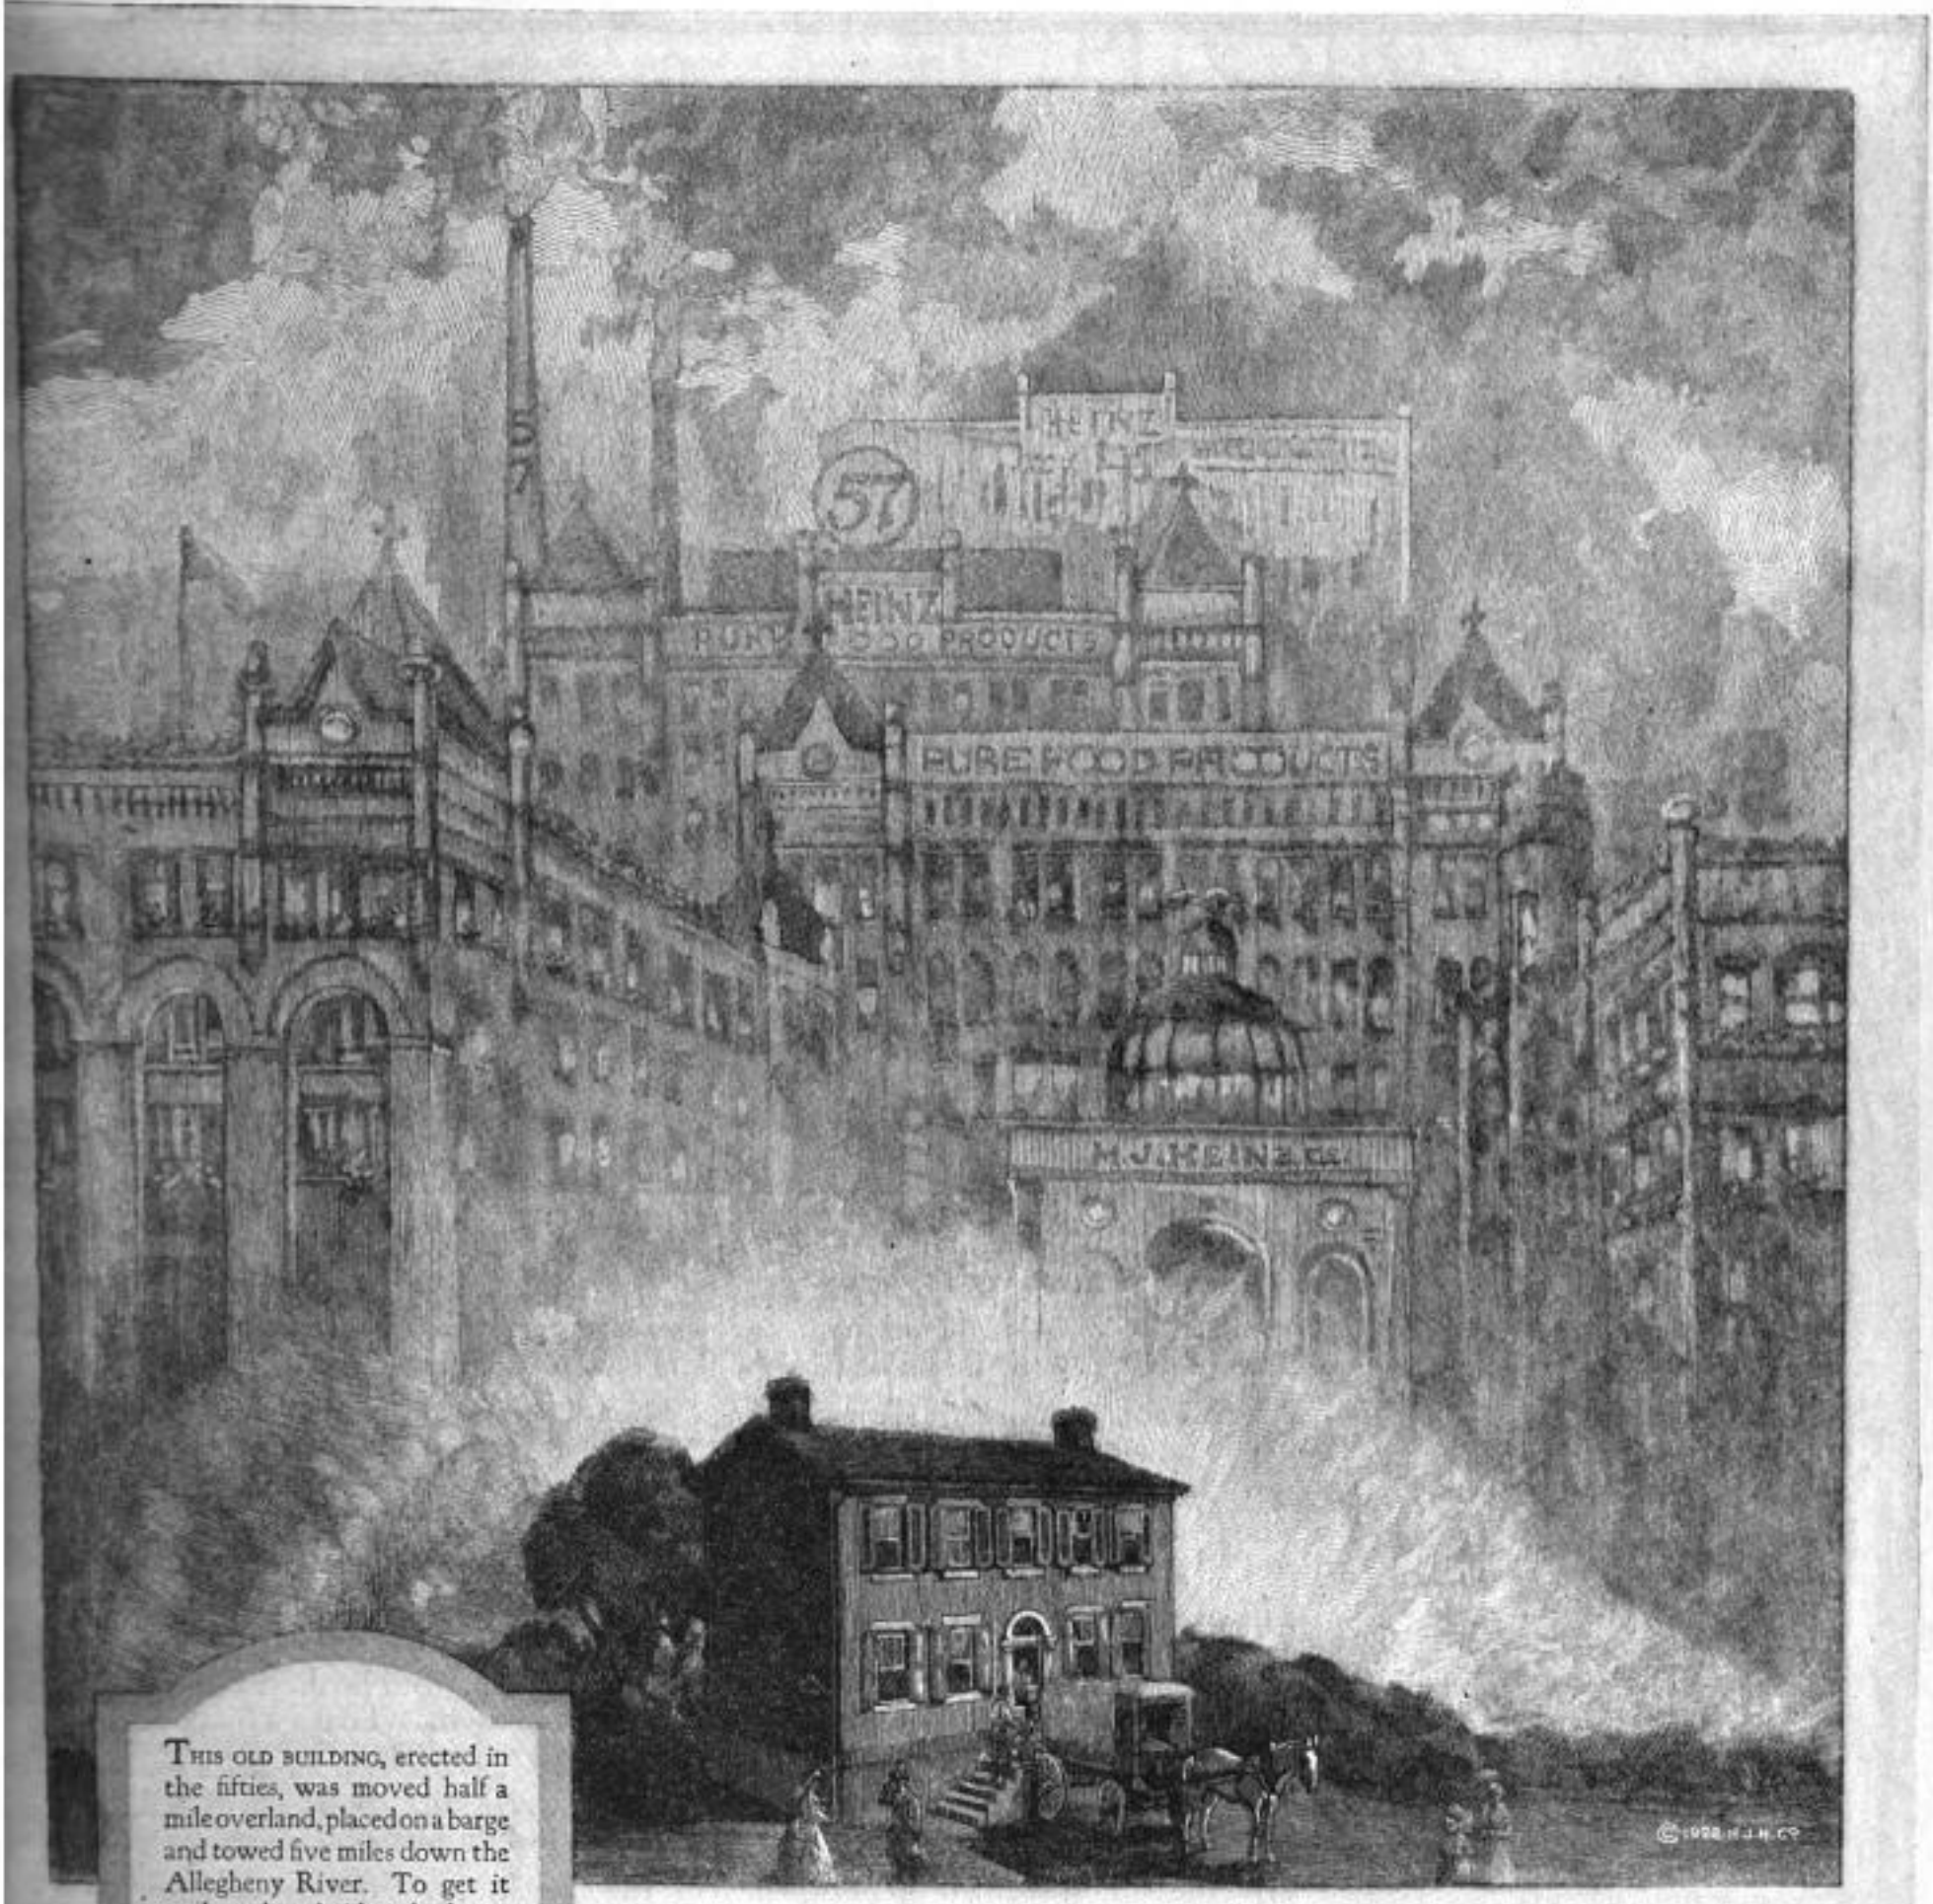
"Oh," cried Helena quickly, "you ha misunderstood me, dear. I did not spe of marrying. If—if I had—at any time any such idea—oh, I realize the absurdit Anything so permanent. I said, merel Henry, that I wanted to tell you—abo 'James Trulow. I wanted to tell you"—h voice lowered, she drooped her head—" wanted to tell you that—James and I hav decided to be for each other."

The room suddenly seemed to spin, th objects fused into a dark haze. There wa a complete silence in which Henry stoo stricken and transfixed. It was Moresb Girard who spoke first, springing up wit an intense gesture, a disordered pallor:

"Mrs. Tilden! But this is too terrible!

Henry found a suffocated voice, his fac suffused:

"Mother! Why—why, do you know what you are saying? You mean—wha you are saying?"



"I mean—what I am saying," Helen bowed her graceful head. "Oh, Henry," she cried, "I've thought things all out—and I see that—that any different—er—mor conventional idea that I may have en tertained—was an error. It would hav displeased you—and I did not wish to dis please you. In fact, I feared to displeas you. I want your good opinion, your re spect, dear; and when I realized that James and I had grown to care for each other— well, I didn't see any way really to secure it—to—to respect our own truth, our in dividual expression—yes, actually, our right—until you and Moresby came home. And then I listened to you. To the new widsom—to the freer way; and I saw how clear everything was, and how mistaken I had been. For here—see—Jim and I can belong together, for as long as we hold each other—and we're actually spoiling nothing. We sacrifice nothing. I remain as I was. My own name ——"

"Mother! Stop! Are you mad?" Henry threw up his hands. "Insulting yourself ——"

"Expressing myself," Helena corrected. "Oh, Henry! Oh, Moresby! You have

THIS OLD BUILDING, erected in the fifties, was moved half a mile overland, placed on a barge and towed five miles down the Allegheny River. To get it under a low bridge the barge was sunk, pumped out, floated again, and moved on down the river to Pittsburgh, where it was placed in the center of the Heinz plant.

Where the "57" began

The LITTLE HOUSE *that was floated down the* RIVER

WHEN YOU visit the "Home of the 57" you see the little "House where we began" —surrounded, overshadowed by large modern buildings. To the visitor the little house may seem but an interesting relic—a thing of purely historical interest, signifying growth and prosperity. To us, this homely little brick building stands as a symbol—a constant reminder of the ideals established there, the principles on which the Heinz business has been built.

It was because of this, of what the little house meant to us all, that we moved it from its original location, floated it five miles down the river on a barge, and placed it where its inspiration would be most manifest. Loyalty to the standards which the little house represents is reflected in the spirit of service, care in preparation and pride in workmanship which characterizes the whole Heinz organization.

A Lesson from the Stars

IN the garden of a country home two men were talking. Near them sat a small boy, looking at the stars.

"Business," said one of the men, "grows worse every month. I am making a product that I know is the best in the field—and still I can't sell it."

There was a moment of silence. . . . Then the second man called to the boy who sat near them. "Son," he said, "if you had your choice of any of those stars up there, which one would you choose?"

The boy promptly pointed to the brightest star in sight. "That big one over there!" he said.

The man who had addressed the boy turned to his companion. "As a matter of fact," he said, "there are other stars in the heavens, which the boy cannot see, that are far brighter and bigger than the one he chose. But he didn't know the other stars were there—and so he couldn't choose them. That's why your product isn't selling. People simply do not know it exists."

"I know what you mean," said the first man, "advertising. But I have tried advertising in the past—two or three times—and it didn't work."

His companion seemed preoccupied with the stars. . . . "If we stand here and watch the sky for a few minutes," he finally said, "we shall see a shooting star. It will spurt across the heavens for a second, and then it will die out. There are thousands of shooting stars every night. People pay little attention to them and they are instantly forgotten. That's the kind of an advertiser you were.

"The Pole Star," continued the speaker, "has stayed on the job so long and so faithfully that its very name has come to mean 'a guide, a controlling principle.' And that's the way to advertise. There are certain products today whose names are regarded as a guide to satisfaction and a controlling principle of quality. They are the pole-stars. In this present economic situation, it is the pole-stars that are doing the business."

(Continued from Page 50)

me a very different way of thinking, re you. Jim, too. And we are firmly ed—you have taught me the uses of dual liberty—and of the importance dividual truth as one sees it. I see now—in the broader aspect. You ght! Beansy was right! I shall be

my own family! To hear you like I little dreamed—I thought a step- r! It was a horrible idea, but I'd r a thousand times. I'd give my con- a hundred times rather ——"

h, but that might be so foolish! How know that I may not tire of Jim—or tire of me—though that last seems y improbable. But there is the pos- ty. This—the new way—leaves an ing for us. It is a truer way. The must prevail."

Mrs. Tilden, this is too horrible!"

Mother! At your age."

I am not a nonagenarian, Henry."

All mothers are old—too old for non- e."

Not for the truth. You have taught even with my failing powers, to recog- it."

But we were speaking in the general— e abstraction, Mrs. Tilden."

Beansy's not an abstraction."

We were speaking, Mrs. Tilden, of—of ew school of thought—or rather of ething still in the making—processes completed yet—they are only being nded, tested, a very little way—by— -the younger generation. They may haps be too radical—for—er—the mass. ey may be merely for the individual— special individual. We can't tell as ."

"One for all; all for one,'" cried Helena. What man may do, men may do. And at," she added incorrectly, "is sauce for e kitten—must be sauce for the cat."

"In my own family!" Henry bleated.

"Well, dear—you need not pull so long lace at making a convert. For I've truly anged. I shouldn't dream of opposing ur views on expression. Nor Beansy— w. Anyhow, James and I have fully cided. We are going to be for each her—on the fourteenth of April. We shall to Bermuda for a month ——"

Henry cried out sharply, "Do you real- e! Think of your home—of your town, f your place here. Of your memories. h, it would be bad enough to marry gain—but—mother, why don't you? Why can't you do the thing as others do, ke any other sane person?"

"But, Henry, I thought ——"

"Why, look what you'll do to yourself! Look what you'll do to us all. You can't ruck the game alone. Look what you'll do to me! Why, Ann wouldn't look at me ——"

"Ann!"

"Yes, Ann. Do you think she'd have a thing to do with me? And just when I— why, if the Post Digest'll give me a raise next year I'll ——"

"Do you mean that you and Ann ——"

"We've been writing since last summer. I've never known anyone on earth like Ann. I want to marry Ann."

"You mean—in the old way? Forever and ever, and *per se*—and take your chance?"

"Twouldn't be any chance at all—with Ann," cried Henry, just as though he had been born fifty years before.

Helena shook her head a little sadly.

"Well, I can't agree with you any more, dear. Anyhow, Jim and I have seen the light. He's coming at four. You can talk it over with him. But I doubt—oh! I want everything"—she paused in the doorway, looking like the Bohemian Girl in her bright attire—"I want everything to be open and expressed frankly. No secret repressions, no hidden longings, but light—light pouring through everything! I think I will have my lunch in my room," she added.

"If Jim," reflected Helena, "continues this line a minute longer I shall believe him—about us—myself. I shall believe we're going on a temperamental journey. He does it almost too well."

Helena, still in her blithe clothing, sat listening to her James—and two as impassioned and active aggressors in the cause of convention as could be imagined. Beansy had of course been excluded from the conference. But now the air was filled with argument for the obverse side of the question as formerly presented, and Helena could not forbear admiration for James, stoical patient manufacturer of umbrellas—and no slouch at his books, either—who sat stubbornly unmoved, carefully considering the persuasions the younger men offered. It was odd, indeed, to hear James returning one by one, with quiet determination, the Rolands given aforetime to his Olivers. He had been a pat and apt listener—old Jim.

It was odd to hear Moresby pleading now like any fogy—to hear Henry reasoning, bullying, demanding like any bourgeois Victorian.

Helena, by the window, planning a garden to be begun when she and Jim got home from their wedding trip, indulged a wicked old habit. She smiled down her sleeve with a rare sense of content. But now Henry threw up his hands, pacing up and down in a last exasperation.

"What can I do to make you see what you and mother are doing? Why, the thing is suicidal—it's monstrous!"

"Do you know," said Helena, "that's just the way I felt about what Beansy did—before I knew better."

Henry paled.

"Beansy! Harold!" he cried bitterly. "If he hadn't behaved like a young ass this would never have happened. Moresby and I would never ——"

"Have infected me. True. But I'm glad you did. I'm as glad as Pollyanna. I'm glad all around. I'm glad Beansy did it. I'm just—glad!" she added softly.

"I'd like to choke Beansy!" cried Henry. "I suppose," he added, "if he had yielded the point in the first place—the first day, you wouldn't have thought of —— Mother, you were going to do it differently—weren't you?"

"Oh, of course. But—I think you're very wrong to get so agitated, Henry. There's a principle involved here—that's all. I believe that's what you and Beansy stood on."

"But look here!" cried Henry. "Oh, mother!—I get your point—I—I—there's something in what you said before—I see that now—but if Beansy gave in—if we all gave in —— Upon my word, I believe you're stringing us!" He stopped suddenly.

"Jim," cried Helena, "are we ——"

"Friday, the fourteenth of April. On the steamship Carpathia, first cabin," said James gravely.

"Mother, then listen. If Beansy eats crow and tells old Anderson he was wrong—would you give it all up? At least"—he caught a strange glint in Helena's eyes—"would you—be willing to be—perfectly conventional, the two of you?"

"Well," said Helena, "I've never been pig-headed, Henry. But I may say that unless Beansy does—we shall continue precisely as we've planned."

Her son looked at her silently, considerингly a long minute, then before something in her eyes his face changed, the red of confusion, even sheepishness poured into his face.

"Mother!" he said with a low breath, "I stick 'em up. I hand it to you. You are simply—priceless." He looked at Moresby, but Moresby covered his mouth and the Parmachene Belle with a concealing hand.

"Where is Beansy?" he asked.

But Beansy was not far and, brought in, Henry, his hero, gave his instructions with clarity and abruptness.

"Beans," he said, "we've been considering it all over—your school stunt; and I've changed my mind. I guess you'll have to renege on the free-expression stuff. I guess you'll have to tell Anderson. It don't work out. We were wrong."

"To tell the truth, Hen," said Beansy, "I've always kinda felt I was. Only that you—I don't mind telling the old stoat I was in darn bad taste. I was. And of course it'll keep the track athletics up."

"Oh," cried Helena, "the track work's saved; and so is your arithmetic; and so are James and I. And I don't care who tries to contradict me, 'God's in His heaven: all's right with the world.' In mine anyhow. And now I'll go and tell Norah to cut a fresh pan of gingerbread."

▼

THE white curl of smoke was the only thing left. The train had quite vanished into the horizon point where the fan of rails met.

The three radicals had departed and Helena stood alone with Jim, looking after them. Others—more remotely—looked, too; two opossum sport coats and a brace

But Helena still looked down the t

After a minute, Jim; but just now last look her eyes cried Godspeed to boys.

BUSINESS LETTER

By Floyd W. Parsons

LETTER writing, especially in business, is being rapidly reduced to something very much in the nature of an exact science. This transformation has been necessitated by changed conditions in commerce and industry. The letters of yesterday would fail in serving the needs of to-day. It is interesting, therefore, to note some of the ideas being evolved by students of the subject.

Personal talks are not always possible in the operation of businesses, and the result is that letters must be substituted for human contact. It follows, therefore, that to be effective in this rôle of proxy for humans, letters must have human qualities. Progressive corporations now realize not only this fact but also the magnitude of the service to the firm in the establishment of good will that well-written letters will render. Practically every large corporation deals with its customers a dozen times as frequently through correspondence as by personal contact. It is not surprising, therefore, that progressive managements are establishing well-planned courses of study within their own organizations to teach employes the most advanced practices in business correspondence. Several companies charge a small fee for the course, returning half the payment when the employe completes the study. This is done to make the course fully appreciated.

Such a course should be placed in the hands of a qualified executive of the company, or a letter-writing expert should be employed. If an outsider is called in it will be necessary for him to study the company's correspondence for several weeks before mapping out the course. Though personal coaching may be undertaken in a limited way, the principal instruction should be given by correspondence. The aim must be to establish uniformity of style, and this must be accomplished without destroying individuality and freshness. Stress should be placed on service to the company; easy, correct diction; forceful expression through concentration on the chief points; and progression to a natural, logical, convincing conclusion.

One concern in an effort to improve the letters written by its employes holds a meeting on company time twice a month, to which all workers of high and low degree are invited, but not officially required to attend. Several persons are appointed to bring in a letter apiece, which was received during the fortnight from some outside correspondent. The employes are expected to criticize their letters, and each one suggests the changes that should be made in his letter. After the several reports have been made a letter writer of recognized ability takes all the letters and comments on the criticisms of the critics. This plan has been found effective in improving the concern's standard of correspondence.

Different types of letters require different styles of treatment. Perhaps the most difficult communication to write is an adjustment letter. In such a communication the opening sentence is vital, for the recipient of the letter is likely to be in an unfavorable frame of mind. Never restate the complaint or commence with an expression of surprise that the customer or client has had trouble. If the writer has decided to make a concession it is far better to do so gracefully, and not at the same time state a number of reasons why he should not do so. Adjustment letters are especially designed to continue business relations, and therefore sarcasm or ill temper has no place in th The writer should avoid flattery and tempts at humor. He should not instr but instead give information. Don't tr force the complainant to admit he is wr Avoid negative suggestions, and never flect on the customer's veracity. S the letter by saying: "It is a real plea to help straighten out this difficulty."

Don't waste words stating a letter been received and that the contents h been noted. Your reply indicates all t Some people call every letter a fav whereas many letters are not favors at A lot of people continually use the w "beg" in writing business communicatio which word conveys an unnecessary impr sion of subservience, besides being ha neyed. The clever letter writer alwa begins and ends his communications by st ing in one form or another the point of vi of the person to whom he is writing. It generally wise to cover up or at least t to disguise the points that are of spec interest to the writer. Many letters a spoiled by including exaggerated stat ments such as the expression, "the bigge value in the world for the money." T telegraph companies tell us that the wo "please" used in telegrams costs mo than one million dollars each year, an that the people spending the money ha made an excellent investment. The wor "please" can be used as effectively in le ters as in telegrams.

The correspondent who trusts his punc tuation to a stenographer admits his incom petence, and should not complain if hi letters are misunderstood. Form letter thoughtfully composed and neatly type are a valuable asset in business, except in cases where correspondents carelessly selec paragraphs that do not fit the subject in hand and cause the letter to lack coher ence. Form letters designed with care usually show restraint and sincerity, and are free of superlatives. In these points they are often superior to letters hastily dictated on the spot.

It is a good plan to avoid trying to cover two separate business transactions in one letter. A number of authorities go so far as even to suggest a different envelope for each letter, although the communications to the same person may be written at the same dictation. Don't use "Gentlemen"; instead say "Dear Sirs." Assume that your stenographer is the person you are writing to, and talk as you would in ordinary conversation. Try to strike a responsive chord, remembering that if you can get the other fellow to feel with you it will be easier to get him to act with you. Don't say "I wish to advise you"; you are not advising, but simply telling him something. The words "tell," "acquaint" and "inform" are far better usage.

Short paragraphs are often attractive, but they can be so brief as to be jerky. If it does not require too long a paragraph it is best to finish the idea or thought in mind in the same paragraph in which you introduce it. In closing a letter it is better to be positive, using a finite verb rather than a participial construction. The expressions "Wishing you success," "Trusting you are well," and so on, are not as strong as "I wish," "I trust," "I hope," and the like. Thousands of correspondents interchange words that are not synonymous.

Few lines of effort to-day offer corporations as great an opportunity to improve their position in business as is presented in the field of commercial letter writing.

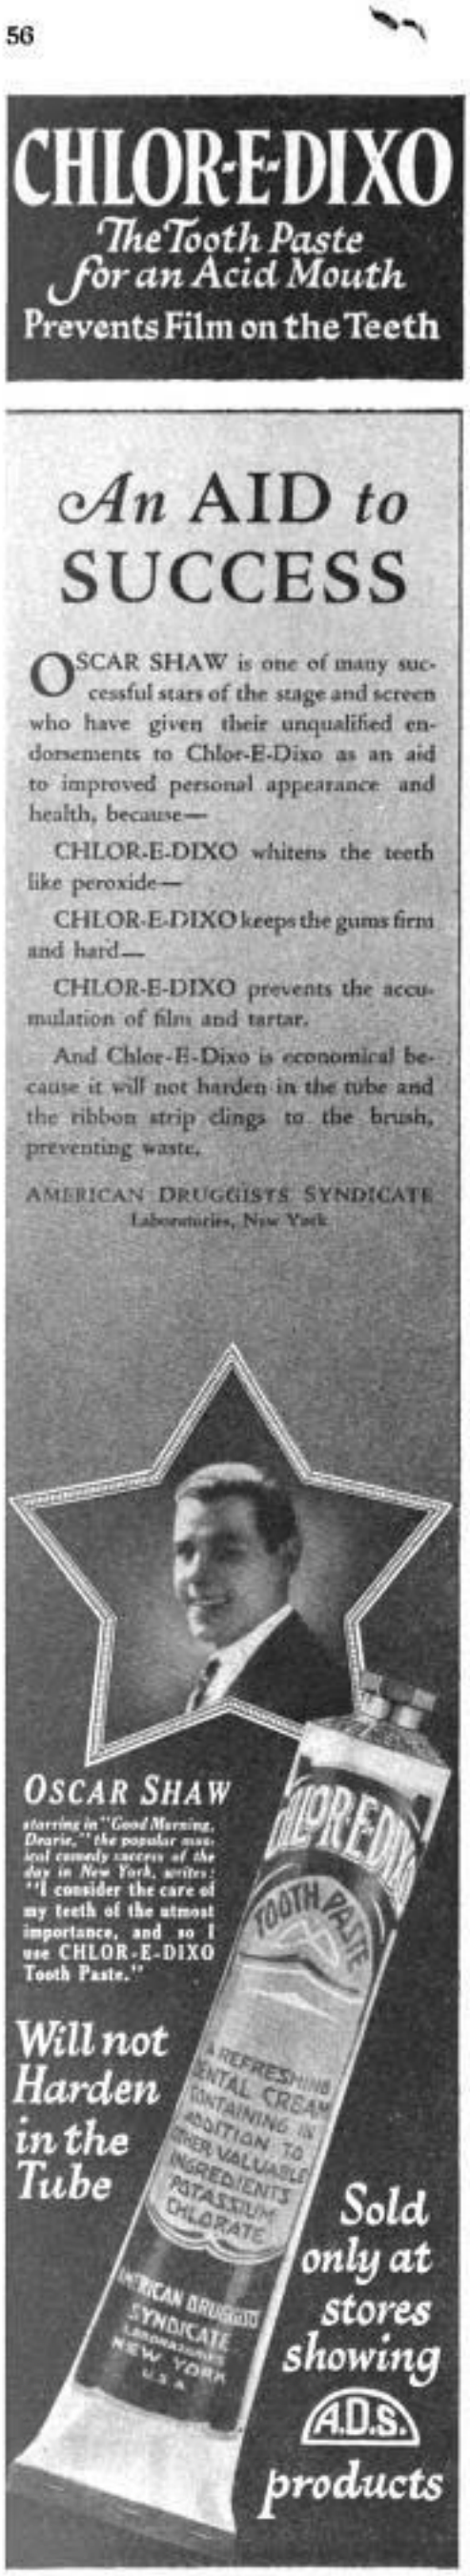
CHLOR-E-DIXO
The Tooth Paste for an Acid Mouth
Prevents Film on the Teeth

An AID to SUCCESS

OSCAR SHAW is one of many successful stars of the stage and screen who have given their unqualified endorsements to Chlor-E-Dixo as an aid to improved personal appearance and health, because—



CHLOR-E-DIXO whitens the teeth like peroxide—

CHLOR-E-DIXO keeps the gums firm and hard—

CHLOR-E-DIXO prevents the accumulation of film and tartar.

And Chlor-E-Dixo is economical because it will not harden in the tube and the ribbon strip clings to the brush, preventing waste.

Laboratories, New York

THE COVERED WAGON

(Continued from Page 19)

After a time they drew close together, running parallel and at top speed. At the distance, what Jackson saw was a swift rush of the black horse between the two bulls. For an instant the three seemed to run neck and neck. Then the rider's arms seemed extended, each on its side. Two puffs of blue smoke stained the gray dust. The black horse sprang straight ahead, not swerving to either side. Two stumbling forms slowed, staggered and presently fell. Then the dust passed, and he saw the rider trot back, glancing here and there over the broad rolling plain at the work of himself and his men.

"I seed ye do hit, boy!" exclaimed the grizzled old hunter when they met. "I seed ye plain, an' ef I hadn't, an' ye'd said ye'd did hit, I'd of said ye was a liar."

"Oh, the double?" Banion colored, not ill pleased at praise from Sir Hubert, praise indeed. "Well, I'd heard it could be done."

"Once is enough. Let 'em call ye a liar atter this! Ef ary one o' them bulls had hit ye ye'd have had no hoss; an' ary one was due to hit ye, or drive ye against the other, an' then he would. That's a trap I hain't ridin' inter noways, not me!"

He looked at his own battered piece a trifle ruefully.

"Well, Ole Sal," said he, "'pears like you an' me ain't newfangled enough fer these times, not none! When I git to Oregon, ef I ever do, I'm a goin' to stay thar. Times back, five year ago, no one dreamed o' wagons, let alone plows. Fust thing, they'll be makin' plows with wheels, an' rifles that's six-shooters too!"

He laughed loud and long at his own conceit.

"Well, anyways," said he, "we got meat. We've licked one red nation an' got enough meat to feed the white nation, all in a couple o' days. Not so bad—not so bad."

And that night, in the two separate encampments, the white nation, in bivouac, on its battle ground, sat around the fires of *bois des sackes* till near morning, roasting boss ribs, breaking marrowbones, laughing, singing, boasting, shaking high their weapons of war, men making love to their women—the Americans, most terrible and most successful of all savages in history.

But from one encampment two faces were missing until late—Banion and Jackson of the Missourians. Sam Woodhull, erstwhile column captain of the great train, of late more properly to be called unattached, also was absent. It was supposed by their friends that these men might be out late, superintending the butchering, or that at worst they were benighted far out and would find their way to camp the next morning.

Neither of these guesses was correct. Any guess, to be correct, must have included in one solution the missing men of both encampments, who had hunted miles apart.

XXI

AS BANION and Jackson ended their part in the buffalo running and gave instructions to the wagon men who followed to care for the meat, they found themselves at a distance of several miles from their starting point. They were deep into a high rolling plateau where the going was more difficult than in the level sunken valley of the Platte. Concluding that it would be easier to ride the two sides of the triangle than the one over which they had come out, they headed for the valley at a sharp angle. As they rode, the keen eye of Jackson caught sight of a black object apparently struggling on the ground at the bottom of a little swale which made down in a long ribbon of green.

"Look-ee yan!" he exclaimed. "Some feller's lost his buffler, I expect. Let's ride down an' put him out'n his misery afore the wolves does."

They swung off and rode for a time toward the strange object. Banion pulled up.

"That's no buffalo! That's a man and his horse! He's bogged down!"

"You're right, Will, an' bogged bad! I've knew that light-green slough to cover the worst sort o' quicksands. She runs black sand under the mud, God knows how deep. You can't run a buffler inter hit—he knows. Come on!"

They spurred down a half mile of gentle slope, hard and firm under foot, and halted at the edge of one of the strange man traps which sometimes were found in the undrained Plains—a slough of tall, coarse, waving grass which undoubtedly got its moisture from some lower stratum.

In places a small expanse of glistening black mud appeared, although for the most part the mask of innocent-looking grass covered all signs of danger. It was, in effect, the dreaded quicksand, the octopus of the Plains, which covered from view more than one victim and left no discoverable trace.

The rider had attempted to cross a narrow neck of the slough. His mount had begun to sink and flounder, had been urged forward until the danger was obvious. Then, too late, the rider had flung off and turned back, sinking until his feet and legs were gripped by the layer of deep soft sand below. It was one of the rarest but most terrible accidents of the savage wilderness.

Blackened by the mud which lay on the surface, his hat half buried, his arms beating convulsively as he threw himself forward again and again, the victim must in all likelihood soon have exhausted himself. The chill of night on the high Plains soon would have done the rest, and by good fortune he might have died before meeting his entombment. His horse ere this had accepted fate, and ceasing to struggle lay almost buried, his head and neck supported by a trembling bit of floating grass roots.

"Steady, friend!" called out Banion as he ran to the edge. "Don't fight it! Spread your arms and lie still! We'll get you out!

"Quick! My lariat, Jackson, and yours!" he added.

The scout was already freeing the saddle ropes. The two horses stood, reins down, snorting at the terror before them, whose menace they now could sense.

"Take the horse!" called Banion. "I'll get the man!"

He was coiling the thin, braided hide *reata*, soft as a glove and strong as steel, which always hung at the Spanish saddle.

He cast, and cast again—yet again, the loop at forty feet gone to nothing. The very silence of the victim nerved him to haste, and he stepped in knee deep, finding only mud, the trickle of black sands being farther out. The rope sped once more, and fell within reach—was caught. A sob or groan came, the first sound. Even then from the imprisoned animal beyond him came that terrifying sound, the scream of a horse in mortal terror. Jackson's rope fell short.

"Get the rope under your arms!" called Banion to the blackened, sodden figure before him. Slowly, feebly, his order was obeyed. With much effort the victim got the loop below one arm, across a shoulder, and then paused.

"Your rope, quick, Bill!"

Jackson hurried and they joined the ends of the two ropes.

"Not my horse—he's wild. Dally on to your own saddle, Bill, and go slow or you'll tear his head off."

The scout's pony, held by the head and backed slowly, squatted to its haunches, snorting, but heaving strongly. The head of the victim was drawn oddly toward his shoulder by the loop, but slowly, silently, his hands clutching at the rope, his body began to rise, to slip forward.

Banion, deep as he dared, at last caught him by the collar, turned up his face. He was safe. Jackson heard the rescuer's deep exclamation, but was busy.

"Cast free, Will, cast free quick, and I'll try for the horse!"

He did try, with the lengthened rope, cast after cast, paying little attention to the work of Banion, who dragged out his man and bent over him as he lay motionless on the safe edge of the treacherous sunken sands which still half buried him.

"No use!" exclaimed the older man. He ran to his saddle and got his deadly double barrel, then stepped as close to the sinking animal as he could.

There came a roar. The head of the horse dropped flat, began to sink. "Pore critter!" muttered the old man, and now hastened to aid Banion.

The latter turned a set face toward him and pointed. The rescued man had opened his eyes. He reached now convulsively for a tuft of grass, paused, stared.

"It's Sam Woodhull!" ejaculated the scout. Then, suddenly, "Git away, Will—move back!"

Banion looked over his shoulder as he stood, his own hands and arms, his clothing, black with mire. The old man's gray eye was like a strange gem, gleaming at far end of the deadly double tube, w was leveled direct at the prostrate m forehead.

"No!" Banion's call was quick and perative. He flung up a hand, stepped tween. "No! You'd kill him—now?"

With a curse Jackson flung his gun f him, began to re-coil the muddied ro At length, without a word, he came Banion's side. He reached down, ca an arm and helped Banion drag the ma on the grass. He caught off a handf herbage and thrust it out to Wood who remained silent before what see his certain fate.

"Wipe off yore face, you skunk!" the scout. Then he seated himself, rosely, hands before knees.

"Will Banion," said he, "ye're a foo ye're a nacherl-borned, congenual, ingr damned fool! Ye're flyin' in the face Proverdence, which planted this crit right here fer us to leave where no on ever be the wiser, an' where he could never do no more devilment. Ye id leave me kill him, ef ye're too chick hearted yoreself! Or leave us throw h back in again!"

Banion would not speak at first, thou his eyes never left Woodhull's streak ghastly face.

At length he said slowly, "If we hadn joined Scott and climbed Chapultepec t gether, I'd kill you like a dog, right her Shall I give you one more chance to squa things for me? You know what I mea Will you promise?"

"Promise?" broke in Jackson. "I damned fool, would ye believe ary promi he made even now? I tell-ee, boy, he murder ye the fust chanct he gets. He tried hit one night afore. Leave me cut h throat, Will! Ye'll never be safe ontel I d Leave me cut his throat er kill him with rock. Hit's only right."

Banion shook his head.

"No," he said slowly, "I couldn't, an you must not.

"Do you promise?" he repeated to th helpless man. "Get up—stand up! D you promise—will you swear?"

"Swear? Hell!" Jackson also rose a Woodhull staggered to his feet. "Ye know this man orto kill ye, and ye sneaked hit, didn't ye? Whar's yer gun?"

"There!" Woodhull nodded to the bog, over which no object now showed. "I'm helpless! I'll promise! I'll swear!"

"Then we'll not sound the no-quarter charge that you and I have heard the Spanish trumpets blow. You will remember the shoulder of a man who fought with you? You'll do what you can now—at any cost?"

"What cost?" demanded Woodhull thickly.

Banion's own white teeth showed as he smiled.

"What difference?" said he. "What odds?"

"That's hit!" Again Jackson cut in, inexorable. "Hit's no difference to him what he sw'ars, yet he'd bargain even now. Hit's about the gal!"

"Hush!" said Banion sternly. "Not another word!

"Figure on what it means to you." He turned to Woodhull. "I know what it means to me. I've got to have my own last chance, Woodhull, and I'm saving you for that only. Is your last chance now as good as mine? This isn't mercy—I'm trading now. You know what I mean."

Woodhull had freed his face of the mud as well as he could. He walked away, stooped at a trickle of water to wash himself. Jackson quietly rose and kicked the shotgun back farther from the edge. Woodhull now was near to Banion's horse, which, after his fashion, always came and stood close to his master. The butts of the two dragoon revolvers showed in their holsters at the saddle. When he rose from the muddy margin, shaking his hands as to dry them, he walked toward the horse. With a sudden leap, without a word, he sprang beyond the horse, with a swift clutch at both revolvers, all done with a catlike quickness not to have been predicted. He stood clear of the plunging horse, both weapons leveled, covering his two rescuers.

"Evener now!" His teeth bared. "Promise me!"

The Small Car Deserves a Good Tire

"A Tire that Will be Known Everywhere"

The 30×3½ Clincher Cord at $12.50

You would doubtless like to have cord tires on your car, if you could be sure you could afford them and that they were really as good as the cords made for larger cars.

One of the first things the Seiberling organization determined to do was to satisfy you on both points.

Mr. Seiberling, after many years of cord-tire production—resulting in the world's largest cord-tire business—was satisfied that a high-grade 30 x 3½ Clincher Cord could be built and sold at a price which would put it within reach of the average owner of a small car, and which would at the same time relieve any doubt as to whether it really was a better investment than a good fabric tire.

Such a tire has now been produced. It has equally as good materials and construction advantages as the larger size (straight-side) Seiberling Cords.

This Seiberling Clincher Cord has very strong features to recommend it to the owner of a small car.

The tough, durable rubber of the tread is continuous from bead to bead, preventing tread-separation, assuring side-wall resistance to ruts, gravel and other rough going, and it is strong at the shoulder, where most small clincher cords have been weak.

The On-Air cure process gives uniform tension throughout (no wrinkles or buckles from pinching in the mold) and better distribution of tension in the finished tire.

It has one tread design (anti-skid) for all wheels, making tires interchangeable. It is semi-flat, giving better traction and longer wearing qualities.

Seiberling Cords and Tubes are now on sale by Seiberling Dealers. Write for name and address of one nearest to you.

TO TIRE DEALERS: Seiberling Cords and Tubes are distributed through regular retail channels. We desire to establish connections with good business men who agree with us that high-grade products, a policy of selected and not closely competitive distribution, and service to the user form the right basis for a lasting and mutually profitable relationship. Write or wire Seiberling Rubber Company, Akron, Ohio.

SEIBERLING RUBBER COMPANY, AKRON, OHIO

SEIBERLING CORDS

"CORDS ONLY": Seiberling Tires are Cords only. All Tires, Tubes and other products carrying the Seiberling name and trade-mark are of one grade only—as good as we can make it.

SEIBERLING TUBES: Seiberling Tubes, also are of "one grade only, as good as we can make it." They are heavy, large tubes, of long-lived "pure gum, floating stock," and should last as long as the casing itself.

How Manufacturers Reduce Cost of Building 15%

The Application of Mill Construction to Factory Building. Also Reduces Carrying Charges, Taxes, Insurance

MANY a business man has, in the last twelve months, come to realize the true meaning of costly factory buildings.

Extravagant building investments, entailing high, fixed overhead, are proving an almost insurmountable handicap in the present intensely competitive period.

A big price to pay for yielding to fear of fire, instead of investigating the causes of fire and the real facts of fire protection.

And entirely unnecessary when the application of a single established principle of commercial building construction, coupled with adequate sprinkler protection, might have *saved him* 15% *on building investment,* 15% *on interest carrying charges, a considerable amount on taxes and as much as* 75% *on actual insurance costs.*

NO wonder industrial executives are, more and more, figuring necessary industrial building in terms of fire resistant, sprinklered "mill construction."

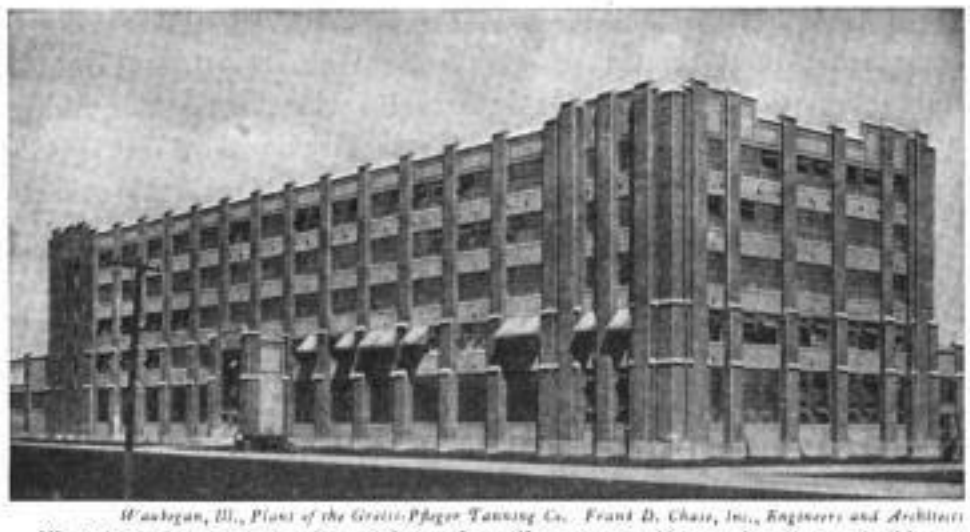
They are finding that insurance rates are much lower than on so-called fire-proof buildings, unsprinklered, while the rate is, at the same time, applied on a lower valuation.

It is, after all, not buildings so much as contents that constitute fire hazard; and trying to reduce fire hazard by increasing building investment only piles up the overhead, and unnecessarily increases costs.

Engineers and architects, long familiar with the principle of fire-resistant, sprinklered "mill construction," yet obliged to limit its use because of lack of sufficient uniformly safe timbers with which to apply it, are now unhesitatingly recommending it.

Timber values are no longer a matter of guesswork.

The work of testing engineers, scientists and lumber experts, extending over a period of years, now makes possible the selection of timbers for "mill construction" *based on uniform values.*



IT is now possible to secure selected timbers for the most exacting industrial uses from the Douglas Fir Mills of the Weyerhaeuser organization or from its great distributing plants in the heart of the Eastern and Mid-western markets.

Just what the principle of fire-resistant, sprinklered "mill construction" is as applied to commercial buildings, and just why Weyerhaeuser selection of timbers now makes this principle practical of application, is told in two booklets sent free on request.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 S. La Salle St., Chicago; 1015 Lexington Bldg., Baltimore; and 4th and Roberts Sts., St. Paul; and with representatives throughout the country.

MANUFACTURERS who have assumed that so-called fire-proof building is necessary to lower insurance rates are surprised to discover that thousands of the greatest mills in the country — sprinklered "mill construction" buildings, in which brick and wood have been intelligently combined into factories of great utility and adaptability — are paying today lower insurance costs than almost any other class of insurance risks and that their losses over a recent three-year period have averaged only 3½ cents per $100.00 of insurance written.

Let us make every day "Fire Prevention Day"

Waukegan, Ill., Plant of the Grasse-Pfleger Tanning Co. Frank D. Chase, Inc., Engineers and Architects

Illustrating the architectural possibilities of "mill construction" in modern factory building

ıson's deep curse was his answer. ı rose, his arms folded.
ou're a liar and a coward, Sam!" said Shoot, if you've got the nerve!"
edible, yet the man was a natural rer. His eye narrowed. There came t motion, a double empty click!
y again, Sam!" said Banion, taunt- m. "Bad luck—you landed on an !"
did try again. Swift as an adder, his flung first one and then the other ın into action. Click after click, no Jackson sat dumb, expecting death.
hey're all empty, Sam," said Banion t as the murderer cast down the re- rs and stood with spread hands. "For irst time, I didn't reload. I didn't I'd need them."
'ou can't blame me!" broke out Wood- "You said it was no quarter! Isn't soner justified in trying to escape?"
'ou've not escaped," said Banion, y now. "Rope him, Jackson."
e thin soft hide cord fell around the s neck, tightened.
Now," shrilled Jackson, "I'll give ye g's death!"
sprang to the side of the black liard, who by training had settled , tightening the rope.

XXII

ATCHING the intention of the mad- dened man, now bent only on swift re- ge, Banion sprang to the head of his e, flinging out an arm to keep Jackson of the saddle. The horse, frightened he stubborn struggle between the two, ng away. Woodhull was pulled flat the rope about his neck, nor could he en it now with his hands, for the horse t steadily away. Any instant and he ght be off in a mad flight, dragging the n to his death.
'Ho! Pronto—vien aqui!"
Banion's command again quieted the mal. His ears forward, he came up, ickering his own query as to what really s asked of him.
Banion caught the bridle rein once more d eased the rope. Jackson by now had shotgun and was shouting, crazed with ger. Woodhull's life chance was not rth a bawbee.
It was his enemy who saved it once ain, for inscrutable but unaltered reasons his own.
"Drop that, Jackson!" called Banion. Do as I tell you! This man's mine!"
Cursing himself, his friend, their cap- ve, the horse, his gun and all animate and animate Nature in his blood rage, the d man, livid in wrath, stalked away at ngth. "I'll kill him sometime, ef ye on't yerself!" he screamed, his beard rembling. "Ye damned fool!"
"Get up, Woodhull!" commanded Ban- n. "You've tried once more to kill me. f course, I'll not take any oath or prom- e from you now. You don't understand uch things. The blood of a gentleman isn't nywhere in your strain. But I'll give you ne more chance—give myself that chance oo. There's only one thing you under- tand. That's fear. Yet I've seen you on firing line, and you started with Don- phan's men. We didn't know we had a oward with us. But you are a coward.
"Now I leave you to your fear! You know what I want—more than life it is to me; but your life is all I have to offer for it. I'm going to wait till then.
"Come on now! You'll have to walk. Jackson won't let you have his horse. My own never carried a woman but once, and he's never carried a coward at all. Jack- son shall not have the rope. I'll not let him kill you."
"What do you mean?" demanded the prisoner, not without his effrontery.
The blood came back to Banion's face, his control breaking.
"I mean for you to walk, trot, gallop, damn you! If you don't you'll strangle here instead of somewhere else in time."
He swung up, and Jackson sullenly fol- lowed.
"Give me that gun," ordered Banion, and took the shotgun and slung it in the pommel loop of his own saddle.
The gentle amble of the black stallion kept the prisoner at a trot. At times Banion checked, never looking at the man following, his hands at the rope, panting.
"Ye'll try him in the camp council, Will?" began Jackson once more. "Any- ways that? He's a murderer. He tried to kill us both, and he will yet. Boy, ye rid with Doniphan, an' don't know the *ley refugio?* Hasn't the prisoner tried to es- cape? Ain't that old as Mayheeco Veeayho? Take this skunk in on a good rope like that? Boy, ye're crazy!"
"Almost," nodded Banion. "Almost. Come on. It's late."
It was late when they rode down into the valley of the Platte. Below them twinkled hundreds of little fires of the white nation, feasting. Above, myriad stars shone in a sky unbelievably clear. On every hand rose the roaring howls of the great gray wolves, also feasting now; the lesser chorus of yapping coyotes. The savage night of the Plains was on. Through it passed three savage figures, one a staggering, stumbling man with a rope around his neck.
They came into the guard circle, into the dog circle of the encampment; but when challenged answered, and were not stopped.
"Here, Jackson," said Banion at length, "take the rope. I'm going to our camp. I'll not go into this train. Take this pistol—it's loaded now. Let off the *reata*, walk close to this man. If he runs, kill him. Find Molly Wingate. Tell her Will Banion has sent her husband to her—once more. It's the last time."
He was gone in the dark. Bill Jackson, having first meticulously exhausted the en- tire vituperative resources of the English, the Spanish and all the Indian languages he knew, finally poked the muzzle of the pistol into Woodhull's back.
"Git, damn ye!" he commanded. "Cen- ter, guide! Forrerd, march! Ye ——"
He improvised now, all known terms of contempt having been heretofore em- ployed.
Threading the way past many feast fires, he did find the Wingate wagons at length, did find Molly Wingate. But there his memory failed him. With a skinny hand at Sam Woodhull's collar, he flung him for- ward.
"Here, Miss Molly," said he, "this thing is somethin' Major Banion sont in ter ye by me. We find hit stuck in the mud. He said ye're welcome."
But neither he nor Molly really knew why that other man had spared Sam Wood- hull's life, or what it was he awaited in return for Sam Woodhull's life.
All that Jackson could do he did. As he turned in the dark he implanted a heartfelt kick which sent Sam Woodhull on his knees before Molly Wingate as she stood in won- dering silence.
Then arose sudden clamorings of those who had seen part of this—seen an armed man assault another, unarmed and de- fenseless, at their very firesides. Men came running up. Jesse Wingate came out from the side of his wagon.
"What's all this?" he demanded. "Woodhull, what's up? What's wrong here?"

XXIII

TO THE challenge of Wingate and his men Jackson made answer with a high- pitched fighting yell. Sweeping his pistol muzzle across and back again over the front of the closing line, he sprang into saddle and wheeled away.
"Hit means we've brung ye back a murderer. Git yer own rope—ye kain't have mine! Ef ye-all want trouble with Old Missoury over this, er anything else, come runnin' in the mornin'. Ye'll find us sp'ilin' fer a fight!"
He was off in the darkness.
Men clustered around the draggled man, one of their own men, recently one in authority. Their indignation rose, well grounded on the growing feeling between the two segments of the train. When Woodhull had told his own story, in his own way, some were for raiding the Missouri detachment forthwith. Soberer counsel prevailed. In the morning Price, Hall and Kelsey rode over to the Missouri encamp- ment and asked for their leader. Banion met them while the work of breaking camp went on, the cattle herd being already driven in and held at the rear by lank youthful riders, themselves sp'ilin' fer a fight.
"Major Banion," began Caleb Price, "we've come over to get some sort of understanding between your men and ours. It looks like trouble. I don't want trouble."
"Nor do I," rejoined Banion. "We started out for Oregon as friends. It seems to me that should remain our purpose. No little things should alter that."
"Precisely. But little things have al- tered it. I don't propose to pass on any

Another Endorsement of Ripolin. The Gare de Lyon, the Paris Terminal of one of Europe's Greatest Railways

"It's the Famous Ripolin Enamel: I Saw it First in Paris"

For thirty years Ripolin, the famous Holland Enamel Paint, has been the standard all over Europe. For more than eighteen years its superior excellence has been recognized throughout America.

Not only in big, prominent structures, but in thousands of homes you will find Ripolin White Enamel today. Both exteriors and interiors—living-rooms, dining-rooms, bed-rooms, bath-rooms, all have been beautifully and durably decorated with Ripolin at a less cost per room than is possible with lower priced enamels.

Ripolin dealers are in nearly every locality. If you cannot locate one conveniently, telephone to your local Tel-U-Where Bureau for free booklet and name of nearest dealer, or write to the nearest distributor listed here. Suggestions and specifications also sent on request.

They'll fight?"
Will two roosters that have been
asted?"

XXIV

AME now once more the notes of the
bugle in signal for the assembly. Word
sed down the scattered Wingate lines,
atch up! Catch up!"
Riders went out to the day guards with
lers to round up the cattle. Dark lines
the driven stock began to dribble in from
e edge of the valley. One by one the
rralled vehicles broke park, swung front
rear, until the columns again held on the
aten road up the valley in answer to
e command, "Roll out! Roll out!" The
lissourians, long aligned and ready, fell in
r behind and pitched camp early. There
re two trains, not one.
Now, hour after hour and day by day, the
ll of the trail through sand flats and dog
wns, deadly in its monotony, held them
l in apathy. The light-heartedness of
e start in early spring was gone. By this
me the spare spaces in the wagons were
pt filled with meat, for always there were
uffalo now. Lines along the sides of the
agons held loads of rudely made jerky—
ieces of meat slightly salted and exposed
o the clear dry air to finish curing.

But as the people fed full there began a curious sloughing off of the social compact, a change in personal attitude. A dozen wagons, short of supplies or guided by faint hearts, had their fill of the Far West and sullenly started back east. Three dozen broke train and pulled out independently for the West, ahead of Wingate, mule and horse transport again rebelling against being held back by the ox teams. More and more community cleavages began to define. The curse of flies by day, of mosquitoes by night added increasing miseries for the travelers. The hot midday sun wore sore on them. Restless high spirits, grief over personal losses, fear of the future, alike combined to lessen the solidarity of the great train; but still it inched along on its way to Oregon, putting behind mile after mile of the great valley of the Platte.

The grass now lay yellow in the blaze of the sun, the sandy dust was inches deep in the great road, cut by thousands of wheels. Flotsam and jetsam, wreckage, showed more and more. Skeletons of cattle, bodies not yet skeletons, aroused no more than a casual look. Furniture lay cast aside, even broken wagons, their wheels fallen apart, showing intimate disaster. The actual hardships of the great trek thrust themselves into evidence on every hand, at every hour. Often was passed a little cross, half buried in the sand, or the tail gate of a wagon served as head board for some ragged epitaph of some ragged man.

It was decided to cross the South Fork at the upper ford, so called. Here was pause again for the Wingate train. The shallow and fickle stream, fed by the June rise in the mountains, now offered a score of channels, all treacherous. A long line of oxen, now wading and now swimming, dragging a long rope to which a chain was rigged—the latter to pull the wagon forward when the animals got footing on ahead—made a constant sight for hours at a time. One wagon after another was snaked through as rapidly as possible. Once bogged down in a fast channel, the fluent sand so rapidly filled in the spokes that the settling wagon was held as though in a giant vise. It was new country, new work for them all; but they were Americans of the frontier.

The men were in the water all day long for four days, swimming, wading, digging. Perhaps the first plow furrow west of the Kaw was cast when some plows eased down the precipitous bank which fronted one of the fording places. Beyond that lay no mark of any plow for more than a thousand miles.

They now had passed the Plains, as first they crossed the prairie. The thin tongue of land between the two forks, known as the Highlands of the Platte, made vestibule to the mountains. The scenery began to change, to become rugged, semimountainous. They noted and held in sight for a day the Courthouse Rock, the Chimney Rock, long known to the fur traders, and opened up wide vistas of desert architecture new to their experiences.

They were now amid great and varied abundance of game. A thousand buffalo, five, ten, might be in sight at one time, and the ambition of every man to kill his buffalo long since had been gratified. Black-tailed deer and antelope were common, and even the mysterious bighorn sheep of which some of them had read. Each tributary stream now had its delicious mountain trout. The fires at night had abundance of the best of food, cooked for the most part over the native fuel of the *bois des vaches*.

The grass showed yet shorter, proving the late presence of the toiling Mormon caravan on ahead. The weather of late June was hot, the glare of the road blinding. The wagons began to fall apart in the

Another Detachment of the Great Army Following the Hegira of the Mormons Was Now Approaching Laramie

dry, absorbent air of the high country. And always skeletons lay along the trail. An ox abandoned by its owners as too footsore for further travel might better have been shot than abandoned. The gray wolves would surely pull it down before another day. Continuously such tragedies of the wilderness went on before their wearying eyes.

Breaking down from the highlands through the Ash Hollow gap, the train felt its way to the level of the North Fork of the great river which had led them for so long. Here some trapper once had built a cabin—the first work of the sort in six hundred miles—and by some strange concert this deserted cabin had years earlier been constituted a post office of the desert. Hundreds of letters, bundles of papers were addressed to people all over the world, east and west. No government recognized this office, no postage was employed in it. Only, in the hope that someone passing east or west would carry on the inclosures without price, folk here sent out their souls into the invisible.

"How far'll we be out, at Laramie?" demanded Molly Wingate of the train scout, Bridger, whom Banion had sent on to Wingate in spite of his protest.

"Nigh onto six hundred and sixty-seven mile they call it, ma'am, from Independence to Laramie, an' we'll be two months a-makin' hit, which everges around ten mile a day."

"But it's most to Oregon, hain't it?"

"Most to Oregon? Ma'am, it's nigh three hundred mile beyond Laramie to the South Pass, an' the South Pass hain't halfway to Oregon. Why, ma'am, we ain't well begun!"

XXV

AN OLD gray man in buckskins sat on the ground in the shade of the adobe stockade at old Fort Laramie, his knees high in front of him, his eyes fixed on the ground. His hair fell over his shoulders in long curls which had once been brown. His pointed beard fell on his breast. He sat silent and motionless, save that constantly he twisted a curl around a forefinger, over and over again. It was his way. He was a long-hair, a man of another day. He had seen the world change in six short years, since the first wagon crossed yonder ridges, where now showed yet one more wagon train approaching.

He paid no attention to the débris and discard of this new day which lay all about him as he sat and dreamed of the days of trap and packet. Near at hand were pieces of furniture leaning against the walls, not bought or sold, but abandoned as useless here at Laramie. Wagon wheels, tireless, their fellies falling apart, lay on the ground, and other ruins of great wagons, dried and disjointed now.

Dust lay on the ground. The grass near by was all cropped short. Far off, a village of the Cheyennes, come to trade, and sullen over the fact that little now could be had for robes or peltries, grazed their ponies aside from the white man's road. Six hundred lodges of the Sioux were on the tributary river a few miles distant. The old West was making a last gallant stand at Laramie.

Inside the gate a mob of white men, some silent and businesslike, many drunken and boisterous, pushed here and there for access to the trading shelves, long since almost bare of goods. Six thousand emigrants passed that year.

It was the Fourth of July in Old Laramie, and men in jeans and wool and buckskin were celebrating. Old Laramie had seen life—all of life, since the fur days of La Ramée in 1821. Having now superciliously sold out to these pilgrims, reserving only alcohol enough for its own consumption, Old Laramie was willing to [illegible] world wag, and content to twiddle a [illegible] around a finger.

But yet another detachment of the great army following the hegira of the Mormons was now approaching Laramie. In the warm sun of mid-morning, its worn wheels rattling, its cattle limping and with lolling tongues, this caravan forded and swung wide into corral below the crowded tepees of the sullen tribesmen.

Ahead of it now dashed a horseman, swinging his rifle over his head and uttering Indian yells. He pulled up at the very door of the old adobe guard tower with its mounted swivel guns; swung off, pushed on into the honeycomb of the inner structure.

The famous border fortress was built around a square, the living quarters on one side, the trading rooms on another. Few Indians were admitted at one time, other than the Indian wives of the *engagés*, the officials of the fur company or of the attached white or halfbreed hunters. Above some of the inner buildings were sleeping lofts. The inner open space served as a general meeting ground. Indolent but on guard, Old Laramie held her watch, a rear guard of the passing West in its wild days before the plow.

All residents here knew Jim Bridger. He sought out the man in charge.

"How, Bordeaux?" he began. "Whar's the bourgeois, Papin?"

"Down river—h'east after goods."

The trader, hands on his little counter, nodded to his shelves.

"Nada!" he said in his polyglot speech. "Hi'll not got a damned thing lef'. How many loads you'll got for your h'own post, Jeem?"

"Eight wagons. Iron, flour and bacon."

"Hi'll pay ye double here what you'll kin git retail there, Jeem, and take it h'all h'off your hand. This h'emigrant, she'll beat the fur."

"I'll give ye half," said Bridger. "Thar's people here needs supplies that ain't halfway acrost. But what's the news, Bordeaux? Are the Crows down?"

"On the Sweetwater, h'awaitin' for the peelgrim. Hi'll heard of your beeg fight on the Platte. Plenty beeg fight on ahead, too, maybe so. You'll bust up the trade, Jeem. My Sioux, she's scare to come h'on the post an' trade. He'll stay h'on the veellage, her."

"Every dog to his own yard. Is that all the news?"

"Five thousand Mormons, he'll gone by h'aready. H'womans pullin' the han'cart, *sacre Enfant!* News—you'll ought to know the news. You'll been h'on the settlement six mont'!"

"Hit seemed six year. The hull white nation's movin'. So. That all?"

"Well, go h'ask Keet. He's come up South Fork yesterdays. Maybe so *quelq'cho' des nouvelles* h'out West. I dunno, me."

"Kit—Kit Carson, you mean? What's Kit doing here?"

"*Oui*. I dunno, me."

He nodded to a door. Bridger pushed past him. In an inner room a party of border men were playing cards at a table. Among these was a slight, sandy-haired man of middle age and mild blue eye. It was indeed Carson, the redoubtable scout and guide, a better man even than Bridger in the work of the wilderness.

"How are you, Jim?" he said quietly, reaching up a hand as he sat. "Haven't seen you for five years. What are you doing here?"

He rose now and put down his cards. The game broke up. Others gathered around Bridger and greeted him. It was some time before the two mountain men got apart from the others.

"What brung ye north, Kit?" demanded Bridger at length. "You was in Californy in '47, with the general."

"Yes, I was in California this spring. The treaty's been signed with Mexico. We get the country from the Rio Grande west, including California. I'm carrying dispatches to General Kearny at Leavenworth. There's talk about taking over Laramie for an army post. The tribes are up in arms. The trade's over, Jim."

"What I know, an' have been sayin'! Let's have a drink, Kit, fer old times."

Laughing, Carson turned his pockets inside out. As he did so something heavy fell from his pocket to the floor. In courtesy as much as curiosity Bridger stooped first to pick it up. As he rose he saw Carson's face change as he held out his hand.

"What's this stone, Kit—yer medicine?"

But Bridger's own face altered suddenly as he now guessed the truth. He looked about him suddenly, his mouth tight. Kit Carson rose and they passed from the room.

"Only one thing heavy as that, Mister Kit!" said Bridger fiercely. "Where'd you git hit? My gran'pap had some o' that. Hit come from North Carliny years ago. I know what hit is—hit's gold! Kit Carson, damn ye, hit's the gold!"

"Shut your mouth, you fool!" said Carson. "Yes, it's gold. But do you want me to be a liar to my general? That's part of my dispatches."

"Hit come from Californy?"

"Curse me, yes, California! I was ordered to get the news to the Army first. You're loose-tongued, Jim. Can you keep this?"

"Like a grave, Kit."

"Then here!"

Carson felt inside his shirt and pulled out a meager and ill-printed sheet which told the most epochal news that this or any country has known—the midwinter discovery of gold at Sutter's Mills.

A flag was flying over Laramie stockade, and this flag the mountain men saw fit to salute with many libations, hearing now that it was to fly forever over California as over Oregon. Crowding the stockade inclosure full was a motley throng—border men in buckskins, *engagés* swart as Indians, French breeds, full-blood Cheyennes and Sioux of the northern hills, all mingling with the curious emigrants who had come in from the wagon camps. Plump Indian girls, many of them very comely, some of them wives of the trappers who still hung about Laramie, ogled the newcomers, laughing, giggling together as young women of any color do, their black hair sleek with oil, their cheeks red with vermilion, their wrists heavy with brass or copper or pinchbeck circlets, their small moccasined feet peeping beneath gaudy calico given them by their white lords. Older squaws, envious but perforce resigned, muttered as their own stern-faced stolid red masters ordered them to keep close. Of the full-bloods, whether Sioux or Cheyennes, only those drunk were other than sullenly silent and resentful as they watched the white man's orgy at Old Laramie on the Fourth of July of 1848.

Far flung along the pleasant valley lay a vast picture possible in no other land or day. The scattered covered wagons, the bands of cattle and horses, the white[illegible] rising now in scores, the blue of many[illegible] all proved that now the white man[illegible] come to fly his flag over a new frontier.

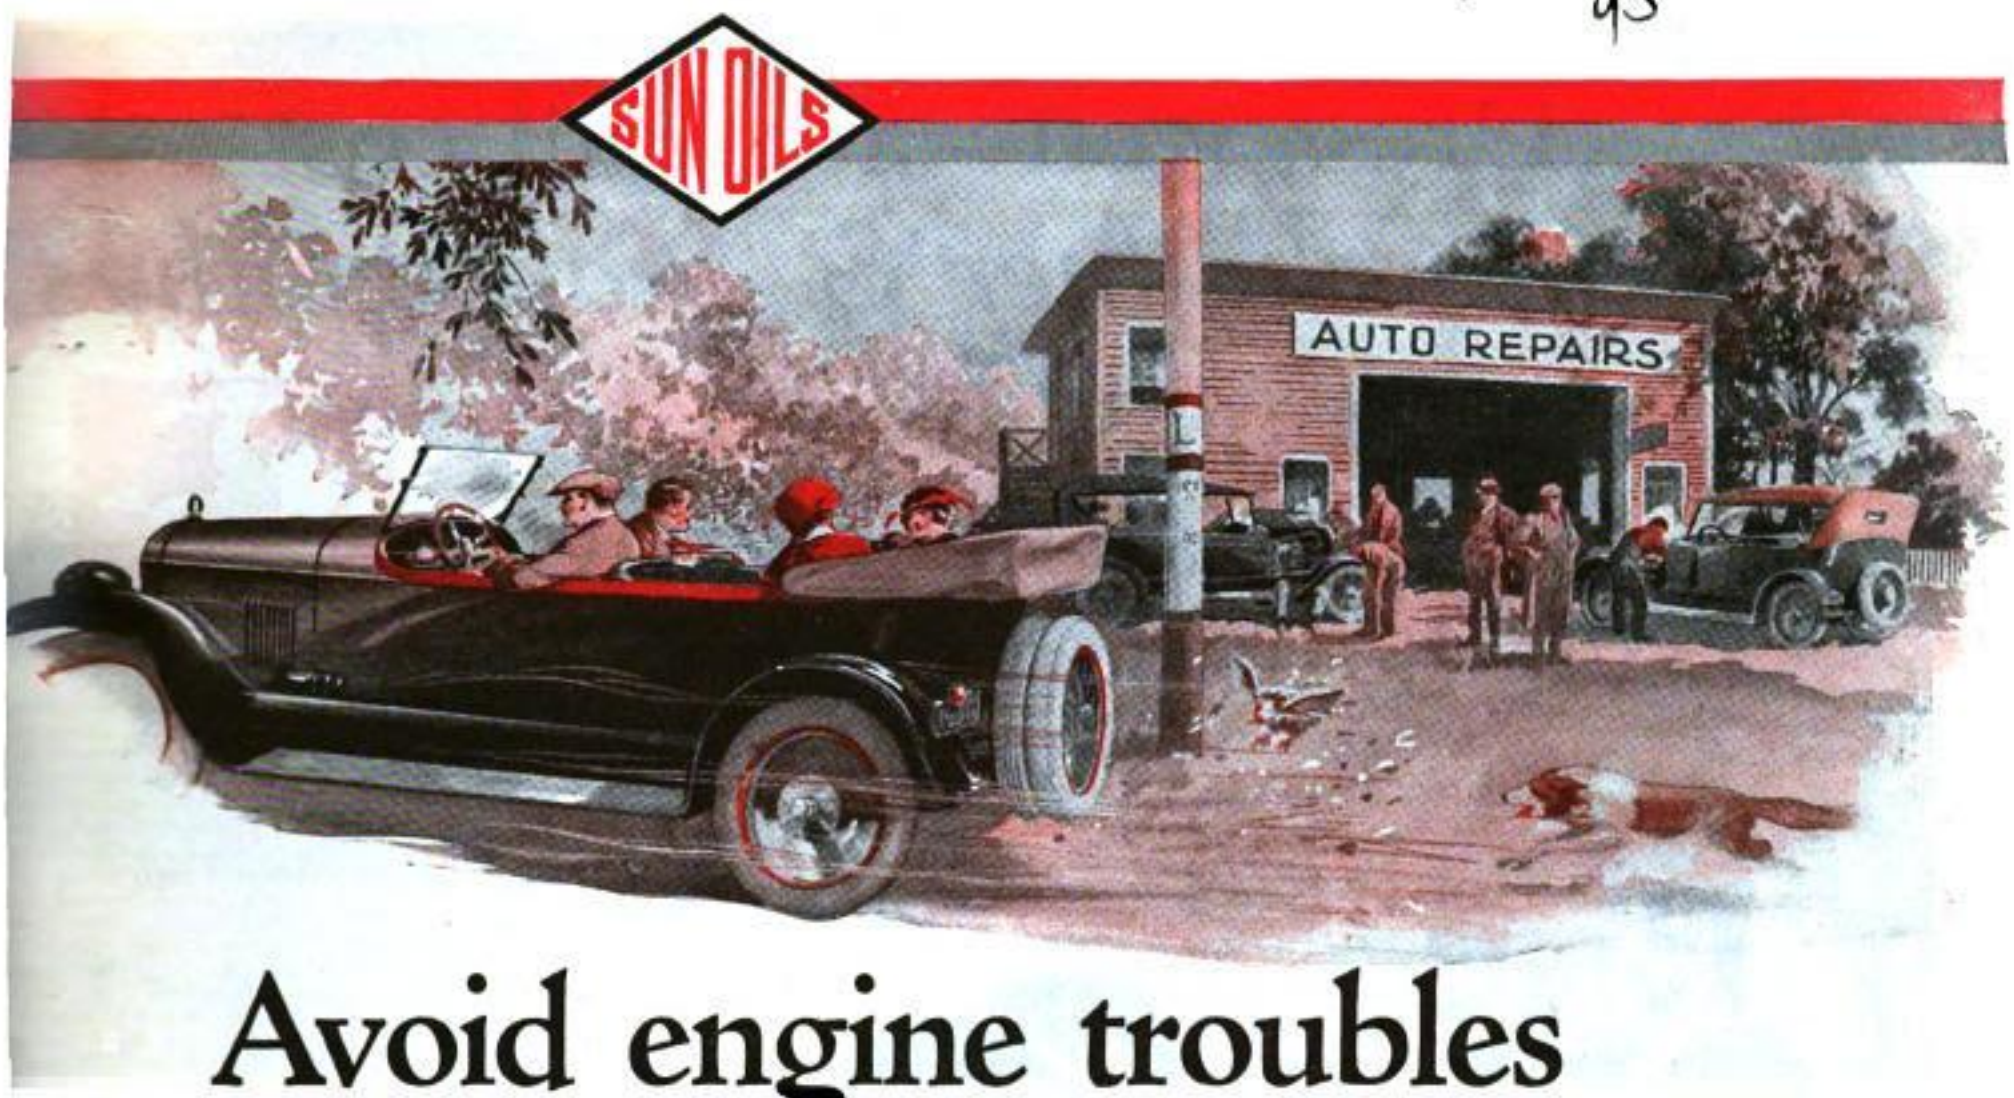
Bridger stood, chanting an Indian [illegible] A group of men came out, also excited patriotic drink. A tall man in moc[illegible] led, his fringed shirt open over a [illegible] breast, his young squaw following him.

"Let me see one o' them da[illegible] things!" he was exclaiming. "That's I left home fifty year ago. Pap wante[illegible] make me plow! I ain't seed one since, I'll bet a pony I kin run her right now! git yer plow things, boys, and fotch on sort of cow critter suits ye. I'll bet I hook 'em up and plow with 'em, too, r[illegible] yere!"

The old gray man at the gate sat twisted his long curls.

The sweet wind of the foothills [illegible] aslant the smokes of a thousand [illegible] Over the vast landscape passed many m[illegible] ing figures. Young Indian men, ma[illegible] Sioux, some Cheyennes, a few Gros Ven[illegible] of the Prairie, all peaceable under the t[illegible] truce of the trading post, rode out f[illegible] their villages to their pony herds. F[illegible] the post came the occasional note of an harmonic drum, struck without rhythm[illegible] a hand gone lax. The singers no lo[illegible] knew they sang. The border feast [illegible] lasted long. Keg after keg had be[illegible] broached. The Indian drums were goi[illegible] Came the sound of monotonous singi[illegible] broken with staccato yells as the bo[illegible] dance, two races still mingling, went [illegible] with aboriginal excesses on either side. [illegible] the slopes as dusk came twinkled countl[illegible] tepee fires. Dogs barked mournfu[illegible] a-distant. The heavy half roar of t[illegible] buffalo wolves, superciliously confide[illegible] echoed from the broken country.

Now and again a tall Indian, naked s[illegible] where he clutched his robe to him unco[illegible] sciously, came staggering to his tepee, h[illegible] face distorted, yelling obscene words s[illegible] not knowing what he said. Patient, h[illegible] youngest squaw stood by his tepee, h[illegible] spear held aloft to mark his door pla[illegible] waiting for her lord to come. Wolfish do[illegible] lay along the tepee edges, noses in ta[illegible] eying the master cautiously. A grumblin[illegible] old woman mended the fire at her own si[illegible] of the room, nearest the door, spreadi[illegible] smooth robes where the man's medici[illegible] hung at the willow tripod, his slatted la[illegible] back near by. In due time all would kn[illegible] whether at the game of "hands," while th[illegible] feast went on, the little elusive bone h[illegible] won or lost for him. Perhaps he had lo[illegible] his horses, his robes, his weapons—hi[illegible] squaws. The white man's medicine wa[illegible] strong, and there was much of it on th[illegible] feasting day.



From the stockade a band of mounte[illegible] Indians, brave in new finery, decked with eagle bonnets and gaudy in beaded shirts and leggings, rode out into the slopes, chanting maudlin songs. They were led by the most beautiful young woman of the tribe, carrying a wand topped by a gilded ball, and ornamented with bells, feathers, natural flowers. As the wild pageant passed the proud savages paid no attention to the white men.

The old gray man at the gate sat and twisted his long curls. And none of them knew the news from California.

Avoid engine troubles

by changing to "summer oil" now

You can't drive your car on the same oil, summer and winter, and *give your engine a fair deal.* (Not unless it is one of a few cars for which one type of oil is specified.)

The wrong oil cripples its power and shortens its life. And it increases your gas and oil consumption and eventually leads to trouble and repairs.

Oils of proper body for winter driving are too thin for almost all engines in warm weather.

Combustion chambers are not properly sealed—compression escapes—the power stroke is weakened—*raw gas gets by the pistons into the crankcase.*

And gasoline-contaminated oil—thinned out and impoverished—is a cause of scored cylinders, worn pistons, damaged bearings and *breakdowns on the road.*

Your engine is a good engine—built for power and speed. But you must treat it fairly—*give it the right oil*—if you want these results from it.

Why not insure its proper lubrication—in warm or cold weather—by using the right type of SUNOCO Motor Oil? *Now is an opportune time to begin.*

Drive your car to the nearest SUNOCO dealer. He will drain the "dead" oil from your crankcase and refill with the type of SUNOCO *designed for summer use* in your car.

SUNOCO is unlike any other oil. And this trial in your engine will prove its vast superiority.

Being wholly-distilled—NOT *a compound of a light and a residual oil*—SUNOCO will not clog your engine with carbon, foul the spark plugs or gum the valves.

And SUNOCO is made in six scientifically refined types to provide a free-flowing oil of proper body *for any condition of service.*

Don't put off changing to summer oil. Delay simply invites trouble and expense. And look for the SUNOCO sign. It's the mark of a dealer who sells lubrication—not just "oil."

SUN COMPANY

Producer and Refiner of Lubricating Oils, Fuel Oil, Gas Oil, Gasoline and Other Petroleum Products

Won't Leak
Because They're Sealed
With Oil

IF your piston rings leak your engine "eats up gas" and your cylinders become carbon-clogged.

No-Leak-O Piston Rings won't leak.

Their "oilSEALing" groove, a specially cut groove, found only in No-Leak-O, collects and holds a film of oil between piston and cylinder wall.

This "film" forms an impassable stop between combustion chamber and oil pit. Both exploding gas and lubricating oil stay where they belong.

You get full five gallon power for every five gallon of gas in your tank, and no carbonized cylinders with NO-LEAK-O Piston Rings.

THE GENTLE CRIMINAL

(Continued from Page 13)

dozen leagues, associations, committees and societies of which, as usual, he was treasurer. It remained only for him to determine how and when and whither he should go thereafter.

One warm June morning, when the red thread in the tube of the thermometer by the door was climbing steadily for the first time that year, Warren Selfridge came into the bank in his Palm Beach suit, wrinkled from its winter in the press, and walked over to the cashier's desk.

"Gid," he said, mopping his forehead and smiling affably, "the old lady's got her mind made up to a trip. We set up half the night figurin' it out. She wants to start Sat'day."

The cashier glanced out the south window. The promises of spring were being unmistakably redeemed in every shrinking snowbank on the mountain tops; in the tumultuous booming of Little Creek under the bridge on Main Street; in the outcry raised by the red-tipped blackbirds swooping in noisy clouds from the tops of the full-leafed cottonwoods to the acre piece where Milt Downer was planting corn, and back again; and in the languor of the soft, sweet air. Worrick continued to snap rubber bands around bundles of canceled checks.

"It's nice weather, all right," he volunteered.

"Yes, that's what the old lady says. She wants to go up to Oregon an' around."

"I see."

"We'd prob'ly be gone quite a spell, Gid, so I want to check things up with you. 'Fore we start I'll give you a list of the places where you c'n telegraph me."

The president went to his own desk, humming a little old tune. He took his cashier's probity and trustworthiness for granted with every syllable he had uttered, with his casual announcement and turning away, with the very lines of his broad back. His voice rose now and again in that humming. Several times he went into the vault for papers or books. Just before noon he called Worrick in.

"I don't know's I'd ought to go for long this summer," he began doubtfully. "I'd forgot about quite a jag o' things."

"I guess I could manage," Gideon said. "I always have."

"Yes, you always have, Gid. But there's matters here"—he waved a hand—"well, let's see. First of all, there's the water-company note. Due this month. They won't have the money."

"Not likely."

"Not possibly. Next here's Giff Duncan's note—extension on his loan—twenty-eight hundred. He said he'd have it by the fifteenth. Don't reckon he will. An' Mrs. Dorrit's havin' bad luck with that millin-ary business of hern. Only eight hundred, to be sure, but we might need it." The president broke off. "Consarn it," he cried aggrievedly, "I'm always gettin' my old stiff leg pulled! Never have sense enough to say no!"

"You've kept going, though, for quite a while."

"Oh, laws, yes! Sure! Bungler's luck. Well ——"

"The examiner hasn't been here this spring," Worrick reminded him.

"No. But he don't worry me any. Templeton always gives me plenty of warnin'. Lucky he does. Saves a power of scandal, I expect. No, he won't bother none. Just wire me if you hear from him, or ask him to wait till I get back."

"That might make him suspicious."

"What? Templeton? Templeton suspicious of me?"

"No. But of me, perhaps."

The president's glasses fell down on his nose and his mouth opened. He looked at his cashier in stupefied amazement.

"What in nation you talkin' about, Gid Worrick?" he cried when he could get his breath. "Where you pickin' up such fantastic idees? Suspicious of you? Why, drat my suspenders, the man that's suspicious of you'd ought to have his head examined—that's the fact! Ho-ho-ho! That's the funniest thing I've heard tell of since Bije Linder got drunk at revival!"

The cashier winced a little, but he only said, "Well, you never can tell, Mr. Selfridge. How about the mortgage on Rich Galloway's timberland?"

The president paused in his mirth and shot a quick look at Worrick.

"Don't recollect tellin' you anything about that deal, Gid," he said.

Worrick smiled one of his rare, lugubrious smiles.

"That shows you can't trust me as much as you think, Mr. Selfridge," he observed. "I happened to find the papers when I was looking for something one day."

"Humph! Did, eh? Can't think what in nation you was lookin' for to run onto that. But never mind. Rich, eh? Well, now, Rich needed that four thousand mighty bad, and he's goin' to come out all right in the end."

"The note is overdue."

"Well, I know it is—I know it is. But plague on it, what you want me to do? If I'd 'a' called Rich's note in I'd 'a' ruined him and had to take the prope'ty over. An' I wouldn't give ninety cents an acre for it as it stands."

"You mortgaged it on a valuation of ten dollars an acre."

"Sure I did! Certainly I did! What of that? If those power people have to build a narrow gauge up past Rich's they'll pay him more than four thousand for right of way alone. Never thought of that, did you?"

"I haven't thought at all, Mr. Selfridge," Gideon replied. "I only asked about the mortgage so I'd know what you wanted me to do."

"Don't want you to do anything."

"I see. That's all then?"

"Certainly it is. You're all right, Gid, and I ain't no complaint to make about you at all. You're a good cashier and you earn your money. Fact is I been thinkin' you earn more'n you been gettin'. But when it comes to loans and mortgages, and so on and et cetry, you've got to leave that to me. Now ——"

The Selfridges left before daybreak on Saturday morning, according to Mrs. Selfridge's original plans. They usually followed Mrs. Selfridge's original plans.

Two weeks passed, each one of them bringing to Gideon Worrick some fresh and sharp reminder of the lowly position he held in Derbyville, and his mind was made up. He had known from the first that he could not loot the bank for any large sum of money, simply because there was never a large sum in its vault; but now he was determined to find out exactly what there was to be stolen. After dinner one evening at Mrs. Cassity's select boarding house on Inyo Street, therefore, the cashier went to the bank to make inventory.

The cash on hand totaled seven thousand dollars and odd. There was less than eight hundred dollars in a special gold reserve the president kept in a small safe in the vault. There was a sack containing one hundred dollars that Mrs. Stoney, the cautious little widow woman, had intrusted to the bank's care but had not deposited to her account. There were odds and ends of trifling sums set aside for special purposes, most of them known only to Warren Selfridge; and there were the funds, kept in special envelopes, of which Gideon himself was the treasurer and custodian. Outside of notes, mortgages, stocks and bonds, I. O. U.'s and various evidences of indebtedness, none of which could be counted as cash, eight thousand dollars would cover the amount available to the prospective embezzler if he started that night. As he could not do that he had to figure that the total would vary day by day. He looked at a calendar, sat down at his own desk and began to plan.

The following Monday was a state holiday; if he left Derbyville Saturday afternoon, ostensibly for a pleasure trip to Merced or Stockton, it would be Tuesday before any inquiry for him would be made or any search begun. In his desk was a railroad time-table. From it he constructed an itinerary that would put him over the Mexican border not later than Monday morning, several hours before the hue and cry in Derbyville could possibly be raised. It was true that there was little immediately beyond the Mexican line to attract a country bank cashier of Gideon Worrick's temperament and habits; but he would be safe from pursuit there, and could arrange further flight at his leisure. So far so good. He went to Mrs. Cassity's and to bed, but he slept little.

What puzzled him was that all this imminent enterprise seemed a dream. Try as he would he could not imagine himself actually going over the border, a fu It was much easier to think of him dying of old age, in the dim future, cashier's desk in the State Bank of D ville.

On the following morning he mad first step towards flight, however. H marked to Henry Peacock that he th he'd take a little trip down to the over the week-end. Henry bit a pen and grunted abstractedly. But he remember to tell his wife and two sm daughters that evening at supper, Gid and Anne and Maud Peacock we dependable as a chatty evening pap Derbyville when it came to dissemin the news. So that his bridges shou set afire behind him, Gideon that afte bought a one-way ticket to Stockto the 1:10 train Saturday. Further cleaned up his room at Mrs. Cassity's night, burning all his letters and papers inspecting the ashes carefully to see no scraps were left for the feasting o rious eyes. Friday morning he st packing. Also, he bought a state ma his way to the bank and spent a few utes conning it to help him with the ad ture southward towards that elusive sometimes illusory Mexican line. By day noon he was practically ready for great crime.

Henry Peacock went to lunch at his u hour. The bank was empty of custom Main Street was drowsing in the sun. or three blue flies buzzed intempera against the plate-glass windows, and o Doctor Witherspoon's setters ambled panting, sniffed along the counter and down in a shaded corner. Gideon Wor went through the motions of being a tru and law-abiding and respectable cash but all his thoughts were on a defalcat and embezzlement of the funds, down the last penny, of the State Bank and divers and sundry trusts, organizatio leagues and committees of the village. I little more than twenty-four hours the commodation would roll out of the Der ville station, carrying among its unsuspe ing passengers a bank wrecker!

Gideon looked up from his routine someone pushed in through the swingi screen doors of the bank. For a moment two he stared without comprehending t phenomenon presented. There was precedent for it, and Gideon was a litt slow to move to meet it.

Frank Van Lythe, the cattle baron, i his picturesque cream-colored corduroy sui his shining boots and his broad sombrer with its famous grass-green silk band s cured with an enormous golden disk, wa entering the State Bank for the first tim in its history.

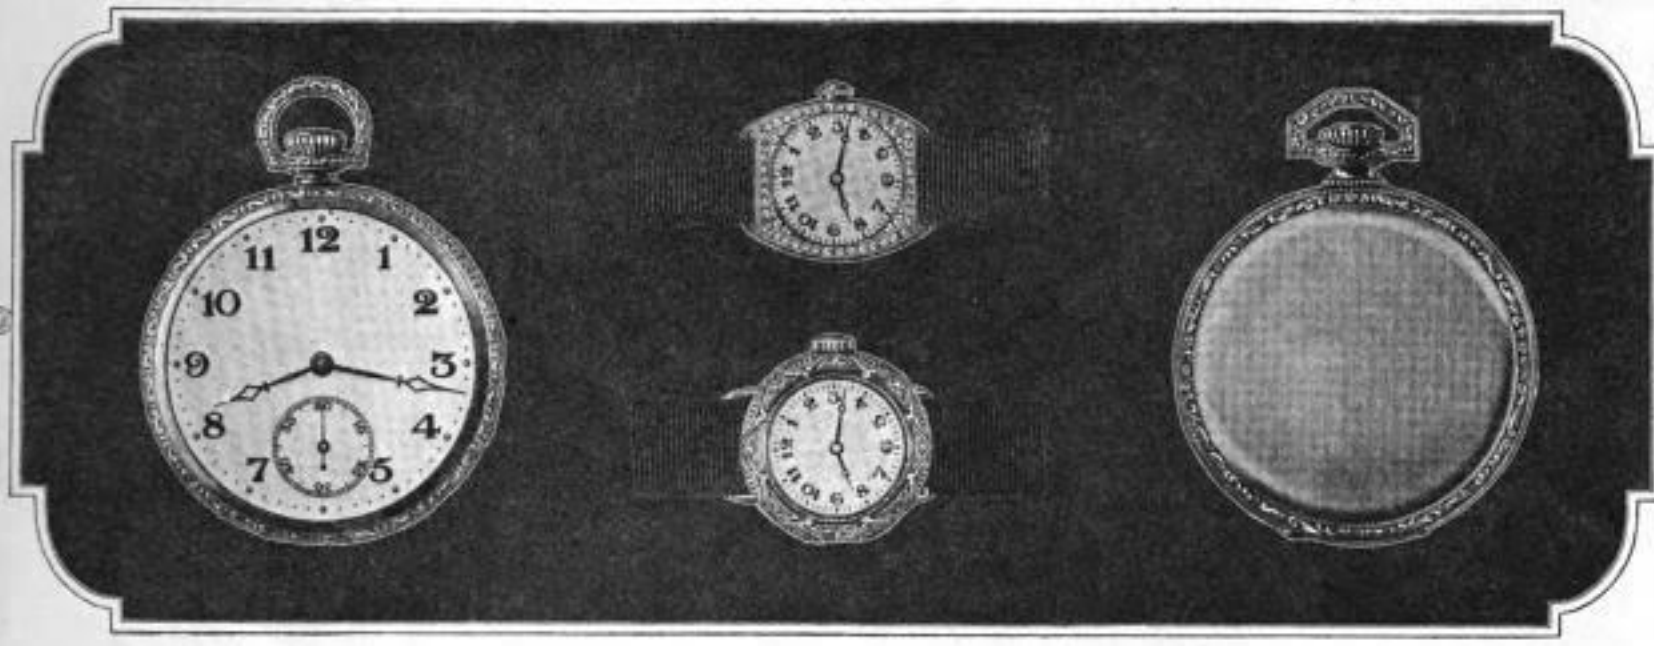
These two—the surprised and obfus cated cashier and the millionaire stock man—held a fifteen-minute conference. At the end of that conference Van Lythe walked out of the bank with five thousand dollars of its funds, in cash, in his wallet. Cashier Gideon Worrick had broken every rule of his life and of his employment by Warren Selfridge; he had met an emergency with an air of grave carelessness, as though accustomed to doing so, and now he moved in a daze.

He had made a loan—he, himself, Gideon Worrick, without so much as glancing at the carefully penned itinerary of President Selfridge and his wife!

After that, Gideon felt, anything might happen. And, as is often the case after months in which nothing at all happens, something did.

Gideon had not recovered from the shock and surprise of Van Lythe's visit and errand; he had not yet telegraphed the president, and was beginning to wonder whether he would do so; and he had decided not to communicate his news to Henry Peacock, when the waning hours of the banking brought in through the doors Mrs. Dorcas Stephens. Mrs. Stephens was the relict of a first citizen some years deceased, and was a temper-touched and irritable old lady whom the villagers scrupulously avoided crossing. Gideon greeted her with a mechanical politeness, but she ignored his amenity.

"Nice day, Mrs. Stephens," Gideon said, reaching for the check she presented.



"Is it?" the old lady replied tartly. "I ain't noticed. I'm movin' an' tel'ble busy. What's the matter, man?"

Wadsworth Cases

MAKE WATCHES BEAUTIFUL

Designs in Wadsworth White Gold have the brilliance of full-cut diamonds

WHEN a manufacturer achieves a greater perfection in a product, immediately the thing produced becomes a standard by which all others of its kind are judged.

Such is the story of Wadsworth white gold in Wadsworth cases.

For several years there have been watch cases made of white gold. But it remained for Wadsworth to refine this precious metal to the point of *perfect* adaptability to watch cases.

The Wadsworth creations pictured here bear worthy evidence to this greater Wadsworth achievement. Here are cases with a new charm, with a luster that will remain undimmed through the wear of years—

Cases fashioned in a metal harder and more durable than yellow or green gold or silver—

Cases that disclose, in their hand-chasing or engraving, a brilliance as of full-cut diamonds.

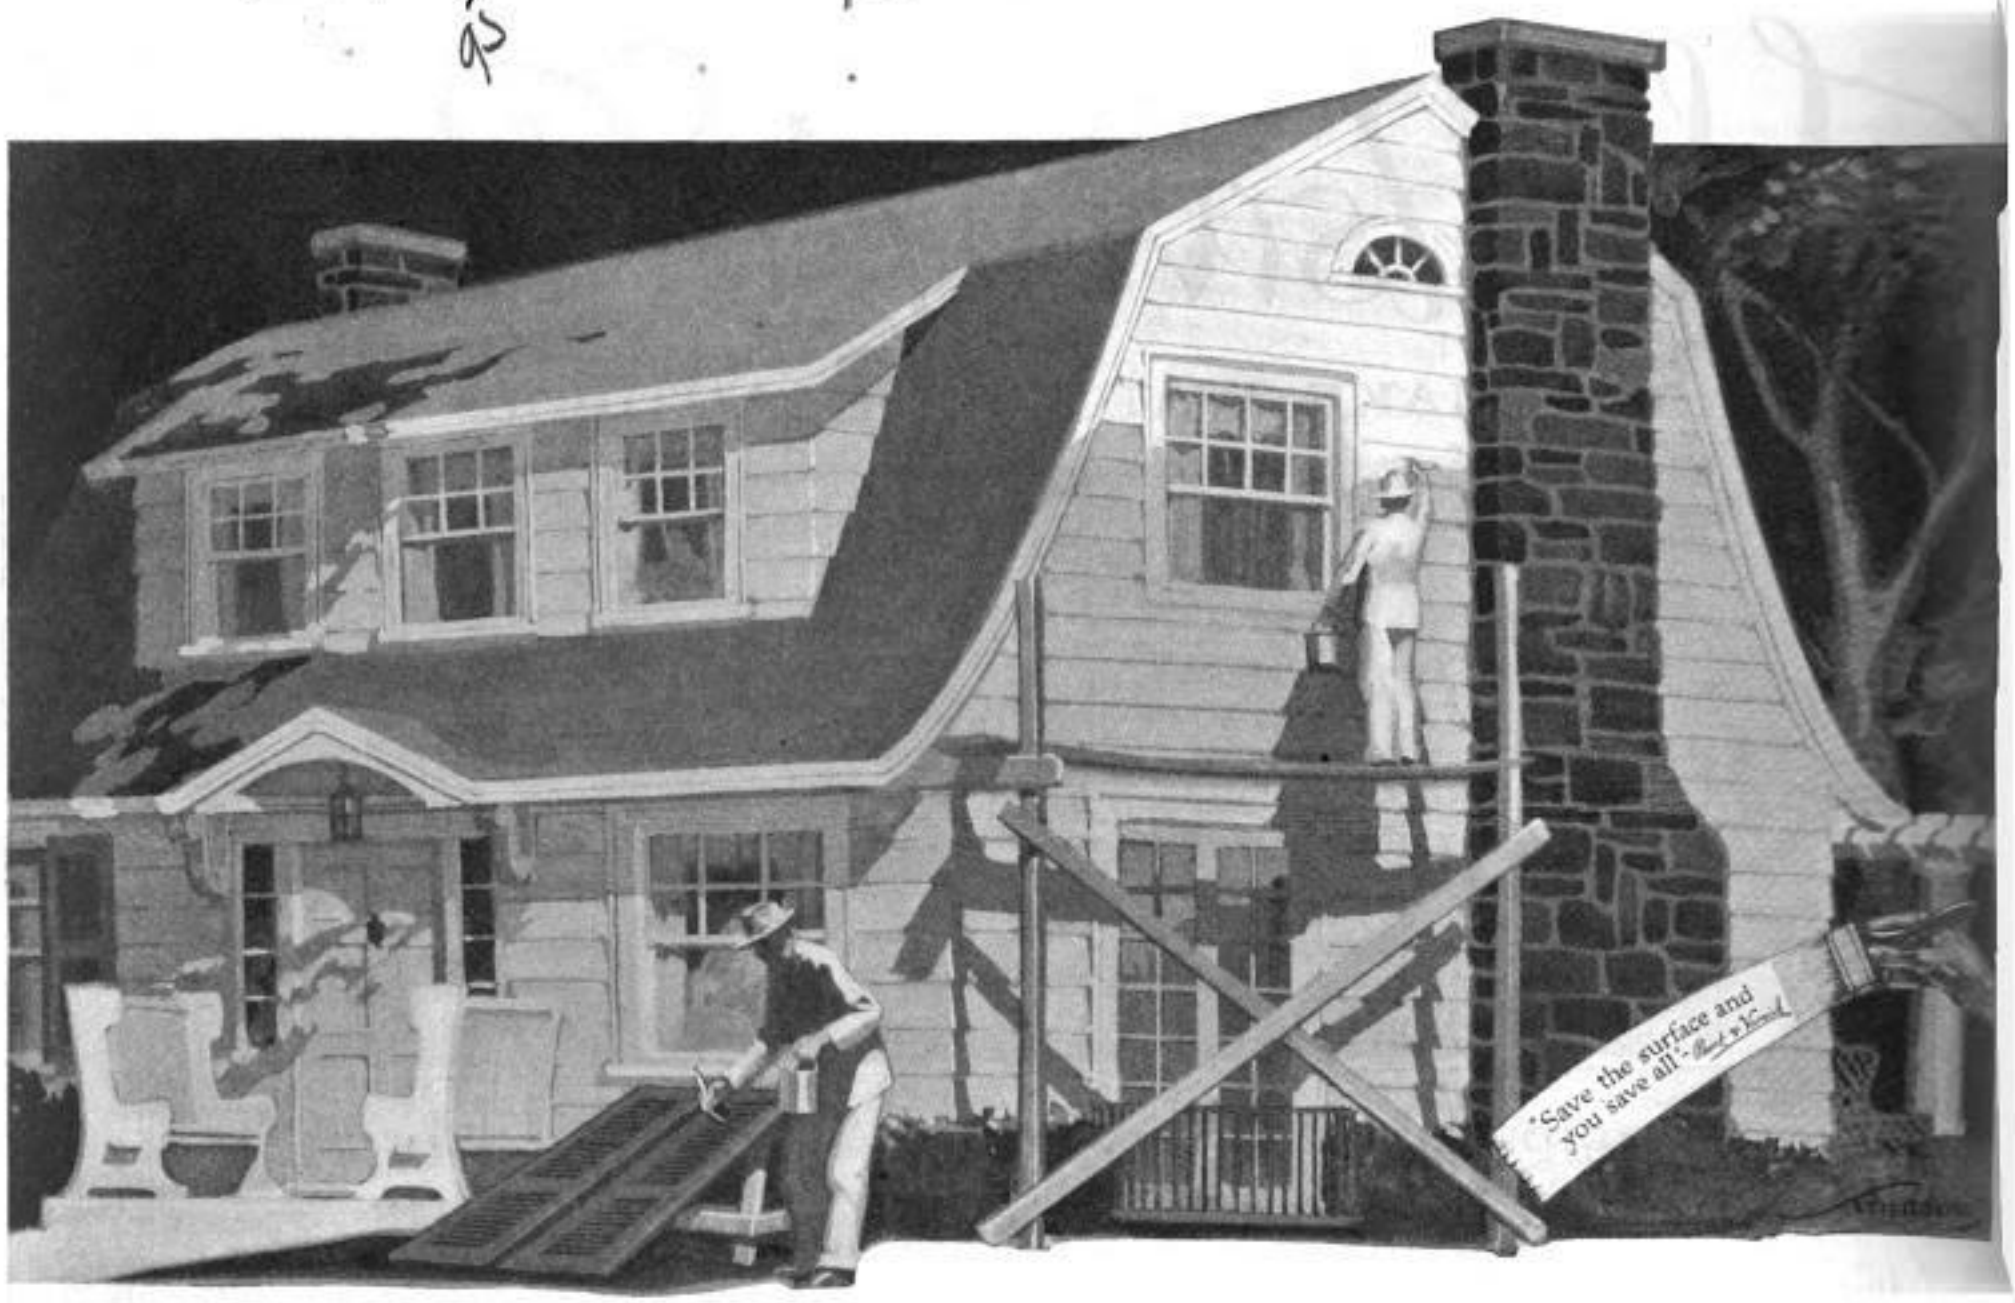
These Wadsworth designs, adapted from the works of the great artists of the ages, will mark your watch as more than a mere timekeeper. Your pride in its possession will be the greater, for in it will dwell something of the spirit of the masters.

Unsurpassed for beauty, and for endurance and exactness of fit as well, the Wadsworth cases in white gold remain in keeping with the modest purse.

The watch—a product of two industries

With great skill the movement maker constructs the movement, an intricate mechanism for the measurement of time. But, for the completion of the watch he now turns to the case maker, who employs such artistry in the designing of the case as will make the completed watch a beautiful article of personal wear.

Thus it is that for thirty years Wadsworth cases have dressed and protected the watch movements of leading manufacturers and importers. Many of the most beautiful, most popular designs with which you are acquainted are Wadsworth creations.



When you buy a watch, select a movement that your jeweler will recommend and insist that it be dressed in a Wadsworth case. The Wadsworth name is your assurance not only of correct design but of the finest material and workmanship.

BEAUTY AND PROTECTION

Plus Lowest Cost Per Square Foot

The retail price of *Lucas Tinted Gloss Paint* is as high, if not higher, per gallon than any other house paint on the market.

And yet it is actually the lowest priced paint you can buy.

There are three important elements that determine the actual cost of paint—so consider them carefully.

First—Thorough and complete grinding in a *Lucas* factory reduces the pigments to such a fineness that *Lucas Tinted Gloss Paint* has a covering capacity of nearly double that of ordinary paint. One gallon of *Lucas Tinted Gloss Paint* covers 400 square feet or more, depending upon the condition of the surface,—100% more than ordinary paint. This immediately reduces the price of *Lucas Tinted Gloss Paint* to a *lower cost* per square foot.

Second—The exceptionally high percentage of pure raw linseed oil used in *Lucas Tinted Gloss Paint* produces a full, even gloss of enduring beauty. Then, the hours of heavy milling that blend the various elements into *one* perfect paint product assure longer life and greater durability. Thus, *Lucas Tinted Gloss Paint* costs very much less per year of service.

Third—In painting the average house the paint represents about one-third of the cost, and the labor two-thirds. So that it costs just as much in labor to put on a paint that will last only two or three years as it does to put on a good paint that will give good service five years or longer.

Thus, paints costing less than *Lucas Tinted Gloss Paint* are actually more expensive. *Lucas Tinted Gloss Paint*, in Beauty, Spreading Qualities, Protection, and Durability, is not an expense. It is an investment.

e cashier had picked up the check ssly, expecting the usual demand for r ten dollars which Mrs. Stephens for her weekly budget, and had been dumb by beholding that it called for 50.

ere was at that moment in the State vaults exactly $3697.14.

xcuse me, Mrs. Stephens," Gid Wor- gulped. "I—you—this check ——"

ook here, young man," Mrs. Stephens ed, "don't stutter and stare at me way! My bank book shows that's the nt you got here belongin' to me, an' t it."

ut, Mrs. Stephens ——"

s'pose you ain't got that much here."

h, absolutely! Of course we have! ——"

Then fork it over. I'm goin' down to with my daughter Elmiry, in Fresno, her husband's brother is comin' up n my place for a spell. I ain't in the of tellin' my business to every ninny wants to know it, but I'd just as lief you. D'ye want to find out anything about me?"

deon smiled weakly.

I didn't mean to be prying," he said. such a surprise to me, that's all. How h of this would you like in cash?"

All on it."

But a cashier's check or a draft ——"

You heard what I said, didn't you? old-fashioned maybe, but I know what ant."

It's only that cash will be pretty bulky carry ——"

The angular and sharp-faced widow smiled mly.

"You hand me over my money! I'll dertake to carry it, all right."

"Very well," Gideon said stiffly.

He was not angry or spiteful—just nned. Mechanically he counted out s. Stephens' money. All but some sixty lars he was able to give her in bank notes; e rest was silver and pennies. She glared him when he handed her the heavy k, but she was not the sort to admit fusion, and she walked out with her d high. Gideon Worrick sat down hard d stared at the floor.

His loan to Frank Lythe had been made r several reasons—because the old cattle- an had a peremptory and compelling way ith him; because the cash deal for the nsummation of which he declared his ed of the money was one Gideon could e the great profit in; because he had al- ays felt that Frank Lythe would become a atron of Derbyville, to the great advan- ge of the town, if he were properly han- led; and finally because he was in revolt nyway and welcomed this opportunity to xpress the fact. Under ordinary circum- tances that loan would have been possible without hampering the bank for cash, since its normal routine was simply that of a clearing house for the merchants and towns- people, with their checks drawn for the most part on the State Bank itself. Van Lythe, of course, was as good as the United States Treasury, and he had promised to return the money within a few days. Gid- eon had thought that it would be a nice little sum for President Selfridge to receive in the midst of the confusion and chaos caused by the cashier's imminent flight with what moneys were left.

But now there were no moneys left. Mrs. Stephens had seen to that. Gideon tried to laugh. His plans for robbing the bank and departing were still flawless, with the single exception of this consideration—that some- thing under one hundred dollars remained to be embezzled. Of course he could stage an embezzlement novel in the annals of crime: he could flee with this small amount, paying the expenses of the flight and re- sultant outlawry out of his own pockets. That, it seemed, was all that was left for him. He would carry it through. But he wondered if, leaving ruin and consternation behind him, he would not provide a spec- tacle savoring more of comedy than of high tragedy.

Here Monk Moore wandered in, whis- tling. Monk was a silly boy of seventeen, whose brain was addled and who functioned as errand bearer and messenger for the village. He stood in the front door of the bank for several minutes, gazing as though fascinated at the ceiling and whistling shrilly.

Then he sat down on the floor, took off one shoe, shook a pebble from it, rose with the shoe in his hand and crossed to the cashier's window.

"Go on away, Monk," Gideon said me- chanically. "I'm going to close the bank now."

"Close it?" Monk echoed vacantly with a giggle. "What for? Shut the door? Keep Monk out? Where's your money? You got a lot of money? You're rich, ain't you? I had a dollar once. Drummer give it to me. Know what I spent it for?"

"Candy, I guess, Monk," Gideon re- plied. He was slowly counting the little heap of cash and his mind was not on the idiot boy. "Run along, Monk; I'm busy."

"You busy? So'm I. I'm busy. Got to take a telegraph. Know who to? Don't, eh? It's to you."

"Well, hand it over, Monk; that's a good boy."

"I'm a good boy. You bet! Hid the telegraph. In my hat. Looka here."

He peered around cautiously, took off his cap, extracted from it a buff envelope, gazed at it a moment as though trying to remember what it was, then put it down on the ledge and ran out abruptly, whis- tling and shouting and swinging his shoe around his head.

Gideon picked up the envelope, slit it idly, read the thin sheet inside:

SELFRIDGE,
STATE BANK, DERBYVILLE.

Arrive there Sunday A.M. Want to check up your business in time to make east-bound at three Sunday for Truckee. Please be ready for me. B. S. TEMPLETON.

The state bank examiner's deputy! Gid- eon tried to laugh and failed. Perhaps when he was in Mexico, Sunday night late or Monday morning, he would be able to laugh. But he couldn't now. He had some twenty-one hours ahead of him as cashier of the State Bank of Derbyville, and it began to appear that at least eight of those twenty-one hours would each be made up of sixty minutes jammed full of grief.

All that afternoon and evening and most of the night Gideon spent trying to see a way out. It was too late now to summon President Selfridge. If he went to Frank Van Lythe and frankly confessed that the bank was without cash he would probably fail to get help from that source, in time, and he would most certainly end all chance of bringing any good to Derbyville from the irascible old stockman. Better to go down in defeat than to do that. If Presi- dent Selfridge had ever trusted him before as messenger or bank's representative he could have taken some of the securities down to the Valley by automobile and there have borrowed enough cash on them to keep the institution open for a few days. But they would probably arrest him in Stockton for embezzlement, and even Gid- eon could see the rich and spicy humor in that situation! No, he must stay by his guns. His train would not leave until 1:10 on Saturday and up to that time he was cashier of the State Bank. That was the simple logic of his position as he saw it.

He opened the doors on Saturday morn- ing with total cash resources of $92.64, ex- clusive of trust and treasurer's funds. The first customer to appear was Terry Casey, the plasterer. Terry was full of rich Irish humor that morning, and he made cheerful remarks to which Gideon found himself hard pressed to rally. For Casey wanted to draw—and did draw—the sum of seventy- five dollars to make a quarterly payment on his two-acre piece at the edge of town.

Immediately Casey had gone out, caro- free and joyous, Gideon took down an old calendar, reversed it, found himself a stub pen and a bottle of ink and began to design a notice, reading:

THIS BANK TEMPORARILY CLOSED
TO REOPEN ——

On his labors entered Ed Walsh, the plumber. The cashier watched him breath- lessly. Walsh nodded, walked to the side- wall writing desk and reached for a pen. Was he going to deposit or draw? The plumber, his back to the cashier, was very deliberate. He took a long time—hours, it seemed. Then Gideon sighed with relief, and hastily whisked his sign under the counter. There were bank notes in the plumber's knubbly hand. Walsh, with con- versation, deposited $28.50 and went away.

The two McCormick girls, from over the hill, came in and drew twenty-five dollars. Gideon took an unreasoning dislike to them that he had never felt before. After them came Sam Shore, and on his heels Parrott, the cashier of the water company. Gid- eon's heart stopped beating. He had

Where the important value is always hidden

Two different raincoats—the same price. Which is the better? Even experts are often fooled. A clever makeshift may look as well as the best raincoat ever made.

The real value of a raincoat is always hidden. It depends both on the quality of the rubber itself and on how thoroughly every crease and crevice in the fabric has been water- proofed. Looks alone are no guide to quality.

That's why it will pay you to look for the name Raynster. Raynsters are made and backed by the oldest rubber organization in the world. Everything that money and skill can provide is used to give you real protection.

Many different Raynster models, from rug- ged rubber-surface types to smart tweeds and cashmeres with the rubber hidden inside. Special types for boys, too. Whether you want a raincoat for work, motoring, or business, there's a Raynster built especially for you.

Look for the name Raynster! If your dealer hasn't just the type you want, he can get it in no time from our nearest branch.

For the woman who's too busy to listen to reams of advice

MOST women have had about all the housekeeping advice they can stand. Now for some real *help* with the housework.

If you have ever used a Hotpoint Electric Iron, you know by experience something at least of what electricity *can do* toward taking the drudgery out of housework.

But the Hotpoint people have met the American woman's needs *at other places* besides the ironing-board. The story is better told in pictures in this particular instance.

And it might be said also, that the following scenes have been drawn with utmost care as to *practical fidelity*.

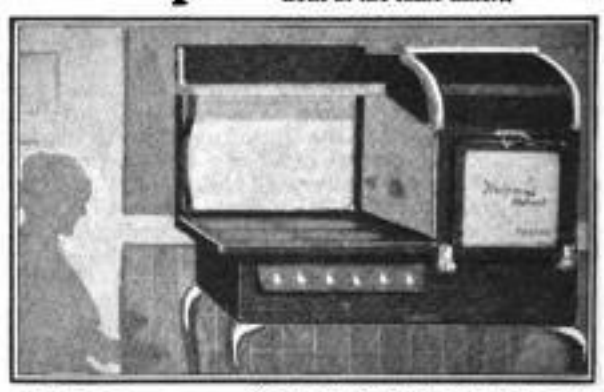
7 a.m. The Hedlite Heater, with its glowing heat for bedroom or bath.

7-15 a.m. The Immersion Heater, for heating shaving water or the baby's milk.

7-30 a.m. The Percolator—uniformly good coffee day after day.

9 a.m. The Vacuum Cleaner—equally effective on carpets, rugs and bare floors.

10 a.m. The Electric Iron—the most celebrated electric iron in the world. Its point even hotter than the rest of the iron.



12-20 p.m. The Radiant Grill—boils, broils, fries and toasts, any two operations at the same time.★

3 p.m. The Curling Iron—the hair lies *flat* in the iron, and a uniform wave is assured. The only electric iron that gives a true Marcel wave.

4 p.m. The Teapot—continuous heat. Tea is served without jumping up to reheat the water.

5-30 p.m. Hotpoint-Hughes Range—the most responsive cooking equipment a woman ever had in her kitchen.

The Hotpoint Utility Set

It might have been called "The Intimate Set"—so *personal* is its service. The three-pound *Iron* finds many opportunities to help—freshening up a blouse, for instance, or pressing out a vestee. The Curling *Iron* is quickly heated in the place provided for it in the Iron. While for heating a little water in a hurry, one simply reverses the Iron in the *Stand*—and it becomes a hot-plate. The whole comes in a Cretonne-covered case which opens out into a compact *Ironing Board*.

(Continued from Page 69)

forgotten the water company's weekly pay roll. It was eighty-five dollars. Before either of the two customers could reach his window he had his sign out and was about to put it up in his wicket.

Then he had a brilliant inspiration—whisked the sign away once more. In the vault was Mrs. Stoney's $100 in gold. He walked back coolly, rifled the sack deliberately and returned to his place. Parrott was taciturn, and Gideon wanted very much to tell him that, as the water company had been operating for five months on the bank's money, it might be more decent in him to show a certain apologetic reticence or shame now. But he held his tongue, and Parrott took the money as though it belonged to him and went out. Sam Shore desired to draw twenty dollars, and was given it.

"What is that shiftless farm hand going to do with twenty dollars?" Gideon thought angrily. But again he forbore expressing his thoughts.

As Shore disappeared through the door Henry Peacock, at his high desk against the wall, coughed and looked up from his work. Gideon started. He had not thought of Peacock before.

"By the way, Henry," he said, catching the bookkeeper's eye, "Mr. Selfridge and I were talking over that loan to Richmond Galloway before he left, and we aren't just satisfied about it."

Peacock caught the unusual use of the plural pronoun and looked at the cashier quizzically. But he only said, "He's bound to be slow, Rich is. Not crooked, don't suppose, but ain't much idea of business, I'd say."

"That's what we were thinking, and I'll tell you what occurred to us: We'd like you to get a rig and drive up to Galloway's place. Don't tell him what you've come for. Just look around and see if you can make out what he's doing."

"I can go out this afternoon, I guess."

"No, you couldn't make it comfortably. It's a long drive. You deserve a change anyway, Henry. Get the wife and spin out there right now—take a lunch, maybe. No reason why you shouldn't."

The old man fairly beamed.

"Well, now, I ain't sayin' Sarah and I wouldn't like a buggy ride. Of course if Mr. Selfridge ——"

"Absolutely!" the cashier interrupted. "Get out with you!"

"Well, of course, it's for you to say, Gideon."

The old accountant shuffled across towards his coat hook, shedding his ink-smeared office jacket as he went. He went back to close a book and straighten his pens. Then rubbing his hands and chuckling he moved towards Gideon's desk. The cashier kicked his closing sign farther out of sight.

"Sarah and I ain't been buggy ridin' since I courted her, I do believe," Peacock averred. "How about the cash f'r the rig, Gideon?"

Gideon replied airily.

"Oh, charge it to the bank, Henry," he said.

And it struck him afterwards that that was one of the richest pieces of comedy in this whole phantasmagoria.

With the bank to himself, Gideon faced its dissolution with less anxiety. He would keep it going as long as he could. He did not stop to ask himself why he should. He did not analyze the futility of trying to save the face of an institution all morning, only to rob it of its last penny at noon. His mind was a small one, and duty and habit rode him hard. Besides, his train did not leave until 1:10 that afternoon!

John Patterson, the grocer, sent over a twenty-dollar bill about eleven o'clock to be changed. There was about sixteen dollars in the money drawer. To send the bill back unbroken would have been to bring Patterson over, bellicose and profane, to demand an explanation. Gideon reached for his sign. Then he remembered the few dollars in silver that he carried in his own pockets. He made change hastily.

With Patterson's messenger gone, he faced the world with a twenty-dollar bill and a little over three dollars in silver and copper. But half the banking day was past and there was still hope. Tom Mott and Clyde Sparrow, two ranchers, came in, discussing the water shortage and the relative food values for a dairy string of dry and green alfalfa for summer feeding. Their argument absorbed them while Gideon Worrick sat in his cage and held his breath. With a nod to the two debaters, Doctor Witherspoon entered. He deposited two checks and asked for ten dollars in cash.

"Driving up to Nash's Mill," the medical man explained casually. "I'd like silver, Gid."

Gideon smiled his watery smile.

"Just a minute, doctor. I've given out so much silver this morning ——"

He walked back towards the vault, his sentence trailing. He violated the trust fund of the Young People's League for ten dollars in silver, came back and handed the amount to Doctor Witherspoon.

"Couldn't sell you a nice Gordon setter pup for eight dollars, could I, Gid? Not full-blood, but ——"

Gideon tried not to laugh—to answer off-handedly.

"No, doctor," he said. "Don't know what I'd do with one."

The doctor left, and the two ranchers suspended their argument long enough to attend to business. Tom Mott deposited $42.25, of which thirty was in the form of a check. Gideon cast up his trial balance hastily. A twenty-dollar bill, four checks, three of them on his own bank, and $23.64 in change. Clyde Sparrow put down a check. It called for $25. Gideon gave up Patterson's twenty-dollar bill and the balance in silver, and sighed. He felt as he imagined a slack-wire artist might who, balancing on one toe, juggles a knitting needle, a five-pound weight and an open umbrella.

A glance at the clock showed him that it was half past eleven.

Ten minutes later Mrs. Stoney appeared, bustling and panting as usual, for she was a fat little lady who moved quickly, and chirped to Gideon, "Good morning, Mr. Worrick. I've decided to buy that sewing machine I've been trying, and I'd like that money you folks have been keeping for me. 'Twon't take quite all of it, but ——"

Gideon faltered. This was a demand he had not at all anticipated, and the shock of it left him winded.

"Probably you would prefer our check," he began hopefully.

"I was going to give the agent a check myself," Mrs. Stoney interrupted, "but he said he'd like cash. It's sixty-two dollars. He bought a horse, seems like, from the Mill boys, down below the highway bridge, and he wants to pay 'em to-day. You know how the Mill boys are about checks."

Yes, Gideon knew. He also knew how he himself was about cash. His hand traveled towards his closing sign; he tried to frame an explanation that would tell Mrs. Stoney the worst but in the gentlest manner. Then Miss Harris, Patterson's cashier, swung jauntily in through the front doors. She carried with her the morning's receipts. She was generally considered plain, and she was certainly all of thirty-seven, yet Gideon Worrick thought her in that moment the most beautiful vision of a woman he had ever beheld.

"Do you mind my waiting on Miss Harris first, Mrs. Stoney?" Gideon asked.

"Not a bit. I've got all day. Good morning, Harriet. How's your ma? Has she tried that flaxseed cough medicine? She ain't? Well, now, when Daniel used to have those ter'ble spells of his ——"

Gideon was frantically running through the Patterson store deposits. One hundred thirty-two dollars in cash and several checks. The cashier paid no heed to the latter—his mind was on the currency. There was enough to pay Mrs. Stoney, at any rate, and after that the deluge!

Tomlinson, the druggist, was behind the two women, and beyond him again two or three others were entering. With machinelike accuracy and his usual subdued politeness Gideon transacted the business as it came to him. But things were happening too rapidly for him to keep more than a rough account of balances. They demanded and drew money; they deposited money; they asked for silver when there was none in the box; they tendered him bank notes when he would have given his soul for a shiny fifty-cent piece, and Dick Drury, the retired rancher, almost brought the sign up at the very end when he scrutinized, then sounded, then rejected a five-dollar gold piece as a counterfeit. Gideon had no time to argue the point, and no spirit, either. He excused himself on a plea of putting the coin in the vault for later examination, and came out with the last five dollars from the last of the funds of which he had been until now the trusted and trustworthy treasurer and custodian.

At one minute past twelve o'clock he shut the front doors on the back of Mary Symonds, the school-teacher, and almost in the faces of two or three flustered—and immediately angry—customers, went back to his place again and fell into a chair, weak-kneed, trembling, hoarse with tension, shivering with the reaction, completely done up. Not counting postage stamps, he had in the bank a grand and final and complete total of ninety-eight cents!

Now that he had time to cast up his circumstances and return to his own affairs, Gideon Worrick awoke to a realization of the fact that he could not even abscond. In the rush of those last ten minutes he had put all that out of reach. His own money was gone, to a penny, and all there was left to steal was ninety-eight cents. He had his railroad ticket, to be sure, but that would carry him only sixty or seventy miles to Stockton, and there lay some six hundred miles between that thriving city and the Mexican border—at three cents a mile and up! He told himself ruefully that the game was played out.

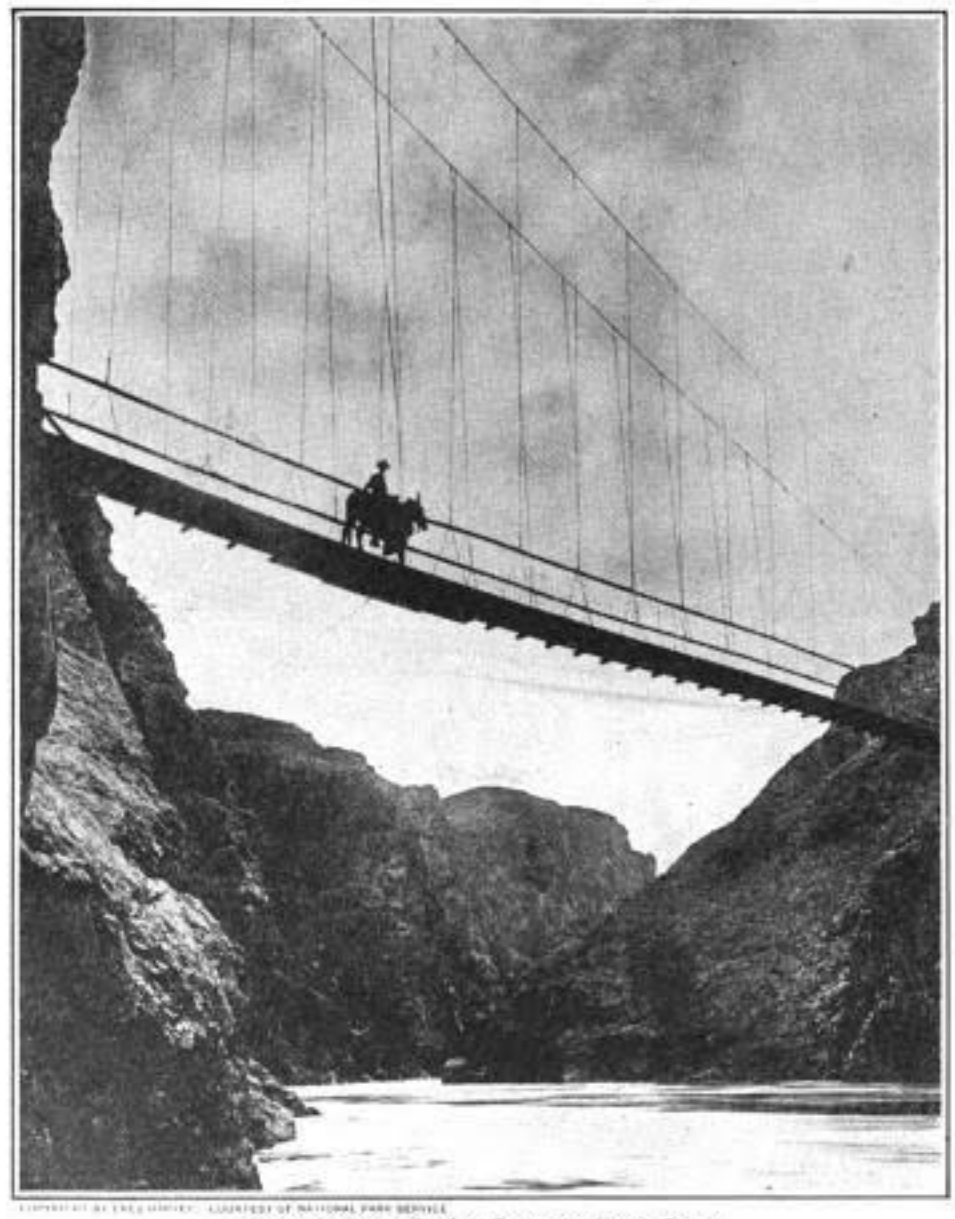
The carefully lettered sign he had begun—and by the skin of his teeth avoided having to use—winked at him sardonically from the floor, where it had fallen in the excitement. It might as well be hung up now as later, of course, for Templeton would come, in the majesty and dignity of his position as deputy state bank examiner, on an early morning train Sunday, and he would put the sign up if Gideon did not. Why all the effort and the strain of the struggles of this hectic morning? To what good end had he sacrificed his plans, his own money, his schemes for revenge on a stupid and an ungrateful community, his predilection for a career of crime?

Gideon did not know. He tried to think it out. But there was no use. He supposed dimly that it was a matter of business with him. It did not occur to him—which was the truth—that it was a matter of habit, the habit of being a tried and true and trusted man. All he did know was that everything was gone save honor. And honor, in Derbyville ——

The reaction passed, and Gideon became again, by slow steps, the reckless and desperate character of a few days since. By golly, he'd show them! He'd make them catch breath and raise their hands in horror. He would shock them somehow into recognition that he was human and frail and weak and a bad egg!

He would learn to play pool and poker. He would take to gambling and swearing and hanging around Tom Noddy's place, where it was rumored a blind pig was conducted. He had never done any of these things before in his life, but he wasn't too old to learn!

He rose and went into the president's cubicle of an office, pried open a drawer and took from a box therein a fat brown cigar. He lighted it after a moment's search for a match and puffed at it. The taste gagged him and the smoke made him cough. But he persisted, spitting into Selfridge's cuspidor inaccurately, but with a desperate and rakish swagger. He returned to his own place and appropriated the bank's last cash assets—that ninety-eight cents. It was too late now for lunch at Mrs. Cassity's, and he would get a bite at the Mint Chop House, where all the Derbyville bloods ate, telling bad stories. At that moment he heard the 1:10 whistle for the station. He started towards the safe, to close it.



Then someone rattled on the front door. Gideon frowned and pretended not to hear. The demand there became importunate. Gideon faced around, prepared to tell the late comer to go to—well, Halifax.

But he did not sully his lips, after all. He crossed hastily and opened the door. Old Frank Van Lythe, the cattle king, came in, ruddy, agreeable, hearty.

"Closing up, eh?" he inquired in his rumbling big voice. "I'm just in time, then. Here! Stick this in for me, will you? That loan you made me sure came handy. I bought a Hereford herd yesterday morning and sold last night. No kick on the deal, either. Not a particle of it!"

"That's good," Gideon said feebly. The cigar had dropped from his sagging jaw; he was fumbling with the great roll of bills the cattleman had thrust at him. "You want me to hold these for you—till Monday, Mr. Van Lythe?" he stammered.

"Hell, no!" Van Lythe bellowed. "Open an account with 'em. Never thought much of old Warren Selfridge's way of running a bank, but you seem to know your business, young fellow. Open an account. That is, if ten thousand and odd is enough for you. Is it?"

Ole Evinrude's New Motor

Elto

Light Twin Outboard Motor

His Biggest Achievement

Twenty years ago, while building marine motors, Ole Evinrude conceived the idea of the outboard motor. Fourteen years ago he built his first motor of this type. Three years later, rowboat motoring had become a universal sport.

The rapid growth of this industry in which he figured so prominently, inspired Ole Evinrude to develop the outboard motor to a point approximating perfection. The Elto Light Twin marks the goal of his effort. It is his biggest achievement, embodying 19 big, new features.

The Elto develops more horse-power than any other light-weight motor. And it's more compact. Light, powerful, extremely substantial. Starts quickly and easily. Runs quietly and smoothly. Tilts automatically. Operates at perfect trolling speed.

Write to Ole Evinrude's new organization for descriptive literature and name of the Elto dealer nearest you.

THE RETURN TO NORMALCY

(Continued from Page 4)

"Margaret?" replied Hermione. She drooped her thick eyelids and smiled, as if the name itself were comic—she never broke her beautiful mask with a laugh. "No, that didn't last long. He bounced Margaret as soon as he got over being delirious."

"And was it then that he sent for you?" asked Cora with an edge to her voice that a Damascus blade might have envied.

"As a matter of fact, he didn't; it was Thorpe who sent for me," said Hermione. "Thorpe had a wholesome recollection that I used to keep Val in order. Nice little job, keeping Val in order. Ever tried it? No, I remember Thorpe said that wasn't your line."

Cora would have given a good deal to know just how Thorpe had characterized her line, but not even curiosity could make her address an unnecessary word to the coarse, cold woman before her. She was not jealous, as she understood the word, but the disgust she felt for Hermione included Valentine, too, and made her hate him for the moment with an intimate disturbing warmth.

Hermione went on: "And, after all, as I said to Val yesterday, what does it matter to me whether he gets well or not? It takes too much vitality—making him mind. I'm through. I'm off to Palm Beach to-morrow. Thorpe's taking him home."

"It's amiable of you—to come and go as Thorpe orders."

Hermione moved her eloquent shoulders. "Oh, Thorpe and I understand each other."

"I knew Thorpe understood you," said Cora insolently.

But the woman was insensitive to anything but a bludgeon, for she answered, "I understand Thorpe too. All he objects to is wives. He's like the—whatever it is, you know—that fishes in troubled waters."

Cora merely moved past her and went away. It wasn't until she was outside that she took in how pleasant had been the unconscious suggestion behind Hermione's last words. Thorpe objected to wives. That was why he had not sent for her—she wasn't a mother, like Margaret; nor a vice, like Hermione. She was a wife. The story-teller, the magic builder of castles that is in everyone, suddenly made for Cora a splendid scene, in which she, reunited to Valentine, was dismissing Thorpe.

Ten days later she took title to her new property and her architects filed the plans. Both events were announced in the newspapers.

That very morning her telephone rang, and Thorpe's voice—a voice so associated with all her emotional life that her nerves trembled even before her mind recognized it—was heard saying, "I'm telephoning for Mr. Bing, madam. Mr. Bing would be pleased if you could make it convenient to stop in and see him this afternoon."

"Tell Mr. Bing I'm sorry. I can't," answered Cora promptly. She was not a Hermione to come and go at Thorpe's invitation. And then just to show that she was not spiteful she added, "I hope Mr. Bing is better."

"Yes, madam," said Thorpe, "he's better, but he hasn't thoroughly regained his strength. He tests it every day."

Cora hung up the receiver. Her thought was, "He can't test it on me." She was aware of a certain self-satisfaction in having been able so firmly to refuse, to set her will against Valentine's. In old times she had been weak in yielding to every wish and opinion that he had expressed, until she had almost ceased to be a person. Of course in this case her ability to refuse had been strengthened by the incredible impertinence of allowing Thorpe to be the one to communicate Valentine's invitation. A few minutes later the telephone rang again. This time she let the servant answer it, and when the woman came to her with interested eyes and said that Mr. Bing was on the wire Cora answered without a quaver, "Say I'm out."

But she knew Valentine well enough to know she was not going to get off so easily as that. He kept steadily calling until at last, chance, or perhaps Cora's own wish, directed that he should catch her at the telephone.

He must see her; it was about this new house of hers. Her heart beat so she could hardly breathe, while Valentine ran on as of old:

"It's folly, Cora, absolute folly! Why didn't you consult me before you bought? You can't live there—the railroad on one side and a gas tank on the other. Besides, the railroad is going to enlarge its yards; in two years you'll have switching engines in your drawing-room."

On and on, giving her no chance to answer him, during the ten minutes he kept her at the telephone. Yet when she hung up the receiver she found she had spoken one important word: she had promised to come and see him late the following afternoon. She had made him beg; she had refused to come that day, she had put it off; she had, in fact, teased him as much as was consistent with ultimately agreeing to do what he wanted. Before she did agree the impertinence of Thorpe was explained. Valentine had simply told him to get her on the telephone. Of course he had meant to speak to her himself. Thorpe was an idiot—overzealous. Cora had her own view about that, but she let it pass. Thorpe feared her, and Thorpe knew what was to be feared. He knew that if she once entered that house she might never be allowed to leave it.

"No," she said to herself the next day, as she tried various veils, and with hands that shook a little put on the dangling earrings that Valentine had given her in Madrid, "it will be Thorpe who will leave."

If there was fear in Thorpe's heart he did not betray it when he opened the door and led her upstairs to the library. The room was empty.

"Mr. Bing has been expecting you for some time, madam," he said.

The slight reproach was agreeable to Cora. She had waited long enough for Valentine in old times, and sometimes he had not turned up at all.

The room was familiar to her. They had not been much in New York during their brief marriage, but she had spent part of the previous winter in this house. She had left her own imprint in the decorations. Valentine used his house as he might use a hotel—asking nothing but that it should be convenient for the purposes of his stay. Cora had been greeted on her first arrival by hideous tasseled gold cushions and imitation Japanese lamp shades; remnants, she believed, of Hermione's taste. She had instantly banished them, and now she saw with pleasure that the shades of her own choosing were still on the lamps. Everything had remained as she had arranged it; he had seen that her way was best. A wood fire was burning on the hearth—not the detestable gas logs which Hermione had left behind her. She found herself wondering for the first time what Hermione had found—what Margaret had left. Then she remembered that Valentine had not bought the house in the simple days of Margaret's reign; he had had a apartment far uptown and at first Mar had had no servant.

A wish to know if Valentine had k paper cutter she had given him— lazuli, the color of his eyes—made he up and go to the desk. Yes, it was t but something else was there, too: a framed photograph propped against a p weight—the photograph of a woman.

She bent cautiously to look at it, a bends to examine the spot where trembling of the grass suggests the pres of a venomous serpent. It was the pi of a slender woman with heavy dark and long slanting eyes, the cruelty o high cheek bones softened by the s drooping curve of her mouth. A ter and fascinating woman. Then as the l struck across the surface of the picture saw it was a glossy print for reproduct It might mean business—a feature for syndicate—not love.

She was sitting far away from the when, a minute or two later, Valen entered—Valentine a little thinner t before, but no less vital. He greeted he if they had parted yesterday, or rather did not greet her at all. He simply be to talk to her as he came into the room. had a roll of blue prints in his hand.

"Now, my dear girl, these plans of your have you thought them over at all? You practically made them? But don't y see what you've done—sacrificed eve thing to a patio. A patio—only good hot weather, when you'll never be h anyhow. The whole comfort of the ho arranged for the season you'll be aw They are without exception the most rid ulous plans —— Oh! Yes, I sent down a copy of them at once. I'm glad I did. I hadn't ——"

"But, Valentine," she interrupted—s knew by experience that you were fore to interrupt Valentine if you wished speak at all—"it is my house, you know

"And that's why I want it to be rig for you," he answered. "But we'll get right—never fear."

"It's exactly what I want as it is," sh returned, and she heard with a mixture disgust and fear that the old tone of fal determination was creeping into her voic

"It isn't at all what you want," he sai "You only imagine it is, Cora."

"Valentine, I've thought it all out wit the greatest care."

"But it's absurd—you won't like it. D listen to reason. Don't be obstinate."

Obstinate—the old accusation.

"That's what you always say when I in sist on doing anything my own way."

"But your way is wrong. Now just listen to me, my dear girl ——"

It was, to the identical phrases, the quarrel of their whole short turbulent married life. He had always made her fee that she was pig-headed and unreasonable not to yield at once to his superior knowledge of her own inmost wishes. The trouble was that the turmoil and the fighting slowly extinguished her own wishes—they weren't changed, they were killed—so that after a little while she was left gallantly defending a corpse; she ceased to care what happened; whereas Valentine's poignant interest grew with each word he uttered—and he uttered a great many—until he seemed to burn with an almost religious conviction that she must not do the thing in the way she wanted to do it.

It always ended the same way: "Now, my dear girl, don't be so obstinate." Was she obstinate? she wondered; and as she

wondered Valentine rushed in like an army through a breach in the wall. He was doing it now.

"All I ask," he was saying, "is that you should look at the set of plans I had my man draw—he's a real architect—not a bungalow wizard like that fellow you employed. Now you might at least do that—it isn't much to ask that you should just look at them. Oh, well, you'll see they call for another piece of land, but honestly, Cora, I cannot let you settle on that switching yard that you picked out ——"

She could not refuse to look at his plans; in fact, she was not a little touched by the idea that he had taken such an infinity of trouble for her.

And at this instant Thorpe entered. Valentine shouted at him to get that other roll of plans from his room.

"Yes, sir," said Thorpe, "directly; but the message has come that the steamer is docking and I've sent for a taxi, sir."

Valentine collected himself. "Oh, yes, the steamer," he said, and then he glanced at Cora. "I don't think I'll go to the steamer, Thorpe."

Cora's heart rose; she knew that look, that tone; he did not want to go. She looked at Thorpe; not a muscle of his face had changed, and yet she knew he was in opposition.

"Yes, sir," he said. "Would you have any objection if I went to the dock? I doubt if the princess will understand the American customs without assistance, sir."

There was a little pause.

"The princess?" said Cora.

Valentine waved toward the photograph on the desk. "She's coming—Hungarian princess. Great stuff, if she's as per invoice. I'm sending her to China for the syndicate. Hun to Hun, you know. Good idea, isn't it? Thorpe told me about her. He lived with her uncle when he was ambassador in London; the uncle, you know, not Thorpe—though why not?"

Valentine rose. The recital of the facts in the case of the princess had revived his interest in her.

"I'll just go and grasp her by the hand. We've got her transportation for the Coast for this evening, and she may not relish starting at once, unless it's put just right. I'll show her it's the best thing for her to do. Her last cable suggested she wished to linger in New York, but she would enjoy it more on her way back. I'll explain that to her. It won't take a minute. You'll wait, won't you? Stay and dine with me. I'm alone. Or no; I see by Thorpe's face that I have someone to dinner."

"Indeed, you have, sir."

"Who is it? I don't remember."

"Mrs. Johnson-Bing, sir."

"Oh, Margaret—good old Margaret—so it is." Thorpe and Cora, a little embarrassed for him, averted their eyes, but Valentine was not embarrassed at all. "You have no idea how good she was to me when I was at the hospital. And I wasn't very grateful—out of my head, you know. I thought I ought to tell her —— You'll wait, Cora; just give you time to look over my plans, and when I come back I'll tell you about the land I bought for you. Well, I have an option on it ——"

She lost the end of his sentence, for Thorpe, who during the speech had been putting him into his overcoat and handing him his hat and gloves, finally succeeded in hurrying him out of the door, still talking. But Cora did not require the end of the sentence; no woman who has lived two years with a man does. She knew what he was going to say, but even more important, she knew what was in his mind—that her welfare was as important to him as it had ever been. The marriage ceremony, she had always known, did not unite people, but now she was discovering that a decree of divorce did not always separate them. She was as much married to Valentine as she had ever been—no more and no less. How astonishing!

She sank into a chair. Perhaps the really astonishing fact was that they should ever have parted. They parted because they quarreled, but now she saw that their quarreling was the expression of their love. Her relations with everyone in the world except Valentine were suave and untroubled. And she was sure there was no one else with whom Valentine enjoyed the struggle for mastery. The mere notion of attempting to master the docile Margaret was comic, and as for Hermione, she was like a dish of blanc mange—you liked it and ate it or else you let it alone. No, it was useless to evade the truth that she, Cora, of all women was to him unique.

Thorpe returned presently and brought the new plans. She nodded without looking at him and told him to leave them on the table. She had plenty of time. Valentine's few minutes were always an hour.

"If you don't care to wait, madam, I'm sure Mr. Bing would be very glad to have you take them home with you," said Thorpe.

Cora did not trouble to repress a smile. "I shall wait, Thorpe," she said, with the good humor that comes from perfect confidence.

Thorpe bent very slightly from the waist, and left the room.

At last she rose and began to unroll the plans. She became immediately absorbed in them; they were not only beautiful and ingenious but, better to her than any beauty, they showed how he had remembered her tastes, her needs. She had always loved growing plants, and he had arranged a glassed passageway with sun and heat to be a small conservatory for her; there was a place for her piano; a clever arrangement for hanging her dresses. He had remembered, or rather he had never forgotten. The idea came to her that this was not a house for her alone, but for her and him together. How simply that would explain his passionate interest in the prospect of her building. She began to read the plans as if they were a love letter.

She was still bending over them when later—much later—the door opened and closed. She did not immediately look up. It was not her plan to betray that she had guessed what lay behind his actions. She waited with bent head for Valentine's accustomed opening, and then hearing nothing she looked up, to find the newcomer was Margaret.

In their last meeting the shadow of death had obliterated the pattern of convention, but now both women were aware of an awkward moment. Margaret smiled first.

"I suppose, as no one sees us, we may shake hands," she said. Cora looked at her predecessor. Even in the low becoming lights of Valentine's big room she was frankly middle-aged, large waisted and dowdy, and yet glowingly human. Cora held out her hand.

"Is it so late?" she said. "Valentine mentioned that you were coming to dinner. He said he hadn't thanked you for all you did for him when he was ill.

Mrs. Johnson-Bing smiled. "That isn't what he wants," she said. She undid her coat and began to remove stout black gloves. She was in a high dark dress—very different from what Cora would have worn if she had decided to come back and dine with Valentine.

"What does he want?" Cora asked. She was really curious to hear.

"He's heard I'm going into business—supplying food to invalids. He wants me to organize according to his ideas, and not according to mine." Margaret smiled. "But poor Valentine doesn't know anything about invalids; just wants the fun of having everything done his way."

"What Does it Matter to Me Whether He Gets Well or Not? It Takes Too Much Vitality—Making Him Mind. I'm Through. I'm Off to Palm Beach Tomorrow"

The words for some reason sounded a knell in Cora's ears. Was that all Va tine really cared about—getting his way? There was a brief silence; far a in some other part of the house she dimly aware of a clock striking and a phone bell ringing. It must be dinner she thought—Margaret's hour. No, couldn't both stay to dinner. She fo herself wondering which of them Val w put at the head of the table. He woul there himself, of course, with one on side of him.

"I suppose you'll do it all just a says," she remarked mechanically.

Margaret laughed; she had a plea laugh, almost a chuckle. "Indeed I shan she answered. "But I may let him t I'm going to. It saves such a lot of trou as I suppose you found out too."

No, Cora had not found that out. felt shocked and admiring—as a little feels who sees another one smoking. was it that Hermione, the faithless, Margaret, the maternal, dared to t Valentine more carelessly than she Perhaps they did not understand him well as she did, with her more subtle r tions.

Before she could answer, Thorpe in the room. When she thought of t moment afterwards she appreciated power of the man, for there was no trac elation or excitement or even of hurry ab him. He addressed Margaret:

"Mr. Bing is very sorry, madam, he not be able to get home to dinner to-nigh

Cora's mind working with the quickn of lightning waited for a second part of message—something that would detain and let Margaret depart in peace. Thorpe having delivered himself of this sentence turned to the desk and began lecting various objects—a fountain pen package of letters.

"When will Mr. Bing be back?" C asked.

"Mr. Bing is obliged to start for Chi this evening, madam," said Thorpe, his eye just wavered across hers. "I packing for him now—as well as I can such short notice." The reason, his to suggested, was sufficient excuse for leavi the two ladies to see each other out. left the room, his eyes still roving about search of necessary objects.

In this bitter moment Cora f vaguely envious of Margaret, wh unmoved by the intelligence, was b ginning to replace her heavy glove

"To China," she observed pla idly. "Now I wonder what t reason for that is."

Cora snatched up the glossy ph tograph and thrust it betwee Margaret's shapeless black finger "That's the reason!" she said pa sionately. "He left me for just ha an hour to meet her steamer—princess—'great stuff if as per i voice.' Well, evidently she is as 'pe invoice,' if he's going to China wit her the first time they meet—he an his princess!"

Margaret took the photograp and studied it with irritating calm

"I don't suppose there ever live a human male who would not enjo going to China with a princess," sh said, and she almost smiled at th thought of their departure.

Tears were already running down Cora's cheeks. "What does i mean?" she said. "Are men incap able of permanent attachments?"

"Oh, no," replied Margaret "Valentine's attachments are very permanent—only they're not ex clusive. He will always want me when he's sick—and you when h wants to test his will power."

She stopped, for Thorpe had come into the room again. He had come for the photograph, which he now took gently out of Margaret's unre sisting hand. She hardly noticed his action, so intently was her mind working upon the question of Valentine's health.

"Thorpe," she said, as if consulting a fellow expert, "do you think Mr. Bing is strong enough to make this journey?"

For the first time Thorpe allowed himself a smile—a faint fleeting lighting of the eyes.

"Oh, yes, madam," he said. "I think now Mr. Bing is quite himself—quite normal. And then, madam, I shall be with him."

MODEL NO. C-147

Burton Brown
—a Brown bilt Shoe

Quality in shoes is due to three factors—(1) leathers; (2) shoemaking; (3) determination to excel. All three must blend in the perfect product.

When you seek class, comfort and quality in shoes, look for the trademark "Brown bilt" stamped in the outer shank of the shoe.

Every shoe marked "Brown bilt" is built from dependable leathers by expert shoe makers and conforms to a definite standard which represents exceptional value.

Burton Brown Shoes for Men all bear the "Brown bilt" mark — all have Goodyear Welt Construction—all represent unusual values at $7.00, $8.00, $9.00 and up.

MODEL NO. A-136

Barbara Brown
—a Brown bilt Shoe

Women admire Barbara Brown Shoes for their style qualities and for their wearing qualities—for their artistic excellence and for their intrinsic worth.

All Barbara Brown models are genuine "Brown bilt" Shoes for Women—made by master-craftsmen — and emphasize women's natural graces by nicety in finish and perfection in fit.

Barbara Brown Shoes are health-builders — because they encourage the graceful exercise of walking by the ease and comfort they give the feet.

The latest models in the most fashionable leathers sell at $7.00, $8.00, $9.00 and up —with the name "Brown bilt" in the outer shank.

For Boys BUSTER BROWN For Girls
—A BROWN BILT SHOE

THE Brown Shaping Lasts give to Buster Brown Shoes their distinctive, health-building qualities. Other lasts are based upon *four* measurements—as contrasted to the *eighteen* necessary to bring each Brown Shaping Last to scientific perfection.

Consequently, Buster Brown Shoes must insure niceties in fit—must properly support each bone and muscle—must protect and develop the growing feet—must prevent those ailments which invariably come from wrongly shaped shoes.

Besides these exclusive health features, Buster Brown Shoes are skillfully made from dependable leathers—with soles cut from the heart of the hide—Goodyear Welt Construction —and are sold at $4.00, $5.00, $6.00 and up, according to style and size.

The Tiny plant your body craves as food

So small that 600 of these infinitesimal plants could go in a spot no bigger than a pin point

Yet so rich in life-giving food factors that millions of men and women are adding it to their daily diet and finding a health and vigor unknown for years.

Did you know that fresh yeast is a plant?—that in addition to the vitamin for which it is famous it contains other equally important food elements?

It is one of the tiniest plants in the whole vegetable kingdom. Yet it possesses the food factors your body tissues crave.

The startling difference between civilized foods and natural diets

"The chief causes of disease and death lie in food and drink," says an international authority on food and its relation to health. This doctor tells of his nine years' experience in the East. There he found a primitive people, far removed from the refinements of civilization, who never had digestive troubles, never suffered from intestinal inactivity, and who never heard of appendicitis.

These primitive people, he says, are "content with natural foods, protective foods, . . ." "But," he continues, "the case is different with civilized man. No longer is he content with the unsophisticated foods made in nature's laboratory; his foods must be preserved, purified, polished, pickled and canned. Some he extracts and distils with the object of procuring concentrates agreeable to his taste. His animal food he heats, dries, freezes, thaws and stores.

"One way or another, by desiccation, by chemicals, by heating, by freezing and thawing, by oxidization, by decomposition, by milling and polishing, he applies the principles of his civilization—the elimination of the natural and the substitution of the artificial—to the food he eats and fluids he drinks. With such skill does he do so that he often converts his food into a dead fuel mass, devoid of those vitamins which are to it as the magneto's spark to the fuel mixture of a petrol-driven engine."

A fresh food rich in health-protective elements

Now that we are learning about the real seriousness of wrong habits of eating, we are vitally interested in knowing just how valuable a food fresh yeast is.

The big chart will explain why Fleischmann's Yeast is needed in the diet. Yeast is not only the richest known source of

Modern man with his refined and modified foodstuffs needs to supplement his daily diet with some natural health-protective food.

Digitized by Google

nin-B, a necessary protective element, but also a source of other food factors essential ealth. It is a fresh natural food sprung clean, wholesome grains—corn, rye, bar- containing factors which must be present our daily meals. It contains precious ral salts. It has valuable protein—the body building material.

he tissue building factors in fresh yeast so valuable that the same noted authority ted above says, "It may occasionally be tituted for meat in the dietary with antage."

he fresh yeast cake contains highly im- ant mineral matter—phosphorus which is l to all the living tissues of the body, ium for the teeth and bones, and iron, ch is an essential element of the blood.

he little cake contains carbohydrate and which give energy and heat to the body.

he full value of this wonderful plant can be obtained in its fresh form. This is the body craves fresh yeast!

Laxatives made unnecessary

atives are made unnecessary by this nat- l food. Of course we know that laxatives er remove the cause of the trouble, but n make it worse. They weaken the intes- l muscles. One physician says that prob- y one of the *chief causes* of intestinal ctivity is the indiscriminate use of ca- rtics.

Fleischmann's Yeast is a simple food, cor- tive in its nature, which increases the tion of the intestines and maintains normal functions. By adding this fresh food to your daily diet you will find the need for laxatives gradually disappear.

Digestion kept in sound working order

Thousands today are realizing that faulty eating is the cause of their digestive troubles. These people are now eating Fleischmann's Yeast and finding increased appetite and improved digestion.

Fleischmann's Yeast supplies abundantly the elements which help the flow of bile and the pancreatic juice. It will help you get the full benefit from the other foods you eat. Without this help even good foods may fail to give you sufficient nourishment.

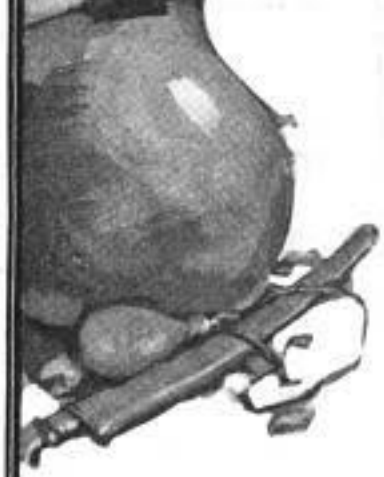
Eat 2 to 3 cakes of Fleischmann's Yeast regularly every day before or between meals. It will help keep your intestines clean and active, your stomach normal, your appetite keen, your whole being radiant with health.

Your grocer will send you Fleischmann's Yeast fresh daily. Place a standing order. 200,000 grocers carry Fleischmann's Yeast. If your grocer is not among them, write to the Fleischmann agency in your nearest city—they will supply you.

Send for free booklet telling more about fresh yeast and what it can do for you.

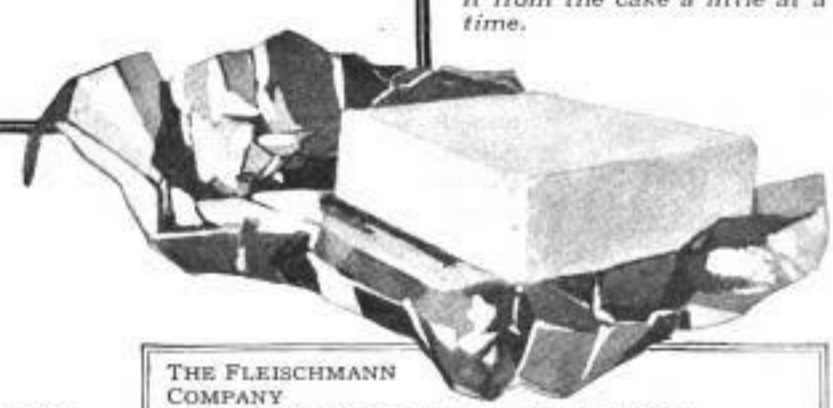
Use coupon, addressing THE FLEISCHMANN COMPANY, Dept. 607, 701 Washington Street, New York.

Primitive man with his natural fresh foodstuffs gets all the food factors he needs to protect him from digestive disturbance and intestinal inactivity.



The five great fundamental food factors in the remarkable little yeast plant

Protein—builds up muscle and repairs waste tissue



Carbohydrate and Fat—give energy and heat to the body

Mineral matter—regulates the body functions and helps maintain the body's health

Vitamin—increases appetite, helps digestion. Without vitamin, neither protein, carbohydrate, fat, nor mineral matter can be properly utilized by the body. Without vitamin the body starves.

Fleischmann's Yeast combines excellently with jams as a sandwich spread. Some like it in very hot water, others prefer it in cold. The simplest way is to eat it plain, nibbling it from the cake a little at a time.

Yeast is grown from a mixture of the most wholesome grains—corn, rye and barley. The grain is carefully selected and thoroughly cleansed from all dust or other foreign substances. When these grains are ground and soaked in water they provide the most nourishing mixture for the yeast. These tiny remarkable plants then grow with astonishing rapidity. The familiar cake of Fleischmann's Yeast consists of millions of these microscopic plants.

Fleischmann's Fresh Yeast supplies the factors you need in your everyday food

RITA COVENTRY

(Continued from Page 17)

he had known she would, and feeling that he had not said enough, he went on apologetically: "I can't imagine its being nice to see me, though. I know I'm an utterly unsatisfactory person to be with this evening, Alice. I'm as restless as a cat. That's why I thought of the theater—something bright to take our minds off things."

"There's nothing the matter, is there?" she asked tenderly.

"Oh, no; nothing special." He sighed. "Apparently there just isn't any bottom to this market. And a lot of little things have bothered me to-day. You know how it goes sometimes."

Feeling as he did, he found it pleasant, after all, to be with Alice—someone to whom he could grumble, even though he could not grumble about the one thing that was on his mind.

"I wish I could help you."

Even more definitely than her words, her eyes, with their expression of solicitude, informed him of that wish.

"You do," he assured her honestly, looking into her face with a peculiar and not too happy little smile. "You help a lot, my dear. You're a mighty comfortable person to be with."

And she was. She was the sort of woman who, when the waiter hands her a menu, lays it down and says to her escort: "You order, please."

The head coat-room boy at the Tuileries, the quiet and fashionable French restaurant at which they dined, possessed a gift for obtaining, at the last moment, seats for the most popular theatrical performances, the one provision being that the purchaser should be willing to pay well for the service. And the mere fact that one dined at the Tuileries was proof of willingness to pay.

The place was dedicated to the affluent, critical and self-indulgent. Two could dine excellently at the Tuileries for approximately twenty-five dollars—this sum including, in this post-Volstead period, a bright yellow beverage at twelve dollars a quart, which was served only to guests known to the management, and was mentioned with wise glints of the eye by the waiters as special cider, although it tasted so precisely like sauterne that it was sometimes ordered by that name, albeit in a low tone, by those lacking a full degree of delicacy.

One got what one paid for at the Tuileries. The dining room was not too large, and was decorated with a restrained elegance which knew neither red nor gold nor marble. The tables stood upon soft carpet, not too close together; the chairs were comfortable, and the cushioned benches against the walls more comfortable still; the cuisine was irreproachable, the waiters sympathetic as only the most expert French waiters know how to be, and among the guests were always to be seen celebrities and beautifully costumed women. And best of all, one paid not only for what one got but for what one was spared. There was no orchestra.

A few years earlier Parrish could have bought a box with seats for six for what he gave to-night for two seats for Gladys. But his two seats were in the third row on the aisle. No one knew better than the coat-room boy where patrons of the Tuileries preferred to sit.

When they arrived at the theater the first act was over, but once the curtain rose they had no difficulty in picking up the thread of story. A thread was all there was.

The star, a pretty Broadway favorite, figured as a Russian grand duchess who had escaped the revolution and come to New York with her guardian, a middle-aged prince with comic legs. Incognito, the two were working in a restaurant, he as a waiter, she as a kitchen maid. Poor though they were, they had brought with them elaborate wardrobes, and they were thus able to lead a dual life, going at times into the fashionable world to which their titles gave them access.

A young man with wavy golden hair, a tenor voice and wealthy parents fell in love with the beautiful kitchen maid, but did not recognize her when he met her in black velvet at a ball; nor did the lank society woman recognize the prince of the night before in the waiter who spilled things on her and tripped and fell with trays of dishes.

These confusions of identity through several scenes enriched with and specialties, but were cleared up end when the kitchen maid, havin her sweetheart, was suddenly revea him standing at the head of an impr flight of stairs, up center, in a pri gown which was the climax of the s a gown which took the honors o evening from the girl, the librettis composer, and even the Italian mas melody with whose famous operatic t the composer was apparently familia

As the sumptuous garment desc the stairs to meet its lover the truth upon him. The person it contained embellished was of royal blood and t fore fit to be accepted on terms of equality by any American family, ho wealthy. The young man put his around the gown, and from the careful he did it the audience knew that he cherish it as long as that show should

At least so far as Parrish was concer the evening's offering had served its d ening purpose. His eyes had been eng with bright stage pictures, his ears trifling jests and melodies, his mind nothing. But as his limousine nosed way cautiously through the glittering ferno of the after-theater streets, rever ating with the snarls of angry motor h and the shrill whistle blasts of traffic po men, he began to think again. He did want to, but he could not help it.

XIII

"YOU'LL come up for a little while Alice suggested hopefully as t turned into the lofty cañon of Park Aven with its double asphalt trail.

"It's pretty late."

"How would you like me to fix you so bacon and eggs?"

"No; nothing to eat, thanks."

"You look tired."

"I am, rather."

"Then you're right—you'd better home and to bed. I did want you to see t photograph of Margaret and the childre though. It's so sweet."

"How is Margaret?"

He asked the question not so much b cause of interest in her married siste whom he had never seen, as to keep h talking of matters unrelated to him.

"I'm worried about her. She's all ru down. George's business keeps him tied u so he can't take long vacations, and Mar garet won't go away for any length of tim without him. I ask her here—time an again I've asked her—but there's alway some reason why she thinks she can't come If it isn't George it's the children. Instead she's always urging me to come out there."

"Naturally," he said, "when she's s fond of you. Of course you haven't been home often." And as the car drew near her door he added: "I believe I will stop in for a few minutes."

She gave a little sigh of contentment.

"I didn't want to urge you," she told him, "but I'd have been disappointed if you hadn't stopped in. I've felt lately as if things weren't—I don't know—as if you were different somehow."

"Nonsense," he said. He was glad the car was stopping.

"Well, that's the way I've felt."

"You shouldn't get ideas like that," he said.

Going up in the elevator he made small talk about the musical comedy. She gave him her latchkey and when he unlocked the door preceded him into the living room, turning on the lamps. Then, as he had slipped off his overcoat, she came and led him to "his chair," where she made him comfortable, tucking a pillow behind him as a trained nurse might for an invalid, after which she brought the photograph and placing it in his hands perched upon the arm of the chair where she could look at it over his shoulder.

"Very nice," said he, nodding.

"Did you ever see a sweeter picture?" she demanded.

"Don't believe so." He continued to look at it. "Margaret isn't so pretty as you are."

"Oh, isn't she though! You wouldn't say that if you could see her. She's a regular little madonna. And did you ever see such darling children? Georgie's such a

Get these checks

with a $1,000.00 insurance policy between you and such loss

WHAT BANKERS SAY

EDO, OHIO
"our checks are unquestionably the best checks we have ever had."

CAGO, ILL.
"we use your Super-Safety Insured ecks we feel satisfied that our depositors ve positive protection against any ssible."

NILER, OHIO
"do not hesitate to recommend them."

RSAW, ILL.
"believe that they are the safest checks e have ever seen."

VER, COLO.
"a truly pleasure in advising the people at we are one of the banks which can ve them this service."

NE, GA.
"pleased our customers to have $1000.00 surance against the raising of checks."

TH BEND, IND.
"have been very well satisfied with the ecks and in due time we will be glad to ve duplicate order with you."

NSAS CITY, MO.
"are delighted with the high quality of ur checks and we are feeling a sense of dditional security in using them."

NTER PARK, FLA.
"These checks, together with the bond and dentification card are creating a great deal of very favorable comment."

LAND, ILL.
"We can say for them that they fill a long felt need for protection against the check ratter."

NKIE, LA.
"The added values which Super-Safety In-sured checks possess can only be appreci-ated by the banks who have used them."

KE GENEVA, WIS.
"In regard to national advertising, we can safely say that you have created a greater public confidence in the use of checking accounts."

W WINDSOR, ILL.
"The satisfaction of our customers to know that they enjoy positive protection is satis-faction to us."

RANKLIN, OHIO
"We are pleased to advise that your Super-Safety Insured checks have met with the approval of many of our customers."

GET these checks, *because* they positively protect your money from "check-raisers." Without charge for this extra service, you are protected by an individual $1,000.00 certificate of insurance. Ask for them at your bank.

Newspaper stories like those above frequently appear. A check stolen from the mails provides the easiest way for the check raiser to operate. Perhaps none of those bank depositors whose checks were raised ever thought that he himself would suffer such loss. You never can tell where the next blow will fall.

Why take any chance?

The risk exists. Why not feel *positively* safe?

Thousands of good banks all over the United States now provide the *positive protection* of Super-Safety Insured bank checks. Read what some of them say in the column to the left.

These checks are made on our finest grade of safety paper, highly sensitized against erasures and then protected with an individual $1,000.00 guarantee that you will not lose if one of your checks *should* be raised.

The finger of suspicion might even be pointed at you if one of your checks should be raised so skillfully as to create doubt that it had actually been changed. Your credit might be doubted; your integrity might be doubted; your standing in the community might be questioned—all because of your negligence concerning positive protection of your checks.

Go to your bank today and ask for these Super-Safety Insured bank checks and get your $1,000.00 guarantee against fraudulent alteration losses. Ask your banker for this positive protection, or write us for the name of one who will gladly accommodate you.

Spark-C

Ignition Tester

Spark-C Ignition Tester is 7¼ inches long

Sees all
Knows all
Tells all
about your ignition

Price
$1.50
in the United States

What happens when the explosion doesn't?

When one cylinder in a gas engine misses fire, there is more than a loss of power. The other cylinders must not only work without the one that misses, but must also fight the unexploded charge of compressed gas.

This compressed gas acts as an air-brake, and you know what that means.

Previously it has been hard to detect a missing cylinder that didn't miss regularly. This is especially true of engines with more than four cylinders.

But now, any man, amateur or expert, with Spark-C Ignition Tester can check up an ignition system in a few minutes and determine whether or not every spark plug is firing properly.

Touch the plug with Spark-C and you can read the result in the little window in the side of Spark-C.

If the plugs are firing properly, the regular flash in the window will show it. If not, the dim flash or absence of any light will show the condition in the cylinder.

Get Spark-C Ignition Tester from your garageman or automotive dealer. Test your ignition system now—car, boat, airplane or stationary gas engine. Test it periodically. It will prevent waste of power. It will remove the invisible brake in the cylinder that sometimes misses.

ttle thing, and little Alice—isn't
able? Just look at her hair, too—
curly."
very pretty."
ted her cheek against his temple,
the photograph.
tly he stirred a little, dislodging
the position, and turning his head
p at her, asking:
say Margaret has been urging you
out and visit?"
she's always doing it. Even now
ave my own apartment in New
and George insist that their home
my home—the dears! And of
a way it is."
of course," he agreed; then:
hy don't you take a little run out

I was out there last fall," she an-
almost defensively.
two or three days."
eek," she corrected. "And I've
re three other times, remember—
since I met you." She had a way
time in that fashion.
" he went on, gently persistent,
sister isn't very well ——" He
sentence unfinished.
sighed.
course I've been thinking about
she said. "I do want to see them
I hate to have Margaret feeling
cause I don't come oftener. And
lice—being her godmother ——"
s," he encouraged, "naturally she
to see more of her Aunt Alice."
nodded.
d Georgie's so sweet too. They're
arest pair of youngsters! But"—
she sighed—"well, I guess you know
don't want to go, don't you?" She
tened, looking at him with eyes
ously tender.
ou find it dull?" he suggested, wish-
fend off the declaration.
h, no. It's not half bad. They have
tty house and the people are nice—
t they seem so to me, being a Middle
rner. Of course they aren't like New
rs; perhaps you'd think them pro-
l; but they're mighty comfortable
with."
m sure of it. In fact, I've often won-
that you didn't spend more time
your sister."
ou've wondered?" She looked sur-
d and somewhat hurt. "You think I
t to? Surely you know why I haven't,
Why, at first you didn't want me to
You didn't like it if I even spoke of it.
said you'd be so lonesome. You told
——"
'm afraid I've been very selfish," he

No, I wanted to be with you as much
ou wanted me. You know that, dear."
Perhaps," said he somberly, "we've
been thinking too much of what we
ted."
Not you. It's no fault of yours if
——"
Yes, it is. I have no right to come be-
en you and your only sister."
Come between us?" she repeated,
nished. "Why, you haven't done any-
g like that! Margaret and I adore each
er."
'She's hurt because you don't go oftener."
'Not hurt, exactly. It's just that she—
misses me, because after father and
ther died we were always together."
"Until you came East," he added.
That's where my responsibility begins."
"But I didn't have to stay East if I
n't want to."
"That's not the point." He gazed at
gravely. "Alice, I think you ought to
ke a run out there. It would probably
ake Margaret feel better if she could just
ve a look at you."
"I thought I'd go early in the summer."
"You ought to go right now."
"Now? Oh, I couldn't!"
"Why not?"
"A lot of things I have to do."
"What?"
"Well, I want to clean house— and I've
dered some clothes."
"Nonsense! Those things will wait."
"I don't want to leave you," she de-
lared; "not when you're feeling the way
you are."
"I?" he said, taken aback. "Why, I'm
all right."
She shook her head.
"Something's been troubling you."
"Business," said he a little bit defen-
sively; "but that's only another reason why you might better go now. I can't tell when I'll be called out of town again. I'm going to be frightfully rushed in the next few weeks. If you were out there with your sister I'd know you were all right. I'd know you weren't waiting around for me."

"But, Dick dear," she interposed, "you mustn't feel that way about me. That means I'm a drag on you—the very thing above all others that I never want to be."

"Not a drag," he corrected. "But honestly, Alice, I won't be happy until this thing is set right."

"Then I'll go of course," she said.

"That's the girl! Now the question is, when?"

"Next week sometime?"

"Why wait until next week? Why not now—to-morow?"

"To-morrow?" The idea seemed to take her breath away.

"Yes, the sooner the better. The sooner you go the sooner you'll be back."

"But I ——"

"To please me," he urged in a final appeal the effectiveness of which he well knew.

"Well, then ——"

She was assenting, though a little doubtfully. At once he became expansive.

"Splendid!" He threw an arm about her waist. "I'll stop and get your tickets on the way down in the morning. You can go in the late afternoon and be in Cleveland early next day. You'd better wire them to-night that you're coming. I'll be around to drive you to the station." Then, perhaps because she looked a trifle dazed, causing him to fear that she was still uncertain, he added encouragingly, "It's just possible that I'll be going to Chicago again, and if I do we might arrange to meet on the train coming back."

Immediately she brightened.

"Oh, that would be lovely! Maybe you could get off and come up and meet Margaret and George. And I'd love to have you see the children. You probably think it's just because they're my niece and nephew that I talk so much about them, but it's not. They're really —— Do you think you could stop off?"

"Well," he said, "we'll see."

"In about a week, you think?"

"I can't say surely yet. I'll let you know as soon as I know myself. The main thing now is for you to get started. We can fix up the rest later." Then observing that she looked cast down again he patted her shoulder reassuringly, exclaiming in a voice intended to be stimulating, "Buck up, my dear! Think how happy you're going to make them all! You mustn't be looking like Grief on a monument, you know!"

"I shall miss you awfully," she said.

"No, no! You're going to have a fine time. You'll see! Why, you may meet some fellow out there who'll make you forget all about me."

"I wish you wouldn't say things like that, Dick."

"Why be so hideously serious, dear?"

"Well, I am—about you. I don't see how you can joke about such things. You know that no one could ——"

"Of course I know." Again he patted her shoulder.

"I'm always thinking of you," she went on. "Every night of my life I pray for you the same as for Margaret and George and the children."

"You sweet girl!"

He rose to his feet; she followed, standing close beside him and looking up into his face as she asked, "Will you miss me?"

"Of course."

"Much?"

"Lots." He kissed her lightly. "Now it's time for me to be running along."

"Already?"

"It's after twelve."

She glanced at the clock.

"Only five minutes after."

"Yes, but you've a busy day ahead of you, packing and getting off. And I'm tired."

She made no further effort to detain him. But in the hall, just as he was leaving, she flung her arms around him and for a moment clung to him like a frightened child.

XIV

WITHIN the hour Parrish, in pajamas and dressing gown, was settled in a comfortable position on his bed. At his back were three large pillows and a good light fell over his shoulder upon the book which he hoped would keep his thoughts engaged until Rita's call should come. He had switched the telephone off from his study to the extension instrument at his bedside, which he could reach at the first sound of the bell.

But there would be a long wait before the bell would ring. She had sung Aïda to-night, and Aïda ran rather late, as he remembered it—until about half past eleven. Then there was all that dark make-up to be removed before she could dress. That meant three-quarters of an hour at least. By now she was at Frémecourt's, but she would hardly be leaving there before two hours more had passed. It would be three or four o'clock in the morning when she reached home and got his message.

But would she get it? He had been explicit enough with Pierre, certainly; but would Pierre, in passing on his word, lay stress enough upon the fact that he wished her to call him up, regardless of the hour? He lacked confidence in Pierre. This business of communicating always through a third person, and that a butler who spoke usually in French, was irritating—irritating as the devil! So much depended upon Rita's understanding the messages he left! It wasn't a mere case of "Call me up some day." He must hear from her! He must! Worn out as he was, he felt he could not sleep until he heard her voice.

The large volume in his hands was admirably suited for ordinary bedtime reading. It was the first volume of the memoirs of a British diplomat who had spent the past half century in various capitals, and who described in an easy rambling style events he had witnessed in those capitals. It was a book of gilded gossip and anecdote which could be opened at any point and closed at any point—a first essential in a bedtime book.

But this was not apparently the kind of reading Parrish needed now. Time and again he found that his eyes had traversed pages while his thoughts were otherwise engaged. He was neither reading coherently nor thinking coherently. He would turn back and reread, endeavoring to concentrate, but only to find himself presently drifting again into shadowy, dreamlike speculations and imaginings.

He saw himself with Rita in foreign places amid spectacular surroundings. Now they would be strolling along the borders of some sapphire lake in the North Italian hills, now dining in a brilliant restaurant at Monte Carlo, now roaming the garden of a villa at Taormina—a villa sparkling white against the green mountainside, with the sea spread out below, and smoke-plumed Ætna lifting its white crest through a far-away blue haze.

At two the striking of the old clock in the study roused him. He had been lying with closed eyes, the open book propped against his knees. Once more he began to read. There was a description of a ball and supper at the Winter Palace, vast and beautiful apartments lighted by thousands of candles—a noble company. He seemed to see Rita there. Constantinople, the Bosporus, the Golden Horn—a succession of strange places, strange people, strange happenings, always with Rita at his side.

Now they were on the stage at the opera. No, not the opera. They were standing at the prow of a great galley surging through a summer sea. Richly colored sails bellied in the soft, sweet wind. Rita was dressed in trailing robes of white brocade. Her glorious dark hair was hanging about her shoulders. There was music. She was singing to him, but in a language he did not know. The sailors, too, were speaking a strange tongue. He listened, spellbound.

Then came Alice. Sailors held her roughly by the wrists. They were dragging her to the ship's side. They were going to throw her into the sea. Rita was not looking at them; she did not know what was happening. He tried to tell her, but she could not understand. She continued to sing, smiling at him, and while she sang there was a charm upon him—he was unable to move.

The sailors were lifting Alice now. Something must be done to save her. She looked at him imploringly, but he stood horror-stricken, rooted to the spot. He heard her pleading with them. He tried to shout and stop them, but was dumb.

They were holding her out over the water now. He could see it rushing by below. In a moment she would be gone. Rita still smiled and sang her song. In agony he watched. What were they waiting for? Ah, yes, the signal. They were awaiting the signal, which, he somehow knew, was to be

Specially priced for one week

April 24 to 29

This family carton of Wool Soap

A floating white **soap**

DURING the week of April 24 to 29, dealers everywhere will feature, at a special discount price, the family carton of Wool Soap, containing 24 six-ounce cakes.

This unusual economy offer holds a particular interest for every home in which there are babies or growing children. It affords a decided price saving and the convenience of a supply on hand.

Mothers have been using Wool Soap for more than a quarter of a century now. Its purity, its dependable quality, have made it the chosen soap for children in thousands of homes.

There are still many thousands of mothers who have not yet experienced real satisfaction in a soap for children's use. It is to introduce Wool Soap to them that this special offer is made—for one week only.

Advantages of this special offer to mothers

To nearly every household comes an occasional emergency of suddenly finding itself without soap. Mothers realize the convenience of having a several weeks' supply in the house.

In addition to the saving always possible in quantity buying, dealers everywhere will extend to you a special price advantage on the Wool Soap family carton during this week.

Wool Soap is the only white soap with which United Profit Sharing premium coupons are given. All Wool Soap coupons are exchangeable for valuable articles which every woman is glad to have.

The ideal soap for children's use

Skin and baby specialists place great emphasis on the necessity of a pure soap for children's tender skins. They say that mothers cannot be too careful about this one bath necessity.

A child's skin is so sensitive that it is easily irritated and coarsened if too strong soap is used. Only a mild, pure soap, suited to the unusually delicate requirements of tender young skin, should be used.

Wool Soap is ideally made for children's use.

The materials are the purest that can be obtained—the fats could be used to cook with. Every process of its manufacture is a step toward perfecting it.

Wool Soap lathers freely and cleanses quickly. For this reason children like to use it. It lasts well—a quality in soap that mothers appreciate.

Its effect on the skin is mild and pleasant. It never draws the skin or stings or irritates.

As a successor to the pure old imported Castile soap, now so seldom obtainable, Wool Soap is fast being chosen by careful, discriminating mothers everywhere, as the *one soap* best suited for family use.

Remember—this offer holds good only one week

The special price offer dealers are making on the family carton of Wool Soap, continues for one week only. Don't forget the dates! April 24–29. You can get it at your dealer's—anywhere. Just ask him to send it out. Telephone him today.

If your dealer does not have this carton in stock, send us his name, address and a check or money order for $1.65 and we will see that you are supplied.

BUILD YOUR HOME ON THE EXPERIENCE OF OTHERS

EVERYTHING for the huge buildings you see is bought with care, with foresight, and with exact knowledge that it is the best to be had for the money.

The Ambassador Hotel at Atlantic City, for instance, designed by Warren & Wetmore, architects, is installed throughout with Reading Genuine Wrought Iron Pipe. Hundreds of other large buildings use Reading, too. Why? Because Reading lasts longer. It resists corrosion.

If you intend to build a home, you should follow the example of the big builder and use Reading Genuine Wrought Iron Pipe. It is your best insurance against corrosion and short pipe life. These evils mean replacement. Replacement means added expense, such as tearing out walls and floors, installing new pipe and then repairing all the damage done.

Good architects specify Reading. If you follow your architect's advice and use Reading, you will be taking the best and most economical course.

Write for the booklet, "The Ultimate Cost." It is of unusual interest to the home builder.

SEND FOR THIS BOOKLET

It contains instructive information on pipe costs and the best installation methods. Also literature on Reading Cut Nails which hold and prevent squeaking floors.

"'Reading' on every length"

(Continued from Page 83)

the ringing of a bell. Then they would let her fall. That bell must not ring! Oh, it must not!

But it did ring, and as he heard it the whole scene faded out. In an instant he was wide awake, trembling and perspiring with the terror of that dream.

One thing, however, he knew he had not dreamed. A bell had in truth rung. It had awakened him. Even now he seemed to hear the echo of its last reverberations.

The telephone! Rita!

He snatched the instrument from the stand beside his bed and answered.

For a moment there was silence on the wire. Then came the droning voice of the operator, "Number, please?"

Without a word he hung up the receiver.

Through the net curtains gently swaying in his open windows he saw daylight. He squinted at the little clock upon his dresser. Twenty minutes to eight. He heard his servant pass down the hall, open the front door and say good morning to the elevator man, who always brought the mail and newspapers. It was the doorbell he had heard—only the doorbell.

He reached above his head and turned off the reading light. As he moved, the book of memoirs slipped from the bed and fell with a dull bump and flap of leaves to the floor. One of the tassels of his dressing gown was digging into his side where he had lain upon it as he slept. The night was gone. Another day had dawned; and not a word from Rita.

For a time he lay there miserable. He ached. But he must get up. There was that infernal tassel to encourage him, and there was so much to be done to-day. He must buy Alice's tickets, go to the office and come up later to see her off.

And Rita—that matter must be definitely settled. The waiting, the uncertainty were no longer to be endured. He had not known a moment's peace since he first laid eyes on Rita. She was driving him mad.

He arose, hurried through his toilet, bolted his breakfast and went out. From the Grand Central Station he telephoned, letting Alice know that he had secured accommodations on the Cleveland Limited and that he would call at six to drive her to the train.

Then, anticipating her, he added, "I'll come before six if I can, but there's no telling about that until I get to the office."

There! That much was done.

But, oh, this case of Rita! Why couldn't he see through it? Generally, he felt, he understood women and their ways. Certainly his friends, troubled by affairs of the heart, had come to him often enough with their problems; and always he had been able to interpret and advise. Everit, for instance, when he was in love with that married woman in Pawtucket; and Sage, when he was having difficulties with his wife; and poor old Goodman, who only needed to be nerved up to propose to a girl who had waited more than a year for him to do so. All he required now was help of the kind he had so often given. He must eliminate his feelings. He must force himself into a state of frigid practicality. He must audit his affair with Rita as impartially as an accountant would audit his own books. A man of his experience ought to be able to do that.

Riding downtown in the Subway, he attempted it. He had a choice of two courses: Either he must ignore Rita until she should communicate with him or else he must spare no effort to get in touch with her at once. The arguments in favor of the first course were simple. She had broken her promise to call him up. She had ignored his messages. She had not acknowledged his flowers. He would like to punish her for all that.

But there were arguments in favor of the other course. Suppose he remained silent—what then? Rita was proud. She might answer silence with silence. A deadlock. Everything ended. Moreover, a card in a box of flowers was easily lost. And there was absolutely no way of being sure that his message, left with Pierre, had ever reached her.

To discover a plausible excuse for her failure to telephone according to her pledge did not at first look easy, but before he reached his office he had hit upon an explanation which seemed to him a masterpiece of feminine psychologizing. Her promise, given freely as they parted, had assumed an aspect altogether different when the time came for its fulfillment. Twelve hours of daylight had cha look of things. She had felt self-co Diffidence! That was it! He had of her thinking of him, wishing to t to him, yet not wishing to; going h toward the instrument, then falte giving up. A charming vision.

He understood her feeling. He w away false pride and keep calling until he got her. Once they had ta shyness would depart.

At eleven o'clock he left his des an investor was discussing with advisability of selling stocks and bonds, went to the private telepho and called Rita's number. Pierre that she was not yet awake. He pected that. But to-day he mea forehanded.

Returning to his desk, he resu conversation with the custome thought him overpessimistic.

At half past twelve he telephone This time the butler asked him to h wire. That was encouraging. kindling hope was quickly exting Pierre returned to say that the specialist was with mademoiselle. Parrish would leave his number moiselle would call him in a little

The throat specialist! Perhaps ill. Perhaps that was why he h heard from her. That was anothe tingency he should have taken i calculations. Opera singers had to b careful of their health than o mortals. But in response to his inquiry Pierre assured him that s quite well; the doctor's visit was a of routine.

"I'm glad to hear that," said Par

Yet somehow he was not quite g hear it. Of course he did not wish be ill, but on the other hand had sh ill everything would have been exp He left his number. Then instead o out he had lunch sent in to him and at his desk. The market to-day irregular—the kind of market one d like to leave.

An hour passed. An hour of su punctuated by frequent excursions ticker. The uncertainties of this flu ing market were trifles by comparison those of his state of mind. At leng ceased to make excuses for her. Her ises were worth nothing. She had intended to call him up.

Well, he would give her one more ch As he went to the booth for the third he felt that he was facing one of the of his life. The whole future hung on should happen now. Again he hear voice of Pierre. He asked to speak to

"Mademoiselle had to go out, sir."

"All right!"

The electric contact, broken as he ered the receiver on the hook, would be resumed. It was over; over and with. He stood for a moment staring at the mouthpiece.

"Damn her!" he muttered. " through!"

XV

HE WAS tired—frightfully tired. needed rest. He needed to relax. his nerves would not let him relax. sensible thing for him to do, he knew, to go home and have a nap before ta Alice to the train, but the thought was tasteful. He was too restless for that.

After the closing of the market he mained for a time in the office, talk gloomily with customers about the e nomic future of the country, the railr situation, wages; the excess-profits killing initiative. Had not the Brit tried an excess-profits tax and abando it? But the British generally showed so sense in these matters. A direct sales was the only thing.

He looked in his desk drawers for a c tain pamphlet giving the comparati figures, but could not find it. The drawe were full of old papers and reports, ma of them useless. Talk about efficienc Sixty dollars a week to a secretary w didn't even clear out these desk drawer He buzzed for the young man, and in th tone of one who has suffered long a patiently spoke to him about the matte Then he left for the day.

Instead of taking the Subway up Forty-second Street, according to his usua habit, he walked up crowded Nassau Stree to City Hall Park, and striking across th park continued up Broadway.

How the city had changed within hi memory! Not only the buildings but th

A Diamond for Every Car

There is the right Diamond Tire for you and your car—a Diamond Cord, or a Diamond Fabric. Sum up your needs, and one or the other will meet them.

DIAMOND CORD

The climax of our twenty-nine years of quality tire making. The sum total of our experience, ideals and principles. Diamond *durability* at its *highest*, *plus* a *handsomer* tread, tastefully set off by smart, shapely sidewalls. Diamond *economy* at peak, *plus* a new road-gripping, tractor-like anti-skid, unique in tire history. A tire to add beauty to the luxurious limousine, and elegance to the most modest car. To get a *new thrill* out of your automobile, equip it with new Diamond Cords.

DOUBLE DIAMOND FABRIC

Owners of Fords, of Chevrolets, of Maxwells, and other popular sized cars—The new Double Diamond is your tire; the tire in *perfect balance*. *In balance* with your car, its weight, its needs, its uses. *In balance* with your ideas of a tire; a full measure tire at minimum first cost. Go and see it; observe its novel, road-gripping tread; its trim gracefulness, and fortified sidewalls. Balance your car with Double Diamonds.

The Only Man in the World

YOU are the only man who has to wear your clothes. You are the only man in the world our tailors consider when your Kahn suit is being made. Therefore, your Kahn tailored-to-measure suit is as individual and personal as your own tooth brush.

❖ ❖

Get that one point forever in your mind —it is *very* important. We do not do so-called "type-tailoring." Every Kahn made-to-measure suit is tailored with infinite care and precision to fit just *one man.*

❖ ❖

This individuality, this "mine" feeling in your Kahn Clothes is pure plus—you pay no premium whatever for it. Kahn made-to-measure clothes cost no more than fine ready-to-wear clothes

—because they are tailored in great volume—meaning low production costs and a low price to our dealers

—and because our dealers have no merchandise investment and no losses on old stocks—meaning a low retail price to you.

❖ ❖

Prove—at our risk—that Kahn Clothes offer the most comfort, satisfaction and value for the money.

Go to the nearest Kahn dealer (there are three thousand of them in this country); select the fabric you admire; let him measure you for a spring suit. If it doesn't please you in every respect

—DON'T TAKE IT. Kahn clothes must make good, or we will.

Get a suit, *this time*, that FITS.

Because of its superior fit, workmanship and materials, your hand-tailored Kahn suit will look well and stand pressing and cleaning indefinitely.

Prices on Kahn made-to-measure clothes for Spring are $35 to $70. To pay less is false economy; to pay more is false pride.

would be gone ten days or two weeks.
Now that Rita had been definitely and
ally ejected from his life there was not,
course, the pressing need that there had
en for Alice's departure. Still, it was
t as well that she was going. The ex-
rience with Rita had shaken him. Such
splendid dream with such a swift and
ter awakening. It would take him a
tle while to pull himself together and get
er it. It was better that Alice should be
ay while he was fighting the thing out
th himself.

He found her putting the last touches to
r packing. The wardrobe trunk stood in
e corner of the bedroom ready to be
sed. He pushed the two sides together
d snapped the lock. The porters came
get it.

"Let me ——" she said, fumbling at her
rse, but he tipped them, telling them to
t the trunk on a taxi and have it wait
ith his own car.

Her Russia-leather suitcase was lying
pen on the bed. He saw her go to her
ressing table, take the large silver-framed
hotograph of himself, wrap it in some-
hing soft and silken and place it in the bag.

"Surely you aren't going to lug that out
here with you?" he asked.

"I most certainly am!"

"You should have put it in the trunk,
hen."

"Something might happen to it—they
hrow trunks around so. Anyway, I want
it with me."

"But when you get out to your sister's—you won't want to put my picture up in your room, will you?"

"I'd like to know why not!"

"They'll be asking about it. They'll want to know if it's your young man."

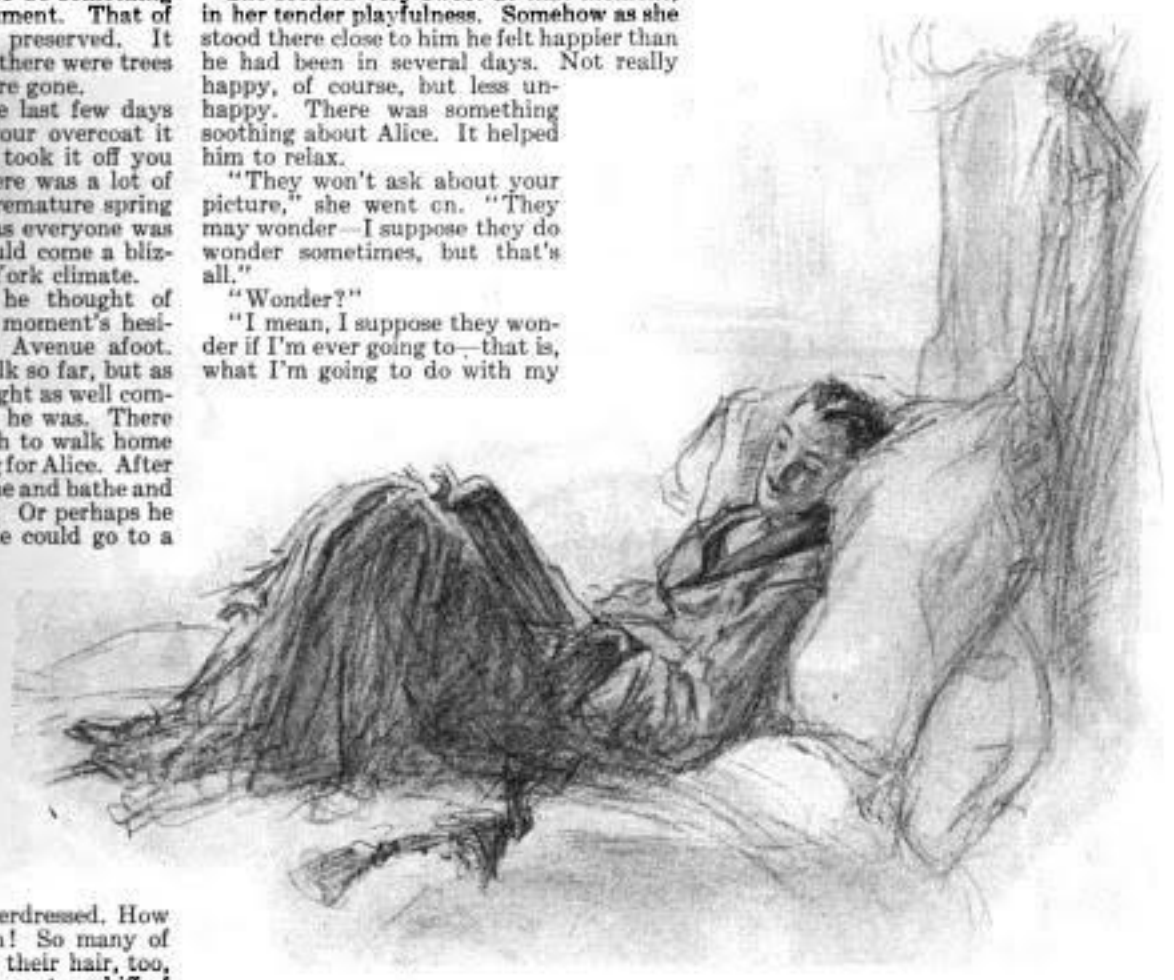
"Well, it is my young man, isn't it?"

"Not so very young," he said.

She came and put her arms about his neck, looking up into his face.

"Yes, young!" said she. "You don't look within five years of your age, dear. And you're handsome—so handsome!"

"God forbid!" he said.



"Yes, handsome—the handsomest man I ever saw, if you want to know! Maybe that's the only reason I take your photograph with me. Did that ever occur to you? Maybe I don't love you at all! Maybe it's just that I'm proud of your looks!"

She seemed very sweet at that moment, in her tender playfulness. Somehow as she stood there close to him he felt happier than he had been in several days. Not really happy, of course, but less unhappy. There was something soothing about Alice. It helped him to relax.

"They won't ask about your picture," she went on. "They may wonder—I suppose they do wonder sometimes, but that's all."

"Wonder?"

"I mean, I suppose they wonder if I'm ever going to—that is, what I'm going to do with my life. But they aren't the prying kind. And even if they were, dear, I just couldn't get along without your picture. I love you too much."

He Had Been Lying With Closed Eyes, the Open Book Propped Against His Knees

"Too much!" he said. "That's just it. You really haven't had out of life anything like what you're entitled to. I haven't done ——"

She placed her hand lightly over his mouth as though to stop the utterance of a sacrilege. They stood thus for a moment, silent.

"It's time to go," he said.

He helped her close the bag and snap the cloth cover over it. Then, when she had put on her hat and coat, he carried the bag to the hall and waited there while she ran to the kitchen to say good-by to Otillia.

"I told her to telephone to you if anything came up while I'm away," she said when she returned. "That's all right, isn't it?"

"Of course. Come along." He held the door open.

In the limousine he felt her hand descend softly over his upon the seat.

"Are you feeling better to-day, dear?"

"Yes, I'm all right."

"Be careful about sudden changes in the weather."

"Certainly."

As they neared the station she said, "I don't know how I'm going to get along without you."

"Oh, it won't be long."

The car had swung into Vanderbilt Avenue and was approaching the carriage entrance of the terminal.

"Do you love me, Dick?"

"You know it."

"Darling!" she said, and pressed his hand gratefully. "And you will try to arrange for us to come back together, won't you?"

"If I can."

Her trunk had followed them down in a taxi. He checked it; then went with her to the train-gate, which was just being opened.

An obliging gateman let him pass through with her.

"Dick," she said in a low tone as they walked down the concrete platform beside the long row of Pullmans, "I can't help it. I feel—apprehensive."

"Why should you?"

"I don't know. I woke up last night—you know how weak you are when you wake up in the night and begin to worry? It was a sort of nightmare. Things haven't seemed just right lately. I felt almost as if—as if we had quarreled. I couldn't get it out of my head that you wanted to get rid of me."

"Silly girl!"

"I suppose I am silly."

"Yes. Why, I had a nightmare myself."

"About me? What did you dream about me?"

"Oh, I don't know. We were on a boat. I can't remember dreams. There was cheese in that salad dressing last night. Cheese never agrees with me."

He boarded the sleeper, saw her to her section and tipped the redcap who had carried her bag.

"Now," he said with the air of one whose duty is done, "you're all fixed. Here are your tickets."

"Thanks, dear, for seeing to everything. Can't you sit down a minute?"

"I have to get home and freshen up before dinner," he answered. "And—I hate to wait around for a train to leave."

"Yes, I remember." She rose. "I'll go to the platform with you."

He followed her down the aisle and into the narrow passage. At the end of the passage she paused, looked out to the platform to see that no one was coming, then turned quickly, and placing her hands upon his shoulders gave him a swift, eager kiss.

"Not here!" he protested, disengaging himself and glancing apprehensively behind him. She was amused.

"Don't you like me when I'm brazen?"

"Now you go back," he said, smiling uneasily, "and we'll say good-by through the window."

He left her, walked back beside the car, and presently saw her sit down on the green plush seat within. Bending over and looking at her through the two thicknesses of glass, he formed a good-by with his lips,

(Continued on Page 92)

Why Brown missed his train

Brown boasted he had never missed a train in his life. He was also a wizard at working puzzles. He had never found one he couldn't do. But one morning Brown missed his train. His record as a puzzle worker was at stake. He had seen some of the boys at the Club puzzling for days over—

"Puzzle-Peg"

He thought he could solve it in a hurry. So he bought a set and took it home. After dinner he worked on it for hours. Finally he gave up for the night but started in again next morning as soon as breakfast was over. He had it almost solved. The tantalizing pegs were jumping just right—when all of a sudden his train whistled. He sprinted for the station, but too late. Away went his record for making trains as well as for solving puzzles.

Thousands of people of all ages from ten to eighty have puzzled over Puzzle-Peg for days. It is the most baffling and mysterious fun-provoking puzzle ever invented. You may work for days to find one solution. You may say it can't be done. But free booklet sent with each game shows already *30* ways of doing it have been found.

If you want the biggest box of fun and entertainment you ever had for 50 cents, get a set of Puzzle-Peg anywhere good games are sold. If you have trouble in getting your set, send 50 cents and we will mail one postpaid together with free booklet of 30 Problems.

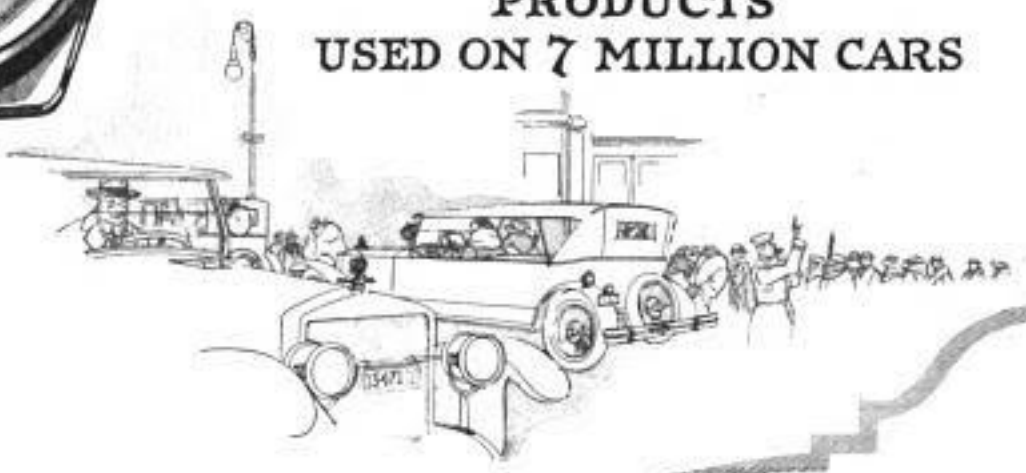
Standard Model, black and nickel finish, $10.00

Ford Car Model, similar in design and identical in workmanship to the Standard Model, $10.00.

SO BIG—so bright—the driver behind can't fail to see it. Avoid *smash-ups*. Through rain or fog STOP flashes out in brilliant red against a black background whenever the foot brake is depressed. Sand-blasted glass to avoid glare.

Extreme caution is advised when buying electrical equipment. The name Stewart is on this Stop Signal.



THE pick-up, the power and the gas-mileage obtained after installing this carbureter astonish Ford car owners. These advantages are due to complete vaporization, equal distribution to the cylinders and complete combustion of the fuel. Trouble from fouled plugs and diluted oil is entirely eliminated. Owners report an average increase of 38% in fuel economy. A remarkable thing about the carbureter is that it operates as well—or even better—on low grade as on high grade fuels.

DON'T take the chance of overheating your motor. Keep your car out of the shop. Cut down repair bills. With a Warn-O-Meter mounted on radiator or fender you are constantly informed as to the motor's heat. A green light appears at an efficient motor temperature. Changes gradually to pink and flashes red should the motor begin to overheat. Beautiful in appearance, correct in workmanship.

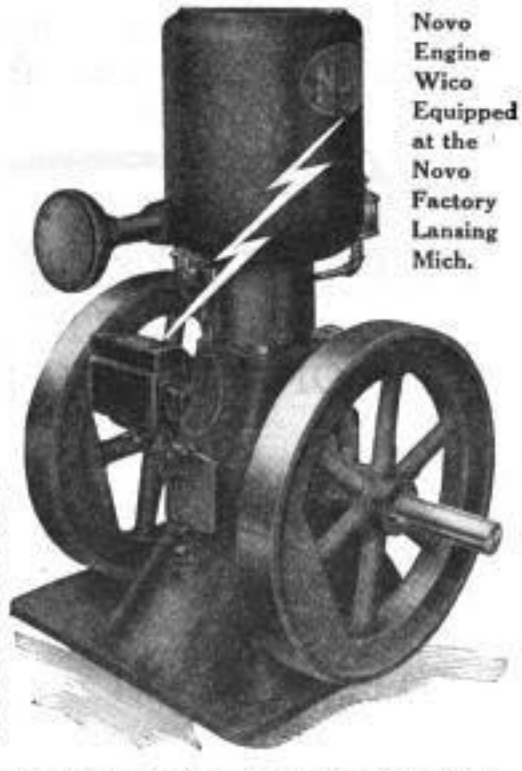
"You want Wico"

For Single Cylinder Engines

HERE is the perfect high tension magneto with all its moving parts withdrawn, just as you can do for yourself. You take nobody else's word for its unique simplicity and unfailing reliability—they're self evident.

WICO HIGH TENSION MAGNETOS for all one cylinder engines

are guaranteed to give a stronger spark for starting, independent of engine speed, and more hours of perfect service than you imagine possible. You can care for one yourself just as you would any other part of your engine.



Wico is the perfect solution of your ignition problem. Saves you the time and strength you now use up in getting started. Saves you the engine time you lose when your batteries or magneto are drowned out or out of adjustment.

Contractors, farmers, oil men, fishermen, railroad men, motor boat owners—Wico is just what you have wanted for years.

Write your engine builder, see your dealer. Specify Wico. Most engine builders now use and recommend Wico Magnetos.

Tear out the coupon below and mail it to us today. We'll help you to get Wico and send you a most interesting booklet.

Write now and save time and money

WICO ELECTRIC CO. SPRINGFIELD MASS. U·S·A

(Continued from Page 89)

then paused for an instant, feeling her clinging to him with her eyes.

"Good-by," he said again, and lifted his hat.

This time her lips moved in answer. With a nod and a smile he straightened up and walked away. Coming upon a newsman some distance back along the platform he was reminded that he had failed to supply her with reading matter. He hesitated. He did not wish to go back to her. It would mean saying good-by all over again.

Making a quick selection from the man's supply he penciled Alice's name and her car and section numbers on the cover of one of the periodicals. Then he stopped an empty-handed redcap who was passing and gave them to him for delivery. It would be a little surprise for her. Trifling attentions always pleased her so.

XVI

THE street lamps were lighted on Fifth Avenue as he drove home from the station, and the traffic was much diminished. It was nearly dinner time. How should he pass the evening? The sensible thing to do would be to dine at his apartment, read for a while and go early to bed. But tired as he was, he dreaded the thought of a quiet evening at home. His nerves were all on edge. He craved diversion and companionship—anything to get his mind off Rita.

All day long he had known that the time would come when he would feel as he was feeling now; that he would find himself alone with nothing to do, and that, left thus to himself, he would be miserable; but he had lacked the initiative to plan the evening otherwise. He had thought of various friends and various pastimes, but had rejected them one after another. There was no definite person he really wished to see; there was no definite thing he really wished to do; yet his desire to see someone and to do something was overwhelming. He did not want to plan. He wanted something to happen—something unexpected, extraordinary, stimulating; the kind of thing that never happens when one longs for it.

He wished he were anywhere but where he was. Oh, to be in Paris at this moment, with a seat at a little table on the sidewalk terrace of some boulevard café; or in a speedy motor boat, dashing along the shores of some tropical isle, blue and silver in the moonlight; or in an aëroplane soaring like a swift night bird between the stars and the sleeping world! But he was conscious, in each of his imaginings, of someone at his side, and though he tried to make himself oblivious of the identity of that someone, he could not.

Rita—how she haunted him!

Reaching home he dawdled miserably over his dressing. He was planning to go out only because it struck him as a little less unpleasant to go out than to stay in. It was after eight when he started on foot for the club; and when, a little later, he entered the dining room and looked about he saw after-dinner coffee on many of the tables. Four of his friends, Larry Merrick among them, were at a table where there was no room for an extra place. Two more were talking business and evidently wished to be alone. Clarke was dining by himself, as usual, and for the usual reason: nobody wished to dine with such an ass as Clarke.

Parrish sat down alone and scanned the menu. It did not interest him. The head waiter came and recommended chicken potpie. He hated chicken potpie. His order given at last, he read his second evening paper. How slow the service was here! When he was eating his dessert Larry Merrick came over and joined him.

"A nice party we had the other night," he said.

Parrish assented briefly; then he spoke of a consolidation of steel companies which had been announced that day, asking Merrick what he thought about it.

"It ought to be a good thing," said the other. "Wasn't it nice to hear her sing in those intimate surroundings? It was just right, the way she modulated her voice for that room."

"Yes. It struck me as peculiar that the steels didn't go up on the news though."

"You can't tell in this market. Have you seen her since?"

Why did he keep harping on the subject of Rita when the world was full of things to talk about?

"No, I haven't."

"She seemed quite taken with you."

"Rot!"

"Busini evidently didn't think it rot." Merrick smiled.

Parrish laid down his fork.

"Waiter," he said, "bring my coffee."

"You think she was simply using you plague him?"

That possibility had not occurred Parrish before; he found the thought tasteful.

"How should I know?" he demanded "All I know is that Busini is a lunat

"Yes. What do you suppose she saw him?"

"The Lord only knows."

"Yet they've been keen about each o for a long time."

"So I've heard," Parrish answered tone intended to dismiss the topic.

"I guess it's pretty straight." Mer paused, then added ruminatively, "Wo are certainly queer!"

"I don't agree with that statement," other returned crisply. "You can't ma sweeping generalizations about either any more than you can about nations political parties or the members of t club. Some men are queer, and so women aren't queer at all. Where can y find a greater freak than Busini, for stance?

"On the other hand, take a high type woman—the fine, straightforward, hone loyal kind that you can tie to as if she w the Rock of Gibraltar. Certainly y wouldn't call a woman like that queer!"

He was thinking of Alice. Her tra must be somewhere near Albany by no She had eaten her dinner and was back her section reading one of the magazin that he had sent her; or perhaps she w sitting thinking about him. He wish that she had not gone away; that she w back in her apartment, where he could go her for solace. She would ask no question She would demand nothing.

"I was talking about temperament women," explained Merrick; "the artist kind."

"Why didn't you say so then?"

"Weren't we discussing Rita?" Merri looked surprised.

"We were discussing women. When yo get down to artistic people there's no us discussing them at all. Nobody can figur them out. You can't tell what they're go ing to do any more than you can tell wha a bolt of lightning is going to do. And even if you could figure them out—what's th use? It's a waste of time. They're like a lot of animals in a zoo. You may like to go and look at them once in a while, but you wouldn't want to live with them, because that would drive you off your base."

The waiter brought his coffee. Parrish tasted it. It was too hot. From his glass he poured some ice water into the cup, then gulped down its contents and rose from the table.

"Talk about generalizations!" said Merrick as they moved together toward the door. "It seems to me you've dealt with artistic people pretty much *en bloc*. Architects are artistic—aren't they pretty sane?"

"They'll put small windows in a house to make it pretty, whether you get air or not."

"Maybe they will. But there's a big difference between different kinds of artistic people. Of course poets are the worst. I don't like authors either. Half of them seem to be socialists or anarchists. They get too much advertising. It swells them up. And painters—they're a little off too. They think they have to wear beards and soft hats and baggy homespun suits. But music is more universal than the other arts. It reaches everyone and expresses things for them they can't express for themselves, and for that reason it seems to me that musical people are generally more human than artists of other kinds."

They had reached the head of the wide stair leading down from the dining-room floor to the hall below.

"Musical people!" repeated Parrish, stopping in his tracks. "Musical people human? Why, musical people are the worst of the whole outfit!"

As quickly as he could he escaped from Merrick and from the club, and walking aimlessly to Broadway strolled down through the glittering, noisy, crowded district of theaters, restaurants, little shops and movie palaces. There came into his mind a vague thought of seeing a movie, but the signs in electric lights outside the movie houses repelled him: The Penalty of Passion, The Chains of Love, The Golden Sin. No, no! Besides, it was

LINCOLN ELECTRIC MOTORS

Lincoln Guarantees This "Cure" For "Bad Power Factor"

"Bad power factor!!"—that fearsome electrical bogey which boosts your power bill and eats up the power company's profits. It is as mysterious as witchcraft and demands the same "cure"—plain, common sense.

"Bad power factor" can only result from putting the *wrong* motor on the machine. Lincoln Engineers are giving "bad power factor" the common sense treatment by putting the *right* motor on the machine. They go direct to the machinery maker—test his different machines—find out the exact type and size of motor needed for each of his models—and give him a chart showing the result.

That sounds like a simple remedy, but it strikes at the very root of the trouble by removing the cause. Every outfit which the machinery maker ships out under this plan has a Lincoln Motor which is *guaranteed* to do the work with the least possible amount of power and hence to give a "good power factor."

If this Lincoln method had been generally used in applying motors to machinery there would be practically no such thing as "bad power factor." Millions of dollars would be saved to power users and power plants as well, where it is now wasted because of motors which are the wrong size, or the wrong type, or both.

You can start today to improve the power factor in your plant by asking that any new machinery you buy be equipped with Lincoln Motors applied and *guaranteed* by Lincoln Engineers.

"Controlled Heat"

"CONTROLLED-HEAT" means that with a touch of your finger the radiator instantly gives the exact heat you want—no more, no less.

Think of the comfort of being able to regulate the temperature in each room, to suit the occupant or to meet sudden weather changes.

Think of the economy of never wasting heat—never having more than you want.

That's what Hoffman "Controlled-Heat" gives you—Comfort—Economy.

Furthermore, "Controlled-Heat" is radiator-heat—heat *where you want it.*

"Controlled-Heat" is vapor-heat—steam heat operating on low pressure and correspondingly low fuel consumption—*it reduces coal bills.*

"Controlled-Heat" is flexible heat. It instantly responds when radiators are regulated and functions without waste.

"Controlled-Heat" is clean heat—no dust or dirt.

"Controlled-Heat" is silent heat—no thumping, banging pipes, no hissing, leaking steam.

"Controlled-Heat" is almost self-operating. It is so simple that it requires no expert knowledge or special care.

Above all, "Controlled-Heat" is *Safe.* No matter what you do or don't do through carelessness it is impossible to burn out or crack the boiler.

If you want heat that can be regulated; heat that is economical, silent, clean, flexible, efficient, simple to operate and safe, get "Controlled-Heat"—controlled by Hoffman Equipment.

Hoffman Vapor Equipment is made by the makers of the famous No. 1 Hoffman Valve, "Watchman of the Coal Pile," and, like the No. 1 Valve, Hoffman Vapor Equipment is guaranteed in writing for five years of perfect service.

Whether you are planning a skyscraper or a bungalow, investigate the Hoffman way of heating. Send for the interesting illustrated booklet, "Controlled-Heat."

MEN WHO FAIL

(Continued from Page 5)

owner of the largest city department store. The young employe of a large metropolitan bank whose one ambition is to become its foreign-exchange manager or trust officer may be working on a far sounder philosophy than his fellow worker who seeks the arduous, almost back-breaking strain and wider reputation that go with the presidency.

There are unthinking persons who would call the one man a failure and the other a success, although if the question be looked at in what might be called a professional sense, like the ministry or medicine, one man is just as far removed from failure as the other. Andrew Carnegie was fond of telling of "Captain" Jones, who for many years was the competent superintendent of the Carnegie Steel Company, but who consistently refused to become a partner, although he was told it would make him a millionaire without any risk. Who can say that his decision was unwise?

"No," he said, "I don't want to have my thoughts running on business. I have enough trouble looking after these works. Just give me a hell of a salary if you think I'm worth it."

"All right, Captain; the salary of the President of the United States is yours."

"That's the talk," said the little Welshman.

Then, too, there are vast numbers of men who may seem to be failures, but if they are such it is because of circumstances over which they have no control. Napoleon said, "I make circumstances," and great men, geniuses, do overcome what seem to be insuperable obstacles. Those who have marked talents usually find ways of exercising them, but the great masses, and even those of ability far above that of rank-and-file workers, are not the kind to burst the bonds of circumstance. Their abilities need to be called forth and stimulated by circumstance. They need every chance to develop.

A young man in a college class twenty or thirty years ago showed unusual talent for writing. If he could have gone to work on the New York Sun under the tutelage of Boss Clarke he might possibly, or indeed in the opinion of friends, probably, have developed into one of the greatest of living novelists. But with a mother and a sister to support he had to go into a branch of teaching which would give him immediate income.

How many men there are who because of family responsibilities must do the immediate thing at hand instead of following the long path to success and reputation!

Poetic Justice

Vast numbers drift into occupations through the merest chance, or because of trivial superficial circumstances in no way connected with the great primary fact of their natural endowments and aptitudes. The head of any business enterprise will tell of men in his employ possessing good education, health, character, industry and even sound judgment and fine personality who never get beyond a mediocre position because they are not in the right place, but who feel they cannot change on account of accumulated family responsibilities.

There is a certain inborn capacity, a flair, a form of canniness almost, for business, for trading, for buying and selling, which cannot be analyzed and which great numbers of those in business, despite numerous other admirable qualities, most certainly lack. These are the men who should be in literature, art, science, handicrafts and mechanical work of various kinds, and perhaps in cultivating the soil.

Nor are all the misfits in life on the lower rungs of the ladder. Indeed there are men who attain a fair measure of material success who are not even honest, and this means that many young men are held back because they are not given a fair chance. A man may be living a half life through no fault of his own and because his superior lacks fairness or common honesty and decency.

A young man called at an employment agency a few years ago and said that he was keeping books for a certain employer and managing the office as well, for eighteen dollars a week. He had tried many times to get a better position, but was always blocked by his boss, who told other possible employers that he was not quite honest.

"Yet he lets you manage his office, he?" asked the manager of the ag "I have a friend, a lawyer, who wa young man like you. I will have him to your employer, and I think he can place for you."

A few days later the lawyer called office where the boy was working and the employer that he merely wants confirm in conversation the letter he received. The employer, quite unsus ing, dilated on the importance of his ness and the size of his office. He adm that the boy was practically office man but that, as he had written in his lett couldn't pay him any more becaus youth wasn't quite honest.

"I will have you in jail in a few ho said the lawyer, "unless you write and a letter, as I dictate, to every man to w you have ever suggested the idea that boy is dishonest. Of course he mus honest or you wouldn't keep him here ning your office."

The letters were written, the young secured a better position, and is no partner in an important firm.

But where there is one dishonest ployer there are hundreds who keep subordinates down through selfishnes mere inertia. This is perhaps espec noticeable in the case of big organizati The great difficulty is that the man im diately ahead will not recommend assistant for promotion. There are natural reasons for this attitude. The is unwillingness to lose a good helper to have the trouble of breaking in a one. The other is the fear that if assistant is promoted he may prove a be man than his superior and in time go ah of him and perhaps oust him from his pl

Untrained Understudies

"There is a vice president of a cert well-known organization," says one knows but evidently does not love h "who gets about twenty-five thous dollars a year, and owing to his connect with the concern has made many investments, but who has long ago stopp being of any use. He is selfish and ingro ing. He is, however, very gracious, ev obsequious, to the men above him, a very disagreeable indeed to those bel him. His whole attitude to those und him is, 'I've got mine, it's up to you to g yours if you can.'"

A series of newspaper comics known Bug House Fables pictures in one issue t department head of a business conce going to his employer and saying, "Bo why don't you give my job to my assistan He is better than I am." But though su extreme altruism is not of this world, a ce tain measure of it pays. Many men ha failed of promotion because they have d veloped no assistants to take their ow places. A large corporation which does n go outside its own ranks for its gener managers recently found itself in need five such executives without having th proper material ready, because the me higher up had failed to develop tho below.

Then there are great numbers of em ployers who are honest and unselfis enough, as well as successful and farseein in all other respects, but who have abou as much ability as a hen in picking sub ordinates and balancing their organizatio Far too often they choose assistants be cause the applicants have the same stron qualities as the employers themselve when obviously the assistants should b selected for supplementary and complemen tary qualities; perhaps for very differen traits rather than for the same.

A close student of human values in busi ness has said that 80 per cent of manage ment troubles are due to the fact tha assistants are not picked out to supply qualities which superiors lack, and with a view to preventing the clash of tempera ments. The visionary, literary type o business head instead of picking out an assistant who has initiative, who is a driver and a self-starter, selects one of his own type, and then everybody wonders why the assistant is a failure.

"If an executive comes to me and says he wants a treasurer, a bookkeeper, a stenographer or any other assistant, I cannot supply such a worker unless I know all

A New Use for the Homer

The Homer Pipeless Furnace has become famed throughout the world for its remarkable heating efficiency, keeping small houses and even good sized homes of from twelve to fifteen rooms warm and comfortable in the severest weather.

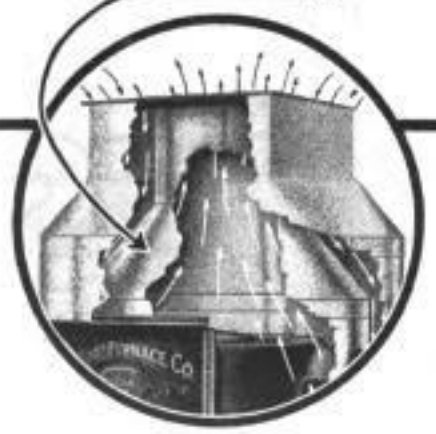
Now it has made a new job for itself, and a big one.

In hundreds of homes, institutions, stores, and churches, which are provided with steam or hot-water plants, the Homer is being installed as an auxiliary plant, or a "buddy to the steam plant"—to quote one satisfied user.

The Homer gives you an inexpensive, economically operated, quick-action plant—just what you need for the fall and spring months, and provides extra heating capacity should you require it on the severest days of mid-winter.

Think of the convenience of being able to start a fire on a chilly morning with a little kindling or a couple of shovels of coal and have the house warm and comfortable in a few moments. Compare this convenience with the trouble, waste, and excessive heat involved in starting the big steam plant in mild weather—besides, the saving in fuel consumed will pay for the Homer within a short time.

Remember, when you install a Homer, either as a main plant or a supplementary plant, you are getting the only pipeless furnace having the famous Thermo-Seal Inner Lining, which stops surface radiation and saves fuel—the only pipeless furnace made of Strokel rust-resisting iron castings—the pipeless furnace designed and built by the inventor of the pipeless furnace, Mr. Samuel D. Strong.



Our book, "A History of the Pipeless Furnace," is mighty interesting reading to anyone who has a heating problem to solve. Ask us to send it to you free, together with the name of your nearest Homer dealer.

ntinued from Page 96)

executive himself," says an em- expert. "It is just as difficult mployers to choose assistants as a physician to treat his own

stance and chance of many kinds s that cannot be passed. This is ntal fact of science and everyday s at once silly and harmful to But equally important facts of d everyday life are that nearly all e reservoirs of power that we great energies upon which we aw, and that we habitually live evel that is far below what we upy. Even those scientists whose s have been devoted to the study ty, and who naturally appreciate ll the limitations that it imposes, what we habitually do is far less it we could do.

end of his life Charles Darwin de- at men differed less in capacity eal and determination to use the hey have. A noted living biologist, . Conklin, speaks frequently in his and books on scientific subjects of lden mental and moral powers" of als, of "capacities very much han the demands upon them," and tent talents of men.

d, though circumstance and chance edly play their part, there is reason to be suspicious of persons h forward pull, luck and favoritism ain the success of others and who the lack of them to be the explana- their own failure. Few are those ll frankly admit inferiority, and cir- nces are often invoked as a defense he facts do not justify it. Thus to an that is great enough at least to in- whole world of free will, freedom, lity, opportunity and responsibility, nen are masters of their own fate.

n a reasonably normal degree of mental and physical health, it is well e faith in the power of the human o conquer success. But obviously the reasons for failure are sought out hysically defective must first be ated.

re are a few exceptions, but gen- speaking any unusual measure of ss success requires sound health.

Lack of Personality

had the 'flu' a few days ago," said the dent of one of the largest banking utions in the country. "I usually re- from any illness quickly, but that se seems to be no respecter of person ysique. I came back to work in a few and realized that I was only 95 per well. I learned that I could not con- for more than a few days or a few s at most to fill this position in that lition. My health has to be 105 per to put the smoke on the ball and give e right wallop."

is often said that men fail because lack personality. But this statement, gh true in a sense, begs the whole stion. Personality means the collective ributes and qualities of a person, the bination or composite of them, and of se it is this composite which chiefly ls success or failure.

But what of it? A man's personality is man himself, it is his whole human ture. To say that he fails for lack of per- ality is like saying that he is the sort of n who fails. It is merely a repetition of bald statement that he is a failure.

What most people really mean, however, n they say that a lack of personality ls failure is that the failure has not a ning and agreeable appearance and ner, that he does not attract other peo- and draw them to him, and that he is presence. But though the gift for ndliness, the ability to make other peo- feel happy, and what is commonly ed an attractive personality, do aid terially in the struggle for success and ndicap those who lack them, it is posi- ely tragic to note the way business or- nizations confuse this quality with the al underlying flair for success and with e attributes that make it up.

Nothing is more common than for a man pleasing personality, the sort that is known in common parlance as a nice fellow, to stay in an organization too late and too long. Such a man, of course, accumulates many friends, everyone is sorry for him and hates to see him go. Very often he builds around himself the semblance of a job. But in reality he is a second-rate business man; and some little runt, lacking in the same pleasing gifts, goes far ahead of him eventually. Time and again an individual with an attractive personality induces his friends and acquaintances to intrust him with the care of their money or their undertakings, only to make a failure in the end.

To condemn to failure those who lack what is commonly known as personality is to place a premium on the mere possession of numerous gifts, although nothing is more common in a business organization than for employes who appear to be handicapped to come out on top. Nearly two thousand years ago the truth that it is not so much the number of talents that one has as the way in which they are employed was told in a parable that is immortal.

And again, the explanation of failure is sought in a single word by saying that one must have judgment, just the right balance between courage and caution. In a way this statement is true, but once more the question is begged and the complete circle traveled to no avail. It does little good to tell a person that he must have judgment and balance in general. It is like saying that one must be a good business man in order to succeed in business. It is a generalization back of which we must still continue to delve.

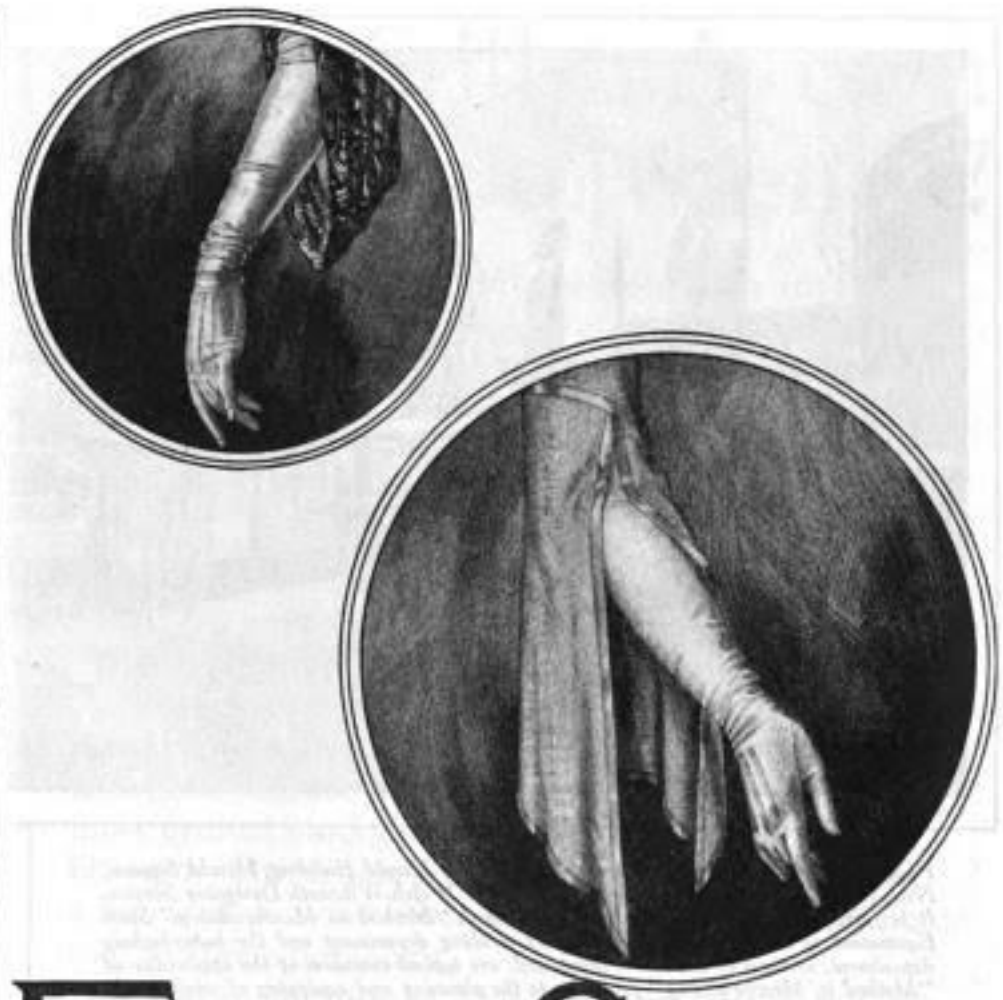
Cases of Arrested Development

But if we dig into the operation of great business organizations it at once appears that many employes fail to attain the highest measure of possible success because of a stoppage in the growth of their mentality and character. Just exactly why this is so no one can say, and to explain its manifold forms would take a dozen articles like this. But the fact itself is not only fundamental; it has the utmost practical bearing and value.

A man of thirty-five who had been with an important business institution for fifteen years and was the head of a minor department at five thousand dollars a year was recently reported on unfavorably by a superior. He was called to the office of the personnel director and asked to explain the criticism. He complained that the superior who had made the report disliked him, had learned all he knew of the business from him, and in addition had a pull. The personnel director then drew out a similar report on the superior officer from those who in turn were his superiors, and read both reports in full.

"Can you stretch your imagination far enough," asked the personnel man, "to pass judgment on these two reports with complete impartiality, in spite of your envy and hatred of your superior?"

Finally, after half an hour's grueling interview, the department head admitted that no one considered him valuable but himself, and that the favorable and unfavorable reports on his superior and himself respectively were alike fair and just.



"What have you done to widen yourself in all these years?" he was asked, and the only thing he could think of was a correspondence course on the work of his department.

"That's all right as far as it goes," said the personnel director, "but I don't see where it widens you. You have kept in your own little sphere. You have drawn a circle about yourself. You agree that you have made no other effort to improve upon an unfinished grammar-school education, that your speech is uncouth and your whole appearance unnecessarily shabby. No one has planned to fire you, but natural laws have worked like gravity to bring it about."

In another case unfavorable reports were being received from a man of about the same age, but in a somewhat less responsible position. His work had deteriorated in the last year and he had grown indifferent, gloomy and morose. On several occasions he had been absent on account of illness. When questioned by the personnel director he expressed fear that in the retrenchment process he might lose his job. He could not sleep for worry of it. He said he had executive ability enough to hold a more important position and needed a larger salary to support his family, but, although he had been with the concern ten years, he had gotten nowhere because he had no pull.

"We can't pay you any more," replied the personnel officer, "because you are not

FOWNES

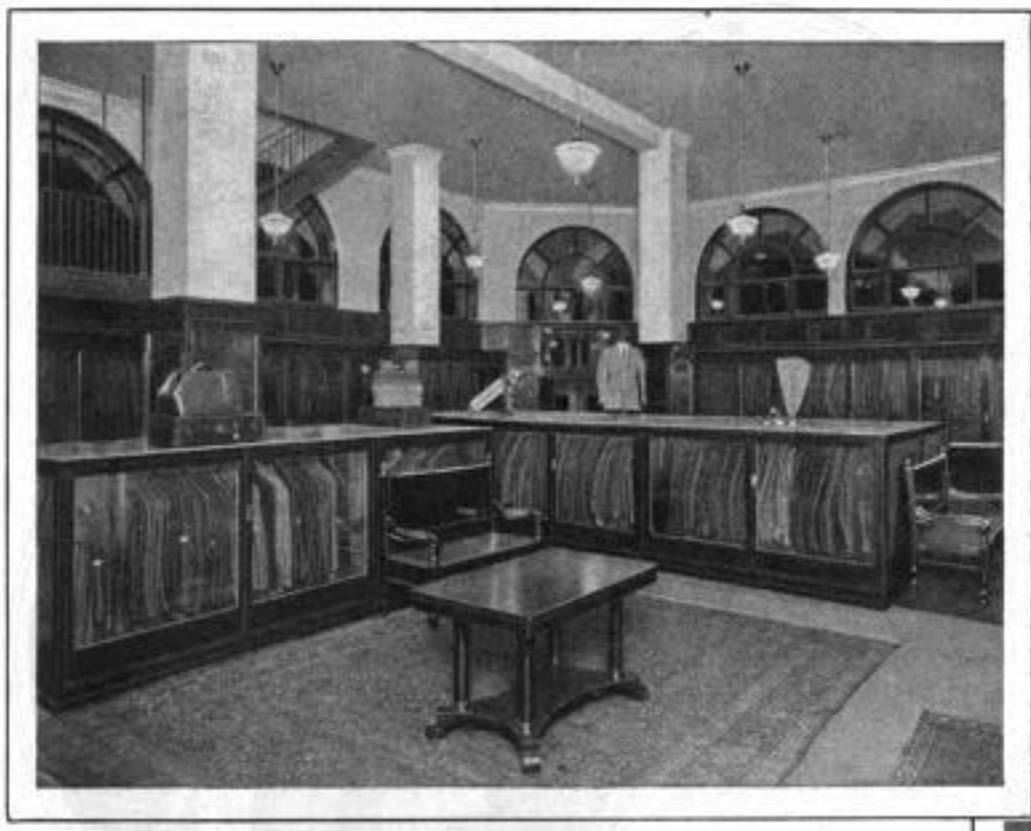
Varied, original—and often beautiful are sleeves nowadays!

The finishing touch is the glove—and this may present a problem to those not familiar with the wide choice in Fownes styles. But there is a Fownes for every sleeve,—whatever its shape, color or texture.

The world-wide acceptance of sports wear intensifies the demand for FOWNES FILOSETTE—the ideal fabric glove with the unmistakable Fownes texture.

Strap-wrist Filosettes for the long sleeve, sports coat, or sweater. Mousquetaires of twelve or sixteen button length for floppy short sleeves or long draped ones.

Or SILKS of every length, in springtime shades corresponding to the foulards, print silks, or oriental effects of the season.



Seek harmony and smartness in Fownes and secure good wear and good value at the same time.

If you have any difficulty in securing Fownes send us size and style desired with the name of your dealer.

It's a Fownes—that's all you need to know about a glove.

FOWNES BROTHERS & CO. INC., 119 WEST 40TH ST., NEW YORK

Digitized by Google

Rogers Peet Company's new store, located in the Herald Building, Herald Square, New York City, was planned throughout by the Welch-Wilmarth Designing Service. It is furnished completely with Welch-Wilmarth "Method in Merchandising" Store Equipment of standard type. The men's clothing department and the haberdashery department, sections of which are illustrated, are typical examples of the application of "Method in Merchandising" principles to the planning and equipping of retail stores.

The design of your store—
does it help to create busines

—does the beauty of your store attract trade?
—does the arrangement induce purchases?
—does the equipment accelerate sales?

IN the many sided retail business of today, no one merchant—no one designer—can know all there is to know about store planning. The merchant who would have his store designed along the broadest lines of efficiency, beauty and economy must turn—not to a single man, experienced as he may be in store planning—but to an organization.

The Welch-Wilmarth Designing Service is such an organization. It is greater than any one man. It includes a group of licensed building architects, store architects and merchandising experts—men who are familiar with America's most successful stores, large and small—men who have gained in years of planning retail establishments a rich, practical knowledge of modern merchandising principles.

If you are dissatisfied with the progress of your business—if you wonder whether or not it would pay you to modernize your store, or a department of your store—ask the advice of the Welch-Wilmarth Designing Service. Whether your business is a small one or a large one, the Welch-Wilmarth Designing Service offers co-operation. Laying your problem before the Welch-Wilmarth designers will obligate you in no way—but it will give you a new insight into modern merchandising efficiency.

TO the design of your store—the type of your fixtures and the arrangement of departments—can be traced much of the success or lack of progress of your business.

If you would achieve for your store a beauty that creates new prestige—if you would attain a merchandising efficiency that develops increased sales without a corresponding increase in overhead expense—lay out your store according to a Welch-Wilmarth Store Plan and furnish it with Welch-Wilmarth "Method in Merchandising" Store Equipment.

Store planning, as practiced by the Welch-Wilmarth Designing Service, embodies a scientific layout of the store from the standpoint of sales potentialities. Every department is correctly located in relation to other departments, to store traffic and to windows and skylights. Every department is allotted space according to proven rules of merchandising—so that each will carry its own share of the overhead and show a clean profit.

Welch-Wilmarth "Method in Merchandising" Store Equipment—which includes patented, interchangeable sectional units, standardized display cases and revolving clothing wardrobes of advanced type—combines beauty of design and finish with the highest development of modern merchandising efficiency. It permits more goods to be carried in the same space. It makes possible more sales by fewer clerks. It eliminates "mark-downs" of shop worn items. It gives the merchandise manager a constant check on stock. Above all, "Method in Merchandising" Equipment insures the utmost in merchandise display value per square foot of fixtures.

Invite the Welch-Wilmarth Designing Service to prepare a modernized plan for your store. Select "Method in Merchandising" Equipment of the standard type or in one of the Period Styles, and you can be sure that your store design will be a real factor in building business.

Write—on your business letter-head, please—for a copy of our new forty-eight page bound book, "Method in Merchandising." It illustrates and discusses authoritatively many of the modern tendencies in retail store designing.

Why is it the East Side of New York
y is slowly creeping up into the big business positions? One answer is that twenty or thirty thousand of these East Siders go to night school at the local universities. Americans talk a lot about success, but have become lazy and indifferent to its necessary conditions."

"What I am preaching to our four thousand employes all the time," said the vice president of a chain-store organization, "is to increase their mentality by study and otherwise, in order to keep abreast of the new problems and changes which come up. I put it up strong that unless enough of them look to the future to learn to operate on new plans as new conditions arise, not only they but the business itself will fail.

"The pity is that so few go on; most men stop when they have learned to do a single thing. In one city recently we were able to pick only six men as a result of two hundred interviews, for while we can get all the salesmen and clerks we want, what we are looking for are men who will become highly trained associates. There are hundreds of new stores to be opened, provided only the young men we take on prove competent to handle them.

"For there is just as definite a curriculum of activity from stock room to partnership in our business as in any university. The man who only knows part of our problems is handicapped on his way upward. Men run after a fairly good job the way they do a street car. When they have caught it they stop. They don't run any more, and their life becomes to all intents and purposes one of indulgence and holiday.

"They have been keen in the first few years, have watched every chance for service, spurred on by small salaries and a desire to live better. But when they get up to a moderate salary imagination dies, and, although they won't admit it to anyone, their development has stopped and they are now prisoners within their own limitations."

An official of one of the great public-service corporations said he thought the reason so many people fail is because they are egotistical, puffed up with a very little success, and predisposed to think they know it all from the start. Although at first glance this is an apparently different line of thought, I am convinced that the idea as thus expressed is fundamentally the same as that running through this article—namely, the vital importance of continued mental growth.

"But aren't you and I middle-aged crabs, when we say things like that?" I asked.

Men Who Never Stop Growing

"My answer," he said, "is that many of the ablest men have never stopped growing, no matter what their age. The most outstanding characteristic of the late Theodore N. Vail was his open mind to the other fellow's suggestion, even when he was well past seventy. The reason people slip is because they discard the very means by which they have gotten ahead, the bridge by which they have crossed."

"But is it not natural," I asked, "for people to change mentally as well as physically as they grow older?"

"Suppose a man gets ahead by being genial," was the reply. "Why should he stop just because he has reached years and position? I caught myself being brusque yesterday just because of my position. Constant vigilance is the price of success for young and old alike. We are all in danger of slipping back every minute, no matter what our age or position. The essence of the matter is that every man must watch his step all the time.

"I am fifty-nine years old and I could become a distinct failure in three months if I let myself slip. I can't see that vigilance in this matter hurts me any. I had a partner once who thought the world was his oyster when he was thirty. But now no one wants him around."

One of the most remarkable cases of failure that has come to the writer's attention is that of a young man who had such a distinguished war record that, without any previous business experience whatever, he was able to take his pick of positions when he returned from France. This he could not have done even with the war record except for a most attractive personality. The story must be shorn of all the picturesque detail and interesting human touches for fear that the person concerned might be recognized. At any rate, the young man obtained a position in what, for sake of illustration, we will call an insurance company. Here he was at once

Is Dan Stillson's own mark on your wrench?

The most famous tool in the world was invented by Dan Stillson in the Walworth plant 53 years ago. It has been imitated many times. It has never been improved upon by anybody, not even by ourselves, and it has never been displaced in the confidence and affections of mechanics everywhere.

We are today supplying new parts for Walworth Stillson Wrenches made 40 years ago. And these parts will, in all probability, fit the Walworth Stillson Wrenches we make 40 years hence.

The genuine Walworth Stillson Wrench is the master mechanic's pal. It holds first place in his affections because it meets every test and rises to the most critical emergency. There isn't a job of pipe fitting or nut turning too tough for a Stillson, and in a hundred and one other breaks and "fixes" it's the tool for the emergency.

A Walworth Stillson is as finely manufactured as any tool in the world. All working parts are made of the best tool steel. The jaw and bar are drop-forged and skilfully heat-treated to give strength and toughness, and hardness without brittleness.

And if any further guarantee of quality be asked, we can point to over 50 years of service behind the genuine Walworth Stillson Wrench.

Be sure that the wrench you buy has the diamond on it.

Ask your hardware dealer for a genuine WALWORTH Stillson Wrench (look for the trade-mark). Also write our Boston office for descriptive leaflet.

"LAWRENCE KNIT—TAILORED TO FIT" Shorts and Stouts in Union and Two-Piece Suits.

"This knit underwear saves my summer suits"

"BEFORE I got wise to the fact that *absorbent* underwear was the only satisfactory kind, I spoiled more than one light suit. And my shirts often hung on me like wet rags on hot days.

"I don't have any trouble with this Lawrence Underwear. It takes up perspiration like a sponge and my outer garments are never stained — they look better and wear longer. It's the finest thing to wear with Palm Beach or other tropical suits.

"Cool? Why shouldn't it be? Just as light and thin as any other underwear and never sticky. More comfortable, too, because it's so porous and elastic, and it wears to beat the band.

"The Lawrence tailor-cut feature is a knock-out. Every garment I get is so perfect in fit — cut separately to pattern by hand and made *full size*.

"I like this sock-length union suit because it protects the knees of my trousers, but you can get Lawrence underwear in loose-fitting athletic union suits or separate garments, if you prefer."

If you cannot find the Lawrence style you want at your dealer's, write to us and mention his name.

picked for a future officer and given to understand as much. The company even went so far as to get up a training class especially for him. To quote the language of one of the officers he was "put into executive action as quickly as possible."

But he never went beyond the first job. He thought he was so much better than others that he made no friends. On several occasions he refused to work after five o'clock. Finally the department head remarked, "I guess he is going to be a flivver after all." Soon he was given very little work to do. Then for a couple of weeks he was given no work, finally he was called to the office of the employment manager to be told that he had made a mistake in going into the insurance business; and that was the end.

A few months later, instead of being on the threshold of an executive position in one of the greatest insurance corporations, he held a manual and menial position, where he will probably always remain.

Or consider the grandson of a wealthy manufacturer who had always lived on an ample income until he was about thirty, when he inherited a principal of five million dollars. He formed a brokerage-and-promotion firm, and within three or four years was completely cleaned out. This man did not lack ability or energy, but he had not gone through the mental processes of learning and growing. He had been spoiled in one way, just as the returned soldier had been spoiled in another.

An entirely different group of cases, which at first glance may seem to have little relation to the subject in hand, should be referred to. The most striking example that has come to the writer's attention recently was that of a middle-aged employe of the faithful and reasonably hard-working sort, fairly well up in one of the departments of an exceedingly prosperous financial institution. Owing to an unexpected number of deaths and other changes he was suddenly promoted in a short period of time until he became assistant treasurer. In this position he handled large trust funds and was in a position to familiarize himself with inside financial operations of the first magnitude. He was told, however, that one condition of this new office must be the eschewal of all speculation in stocks.

The Story of Three Brothers

Despite this warning he began immediately to play the market, and when the fact was discovered he was summarily fired, thereby losing a more than generous salary and the prospect of retiring within a few years on a good-sized pension for the rest of his life. Only a psychologist could hope to discover why this highly and fortunately placed individual should throw away his inheritance, as it were, for a mess of pottage. But in the character of many of the business men who speculate there is the weakness of self-indulgence and laziness, the false idea that success can be achieved by a short cut that avoids work. Whatever may be the economic benefits or evils of speculation, it is far too often an indulgence whose only effect upon the individual is to weaken the fibers of both mental and moral strength and growth.

There is a vital defect in many men, rich or poor, young or old, that is not defined by any one word or phrase, such as laziness, indifference, self-indulgence, or being stuck on oneself, although these all suggest the essential idea. It can best be envisaged by contrasting such cases as those related here with that of a man like Mr. Vail, who kept on learning and in other ways paying the price of success up to the very end of a long life.

This defect of easy, indifferent slipping from day to day, of not taking the trouble to grow mentally, is perhaps only another way of saying that people are unwilling to pay the price of success. A distinguished writer on political and historical subjects planned to sail to Europe on March first of this year. He was able to get the passage he wanted on that date, and in addition would have reached Europe in time to attend the wedding of the King of Serbia, to which he had been invited.

"Every reason of self-indulgence invited me to go at that time," he said; "but I have a new book coming out, and to see that it gets started right meant that I had to stay here a few weeks longer. The trouble with most authors is that they do not really finish the job. They work hard up to a certain point, then lose interest and stop."

The story is told of three bro worked for a New York export ho Jim and Bill. Tom received ten dollars; Jim, the oldest, three dollars; and Bill, twenty-one hu lars. Bill, being the youngest, was his mother's idol, and contin plained that the other brothers, Tom, received more than he did the father complained to the empl by way of reply asked the father the next day in an adjoining office, could hear what went on in the e room, without being seen.

The following day, at interval hours, each of the brothers was s turn to investigate a shipload of g had just arrived, with orders to their nature and value. Bill ca shortly and said a man on the him so-and-so about the goods. a little longer and quoted the c describing the goods in a certain w did not return until the follow when he reported that he had option on a portion of the car having examined it all personally, sold it over the phone at a con profit. After hearing this report fr the employer called in the father adjoining room, and said, "You why I pay Tom so much more t others. I am going to take him in nership."

I cannot vouch for the literal a of a tale so reminiscent of the Roll but it might as well be true, and it to the writer by a responsible busin as being such. Certainly it is a lit that relatively few men have c loyalty to the end they are tr achieve. It is so much easier to ta eye off the ball.

Too Quick on the Trigge

"Too many men are satisfied with holding a job," said the vice preside corporation which employs all sor descriptions of men and women. hope to be carried on by the momen circumstance, by the lapse and pro of time, instead of by their own They are the five-o'clock quitters. astounds me is the unwillingness average young man to do his job little bit better. There is only a very difference, only a little extra marg tween the good man and the very man. Most men stop just a little too They do the perfectly logical thing correct mediocre thing, but not the bit more which makes it excellent.

"A young lawyer was told by his ployer to find all the witnesses in a sui have them in court at a certain hour. shall I find them?' asked the young helplessly. 'I'll be hanged if I kno care,' was the irritated reply. The y lawyer's question was nothing but a of laziness, of an unwillingness to pa price of the mental exertion require doing the job."

Now it is true that numerous me though probably a far smaller group the ones we have been considering, fai cause of impatience. Instead of bein different they are too quick on the tri too bright, fresh and smart. The yo lawyer wants to get into the firm so that his superiors lose confidence in bustling, officious eagerness. Often, because of no fault of their own, young are pushed ahead beyond their ability, find themselves in such rough water they cannot swim at all. The bear taken out of them and they are bran as failures when they really deserv better fate.

A young man with a fair educat drifted into a line of work where he sho great ability in handling men. He made a foreman of a large gang of laborers and did exceedingly well. But boy became engaged to the daughter very wealthy man, and the young lad family thought it undignified for th future son-in-law to be bossing a gang hunkies. So they set him up in business himself and he promptly lost a small fortu This happened several times, to the creasing disgust of the father-in-law, w thought the boy was no good. But finally, his own accord, the young man obtained minor position in a concern where an old friend was an executive, and there, aft some years in a subordinate capacity, has made good, being at the present tim one of the chief executives himself. Wh

Chicken à Lorain

Any woman who owns a Lorain-equipped Gas Range can easily prepare this favorite delicacy

COOKERY, until a few years ago, was an inaccurate art. Today it is an exact science because the Lorain Oven Heat Regulator gave housewives an easy way to measure and control heat. No longer need you wonder why the appetizing recipes you try sometimes fail to meet your expectations.

"Time and Temperature" now a part of the recipe

Two new elements, you'll notice, are now being included in the best recipes—"Time and Temperature." Formerly, recipes gave exact quantities of ingredients only. The exact temperature and length of time for cooking were left for the reader to guess.

Lorain—The Missing Link

Then came the invention of the Lorain Oven Heat Regulator. It's a simple, accurate, automatic device attached only to certain makes of Gas Ranges. With Lorain you tell the oven just what heat you want. Automatically that heat will be maintained for any length of time.

A Twist of the Wrist Brings Cooking Success

Now, when you read a modern recipe, such as that given on this page, you can exactly duplicate the success of the originator, if you own a Lorain-equipped Gas Range. Just prepare the ingredients as explained. Set Lorain at the temperature required. Then go where you will, and do what you please until cooking time is up. Everything in the oven will be deliciously ready to serve when you return.

Lorain Dealers Invite You

Our dealers are always glad to explain the Lorain Oven Heat Regulator. Many of them give public demonstrations frequently. That's where you can see for yourself how this magic oven will cook, bake, roast, boil and stew—all at one time—without any attention. If you'll mail us the coupon we'll send you the name of the nearest Lorain Dealer and a copy of an interesting booklet—

"An Easier Day's Work".

Recipe
Chicken à Lorain

Dress, clean and cut up fowl. Dip pieces in flour—patting the flour into every part of surface and then shaking off surplus. Place in roaster and pour melted butter over them. Set uncovered in oven, turn "LORAIN" to 450 degrees, leave at this temperature until the skin is seared a delightful brown. Put cover on roaster. Turn "LORAIN" to 275 degrees for a three hour meal or 250 degrees for a four or five hour meal. No further attention is required until dinner is ready, when you will remove from your oven the most delicious chicken you ever ate—even if it happened the fowl were not young. Soup, sweet potatoes, squash and a barley spice cake may also be placed in the oven after the searing temperature has been reduced and will be found perfectly done at dinner time.

Only these famous Gas Stoves are equipped with the "Lorain"

CLARK JEWEL—George M. Clark & Co. Div., Chicago, Ill.
DANGLER—Dangler Stove Co. Div., Cleveland, Ohio
DIRECT ACTION—National Stove Co. Div., Lorain, Ohio
NEW PROCESS—New Process Stove Co. Div., Cleveland, Ohio
QUICK MEAL—Quick Meal Stove Co. Div., St. Louis, Mo.
RELIABLE—Reliable Stove Co. Div., Cleveland, Ohio

One easy turn of the Lorain red wheel gives you a choice of 44 measured and controlled oven heats for any kind of oven cooking or baking

AMERICAN STOVE COMPANY, 14 Chouteau Ave., St. Louis, Mo.

ed as follows: "When I was man-
f the Blank Motor Company I
d that we needed a lot of new blood.
eded new foremen and superintend-
o I took on a dozen or more young
men. I remember two of them
y. The first one came from a great
sity and had a good record. I put
t work in the machine shop, and in
r three weeks he came back and said
s pocketed. I hadn't forgotten him,
gh he thought I had. But that man
always chafing, he was always dis-
ed and wanted more money. I
n't say to him, 'In five years you will
aking five thousand dollars.' I had
s of other young fellows like him,
couldn't lay out a time-table for each

nother young college man came on at
ame time. Superficially he was more
dicapped, because he was married and
parents were much poorer. But he
r peeped. Not a word came from him.
I had my eye on both these men all the
I don't know what has become of
first man, but the second one is now
l of a department and is just as sure to
eed as the other is to fail. The trouble
hat young men will not do the daily
ible chore.
So many of them are afraid the things
have to do aren't dignified enough.
hey are educated men, if they start
h certain mental and social advantages,
y are so afraid of losing caste. When I
around speaking to groups of our sales-
n I always tell them I am perfectly will-
to carry the other fellow's bag if it's
t of my work, and especially if the other
n is older than I."
A young college graduate who had
ered a financial institution went to the
sonnel officer after a year's time and
ed how long it would be before he
came an officer.

The Wrong Slant

"In about fifty years, the way you are
ing now," was the answer. "You think
am fooling, but your record is unsatis-
ctory because of your unrest. You were
good scholar in college and were highly
commended by the faculty. You and
e others in your class came in here with
hat might be called a head start; you
ere supposed to be capable of serious
pplication and your abilities were organ-
ed by years of study. You all looked
like at the start, we might as well have
icked you out blindfold. But now, after a
ear, you are on different levels, you are
perating on your natural tools.
"You don't seem to realize that good
en go wherever they are sent, and do
hatever they are given to do to the best
f their ability without regard to what job
ies immediately ahead. This job which
you have been holding is not so very im-
portant in itself, but you have had just as
good an opportunity here as anywhere else
to show what your attitude is toward work.
This job is just as important as any other
in this institution in respect to the attitude
which is shown, and that is the important
thing."
What I mean by the second great funda-
mental cause of failure is the wrong atti-
tude, the wrong slant taken by so many
workers, high and low. For so often this
attitude is the very essence and alchemy of
the man. Failure with them starts in the
heart, and the results are just as thoroughly
unsatisfactory as where the cause lies in
the stoppage of mental growth. This is not
preaching and moralizing, even though the
Old Testament does tell how the prophet
Samuel in searching among the sons of
Jesse for a king to rule over Israel looked
them over one after another and finally
took David.
"But the Lord said unto Samuel, Look
not on his countenance, or on the height of
his stature; because I have refused him:
for the Lord seeth not as man seeth; for
man looketh on the outward appearance,
but the Lord looketh on the heart."

There is no more firmly established fact in business experience than that the wrong attitude, which produces failure on the part of so many workers of high as well as low degree, is to a considerable extent caused by the death of spiritual or at least of ethical forces.

A man over fifty, well endowed physically and mentally, but with that indefinable air of being too smart and just a little crooked, called upon a placement-and-vocational expert one day. "I don't want to touch you," said the latter with a wry face. "I know something is wrong with you, and I can't help you—that is, unless you will build up your spiritual forces from the beginning. Will you meet me at church next Sunday?" The man was game, with the result that he now has a four-thousand-dollar position, and his two sons have thanked the placement expert many times.

Moral Factors

A professional man with excellent ability but a dangerous propensity for overdressing, leaving unpaid bills behind him, and getting into trouble with women, was kicked out of an eight-thousand-dollar position and obliged to take one for four thousand. Fortunately, at the start of his new work he took a long railroad trip with his employer, who, knowing his weaknesses, read him the riot act during the trip, and explained in frank language how a continuance of such behavior would soon mean the workhouse. The lecture seemed to strike home, and its recipient has been moving up in the professional scale ever since.

But I am not talking primarily about the moral derelicts, the down-and-outs, or those whose only escape from actual degradation lies in the shock of religious revival. The placement-and-vocational counselor previously quoted always seeks to draw out the moral philosophy of applicants, even those of fine, manly appearance, and he is in touch with something like six hundred a week. The existence of a moral philosophy is just as important to the growth of ultrarespectable holders of good positions as to those who are patently on the toboggan. In this connection the following statement was made by an officer in charge of personnel of a corporation of the first rank:

"I have considered your question carefully and talked it over with several of my associates. We all agree that with men who have initial ability and steam of their own the greatest obstacle to success is that they think only in terms of themselves. They think of each situation only as to how it reacts upon them. They have no ambition for the organization whose growth in the long run means their growth."

The vocational counselor already quoted says that the hardest part of his work is straightening out the mental and moral kinks of the people who come to him. "Hundreds of men start out with everything in their favor for a successful career, but some twist or turn in their make-up develops a personality or an attitude which overshadows their ability. Then no one wants them. These are the kind of men who are always saying of their employers 'He won't give me a chance.' What I try to do is to take that stuff, that grouch, out of them. But there are many cases where I can't do it.

"People make most of these troubles for themselves in the beginning, but they become very real after a while. There was a man in here to-day with not very much ability, but he has other good points which would make him of some value in a big organization. He must make a connection very soon, however, for I see signs of his becoming sour, and once that occurs he is done for.

"Men are too close to get a correct view of themselves. Most of my work is straightening out these kinks, checking way back into the lives of middle-aged men to find if they can see and hear correctly. They have to be helped as much as if they were children."

The personnel director of a financial institution who personally or through his assistants sees something like fifteen thousand men and women in a year, either those who hold positions in the institution or are applying for the same, says that what he has to fight the hardest is the individual who thinks only of what the concern can do for him and not of what he can do for it. The typical failure, in the opinion of this experienced authority, is the fellow who

A BETTER IRON

TONCAN

For Beauty that Lives

Beauty is fleeting, when but surface deep. Then follows regret. Only beauty that lives is a joy forever. Such beauty must have foundation.

From the attractive surface of enameled equipment that brightens a kitchen, to the boiler tubes of a locomotive, Toncan is the foundation of service.

Inquiry is invited concerning this better iron.

The Builders

During a century of amazing achievement, there has grown up in this country a nation of homes, served as no people ever before was served, by railroads, public utilities and every phase of industry and commerce which could increase the comfort and happiness of living.

This tremendous progress is attributable to the courage, vision and constructive genius characteristic of the American people—a race of builders.

It is inevitable that during the next half century the world will need to draw heavily on American resourcefulness to aid its material progress.

Difficult problems are involved in the extension of this usefulness to other countries, but the National Bank of Commerce in New York believes that every forward-looking business man should study and understand America's future relation to world markets.

National Bank of Commerce
in New York

Capital and Surplus Fifty Million Dollars

grumbles about everything but himself and is constantly saying "I am not paid for doing that," who always blames everyone and everything but himself.

"My job is to save men from themselves. I am trying to run a human-salvage department. We released a man to-day who said as he left that he didn't intend to worry, because someone would give him a living, and the world owed him one anyway. I replied, 'You owe the world a life of service.' Men need medical and hospital treatment for their attitude toward work as much as they do for their bodies.

"Men invite failure, and the pity so often is that they do not know it. The head of the department says, 'Sorry, but we've got to work to-night.' Instead of replying 'I'm with you, Bill,' they say, 'Do I get supper money? What do you think I am, anyway, a centipede? I'm not paid for that. That's Fred's job.' They don't say 'Sure; all right! I'm glad to do it.' They resent being asked to work.

"The trouble with so many is that they have a score of reservations. 'How long before I get a real nice job? Do I get off at one o'clock Saturday? Do I ever have to work after five o'clock?' They want better jobs, but in hundreds of cases they fail when they get them. They go down of their own dead weight. They want to be front horses without doing any pulling. We had a vacancy in a certain line recently and a man from another institution came in to look it over. I asked him what was the matter with the job he was holding, and he replied that he had been there nine years without getting ahead. He couldn't get along, he said, with the man over him, because this fellow was a hard driver.

"'I don't think you have the right slant,' was my reply. 'You have never worked very hard over there. You are not changing your work or improving your position by coming here. It is exactly the same kind of work here. I'm going to send you back and keep tabs on you. I want you to come and see me in about a year and tell me how you have gotten on. But you must make a right-about-face in attitude.'"

A Useful Prescription

"He came back in a year and said he had made more progress than in the preceding four years. The most curious part, he said, was that his superior had changed his attitude too.

"Men come to me and say, 'I want to get along; I want that job up there.' 'Are you big enough for it?' I ask them. 'Before you answer let me write out on a piece of paper for you what Robert Burns said:

'Oh wad some power the giftie gie us
To see oursel's as others see us!'

"They come into my office and say that they can't get ahead, that there is no opportunity for them. 'What do you really think of yourself?' is the reply I often make. 'Here's what I think of you. Tell me where I'm wrong. Have you ever stopped to think of the opinion which your superiors have of you? I know you have complaints to make of them, but are you big enough to reverse the situation and put yourself in their place?'

"I often say to young fellows, 'Here's a little plan I want to set out for you, and see just what happens.' Then I write prescription on a slip of paper for a plete change in attitude, urging them whatever is given them to do to the best of their ability. In about three m the head of the department comes and says in a tone of surprise, 'Why fellow is a crackajack, after all! Wha happened to him anyway? He's a dif man from what he used to be. His att has changed. Formerly he was all gr and resentment. Now he's all service, can cancel that release. I'll keep th low, after all.'"

"But," I queried, "when you tell young men to get the right slant don't sometimes come back at you by s that hard work doesn't get a man where?"

"Of course they do, but I ask them else they have to give except that. to them, 'You haven't got anywher other way, now why not try the meth suggest?'"

"But," I persisted, "don't young who are dissatisfied or who need a ever come to you without your losing spect for them?"

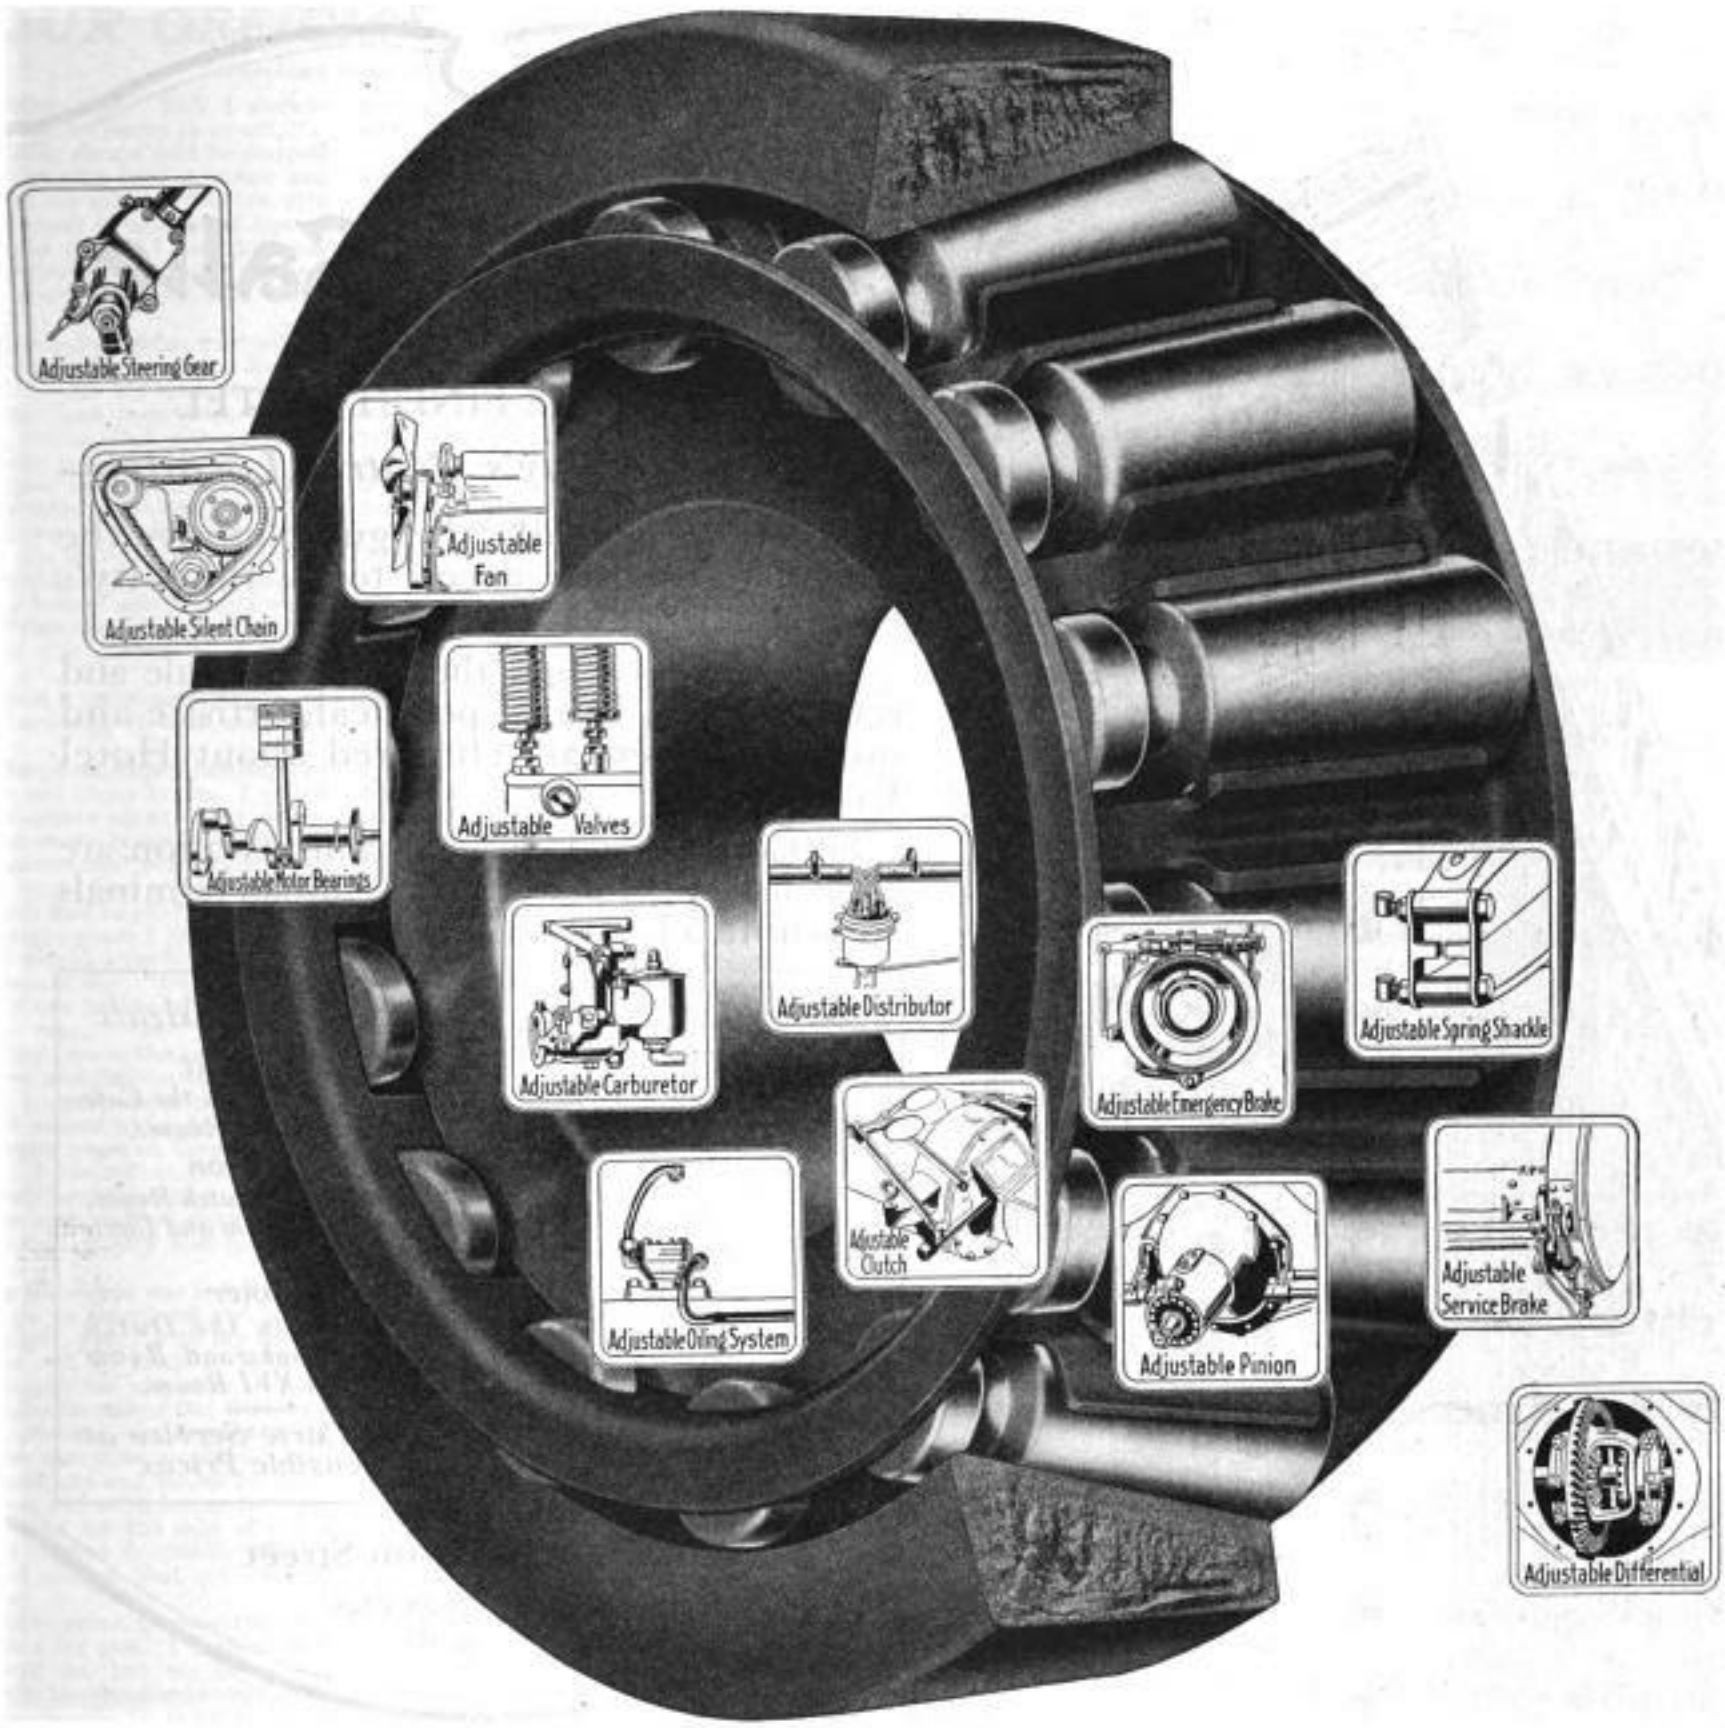
"Certainly. I have the highest re for the young man who says 'I'm complaining, but I want some advice.'

Why There are Favorites

"'I have been here eighteen months my ideas about this business have cha radically in that time,' said one yo fellow.

"'The man just ahead of me has b here five years and he is a mighty capa chap. I am firmly convinced that I h a longer way to go than I first suspect and I want your advice about going i some other business.'

"I was able at once to get this ma job selling musical records, and that pro the right occupation for him. Now he a store of his own, and is doing very w A man who is in the wrong place may benefited from being kicked overboard, l that is a very different thing from havi the wrong attitude toward one's work.



"No, the trouble with most of them that they want something for nothi Their characters have to be trained to gi them the right viewpoint. The attitude willingness to serve attracts attention. course there are always scores of you fellows here who are working for all th are worth, and they stand out above t rest in a short time. A man may be poc eted for a while in a big organization a his superior may take the credit for h good work, but sooner or later it inevitabl turns up in the figures. Sooner or later th officers are looking around for someone t promote.

"There are always a bunch of youn men here that every department hea wants, the fellows who don't think o hours. You can't keep them in a rut. Soo they find themselves treated better tha the others. They get more consideration from their superiors, and the other crow are constantly having it rubbed into them by department heads. Strangely enough they never seem to know why. They com plain that favorites are being played, and of course they are, the favorites being those who serve the organization best."

Adjustable

Timken adjustability is based upon the sound engineering principle that wherever there is motion there is wear

The mechanical device—the automotive vehicle—which provides most completely for compensation for unavoidable wear is the more nearly perfect, the more refined

No matter what type or form of physical characteristics exists, if one part moves upon another part wear must follow

The great difference between the Timken type of anti-friction bearing and other types—which wear as soon or sooner than Timken Tapered Roller Bearings—is

That when that wear which *must* follow motion does occur (—after many thousands of miles—) Timken Tapered Roller Bearings may easily and quickly be adjusted to compensate for that wear and made to function as when new

Thus are shafts held in absolute alignment—gears kept in perfect mesh—and quietness made permanent

More than 68,000,000 Timken Tapered Roller Bearings installed by more than 424 American and European manufacturers bear silent witness to the practicability and soundness of this inherent Timken characteristic

OUR OFFICIAL FAMILY

(Continued from Page 9)

ge the father said, "Well, I want to
if you intend to marry in or out."
Daniels has always said he married
mother having been a widow and
ving spent all our married life with
With my scant knowledge of how to
d I thought that all I had to do was
a real-estate agent what I wanted,
uld take me to see the house, and I
move right in.
h this born-on-Sunday-married-on-
ay idea of the old rime, I left Raleigh
nday night, with my house in charge
rvants who had been with me for
, and the rooms filled with guests. I
the guests not to hurry away, for
my program would be to spend Mon-
with my mother and sisters, who had
an apartment in Washington; Tues-
was the inauguration; Wednesday
Daniels would be sworn in; Thursday
ld find my house; and Friday I would
n home. With the greatest confidence
en ordered the packers to come on
ay.
e day to find a house according to my
ram, and actually it took me three
s!
suit our large old-timey furniture we
ted a large old-timey house. I stated
to the real-estate agent of my choice,
I looked at every house he could sug-
. Then I summoned every other real-
te agent I could find and I looked at
y house each had to offer.
uring the eight years I lived in Wash-
on, when I would drive through differ-
streets I would say, "Oh, there's the
se with only one bathroom and that on
third floor rear." Or, "There's the
se with the kitchen in the basement and
y one window and that on an areaway."
looked at houses where people were
n living and houses which had the dust
l mold of empty years on their hangings
l curtains. I looked at houses with
niture and without furniture. I looked
large houses and medium-sized houses,
l houses in the country and houses in
wn.
All this while the season was in full swing.
d I had to go to receptions and lunch-
s; and at night, weary with my search,
had to dress and go forth to smile at
nners. It taught me why men of great
ility but moderate means feel that they
ust decline Federal appointments. I
ew that other countries provided homes
r their ambassadors and homes for their
binet members and even homes for their
iefs of staff, and for the sake of every
merican man named to public office—
d his wife—I wished that our country
re in this list.
Finally we discovered a house that was
t for rent, but for sale. I decided that
he house would do, but my boys said,
'Why, mother, it hasn't a hardwood floor";
nd my husband said, "I think the only
ason you are willing to take it is because
t has a plot of grass on either side."

The Shackles of Precedent

So the house was given up and shortly
fterward we found Single Oak, and its ten
cres, which was our home during the first
f our Washington stay. Single Oak is in a
tract of one hundred woodsy acres, next
door to Senator Newlands' house, which
President Cleveland made his summer home
while he was at the White House. It
suited our needs exactly, and our gratitude
for it was greatly increased by a sense of
thankfulness that we had not obligated
ourselves to buy a house when one month
later our newspaper, the Raleigh News and
Observer, burned.
The news came to Mr. Daniels in New
York, where he had gone to make a speech
before the Associated Press convention. It
meant more than a financial loss, because
to us our newspaper is not a piece of prop-
erty, but an institution. Mr. Daniels had to
make his speech that night with an aching
heart.
The oldest boy at home at Single Oak
said, "I shall pack up to go back to Raleigh
with father. Plenty of boys fourteen years
old have to earn their living, and I can help
down there."
"I am going too. I can go around selling
magazines and newspapers," said the eleven-
year-old.
The smallest boy, then nine years old,
had sometimes been allowed to earn extra
money by stamping circulars in the office,
and he said, "I can help. I can lick stamps."
There is no loss too great to be borne
when one has a small boy who is willing to
lick stamps.

Using the word "manners," which my sons' colored mammy constantly held before them, I verily believe precedent is death to manners. Never so long as I was in Washington did I become reconciled to those hard-and-fast rules which require an older woman, whose husband had served faithfully and well in a position of highest rank in the Navy, to stand aside for me, the wife of the Secretary of the Navy. Nor could I feel that it was right for me, because I was the wife of a secretary, to enter a room ahead of the daughters of the President of the United States.

Two instances very shortly after I arrived in Washington brought forcibly to my attention the rigid rules of social observance in official circles. At one of my first dinners I stood in the women's reception room talking with Miss Margaret Wilson. I was not then conscious of my duty as the ranking woman present. Perhaps I was even waiting for Miss Wilson to indicate her readiness to proceed to the drawing-room, when Mrs. Wilson's secretary stepped up to me and asked, "Mrs. Daniels, will you go forward?"

A few days later I went upon a warship for the first time with my husband. As had been my habit all my life I stepped ahead of him, and not until I heard the salute and saw the flag fluttering above my head did I realize that I was receiving the honors intended for the Secretary of the Navy.

Never again could I be unmindful of those rules of precedence by which Washington lives. In seating guests at dinner, in placing a receiving line, even in the simple matter of making an introduction, one must always take thought as to which of two men or two women has higher rank.

Sticklers for Form

The President, Vice President, Speaker, Chief Justice of the Supreme Court, members of the cabinet, justices of the Supreme Court, senators and members of the House of Representatives—each has his individual rank, and woe betide the hostess who places one of lesser rank above one of higher rank or, in the case of members of Congress, one who has served a lesser number of years above one who has served a greater number of years. Indeed it is even told of the wife of a senator who stood in line at a social club in Washington waiting to wash her hands, that because the woman ahead of her in line, whose husband happened to be of lesser rank, did not stand back and give her her place, the wife of the senator would never again enter the doors of that particular club.

It is not women alone who are thus bound by precedent. It is told of a man high in official life in Washington that one night he looked at a dinner diagram and said to his wife, "My dear, we are not properly seated. We will leave as soon as dinner is over." This they did, rising directly from the table, and as they said good night to their hostess the gentleman remarked, "I hope that the next time we dine with you we shall be properly seated"; but the hostess had spirit, and she replied with double meaning, "I assure you, sir, that you will never be embarrassed again in dining with me."

There are conflicts of opinion occasionally about rank, especially between the justices of the Supreme Court and the members of the cabinet. Custom accords to the cabinet members the higher rank, but when any lady belonging to the family of a justice gives a dinner she puts all the justices first and the members of the cabinet second.

Sometimes there are unexpected contretemps due to this question of rank. Once Mr. Daniels and I were giving a dinner to meet a new member of the cabinet and his wife. My husband insisted that since we were in reality all one official family the Vice President of the United States would be glad to come. Although I reminded him that the Vice President should not be invited to meet one of lesser rank he insisted upon the invitation being sent. Regrets came back promptly. A few days later I casually spoke to Mrs. Marshall about the invitation, and she said, "I will tell you

F.O.B. Trenton

TEPECO Water Closets
FOR EVERY PLACE AND PURSE

THE Si-wel-clo closet incorporates all the good mechanical features a water closet should have and *adds* that of extraordinary quiet operation. It suppresses a noise you do not want heard and do not want to hear.

The Quiet Si-wel-clo is the leader of a group of water closets which The Trenton Potteries Company has developed to meet the needs of every building, from the big hotel to the modest bungalow.

We, of course, consider the Quiet Si-wel-clo the most desirable. For those who can not afford it, we make other good closets. Into our "Welling," "Merit" and "Saxon" we have merged as many of the excellencies of the Quiet Closet as possible. Each in its class and at its price is the best the market affords. Each is equipped with a tank of glistening white china, with surface unaffected by stain, acid or soil, and *trouble-proof* working parts.

We have priced these four closet outfits fairly, f.o.b. Trenton, and are shipping them completely crated to the plumbing contractor. We *know* it will pay you to insist upon your plumber furnishing them.

Send for our bathroom plan book, "Bathrooms of Character." It will tell you things you should know before building.

Bumps come front and rear

You never can tell what the driver behind you is going to do. In congested traffic you may get a smash in the rear at any time. And that often means another bump in front.

Are you prepared for the other fellow's carelessness? Are you giving your car the collision protection it ought to have?

With Lyon Spring Bumpers on your car—front and rear—you can drive with assurance of safety. Insurance companies recognize this fact and grant reduced collision rates on Lyon-protected cars. These reductions more than pay for a pair of Lyon Spring Bumpers. So it really costs money in more ways than one to drive a car that is not Lyon-equipped.

Why take chances? Each Lyon Bumper is guaranteed to take the full force of a blow at 15 miles an hour without injury to the car or its occupants.

The Lyon-patented, two-piece overlapping front bar and the open "looped ends" yield to the blow like a spring. They absorb the shock and keep it from being passed along to the car.

Lyon Spring Bumpers are simple in design, exceedingly strong and perfectly balanced. Easily attached to any car by means of a patented hook bolt, without altering the frame or drilling. No brackets required.

The Lyon trade-mark is on every genuine Lyon Spring Bumper. Accept no substitute.

Over a million in use. $10 to $23.

METAL STAMPING COMPANY, Long Island City, New York

LYON RESILIENT BUMPERS

frankly, Mrs. Daniels, we do not accept an invitation to a dinner to meet someone who does not rank us."

Apparently the most plain and simple of Democrats, who cares nothing for rank himself, is subject to this system, for Vice President Marshall, in reality a strong believer in democracy, would have accepted the invitation to have dinner with members of the cabinet, but in deference to his position had to decline that same invitation because it was worded "to meet" one of them, a man of lesser rank.

During his stay in the United States the Prince of Wales several times exhibited the greatest courtesy with regard to this question of rank. On the occasion of the big reception given in his honor at the Congressional Library there were seated at his table for supper Vice President Marshall, Mrs. Lansing, Earl Grey, Madame Riaño, wife of the Spanish Ambassador, and myself. The Prince asked the Vice President, the ranking gentleman present, at what hour he intended to leave, and Mr. Marshall said, "When you leave, Your Highness, I assure you I shall not be half a mile behind you."

A few minutes later the Prince approached Mr. Daniels with the same question and received a similar answer, since this was during a time when there was great pressure of work and most of the officials present were expecting to return to their offices to put in several hours at their desks.

"I shall be leaving early, since I have work to do," said the Prince.

Both Earl Grey and Mr. Daniels smiled, and the Prince asked the reason. The British Ambassador explained that it was because he could not understand why the Prince should work at that hour instead of the next morning. But the young man insisted that work claimed him, and shortly was out of the building, a long line of carriages immediately following with the men who in reality had work to do but who were required by courtesy to await the pleasure of the guest of honor.

Stories are constantly current of those who are unhappy over breaches of precedent, or who themselves offend by trying to occupy positions ahead of those to which custom entitles them. I never had these experiences, because to me this was never a personal matter. As I said to a woman once during commencement week at Annapolis, when she asked me if I were not proud of the honors being paid my husband, "There are no honors being paid to my husband. The gentleman who is being saluted is the Secretary of the Navy."

Overwhelming Social Duties

In thinking of precedent I am glad to recall that the President of the United States never forgot that his wife outranked him by an older law than that of Washington officialdom, and always accorded her the honor of preceding him.

And I must confess that now in private life I see some instances where rules of precedence would bless and not harm, and where unhappiness might be avoided by some of the usages in which Washington delights.

"Mother, doesn't a cabinet lady ever have a day off?" is a question from one of my young sons which is easily understandable after a glance at an average day's program during my life in Washington.

Take, for instance, one Easter Monday when my engagements were so complicated, especially because of my living some distance from town, that I planned a costume like this: In the morning I started from my house in a black taffeta frock with feathered hat, bouquet of white lilacs and white gloves. In this garb I attended a wedding. Back in the carriage, off came the flowers and white gloves, and black gloves were donned for a call of condolence.

The call paid, the white gloves were again substituted for the black, the flowers were hastily pinned on, and my carriage had arrived at a luncheon. After the luncheon I paid forty calls and then hastened home to dress for one of the six dinners to which we had been invited that evening, and for a reception to which we were going on later.

Usually I arose at eight o'clock. After breakfast and telephone calls I discussed the program of the day with the servants. This was no light task, although I did not have the servant problems which beset many Washington hostesses. Once Mrs. Hoke Smith, wife of the former United States senator from Georgia, whose cook longed for Georgia just as Mrs. Smith was ha a dinner for some ambassadors and m ters from foreign countries, groaned, " Margaret, you leaving and the mini coming!" But Margaret, true to her gious upbringing, said, "Law, no, Birdie, I yain't gwine to leave you if co ence meets yere." My servants wer faithful to me as though conference meeting every day. After making out menu I dictated to my secretary and over the invitations for the day, the market. There was usually a luncheon, from three until six o'clock every day Wednesday, when I received myself, Sunday, when I made no social eng ments, I called.

This matter of calling, one of the m mooted questions of Washington life, brought up at the first meeting of women of the cabinet after I went to W ington. I was heartily in favor of upho ing the old custom of returning the call all those who called on me. I enjoy m ing people and I was sure then of w proved to be true, that I should never m calls myself without meeting some won who would illumine my whole day.

When in common with the other la of the cabinet I began to be at home Wednesday, receiving from two hund and fifty to four hundred calls, I began realize that it is well-nigh impossible any woman in five afternoons in the we even though she calls every minute, to turn these hundreds of visits. Added to I myself took pride in never sending in card, but always asked if the one called were receiving that afternoon, and if were I went in and made a real call, such I would at home in Raleigh, North Carolin

Page Mr. Daniels!

Out of that experience I came to belie that if the wife of a cabinet member mak callers really feel welcome when they co on her public receiving days, and then, i stead of returning visits, occasionally giv a large reception, inviting by card all tho who have called, this most controversi question would be solved.

There was scarcely an evening, save Sun day, when we dined at home unless we ha guests ourselves. I always called for Mr Daniels at the department, and as he wa rarely ready to leave before 6:30 o'clock would be seven when we reached hom with barely half an hour to dress befor going out for the evening's engagements.

I recall one occasion when Mr. Daniels appointments for the afternoon made it im possible to get even half an hour at home He was to finish the afternoon with a private interview at one of the hotels with a gentleman whose presence in Washington it was not wise to have publicly known. Mr Daniels arranged to change his clothes at the hotel and I was to call for him there and go on to a dinner at the Navy Yard. I went as agreed, and after waiting almost up to the dinner hour I had him paged. There was no response. Then in desperation I asked to have him called in Mr. M——'s room. The clerk said that no Mr. M—— was registered. I insisted that he look on the private register, and he came back to whisper that Miss M—— was registered, and should Mr. Daniels be called in her room?

About this time Mr. Daniels came walking across the street. There had been a misunderstanding as to the hotel at which we were to meet. Of course the dinner hour was long past. In the carriage Mr. Daniels asked if he might kiss me and be forgiven, and I said the only difficulty was that he could not kiss and be so readily forgiven by the wife of the admiral whose dinner he was keeping waiting.

The average day makes no reckoning of the many special calls for entertainment or attendance upon meetings or participation in charitable enterprises. I am a little proud of my record that I never broke an engagement during all my eight years in Washington.

When national conventions, of which there are many in Washington, took place, I usually invited the delegates to meet the North Carolina representatives. We never found our home as large as our hearts, and one occasion when it was taxed greatly was when the Women's Christian Temperance Union met in Washington, and fifteen hundred women came to tea when we had expected about eight hundred. The line reached not only from the house to the sidewalk but clear to the end of the block.

Reproduced from actual photographs taken after the two panels had been handled for several days

His friends made this test for him

Its result is a warning to everyone who buys paint for interior use

HE was about to repaint again. It was a question of dirty, graying walls—or "another coat."

On his desk were two wooden panels—one painted with an ordinary flat-finish white paint, the other with Barreled Sunlight.

Passing friends picked them up and examined them.

At the end of several days they showed a startling difference.

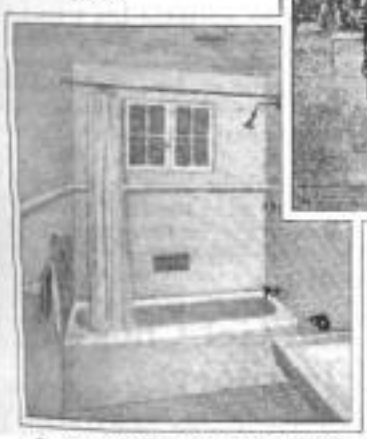
The panel painted with ordinary flat-finish white paint had apparently collected every fingermark—every particle of dust and dirt. The board painted with Barreled Sunlight remained white and clean as when newly painted.

The reason is simple. The surface of ordinary flat-finish white paint is full of countless invisible pores. These microscopic holes catch the dirt and hold it. That is the reason most walls and woodwork need repainting so often.

Barreled Sunlight is a white paint made by the exclusive Rice Process which produces a lustrous surface so smooth that it offers no lodging place for the tiny dust and dirt particles. It can be washed clean like tile—even after years of service.

That is why Barreled Sunlight is being used today in buildings of every description—hotels, apartment houses, office buildings, stores and industrial plants. Ideal also for woodwork throughout the home, for the walls of kitchen, bathroom, laundry, etc.

Barreled Sunlight is guaranteed to remain white longer than any gloss paint or enamel applied under the same conditions. It is easy to apply. Flows freely and leaves no brush marks. Comes ready mixed in cans from half-pint to five-gallon size—barrels and half-barrels. When painting over an unpainted surface use Barreled Sunlight Undercoat.



If your dealer does not carry Barreled Sunlight have him communicate with us for name of nearest distributor.

Here, Madam, Is the Wonderful Vacuette Which Cleans Perfectly Without Electricity

THE drudgery of sweeping banished—housework made much easier. That is the good news now for every woman who is weary of old fashioned ways, or expensive and cumbersome devices for cleaning rugs and carpets.

The Vacuette is the long looked for device which is actually revolutionizing housework—saving strength, saving time and costing nothing to operate.

In justice to yourself, Madam, you should know just what the Vacuette is and what it will do. You should not only read what we tell you here—you should ask for the demonstration by which you can make a free test of the Vacuette in your own home. Do not delay—write us at once—we will arrange for free demonstration.

Absolutely Automatic No Electric Current Needed

With the Vacuette you need no electric current because it operates mechanically and automatically. You, therefore, have no electricity to pay for. You do not have to handle plugs, cords, wires or attachments. You simply run the Vacuette across the floor and all the dust, dirt, lint, thread, ashes, grit vanish into the bag.

The Vacuette gives the advantage of both a fast revolving, gear driven bristle brush and a powerful air suction. No dust or dirt can escape—it must go into the bag. It has the pistol-grip handle which makes it easy to guide and the handle stands upright when not in use.

The body of the Vacuette is made of beautiful cast aluminum. It has "Parkerized" rust proof parts. It runs on noiseless rubber wheels. The mechanism requires practically no oiling. It will last for years. It weighs only 7½ pounds.

Model "C," our new type of Vacuette, presenting these improved features, stands as the "last word" in vacuum sweepers.

With all the advantages which it offers, the Vacuette costs only about half the price you would expect to pay for an efficient vacuum sweeper. And those who wish to buy on easy terms can make a small down-payment and pay the balance a little every month.

Our local representatives are ready now to call and arrange for the free trial which will be a revelation—a positive proof that the Vacuette makes rugs look bright and new, and actually makes play out of work. If there is not a representative in your territory, write direct to us.

Proved in 180,000 Homes Wins on Merit

Already the Vacuette is in daily use in more than 180,000 homes. It is also in constant use in great city office buildings, in hotels, in schools, in hospitals and on steamships and on trains.

No sweeping device ever invented has stood more strenuous tests than the Vacuette. We did not offer it to the public until we knew to a certainty that it would do its work perfectly, that in strength of construction it was unsurpassed and in simplicity of mechanism without a rival.

And then we let thousands of women demonstrate it in their homes at our risk. We told them to use it daily—to use it hard—to try to find defects because we were determined to make the Vacuette beyond criticism, and we wanted the user's experience and judgment. The results were as gratifying as we hoped—the reports that came in were a tidal wave of enthusiasm—we knew that the Vacuette had scored an epoch-making triumph.

Improved Model "C" Vacuette

And now we are offering this splendid labor-saving device in a nation-wide campaign so that people everywhere in cities, towns, villages and on farms may have it.

Guaranteed by the Makers

Not only do we offer the Vacuette, backed by its remarkable record in use, but we guarantee that in every case it has been thoroughly examined and tested before leaving the factory—that it is in perfect condition and that if any part shows a defect due to fault of material or manufacture, we will replace it free of cost to the user.

The Vacuette will last for years—practically for a lifetime.

Free Demonstration

All you need to do to learn what the Vacuette will accomplish for you is to ask for a free demonstration. Just write to us direct and we will arrange for the demonstration right in your home. We want you to see the wonderful work which the Vacuette does before you make a decision one way or another. See dust and dirt disappear as if by magic—all into the bag—none scattered—none left as with ordinary sweepers or inefficient suction devices. Simply marvelous, you will say, just as 180,000 women have already said.

Local Representatives Wanted—Now

So successful has the Vacuette been wherever introduced that we are planning to cover the entire country through salesmen and saleswomen who will visit homes, make demonstrations and take orders in localities which we are ready to assign now.

We are now ready to make appointments, and to active, ambitious people we offer an opportunity such as we believe has never been equalled in its field.

Experience is not necessary, as we give every representative a thorough special training by sales experts who make every point so clear that any intelligent man or woman can quickly take up the work. Every one who enters the field goes with a preparation which, coupled with enthusiasm and energy, means success from the beginning. Not only are splendid earnings to be made by demonstrating and selling in the home, but salesmen who prove their ability will have the opportunity to take charge of crews and to manage districts.

Our representatives are constantly backed by a consistent campaign of national and local advertising and by active co-operation from the factory.

And our free demonstration offer, reasonable price and easy terms place the Vacuette in the great majority of homes—and once placed it always stays.

Women never go back to the hard way of sweeping when once they see how the Vacuette makes rugs and carpets look like new with really no effort. To show the Vacuette is to sell it.

Those who realize that the Vacuette has a market in practically every home need no argument to convince them that the possibilities are simply tremendous. No active man or woman who is ambitious to make large earnings and to win independence need remain in any small-pay occupation while this proposition is open.

In the cities—where electricity is in general use—the Vacuette is sold the same as in the rural communities where there is no electricity. *Everywhere*—large cities, small towns, on farms—the Vacuette sells itself. To demonstrate is to sell it.

Write—and Get Choice of Territory

If you are ready for an opportunity such as we have described—if you want to enter a pleasant paying business in which you will be associated with active, ambitious people—write and tell us in what part of the country you wish to work and we will give your application careful consideration.

This is a proposition on which you should not delay, for as fast as we find people of the kind we want, we will fill the open territory.

Write today and get complete information about the unusual opportunity.

Vacuette
Non-Electric Suction Sweeper

As Efficient as an Electric—as Easy to Operate as a Carpet Sweeper

(Continued from Page 110)

as perfectly appropriate, the wives of am J. Bryan and Josephus Daniels ived the guests together, and if our s could have been turned with praise ur husbands they would have been on day. One woman met Mr. Daniels in crowd and asked the way to the door. hich door?" he questioned. "Any e!" she gasped. He conducted her ugh the back hall to the kitchen and to the alley, where she joyfully shook elf free from the crowd. I thought Women's Christian Temperance Union ies were many on that day, and they e seemed equally numerous when on trips through the country I have met se whom I entertained and have been ertained by them in return.

I have said that we accepted no Sunday itations. We had no criticism for those o did do so, but we abided by this rule for rselves. We were asked once to dine with r. and Mrs. Thomas Nelson Page, and as declined I asked my husband if I should re the real reason. He said yes, and erefore I turned to Mrs. Page and said, We never accept Sunday hospitality; and en, that is the only day we have at home th our boys."

There were tears in Mrs. Page's eyes as e said, "Stay with your boys."

It is an actual fact that women order eir chauffeurs to take them to a series of ashington receptions and literally enter house without realizing whose it is.

The women of the cabinet are at home on ednesdays, and on that day they have ne of the few perquisites of their position, owers from the White House conservato- ies always being sent for their tables.

On my first day at home I received nine undred and sixty-eight callers, and each eek from two hundred and fifty to four hun- red women came in the long line past me. I ad a rare blessing in that when women ame thronging so rapidly that I had no hance for a special word with them I could ay, "My mother is in the next drawing- oom." To be able to send one's friends on with the sense that you are conferring upon them your greatest gift and with the knowl- edge that they will have a friendly hand- clasp and just the right word from one's mother is a great thing.

The first day that I received after going to Washington the wife of a former cabinet member asked me how I expected to like official life. I told her that I had always enjoyed people and I looked upon this as a broadening of the social lines in which I had always delighted. Of course, then a vase of flowers had not been tipped over at a very special dinner, nor had a conference at the White House and an executive ses- sion of the United States Senate thrown another dinner into chaos—but those are stories to be told later. I learned that a sense of humor is the only saving grace in times like those, as well as during the long hours that one stands in line receiving guests.

Doctor Walker Comes to Tea

On that same first receiving day there came a woman who said that she wanted to make a good impression upon me because her son was a plebe at the Naval Academy at Annapolis. I told her I was interested because I had had two brothers plebes at the Academy, and I had four boys of my own. And then this woman who was so eager to clinch her good impression asked blandly, "Oh, were those your little grand- children I saw in the garden?" speaking of my two youngest boys.

Another day, when I was receiving, not the public, but only an invited group of guests, I found standing in front of me a woman with a horseshoe of oxeye daisies on her frock and a chaplet of the flowers on her head, who stated that she had decided to come because she knew that if I had under- stood how much she wanted to be there I would certainly have asked her. She re- mained all through the affair and had a blissful time.

Once one of my youngest boys came in to say, "Mother, I didn't want to go out in front, but Jordan called me"—Jordan being the footman—"and there's the funniest little old man coming in that's a woman."

Before I saw the little figure in trousers, frock coat, and green-and-red-plaid tie fas- tened with a diamond breastpin, I knew that it was Dr. Mary Walker, and I sent word ahead to the maids to see that she had special attention in the dining room.

"Mrs. Daniels, I had no idea you were so far from the trolley. I am so glad that I didn't bring my secretary with me. I do not know how she would have gotten here, clothed as she is," said Doctor Walker. But I replied, "Doctor Walker, with the present fashions perhaps we are less im- peded with clothes than you are." Out in the dining room Doctor Walker declined tea, but yielded to the urging of one of the maids who offered to make her a cup of cambric tea. On that occasion and at one other reception, when I saw her in full-dress male attire with a corsage bouquet of flow- ers and palm leaves thrust between her shirt and waistcoat, I saw in the face of the little woman the spirit which had carried her onto war-torn battlefields.

The first formal event for which we is- sued cards in Washington was a garden party in June, 1913, for Admiral and Mrs. Dewey. The morning dawned clear and radiant, and baskets of flowers and chairs were arranged on the lawn. Almost imme- diately the sky was overcast and everything was brought into the house. Again the weather cleared and things were returned to the lawn. When the clouds came again we telephoned to the weather bureau to ask if it was going to rain. The reply was that it oughtn't to. And it didn't.

Admiral and Mrs. Dewey accepted very few social engagements and this garden party was one of the last occasions on which large numbers of persons had an opportu- nity to meet the admiral.

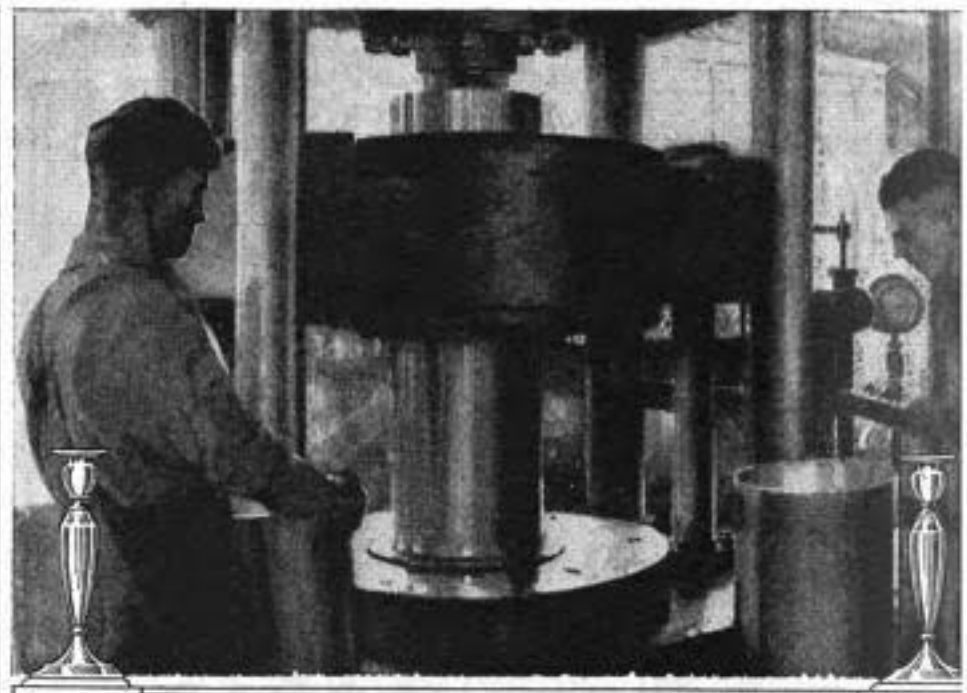
A Day With Admiral Dewey

The friendship of the admiral and Mrs. Dewey is one of the rarest gifts which came to us in Washington, and many of my hap- piest memories are of them and their marvelous kindness to us. On one day I was asked to bring our boys to see the admiral's trophies. We saw his mementos of Manila and many other treasures, price- less because of their connection with events and people. Then we were invited to the dining room, where we found a feast laid out surrounding a great birthday cake. The admiral had chosen to spend his birthday showing his trophies to our boys.

A few months later we gave a big recep- tion to every North Carolinian in Wash- ington, securing from all the government departments lists of the representatives of the state who were at work, and sending each an invitation.

The first of our series of New Year's receptions was in 1914. The President was not giving his usual New Year's reception, because he was not well and was spending the holidays on the Gulf of Mexico. There- fore we had added to the brilliant uniform of our own Army and Navy guests the magnificent gold braid and glittering colors of the diplomatic corps, who might other- wise have been at the White House. The diplomatic corps, I might mention, came to us that year from the celebrated grapejuice breakfast given for them by the then Sec- retary of State, Mr. William J. Bryan.

There was great excitement among my boys when they found that among the call- ers were the discoverer of the North Pole, Admiral Peary, and Mrs. Peary.



Among the pleasantest receptions were those at which I received officially, the Navy Relief balls for charity, the Army and Navy League club affairs, the events following the Army and Navy games, and the festivities at Annapolis.

When I went to Annapolis for the games I saw in place of the youths out on the field, my brother, Worth Bagley, who was the first American naval officer to give his life in the Cuban War, and of whom it was said twice that he won the game for the Navy. For some time his place kick of fifty-three yards was the longest on record, and he used to tell with great glee of the time when as a midshipman he was familiar with an ad- miral. The admiral in question slapped him on the back after the Navy had won the game and said, "My boy, you have saved me five hundred dollars."

So it was that in place of these others I saw him on the gridiron, and in the cheers and songs I heard the words, to the tune of Marching Through Georgia, which they used to sing when he played:

There goes Bagley round the end
With Johnson by his side
Fighting like the devil
For a touchdown.

Editor's Note—This is the first of two articles by Mrs. Daniels. The second will appear in an early issue.

The Beauty of Silvore Never Fades

WHETHER it be your tableware or your toilet articles, if your silver plate has been proved to be of lasting brilliancy it must have been made from Silvore or from a metal of equal quality. For Silvore is simply a new name for the lasting metal base which has been used for silver plating by many of our foremost silversmiths for decades past.

Silvore is a manufactured metal, so much like silver in appearance, texture and weight that in its finished form it might easily be mis- taken for sterling. Many famous brands of silver plated ware, superb examples of the silversmith's craft, owe their lasting loveliness and moderate cost to the fact that they are made from Silvore. For silver plate made with Silvore as its base, retains brilliancy and beauty as long as it remains in use.

Of uniform composition throughout, wear does not lessen the silvery whiteness of Silvore. That is why articles made of Silvore, or plated on it, hold their lustre after years of usage.

When a salesman assures you an article is made of Silvore, or plated on a Silvore base, you may be certain its beauty will never fade.

CONN

WORLD FAMOUS BAND *and* ORCHESTRA INSTRUMENTS

Ten American Conductors Who Praise Conn Quality

1. PIERRE MONTEUX, Boston Symphony: "The Conn instruments used in my orchestra are very satisfactory."

Boston Symphony Artists who play Conns: G. Mager, J. Mann, L. Kloepfel, trumpets; E. Adam, A. Maasbach, L. Kenfield, trombones; M. Kunze, tuba.

2. OSSIP GABRILOWITSCH, Detroit Symphony: "I greatly appreciate the quality of your instruments, they are a valuable addition to our orchestra."

Detroit Symphony Artists who play Conns: S. Miller, C. O'Hara, A. Kearney, E. Van Amburgh, trumpets; M. Smith, S. Van Amburgh, W. Addison, trombones; W. Webster, tuba.

3. ALFRED HERTZ, San Francisco Symphony: "I have selected Conn instruments as the only make for my entire brass section, an indication of my regard."

San Francisco Symphony Artists who play Conns: D. Rosebrook, O. Kegel, A. Arriola, A. Stephen, trumpets; F. Tait, O. Clark, F. Bassett, trombones; A. Starch, tuba.

4. JOSEF STRANSKY, New York Philharmonic Orchestra, endorses Conn quality. The following artists playing under Stransky use Conns:

V. Bruno, M. Schlossberg, J. Grapp, trumpets; M. Falcone, L. Haines, W. Lilleback, trombones; F. Gelb, tuba.

5. W. H. ROTHWELL, Los Angeles Philharmonic: "Conn instruments used in our orchestra are very satisfactory in tone quality and pitch."

Mr. Rothwell's players who use Conns are: V. Drucker, G. Pacheco, trumpets; H. Beitel, L. Steinberger, J. Wallace, F. Schellhouse, trombones.

6. JOSEF WILLEM MENGELBERG, the famous guest conductor of the New York Philharmonic Orchestra, appreciates the effects obtained by the Conn brass section of his orchestra.

7. LEOPOLD STOKOWSKI, Philadelphia Symphony. Artists under Stokowski, who play Conns:

S. Cohen, trumpet; G. Simons, C. Gerhard, P. Lotz, trombones; G. Fery, tuba.

8. EUGENE YSAYE, Cincinnati Symphony. Artists under Ysaye who play Conns are:

F. Weiss, W. McGee, W. Kopp, trumpets; J. Hanse, tuba.

9. NIKOLAI SOKOLOFF, Cleveland Symphony: "Your instruments in the Cleveland Orchestra are of excellent quality and beautiful tone."

Cleveland Symphony Artists who use Conns: A. Clark, A. Clonset, J. Sirota, trombones.

10. EMIL OBERHOFFER, Minneapolis Symphony. Artists under Oberhoffer who use Conns:

W. Thieck, H. LeBarbier, A. Koehler, H. Bossenbah, M. Rabin, G. Lickeberg, trumpets; R. Lindenhahn, French horn; M. Sery, V. Gebhardt, F. Wagner, trombones.

Conn Instruments are also used and endorsed by the following New York Symphony Artists: B. Glantz, F. Vesecia, C. Heinrich, trumpets; M. Wackerhan, S. Tilkin, trombones; J. Perletto, euphonium; D. Bibelo, tuba. METROPOLITAN OPERA ORCHESTRA, N. Y. G. Nappi, A. Arbuzo, trumpets; S. Miatia, C. Cusumano, B. Wankoff, W. LaCroix, trombones.

In America's Great Orchestras

WHAT a significant fact it is, that the artists who interpret the works of the masters, who paint again the great tone-pictures of the symphonies, use Conn instruments in the expression of their art!

The standards of these conductors, and of the players with them, are indeed exacting. Conn instruments meet these standards in every detail, giving life and color to the composition with the brilliant beauty of their tone, and responding instantly to the player's control in the most difficult passage.

Exclusive processes of manufacture developed in the great Conn laboratories, the painstaking care of artist-craftsmen, and the skill developed in half a century of instrument building are responsible for this excellence. The name Conn on a band or orchestra instrument means above all: *Highest in Quality.*

'TAIN'T RIGHT

(Continued from Page 7)

off all my admirers. It is the truth, Don Francisco. The colonel hardly ever comes here any more unless he first makes sure Servin is nowhere in the neighborhood."

"Surely not, señora. The colonel is a gallant soldier. He has frequently told me how ——"

"He is very handsome; yes."

"What, then, do you propose to do?"

"Just let him go about his business and pay no attention. That is the only way to treat a conceited fellow like Servin. Wow, he is all swelled up like a peacock!"

Well, she continued her promenade among the tables and I watched her. Women are curious creatures, sir. The Señora Tostado was resolved to ignore the rascal, yet no matter where she moved or to what person she spoke, her gaze kept returning always to Benito Servin. By goodness, how she hated that fellow!

I think my suggestion in regard to Zapien must have borne fruit, because not long afterwards he came into the room where I was working on a manifesto and, twirling his mustache, said, "Well, Don Francisco, I give you good day. Congratulate me."

"With all my heart. But what for, my dear colonel?"

"Because I am the accepted suitor of the Señora Adela Tostado. You are surprised; yes? Well, pretty soon I shall be master of Tres Hermanos."

He was very much pleased with himself and smiled at his own image in a mirror. I did not like this Zapien. He was a stiff-neck, sir, and none of us could understand why he enjoyed the general's confidence.

"Fine!" I said. "You are, then, betrothed?"

"Well—well—you see—you are going too fast, Don Francisco. We are not exactly betrothed, but she has given me to understand. You are a man of the world, *amigo*, and you know the numberless ways a woman has of acquainting a lover of her favor."

"Sure. But I also recall, Colonel, instances where I was mistaken in the symptoms."

"Possibly. But when a woman asks you for protection against another man, Don Francisco, what are you justified in thinking? Hey? Have I not told you that I know women? Well, you may consider this affair as good as settled."

"So that is it," I replied indifferent, but I did not feel that way.

Zapien's manner convinced me he was speaking the truth, and I grew very sad, sir, when I thought of that lovely hacienda, Tres Hermanos.

The same night I reported the conversation to Dario Pez. He pricked up his ears, then he became thoughtful. Finally he started rubbing his hands with every appearance of satisfaction.

"Excellent!" he exclaimed. "This pleases me very much, Don Francisco. It gives me an idea; yes. You do not seem overjoyed, *muchachito?* Me, I am not surprised. Zapien is a fine chunk of a man, and the girls like a pretty fellow, hey?"

"When they are very young and inexperienced, *mi general.* But the Señora Tostado ——"

"Yet it is something to marry a member of the *aristocracia*, Don Francisco. And do not forget that Zapien belonged among them before he joined my flag. The arrangement suits me very well; yes."

His good humor continued to increase.

"Get ready to write a letter," he commanded.

"I am ready."

"It is to General Miguel Fierro."

"The Hangman?"

"The same. Now take what I say, and be sure the spelling is correct and you write it word for word."

By goodness, what he wrote to Fierro made my eyes stick out. Perceiving which, Dario Pez said to me in the purring tone he always used when in his most dangerous mood, "You understand, do you not, Don Francisco, the necessity of absolute silence in this business?"

"Assuredly, Excellency."

"Then order a special courier to get ready, and send Colonel Zapien into my presence."

I ran like an antelope to execute his commands. After all, it was none of my affair and Zapien was certainly not my friend. He came with an elation, sticking out his chest and smoothing his uniform, persuaded that Dario Pez intended to congratu[late] him; so the general's first words took [him] by surprise.

"Colonel Zapien," he said, "you [will] take fifty men and proceed by wa[y of] Cañon del Huarache to the town of B[ena]. I have information that the garrison [there] is disaffected and friendly to my cause [and] will not offer much resistance. Be[sides] they have only a small force. So I re[quire] you to capture the place and hold it [until] further orders."

It was not a job to Zapien's liking, much preferring to make a big bl[uff] headquarters and look as wise as a[n owl] when Dario Pez summoned a staff co[n]ference; but he had to pretend.

"Consider it done, *mi general.*"

"Good. You will start as soon as [your] party has saddled. It ought not to [take] you more than three days to reach Ba[ena]."

Then all at once Zapien grew thoughtful. "But why through Cañon del Huarache, Excellency? There is an easier way."

"Because it is shorter," answered the general sternly. "And you would run [into] the Red Flaggers on the other road. Carry out my orders. It is your place to obey, not to question."

"Yes, General."

When he had gone to get his command together, and I had dispatched a trusty courier with the letter to Fierro, Dario [Pez] looked at me with a sly smile and remarked, "He is a smart man, that Zapien—he, Don Francisco?"

I did not answer, sir. What could I say?

The very next day a thing occurred which promised at one stage to result very disastrous for somebody. This Benito Servin was walking along the street on front of the general's house when suddenly he saw a man rush out of a doorway on the opposite side, his feet moving like the needle in a sewing machine; at the same time a woman, with her hair flying and a shawl streaming behind her, appeared in pursuit, screaming at top of her voice, "Ah, rascal! Wait till I catch you! Come back, you coward!"

Now the man was a perfect giant, sir, and the woman nothing but a thin, wretched slattern; but my, the way he beat it from there! He had a heavy sack slung over his shoulder and it bounced as he ran, and Benito Servin made sure the scoundrel had robbed the poor creature.

So he sprang like a mountain lion, direct Benito Servin, to intercept him. Against that prodigious bulk he knew he could do nothing and Benito had no weapon except a knife, but by cunningly thrusting out his foot he tripped the giant and brought him tumbling to the earth.

"Now," he cried, "I've got you! Give up or you are a goner."

The man on the ground lost no time in surrendering, shouting it in a voice like a bull, at the same time begging Benito to be very careful. And then the sentry at the gate of the general's house rushed up with his rifle ready.

"A thief! A thief!" said Benito Servin. "Arrest him."

The sentry, sir, arrested both, and while still undecided whether to shoot them or call somebody in authority, was startled by the appearance of Dario Pez himself at a window of his headquarters. He had been disturbed in his siesta by the awful racket and now wanted to know what all this noise on front of the house meant anyhow. Well, the sentry tried to tell him, and so did Benito Servin, and so did the Goliath he had captured. All three jabbered away at the same time, making more confusion than a cageful of parrots.

"Bring them in," ordered Dario Pez in a rage, and the soldier escorted Benito and the other man through the gate, up the walk, and inside. Goliath held firmly to the sack, and Benito was glad of that, for it heaved in a highly suspicious manner and he was satisfied that therein reposed the evidence. As for the woman, no sooner did she hear the general's wrathful voice than she disappeared most swiftly—beat it without once glancing back.

"Well, what now?" demanded Dario Pez, bending his brows. "What was all that row about? Hey, *hombre?*"

"This criminal was robbing a poor woman, Mister General," answered Servin boldly, "and I leaped upon him and captured him."

$1000.00 in prizes

What is she saying?

Men's Sealpax $1.25
(Union Suit)

Best answer $500

Second Prize	$200
Third Prize	$100
Fourth Prize	$50
Next Best five	$15
Next Best five	$10
Next Best five	$5
Next fifty (each)—	one suit of Sealpax.

(In event of a tie for any prize offered the full amount of such prize will be awarded to each tying contestant.)

Is she buying underwear for her husband? Is she speaking for her husband as she says that interesting something to the clerk which is making him turn to Sealpax Athletic Underwear? *What is she saying?*

She must be saying something—something *worth* saying—about Sealpax Athletic Underwear. Read the things she *could* say about Sealpax—figure out what she *is* saying—write it down in not more than twenty words—and send your answer to the Prize Department, The Sealpax Company, Baltimore, Md. There is no set answer to guess—yours may be the winner. All answers must be received before midnight, July 29th. Competent neutral judges will award prizes and winners will be announced in The Saturday Evening Post, October 28th, 1922. No restrictions—you can win a prize.

Sealpax

REG. U.S. PAT. OFF.

Athletic Underwear

PUT on Sealpax and cool off for the summer! Put on Sealpax and you will understand why everybody who *knows* Sealpax wants to tell the world about it! Take it from the men who wear Sealpax—there is no underwear that can make a hot day more comfortable—an active day less tiring—than a suit of Sealpax Athletic Underwear. It's built for coolness—planned for comfort—made with a free-and-easy athletic cut, of a light-and-breezy fabric, with elastic webbed shoulders and full roomy armholes.

Sealpax is too good to be sold like an ordinary underwear. You buy it packed in individual sanitary containers—a guarantee that it is as clean and crisp when you buy it as on the day it is made and laundered.

Sealpax is also made for women and children. "Lady Sealpax" offers women all the coolness and comfort of athletic underwear, daintily made in a wide range of fabrics. "Little Brother and Little Sister" Sealpax bring "Dad's Comfort to Dad's Kids"—athletic underwear for children, cool and comfortable and reinforced for hard and long wear.

GAS MANTLES

through three decades of use, have established a definite standard of mantle value.

Their perfection comes from the care and conscience employed in their manufacture—a perfection which is only possible in mantles made the Welsbach way.

Welsbach Mantles are produced by seventeen complicated, scientific processes, each of which requires the greatest skill and an unfaltering purpose to produce Quality at any cost.

Your safety lies in looking for the Welsbach name and Shield of Quality on every box of gas mantles you buy. They are your guarantee of satisfaction.

At your dealer's, and the Gas Company.

WELSBACH COMPANY, Gloucester, N. J.
Member American Gas Association

Having sent back Fierro's courier with a confidential message the two of us strolled up to the saloon, sir. It was well filled, and, by goodness, the consternation of those *hombres* when they recognized their general! What was Dario Pez doing there? Some of them decided that his visit boded no good and it was assuredly no place for them, and they beat it; but quite a few remained, and these just sat and gaped without paying him any open recognition. Among this daring bunch was Benito Servin, sir. The magic oil had evaporated to some extent, so that he was not now even prominent among his fellows.

"It occurs to me, Don Francisco, that the Señora Adela is none too glad to see us," remarked the general as we took seats. "Her welcome lacks warmth."

Dario Pez was right. The widow did not come near us, signal as was the honor being paid to her poor place, but pretended to notice nothing unusual and walked in and out among her guests at the far side of the room, with a restlessness. Yet her gaze wandered back to the general, time and time again. In fact, she watched him almost as closely as she watched Benito Servin. And Dario Pez, sir, he kept his eyes peeled also.

"Pshaw, you are a great blockhead, Don Francisco!" he exclaimed at last.

"Yes, *mi general*."

"Let us go. I have seen enough." He chuckled as we emerged into the street, and appeared well satisfied with the visit. "Yes, you are a fool! Send for this Servin and bring him into my presence."

I found Benito still in the saloon and escorted him to headquarters.

"Sergeant Servin," began Dario Pez, "I am going to intrust to you a dangerous and delicate mission."

"Fine!" said this Servin. "I'm the guy for the job."

"Captain Banda has recommended you highly. It is a job for an officer, but I have nobody on hand whom I can trust. Are you listening?"

"Sure, Mister General."

"You will take fifty men and proceed by way of Cañon del Huarache to the town of Baeza. I have information that the garrison there is disaffected and friendly to my cause, and will not offer much resistance. Besides, they have only a small force. I rely on you to capture the place and hold it until further orders. Also, you will observe absolute silence until your mission is accomplished. Do you understand?"

Benito Servin, he nodded; that is all he did, sir. I could see from his expression that he was puzzled and was thinking fast. And why should he not be puzzled? Here he was, an obscure sergeant, being selected by Dario Pez to command an expedition which ought to have been given to a colonel, at the very least.

"You will start as soon as your party is ready. It ought not to take you more than three days to reach Baeza, by Cañon del Huarache. Is there anything you wish to ask?"

Servin shot a swift glance at the general, and then replied, "Nothing."

This way of acting did not please Dario Pez at all, sir, but he could not complain of it, and dismissed Benito with a movement of his hand. And by goodness, that roughneck raged around with such a furiosity and tore things up so fast that the force was ready to set out by midnight! The bugles sounded "Saddle boot!" and away they went.

Not long after this event Colonel Zapien reappeared one day on a starved and dusty mule, and was followed, singly and in pairs, by his entire command. He told a stirring tale of their escape from the Red Flaggers, which had been made possible by the intrepidity of Zapien himself in binding all the sentinels as they slept. The colonel and his followers were almost famished; they had endured terrible privations from heat and thirst in the desert, sir.

"But," demanded Dario Pez, unable to conceal his exasperation, "was the food not good where you were, colonel?"

"The food not good? I do not understand, General."

"Never mind. It is nothing. Go and rest up. And you, Don Francisco—see that these poor boys get their bellies filled."

Well, the days went by, and no word of Benito Servin. The general began to grow impatient.

"What? No courier this morning?"

"No, Excellency."

"It is very strange. If Fierro has betrayed me ——" he muttered, gloomy.

We waited another twenty-four h Then Dario Pez summoned me int presence.

"Don Francisco," he said with a bru ness, "I have received a message General Fierro that he has capt Sergeant Servin and his force, and is ing them for ransom."

"It is very sad, *mi general*."

"It is a terrible blow. He deman hundred thousand pesos, this Hang What do you know about that!"

"A robbing price for a sergeant, sir.

"Sure. That's what I have been t ing. Where are we to raise the m Don Francisco? Has this Servin friends who would be disposed to con his aid?"

"I have heard that the Señora A Tostado ——"

"Go and fetch her. Hustle! Shake hoofs, Don Francisco—get a move on

I did not relish the job, sir, but I hu and brought the señora to the gene house again.

"Well, here we are once more, Se Adela. The blessings of God upon yo said Dario Pez.

"*Gracias, mi general,*" answered Señora Tostado. "Have them yours

The general coughed and rubbed hands, eying her sidewise.

"A dreadful thing has happe señora."

"If it has to do with Zapien, Ex lency ——"

"Not at all. The miserable victim t time is Benito Servin."

I saw the señora stiffen and clutch at breast, sir, but she made like it was a m ter of indifference to her what happened that son-of-a-gun.

"You may have noticed that he has been around lately?"

"Whether he is around or not, I sho worry," replied the Señora Adela w proud.

"Well, that is as may be. But Serv was sent on a mission, and the blockhe has let himself fall into the villaino Fierro's hands. That man hates m señora. And he sends word that Serv is to be shot."

The Widow Tostado, she sort of laughe sir. Then seeing from the general's fa that it was a matter which might make h laugh on the other side of her mouth s grew grave and murmured, "Unless?"

"Exactly. You have guessed it, señor Unless a ransom of a hundred thousan pesos is paid immediately."

"But he may escape, Excellency. Zapie accomplished it, and Zapien cannot b compared ——"

"He will not escape," answered Dari Pez, very slow. "It happened once, but will not happen again. If this money not paid by somebody Servin will die."

The general spoke in a soft purring voice and the two stared steady into each other's eyes. It was perfectly still in the room, s still that I could hear the señora's heart thumping. She looked as though she would have liked to twist her fingers in Dario Pez's hair, sir.

"Well?" murmured the general at last.

"What is this *hombre* to me, General? Besides, I haven't got the money."

"Surely a hundred thousand pesos ——"

"I could not raise a fourth of that sum."

Dario Pez smiled and remarked with politeness, "But your fine fat cattle, señora. Surely you could sell some of them. And sheep, too."

"Oh, you villain!" she suddenly burst out, and then began to cry. By goodness it made me feel bad!

"There, there!" said Dario Pez, trying to soothe her. "You are a noble woman, señora. And I respect and admire you exceedingly."

The Widow Tostado made no reply. She kept on sobbing, with her face hidden in her shawl.

"Don Francisco," cried the general to me, "do not stand there like a booby! Make all the necessary arrangements. The señora has searched her heart, and she cannot permit this man to die. Therefore she will dispose of some of her cattle, the money to be used to pay the ransom. See that the business is attended to at once, Don Francisco. That is what you wish, is it not, señora?"

The widow moved her head in consent, and fearing she might change her mind and turn on him Dario Pez signaled that I should escort her out. I did so, sir. The business did not please me, but war is

full of such stratagems and meannesses. 'Tain't right!

The general was triumphant, for now there would be money to pay the troops a handful on account; but before the project of selling the señora's cattle could be put into effect, here came a courier hell-bent from Benito Servin himself. And by goodness, sir, guess what that guy had done! He had captured Baeza, and sent word he was organizing the place; he had fallen upon Fierro with a surprise assault and made a whirlwind of friends and enemies, and now held The Hangman and his whole band; he had in jail the rich *científico*, Don Luis Aviles, whom he had snaked in whilst Don Luis was paying a secret visit to one of his haciendas to gather some treasure.

And what were the orders of Dario Pez?

"Why—why—the fellow is crazy, Don Francisco! He had only fifty men. And I know for a fact that the garrison numbered two hundred and forty, and Fierro had a hundred and ninety seasoned fighters. It is a fake—a trick."

"But, Excellency, the courier swears it is true. He says this Servin works magic. They call him The Enchanted Captain, and ——"

"Enough! If it is true—ah, at last I have a fighter to help me, Don Francisco!" cried Dario Pez, and his eyes blazed like a leopard's, sir.

Well, the general sent a courier on one of his own horses, carrying instructions to Benito Servin, and meanwhile I countermanded the orders for selling the widow's cattle.

"But don't tell her yet that this Servin is unhurt. It may not be a fact, and besides, we can use the cash she has advanced," said Dario Pez.

A week later, sir, Benito Servin himself reported at headquarters, and behind him seven hundred men. I tell you it scared us when scouts brought word of the approach of this army and we saw them winding like a huge serpent across the plain. None of us could believe it was really Servin, except only Dario Pez, and he had received exact information which prepared him for what to expect.

"Well, Colonel?" he cried with a joyousness as Benito strode into the room, and he jumped up to embrace him.

"Colonel?" queried this Servin, raising his eyebrows.

"I should have said 'General,'" replied Dario Pez. "My mistake. I congratulate you."

What do you know about that! From sergeant to general, and I myself only a captain.

"Now," continued Dario Pez, "tell me all about it."

"Well, you ordered me to go and take Baeza, by way of Cañon del Huarache, Mister General. But I reflected that this route might be dangerous."

"Of course. You did well."

"So I made a wide swing and got close to Baeza from the other side. There, at night, I built many fires. All along the line of hills I had fires built."

The general laughed and rubbed his hands, for this was one of his own favorite tricks.

"The rascally Federals perceived those fires. They said, one to the other, 'Aha, the enemy is yonder in force. Maybe we had best beat it.' So when I attacked at dawn of the following day they had no heart for the encounter. Moreover, I had allies."

"What? Allies, you say? You amaze me, Servin."

"Yes. There were woodcutters in those hills, and I made them mount their burros and come with us, raising shouts of 'Viva Pez!'

"The scoundrels had good lungs, Excellency, and we created a fine impression."

"And then what?"

"I learned Fierro had hidden his band in Cañon del Huarache, Mister General, thinking to ambush me as he had ambushed Zapien."

"Well?" said Dario Pez, uncomfortable. He could not help wondering how much Servin knew, sir.

"When the garrison at Baeza surrendered I gave them their choice of death or joining our flag. The cause of liberty appealed to them. I now had nearly three hundred men. And later recruits came in from all the surrounding territory."

"Excellent. Excellent, General. That is my own method. I could not have done better myself."

"So in the blackest of night we fell] thunderbolt upon The Hangman. He been led to believe we had gone the way. Yes. He captured one of my who carried that information. So we jumped on them they scattered b us, and I had the victory."

"But Don Luis?"

"Fierro told me of his presence in country. I led a small band to his pl tion, and here he is, Mister General— prisoner."

Dario Pez walked gravely up to B Servin and again embraced him, ki him on both cheeks.

"*Compañero*," he said, "you are a man. I am proud to have you in my a But tell me—it is very strange—how you happen to think of all this?"

"It was not entirely due to my efforts, Mister General, as you per have guessed. No. It was the magic

"What? Not that stuff which C Pena ——"

"The same, Excellency. I have use and my enemies have been powe against me. Knowing I could not be h what was there to fear? I also sme some of my most trusted followers wit And now the whole world knows me as Enchanted Captain."

By goodness, can you beat that, sir? occurred to me that Servin and his lowers might have stunk out the garri of Baeza, but he was now a general an an obscure captain, so I kept this thou to myself. And just then they led in G Miguel Fierro, the Red Flagger, the ter of all that country, whose name moth used to frighten naughty children wi The Hangman and Dario Pez had l been deadly enemies, but recently, as y may have surmised, they had come t sort of secret understanding, so I was c rious to see how Fierro would regard t last incident.

For a moment or two Dario Pez did n meet The Hangman's gaze, but fidgeted his chair. Then at last he glanced up, sm ing very sheepish.

"So," he said, "we meet again, General

"Yes, viper, here we are!" retorte Fierro. "Only for your treachery ——"

"Clear the room, Don Francisco!" crie Dario Pez sharply. "General Fierro and have business to discuss. You may reti now, General Servin. Your promotion wi be recorded in orders to-morrow. Embrac me, my brave fellow."

Well, when he and Fierro came out couple of hours later they walked arm i arm and appeared to be on very friendly terms, sir, so the news spread like wildfir that the Red Flag chieftain had joine forces with Dario Pez.

Meanwhile the bells of the town were ringing and all the people crowding to the plaza to hear the great news of Benito Servin's victory. The *cura* of El Sauc told the story from the *kiosco*, and how those people did shout! My, but he became a hero, and the entire population gave themselves over to feasting and celebration.

And Carlos Pena grew second only to Servin in importance, sir. Everybody wanted to buy some of the magic oil. They besieged his house. Not only soldiers but men who had private enemies, or a grudge to work out—all offered any price for the stuff. The demand from married couples was steady and strong also. The people of El Sauc showed a willingness to part with any of their treasured possessions to obtain a few drops of the fluid which would render bullets and steel powerless to hurt them.

Now Pena had very little of the oil in stock, as you may well believe, and he was at his wit's end what to do. On the one hand was a market which would certainly never offer again, and which would assuredly make him rich in a few hours if he could take advantage of it. On the other was the sad fact that he had no more than half a cup of the magic oil left. He put water with this, sir. Yes, he thinned it down a lot. Still the demand persisted.

I cannot say with authority how he met it, but I know that everybody went away satisfied. People learned later that Carlos Pena had purchased ten gallons of oil from a merchant of El Sauc, and since he did not possess an automobile or any machine whatsoever, I consider this circumstance suspicious. What is your opinion, sir?

However, his reputation did not last long. On the second morning, as Benito Servin was making a triumphal progress toward the Señora Tostado's saloon, somebody fired at him from the corner of the

'Too late, Don Francisco," he said.
esides, he will recover. Nevertheless,
to the Señora Tostado's house and con-
to her my profound sorrow, and assure
that General Servin will receive every
ention."
This last assurance turned out to be
ecessary, sir. For when I met the
ora face to face, almost the first words
uttered were, "I am going to have him
ed to Tres Hermanos, Don Francisco.
s. Will you help me? I can give him
tter care there."
"But, señora, I thought —— You your-
f told me ——"

"Told you what?" she snapped.

"Why—well—well, now, you certainly did not express admiration of this Servin, Señora Adela. Ha, ha! Did you now?"

"Men are fools!" returned the señora, very sharp. Then her expression changed, sir. It grew soft. "Why, *muchacho*," she whispered, placing one of her little hands on my sleeve, "I would go to the ends of the world on my hands and knees for that son-of-a-gun. Tell that to your general."

"Yes, señora," I said, my heart heavy.

"And tell him, too," she added, her voice rising, "that this rooster Servin can protect his own roost."

"I will do so, señora."

On my way back to headquarters I heard a din of voices in dispute, and on approaching nearer, discovered that they came from the house across the street, the one occupied by Carlos Pena, the snake man. Now and again his bull-like tones made themselves heard above the racket, but chiefly the noise emanated from the Señora Pena, who was screaming abuse at her husband. Wondering what could be amiss I tiptoed through the passage and into the yard at the back, for it was from there that the sounds came.

"So! You will stay out all night, drinking, and try to sneak in when my back's turned, will you?" shrilled the señora, and then I caught sight of the pair. That little scrawny woman was chasing that giant around and around the yard with a broomstick, sir, and whenever she caught up with him she thumped the unfortunate wretch over the head with a ferocity. Finally he could stand it no longer, but gaining on her by a burst of speed, he sprang into the largest of the snake pits, which was standing open.

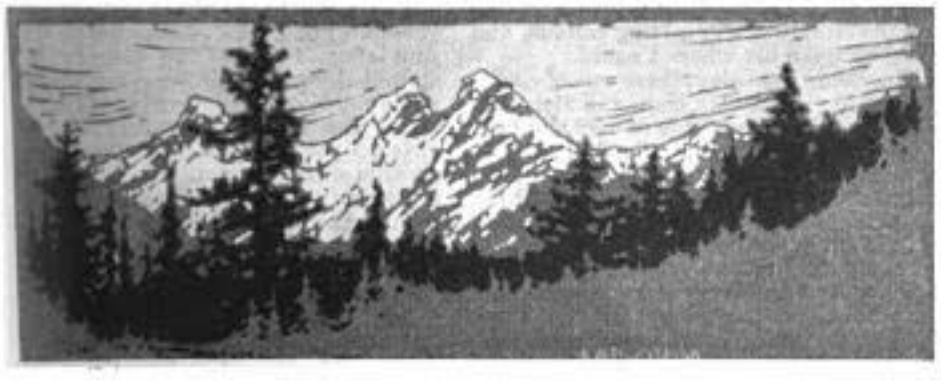
And there, in the midst of the crawling, hissing reptiles, which he herded into a corner with his stick, he tried to plead with her.

"Ah!" shrieked the señora. "You think to escape me. But you shall see."

Well, that is all, sir. I contrived to get this Carlos Pena out unharmed, but only after much trouble and by threatening the señora with the wrath of Dario Pez. Benito Servin, he married the Widow Tostado. And, by goodness, that son-of-a-gun spends most of his time at the hacienda of Tres Hermanos, where the perfume of flowers mingles with the soft breezes, and the pretty little girls promenade on front of the house in the cool of the evening. 'Tain't right!

THE GROWERS

DADDY he got him some maple trees
And he planted them in a row,
Up and down and about the house,
In the long time ago.
Daddy he tended them lovingly,
And they grew and they grew and grew.
The years came on and the years went by
And the trees grew into the summer sky,
In the long time ago.



Uncle Hi got him some dollar signs
And he planted them in a row,
Far out and away from the old homestead,
In the long time ago.
Uncle Hi tended them night and day,
And they grew and they grew and grew;
And the years came on and the years went by,
And the dollars heaped into the summer sky,
In the long time ago.

Daddy sat under the maple trees
And dreamed in the summer noon,
The blackbirds followed him down the field,
And the wild bee's cheerful croon.
Daddy came home in the eventide
And sat under the maple trees
Till the sun went down and the night breeze strayed
Through the whispering leaves where the fireflies played
In the sheen of the harvest moon.

Uncle Hi seldom was known to smile;
He battled his whole life through;
The whisper of God in the maple trees
And contentment he never knew;
To the end of his life he was gray and grim
And jealous of all mankind;
His heart was cold and his eye was hard—
For he lost his soul when he set to guard
The field where his dollars grew.

Daddy was not a success, perhaps;
All he did was to make things grow—
Green things he and God tended lovingly,
In the long time ago.
His clothes were worn and his purse was lean,
And he dreamed and he dreamed and dreamed;
Yes, he was a failure, the world would say—
But the neighbors all cried when he went away,
In the long time ago.

A better home for less money
by the Lewis Method

YOU can buy the materials for your home at wholesale prices and at the same time save many dollars on labor by the Lewis ready cut method.

For Lewis Homes we furnish lumber logged in our own forests and cut and finished in our own mills. There is a big economy in labor cost because Lewis Homes are cut ready to put together. Weeks of costly time are saved. Yet they are built just as solidly as by old fashioned methods. They comply with all building laws.

The high grade quality of every bit of material is covered by our binding guarantee of satisfaction. In one shipment you receive all the necessary lumber, shingles, nails, paint, hardware, etc. You need pay no money until you inspect the materials.

You know in advance exactly what your Lewis Home will look like. Instead of a mass of blue prints you see an actual photograph of the finished house. And you save the architect's fee. Lewis plans are based on a study of thousands of the most artistic and livable homes throughout the country.

Our Personal Service Bureau will give you information concerning excavation, foundation costs, plastering—every possible item. There will be no extras coming up at the last minute.

Send for 160 page book
"Lewis Homes of Character"

It contains photographs, floor plans and descriptions of 96 homes—colonial or modified colonial designs, bungalows and semi-bungalows, Swiss chalets, Old English half-timbered designs, two family houses, summer cottages, etc. Answers every point you want to know about the Lewis Method of Home Building. 160 pages, 7½ x 11 inches, fine paper, beautifully bound. Mailed for 25 cents (coin or stamps). Lewis Manufacturing Company, 1350 Michigan Ave., Bay City, Mich.

THE UPRISING GENERATIO

(Continued from Page 28)

Marilyn changed the subject and, I suppose, forgot it in her light way. But I remembered it a long time, as you shall see. I felt hot and uncomfortable all through the rest of the meal, and afterward refused to join the bunch who were going out on Sylvia's father's yacht for a little cruise.

When they had all left I didn't know quite what to do with myself in that ghastly quiet house, and roamed about aimlessly from room to room, awfully depressed and in the sink generally until in my wanderings I came to the little coat room on the ground floor, looked in, saw that my huge order of fireworks had been stored there, went in to give them the once-over, and then heard voices directly outside the window.

At once I tiptoed over and peeked through a crack in the blind, my heart growing sort of cold, a most upsetting and unpleasant sensation. There on a stone bench, well concealed by shrubs in this secluded corner of the east terrace, sat Ted and the widow. So they had not gone on the yacht after all! The low, deceitful things, sneaking back like that! Marilyn's silly china-blue eyes were turned up to Ted in the most idiotic way, and she was sort of wavering toward him.

"Of course I do get lonely," she was saying. "But what else can I expect—an old woman like me, and a back number, with so many pretty little chickens around?"

"Old! Why, you're lovely! You don't look a day more than twenty—honest!" Ted replied. "And believe me, you've got it all over these kids. Nit-wits, that's what most of them are!"

I drew back from the window, my heart pounding furiously, a sort of red blindness coming over me. I could hardly breathe. Then I controlled myself. So she didn't look over twenty! Ha, if he knew only the half of it! Not that I cared a hoot what Ted Stonewall thought, or whom he sneaked away from the crowd with or anything! For certainly I wouldn't demean myself so far as to care for a man who flirted with other women. Only it did seem a pity that a nice decent chap like Ted should be fooled by an old woman like Marilyn. There are mighty few boys as clean-cut as Ted, and so naturally—well, of course it did make me sick to see him taken in by a middle-aged fake. Not that I cared, you understand. Not a rap—not personally! Yet I couldn't refrain from a bitter, silent laugh at the thought of Marilyn in her nightly make-up. If Ted could only see her like that he'd get an eyeful which would bring him to his senses. If he could just see her with the chin strap and the muscle plasters and the coconut oil and the damp little knob of hair! Why, she even slept in a flannelette nightie! And if Ted once knew it ——

At this point I realized that I was staring at a big box marked Red Fire and that just above it was another packet marked Insect Smudge, Smokes 'Em Out. And as I read the words over and over mechanically a great thought blossomed comfortingly in my mind. Ted should see poor old Marilyn in all her negligée! I could save the dear silly boy from the horrid creature, and I would do it that very night! No sooner thought than floated! Collecting several pots of red fire and the smudge, I stole silently and rapidly to my own room, where I concealed them under the taffeta flounces of my day bed. After which I took a nap, and when I awoke refreshed I did the nastiest thing I could think of: I deliberately put on a black dinner gown. It was a dirty trick to cramp Mrs. M. like that when black was the only thing she could wear, and ordinarily I wouldn't have dreamed of doing a thing of that sort to a girl who was stopping in my own house; but the situation was getting serious, and I had to spike her where I could.

This being Saturday, there was of course a dance at the country club, and after dinner we piled into a couple of cars and beat it on over there. No one who had seen me perched on the running board of Tot's yellow roadster, my bobbed hair and my cloak flying in the wind, my girlish laughter pealing out in harmony with the rest, would have dreamed of the solemn, secret plan which was at that very instant burning in my bosom, or suspected the fact that I was simply wild for the dance to be over so that I might get the crowd back home and put the plot into execution. Oh, I mana keep up a brisk enough shoulder—a anyhow! But as the evening drag and on and Ted cut in on me only grew irritable and impatient. So m that when poor Little Arthur cut in for the third time in quick successio as soon as he had got in step and take his mind off his feet began his about having something he wanted to me, I almost pushed his face in, a actually shove him away the very firs I caught sight of help in the shape of on the end of the stag line. I felt simply wanted to kill Little Arthu nasty, effeminate worm! In fact I have enjoyed killing almost anybo thought it a beastly dull dance.

But not so Marilyn. She toddled professional, and was cut in on ever steps, especially by Ted, the poor old Well, I reflected, he would soon see he should see!

At length, after what seemed a fectly interminable evening, althou was really an uncommonly early on we left the club shortly after two o' we returned to the house; and follo the usual gabble downstairs, said night and scattered off to bed. I en my room with beating heart. Sending Celeste, my maid, I at once set abou preparations for the remainder of the with the calm of one who is committe a strange and terrible deed.

First I undressed, and then I ma most careful and attractive new t starting with a pale pink satin nightie, which I put on a boudoir cape of rob egg-blue Georgette trimmed with ye ribbons and violets, and thrust my young bare feet into a pair of lace-trim mules to match. Next I tucked my su curls, all but one or two which might considered to have escaped while I slept, a filmy boudoir cap, sprayed myself some of mother's eighteen-dollar perf and sat gazing at myself in the mirror quite ten minutes, feeling, I must say good deal of artistic pleasure in the re I had achieved. Considering I had j been startled from my bed, I was cha ing—I admit it. I was, in fact, a wond I looked at my watch—twenty-five m utes past three. By now Marilyn must safely asleep, arrayed in her flannele nightie, chin strap, patches and all, reeking of cocoa butter! This was my tim I collected my bundle of red-fire pots a my box of insect smudge, added a packet safety matches, and switching off the lig I stole softly out into the corridor.

The house was silent as a grave, and t upper hallway but dimly lit as I flitt along it. At least I started to flit; but so found that my heelless mules made t much noise, so I was forced to take them and stuff them into the lace pocket of m Georgette cape. Then I hoofed it a Duncan. My heart pounded furiously, a I was in deadly fear that someone woul hear me and come flocking out; but n body did, and I reached the little r ception room on the ground floor, whic was my destination, without trouble. On there, I turned on a light, shut the doo and got busy with my fireworks.

The three red lights I set together in th middle of the floor where they couldn possibly do any harm. I needed only t ignite their wicks. The smudge gave m more trouble, but I simply had to have it A red glow wouldn't be good enough. wanted smoke and a smell to make m party more convincing. And believe me that smudge was a task! You had to wet on top and put kindlings underneath, I took the peacock feathers out of the fire place and the new magazines from mother' table and some water from a vase of flow ers, and the nasty stems spattered me a good bit, but I didn't notice it at the time. And then I mixed up that stuff and sprinkled on the brown powder and it made my nose itch horribly and I had an awful time not to sneeze too loudly. But at last I got the darn thing started, and it sure did smudge beautifully! Then I lit the red lights, switched off the lamp, and as soon as the mess got going strong I beat it upstairs, and when the lower hall began to be smoky I started to yell.

"Oh! Oh!" I screamed. "I smell something! I knew I smelled something! Fire! Oh, fire! Fire!"

BOYS!

This Advertisement Is For You!

Here's the gun every BOY wants to buy

It looks like a real automatic revolver
It shoots like a real gun
It FLASHES like a real gun
It is absolutely harmless

HERE is a gun made for boys, and it is a corker. Every time you pull the trigger, a big red flash shoots out. It looks just like the flash when a real revolver is fired—smoke and all.

We can't tell you what makes the flash, for that is the secret. But we can tell you this—the flash is absolutely harmless. You can shoot the Ronson Repeater anywhere—in the house or outdoors. It cannot harm you or anything you shoot it at.

This is a real repeater. You don't have to cock it to shoot it. Just pull the trigger. And you can shoot 5000 flashes before you have to reload the Ronson Repeater.

This dandy gun has a genuine gun-metal finish. It looks and grips like a real automatic revolver. And the Ronson Repeater is strongly made of steel—it will give you long service and lots of fun.

Get a Ronson Repeater right now. If you can't buy one at your dealer's, cut out the coupon below, send it to us with 25c in coin or stamps. (Enclose 10c additional if you live west of Chicago.) We will send you one by return mail, loaded all ready to shoot 5000 times. Tell us your dealer's name on the coupon. Address your envelope to

THE ART METAL WORKS

(Continued from Page 122)

That brought 'em out! You should have seen them flock! And even in the excitement of the moment I realized that I was learning a lot about my friends that I had never known before, and if anyone had told me Sylvia wore two false teeth on a plate I simply wouldn't have believed it! Or that Rotter actually was a rotter and a coward, and that Little Arthur would keep his head and have a common blanket bath robe! But all this was true, and more. Gosh, how they rushed out and yelled! That upper corridor went simply mad with excitement. I kept screaming with sheer terror and led the stampede for the lower floor. Once there, however, I turned to watch them coming down the stairs; but the figure I had my eye out for was missing. Marilyn was not there. Could the vain old fool actually have stopped to prink in the face of this hideous danger? I could scarcely believe it, yet what else could be keeping her? The servants were on the scene by now, and Tams, in a red shirt but no undue haste, was very brave about the fire extinguishers, and Celeste, my maid, was wonderfully helpful, because she overturned a huge tubful of flowers and water in the general direction of the fire, and the mess it made helped to disguise the true origin of the blaze. But still no Marilyn appeared. With a dreadful shock I realized that Ted had not shown up either!

This was awful! I assure you I was so unnerved by the realization that I began to feel like screaming in earnest. And then all at once I heard footsteps running along the terrace, and Ted's voice.

"What's wrong?" he shouted, bursting in at the door.

But I could not answer him. I was not only screamless but speechless, for there behind him came the widow, still in her lovely evening gown, her hair immaculate, and she was even powdering her nose as she entered!

"What is it?" Ted asked.

"Where have you been?" I demanded chokingly.

It was not Ted who answered me, however, but the widow. She sailed past him and up to where I stood trembling with indignation.

"We've been walking on the terrace," she said lightly. Then she gave a little scream of laughter. "Oh, Pet, my dear, how funny you look! For heaven's sake what have you been up to?"

Seizing me by the shoulders she whirled me around to face a full-length mirror, and for a moment I stood before it frozen with horror by what I saw. My cap was all askew, and across my nose was a horrid black smudge, while another ran up from one corner of my left eye into my untidy hair. My lovely cape was a wreck and my rosy bare feet showed all too plainly that I had pattered around on the dusty floor—especially the heels, which were simply black! A roar of laughter went up from the crowd, but I didn't join them. With a sob of rage I turned and fled up the stairs and into my room, banging the door behind me.

There I lay awake for simply hours and hours, tossing from side to side and thinking of what Marilyn had said. "Just walking on the terrace!" She and Ted—my Ted! Oh, it was dreadful! And so, there alone in the dark, where I didn't have to pretend or keep up a good front, I simply let my heart go ahead and break. What a vile thing it was to treat love so lightly! How could any decent boy do such a thing? A person ought not to cheapen himself like that, but come fresh and clean to his own real sweetie—the one he is going to marry.

"Oh, Ted, Ted, how could you?" I howled into the smothering depths of my damp pillow. And then a thought came to me which caused me to sit straight up in bed with alarm. Suppose Ted intended marrying the widow! What was there to prevent? Widows had been known to marry again. She was old, but she was free! What should I do? What? I must stop them somehow. I must! But how?

With a groan I turned on my bed-head light and, wondering why death was so unpopular when life was so hard, I got up, secured a little snapshot of Ted—a ridiculous thing snapped in midair when he was on the tennis court—and with this I crept back to bed again, holding it to my broken or almost broken heart and fully intending to spend a miserable, wakeful night. But somehow or other the next thing I knew the sun was pouring into the room through the crack between the rose-taffeta curtains, and Celeste was running the water into my tub. It was a beautiful morning, [illegible] took me quite five minutes to rem[illegible] that my life was wrecked.

How I lived through that day I [illegible] know. When I came downstairs at [illegible] it was around noon, and the rest [illegible] bunch was also just beginning to co[illegible] life after the hard night, and to st[illegible] out onto the breakfast porch. I s[illegible] others, but I must except Ted Sto[illegible] and Mrs. Morelle. They, it seems, h[illegible] an early start and gone off for a long [illegible] Well, of course I liked to hear tha[illegible] about as well as I would have enjoy[illegible] tening to my own death sentence. A[illegible] didn't cheer me up greatly to have [illegible] Arthur, who was resplendent in raja[illegible] promptly maneuver himself into the [illegible] beside me.

"Look here, Pet!" he said. "Wh[illegible] you always try to avoid me? I think [illegible] are just too mean!"

"Don't weep over it!" I replied t[illegible] "I'm a busy hostess, that's all. I'm [illegible] avoiding you."

"Look here!" he said again, hitchin[illegible] seat a little closer. "Look here! I k[illegible] you don't like me—not yet. But I t[illegible] you are a peach, Pet. I'm—well, now [illegible] quite crazy about you. Don't be so m[illegible] to me!"

"I'm not!" I said.

"Now, now!" said Little Arthur, s[illegible] ing his finger at me. "Yes, you are! [illegible] know you are, for you never let me see [illegible] alone!" He dropped his voice, and I s[illegible] dered at what I knew was coming. "I[illegible] see you alone, Pet. I have something I w[illegible] to say to you."

"No, you haven't!" I snorted, and [illegible] to my feet. Little Arthur was almost dri[illegible] me to drink. This was his sixth effort to [illegible] pose in less than three days, and it's a fu[illegible] thing, but if you don't love a person n[illegible] ing makes you hate them worse tha[illegible] have them love you—after the first refu[illegible] anyhow. Arthur was a nut to keep it [illegible] The little fish face! If he did have tw[illegible] million dollars, he wasn't worth a—a [illegible] rot or a beet raised by a real man! But [illegible] poor moon calf didn't seem to realize thi[illegible] the least, and continued simply to ha[illegible] me all that hateful day. However, he [illegible] not catch me alone, although he did w[illegible] nearly succeed in doing so just before d[illegible] ner that night.

I had trusted my diamond wrist wat[illegible] once too often, and it had betrayed me, [illegible] that I came down too early. That is to s[illegible] I almost came down. But when I reach[illegible] the head of the stairs I caught sight [illegible] Little Arthur all alone in the prefesti[illegible] silence of the hall below and drew back [illegible] of sight before he spotted me. I felt pa[illegible] icky at his watchfulness, but I was ab[illegible] lutely determined not to run into the tra[illegible] For an instant I couldn't think what [illegible] do, and then I did. Very quietly I beat [illegible] tiptoed retreat along the upper corrid[illegible] and opened the door to the back stairs a[illegible] incidentally to fate, although, as the wri[illegible] ers say, I was all unconscious of it at th[illegible] time. Strange what trivial actions precip[illegible] tate great disasters! For if I had n[illegible] spotted Little Arthur parked in the fron[illegible] hall, and used those once-in-my-childhoo[illegible] familiar back stairs, I would never hav[illegible] seen that big florist's box lying on the re[illegible] pantry shelf, or read the tag upon it. Bu[illegible] I did; and what is done, alas! cannot b[illegible] undone.

It was a long white box with the florist' name in gold upon the lid, and the strin[illegible] and the tag were as yet untouched. Jus[illegible] the sort of box which flowers for the table might come in. The only peculiar thing about its appearance in the rear pantry was the fact that we have huge greenhouses of our own, and practically never buy from florists. However, I did not think of all that at the time. It was some swift uncontrollable instinct which caused me to stop and examine the tag instead of passing on through to the butler's pantry and the dining room. But stop I did, and imagine my feelings when I saw that the box was addressed to Mrs. Marilyn Morelle!

Who had sent flowers to Marilyn? In my heart I already knew the answer, and yet I stood there trembling for a moment, and whispering that I had to know the truth. I had to! I put down my blue ostrich fan and with shaking fingers untied the string and lifted the lid. Under the dewy paper something glowed red. Roses! Red roses! And nestling on top of them was a little envelope. Sick with foreknowledge, I drew the card out. Mr. Theodore Stonewall, of course! But he hadn't written anything on it except to draw a line through

FIELD & FLINT CO., BROCKTON, MASS.

the engraving and write "Ted" above it. It was the darkest moment of my life.

Then from misery I turned to rage. Roses! Red roses, no less! The old-fashioned sentimental simp! Of course he'd send that sort of garbage! Ha, it was pretty sappy! Well, he wasn't so far gone but that I could still save the poor nit-wit before he went down for the third time—and I would. I'd teach that cat Marilyn Morelle not to come in and steal another woman's man and turn a good young farmer's head! There is one thing no woman in the world can stand, and that is being made to look a fool. Well, I'd make her look one, all righto! I knew how, for nobody is so sensitive to the brutality of crude youth in love affairs as an older, experienced woman. Just let one of the boys get funny over a sentimental situation, and he is queered with her—he's simply out, that's all! I knew this as well as another, and once having made up my mind, I didn't waste any time.

I gathered up those roses one and all, and holding them way off so that they would not contaminate me, I thrust them into the garbage can and put the lid on tight over them. Then I collected several large bunches of new beets from the screen closet and laid them gracefully, leaves and all, upon the bed of asparagus fern in the florist's box, folded the paper over them, placed Ted's card upon that and tied the box up again. Just as I had finished, Tams, the young-old family butler, entered from the pantry. He was not unnaturally startled at seeing me, but got back his poker face almost at once and stood at respectful attention.

"Can I do anything for you, miss?" said he.

"You can!" I replied grimly. "I see there is a box of ros—flowers here for Mrs. Morelle. Please deliver it to her at dinner to-night—with the roast."

"Very good, miss," said Tams respectfully, standing aside to let me pass.

"You said a mouthful!" I thought. "Very good is right!"

At dinner that night I fairly bristled with pep, the knowledge of sitting, as it were, upon a bomb intrigued me tremendously, although I had myself perfectly in hand, and never even turned my head at first when Tams brought in the fatal florist box.

I did look, of course, when Marilyn gave a little squeal of delight as the butler presented it to her. So did all the rest of us. Every eye was upon her. My heart thumped with pleasant excitement.

"For me? How wonderful!" she cooed. "Ted, dear old thing, unfasten the string, do!"

Well, Ted, who was sitting beside her, obliged, lifted the lid, and Marilyn picked up the card from the veiling oiled paper.

"Oh, Ted! How darling of you!" she shrieked.

Then she dug into the box and drew out a bunch of beets amidst an instant of horrified silence. The table broke into a roar—hoots, catcalls, a regular tornado of kidding.

They all thought it a peach of a joke. But not so Marilyn. Getting to her feet she flung that bunch of sweet, wholesome, innocent vegetables down hard upon mother's best Italian cut-work cloth, which wasn't at all a sweet womanly thing for Marilyn to do, because beets stain horribly. But anyhow, she flung them down and pushed back her chair.

"Why, Marilyn!" I said. "You simply raved about Ted's beets at luncheon yesterday!"

"And he promised to send you whatever you admired most on the farm!" chimed in Sylvia, proving once and for all what a sterling friend she is to me.

"I have never been so insulted in my life!" gasped the widow. "You young—beast!"

She shot this at Ted and then flung herself out of the room, carrying her napkin pressed to her lips, her face as red as one of the despised vegetables, and leaving Ted staring and frozen with astonishment.

"But—but good heavens! I didn't do this!" he sputtered. "I say, Marilyn—by gosh, this is awful! Wait—let me explain!"

He was on his feet now and beating it out of the door after her. Another shout of laughter from the crowd followed him. Then I got up too. I was simply eaten with curiosity to see what would happen, and also bound to stop any reconciliation between those two.

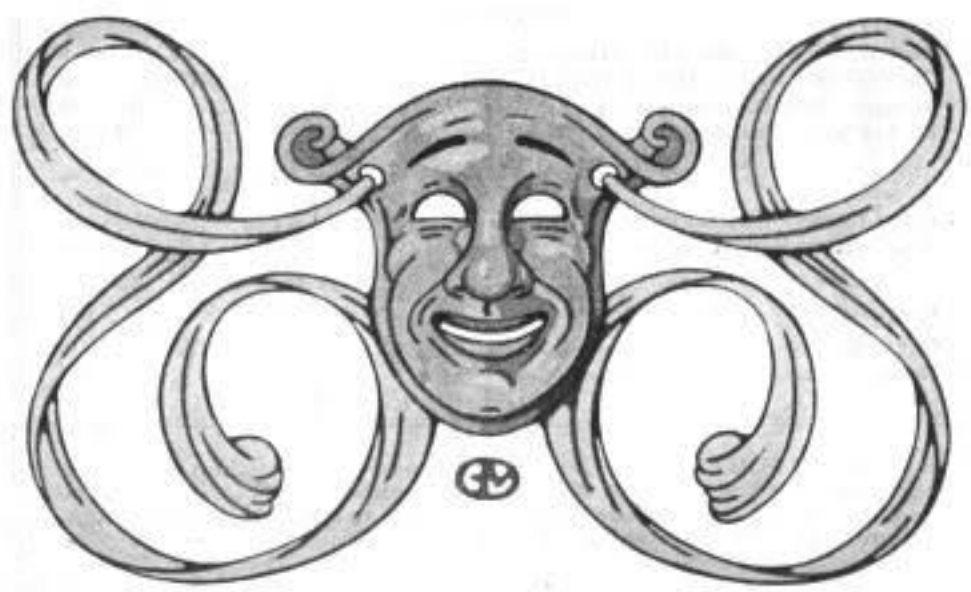
"Excuse me," I murmured into the din. "I think I really ought to go to poor dear Marilyn," and with that I left the table.

But I need not have worried about a reconciliation, for as I slipped out into the hall and watched, hidden by a curtain, Marilyn turned at the foot of the stairs like a cat at bay and almost scratched Ted's eyes out.

"There is no explanation!" she spat the words at him. "And I will never forgive it! I never saw anything so—so unspeakably young! A schoolboy's trick! I suppose you think I am an old fool, and so you first give me a rush and then show me up! I should have known better than to have anything to do with a chit of a boy!"

"But, Marilyn, I didn't do it!" Ted pleaded. "And I never gave you a rush—really. You've known all along I was only trying to punish Pet. And you were so understanding and sympathetic at first! Why don't you believe me now?"

Well, did my heart sing at those lovely, heavenly words? He had been pretending! There was really nothing between them, after all. He was mine, mine, and always had been! I simply swayed with joy. I went delirious with happiness, and did not even hear Marilyn's last spiteful remark as she turned from Ted and dashed up the stairs. Then the dear boy, after staring hopelessly after her, shrugged his shoulders and started back toward the dining room. And as he did so a second interpretation of that speech of his came into my bean—"To punish Pet!" So he had an idea that he could punish me, eh? Naturally I decided that if any punishment was to be pulled I was going to be the administratrix of said punishment. At once I conceived the perfect idea. I would let Little Arthur propose that very night, accept him, announce the engagement and then break it off after Ted had suffered a day or two of utter misery.



"Where is poor dear Marilyn? I asked the unsuspecting Mr. Theodore Stonewall as I emerged breathless from between the portières as though I had just left the table.

"She's gone upstairs," said Ted. "Pet, who the devil did that?"

"How should I know?" said I, looking him in the eye in my charmingly frank way. "I'm not concerned with your affairs."

"Here—don't go!" said he. "Wait a minute, dear! I have something I want to say to you."

At these all-too-familiar words I simply saw red.

Snug, but roomy

A SNUG-SEAT soda table is just big enough for two. But there is plenty of room for four customers without the slightest crowding.

A set consisting of table and chairs covers only a 5-foot circle of floor space when occupied by four good-sized people.

You can put at least 50% more tables in your grill—probably more than that. They are so attractive they draw trade—10 years' trial in hundreds of stores proves this. Some report 100% increase.

Black or white Carrara tops, polished wood tops, or plate glass "show case display" tops. Tables and chairs finished in oak, mahogany or special enamel colors.

Moderate in price.

Crescent
DISH WASHER

Over
10,000 users

This booklet shows the new small model of the famous Crescent Dish Washer now used and endorsed by 10,000 of the largest hotels, restaurants, hospitals and institutions.

Washes 300 Dishes in 15 Minutes

The Crescent has the famous Revolving Wash that finds dirt and perfectly cleans every dish. You simply put the dishes in the rack. Turn one simple lever—and hot soapy water under pressure of an electric pump cleans and sterilizes all dishes in less than one minute. They dry almost instantly. Washes silver and glassware perfectly. **Dishes Cannot be Broken in a Crescent.**

This new small Crescent is for:

Smaller Hotels	Clubs
Restaurants	Boarding Houses
Lunch Rooms	Y. M. C. A.'s
Hospitals	Religious Institutions

Send for Free Booklet

It tells what well known users say of the Crescent. How it pays for itself in the dishes it saves. How one girl and a Crescent will replace three washing by hand. How it sterilizes every dish and dries them without handling.

Dealers — ***There is a Crescent for every size kitchen. Let us tell you about our attractive terms and interesting proposition.***

"You must not speak to me in that affectionate tone," I said coolly.

"If you are angry about Marilyn," said Ted, "you have the wrong dope, dearest."

"Don't dearest me, Ted Stonewall!" I flashed back at him. "I am—well, there is another man. You will know more later in the evening!"

And with that I walked back to the dining room with great dignity and inner satisfaction. Oh, wouldn't he suffer! My eye! I would make him go through all the agonies he had been putting over on me for the last three days, and then several! I simply ached to see his face when I sprang the news of my engagement.

But it was fully two hours later before it occurred to Little Arthur that he hadn't been reciting his favorite line for quite a while. And then he did so in the middle of a toddle.

"Can't we go somewhere alone?" he whispered. "I have something I want to say to you, Pet."

I sprang at the suggestion like a cat upon a frightened mouse.

"Indeed we can, old dear!" I said. "Let's slip out into the conservatory—it's empty."

Well, he nearly fainted at my reply, and I had to support him to our secluded bower, where I parked him upon a wicker settee which was backed by a screen of ferns and orange trees, and sank down beside him languorously. But Little Arthur didn't begin at once. The engine had stalled because I'd let it get cold, I suppose. He didn't seem to have any self-starter either, so I had to crank him up.

"You said," I murmured shyly, looking down and plucking at my dress—"you said there was something you wanted to say to me."

"Ah—er—ha—yes!" he sputtered. "I—I do. But I hardly know how to begin."

"Well," said I, "you need not be afraid of me, Arthur—dear."

"That's awfully good of you, Pet!" said Little Arthur. And then he stopped dead for a moment. "It's—it's about us," he went on at length—"you and me."

"Yes?" said I softly. "And what about us?"

"Well, I—I'm sort of embarrassed to explain," said he. "But our mothers are old friends, you know."

"That only ought to bring us closer," I suggested.

"Well, yes," said he. "You see, Pet, your mother and my mother have been writing to each other about us. The fact is they want us to marry. In point of fact, I—I was sent on to propose to you."

"Oh, Arthur!" I said. "How darling!"

"But now—well, I want you to see your mother as soon as she comes back and sort of help me to explain and back me up and all that."

"Of course I will, dear Arthur!" I said. "Because when I left home I fully intended to obey my mother and fall in love with you if possible," he went on earnestly. "Really, I want you to believe that. How could I know that I would meet my fate, my lovely Marilyn, on the train and become engaged to her?"

"Engaged!" I said, stunned. "To Marilyn!"

"Of course I explained to her how things were," he babbled on. "She suggested that we would let no one suspect our betrothal until I had talked with your mother and fixed matters up. Oh, you will help me, Pet? I'm in the deuce of a hole, you see."

"Of course I will help you," I said slowly, in a dazed way. "I—I—well, of course I will help. Only go away now, I want to be alone. I want to think."

"Oh, thank you so much!" squeaked Little Arthur, jumping up and actually kissing my hand before he skipped out of the room.

For a moment I stood like Lot's wife turned to salt. And then to my horror the orange trees behind the bench parted and there was Ted Stonewall.

"The horrid little sap!" said Ted. "Well, if he wouldn't propose I will. Would you like to be my wife, Pet?"

I was speechless with rage and mortification. But not for long. Glaring at him with fiery eyes and clenched fists I stamped my foot.

"I wouldn't like to be your wife, Ted Stonewall!" I said. "But oh, how I would love to be your widow!"

A scene at the Van Wert County (Ohio) Fair, typical of the part the automobile plays in farm life today.

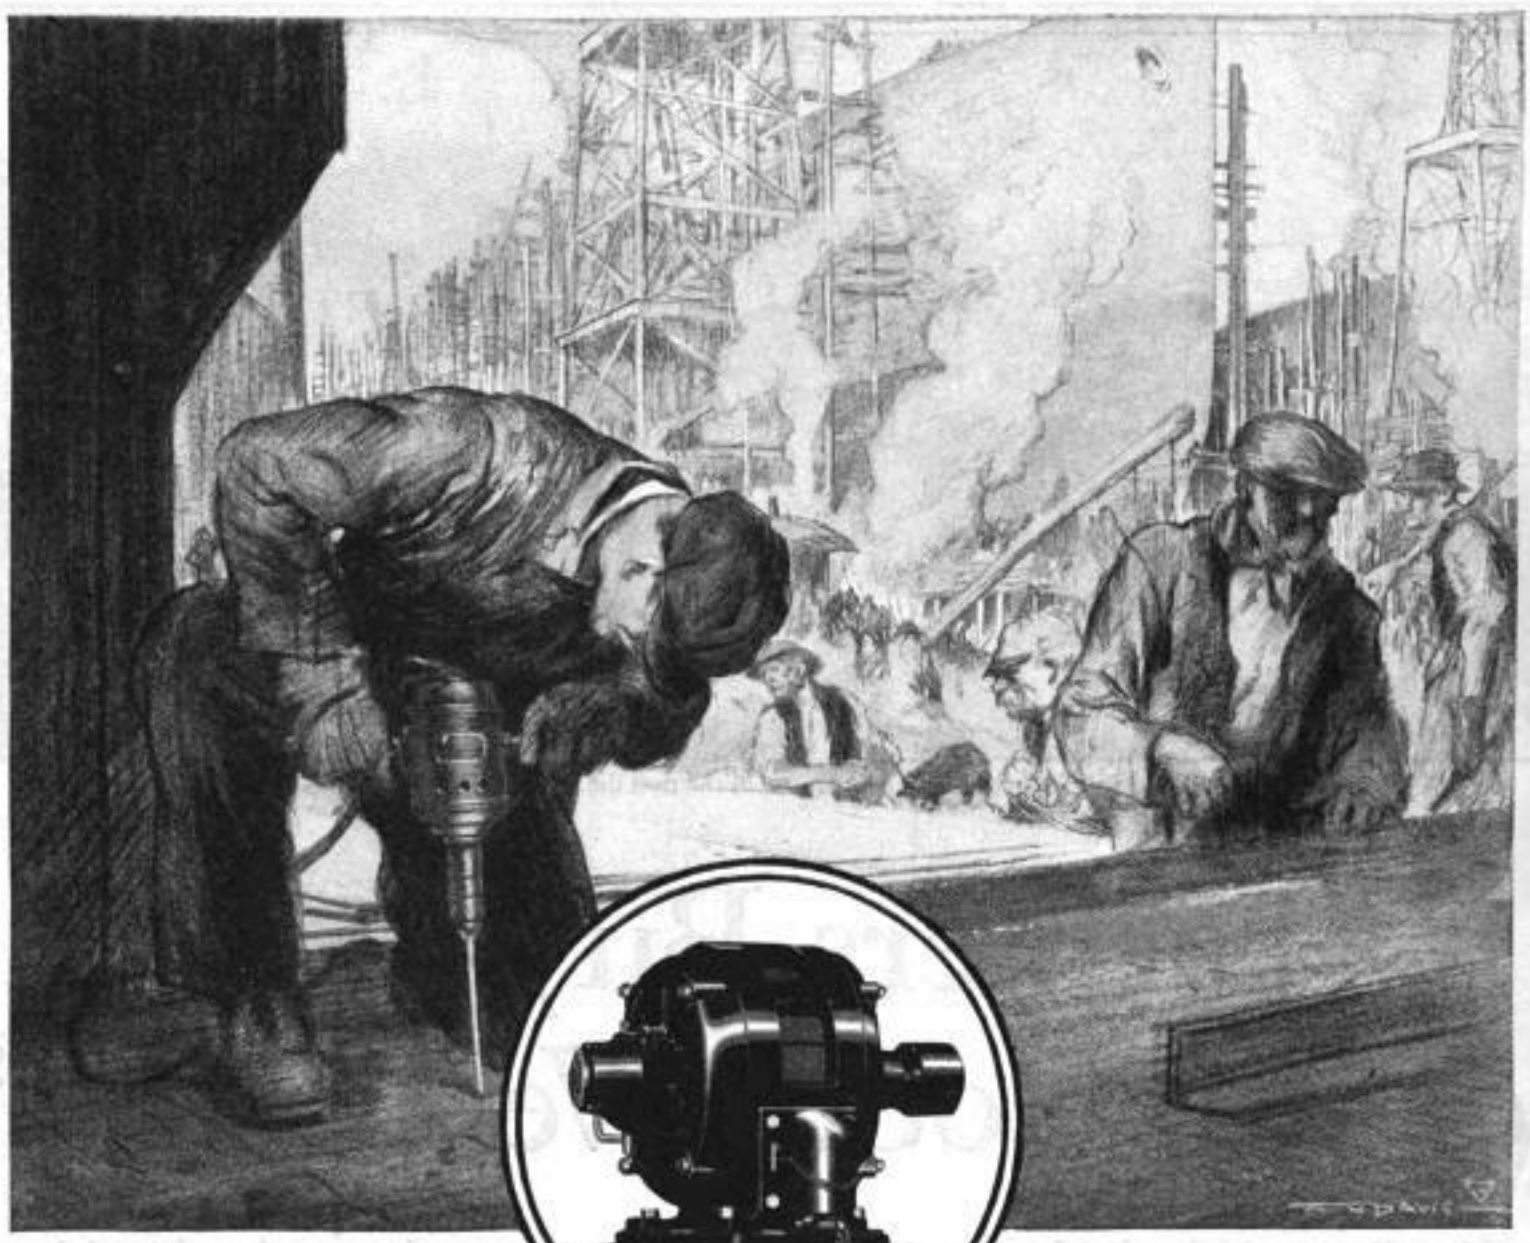
"Farmers Buy 75% of the Goods We Handle"

writes George N. Lockridge, president of the Kansas City Automobile Supply Company, distributors of automotive equipment.

"Dealers in agricultural towns are our chief market. The best sales argument we can make to them is that an article is nationally advertised. This means its quality is established.

"What we need most is advertising to the farmer. Every progressive farmer in our trade territory has an automobile. In fact, sixty-two per cent of Kansas farmers own cars.

"Replacement parts especially should be strongly advertised right now. A big new business in these lines has opened up to accessory jobbers.



"Manufacturers of our lines can reach the farm trade through THE COUNTRY GENTLEMAN. *We find that advertising in a Curtis publication is both a certificate of quality and an assurance of demand."*

MAJESTIC ships, towering buildings, great bridges and other structures are reared from ponderous plates and beams of iron and steel today with the aid of electric motors. The bulky weights are handled with ease by the electrically powered cranes and winches. Motor driven tools drill, rivet or bolt the sections securely in place.

In such spectacular work adequate, dependable motor service is essential. And because all Robbins & Myers Motors, large or small, give ample, reliable power, these sturdy power units are employed in every phase of steel construction.

Engineers and workmen know that an R&M Motor, whether it is hoisting great loads or driving a small tool, is absolutely trustworthy. The satisfactory performance of Robbins & Myers Motors is the result of twenty-five years of progressive experience in the making of fine motors.

Whatever your power problems may be, you can profit by a survey of the records established by R&M Motors in manufacturing, construction, or appliance work.

R&M Motors are made for all services; sizes range from 1/40 to 100 horsepower, inclusive

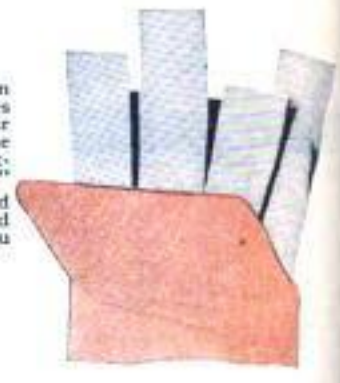
See what one lost tooth means

If you don't want to lose your teeth, start now to take proper care of them.

It is said that 95 out of every 100 persons have "Acid-Mouth"—a condition responsible for early tooth-decay. The chances are this enemy is eating steadily into your teeth. Check it!

Use Pebeco Tooth Paste night and morning. Pebeco counteracts "Acid-Mouth."



Sold by druggists everywhere

How to tell if you have "Acid-Mouth"

First, send for Litmus Test Papers and big trial tube of Pebeco

Then moisten a blue Litmus Test Paper on your tongue. If it turns pink, that indicates an acid condition of the mouth. Brush your teeth with Pebeco and make another test. The paper will not change color, thus demonstrating how Pebeco counteracts "Acid-Mouth."

Fill out the coupon, enclose ten cents and mail to us now. The Litmus Test Papers and big Trial Tube of Pebeco will be mailed you at once.

PEBECO TOOTH PASTE

LEHN & FINK, INC.
635 Greenwich Street, New York

Enclosed find 10 cents, for which please send me your Litmus Test Papers and large trial tube of Pebeco.

Cleveland's New School Buildings

TO house its army of 122,000 public school pupils, the City of Cleveland has provided many splendid new buildings. Architecturally, they are masterpieces—models of convenience, comfort, safety. And in line with standard practice the country over, most of these schools are covered with Barrett Specification Bonded Roofs.

One reason for the popularity of these roofs is, of course, their unequalled economy—moderate cost, long service, and no upkeep. But another reason, and a very important one, is their high fire-resisting qualities.

When burning brands fall on the slag or gravel surface of a Barrett Specification Roof, they burn themselves out without doing serious damage. If a fire inside the building weakens the roof-deck, the Barrett Specification Roof has the necessary tensile strength to support itself over a large area, thus effectively blanketing the fire.

The degree of fire protection afforded by a roof is not determined by the character of any one ingredient of the roofing material, but by the ability of the completed roof to resist fires that attack it, whether from the inside or the outside of the building. Barrett Specification Roofs are given base rating by the National Board of Fire Underwriters.

The Barrett Specification Type "AA" 20-Year Bonded Roof represents the most permanent roof covering it is possible to construct and, while we bond it for twenty years only, we can name many roofs of this type in service over forty years and still in good condition.

Where the character of the building does not justify a roof of such extreme length of service, we recommend the Barrett Specification Type "A" Roof, bonded for 10 years. Both roofs are built of the same high grade materials, the only difference being in the quantity used. Before specifying or closing contract for a Barrett Specification Roof, be sure to read carefully all the stipulations in the specification.

Full details regarding these Bonded Roofs and copies of the Barrett Specifications sent free on request.

How a single soap does double duty

Do you know this:

The grocers of the country sell more P and G The White Naphtha Soap than any other soap?

Why?

Because you, the women of the country, have learned to get the *speed* of *naphtha* soap, combined with the *safety* of *white* laundry soap—by using P and G The White Naphtha Soap.

The same cake of P and G The White Naphtha Soap that safely washes your precious table linens will quickly wash your husband's shirt cuffs—without boiling or hard rubbing—and preserve the colors.

With P and G The White Naphtha Soap, you can remove the light surface soil from a white piqué collar *and* the playground grime from your children's clothes —with *equal* promptness and safety.

P and G The White Naphtha Soap is a complete soap for laundry, dishes, woodwork, floors and all other general household cleaning. It does so many things supremely well!

for speed and safety

Not merely a white laundry soap—
Not merely a naphtha soap—
But the best features of both, combined.

Clemenceau and Pershing

...free from blind adherence to the outworn policy of no association. Willy-nilly, ...country must take its place at whatever council table disposes of world problems. ...elopment made impossible and the war definitely ended our comfortable isolation. ...in joining with other nations in such settlements the American people are entitled ...now what sort of treatment they may expect from those with whom they will have to ...; they should be alive to the motives that may move those who would enlist their ... For five years sentimentalism and a hysteria bred of war fervor have clouded their ...ds when considering our foreign problems, and it has become imperative that they ...uld approach European contact with clear eyes.

International Politics Based on Big Business

...ND so I venture to write of a series of happenings whose recital may prove instructive ...and therefore assist in a return to that sanity and common sense which formerly dis...guished our attitude toward foreign nations, but from which we have been stampeded ...misdirected idealism and the propaganda of those who thought to profit from it. ...Americans are generally given credit for shrewdness and hardheadedness in the con...ct of their business affairs; yet they suddenly grow mushy and maudlin in their ...ought on international relations. Why? International politics is nothing but business ...a colossal scale. No matter what floods of patriotism and sacrifice are let loose in the ...ot rush of war, behind the moves in the final settlements is the cool hand of selfish ...terest; even when the peoples are flaming with high resolve and forgetfulness of self, it is always seeking to direct their efforts. The first step in world politics is to learn to view dealings with other powers in the light of business transactions.

In every crisis and in every war the people concerned have seldom been really informed. They have learned only what the inner circles who controlled governments and national effort deemed fit to hand out to them—which information has been plentiful enough in the direction of stimulating united action, but has generally been meager of facts and, when not brazen distortions of truth, either lacking in any indication of motives or camouflaging them.

In the Dark

HAD history always told the whole truth, instead of being largely what Napoleon dubbed it—a fable agreed upon—the peoples of the earth might have attained by now to a knowledge of one another and an attitude toward international relations which would render military alliances unnecessary and warfare so abhorrent that no nations or combinations of them dare undertake it.

An extraordinary, sedulously nursed tradition has contributed to the successful effort to keep the peoples in the dark. This tradition imposes the idea that in any international undertaking it is highly improper to divulge a word of what transpires, beyond the formal communiqués. Should any government or diplomat do so, it or he is instantly held up to execration. Such conduct is shocking, rotten bad form; every gun of the old order's artillery is turned loose on the luckless offender. And in the smoke screens they create the important facts of such disclosures are blurred and public attention is diverted from the real issue and focused on this heinous offense against the fine traditions of diplomacy. As though any individual's conduct or fate weighed one iota against the terrible necessity of a people learning every fact of an effort which may demand from them thousands of lives and billions of treasure! The thought back of this tradition seems to me to be on a par with the recent plaint of some rascally oil promoters who, being thrown into sudden bankruptcy and jail, clamored that their nice business had been ruined by the publicity given it by the press.

From the day the outbreak of war, in 1914, rendered American support of vital importance to the combatants the American people were subjected to organized, unflagging campaigns by the European powers to secure their help. That was natural enough and only what we expected. Then in 1917 the United States declared a state of war with Germany, and the need for concerted effort to line us up with the Allies ended. From then on it became a silent struggle between Great Britain and France to bring the United States under tutelage.

As usual in the international game, the British were first with a concrete proposal for the employment of the American effort. The United States got into the war in April; the French Military Mission outlined a week later some general suggestions as to what form American participation ought to take, and on April twenty-seventh Marshal Joffre

Digitized by Google

Doughboys in Mass Formation at a Review Before Belgian Royalty, Chaumont, France

asked that one division be dispatched at once for the moral effect; but on May fifth Major General Bridges, of the British Mission to this country, wrote a letter to Major Gen. Hugh L. Scott, then chief of the General Staff of the United States Army, requesting that 500,000 untrained men be sent at once to England for training there, later to be drafted into the British armies in France.

"If you ask me how your force could most quickly make itself felt in Europe," wrote General Bridges, "I would say by sending 500,000 untrained men at once to our depots in England to be trained there, and drafted into our armies in France. This is the view alike of our Commander in Chief in France and the Chief of the Imperial General Staff—Sir Douglas Haig and Sir William Robertson—their reasons being that we are short of men, the war is at a critical stage when we may yet be able to turn the scale and force a decision during the summer, and EVERY DAY COUNTS. Our recruits are put into the field after 9 weeks' training in England and 9 days in France, and give a good account of themselves. With your intelligent men under our system and instructions this would be found ample. In no other way could those 500,000 men make their presence felt before what we call the fighting season is over for the year."

COPYRIGHT BY CLINEDINST, WASH., D. C.
General Tasker H. Bliss

British Arms Recommended

"BOTH Sir Douglas Haig and Sir William Robertson however recognize the difficulties attending such a course in view of the fact that you are engaged in raising a national army. However I put it forward for your consideration whether in view of your enormous man-power you cannot do both, in which case the drafts sent us could eventually be drafted back into the U. S. Army and would be a good leaven of seasoned men.

"The sight of the Stars and Stripes on this continent will make a great impression on both sides. It will be as good as a tactical victory in its moral effect. To this end I would like to see one of your regular divisions sent to France at once, with 50 per cent reenforcements following closely."

After arguing for the adoption of the English rifle and the English 18-pounder gun and 4.5 howitzer, in preference to French armament—General Bridges impressed upon General Scott that Great Britain could supply all of these that the United States troops might require—he went on: "It appears to me that the above considerations may have some weight in the decision of your government as to whether your initial forces are directed to the care of our army or to the French. The French may be able to promise a separate line of supply for a small force. I understand they are extremely anxious to have your army with them, a are probably willing to sacrifice a good deal to t I feel certain that Sir D. Haig could not promi but would stipulate that your divisions would come into line with ours as regards ammunition If with the French you would probably want yo food supply also."

Some Practical Details

"A FEW other points occur to me in this connection will have the language difficulty to contend your divisions go to the French. The French hav few English-speaking officers; not so many as they A good instructor can indeed seldom speak Englis men will soon get tired of being instructed through preters.

American Troops Landing at Liverpool

American troops began to arrive—very slowly, for shipping was scarce and we had no trained units of division size then. The regular army regiments which went first were largely composed of recruits. They were placed around Gondrecourt to be instructed in trench warfare by the French.

Early in September, 1917, M. Clemenceau paid a visit to the training area. Major General Sibert was then commanding the First Division. With Clemenceau was General Castelnau. They had an interview with Sibert, in the course of which Clemenceau made a talk on the importance of an early entrance of American troops into the line. When he had finished he asked Castelnau to outline to the American commander the arrangements for this entry of American troops, and Castelnau revealed that it was the intention to place the Americans in the quiet Lunéville sector, brigading them with the French. And then Clemenceau brusquely capped this information by naming the date—September twelfth, only ten days distant.

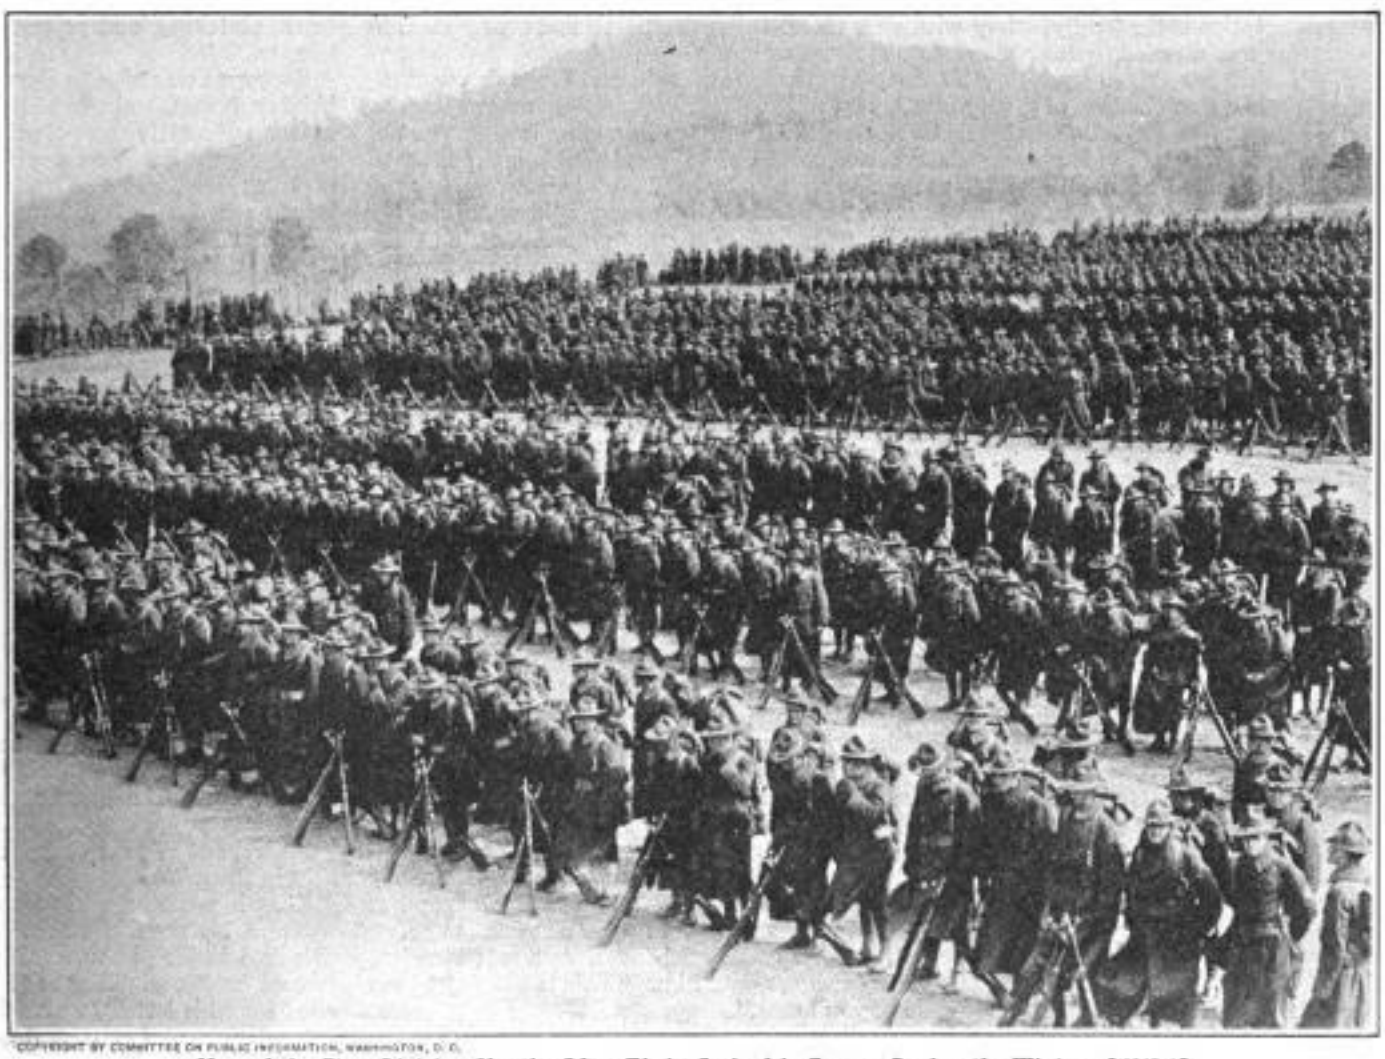
Major General William L. Sibert

Promises

GENERAL SIBERT was placed in a difficult position, but replied to the Frenchmen that he was not empowered to agree to any such arrangement. Decisions of that character were for General Pershing, the commander in chief, to make. On hearing this Clemenceau sprang from his chair and began to pace up and down in great agitation, delivering an impassioned harangue in English on the seriousness of the crisis and the necessity of immediate American participation in the fighting. He declared it was not a question of the American troops' getting into perfect shape—it was one of losing the war, for the strength of the French soldier was exhausted, his morale was at lowest ebb, and he had begun to doubt the good faith of the United States, because months had passed and no American troops had been seen in the trenches.

He had come direct to General Sibert, he explained, because he had been unable to locate General Pershing, and he wanted to make this point clear: The Americans must enter the battle to prove to the French they meant business and were there to fight to a finish.



One can sympathize with M. Clemenceau's heat. Extravagant promises had been made by their own leaders to the French poilus and people as to the help the United States would be able to bring to them by the fall—promises utterly impossible of fulfillment. They had been told that the Americans would throw half a million men into the fighting by autumn, when there was not sufficient available shipping to transport a third of that number and matériel for them, even had the troops been ready in the United States. It may be that such propaganda is necessary in a pinch to bolster up a nation, but the reactions are always dangerous.

On December 2, 1917, Mr. David Lloyd George wrote the following letter:

My dear R.: I am scribbling this in the train after a tumultuous passage across the Channel.

The C. I. G. S. is very anxious you should place enclosed before Colonel House. I entirely concur, and urge its acceptance. We shall be hard pressed to hold our own and keep Italy standing during 1918. Our man power is pretty well exhausted. We can only call up men

REGGIE

By DANA BURNE

ILLUSTRATED BY JAMES M. PRES

"Bert!" She Said, "What are You Doing Here?"

THE Mendenhalls were a bustling family. Mr. Peter Mendenhall, the father, was the head of a large furniture business, and caught the 7:45 every morning for New York. Mrs. Mendenhall, the mother, was a vigorous, commanding, white-haired woman, who at fifty-five still maintained a complexion and a figure. She was a member of the Foxboro Woman's Club, president of the Wednesday Evening Literary Society, and undeniably the mistress of her own household. Belle, the oldest daughter, after a tentative social career, had decided upon a course in a business college and had emerged, a trifle battle-scarred but triumphant, to take a position as secretary to a Wall Streetbanker. She caught the 8:15. Belle was thirty, a trim, plain girl, very neat, with a nose that turned up a bit too sharply. It is fascinating, but dreadful, to think that Belle's life had been determined by the angle of her nose. Not that she was unhappy. None of the Mendenhalls was unhappy.

But we must hurry on with our description of the family.

Sue was the second daughter. She was married, quite successfully, to a Mr. Treadwell—Real Estate, Mortgages and Insurance, Foxboro, N. Y.—and had two children of her own. They were successful children.

Jane, the youngest of the Mendenhall girls, lived at home and did the housekeeping under Mrs. Mendenhall's direction. She was surprisingly her mother's replica. When they went shopping together in the family sedan, which Jane drove, people would turn and stare at them, and others who knew them would say, "I declare, Jane, you're the image of your mother." Happily both took this as a compliment, and would drive home to the large white-stucco house on Elm Avenue, pleased and satisfied with themselves.

The house itself was about twenty years old. The Mendenhalls had been among the vanguard of persons moving to the country. It was one of the family traditions that Father and Mother had been very astute about coming to Foxboro before the crush set in. But the house itself had never ceased to look vigorously and defiantly new. The stucco never had cracked, for one thing. That was extraordinary; but no one thought it surprising. It was taken for granted that the Mendenhall house never would crack, either inside or out, if it stood till Doomsday. Yes, they were a solid, bustling family—all but Reggie.

Reggie was twenty-five, the youngest of the lot, and the only son. To say that he had come as an afterthought to the Mendenhall marriage is to put it, perhaps, a little crudely. But there is truth in the statement. Mrs. Mendenhall had had the girls—let us say, conscientiously and even consciously—within the first six years of her married life. She had wanted two girls and a boy, and she had got three girls, one after the other, with a consistency that she had accepted as a sign of providential determination. Then, when she was past thirty and beginning to think of her family as complete, along had come Reggie.

He had weighed seven pounds at birth; less than any of the girls. That fact, coupled with an early tendency toward childhood diseases—"If there's a germ within ten miles of Foxboro," said his mother, "Reggie catches it"—had given rise to the assumption that Reggie was a delicate child. His physical appearance, as he grew up, seemed to bear out this theory. He was a thin, languid boy with pale blond hair, who never under any circumstances was known to bustle.

At twenty-five he was still thin and languid, very tall, very blond, very quiet. When he spoke it was in a low unhurried voice that had a way of drawing laughter out of certain types of people. The Mendenhalls never laughed at Reggie. They still considered him delicate.

His eyes were a light blue; his nose was long and sharply cut—a delicate nose. His mouth drooped a little at one corner. He had a skin that should have belonged to one of the girls; it was pale with a clear, transparent pallor that showed occasionally a becoming color. A delicate skin.

Reggie, alone of all the family, did nothing, was nobody. To be sure, he mussed about a little with paints; but that, from the Mendenhall standpoint, was as good as doing nothing. Nevertheless they suffered him, and even humored him, because they felt—it was an unspoken agreement among them—that Reggie was not long for this world.

He had gone to school in Foxboro, and incidentally had won several medals for scholarship. "Don't know how I happened to get them," said Reggie to his family. "No intention of getting them. Aren't they awful? What'll I do with them?"

"Give them to me," said his mother firmly. "I'll keep them for you. We're very proud of you, Reggie."

"Don't know why you should be. Feel silly about it, myself."

But Mrs. Mendenhall had put the medals away in a toy trunk which had been Reggie's as a child. She wept as she placed them among his other treasures.

Reggie had prepared for college, along with Bert King and Charley Bingham and the other boys of his age; but when the time came he decided he did not want to go.

"You'll never succeed without a college education, Reggie," his family said to him. "This is the day of the college man, you know."

"M'm," said Reggie.

"Why don't you want to go?"

A week later he received a check for one hundred dollars from the Fifth Avenue dealer. He told them that, dutifully, blushing under his clear skin. They exclaimed over it as they had exclaimed over his medals, passing the check from hand to hand about the dinner table.

"Well, my boy," said his father, gravely inspecting the slip of paper, "it's a start for you. A start, yes. You can open a savings account with this."

"What for?" said Reggie.

They severally explained to him the virtues of a savings account.

"You aren't going to spend it, Reggie?" demanded Jane, the housekeeper.

Reggie nodded.

"Going to buy an etching press."

"An etching press!"

"M'm. Already ordered it."

Silence. The silence of inarticulate disapproval. Reggie went on calmly eating his dinner. Conversation started up again, desultorily.

The etching press arrived the next morning.

II

IT WAS the second year after the war. The period of economic depression had set in, and the furniture business was hard hit; for a time it was feared that Peter Mendenhall might be forced into bankruptcy. Then if ever the house of Mendenhall might have been expected to crack. But by rigid economy and a sharp curtailment of living expenses the family managed to keep going.

One servant had been dismissed. Only Bertha, the cook, remained. Mrs. Mendenhall, capable and courageous, helped in the kitchen. Jane did the cleaning. Belle contributed her salary. Sue was quite occupied holding together her own household during the slump in real estate. Aunt Victorine had come to live with them, her house sold at last, her income devoted to the family interests. Only Reggie seemed undisturbed by the change in affairs.

One Sunday morning his father spoke to him about it. The rest of the family had gone to church. Reggie never went to church—no one knew why, exactly, but he never went—and Mr. Mendenhall had overslept. Coming downstairs he found Reggie making coffee in the kitchen.

"Where's Bertha?"

"Church," said Reggie. "Got breakfast for you. Eat here. Save trouble."

"Certainly, my boy. Certainly," said Mendenhall, seating himself at the kitchen table. "Well, I didn't know that you could cook."

"Can."

"Where'd you learn?"

"France. Cooked for my outfit."

Mr. Mendenhall said, "Well, Reggie, I suppose some day we'll find out what you really did in France."

He looked at his son leaning gracefully against the wall. Reggie was always leaning against something. He had a cigarette between his fingers. He smoked a great deal, more than was good for him, no doubt; but apparently it had no effect upon his delicate constitution.

His father began to talk to him about his economic responsibilities. "It isn't that I begrudge you your living," he said after a preliminary review of Reggie's butterfly existence. "Even now, with the business just crawling along, I don't say I can't support you. But for your own good, for the sake of your own character—self-respect, you know, my boy!—I think you ought to go to work at something."

"Am working," said Reggie.

"Eh? At what?"

"Etching. Painting too."

"Yes, I know. I know. But that's not practical. At least"—remembering the hundred-dollar check—"not very practical."

"M'm," said Reggie. "Want me to do something practical?"

Mr. Mendenhall replied rather testily, "What do you suppose I've been talking about? The point is that you're not contributing anything to your own support or to the support of—ah—society. I don't ask you to go into the furniture business ——"

"Couldn't," interrupted Reggie. "No talent for furniture."

"Well, then—well, then. There are other openings. Look at Belle."

"Belle," said Reggie thoughtfully, then shook his head. "Poor Belle!"

"Poor? Nonsense. Belle's all right. A fine girl. Independent!"

Mr. Mendenhall broke off, and added, somewhat defensively, "At any rate, she's paying her way."

"Want me to pay my way; that it, father?"

"For your own good, my boy."

Reggie inhaled a most unhygienic amount of cigarette smoke, blew it out again.

"Think it over, father. Let you know to-night."

That evening at dinner Reggie announced his decision. Hereafter he would do the cooking for the family. It would amount, at the present rate of wages—including board—to a saving of about seventy dollars a month.

His announcement was received with indignant protests. What! Do the cooking?

He had cooked for his outfit in France. That was different! What would people say? Besides, he couldn't do it.

He could.

If he wanted to contribute to the family support why didn't he get a position somewhere?

Didn't like positions.

Well, he simply could not do the cooking! They wouldn't have it, any of them.

And then—somehow—Reggie was doing the cooking. No one knew just how it had happened, but there he was, in his shirt sleeves, puttering about the kitchen.

The attitude of the family then changed from one of active protest to one of kindly tolerance. After all, if Reggie wanted to amuse himself ——

Only Aunt Victorine openly encouraged him. "Good for you, Reggie. Stick to it. You've got as much in you as any of them." And the incorrigible old lady added under her breath, "Maybe more."

TROPICAL GROWT

By Kenneth L. Roberts

Three Pictures That Show the Evolution of a Leading Hotel at Miami, Florida, From the Time the Site in Jungle Land Was Selected in 1914. The Completed Structure Was Photographed in 1920

EVERYTHING grows in Florida. That is to say, everything grows in Florida that Florida people want to grow. That is Florida's specialty—growing. Occasionally a few things get out of hand and indulge in some over-enthusiastic growing when Florida people wish that they wouldn't; but for the most part Florida is proud of the remarkable growths that take place within her boundaries. This is particularly true of Southern Florida. The superlatives as well as the fish grow to surprising proportions; so do the real-estate advertisements and the avocado pears. The sun is larger and warmer than in other parts of America; and the sky—unless the leading Florida authorities are mistaken in their observations—is higher and bluer than elsewhere.

There are only three things that Southern Florida has never made any effort to grow. These are mountains, snowstorms and earthquakes. If there were any particular reason for her to grow any of these things she could probably arrange to pump up a few square miles of ocean floor and pile the sand up into a mountain that would look like a blood relative—say, a grandson—of Fujiyama; and she could unquestionably find a way to raise artificial snowstorms that would make Maine jealous, and earthquakes that would shake out a person's eyeteeth. Since there isn't any reason for them she specializes on more useful things, like pawpaws and prospectuses and perfect-thirty-four bathing girls and what not; and secures some startling results.

Take Miami, for example. Before taking it one should understand that there is grave danger in taking any particular city in Florida to the exclusion of any other city, because all the untaken cities feel slighted and begin to thirst for the heart's blood of the one who did the taking.

A Little Matter of Climates

EACH Florida city or resort is violently jealous of every other resort or city. The residents of Palm Beach speak of Miami as being just a little plebeian. The residents of Miami speak compassionately of Palm Beach, as young and pretty girls speak of decaying beauty. St. Petersburg and Tampa and Miami have little of a favorable nature to say concerning one another. They only unite to resist attacks from resorts outside the state or to say a few tart words about California.

Every little while some fiend in human shape prints a piece in a South Carolina or North Carolina or Georgia paper falsely accusing a Florida city of harboring a few cases of typhoid or scarlet fever or of being too chilly for winter bathing. Instantly the Florida people rise to defend the state's fair name; and the low, searing curses that are hurled against the foul detractor are warm enough to singe a hog.

Every little while, too, Florida gets a chance to slip a knife into her Western resort rival, California; and when the chance occurs the air is filled with a deadly swishing sound, due to the violence with which the knife is inserted.

A snowstorm in California causes Florida newspapers to spread loud and exultant headlines entirely across their front pages, declaring excitedly:

NO LIVES LOST IN CALIFORNIA BLIZZARD

This is the negation of news everywhere except in Florida; but Florida smacks her lips over it with the keenest delight. She emphasizes the blizzard's severity by shrieking that no lives were lost, thus implying that hundreds—nay, thousands—might have been lost save for the merest chance. She is so anxious to have tourists realize that she is the queen of winter resorts that she is overjoyed when another resort state is cursed with a phase of Nature that tends to discourage tourists.

There is another grave danger in taking any Florida city as an example. The natives of Florida winter resorts are constantly on the qui vive for slights and insults. They are so much on the qui vive in this respect that there is scarcely room for anyone else on it. They occupy practically the entire qui vive.

Furthermore, one can never tell beforehand what statements, phrases, remarks, words or inflections—or lack of these things—the staunch Floridans will regard as slighting or insulting. Sometimes they become just as fretful if you don't say them as they do if you do say them.

There is the matter of hotel rates, for example. If you tell what they are at the best hotels all Florida reviles you for frightening tourists away. If you tell what they are at the cheaper hotels the owners and officials of the best hotels curse you bitterly for representing Florida as a cheap dump.

Then there is the little matter of mosquitoes. Usually there are no mosquitoes along the Florida coastline between the months of November and March inclusive, because the prevailing winds drive them inland. Occasionally, however, the wind shifts or the atmosphere is unduly affected by the hemisphere or something technical; and the tough, leathery, muscular, hungry Florida mosquitoes are blown down to the shore, where they sink their dagger-like beaks into the soft white flesh of the Northern tourists.

s grows with such enthusiasm in Miami that one nerely plant seed and let it grow. If one did that the would come in so thick that it would choke itself. one does is to plant the seed and then, when the as sprouted, transplant the spears of grass so that e six inches apart.

A Jump Ahead of the Prophets

E culture is very simple. A small piece of wood the e of a toothpick is stuck in moist sand. At the end of years the toothpick has grown into a hibiscus bush y feet high and twenty feet across. The publisher of ading Miami paper declares that in some sections of lty the soil is so fertile that if a shingle is planted in it e sunup it will grow into a fully equipped bungalow by fall. Other fish stories will be taken up in another place.

iami surges ahead so lly that none of its citi- dares to stand still for ment in order to watch ew, for fear that he'll be so far behind that he'll r catch up. If he makes ediction he makes a run- t prediction; never a ding prediction. If he a piece of land—and it's atural for a Miami citi- to sell a piece of land as for him to have coffee for akfast—he is very likely name a price that the ld will reach to-morrow in- ad of the price that it has ched to-day. He is always ving ahead of the city.

The population of Miami as increased 440 per cent the last ten years. There- re the Miami people figure at it will easily increase nother 440 per cent in the ext ten years. They claim hat the city's population in 925 will be 100,000, and hat in 1930 it will be 200,- 00. Proceeding at that rate, its population in 1950 will be 5,000,- 000; and by 1980 practically every- one in North America will be pushing and crowding in his effort to squeeze into the city.

It is of course quite obvious to the effete and blasé Northerner that the claims made by the Mi- ami folk show that there are some screws loose on their claimers. The Miami people, however, say that the Northern peo- ple don't know how to adjust their views to a rapidly growing city—that they stand still to look at it; and that while they are looking the city grows out of focus. They say that a short time ago the telephone company sent down esti- mators to look at Miami and estimate its population in another ten years, in order that the company might be able to install the proper-sized telephone switchboard. The esti- mators looked, made careful esti- mates, and reported that the popu- lation would be 100,000 in ten years' time. The telephone company burst into loud howls of derision. "You're crazy!" it cried to the estimators.

Miami Beach in January, 1922

Mr. Roberts, and an Eight-Foot Shark Caught Off the Florida Keys

Water-Sports at the Miami Beach Casino

"Who ever told you that you could estimate? Somebody must be paying you to boost the place! Get out of the way and let us send down some regular estimators!" So the company sent down some new estimators; and these estimators in turn looked over the ground and did some careful estimating. They then returned and reported that the population in ten years' time would be 120,000. The telephone company, without more ado, installed a switchboard based on that estimate. But the Miami people claim that the estimators were making stationary estimates, and that the difference between the estimates of the first and the second estimators was merely due to the fact that the city had moved forward between their visits. If they had known how to place themselves *en rapport*, so to speak, with the city and move forward with it, both of them would have estimated that the population would be 200,000 in ten years' time.

At any rate, the real-estate operations in Miami—and the word "Miami," by the way, is pronounced "My-amma" by everyone except the rude hicks who insist on pronouncing it as spelled—the real-estate operations in Miami are on a scale that will provide building lots enough to go around.

A Thriving Florida Industry

THE exact number of real-estate dealers in Miami is not known. Practically everyone over eighteen years of age dabbles in real estate at one time or another. Almost everyone owns a lot somewhere that he is anxious to get rid of, although it is unanimously admitted by the owners that every lot in Miami will double in value in a year's time. Almost every other doorway along Miami's crowded streets shelters a real-estate firm; and whole coveys of real-estate firms are frequently sheltered in buildings that would be considered small by a family of three people.

Some of the firms keep impressive-looking salesmen standing just outside of the buildings in which the firms do business. These salesmen are large, handsome men for the most part, strikingly dressed in white trousers, pearl-gray sack coats, white shoes, white belts, white neckties and straw hats tilted knowingly toward the right ear. If one stops for a moment to admire a window display which shows automobiles, diamonds and tax-exempt bonds sprouting from the superfertile soil of land that is on sale within at $1000 an acre, one of these salesmen is very apt to come up behind him and tempt him with honeyed words. It is almost futile to struggle against these salesmen. Unless one possesses an iron will he will weakly permit himself to be coaxed within the portals of the office, where he will spend the better part of an hour looking at meaningless maps and hearing large sums of money mentioned with the utmost carelessness and disrespect.

Other real-estate firms constantly carry on selling campaigns that strongly resemble—in noise, at least—the return of the 27th Division from the war. They resort to brass bands, numbers of sightseeing automobiles, silver-tongued orators to cajole the crowd, and advertisements that inflame the acquisitive spirit of every beholder. When newcomers see a monster parade of automobiles, headed by a blaring band, swinging through the streets of Miami, they usually think, in their innocence, that a three-ring circus has come to town. As a matter of fact, it is only a mob of prospects going out to the daily auction sale of lots at Rubber Plant Park.

Skilled and expensive real-estate auctioneers are imported—auctioneers capable of selling refrigerating machines to inhabitants of the Arctic Circle. People are lured to the auctions by free lunches, by distribution of souvenirs, by the giving away of automobiles.

Early in 1922 the real-estate firms who disposed of their land by auction were vociferating passionately

JOSEPH'S COAT

By Marguerite Cu

ILLUSTRATED BY GEORGE E.

I AM fully aware that the story I am about to relate could be told in a number of ways. I might, for instance, write a novel and let Valentine act as the heroine, relating her history in an impersonal sort of way, with a paragraph here and there of my own observations, nicely veiled under the cloak of authorship. Or I might give the pen into her own hands, so to speak, and let her do the talking—but that seems giving in altogether too much to the natural proclivities of woman. So I have decided to tell the thing in my own way, without prevarication, just as it happened, and this naturally brings me to that spring morning when Briggs opened the door while I was at breakfast and announced that there was a lady to see me.

"A lady?" said I, my eyebrows rising alarmingly. "A lady, did you say, Briggs?"

He stood firm, though his attitude as usual was that of the perfect servant.

"A lady, Mr. Magnus," he repeated after me, not batting an eyelash. "I left her in the reception room. Shall I show her in here?"

Now, no one except myself knows better than Briggs how very strict my rule is about ladies. I don't like them in the home. They are all right—quite in their place, I think—at a social function, decorative and amusing both; but in one's home—particularly a bachelor's establishment—they do not fit. I have never had a woman caller since I came to live in Central Park South, and that this is so is due not a little to the gentle firmness and perfect training of Briggs. No wonder, then, that I was a trifle upset at his persistency.

Three questions rose to my lips. I wanted to ask why he had admitted her, whether she was old or young, and was she pretty? But it would never do to let Briggs know that I was curious. The only way to manage a servant is to keep aloof and be chatty alternately. Never let them guess which mood has you. This was a time to keep aloof.

"Why the devil do you want to bring her in here?" I said testily. "Don't you know I haven't finished my breakfast, and I'm not dressed either?"

"Your house coat is in perfect form, Mr. Magnus," said Briggs reprovingly, glancing with the air of a connoisseur at my dressing gown of purple silk. "And besides," he added, "I don't think the lady is in the mood to notice those things much, sir; she is very young."

"Hasn't she a name, you idiot?" I shouted after him, modifying my voice a trifle, however, when I realized that he had gone and left the door open. My apartment, though commodious, is on a plan that acoustically speaking leaves much to be desired. After all, I did not want any young lady, however unwelcome, to receive the impression that I was a boor.

I rose from the breakfast table and stood with my back to the window, waiting, and almost immediately Briggs returned, carrying in his arms two dilapidated traveling bags, which he deposited inside the door, while he announced in his best manner: "Miss Valentine Forster."

A little girl entered, or at least for a minute I thought she was a little girl, although as I looked again I saw that she wore her hair up and a veil depended from her battered black velvet hat. She was about seventeen, I judged, and I breathed a sigh of relief, for a very young lady is not so terrorizing as I had surmised this lady might be.

The name, however, conveyed nothing to me. Valentine Forster was not familiar to my ears, and I felt that I should like to say something to Briggs for having so interrupted the quiet hours of morning. Instead, that worthy discreetly withdrew and closed the door.

"Then I Knew That I'd Done Something Terrible, Though I Did Not See Why It Should Be"

The young girl turned to me, smiling, but I recall now that her underlip trembled a little as she spoke.

"You didn't expect me, Uncle Magnus?"

Her voice was very soft and beautifully modulated, with a little singsong quality that even after all these years away placed her nationality easily. I hid my indignation at her mode of address—for to my knowledge I have no nieces—as I made a remark.

"You're English!"

"Of course," she said in a bewildered tone. "I only got here this morning. The boat docked very early; I—I didn't think you'd be at breakfast. I came straight here."

Valentine Forster! Suddenly I knew. I smiled and went closer to her.

"Why, my dear child, I do believe you're Clement Forster's daughter; Marie's girl."

She gave a little unsteady laugh. "Didn't you know, Uncle Magnus? Haven't you had Amanda's letter?"

"I had one from her three weeks ago"—I searched my memory for something relating to the present arrival—"but it was just the same sort of letter Amanda always writes. She mentioned nothing unusual."

"She wouldn't," said the girl, nodding her head wisely. "Amanda hates things that are different, and of course at that time we didn't know ——" She broke off hurriedly, her face tinted with rose color. "But you ought to have heard by now, Uncle Magnus; she promised me she'd write."

Now, I have a very bad habit of not opening my mail until after breakfast, a remnant of a vow I made when I had to open so many letters early in the morning for other people, and now as she spoke I had a sudden misgiving. In that pile of letters Briggs had brought in towards the end of my meal and deposited on the small table near the window designed to hold them, hadn't I glimpsed a gray envelope addressed in Amanda's careful hand?

Turning to look I found the gravely inquiring eyes of the stranger fixed upon me, and for the first time I experienced a sense of warmth towards her. I pushed up one of my great armchairs, change from the which she sat, an myself as I saw h in it, picking up n letter.

Amanda has years my only En respondent. She i sister, one of th who seem born o in those days bef home she mothere her smudged and i letters, smuggled father's house by servant, were very when I went aw through the years venturous life in her letters followed the regularity of clo a thing I gibed at, over in public, and loved. Only once in time *did* she really herself, and that w in an unguarded m told her I had becom zen of the United It hurt her gentle old heart that a brother should ignore his ow try, as she put it. I o very well explain to America *is* my c now—has been this heart ever since I its shores. She could understand.

Her letters, *if* th done nothing else, least kept me in tou some of the minor in the life of the Not that I cared; the was nothing to me, helped me consid with Briggs, who ha reverence for birth t inbred in all English the lower classes. He could never have been so fa to an American born and bred!

As I opened Amanda's letter a suspicion shot th me, and not for the first time either. Why had admitted this particular lady so readily on this parti morning? Why had he carried in her bags as a ma course? Why was he even now making fresh coff frying ham and eggs in the kitchenette if he had not to some degree cognizant of the contents of this lette was strange, to say the least of it.

For once Amanda had spread herself, and the exp tion of this unexpected visit from a strange girl who me uncle was instantly before me:

My dear Magnus: I have some very distressing news for I know you always disliked Clement Forster, who marri second cousin, Marie Blount, but now that he is missing may appreciate his qualities. I notice that death or a ser accident often affects our most acid conceptions of others. pretend to have forgotten the family, so I will inform you a Clement.

Marie's mother made that marriage, settling an income Clement and building a great house for them in Harley St It may be wicked of me, but I never fancied that he Marie; just married her to make himself financially sound able to continue his work in peace. He became a famous surg and did magnificent work during the war.

Two years ago Marie died, and Valentine took over the m agement of the house. The family protested, but we could of us do anything when she announced quietly that she promised her mother. Valentine is the only girl. Clement eldest; we call him Clem to distinguish him from his fath Toddy died quite suddenly last year of heart trouble; he the baby. From that time Clement changed; he began to ha long brooding fits of melancholy. Val's influence over him wonderful, but of course we all felt it was very bad for the chi Poor Marie's life had been spent in looking after Clement, a it did seem a shame that Valentine's youth should go that w too. We were all a trifle resentful of the way he accepted services, until he disappeared and we knew that something w definitely wrong. I am writing this to prepare you for Valentine arrival. She has taken it into her head, poor deluded child, tha her father has gone to America.

Why? Why should he leave all the honors of English life a its best to go to the United States? I never remember hearin him speak of the country, and one so cultured could only have felt contempt for a land where the almighty dollar is upheld as a god. I don't want to pain you, my brother, but at such a crisis I must record my solemn conviction.

Digitized by Google

alentine unreservedly in your care. It is terrible for his journey unchaperoned, but she insists, and Clem . Since the war he is so crippled that it is useless for npt it. My dear Magnus, try and make Val realize nt is dead. He never did anything different from e in his life—except his profession. He must have ff in a fit of melancholy and been killed. It is all With much love,

Your affectionate sister, AMANDA.

ntine sails on the Adriatic.—A.

own the stilted, old-fashioned letter, and just as if it had been etched on the air I saw a picture reway at the Blount home that day I'd gone to ity call on my only visit to England since leav- —and of old Benson driving up to the house, a eated proudly beside him.

's your name?" she asked me curiously, eying parkling interest as Benson pulled in his horses ed his hat.

hame, missy!" the old coachman said. "Mind iners, now; the gentleman has been to see your w!"

gled and brought up a forgotten dimple, shaking emphatically. "Her is out; he couldn't."

ocative shoulder was turned on Benson while she her question to me coaxingly:

t's your name?"

nus."

gested that, smiling a slow, dazzling smile. "Are uncle?"

no; missy, this is Mr. Magnus. Wait till I tell ndmaw on you," old Benson reproved.

n't have no misters, nor no missuses," the little id informed me mysteriously. "They is all uncles its. Are you Uncle Magnus?"

re am!" I'd interpolated this Americanism for the of old Benson, holding out my arms to the child. look in my pockets you'll find some candy."

climbed into my hold without hesitation, and the ands searched like busy squirrels in my pockets as eated. "Candy? What's candy?"

, sweets—chocolates."

shed I'd an armful for her. But she was blissfully d with the little satin box she found, and kissed pily as I passed her back to her seat beside Benson.

"You're nice, Uncle Magnus." Her approval was shy, but the blue eyes shone as she looked me over. Benson told me she was Miss Marie's little girl. "My, she's a box o' tricks, too," he chuckled; "a reg'lar box o' tricks."

So this was why she called me uncle; it was a remnant of her childhood; and I—I had never even known her name; she'd just been a charming five-year-old, a trifle in the life of a young man.

Again I looked at the little girl who had been thrust upon me so unexpectedly. Without doubt Amanda's letter had been on a slow boat and so arrived only a few hours before Valentine herself, and owing to my habit of breakfasting late after a ride in the park Briggs had been aware of the contents before my niece's arrival—well, she wasn't my niece, of course, but that word does as well as any; otherwise I could not imagine his admitting such a stranger to my home, for Valentine had little, that morning, to recommend her to the outward eye.

I can see her now as she sat in the big rocking-chair, holding herself still and immobile in the way English girls are taught to do in the presence of their elders, but with effort visible in every line of her slender body. She wore an English traveling suit, and from anything more hideous I pray to be delivered. It was one of those good but indeterminate tweeds of which the English are so fond, and although its lines may have been good when it was made—were good, I have no doubt, for Clement Forster's daughter would have nothing but the best procurable—it was now shapeless and lackluster. Valentine had evidently worn it during the voyage over, and there hung about it still the indescribable aroma of the sea, that pungent, intangible essence most of us love. Already I have mentioned the battered velvet hat, and her shoes were of the ordinary Oxford shape, which in terms of the English means an ugly shoe built of the best leather. Their cost had been excessive, probably, but there was nothing graceful about them.

Valentine's eyes were closed, and this took away something—as I was later to discover—of vividness from her face. It seemed to me, as I looked, incredible that this could be Marie Forster's daughter. Poor Marie! I had not guessed that Clement really meant to marry her that evening in my chambers at Christ Church when he had spoken of her so patronizingly; the whole thing had been a most tremendous surprise.

She had come up for the boat race with her mother; a pale, rather stupid girl, I had always thought her, with hair of a reddish tinge, hair that in these days we might have made much of. Clement, charming to every woman, had shown her round, and we had a sudden, rather impromptu meal in his rooms, during which hour I had seen Marie's eyes lifted to Clement's with a shy adoration in their pale depths, a look that somehow hurt me. Lady Blount had studied him coolly—I caught that expression too—and perhaps it had been less Clement's desire to marry Marie than her mother's belief that she had better make the best match possible for a daughter without natural charm or beauty that had made the marriage. Because that night in my study Clement had not meant Marie for his wife. I am sure of that, even though he had dropped his lazily patronizing tone when he mentioned the Blount money, and for an instant that expression of caution had come into his eyes, the expression of which I had learned to beware.

Well, well, well, that must have been eighteen years or more ago, when I was a freshman and he'd just graduated with honors in medicine. I left England after only a year at the varsity—I'd danced at Marie's marriage to Clement, but Amanda had forgotten.

Briggs entered silently with the breakfast tray, and the smell of the coffee so near her must have reached Valentine's tired senses, for she opened her eyes with a startled expression and looked at me apologetically.

"I wasn't asleep, Uncle Magnus, but—but the boat swayed so."

"Your mother's girl should be a good sailor."

"Oh, I am; mother loved the sea. You remember that?"

The eyes were fixed upon me eagerly, and the tiredness had gone out of the little face as by a miracle. I could think of nothing except that her eyes were blue as the sea itself, the one heritage from her father that I could discover; in all else she was Marie, except that she was vivid where Marie had been negative, rosy where she had been pale, colorful as to the thick braids of reddish-gold hair. That awful tweed suit—and those shoes!

Briggs had drawn up a little table before her and deftly assisted in the removal of coat and hat. He does things well, does Briggs. I was more than ever certain that he had

Suddenly I Found Myself Violently on Her Side, Wishing Her Well in a Quest That Could Not be Anything But Futile

Digitized by Google

ONCE A SLOGANEER —

By RICHARD CONNELL

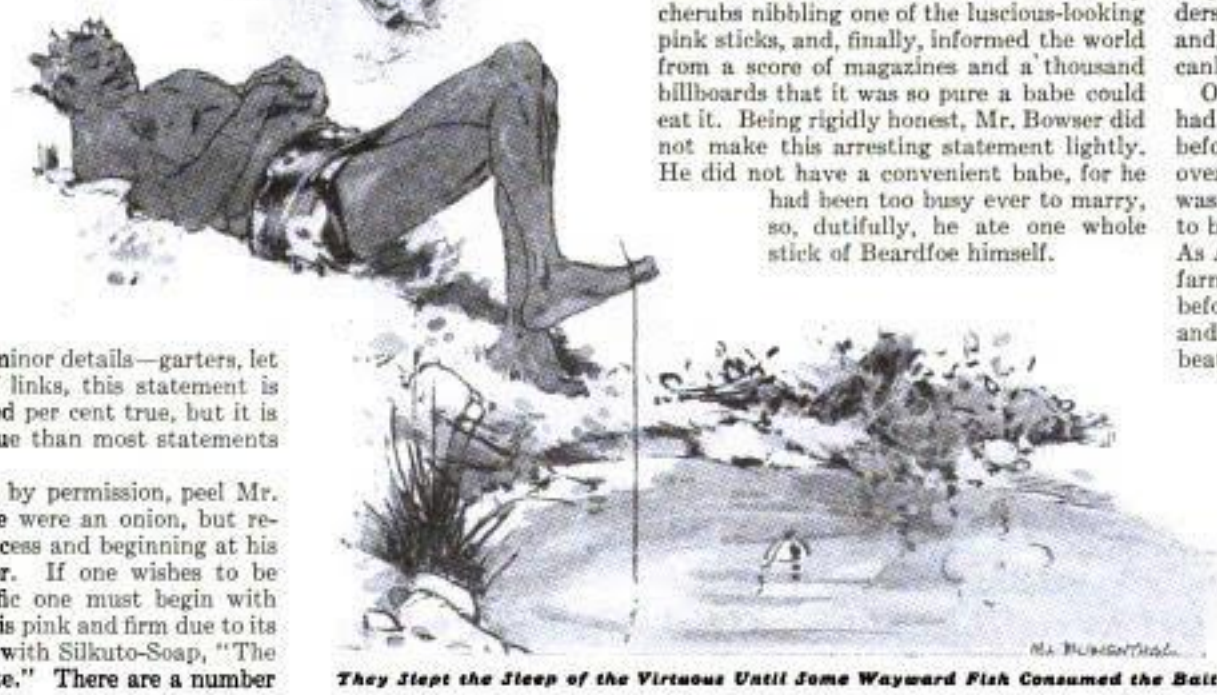
ILLUSTRATED BY M. L. BLUMENTHAL

HERE is Bowser. J. Sanford Bowser. The great J. Sanford Bowser. Bowser, the President of the Bowser Publicity Engineering Corporation, Inc. "Let Bowser Put You On The Map." Bowser, director of a dozen other corporations, all on the map. Bowser, from whose teeming brain sprang "The Tuck Truck Delivers The Goods," and "Beardfoe, The Oh-So-Different Shaving Soap, So Pure A Babe Could Eat It," and a score more you know as well as your own name. Bowser, the poet, author of

"My daughter's face
Was a disgrace,
I'd given up all hope,
Till, luckily, I tried a case
Of Horowitz's Soap."

He is sitting in his office on the fifteenth floor of the Bowser Building—"Built—Like The Himalayas—For The Ages." It is a vast apartment, this office, big as four tennis courts, and scenically impressive. As Mr. Bowser said to the interior decorator who, with suggestions from Mr. Bowser himself, decorated it, "This Is My Little Work Room. Spare No Expense. I want this to be a place Where Taste and Luxury Shake Hands." It is hardly less than that. Note the rugs—black, velvety and so thick one sinks ankle-deep in them and withdraws one's foot with a plopping noise. "Rugs," cried Mr. Bowser rapturously, when first he gazed on them, "Rugs As Soft As A Woman's Voice in Love, As Strong As A Man's Voice In Anger." Note the furniture. "In These Sturdy, Beautiful Chairs A Forest Fulfills Its Destiny." Mr. Bowser said this directly his bright blue eye fell on them. He had a way of accenting his words that made one know that as he spoke them he saw them set up in bold-faced type, with capital letters.

Let us undress Mr. Bowser. In the interests of the science of which he is a high priest—"To-day's Magic Wand, Publicity" (Copyright, J. Sanford Bowser)—he will not mind, but will doubtless assist in the process, pointing out that from head to toe he is a Bowser-dressed individual. In his own person, indeed, he is the epitome of the craft he so assiduously practices.



"There is not," he will tell even a casual acquaintance, "An Iota Of Hypocrisy about J. Sanford Bowser. I Eat, Wear, Use Only What I Advertise." If one wishes to quibble about minor details—garters, let us say, or cuff links, this statement is not one hundred per cent true, but it is more nearly true than most statements of that kind.

Let us then, by permission, peel Mr. Bowser as if he were an onion, but reversing the process and beginning at his innermost layer. If one wishes to be strictly scientific one must begin with his skin, which is pink and firm due to its daily intimacy with Silkuto-Soap, "The Pores' Playmate." There are a number of square feet of this skin, into which Mr. Bowser fits snugly but comfortably, one hundred and seventy-nine pounds of him.

The next layer is of a white clinging material and is nothing less than one Swansofto Underthing, "The Garment That Stays Put. Note The Big Buttons." The feet of Mr. Bowser are incased in Gloss-I-Fit Sox, "Oh, Boy, How Happy My Feet Feel!" His shirt is of a subtle hue of heliotrope and, one sees at a glance, is a He-Shirt, "Man-Built For A Man's Man." His collar is unmistakably of the Fitz-U Brand, Ritzy Shape, "Alps in Quality, Grand Canyon in Price." It is held firmly in place by Triple-Truss Collar Buttons—"Constructed like the Brooklyn Bridge by the House of Katz." His necktie is of black knitted silk, very narrow and very straight, and, incidentally, "The Newest Sensation of the Ar-Is-To-Krat-O Line of Toggery." That narrow black tie might strike a note of sinisterness quite out of keeping with the character of its wearer, were it not redeemed by a single pearl scarfpin, glowing modestly. The pearl is an excellent specimen of a NO-Telly Pearl. "She'll Think They're Real!"

The outer layer that incases Mr. Bowser's round, but not too round, figure, is of blue and is "The Most Virgin of Virgin Wool; From Sheep With A Family Tree." It has a fine white stripe running through it and its cut is jaunty and imparts to Mr. Bowser's thirty-eight-year-old being a certain juvenility. The fact is—and Mr. Bowser would be the last man in the world to conceal it—that he is trying out the new Yale-Fence Model of Kampusfello Duds, and is trying, casually, to see how friends and acquaintances react to the new Slant-Slit Pockets and the Hug-Fit Waist-Line.

Jumping to his shoes the passionate explorer perceives that they are Gothick Brogues of the Armorclad Line—"You Could Kick A Battleship To Bits With A Pair Of Armorclads." Jumping five feet and eleven inches from his brogues to his face one notes that its almost unnatural smoothness is due to a happy combination of a Cutlasso, "The Dempsey of Safety Razors—A Million Safe, Sane, Successful Shaves For A Dollar," and Beardfoe, "That Oh-So-Different Shaving Soap," the sales of which have increased four hundred per cent since Mr. Bowser took hold of it, changed the package from brown to rich eye-taking flamingo, had the best baby-head artist in America do one of her characteristic rosy cherubs nibbling one of the luscious-looking pink sticks, and, finally, informed the world from a score of magazines and a thousand billboards that it was so pure a babe could eat it. Being rigidly honest, Mr. Bowser did not make this arresting statement lightly. He did not have a convenient babe, for he had been too busy ever to marry, so, dutifully, he ate one whole stick of Beardfoe himself.

They Slept the Sleep of the Virtuous Until Some Wayward Fish Consumed the Bait

That it did not kill him and is therefore pure[ly] denced by the fact that just now he was discovered in his office, gazing pensively out of the window tow[ard] Hudson River, where the ferryboats, mere speck[s] his altitude, slid back and forth from New York [to] Jersey, from New Jersey to New York, from New [York] New Jersey and back again, like so many met[al] skating bugs, such as Mr. Bowser, as a youth, had [on] the horse pond back in Wingville, Ohio, which vill[age] given Mr. Bowser to a waiting world some years [ago]

From Mr. Bowser's well-razored cheek it is but [a] distance to his mouth, which is, normally, smiling, confident, and to his chin, which is, usually, tilted [up] and upward, partly because it is naturally aggressive partly to offset a ruff of protoplasm about the Bow[ser] neck, which follows, alas, a sedentary occupation a consumption of much Bender's Beans, "The Food Makes America What She Is"; Sunshine Tripe, "A Of Paradise For A Dime"; Choc-Oh-Late Nutties, "[Eat] As Is Candy"; and Joan of Arc Hams, "From S[un] Table, Untouched By Human Hands."

Mounting upward from the Bowserian neck we co[me] the eyes, blue, as has been mentioned, but of a pe[cu]liar brightness, and alert as a robin's. Then we encounter his forehead—high, protruding and rather noble; and above it, his well parted, smoothed, perhaps oiled assemblage of blond hair of that decided cider shade seen on Princeton sophomores and collar advertisements. Lastly one observes his hands—doing hands—manicured, he will inform you in that bell-toned voice in which he always declaims slogans of his own making, by Dazzle-Dust, "The Polish That Makes Mirrors Of Your Nails. Be Critical Of Your Cuticle." Between two fingers is a Marlborough-Somerset. "Just Sniff The Air At Any Swell Club. Get That Tangish Perfume? It's a Marlborough-Somerset, Of Course!"

"Do You Think I Don't Know the Fine Hand of Bowser When I See It?"

The whole picture at first glance is one of youth triu[m]phant, for Mr. Bowser certainly, from a distance of twen[ty] feet, does not look his thirty-eight years. But draw nea[r] On closer examination it becomes apparent that all is n[ot] rosy with him. There is an unwonted droop of the shou[l]ders, a melancholy series of small wrinkles about the eye[s] and, for all their bright blueness, deep in those eyes lurks cankering discontent.

On this day J. Sanford Bowser did not feel right. He had not felt right the day before. Nor had he the da[y] before that. For months something had been creepi[ng] over him, and he could feel it, without knowing what it was. This worried him. Its secret spring hardly seemed to be physical. He was fond of saying, "I Am As Tough As A Boiled Rhinoceros." This was almost true. On the farm back in Ohio he had built up a steel constitution before he put his flannel underwear in a straw suitcase and came to New York and tackled it bare-handed and beat it to its knees. In that fifteen-year battle he had not spared himself. His work had meant more to him than air to a deep-sea diver. He had given the world a lot of punishment in that fight, and he had taken a lot himself. He had won, but, as he sat and, Alexander-like, surveyed the city from his window, he got little joy from his victory. He felt as if he had eaten a barrel of pickles.

Things seemed sour. Could he be going to pieces, he wondered. Nonsense! He was only thirty-eight. He felt his biceps. They were hard as a landlord's heart.

Of course. Dozens of I'm so full of whale this minute I feel slipy all over."

"Did they make you feel tter?"

"Worse. But I guess it's t the pills' fault," said Bowser, ever loyal to product of his. "I guess y trouble is too deep for y pill to reach."

e leaned toward ctor Harter confidentially. "You now, Ned," he id in a plaintive oice, "I can't unerstand it. I've ot the world by the neck, but 'm not happy. I Am In The Grip Of A Vast Emptiness!"

For some moments Doctor Harter studied Mr. Bowser. Then he said, "I know what 's you, Bowse."

"What?"

"Sloganitis."

"Are You a Patient Here?" He Asked. "Do I Look Like a Milkmaid?" Laughed the Girl

"I don't get you, Ned. Something new?"

"Brand-new. And almost unique. Yours is the first full-fledged case I ever ran across. You see, it's an occupational disease."

"What did you say it was called?"

"Sloganitis."

"You're kidding me."

"No, I'm not," said Doctor Harter seriously. "Bowse, the trouble with you is that you have a rush of slogans to the head. You talk, think, eat, sleep and dream slogans. Isn't that true?"

"Yes, I suppose it is."

"You've done it fourteen or more hours every day for the past fifteen years, haven't you?"

"Guess I have."

"The chief symptom of this disease," went on the doctor in his best bedside manner, "is an uncontrollable desire to put things on the map. It makes no difference whether they belong there. You're not happy till you've coined a slogan and put them there. Am I right?"

Mr. Bowser grinned. "You are," he said.

Doctor Harter leaned toward him earnestly.

"You're a sick man, Bowse," he said. "Organically you may seem to be sound. But sloganitis is an insidious disease. It will get you if you don't watch out."

"Oh, doctor," cried Mr. Bowser, faintly facetious, and yet concerned by the seriousness of his friend's tone, "is there no hope, no cure?"

"Science," said Doctor Harter, "has not agreed on any sure cure. There are several treatments we can try."

"What are they?"

"Have you tried falling in love?"

With a snort of double-distilled contempt Mr. Bowser waved this idea aside. He spoke emphatically.

"Bah!" he said. "Bah! I gave up that idea years ago. Love may be good for adolescent troubles, but my case of sloganitis is in its tertiary stage. It's in my blood, Ned. Why, do you know I live to make slogans! It's The One Big Dynamic Passion Of My Life. What woman could understand that?"

"You are far gone," the doctor admitted. "But I've another cure—the best cure I know of for sloganitis."

"What is it? Tell me."

"Rest," said Doctor Harter.

Mr. Bowser snorted like a harpooned whale.

"Rest," repeated Doctor Harter. "Complete rest and change of scene. No slogans for at least a month."

Mr. Bowser snorted again, even more vigorously.

"No use," he said flatly. "I don't know how to rest."

"Then you'll have to learn."

"I don't want to. Rather die in the harness."

"And so you will. Mighty soon too."

"Do you mean that, Ned Harter?"

"I do. Absolutely."

Mr. Bowser shrugged mournful shoulders.

"I'm as bad as that, am I?"

"You are."

Mr. Bowser whistled.

"I'm only thirty-eight," he stated.

"But, like most American business men, you've crowded thirty years of work into fifteen."

"But I like to work," said Mr. Bowser. "Honestly, Ned, I don't think I'd be at all happy resting."

"You have nothing to say about it," said Doctor Harter. "As your doctor I order you to take a rest."

Again Mr. Bowser's shoulders gestured a shrug of doubt.

"If I must, I must," he said.

"Will you promise me this, Bowse?"

"What?"

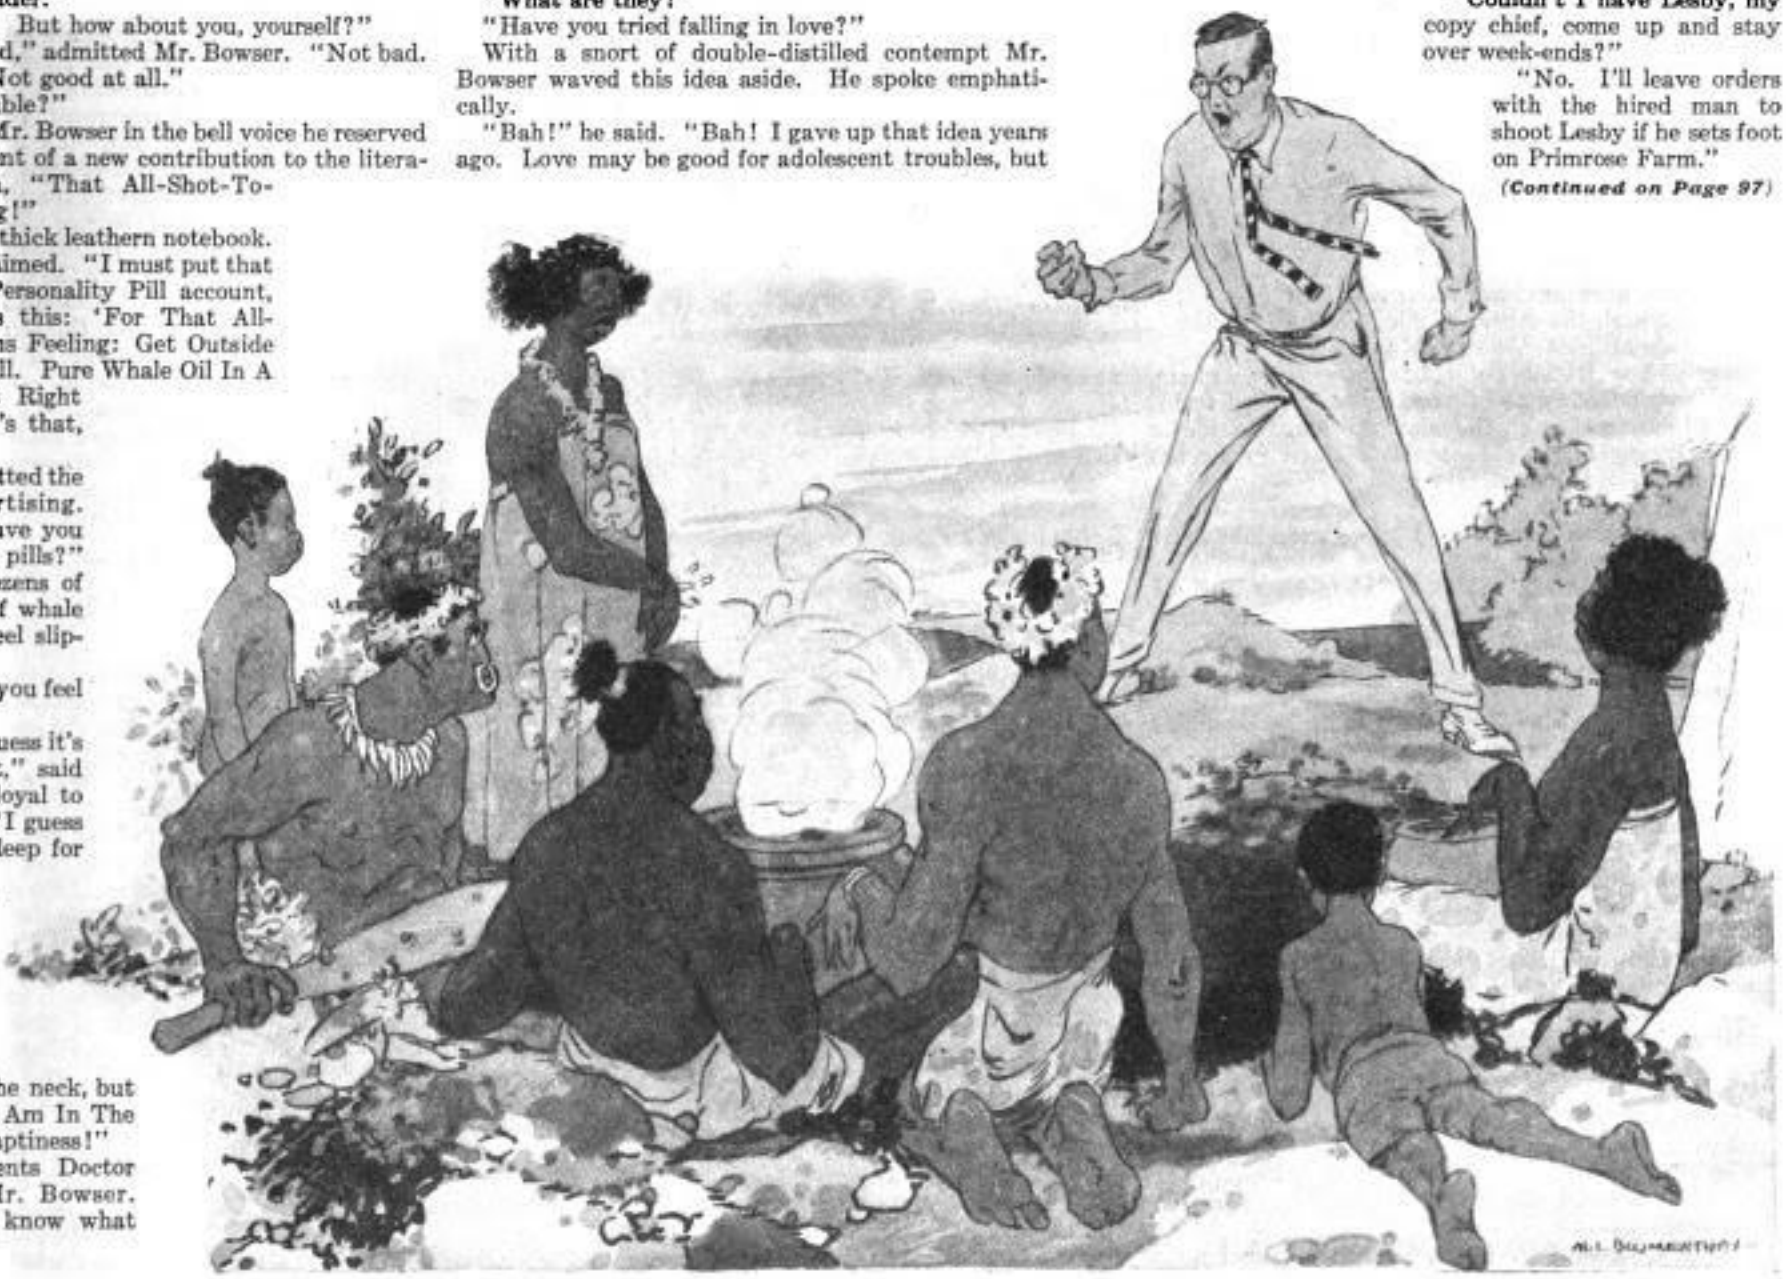
"That you will give up sloganeering for a month."

"I'll try."

"Good! Now here's your prescription! Up in Dutchess County is an old farmhouse kept by two elderly ladies. There isn't a billboard, magazine or newspaper within four miles. They still read Godey's Lady's Book. But they raise the best strawberries in the world. I want you to go up there and just lie around and eat strawberries. Don't do a darn thing. Don't think of a single slogan. Just rest."

"But ——" began Mr. Bowser in accents of protest.

"No buts," said Doctor Harter. "Come. Get your hat. I'll motor you up there this very afternoon."



"Must I stay a whole month?"

"You must."

"Couldn't I have Lesby, my copy chief, come up and stay over week-ends?"

"No. I'll leave orders with the hired man to shoot Lesby if he sets foot on Primrose Farm."

THE TIP

By EVERETT RHODES CAST

ILLUSTRATED BY HIBBERD VAN BUREN KL

THERE was nothing of the cringing debtor about the big man. Of the four sitting about the heavy walnut table he least of all looked the stag brought to bay. Like most big men who look back on sixty, he was heavy about the shoulders, his coat collar running up to meet a jumbled mass of wrinkled cords. He slouched, unharassed, in the huge chair, tapping the table before him with a forefinger modeled by many years of toil. With the other hand he caressed an unpleasant black pipe. He puffed, seemingly content, and little clouds of ashes fell unheeded on his vest. There was about him the hint of an old lion basking in the sun, and nothing of the man who needed twenty million dollars—desperately. Nothing perhaps but the bristling of the wiry white hair on the wrinkled cords.

"Well, gentlemen," he said very quietly, "here I am."

Mr. Payne Ashbrooke, at his seat at the head of the table, clipped a cigar with a gold cutter and gazed absently through the large double window down into the whirling mass of Wall and Broad. He had the reputation, wherever Wall Street was known, of being a clever man, and he knew that it was so. The two other members of the banking house of Ashbrooke, Mead & Oppenheim were good men; they might even be considered big men in any other house on the Street, entirely capable of giving orders, of generalship, of financial finesse. Here they were office boys—and knew it. In point of fact they gloried in it.

Mr. Payne Ashbrooke was a money-maker, natural born. Other houses on the Street could sneer all they pleased. They could hint at will that in changing to an American name he had not changed to American business ethics. Ashbrooke was a go-getter! And the grist he brought to mill was profitable. Always. Old John Stage was a case in point.

Twenty years back, when Ashbrooke was not Ashbrooke, John Stage was a trade name to American industry. If what they said was true Ashbrooke was still a peddler boy in Odessa when Stage Steel Products were known and liked. He was still saving his passage money when John Stage was a millionaire. When he was known only to Curb habitués they said Stage was worth a hundred millions.

And now look at the two men!

One still young and garbed to look younger, the other seventy and dressed to look every year of it. One with the fragrant touch of a fresh carnation, and the other sprinkled with dandruff. One growing richer with every turn of the mill wheel, the other tottering on the brink of financial disaster. Smug old-fashioned houses could bow, frigidly polite, but the answer was here.

Mr. Henry Mead smiled pleasantly and looked to his chief, still gazing through the window. Mr. Oppenheim was eagerly fingering a crisp sheet of tissue giving the opening market quotations.

"Well, gentlemen?"

The senior partner turned softly back to the table. He smiled.

"It is too bad to ask you to travel to New York in weather such as this. But I am afraid it was necessary. Unpleasantly so for me, Mr. Stage, as you undoubtedly know. We—we have asked you to come down to discuss the receivership."

The head of Stage Steel Products wrinkled his keen blue eyes, frankly puzzled.

"Receivership? For what?"

Mr. Oppenheim took the cue from his chief. Ashbrooke disliked to say unpleasant things.

"Stage Steel Products."

The banking house expected one of the usual outbursts at this point—wild anger; pounding on the walnut table; perhaps even tears, followed by all sorts of wild pleadings for extensions; hard names maybe; accusations of bad faith. Anything!

Instead there was nothing at all, unless an increased sprinkling of ashes or a further bristling of the scalp was indicative.

"Why?"

Expecting almost anything, the gentlemen were frankly surprised.

"Why?"

Ashbrooke silenced his astonished partner with a slim upheld hand.

"Simply because, Mr. Stage, as one of the largest creditors of your company—er—to the extent of twenty millions of dollars—we believe it is the best safeguard, not only for ourselves but for the best interests of the other creditors and—er—stockholders."

He Raised His Arms and Held Them Far Above His White Old Head. Jerkily He Prayed

"But the company is solvent."

Nettled, the senior partner's voice lost its suavity.

"For the moment—yes."

"Not a claim has been made against the company which has not been satisfied."

"Not yet, but ——"

"Why, then, why this receivership discussion?"

The senior partner knew that this was no moment for anger, that beneath a cloud of smoke one of the keenest minds of American industry was fighting the grim fight of self-preservation without anger or wild pleadings; fighting for time, which in the end would avail him nothing, with a finesse that consorted not with pipe ashes and baggy apparel. Stories drifted back to Ashbrooke—stories of the fights this man had made, of the situations he had saved. But the man was old now and times were different.

He tacked gracefully.

"Sixty days ago, Mr. Stage, you came to this house and requested a ninety-day loan of twenty million dollars to care for pressing obligations. You did not come here first."

"No."

"I believe I am right in assuming that gossip is true concerning your attitude toward financial houses."

The old man nodded his head. "I have never been able to get along with the banking mind."

"You were turned down."

"Yes"—grimly.

"You said at the time the loan was arranged that it was your opinion that within the ninety-day period you would be able to liquidate your inventory and accounts receivable to the point where you would not only be able to pay off our loan but place the company in a comfortable cash position. Is that correct?"

"It is."

"Sixty of those ninety days are up. Mr. Stage, this: Is two-thirds of your promise or—er—be filled?"

Through the smoke came the answer, still quie "It is not."

Like an expert stage director Mr. Ashbrooke ticking of the desk clock emphasize the point. F table he took a long sheet thickly covered wit figures.

"Your balance sheet, which we have just r shows an inventory of raw and finished product ing to approximately twenty-six millions of dollars accounts receivable aggregate twenty millions. Y including bills payable, taxes and ourselves, approx thirty-seven millions. Am I correct?"

"You are."

The senior partner clipped his words short: "G that you can liquidate your accounts receivable, be so kind, Mr. Stage, as to state why we should cuss a receivership at this point when your gross has fallen from a peak of fifteen millions per month than three at the present time? Why do you ch ignore these facts in the light of such conditions?"

"Gentlemen, I will tell you—and—and I'm going you standing up. A man can always talk — and better standing up. You asked come down to New York and br board of directors with me. I di that. I didn't bring my lawyer I just brought myself. The respo ity of making decisions has alway mine ever since the business wore ers, and I guess it will—until the t third of April anyway. In the first I am going to say to you that after through talking—and I'm going brief—there will be no further disc of a receivership for Stage Steel ucts—not for thirty days.

"You asked me how I was go avoid it, and I'm going to answe frankly—I don't know. And I am to be frank some more: You men business is only a question of bills able and bills receivable; of inven raw and finished; of cash in the and government taxes; but you wrong. It's—it's a question of h Twenty-six thousand of them scatt all over God's creation! Fine big b Some of them as old as I am; boys have been with me from the start. S tered all over the world from the h plant in Cleveland to Singapore.

"Do you think a little matter twenty millions of dollars means a thing to that troop if their fighting spirit was up? I k it wouldn't. You know it wouldn't. And there is wh the trouble lies. Somebody has gone behind the lines a taken the spirit out of them. Somebody dirty enough a unscrupulous enough has dug this thing called morale o of them. Somebody who has seen fine pickings from t bones of a nice big smash!

"What have they done? You men ought to kno You are within a half mile of where the whole thing w done. Where the entire operation has been carried o with neatness and dispatch. Listen! Every boy th has gone to work for me in the past twenty-five years h had to go in as a partner in the business. He has had t buy stock in the company. Not the preferred stock, whic only meant lending his money at 7 per cent, but th common stock that got the profits of the business. An regardless of the market price they only paid par for eac share. When surplus justified a stock dividend they saw the number of their shares grow and their dividends increase. Every single one of my boys who stuck with the old man has made money, many of them modest fortunes.

"Three months ago Stage Steel Products was selling around 197, and the market was strong. To-day the market is 31, and weak—weak as a cat. And what has happened? I'll tell you: Boys of mine who were building homes and using their stock as collateral have had their loans called at the bank. Boys who thought they were putting away for a rainy day found, on paper, that their savings were dissipating every day. What difference did it make if the solid value which had been built into that stock by thirty years of hard labor did amount to over three hundred dollars a share? There was the market staring them in the face. And with the decline came whisperings, baseless false things from bucketshops and shyster tipsters. Insidious, rotten trade lies which crept into the boys and their customers as well.

ll another and said brightly to the boy: "Well, my lad, how goes it?" But my lad did not happen to be a captain of industry in the making with a cheery "Very good, thank you, sir." Instead he gazed with sullen indifference into Mr. Peavy's beaming visage.

"Yah," he muttered.

From his position in the golden chair Mr. Peavy could not let this innuendo against a great and glorious world pass unnoticed.

"Tut!" he chided. "As you grow older you will find that true, faithful service never goes unrewarded; that—er—every cloud has its silver lining."

My lad grunted skeptically. He knew, out of centuries of experience, that they were made that way, one every minute.

"Keep the penny change, my boy, and remember that ——"

A burly individual brushed the advice and Mr. Peavy roughly to one side and bawled for a stock edition. But no anger lurked in Mr. Peavy's heart. He smiled benignly. A gust of raw March wind down the cañon of Broad Street plucked the Peavy derby with playful, boyish fingers and hurled it into the blue haze of hurrying figures. Mr. Peavy rescued it, liberally dented, from beneath the feet of a heavy Italian woman, who listened to Mr. Peavy's profuse thanks with complete indifference.

In the doorway of a darkened haberdashery he stopped and polished the nap with the sleeve of the imitation tweed. What was the difference? In a few days he wouldn't care how it looked. Through the darkened plate glass Mr. Peavy saw the new spring modes in derbies at fourteen dollars. Yesterday he would have sniffed audibly and demanded of the glass how they had the nerve to do it. In the half light of the present he made a mental selection and commented to his smiling image that good stuff couldn't be bought for nothing in these days.

With the dents removed and the nap smoothed away Mr. Peavy stepped again into the throng. Turning into Broadway he stopped at the first cigar sign, entered, and demanded the best fifteen-cent cigar in the house. His purchase well alight, he once again sought the crowded street.

Four blocks uptown another situation was presented. It read: "Shine, 10 cents." A man of affairs demanded highly polished shoes. The senior partner of Ashbrooke, Mead & Oppenheim wore shoes in whose reflections a man might shave—but he never walked through spring slush, and he had no Mrs. Henrietta Peavy. Mr. Peavy looked down at his rubbers in deep perplexity. The Greek within smiled and nodded vigorously.

"Fine shine," he stated. "No waiting."

Mr. Peavy approached tentatively.

"If I got a shine," he inquired anxiously, "could you keep a package?"

"Huh?"

"These." Mr. Peavy thrust forward his right foot, covered with its unexecutive rubber. "Keep them till to-morrow noon?"

The proprietor nodded.

"Sure!" he stated. "The cheek. Ten cents."

Mr. Peavy climbed into the creaking chair and probed for the foot rest. As he watched the swaying back below him he puffed contentedly at the straight fifteen-center. Chances were he would have them shined nearly every day from now on. A regular customer of the swaying back. As for the rubbers, well, Henrietta Peavy might as well know first as last that rubbers didn't go in the Street. As the brush clicked with false activity Mr. Peavy considered just what rubbers didn't go with. In the first place they didn't go with people that got on. For clerks, well and good; even for the general run of chief clerks perhaps; but chief clerks in the confidence of the head of the house, on whose shoulders rested friendly hands, whose ears received confidences for which men worth millions would fight? No. Decidedly no! And so Henrietta Peavy would find out. And she would find out quick.

As the bent back ran a line of shiny black about the edge of the Peavy soles he decided just the way the ultimatum should be given. Short and snappy. The way Ashbrooke said things. Without going into too many explanations. Just about the way he had talked to her over the telephone an hour before.

Mr. Peavy chuckled aloud as he recalled the conversation. First she had said something must be wrong with his head. Then she said that he had been drinking, though she knew the only thing he had ever touched in his entire life was elderberry wine weakened with water. And all for why?

Simply because he had said, "Henny, you go right in and get into your black net and spangles and meet me in the Ladies' Room of the Restmere."

What if it was the best hotel in New York? A man with the world in front of him had the right to anticipate if he wanted. What if Henrietta Peavy was right and Lima beans did cost sixty cents for a little side dish? If they could afford it, why should Hen—— And she could find the Ladies' Room if he could, couldn't she?

Sudden contrition came to Mr. Peavy. Why, it wasn't Henny's fault. She didn't know. After seventeen years of scraping and hoping and everlasting knitting she was going to know! Mr. Peavy stamped his foot aggressively in the face of the astonished Greek. Right from to-night!

Out of the chair Mr. Peavy eyed his shoes critically. Not so long and stylish-looking as the senior partner's, perhaps, but the reflections were there.

In consideration of the violent gesticulations of a frayed whisk broom he deposited an extra nickel in the palm of the Greek and ran a careful hand suggestively across his chin.

"Good barber near here?" he inquired carelessly.

The other pointed to a glow of red and white a short distance up the street.

"First-class?" demanded Mr. Peavy sharply.

"Huh?"

"First-class?" repeated Mr. Peavy sternly. "Clean? Gentleman's place?"

The Greek nodded violently. "Swell place! Swell smell!" and grinned.

Mr. Peavy nodded and stepped out into the night.

In the swell place he demanded a haircut and a shave and

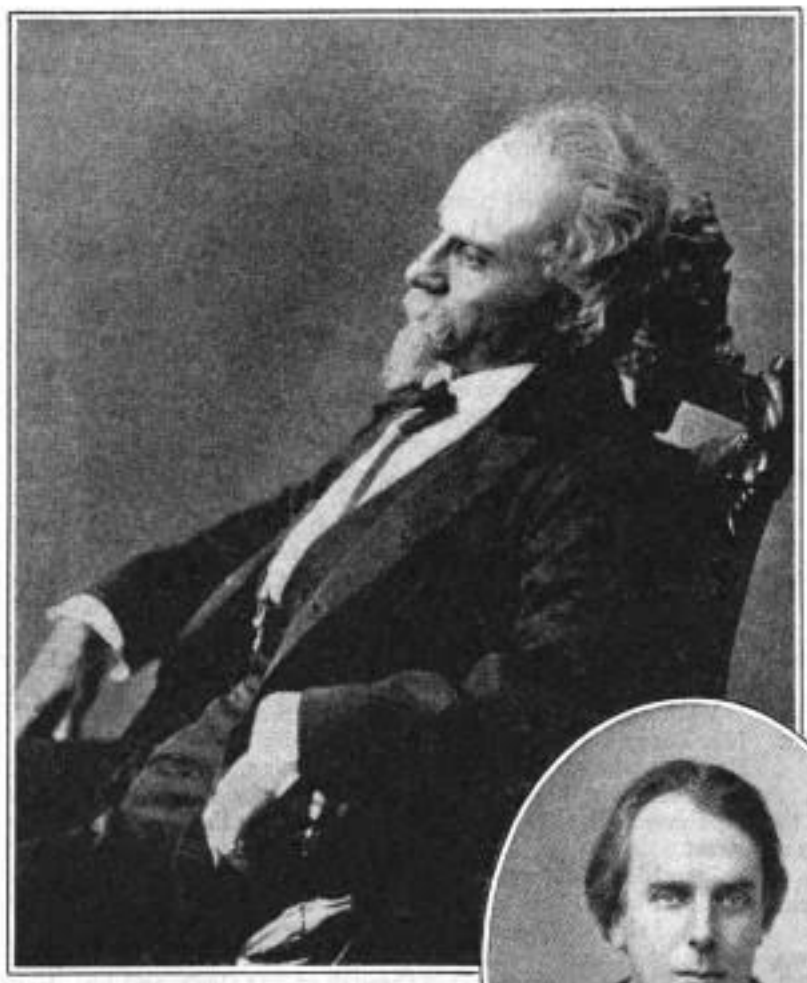
The Print of My Remembran

By AUGUSTUS THOMAS

IN THE middle of April, 1891, after Mr. E. S. Willard, for whom I was serving as publicity man, opened his mid-Western tour in Chicago as Cyrus Blenkarn in Henry Arthur Jones' play The Middleman, with Marie Burroughs as his featured support, my wife and I went to St. Louis, and afterwards to the Minnesota lakes and the Northwest. We returned to Chicago in the middle of May to see the Western opening of my play, Alabama, which had been forced out of New York by a summer sublease of the Madison Square Theater. My father and mother came from St. Louis to see that first night and visit us a few days in Chicago, where I tramped over the crowded downtown streets with father hunting landmarks of the small town he had known as a printer and medical student in his youth. The first week in June the parents went back to St. Louis and my wife and I returned to New York.

Marse Henry's Hospitality

UNDER my arrangement with Mr. Palmer I had rewritten parts of John Needham's Double, a play by the English author, Mr. Joseph Hatton, produced February 4, 1891, by Willard at Palmer's Theater. This rewrite was after I had completed Alabama but before that play was produced. An account of it in this place is a little out of such time order as I have attempted, but not enough to make the dislocation jar. Hatton had put into his play a supposedly Southern colonel whom he called Silas Higgins, or something of that kind, and who talked about nutmegs and apple sauce. Mr. Palmer asked me to make this character proper to its section not only in name and in speech but in viewpoint and relation to the story. I wrote a character which I called Col. Calhoun Booker. Mr. Palmer, at my suggestion, engaged for the part Burr McIntosh, at that time about thirty years of age, fairly prominent in the Bohemian life of New York, celebrated for his good nature and his willingness to take chances, and for a pronounced mimetic faculty. Palmer knew nothing of McIntosh, but I had heard him tell stories at the clubs and was sure he had the foundation for the part. With Palmer's permission I stressed Col. Calhoun Booker's importance in the play, feeling that its presentation would be a *ballon d'essai* for Alabama, which was to follow; and I believe that the success of McIntosh helped determine Mr. Palmer to go through with it.



Needham's Double was one of those plays of dual personality, resembling in kind The Lyons Mail. It was invented and unlikely, and on the first night in New York McIntosh, with his breezy manner and his welcome Southern geniality, would have walked away with the honors if the opposition had not been a star in large type. He played the part during its short run and left it to do Colonel Moberly in the second company of Alabama.

PHOTO FROM THE COLLECTION OF T. F. MEEGAN, N. Y. C.

Annie Russell

After the original Alabama company played its New York and Chicago engagements, and before it reopened at Palmer's in the fall of 1892, it went to Louisville. Mr. Palmer asked me to go there and look over the performance. The Louisville engagement was in the fine old playhouse belonging to the Macauleys, so dear to me in memory of Johnny Norton and the more recent visit of Marlowe. Henry Watterson saw to it that our first night was a gala occasion, and the men of the company were invited to a midnight reception at the Pendennis Club. Marse Henry was in his element, ably aided by those Kentuckians who have the Southern instinct amounting to genius for hospitality and entertainment. At an effective moment in the evening he got the attention of the party—close on to a hundred men, I should say—and with his arm through mine in the center of the floor explained the circumstances under which our acquaintance had been made and claimed to be proud that I was a product of a newspaper office.

E. M. Holland as Colonel Carter, in "Colonel Carter of Cartersville"

E. S. Willard

Then shifting his arm over my shoulder, a habit he had with any younger fellow he thought it would help, and reverting to the play, the subject of which was the reconciliation of the two great political sections of the country, he said: "This boy has done in one night in the theater what I endeavored to do in twenty years of editorial writing."

No halfway measures about wonderful Henry Watterson, gone since I last wrote of him in these chapters.

With the opening of Palmer's at this time, the little Madison Square Theater passed into the control of Messrs. Hoyt and Thomas. Charles Hoyt was the author of a line of comedies as distinct in their kind and for their day as the George Cohan plays are three decades later.

Distinctively American Successes

THERE was in the business department of the theater of America at that time a relationship of forces worthy of comment here. Those forces were then functioning principally in New York. Although perhaps traceable to more remote origins, they focused and funneled through the channels of publicity.

The principal managers, like Wallack, Daly, Palmer, Daniel Frohman, had been accustomed to get their plays from the other side of the water. American playwrights, compared with to-day's number, were few, their triumphs not numerous; but in the '80's there had been some notable successes with American subjects. Florence had played Woolf's The Mighty Dollar to extraordinary business. Curtis had had success with Samuel of Posen; Raymond had made a fortune with Colonel Sellers in Mark Twain's Gilded Age. Denma son, under the encouragement o ager, J. M. Hill, had elaborated a sketch into The Old Homestead. rently with these American plays on th a cycle of big productions of English n like Romany Rye, The Silver King, T Hoodman Blind, Lights of London, an the exploitation of which throughout th had developed a school of publicity men accurately what part skillful press wo in all these successes. They also had a knowledge of the respective values of t age to be obtained in the various cit experience and this knowledge had co together with the rapid growth of the upon which both depended, and while managers, content with their local tri New York and Boston, gave their att those centers these lesser agents and the men referred to were wide awake to the the road.

Notable Managers

JUST back of Palmer's Theater, both and later Wallack's, on Thirtieth Stre basement of what had been a dwelling ho the office of Jefferson, Klaw and Erlang Jefferson of this firm was Charles Jefferso son of Joseph Jefferson. Klaw and Erlan no identification now; but even at th A. L. Erlanger was one of the best i of the men of whom I am writing.

At 1115 Broadway, near Twen Street, in a rear room, Charles Fr had his first office under his own He was another of these men.

Erlanger's genius was of the sy kind; he had the faculty of combi Very rapidly, under his activity was built up the first big syndi American theaters controlling th time on the road. Charles Froh vision was the supplementing one ducer. He also knew the country tastes of the people, and had an un flair for what would be acceptable. both men, and lesser ones with whom were associated, approached the whole the question along the lines of availability and sale ship. What were the things for which there market, and how rapidly could the public inte them be created, stimulated and expanded? Thes sets of managers, the Palmer-Daly-Daniel Frohman group on one side, and the Charles Frohman-Hayman-Erlanger group on the other, approached the business from entirely different points and with entirely different methods. An example of approach and method is furnished by Alabama. When that play was produced in April, 1891, there was ahead of it in the Madison Square Theater but four weeks. After that time Mr. Palmer had rented his theater for Martha Morton's play, The Merchant, and although Alabama immediately played to capacity and would have rapidly restored the failing fortunes

Are you happy, Rita?"

e answered with a nod and the smile.

Absolutely?" He had a boy- longing to hear her explicit aration.

Of course. We couldn't have a finer day, could we?"

He was obliged to concede the ness of the day. But he hed her to understand that was not the weather that was king him so happy, so he con- ued: "That's far from being best of it though. The best it is that you and I are really ng to know each other now. is is going to be a day to date me from. Ever since that night your house I've had a tantaliz- g sense of knowing you, yet radoxically not knowing you all. It's as if I had an unfin- hed portrait of you—very beau- ful, what there is of it, but with e rough canvas showing hrough in many places. Oh, Rita, how eager I've been to get it ompleted, background and all!"

"I shall be sitting for you all his afternoon," she answered, iving him a little smile.

"Yes," he cried eagerly, "and omorrow, and the next day, and nd on, until ——"

"Evidently," she put in, "you en't a very rapid painter."

"I suppose," he said thought- lly, "I shall never finish really."

"Perhaps you'll be sorry you started."

"It's Our World. It's All Ours. No One Else Can Look at it Without Permission From Us"

After a brief glance of appraisal she said, "You're about thirty-five."

"Thirty-eight," he corrected in a sighing tone.

"Well, that's not old. You may be sure I shan't let myself feel old at thirty-eight."

"Ah," he said mournfully, "when you're that age—I *shall* be old then!"

"No, you won't."

"Oh, yes."

"Do you know my age?"

"Not exactly. But I have a pretty good idea."

"What?"

"Judging by your looks alone," he answered, "I'd call you twenty-five or six. But I have more than your looks to go by. I heard you sing in Paris the year of your début. Say you were twenty or twenty-one then. Add eight years and you have it."

"Twenty-eight's my publicity age," she said gravely, "but I'm really thirty-one. I don't mind letting you know."

Her slight stressing of the penultimate word gave him extraordinary satisfaction. Gazing at her fondly he laughed. "You're amused that I shade my age?"

"Of course."

"Why?"

"It's so unnecessary—and so feminine."

"Of course it's feminine; because age is infinitely more important to a woman than to a man. No one cares what a man's age is, but everyone is curious about a woman's. About a man they say 'Oh, he's somewhere between thirty and forty'; but of a woman they say 'She's thirty-five if she's a day!' Even when she's young and blooming they'll tell you what she's going to look like at forty. 'She's the type that gets fat!' People are always speculating about the ages of women on the stage. When a woman has been before the public ten or fifteen years they begin to feel they've seen her since the world began. It's bad enough when they check up, but it's worse when they don't. If it's ten years they call it fifteen, and if it's fifteen they say 'Why, I heard her all of twenty years ago,' and they speak of her as well preserved. Ugh!" She gave a little shudder. "I don't want to be old."

At that he seized her hand in both of his and promised that she never should be old.

"We'll stay young," he said, "together."

The afternoon's run left in his mind a patchwork of pictures and of memories. Long Branch, Lakewood, Toms River, Barnegat, Absecon; the sea, the pines, the marshes and the sea again; Rita's profile against the window; her gestures; the quick turning of her head; the sudden lighting of her face; the whiteness of her teeth when she smiled; the grave look in her eyes as she talked about her girlhood.

Of all their conversation that was what he remembered best. He felt almost as if he had seen the narrow gabled cottage in Rochester, standing in its cramped yard, between two other cottages almost exactly like it. There was a front porch with turned posts and a honeysuckle vine, where the young people used to sit, chattering or singing, on hot summer evenings.

But her father had not, as legend told, been a postman. He had been an accountant. This information, though in itself unimportant, Parrish found gratifying, because it pointed to the

Digitized by Google

unreliability of all rumors concerning Rita. People like to tell exaggerated tales of a woman beautiful and famous. Such stories suited the common craving for dramatic contrast, making a Cinderella of her. As gossip painted Rita's beginnings grayer than they had actually been, so it gilded her later life with adventures set on the private cars and yachts of multimillionaires and kings.

The picture she made for him of her girlhood took its place in a larger picture representing the life of a happy though none too prosperous American family, in which the dressing and educating of three children was a chief concern. It was always a strain to make both ends meet. Neither Rita nor her sister had been able to dress so well as their girl friends.

"When I went out in my best," she said, "it was always with a haunting feeling that there might be a gap somewhere or that my skirt hung badly."

She was sixteen when the choirmaster in the church she attended thought he detected an unusual voice. He carried her along as far as he was able, then sent her to a local singing teacher, who, after a few years, advised that she go to Proileau, in Paris, to be finished. For her father to finance such a venture was quite out of the question, but some wealthy parishioners, becoming interested in her, made up a purse and sent her to Paris for a year. A year was not enough to bring out her voice fully, but Proileau believed in her and placed her as prima donna with a third-rate opera company which played through the summer at Trouville, where at his summer home he continued to coach her. Thus she gained her first practical experience and earned money for a second year in Paris. In her third year she made her début at the Opéra Comique, began to reimburse her benefactors, and bought herself "dresses in which I wasn't nervous every time I got up out of a chair."

He felt that he had made good progress with the background of his portrait of her.

She Was Sixteen When the Choirmaster in the Church She Attended Thought He Detected an Unusual Voice

XVIII

DUSK was advancing over the marshes as Parrish's car traversed the last miles of the broad boulevard by which Atlantic City is approached, and by the time they turned into Atlantic Avenue daylight had all but abandoned its rearguard action against oncoming night.

Looking down the wide, brightly lighted yet somewhat tawdry shopping street and into the intersecting highways with their close-set rows of frame cottages, boarding houses and cheap hotels, Parrish's first impression was that this strange settlement had changed not at all in the ten or dozen years that had passed since his last visit. It resembled, he thought, rather a town into which prosperity had gushed with a flood of oil than one established on the fixed flow of the Gulf Stream, the tides and tripper-laden trains.

Not until they swung around a corner and headed down a short street leading toward the ocean did he perceive that there had been, after all, a kind of progress here; for it was then that he discovered, in its new surroundings, the pleasant old hotel in which he used to stay; but its former look of size and consequence was gone. By contrast with the new flamboyant caravansaries facing the Boardwalk and the beach, it seemed to have paled and shrunk.

"I used to stop there," he said, looking back a little wistfully as the car drew up under the porte-cochère of one of the larger hostelries.

"Yes," said Rita, "it's a nice old place. But this one will amuse you."

One of Parrish's bags contained certain precious and illegal bottles. He paused midway across the lobby to warn the bell boy to handle it with care, and, waiting, overheard a snatch of conversation between two large, expensive-looking women whose modishly short skirts revealed the plebeian bowing of their legs.

"Irma's got three hats with different-colored paradise plumes on," said one. "That red one you was admiring cost two hundred and sixty. She showed me the receipted bill."

To which the other replied in an envious tone, "Manny don't seem to kick, no matter how much money Irma spends."

The dapper clerk knew at once who Rita was.

"We received your wire," he declared with extreme affability as he dipped the pen and handed it to her. "I've been able to hold a very choice suite for you. Our managing director has had his own personal grand piano placed in your parlor with his compliments."

Rita thanked him and signed the register, whereupon the young man turned to Parrish, assigning him a suite which, though it did not face the sea directly, he mentioned urbanely as having a favorable position with regard to the morning sun.

Before going to his own rooms Parrish saw Rita to hers. Her parlor was large and elaborately furnished. French windows opened upon a sheltered balcony overlooking the ocean. On the center table was a bowl of roses accompanied by the card of the manager, with the word "Compliments" written in a Spencerian hand above the name. Before slipping out of her loose motor coat Rita moved over to the grand piano, opened the lid and ran a hand over the keyboard. It was out of tune.

After seeing to the placing of her bags Parrish departed with his bell boy.

"I'll be ready in an hour," she said, giving him a gay wave of dismissal.

But he did not expect her to be ready in an hour. His experience of her was not such as to encourage hopes of promptness. Moreover she had not brought her own maid with her.

In leisurely fashion Parrish unpacked and made ready for dinner; then, as the hour was up, he took the small bag about which he had cautioned the bell boy, walked down the corridor and knocked at Rita's door.

"Come."

She was moving toward him as he entered. Her henna-colored evening gown was of some diaphanous material that fluttered as she crossed the room. It was draped with infinite art, and it seemed to him to fit with a kind of haughtiness. He fancied it as being proud of its lines and its fabric, as a beautiful woman is proud of her figure and the texture of her skin. The stockings and the little satin slippers, being of the color of the dress, gave a characteristic look of completeness; always there was that look about her; yet Parrish felt instinctively that this completeness was achieved without much effort or indeed much on Rita's part, but represented rather the unhamp of costly experts.

"I didn't think you'd be ready," he said, prai appearance with his eyes.

"I said an hour."

"Yes, but——"

He was thinking of the times that she had disap him; but instead of speaking the thought, shifted to tion of the absence of her maid.

"Oh," she answered, "that's easy. I've bought of the hotel maids."

Parrish laid his bag carefully upon the table bowl of roses, opened it, produced bottles and a and having secured ice, orange juice and glasses, mad tails.

"I have plenty of appetite without this," said Ri ping.

He was glad that she was hungry. After the ma his kind, he prided himself upon a certain skill in o and as to-night he was for the first time to exerci skill for Rita, he had given preliminary consideratio meal.

First they would have Lynnhaven Bay oyste Lynnhaven Bays; then green-turtle soup, provid green turtle was fresh—he would inquire about that; filet of flounder—call it sole if you like—with Mar immortal sauce: he was sure that Rita would app that touch; then a broiled live lobster with drawn b to be followed by a salad chiffonade. Sweets, h might be dispensed with. Crack cheese—Roquefort or Port de S would be more suitable. Then

The elevator was half full whe got in. He saw a woman nudge th with her, calling his attention to and the two stared at her with un ing eyes during the descent to the floor. Clearly they recognized Clearly many people did. Walking her through the lobby and dow corridor he thought he could te the faces of those he saw lookin her whether they knew who she w saw in her only a woman to be adm One man stopped and stood at inspecting her as a gourmand n an appetizing dish being served a other's table. He was a gross-loo creature. Parrish would have like kick him. Rita, however, appeared livious of ocular intrusions. She wa among strangers as she might b among trees in a forest.

At the door of the café they w met by the head waiter, who led th through the crowded room to a t bearing a card marked "Reserv and drew out their chairs with an el flourish.

"I have had the honor to serve madame at the Carl in London," he declared as he seated Rita; and it was o her, not Parrish, that he leaned to discuss the dinner.

This was a novelty to Parrish, who was thorough accustomed to receive attention from head waiters. had realized, of course, that to escort Rita would be different matter from escorting a woman in private li but he had not foreseen how great the difference would b Interrupting the culinary conference across the way, began to outline to her the dinner he had contemplate but before he could finish she broke in.

"I know just what I want. I want a porterhou steak—medium—about three inches thick." As she spo she glanced up at the head waiter, measuring with h hands in exaggerated illustration. "And some hashe brown potatoes, and soup—cream of tomato—to pa with while the steak is cooking."

"*Bien, madame.*" The man made swift notes on his pa and came around the table.

"Monsieur wishes Lynnhaven Bays?" he asked, h pencil poised to write.

Parrish hesitated, but only for the briefest moment Then he duplicated Rita's order.

"Oh, but you mustn't let my vulgar appetite spoil you dinner!" she protested.

He assured her that the things she had ordered were the very things he wanted. Nor was the statement alto-gether false.

Steak and hashed brown potatoes ordered in this plac by so complete a cosmopolitan as Rita constituted not a barbarity but a gastronomic playfulness in which he wished to join, precisely as he would have wished to join in any other playfulness of hers.

The café orchestra, which had been finishing a trivial tune from a musical comedy as they came in, presently be-gan again to play. But this time it was *Un bel dì vedremo*, from Madame Butterfly.

"They've found me out," Rita told him with a sigh.

He was thinking hat she had said meant, after all, only that she had known a love beyond her love for music—not yet. nly that was nothing for him to deplore.

prevision concerning the musical program proved ate. *Depuis le jour*, from Louise, became the entrance for their steak, and was followed by melodies from and La Bohème, while their coffee was drunk to the *Près des Ramparts de Seville*. After each number there was the same applause, the same bowing of the violinist to Rita, the same concentrating of eyes upon her.

When, having lost no time over the simple meal, she rose to leave, people at near-by tables stopped talking and gazed up into her face, and as she moved toward the door, Parrish, walking behind her, saw that the whole room turned its head. The violinist stood and made her a profound obeisance as she passed the musicians' platform; at the portal the head waiter paid her like homage; and as she emerged to the foyer the maid from the ladies' cloakroom hastened forward with her wrap.

But no one came running forward with Parrish's hat and coat. The olive-skinned attendant at the men's coat room stood entranced, gazing at Rita. Parrish had to speak to him crisply before the trance was broken. Had Rita been a queen, he thought to himself, she could hardly have received more attention; then with a little inward smile he added the reflection that had he been a prince consort he could hardly have received less.

"If I should ever be a fugitive from justice," he said to her as they made their way toward the exit leading to the Boardwalk, "I should know exactly what to do. Instead of hiding on some obscure island where they live on pineapples, bananas and rum highballs, I should conceal myself by going everywhere with you."

But, as he was to learn later, that form of self-concealment was not so effectual as he had supposed. Some eyes there were alert enough to encompass both Rita and her escort. By one such pair of eyes—a not too friendly pair—he had been recognized.

XIX

EMERGING from a revolving door and passing by a wheel-chair stand, they moved up the Boardwalk in the direction of the Inlet.

The night was dark. The moon had not yet risen, and though there were stars overhead they were dimmed by the Boardwalk lamps. Below them the beach was a gray mystery fading away to a blackness within which, as an awakened sleeper may feel the presence of a silent moving something in his room, they felt the presence of the sea.

A mild salt breeze blew toward them. Ahead the heart of the Boardwalk was marked by an electric brilliance against which wheel chairs and promenaders were revealed in shifting silhouette. Nor was the brilliance to be seen only along that way of pleasure with its rows of lamps and its bright doors and windows; by a ladder of illuminated windows it mounted to where, above the hotel roofs, the sky was restlessly alive with the changeful dotted glitter of great advertising signs.

As Rita took his arm and stepped out beside him he was struck by the fact that she did not amble after the fashion of most women, but strode with a fine swinging gait, making necessary but a slight abridgment of his own normal step. It was like an expression of her spirit, that free, elastic tread.

He leaned forward a little and looked down at her slippers swiftly appearing and disappearing below the hem of her cloak as she walked—satin trifles, frail and exquisite, with soles wafer thin and heels of a voluptuous violinlike curvature.

"I suppose," he said wonderingly, "that those slippers are fully as durable as morning-glories."

"Oh, they're stronger than they look."

"They must be."

For a time he was silent, his mind taken up with the miracle of woman's dress, which is to man the most baffling thing about her. For man feels that even supposing he could walk in slippers such as hers they would be ruined in the distance of a block or two, while as for her gowns—made seemingly from wisps of rainbow, sunset and the Milky Way—he knows that such things, worn by him, would not endure an hour.

His ruminations on this theme were interrupted when she drew him over to a lighted show-window containing dainty bits of feminine equipment at which she wished to look.

As they moved on again he shifted the position of his arm, bracing it behind hers so that her elbow found a cradle in the crook of his, her wrist resting in his hand. Holding her thus firmly he was more than ever conscious of moving with her in delightful unison.

They wandered out upon a pier and back again; then, having resumed their way along the Boardwalk, were attracted by sounds of snapping rifles and clanging target gongs to a shooting gallery, where they stood for a time looking on. The shooting gallery fascinated Rita; presently she announced a wish to try her marksmanship; and when, after a little coaching, her bullets began to break clay pipes, ring gongs and knock over moving models of

THE COVERED WAGON

By Emerson Hough

ILLUSTRATED BY W. H. D. KOERNER

XXVI

THE purple mantle of the mountain twilight was dropping on the hills when Bridger and Carson rode out together from the Laramie stockade to the Wingate encampment in the valley. The extraordinary capacity of Bridger in matters alcoholic left him still in fair possession of his faculties; but some new purpose, born of the exaltation of alcohol, now held his mind.

"Let me see that little dingus ye had, Kit," said he—"that piece o' gold."

Carson handed it to him.

"Ye got any more o' hit, Kit?"

"Plenty! You can have it if you'll promise not to tell where it came from, Jim."

"If I do, Jim Bridger's a liar, Kit!"

He slipped the nugget into his pocket. They rode to the head of the train, where Bridger found Wingate and his aids and presented his friend.

They all, of course, knew of Frémont's famous scout, then at the height of his reputation, and greeted him with enthusiasm. As they gathered around him Bridger slipped away. Searching among the wagons, he at last found Molly Wingate and beckoned her aside with portentous injunctions of secrecy.

In point of fact, a sudden maudlin inspiration had seized Jim Bridger, so that a promise to Kit Carson seemed infinitely less important than a promise to this girl, whom, indeed, with an old man's inept infatuation, he had worshiped afar after the fashion of white men long gone from society of their kind.

Liquor now made him bold. Suddenly he reached out a hand and placed in Molly's palm the first nugget of California gold that ever had come thus far eastward. Physically heavy it was; of what tremendous import none then could have known.

"I'll give ye this," he said. "An' I know whar's plenty more."

She dropped the nugget because of the sudden weight in her hand; picked it up.

"Gold!" she whispered, for there is no mistaking gold.

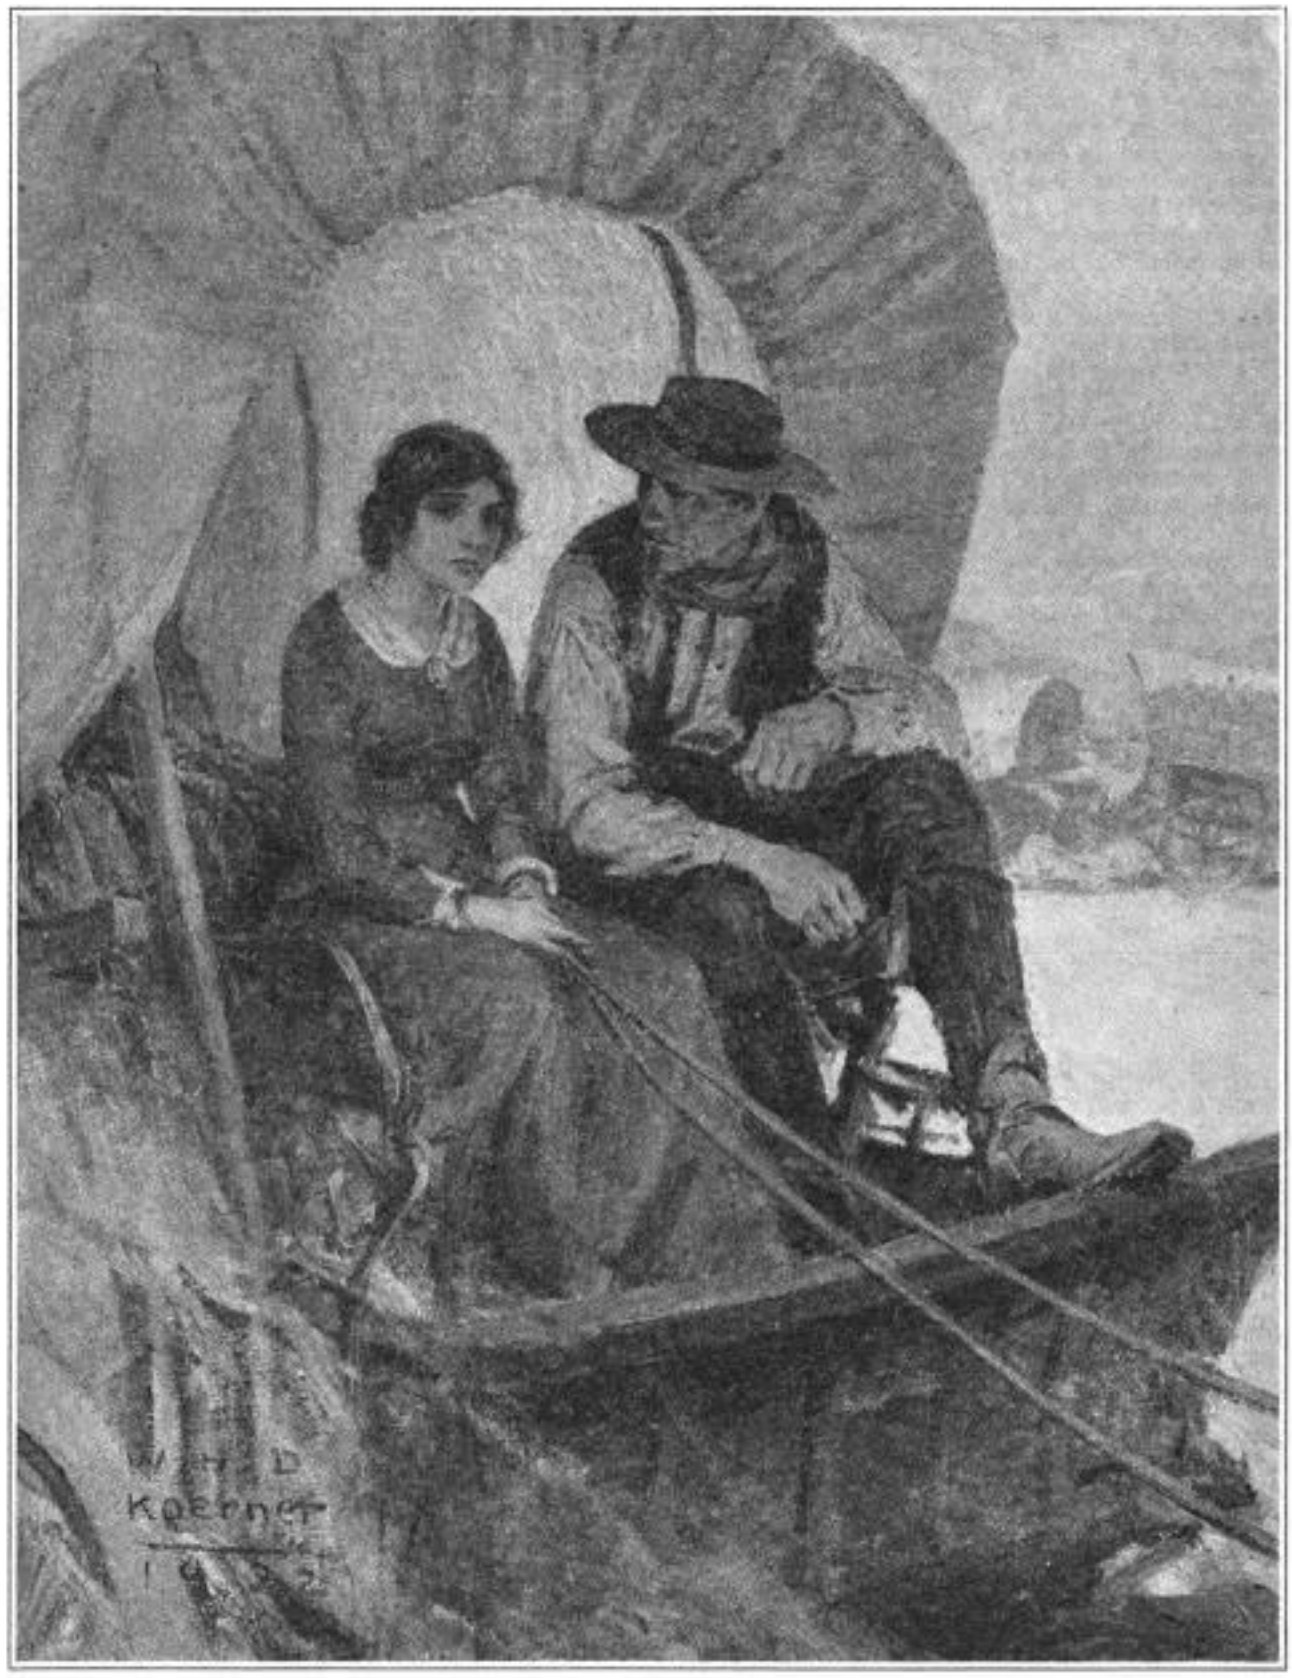
"Yes, gold!"

"Where did you get it?"

She was looking over her shoulder instinctively.

"Listen! Ye'll never tell? Ye mustn't! I swore to Kit Carson, that give hit to me, I'd never tell no one. But I'll set you ahead o' any livin' bein', so maybe some day ye'll remember old Jim Bridger.

"Yes, it's gold! Kit Carson brung it from Sutter's Fort, on the Sacermento, in Californy. They've got it thar in wagonloads. Kit's on his way east now to tell the Army."



"Everyone will know!"

"Yes, but not now! Ef ye breathe this to a soul, thar won't be two wagons left together in the train. Thar'll be bones o' womern from here to Californy!"

Wide-eyed, the girl weighed the nugget in her hands.

"Keep hit, Miss Molly," said Bridger simply. "I don't want hit no more. I only got hit fer a bracelet fer ye, or something. Good-by. I've got to leave the train with my own wagons before long an' head fer my fort. Ye'll maybe see me—old Jim Bridger—when ye come through.

"Yes, Miss Molly, I ain't as old as I look, and I got a fort o' my own beyant the Green River. This year, what

"Molly!" He Broke Out. "Listen to Me! Do You Want the Engagement Broken? Do You Want to be Released?"

I'll take in for my cargo, what I'll make cash money fer work fer the immygrints, I'll salt down anyways ten thousand; next year maybe twicet that, or even more. I sartainly will do a good trade with them Mormons."

"I suppose," said the girl, patient with what she knew was alcoholic garrulity.

"An' out there's the purtiest spot west o' the Rockies. My valley is ever'thing a man er a womern can ask or want. And me, I'm a permanent man in these yere parts. It's me, Jim Bridger, that fust diskivered the Great Salt Lake. It's me, Jim Bridger, fust went through Colter's Hell up in the Yellowstone. Ain't a foot o' the Rockies I don't know. I eena'most built the Rocky Mountains, me." He spread out his hands. "And I've got to be eena'most all Injun myself."

"I suppose." The girl's light laugh cut him.

"But never so much as not to rever'nce the white woman, Miss Molly. Ye're all like angels to us wild men out yere. We—we never have forgot. And so I give ye this, the fust gold from Californy. There may be more, I don't know."

"But you're going to leave us? What are y to do?" A sudden kindness was in the gir

"I'm a-goin' out to Fort Bridger, that's w a-goin' to do; an' when I git thar I'm a-goi hell out o' both my that's what I'm a- do! One's name Yore Hide, an' t'oth Yore Eyes. Which ask me, is two nam an' fitten, way I fe

Wingate walked toward his wagon. Banion kept out of the light circle and found his horse. He stood, leaning his head on his arms in the saddle, waiting, until after what seemed an age she slipped out of the darkness, almost into his arms, standing pale, her fingers lacing and unlacing—the girl who had kissed him once—to say good-by.

"Will Banion!" she whispered. "Yes, I sent for you. I felt you'd find the letter."

"Yes, Molly." It was long before he would look at her. "You're the same," said he. "Only you've grown more beautiful every day. It's hard to leave you—awfully hard. I couldn't, if I saw you often."

He reached out again and took her in his arms, softly, kissed her tenderly on each cheek, whispered things that lovers do say. But for his arms she would have dropped again, she was so weak. She fought him off feebly.

"No! No! It is not right! No! No!"

"You won't be with us any more?" she said at last.

He shook his head. They both looked at his horse, his rifle, swung at the saddle horn. She shook her head also.

"Is this the real good-by, Will?" Her lips trembled.

"It must be. I have given my word to your father. But why did you send for me? Only to torture me? I must keep my word to hold my train apart. I've promised my men to stick with them."

"Yes, you mustn't break your word. And it was fine just to see you a minute, Will; just to tell you—to say I love you, Will! But I didn't think that was why I sent. I sent to warn you—against him. It seems always to come to the same thing."

She was trying not to sob. The man was in but little better case. The stars did not want them to part. All the somber wilderness world whispered for them to love and not to part at all. But after a time they knew that they again had parted, or now were able to do so.

"Listen, Will," said the girl at last, putting back a lock of her fallen hair. "I'll have to tell you. We'll meet in Oregon? I'll be married then. I've promised. Oh, God help me! I think I'm the wickedest woman in all the world, and the most unhappy. Oh, Will Banion, I—I love a thief! Even as you are, I love you! I guess that's why I sent for you, after all.

"Go find the scout—Jim Bridger!" she broke out suddenly. "He's going on ahead. Go on to his fort with him—he'll have wagons and horses. He knows the way. Go with Bridger, Will! Don't go to Oregon! I'm afraid for you. Go to California—and forget me! Tell Bridger ——

"Why, where is it?" she exclaimed. She was feeling in the pocket of her apron, and it was empty.

"I've lost it!" she repeated. "I lose everything!"

"What was it, Molly?"

She leaned her lips to his ear. "It was gold!"

He stood, the magic name of that metal which shows the color in the shade electrifying even his ignorance of the truth.

"Gold?"

She told him then, breaking her own promise magnificently, as a woman will.

"Go, ride with Bridger," she went on. "Don't tell him you ever knew me. He'll not be apt to speak of me. But they found it in California, the middle of last winter—gold! Gold! Carson's here in our camp—Kit Carson. He's the first man to bring it to the valley of the Platte. He was sworn to keep it secret; so was Bridger, and so am I. Not to Oregon, Will—California! You can live down your past. If we die, God bless the man I do love. That's you, Will! And I'm going to marry—him. Ten days! On the trail! And he'll kill you, Will! Oh, keep away!"

She paused, breathless from her torrent of incoherent words, jealous of the passing moments. It was vague, it was desperate, it was crude. But they were in a world vague, desperate and crude.

"I've promised my men I'd not leave them," he said at last. "A promise is a promise."

"Then God help us both! But one thing—when I'm married, that's the end between us. So good-by."

He leaned his head back on his saddle for a time, his tired horse turning back its head. He put out his hand blindly; but it was the muzzle of his horse that had touched his shoulder. The girl was gone.

The Indian drums at Laramie thudded through the dark. The great wolf in the breaks lifted his hoarse, raucous roar once more. The wilderness was afoot or bedding down, according to its like.

XXVIII

CARSON, Bridger and Jackson, now reunited after years, must pour additional libations to auld lang syne at Laramie, so soon were off together. The movers sat around their thrifty cooking fires outside the wagon corral.

PHILADELPHIA, APRIL 29, 1922

A Really Shocking Book

THE reason why schoolboys furtively read dime novels under their desks during history hour is that, as a rule, novelists of the Nick Carter school have a far keener sense of the literary possibilities of suspended interest, dramatic situation and well-approached climax than is displayed by the pedagogues, with necks cramped in the yoke of tradition, who write textbooks. As good rules work both ways, is it not reasonable to suppose that if a writer of school histories, with all the comedy, tragedy, adventure, mystery and romance of the ages to draw upon, were clever enough, he might make a textbook so thrilling and absorbing that boys would stay indoors to read it when they might be outside at play?

This remarkable achievement has lately been accomplished by an American professor of history who wrote for his own children the story of mankind from the first brutish emergence of the human race down to the middle of the World War. His work is so clear and simple and so admirably balanced that it is to be doubted if the average college graduate has a more lucid conception of the history of the race than may be obtained from these pages by any bright boy of fifteen.

This book is of real significance not only on its own account but because it will probably exercise a powerful influence upon other textbook writers who have the courage and ability to follow in the same path and break away from the deadly formalism that old as well as young find so tiresome and uninspiring.

The advances in textbook writing that have been made in recent years are tremendous; but schoolbooks are still susceptible of a vast amount of improvement. This is a debt that age owes to youth, for though dullness and drudgery are inseparable from elementary education it is the obvious duty of teachers and schoolbook makers to present their subjects as attractively and interestingly as is consistent with sound learning.

The method pursued in the book under discussion is to avoid any attempt at unbroken narrative, but to deal adequately with the high spots of history, allowing the gaps between to take care of themselves. Well-proportioned biographies do not devote equal space to every week of the lives whose stories they relate. They are full and explicit in regard to significant events, periods of swift development and great pivotal occurrences; but upon the interludes they are silent. Applied to general history, this method dictates the exclusion of much dreary chronicle and the lively treatment of such really vital topics as daily life and thought in various ages and countries, the rise and fall of vast empires, the achievements of those who have most influenced the thought and behavior of men, momentous military activities, notable advances in science, industry, political organization, art, religion, philosophy, exploration, discovery, social systems and the various struggles whereby man ever seeks to adapt his life to the environment in which he must live it.

Such matters are full of interest for all except those who shrink from the slightest mental effort, and it is only when they are devitalized and spoiled in the telling that they become tiresome and repellent. Yet history is often written by men whose literary attainments are smaller than those of very mediocre news stand novelists.

Few textbooks would be improved by being illustrated by the author instead of by a professional illustrator, but in the present instance that rash procedure is entirely justified, for the "animated maps" and crude drawings with which the writer has illuminated his pages are singularly calculated to impress facts and sequences of events upon the student's memory.

Pictures and diagrams that have this effect require neither justification nor apology.

Professional textbook writers will find this a shocking volume, for though the author's subject is a solemn and stupendous one he has not been ashamed to give free rein to a lively sense of humor. He has even constructed two complete sets of laughs, one for his childish readers and another for those of maturer years.

If books of this sort should multiply and become commonly adopted for use in our public schools, American education would never be quite the same again. It might be brighter, more penetrating and fuller of the joy of living, but it would be different, very different.

Is the Trade Tide Turning?

INTERNATIONALLY minded economists who have been venturing the prediction that our positive balance of trade in commodities could not be long maintained, on account of the differences in the buying powers of the United States and Europe, observe in the trade figures for February an approach to the confirmation of their views. The value of exports was $251,000,000, of imports $217,000,000, the positive balance therefore $34,000,000.

This is only part of the picture. We are buying more services in shipping and insurance than we are selling. Many remittances of immigrants flow from this country to Europe, few are sent to us. We are expending far more tourist money abroad than is being expended here by the foreigners who visit us. Foreign loans are being floated regularly on our market. Americans are investing abroad in industrial enterprises. Europeans are selling back old investments in this country. It is not possible to strike a balance between these several forces, but the trend is unmistakable.

We have passed the worst of the business cycle and better times are ahead. We shall need to import more manganese, tin, nickel, jute, wool, rubber and other raw materials.

Our herds of animals have fallen to such an extent that decline of export of animal products to the level of 1913 would surprise no one. A short crop of wheat this summer would wipe out the exportable surplus. We are losing none of our fondness for coffee, sugar and other imported necessaries. Our exports of cotton should rise, and of manufactures also. But by and large, the impulse to import seems gaining ascendancy over facility to export. We shall restore our standard of living faster than any other people. That means imports. The cars that travel over our bonded highways run on imported asphalt, are made comfortable by imported rubber, and are propelled in part by gasoline made from imported mineral oil. Farmers, manufacturers, bankers, traders and shippers will resist an excess of imports of commodities as long as possible.

When it comes, if it does come, we shall console ourselves with the reflection that creditor countries have always had excesses of imports of goods. And po will find it as easy to argue for a tariff under the ne conditions as under the old.

Industrial Leaders in Diplom

THERE is sound common sense in President announcement that it will be his policy to c outstanding business and industrial executives rat old-school diplomatists to represent the German ment at foreign capitals. The tentative sele Dr. Otto Weidfelt, the dominant director of the works at Essen, to be German Ambassador to the States is a concrete instance of this policy. It is to bring forward any convincing reason why such representation should not be of the highest value, curriculum of industry is quite as broad as that macy and the training it affords is much more va exacting.

Old-line diplomacy was largely a matter of int jockeying, wriggling and maneuvering for advanta accepted and time-hallowed tactics were based on l ning rather than on beneficent wisdom. Its metho in sharp contrast to those of great leaders of mod dustry. Big business men do big things in a big way sharp eye on a future still two or three generations For the most part they are born builders with vig constructive minds that aim at broad general resul

There are always those who are ready to deri appointment of business executives to ministerial We still remember the sneers that were heard wh late Senator Knox was at the Department of State a enemies made much political capital out of his " diplomacy"; and yet the most superficial examinat international relations reveals the fact that often fairly bristle with dollar signs, sterling marks and symbols that indicate monetary units.

Successful men of large affairs are singularly fitt carry on the kind of negotiations that will be involv bettering relationships between the various national of the human family. It is not too much to say tha passing of the old diplomacy will be one of the best o for future peace that the world can desire.

Better Than Bucket Shops

SO MUCH has been written on the subject of thrift one hesitates to lay down rules designed to guide t seeking financial success. However, it is a fact that sonal thrift, to most of us, is such an unpleasant duty th is performed by the majority of people only in propor to the frequency of the admonitions. Therefore, here a few fundamentals which may serve more as remin than rules for those interested in saving:

Start a bank account. Banks may break, but they the safest known place to keep money. Money in savings bank will work for you as you have worked for Idle money is as mischievous as idle people. The p session of even a small checking account advances cr standing in the community. The best receipts for b paid are your checks which come back from the bank.

Make a budget. It is as necessary to the individual w would become successful as a compass and chart are t ship at sea. Purchase life insurance and make your wi Men who love their families should spend a few dolla now, rather than permit a situation where the expenditu of many more dollars will fail to safeguard the futures a widow and her children.

Investments should be made for safety rather than f large and quick returns. Money should not be investe in projects concerning which you are unable to infor yourself by personal examination, unless you are able t base your action on the advice of those who are specialist in the business concerned, and of whose absolute integrity you are assured. There are thousands of recognized finan cial institutions in the country managed by men of hig character and undoubted honesty, and these concerns e experience and reputation value their standing more highly than any comparatively small amount they might earn unscrupulously.

HALL WE FINANCE EUROPE R AMERICA?—By Carl W. Ackerman

)M 1915 to 1920, according to George M. Reynolds, airman of the Board of the Continental and Commercial National Bank of Chicago, we exported ,000,000 of capital, cash or credit.

her words, during these five years the American loaned an average of nearly four billion dollars y to foreign governments, cities, railways and ies, through the U. S. Treasury and the banks of ited States.

year, according to the Guaranty Trust Company of ork, foreign governments and foreign corporations d $650,000,000 more. This, however, is a conservatimate. One of the bankers whom I know in New stimates that we exported one billion dollars in In making this statement he called attention to the ds of millions of dollars which have been "*spurlos t*" in the American market by private "invest-" in Russian rubles, German marks, Austrian , Italian lire and French francs and of foreign securities not included by ew York bank.

s, from 1915 to December 31, 1921, ported twenty billion dollars of capi- From January 1, 1922, to March 17, is article is written, that sum was sed by $225,000,000, the amount of y publicly obtained by foreign govents and corporations during the eleven weeks of this year. Included is figure are a few capital exports such e following: $60,000,000 to and; $27,000,000 to Argen- ; $11,000,000 to Canadian National Railways; $30,000,000 to the P. L. & M. Railway of France; £1,000,000 to Rumania; 25,000,000 francs to the Midi Railway of France; and so forth.

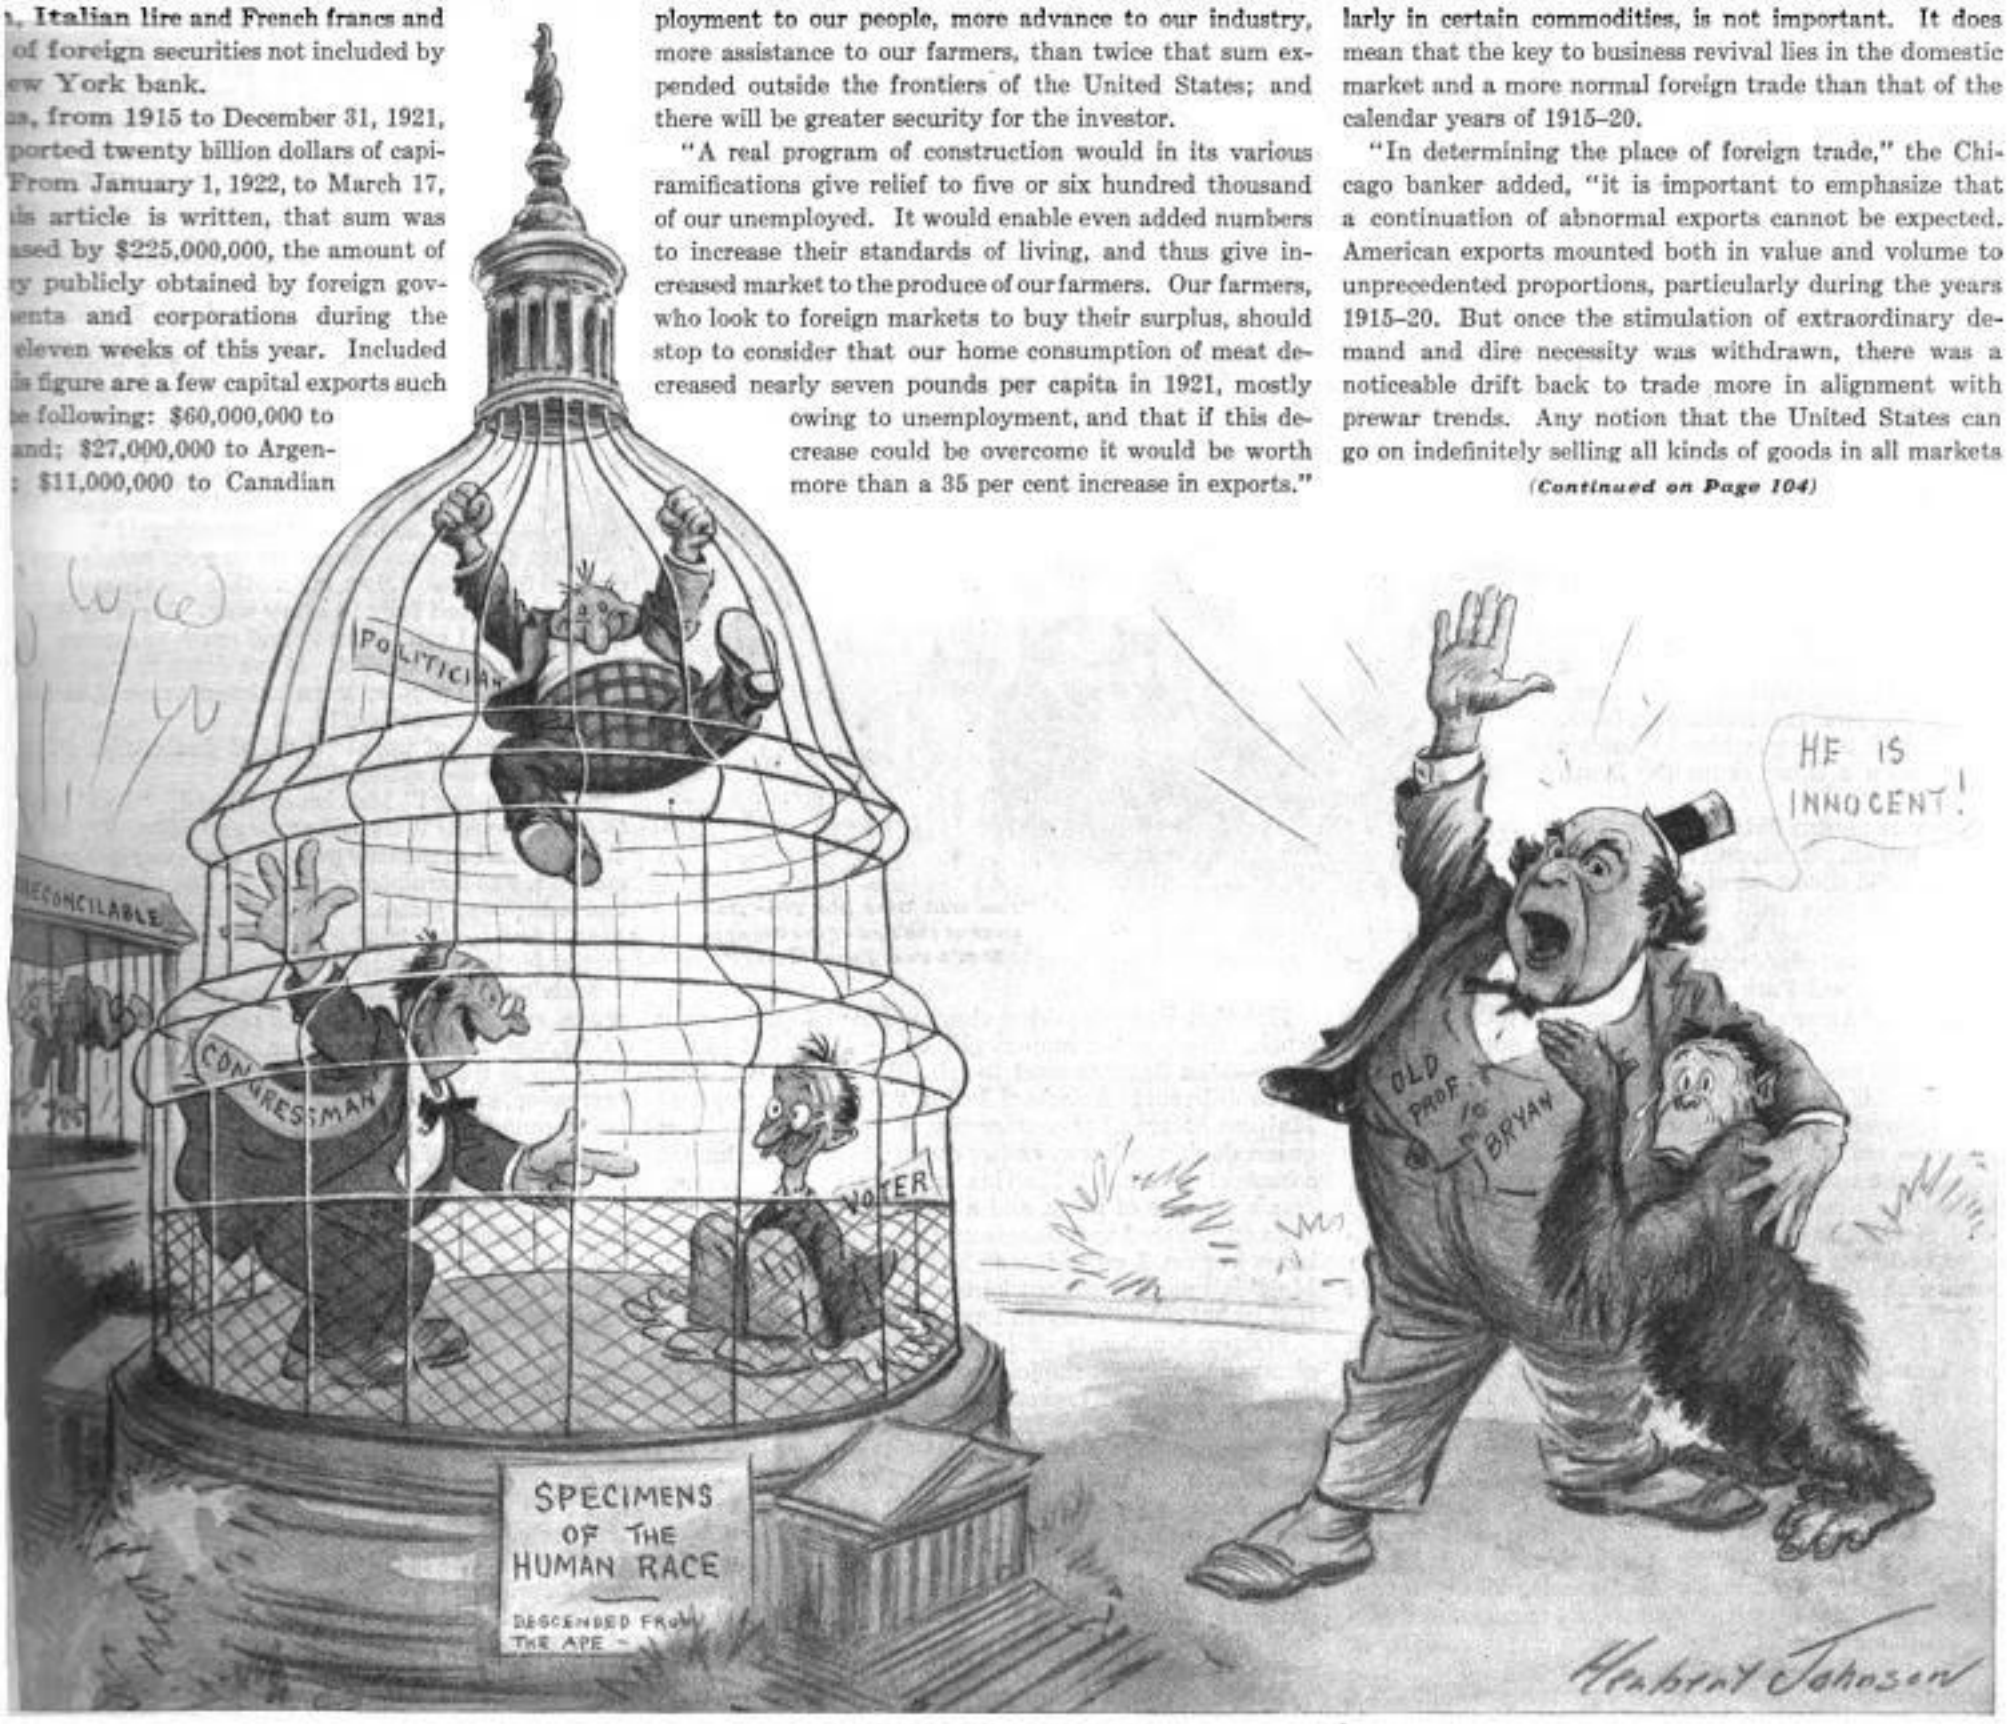
If we continue at this rate we shall export more than a billion dollars of capital before the dawn of 1923.

This is what Mr. Reynolds had in mind when he asked recently, "Shall we export capital or use it for American business?"

"Shall we finance Europe or our own country first?"

Home Needs for Billions

"WE TALK glibly of giving billions of credits to foreign countries to increase our farm exports," Herbert Hoover said, addressing the Interstate Commerce Commission. "I wish to say, with all responsibility for the statement," the Secretary of Commerce continued, "that a billion dollars spent upon American railways will give more employment to our people, more advance to our industry, more assistance to our farmers, than twice that sum expended outside the frontiers of the United States; and there will be greater security for the investor.



"A real program of construction would in its various ramifications give relief to five or six hundred thousand of our unemployed. It would enable even added numbers to increase their standards of living, and thus give increased market to the produce of our farmers. Our farmers, who look to foreign markets to buy their surplus, should stop to consider that our home consumption of meat decreased nearly seven pounds per capita in 1921, mostly owing to unemployment, and that if this decrease could be overcome it would be worth more than a 35 per cent increase in exports."

Mr. Reynolds, who interprets the sentiment of that broad fertile section of the United States, the Middle West, which Meredith Nicholson named The Valley of Democracy, answered the question of what we should do with our capital and what our national policy should be, in this way:

"Foreign trade for the United States is both necessary and desirable. There is no disagreement on this point among bankers, business men, economists, statesmen. However, in seeking a lead for the revival of American business, attention should not be focused on foreign trade to the exclusion of domestic business. American exports have constituted only some 6 to 8 per cent of the total sales of this country during the period of maximum exports. The domestic market is definitely under American control, to be revived if proper thought and action be taken. A clear ray of hope offers in the thought that measures looking toward business revival can be taken at home and at once. This does not mean that foreign trade, particularly in certain commodities, is not important. It does mean that the key to business revival lies in the domestic market and a more normal foreign trade than that of the calendar years of 1915–20.

"In determining the place of foreign trade," the Chicago banker added, "it is important to emphasize that a continuation of abnormal exports cannot be expected. American exports mounted both in value and volume to unprecedented proportions, particularly during the years 1915–20. But once the stimulation of extraordinary demand and dire necessity was withdrawn, there was a noticeable drift back to trade more in alignment with prewar trends. Any notion that the United States can go on indefinitely selling all kinds of goods in all markets

THE GALLOPING TIGE

By Nina Wilcox Putnam

ILLUSTRATED BY CHARLES D. MITCHELL

IN OUR set, particularly among mother's friends, the things we find really amusing are usually forbidden by convention.

Further down town, in Greenwich Village, it is perfectly conventional to break all the conventions except the convention against being conventional. At first glance the average pleasure seeker might easily consider this condition of things satisfactory, and give up any further search for the perfect happiness which someone—Bernard Shaw, I think—so quaintly refers to as "the Blue Bird."

But the Blue Bird lives further south than Washington Square. It seems he is a native of Tahiti, and that the South Sea Islands have it all over Greenwich Village when it comes to personal liberty, self-expression, and allowing your own true self to emerge from your inhibitions and ramp around on its own completely untrammeled, because the South Sea Islanders apparently haven't even a convention against conventions.

What I mean, it's quite all right out there for a native deb to expand pretty well as much as she likes, and Marquesan mammas never say: "Now, my dear, don't dance that dreadful camel walk or take anything to drink; and if you allow Bobby to kiss you he will never come to see you again, I assure you!" Well, instead of pulling a line like that, the Marquesan mammas are reputed to smile sweetly and merely say "Hicky oi poi!" or something of that sort, which gently translated means "Go to it, my child, and enjoy yourself!"

No wonder everyone has gone simply mad about the South Seas this season! Why, just think of the scope that place offers a really live deb—one full of pep and health and ideas like, let us say, myself! I could groan aloud when I consider all the wasted years before I knew what Tahiti was like, and the fact that my youth was thrown away upon the stuffy air of Rosemere, Long Island, and a mere New York season! Also it makes me positively shudder to think that if I had never moved to the Village I would not have met Shackelton Salts, and if I had never met him I wouldn't have known a thing about the South Seas.

Of course mother didn't like my moving downtown. That, as I read it over, is a very mild statement of the fact. As a matter of plain truth she made the deuce of a row about it, and yet it was really she herself who drove me from my father's ancestral Park Avenue apartment. What I mean, she did so because she tried to enforce a lot of conventions which simply would not convene as far as I was concerned; and the end came after our having a terrible row about my staying overnight at Sylvia Glenning's and walking in to lunch next day, wearing a tangerine chiffon evening frock and gold slippers. Of course there was nothing in the least improper about this, but mother simply could not be made to see it from my point of view, and so we had this fearful row I was speaking of, and I got dad to allow me to take a studio on Eighth Street with Malvina Jones, a girl who was at Miss Spooner's with me.

For I decided that perhaps, all things considered, it was time for me to have a career of some sort. I wasn't at that time quite sure what kind, but it was to be a real career, not merely a social one, and finding myself was perfectly ripping, as Malvina pointed out. Everything I wanted to do uptown and was forbidden to, or at least circumvented from doing as far as the family could manage it, was absolutely *de rigeur* below Fourteenth Street; and all the things my own people thought proper, such as being on time for meals, paying one's bills, washing all over every day, being a Mrs. Somebody when one married, and getting as rich as possible—all these were considered almost indecent by Malvina's set. I will say that I found it a tremendous relief, throwing off all social responsibility, or, as Malvina put it, allowing the subconscious to animate my life habit.

"You Will Give Me Your Answer at the End of the Voyage, Won't You, Leopardess?"

Not that it, or anything else, animated Malvina very much. She was the limpest girl I ever knew, but full of ideas—Miss Spooner used to miscall them notions—and so, so different! At school I didn't think very much of Malvina because her mother was a writer and lecturer; queer, don't you know, and of course, as a mere ignorant schoolgirl I thought Malvina was queer too. Our set didn't approve of ideas, and a mother who called herself Miss and backed movements and presented bills to legislators—or no, I guess it was legislatures—well, anyway, Malvina's mother was modern, and so was Malvina, and that let her out as far as our bunch was concerned.

Malvina was lonely at Miss Spooner's school, and we girls rather thought she jolly well deserved it for being so darn intelligent. I expect her mother sent her there because she didn't know what else to do with her. And when Malvina finished at Miss Spooner's she didn't come out like the rest of us, because her mother didn't have any home to bring her out of, I suppose, and so Malvina just went out, instead. Went out to the Art League, and took up batik, which is a kind of dyeing that can never be a failure, because no matter how it comes out—streaks, spots, anything—the batikist always claims that it was just the effect she had been trying for, and nobody is in a position to contradict her.

Well, anyhow, the very day I had that awful row with mother and threatened to leave home forever and had not the remotest idea of how I was going to make good on my threat unless I married stuffy, proper, old faithful Ted S wall, I was standing in Fifty-se Street looking mournfully at a feather hat at forty-five dolla Francine's window and realizing bitterness that under the circumst I couldn't very well go in and cha to mother. As I was standing along came Malvina in a green ha only it was a green felt tam. She had a portfolio under her arm an wearing a ruined batik smock tha one of her most successful inspirat an interpretation of a can of green I think it was. And I was so low in I was actually glad to see her.

Malvina allowed me to take h tea, although it was unfortunately conventional hour for tea, and whil ate she listened to me most beauti and understandingly.

"Look here, Pet Torrington!" sh claimed when I had pretty nearly ished—which is a long time for one to allow another to talk. "Look! what you need is work and freedom can see at a glance that you have gr intellectually in the year since we school. You have bobbed your hair one thing—the first step toward emancipation. I'll bet your people trying to marry you off to some con tional man, and that they will be j fectly satisfied as soon as they see trapped for life. I'll bet, furtherm that they hamper and curb you at ev turn!"

"Indeed they do!" I said eage "Why, father has actually cut my all ance to five hundred a month! A since last night he's been threatening take away my roadster. You see, we pinched for speeding coming home, a he didn't like our being in evening clot in the police court before noon. Dad so painfully conventional!"

"That clearly shows how narrow your people are!" claimed Malvina. "Now, my mother has always urged to express myself fully in every way. My only difficul has been that I can't seem to find much to express. But tell you what you do, Pet. Move down to my place, a meet some real people; learn to know yourself, and wor Work is the great solvent!"

"What kind of work?" I asked doubtfully. "I don know how to do anything!"

"All the better!" Malvina exclaimed. "I will help yo to find yourself. Work will come naturally. Try out a l of things and eventually you will find your *métier*. I, fo example, was a sculptor for a while, and then I dropped and it broke to pieces. It was a group called The Fall Man. And next I tried free verse, but I couldn't get an money for it. And then after a while I found—this!"

Malvina held up the tail of the green-pea effect as sh spoke, and while I didn't think much of the smock I cer tainly was impressed with her ideas about living alon with her in a studio and having perfect freedom for self expression, and when I found that there was a good garag right around the corner from her, why, I decided to try and make a woman of myself and find a career and allow my real nature to develop to the highest point so that I might be of greater value to society. Society in the most liberal sense, you know, with a capital "S" and all that!

And as Malvina was with me heart and soul, we went right to it. Malvina's mother only sent her thirty a week, so earnestness and inventiveness were about all she had to contribute. But she had a lot of those, and as I am promptness itself when I am trying to get away with anything, and mother was out and father still downtown, I gave up all idea of the green-feather hat at Francine's and put the remainder of my allowance into a van and two men, who obligingly went to the apartment with us at once and carted off my day bed and a big divan from my sitting room, and a long mirror and a few rugs and things; because Malvina had only a black cat called Poe, an easel and a spring cot for herself. We took my electric curler and my dressing silver, which is gold, in case we ever ran short of cash, and also a lamp, some books that Malvina wanted, a couple of lace-trimmed pillows, my blue satin comforter and the firedogs. Then Malvina thought we had enough and sent the men off with the load, while I got my

new red roadster out of the garage and had the tank filled and oil put in and charged that to dad, and then with only a couple of armfuls of clothes, three hat boxes and my jewel case I left my parents' apartment—I thought it only fair to leave that much—and drove Malvina down the Avenue, smiling at all the cops as I went.

When this was done and I was comfortably settled in that great glorious big studio, why, I telephoned home and asked permission to move.

What happened subsequently I refuse to put on record; I think too much of my parents to tell all that I know about them.

However, I will say dad produced a larger vocabulary than I had ever dreamed he possessed, but that in the end permission was granted, nevertheless.

Which is how I came to know about the social revolution and Freud and batik and chop suey, and a lot of wonderful things like that which showed me how I had been wasting my time uptown. I could do practically whatever I liked without a tiresome family snooping around except once or twice a week when mother would turn up with a hamper exactly as if I were the poor or something. But for some reason, once the break was made, mother didn't object to anything. She seemed to realize that I was finding myself and looking for my life-work, and she was really very sensible about it, and I was left practically untrammeled in my new life until one afternoon when Ted Stonewall showed up.

Now Ted's family are year-around people out in Rosemere, where we have our summer home, and when we were kids mother didn't mind our playing together. I expect she knew that I'd get over my girlish fancy for Ted, and for once she was right. Ted was intellectually quite out of date, if you know what I mean, and his ideas about women were as antique as mother's. And of course I was not going to permit myself to stay in love with anyone who would cramp my style. Curiously enough the alikeness of their standards got him nothing with mother after we grew up. I suppose his father being coal and wood was the reason for that. Certainly she had never of late years encouraged his coming around. And so when he turned up at the studio with a hamper from her I was a good bit surprised, until I realized that he had probably worked it so as to get to see me.

"Hello, La Bohème!" he greeted me as he swung the big basket to the refractory table with an easy lift of his broad shoulders. "Gee! This place is as big as Art Jones' photo-studio-six-dollars-a-dozen-finished-while-you-wait, down home!"

"Ted, don't be crude!" I admonished, digging into the hamper to make sure there was quince jam. There was, and so I turned back to Ted. "Don't be facetious, Ted, it's so bourgeois! This is a real studio—my workshop!"

"And where is your work?" Ted wanted to know with that disconcerting directness of his.

"I haven't found my true work yet, Ted," I replied crossly. "But when I do find it I shall work at it here."

"Oh!" said Ted. Then he came over and stood very close to me in that way which used to comfort and at the same time rather frighten me in the old days before I became an intellectual. "Don't you know what your true work is?" he asked softly.

"No!" said I, trying to break away.

"Well, I do!" he said. "It's to marry me; that's work enough."

"Oh, Ted, you are really impossible!" I cried, freeing my hands, which he had somehow managed to get hold of. "Don't be ridiculous, please! I shall never marry. And as for finding my work in the home, just forget it! Don't talk to me about domesticity; it's cold, old priceless!"

"It's never cold, to my mind!" said Ted soberly. "I say, Pet, you don't take this bunch down here seriously, do you?"

"Of course I do!" I said hotly. "I'm thinking, for the first time in my life, and I'm enjoying it!"

"Thinking about what?" said Ted.

"Oh, about art and life and beauty," I said, "and, of course, work!"

"But what work?" persisted Ted. "Look here, Pet, I believe this crew you're running around with is a bunch of fakes! Don't let them put anything over on you, dear. The real art in this world lies in the simple, fundamental things: in happy homes, fine children, in things which grow in the clear air, not in stuffy cellar cafés!"

"Ted Stonewall, you have no right to speak of my friends like that!" I retorted. "You think I am living down here among a bunch of cheap, fake Bohemians, but you are wrong. Do you call Shackelton Salts a fake?"

"I have heard of him—from your mother," said Ted, plainly impressed. "The chap that wrote those Deep Sea Chanteys?"

"Yes, that's the one!" I said triumphantly. "He's a very especial friend of mine—very! He's published seven volumes of sea poems—only two at his own expense," I went on—"and he's a very wonderful person. He's been around the Horn ten times, I think it is."

"Got Masefield lashed to the mast!" murmured Ted, but I pretended not to hear.

"I'm very fond of Shack," I went on. "And nobody, not even you, can deny that those are great sea poems. Then there is Shamus O'Shamus, who wrote Glimpses. And, oh—lots more real people!"

"Well, could you endure the company of a mere low-brow musical-comedy hound for one evening?" inquired Ted. "Because if so I would like to have you dine with me."

"Oh, Ted!" I said regretfully. "I'd love to, but I have already asked Shack to dine with me!"

"And he accepted?" said Ted in a peculiar tone. "Well, then, perhaps he won't mind if I bring Malvina along, and you all dine with me?"

"That will fix it splendidly!" I cried, relieved. "And some of the others are sure to drift in. Oh, Ted, I do want you to meet my new friends and see just how perfectly splendid they are."

"Don't be Ridiculous, Please! I Shall Never Marry. And as for Finding My Work in the Home, Just Forget It!"

"Good!" said Ted. "That's exactly what I can town for!"

An hour later we were seated in the café of the ol hotel, and I looked about the table with pride, for had foretold, the bunch had gathered around. H scarcely seemed possible that a few short weeks a people, all but Malvina and Ted, had been utter s to me. Why, I had not even heard of them, and now on first-name terms. They certainly were a distin looking crowd, and it was just wonderful to b there among people who did things!

First in importance came Shackelton Salts, of with his magnificent physique—and it is truly wo only perhaps just a little thick about the middl anyway, with it thrown gracefully into his mirrore and a new suit of corduroys, the shirt open at h strong throat, as he bade us notice, his mat of yel fairly standing on end as always when he was excit of course he was always excited, and usually poun table.

Then there was my Malvina, very limp in a batik smock, but so emancipated under it all, an Rosen—you know, the organizer who split the but makers' union. Just now she wasn't splitting a except a baked potato, but she did it with a single-min and fierce determination which made me realize ho erful her personality was—that, and her powerfu hair and strong little figure. Zelda was the daugh Lower East Side tailor and was the living proof utter democracy. Next to her sat Edouard Roula sculptor; awfully modern stuff, he does; in fact, h founder and one of the very few members of the A School of Sculpture, which never uses original mate takes something that is symbolic of the idea they interpret, and uses it as a foundation. For exampl statue called Smoke was made entirely of old cigar and attracted a great deal of attention at the las pendent Exhibition. Next to him was Ted, wisely but absorbing a steak, and on Ted's other hand sat S O'Shamus, the author of Glimpses; a dear boy, so romance, and the most perfect dancer. Besi of which he was the great Irish patriot, you At least his other book, the one about the H of Belfast, was a great success. Shamus had been in Ireland himself, but he changed his from James Jameson to its present form of h accord, and he feels very st about the Irish. I'm not jus on which side.

I felt sorry for poor old tical Ted, silently eating a his corner, completely swamp the brilliant talk of the other seemed so out of it and so con place, compared with the rest little group, that I pitied hi cerely. Particularly because so utterly unaware of his cr My heart ached for him—or have, only I remembered in that, as Malvina often say commonplace is always unfo able.

The talk had for some time upon Russia, as it usually among us at one time or an during an evening. Zelda w ways bringing it up because aunt's husband was killed in grom or a droshky, I don't remember which.

"See what an unservable tle capitalistic potato!" she claimed. "In spite of the li the kept press, I'd take an that the free peasantry of re tionary Russia grow larger p toes than that!"

All of a sudden Ted eme from his retired corner.

"Believe me, then, they hid 'em mighty when I was over there with the Red Cro said Ted.

"You were in Russia!" exclaimed Ze "Camerad! Tell us about it!"

"Nothing to tell that the papers haven't to replied Ted. "Slush, cold, hunger, disease slavery. All this freedom stuff is bunk!"

"Ah!" said Zelda. "You probably only saw what were meant to see! You probably never got to know truth!"

"Well, I was only there six months," Ted admitted, a returned to his steak.

"Truth," said Shackelton Salts, "is a strange, elus thing.

"We are afraid to look for it—because it's unclean you know, and we are a nation of prudes!"

The Greatest Year In Hupmobile History

Sales Everywhere Mounting to Larger Volume With Each Succeeding Month

S year will be the greatest, sales volume, of all the 14 of Hupmobile history.

rst month of this year was eatest January in the records Hupmobile.

ebruary, the smashing in- in demand topped January per cent.

h rapidly gathered further entum and recorded the est month of selling the Hup- le has ever known.

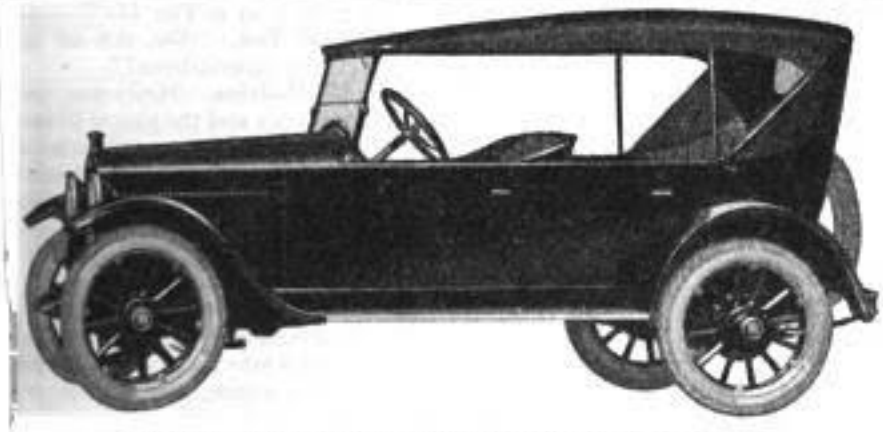
it has gone and is going, after week and month after th, all over the country.

Public Sifting Out All Car Values

clear now that the six months' l will almost reach the entire duction for the largest year the has ever had.

The reason for this tremendous growth is perfectly plain.

The public has settled down to a sifting process—to a process that is leading thousands straight to the Hupmobile.



The Hupmobile is in tune with the spirit of the day—a spirit that seeks out that which is substantial, that which is sure, that which is saving, and that which renders service.

Traveling side by side with this swiftly speeding and greater appreciation, is an equally impressive demand for used Hupmobiles.

As we have told you in recent announcements, used Hupmobiles are a live asset all over the United States.

Confirm this by looking over your own local newspapers.

Offerings of used Hupmobiles are few and far between, and they are eagerly sought by waiting buyers.

Style—Beauty—Luxurious Comfort

Touring Car, $1250 Roadster, $1250 Roadster-Coupé, $1385 Coupé, $1435 Sedan, $1935
Cord Tires on all models—Prices F. O. B. Detroit—Revenue Tax Extra

High Lights in Hupmobile's Greatest Year

Official reports from scores of points throughout the country indicate the tremendous increase in Hupmobile retail sales. Comparison is made with 1920, the greatest previous year. Figures are the latest available in complete form, at the time this tabulation is made. These few examples are typical of our sales everywhere.

Boston . .	January and February, 1922, greater than same months, 1920, by—	100%
Detroit . .	January and February, 1922, greater than same months, 1920, by—	53%
Chicago . .	January and February, 1922, greater than same months, 1920, by—	238%
Minneapolis .	January and February, 1922, greater than same months, 1920, by—	30%
St. Louis .	January and February, 1922, greater than same months, 1920, by—	82%
Los Angeles .	January and February, 1922, greater than same months, 1920, by—	27%

New Buyers Come From High and Low Priced Fields

In large proportion, this great influx of new Hupmobile buyers is coming from two sources. One is the field far above the Hupmobile in price, the other the field far below it in price.

The Hupmobile has never sought comparison or competition with cars of lesser price and huge volume production.

But in many cases it is actually outselling the best of the cars whose strongest appeal is price.

There is not a distributor or dealer on our books who has not increased his orders and sold the increase.

There is scarcely a dealer who does not report remarkable instances of buyers abandoning costlier cars for the Hupmobile—and scores of others discarding cars of lower price because they are convinced of the greater economy of the Hupmobile.

That economy, of course, consists in the greater freedom of the Hupmobile from repairs, and its lower upkeep costs.

Greater Economy an Established Fact

Tested out time and again in business fleets, the Hupmobile has proved that it is a more economical car than those in the higher priced field, and the best of the lower priced as well.

More economical because this Hupmobile is built as all Hupmobiles have always been built—in shops with the will and the equipment to do the same precise and painstaking work; with the same high quality, tested materials; that go into the world's finest motor cars.

"Oh, pshaw, Shack!" said Edouard languidly. "You love to talk about nudity because you're stuck on your shape. You are getting fat, though—you ought to train down!"

"Train down!" shouted Shack. "How under heaven can I do that in this mad country? How can I live a free, healthy, natural life when I have to go around in clothes—the most unnatural things in the world? How?"

"Ye ought to go to the South Seas, Shack," put in Shamus. "I've been reading that Murphy book, The Shadowy South Seas. Great stuff! The place would suit ye, man! Faith, it would suit myself pretty good, as well!"

"The Shadowy South Seas!" I exclaimed. "Oh, that's a wonderful book! It makes you want to jump right on a boat and start for Tahiti!"

"Those Marquesans are real people!" declared Malvina, giving them her highest praise. "Utterly unconventional, and the only clothing they wear is batik. How I'd adore to go there and compare batiks with them!"

"By heavens, you are right!" exclaimed Shack, replying to Ed, however, not to Malvina. "I ought to go to the South Sea Islands! Do you know, in all my voyages before the mast I have never sailed the South Seas? That is to say, not seriously. Think of the glorious freedom of life on those islands! You are right, Ed—that Murphy book is a masterpiece. I would certainly like to go out to Tahiti. Every poet ought to go there! By thunder, I have an idea! Think what a magnificent thing it would be if an army of poets and sculptors and artists invaded Tahiti intent to live the glad, free life of the islands; to lie under the breadfruit trees and make verses, with no beastly editors and landlords around; with not a care in the world and no effort to make except to dance about. Think of it! Glorious! Marvelous! By heaven, if I had a seaworthy boat I'd take you all there! We'd leave this poisonous, artificial life behind us, and in Tahiti we would produce art that would conquer the world!"

I was simply paralyzed by his marvelous eloquence and by the inspirational light on his rugged face. But I was a little surprised at his referring to the Village as poisonously artificial, because he usually assured me that I was seeing true freedom there. Well, of course, Tahiti would be a whole lot freer; I had to admit that, even before Edouard took up the theme.

"An art ship to Tahiti!" he murmured, lifting his pale face and half closing his eyes. "Exquisite! I was on a ship once! If it could only come true!"

"If I could only sell some stuff I'd take you all!" exclaimed Shackelton. "I'd buy a ship—a sailing ship, for who would want to find romance under steam? Then I'd hoist the fair white sails, cast off, and then—ah, then!"

"By Jove, Shack, my boy!" said Shamus pettishly. "I wish ye wouldn't make such talk, with the winter soon to be upon us and my bones aching for the warmth of the sun! I'd go on that trip of yours for the shake of a cat's tail."

"So would I!" put in Zelda, who had finished her capitalistic potato, skin and all. "The trouble with those Marquesans is that they are not organized. How can they resist the invasion of the white man unless they have a union? I'd whip them into shape, so that authors would have to get a permit from the Hula-hula Union Local No. 1 before they would be allowed to land!"

"Friends!" exclaimed Shack. "If only we could do it! That mythical sailing boat—a schooner, preferably! She has captured my fancy utterly! No hired crew, you understand. We would sail it ourselves! Think of a crew of artists setting sail for the South Seas, the black ship dipping like a gull, the fierce white foam kissing her sides! The crew singing 'A deep sea, a cruel sea, between my blue-eyed love and me'!"

"How beautiful!" said I.

"It's the first poem in my second volume of sea ballads," breathed Shack, turning directly to me. "Think of that voyage, with you beside me, Leopardess! A ship, a ship, my kingdom for a ship!"

Then Ted, who had been watchfully smoking and looking keenly from one to another of us without joining in at all, spoke quietly.

"I can let you have a ship," said he. "Two-masted schooner in splendid shape; everything aboard her but the crew. I took her for a bad debt."

For a moment there was an incredulous silence. Then Shackelton leaned toward Ted, and they stared at each other like two dogs who are not quite sure whether to fight or not. Then Shack sort of wagged his tail.

"Do you mean that, or are you kidding?" he demanded, as we listened breathlessly.

"Never more serious in my life!" replied Ted, removing his pipe from between his strong white teeth and smiling in his pleasant way. "She's a sixty-foot schooner, two masts, full-rigged, sleeps ten people and has a gasoline kicker. Name, Sadie Brown of Boston. She is in sound condition and you are more than welcome to use her. With crews on strike I didn't know quite what to do with her. You have shown me!"

"Old man!" said Shackelton after an almost imperceptible hesitation. "Done with you!" And the two shook hands solemnly.

"Look Here, Pet Torrington!" She Exclaimed, "What You Need is Work and Freedom"

"This is a great opportunity," Shack went on. "Think of the publicity! Why, it's the biggest sort of a Sunday story! I can't tell you what a wonderful thing you have done!"

"Not yet, you can't," said Ted; "so don't try. I'm not sure just what I've done, myself. But the boat is yours to command; on one condition—that you let me come along!"

Well, we just about got up and cheered at that! We were almost put out of the hotel for it—Zelda afterward claimed that we actually were, but I still think it was only the ordinary closing time. However, we certainly made a big row over Ted, and then we parted reluctantly out in front, after first agreeing to meet next morning at ten at the wharf where the Sadie was tied up, and look her over. Ted took Malvina and me home—that is, to the studio. Once there he somehow managed to see me alone for a moment.

"Pet," said he, "Mr. Shackelton Salts seems very devoted to you. Does it mean anything?"

"I—don't ask me, Ted!" I begged. "I—well, I haven't made up my mind about him yet. I want to wait and get to know him better!"

"I see!" said Ted thoughtfully. "Well, you will, on this trip. Do you mind my coming along?"

"Mind, you old honey!" I exclaimed. "Mind your coming on a party that has any stunt I ever did before trimmed down the neck? That puts it all over any party I ever dreamed of? Why, little angel face! There is only one thing I'll mind, and that is if mother tries to stop my going. Oh, Ted, she must not stop it! You help me to persuade her!"

Ted looked around guiltily, to make sure that nobody was about. Nobody was, for Malvina had gone to bed.

"Pet!" he whispered suddenly. "How about up to the Crystal Room at the Ritz for a litt Your mother has a table there to-night, and twelve o'clock!"

"We—you—she might ——" I began hurrie Ted, I'd love to! Only promise faithfully you tell Malvina that I did such a dreadfully co thing!"

Next morning it was Shackelton Salts who ca me and take me down to see the schooner, for T business at his new Park Row offices had promise us at Pier 13 at ten o'clock.

Shack came around to our place at eleven min and I took him and Malvina down in the red ro

"Do yo anything boats, Pe asked, his so fixed upon r edly.

"Of cours replied. "I' Europe thre

"That's fi Shack reli

"The more understand the better. Sham he went to South on a sailing boat du war, and Ed has re of sea stories and fe he can easily put in tice what he rem from them. How your plutocratic Stonewall?"

"Oh, Ted isn't a I explained. "He' beginner at busine though he's making good. But when it to sailing a boat—wh been doing that ever mer all his life.

"Ted can sail a b easily as you can beautiful poetry!"

Shack smiled deligh at that, and I am hap say his attitude toward Ted became disti more cordial from then on.

Well, when we finally got to the wharf, was Ted sitting on a post and smoking his old pipe with all the patience of who was a monument? Anyway, there he was, and it turne that although a little late we were the first upon the s Malvina flapped up to him at once, an anxious expre on her face.

"Oh, Mr. Stonewall!" she cried. "Do you really t it is all right to leave your boat at Pier 13?"

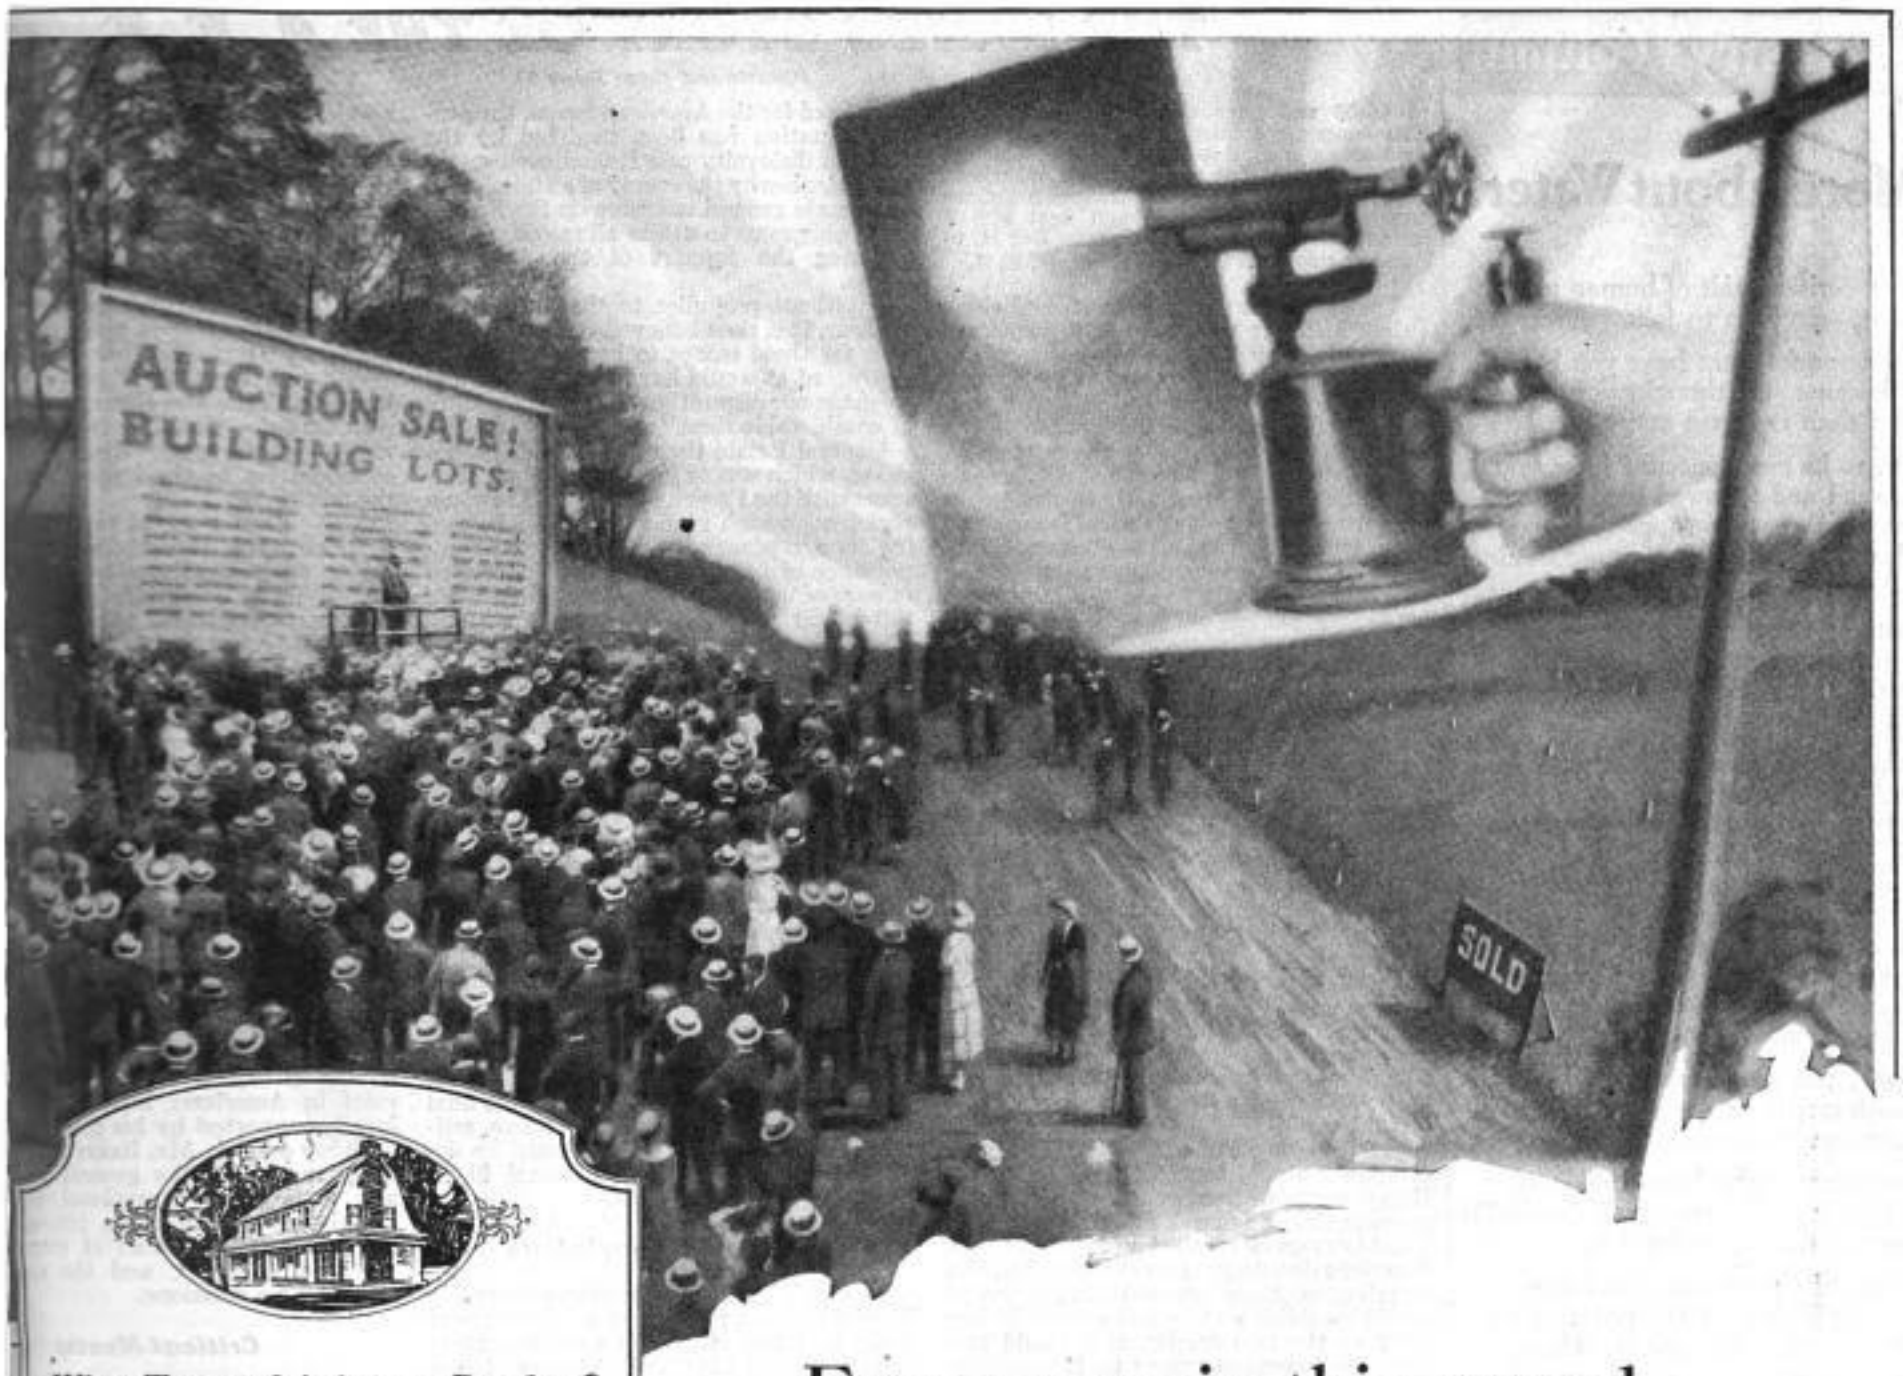
"Good morning!" said Ted. "Yes, it's all right course. Surely you are not superstitious?"

"Oh, no!" disclaimed Malvina. "Only you see, teen is supposed to be unlucky and the idea of ill luck associated with anything may influence one's subconsc thought, that's all. I only mean that by associatio ideas some of us might actually though unconscio induce ill luck!"

"Well, it hasn't hurt the old boat any so far," Ted c mented. "Hello, here comes the rest of the bunch. it's only eleven o'clock."

The others were indeed coming down the pier, ea Shamus in a rather soiled white middy blouse, which had dug up goodness knows where; Zelda in her manni tweeds and no hat; and Edouard in his immacul sculptor's smock, looking paler than ever, if possi A handful of rude and shockingly sophisticated small bo were following them.

"Behold the faithful—our romantic seafarers!" cr Shack in his beautiful liquid voice. "Welcome, dear a venturers!"



"Aye, aye, captain!" cried Shamus, coming to a sort marine salute. "The top of the morning to ye all!"

"It's not the top, it's halfway down the morning!" co mented Ted, the mean thing, spoiling the whole effec "Come on in, friends. The Sadie's warped to the far e and I've got to get back to the office!"

"Just a moment!" exclaimed Shackelton with one of h fine, strong gestures. "One moment! Before we stir fro this spot something has got to be set right. Shamus he has used a most opprobrious term. He addressed me or one of us—as captain. Now to my mind, on a voyage o this kind—a quest after sheer beauty, made by comrade in the arts—there can be no question of officers. No cap tain, no mate, no crew; but only a oneness, a perfect, fre and glad coöperation between us all. No one should hold

What Type of Asbestos Roofing?

This chart will help you decide

Kind of Building	Type of Asbestos Roofing	Brand or Trade Name
Small buildings	Slate surfaced roll roofing or shingles	Flexstone—red or green
Dwellings $5,000–$7,000	Slate surfaced roll roofing or shingles, or rigid asbestos shingles	Flexstone—red or green; rigid—red, brown or gray
Dwellings $7,000–$25,000	Rigid asbestos shingles	Standard or extra thick—red, brown, gray or blended
Dwellings $25,000 upwards	Rigid asbestos shingles	Colorblende—five-tone, brown with or without red or gray accidentals
Factories, shops and mills—Monitor and Sawtooth roofs*	3 or 4 ply ready roofing	Johns-Manville Asbestos Ready Roofing or Built-up Roofing
Flat roofs—all buildings*	Built-up roofing	Johns-Manville Built-up Roofing
Skeleton frame buildings—standard conditions*	Corrugated asbestos roofing with steel reinforcement	Johns-Manville Corrugated Asbestos Roofing
Skeleton frame buildings—excessive temperature or condensation conditions*	Corrugated asbestos roofing without steel reinforcement	Johns-Manville Transite Corrugated Asbestos Wood Roofing

*Note—Industrial buildings call for expert advice. A roofing expert is available at all Johns-Manville Branches.

Every man in this crowd can afford Asbestos Roofing

THESE people will soon have to consider the question, "What Roofing?"

Some will be guided by economy.

Others will seek permanence and durability.

In either case the trail ends with Johns-Manville Asbestos Roofing.

Surprising as it is to most, this permanent roofing costs but a few cents more, per square foot, than the ordinary, perishable type.

Only a few cents more—yet in addition to permanence you get fire-safety. Johns-Manville Asbestos Roofings will withstand the intense heat of a plumber's blow torch. Any dealer will quickly prove this to your satisfaction. Each type is given highest rating in its class by Underwriters' Laboratories, Inc.

Asbestos Roofing is made by Johns-Manville in many forms: shingles, artistic in colors and shapes, for homes; roll-roofing for the sloping roofs of garages or small industrial buildings; or built-up, layer upon layer, on the great roof-decks of commercial structures. (See chart on left.)

The most striking attribute of Johns-Manville Asbestos Roofing is not its fire-safety and weather-resistance, not its economy and permanence, not the single fact that it never needs painting or refinishing; but rather the fact that all these qualities are combined in this one roofing. The universal roofing is Johns-Manville Asbestos.

Jim Henry's Column

More about Water

It is a curious trait of human nature that no one likes to follow directions.

How many times have you been lost because you thought you knew better than the road map?

Or, to be more specific, have you ever read and followed the instructions which come wrapped around each tube of Mennen Shaving Cream?

Of course, Mennen's will give great results no matter how you use it, but just the same you will never experience the perfect Mennen shave until you obey the rules.

These instructions (I wrote them myself) say to use three times as much water as you formerly used with old-fashioned soap. Yet, so far as my observation goes, most men use only the first brushful of water and, as a result, get a thin coat of whitewash instead of the heavy bank of lather they could build up if they would only use a lot of water.

Now, this extra water has a lot to do with putting your beard into a proper condition to be shaved.

One reason why Mennen's is so much better is because its lather holds so large a quantity of water.

Please do it my way just once. Start the lather on the point of your chin and gradually spread. Then keep adding water—a little at a time. It is amazing how much water you can pack into Mennen lather. Until you have exposed your beard to a three-minute, complete saturation with Mennen lather, you will never know the joy of operating on a thoroughly licked beard.

Just to fill up the column, I want to plead with you to learn what comfort there is in Mennen Talcum for Men for after shaving and bathing. It is neutral in tone and doesn't show. I'll send samples of Shaving Cream and Talcum for Men for 10 cents.

Jim Henry
(Mennen Salesman)

THE MENNEN COMPANY
NEWARK, N.J. U.S.A.

THE INSIDE STORY OF THE A. E. F.

(Continued from Page 5)

of 45–50 and boys of 17. France is done. The American soldiers will not be ready to fight as an army until late in 1918. Our experience proves that meanwhile we must keep the fight going. Even half-trained American companies or battalions would fight well if mixed with 2 or 3 years veterans. Beg H. to consider this favorably. Yours, D. L. G.

The inclosure to which the British Prime Minister referred was a memorandum, as follows: "Obviously Germany has a better chance of winning the war before America can exert her full strength than she will have after. It follows that she may try to win it during the next eight months or so. I believe she will. Russia's defection enables her greatly to strengthen her forces on the west or Italian front, or on both, and to try to get the decision. Italy will be weak for some months to come; the man power of France is rapidly diminishing; we cannot yet see our way to keeping our divisions even approximately up to strength throughout next summer, especially if there is heavy fighting this winter—which will probably be the German game—while America requires several months before she can put an appreciable force of divisions into the field.

"Would America, therefore, be ready to help in another way, as a temporary measure? When she first came into the war we hoped she might send some men for inclusion in the British armies, as being clearly the quickest way of helping; but for reasons we quite understand, she preferred to retain her national identity. No doubt she still desires to do so, but over and above the preparation of her divisions, and without interfering with it, would it be possible for her to provide a company of infantry to replace a British company in such a number of British battalions as America could bring over men? Even 100 such companies would be of the greatest value. Every consideration would, of course, be given to the companies, and if desired they could later on be recalled and posted to the American divisions. It is thought that this mingling of American and British troops would establish a close and cordial feeling between the two armies, and would also give the American troops useful training. If this system is not possible would America find a battalion to replace a British battalion in as many brigades as possible? There would be no insuperable difficulty in meeting American wishes in such matters as discipline, rations and general maintenance. The only difficulty is American national sentiment, which we quite understand.

"On the other hand, the system suggested is clearly one which would the most rapidly afford much-needed help during, perhaps, the most critical period of the war."

General Petain's Proposal

While pressure was being brought to bear overseas by both French and British, each government was exerting its influence in Washington, also, to accomplish the same end. The War Department cabled the American commander in chief on December 25, 1917: "Both English and French are pressing upon the President their desires to have your forces amalgamated with theirs by regiments and companies, and both express belief in impending heavy drive by Germans somewhere along the lines of the western front. We do not desire loss of identity of our forces, but regard that as secondary to the meeting of any critical situation by the most helpful use possible of the troops at your command. The difficulty of course is to determine where the drive or drives of the enemy will take place; and in advance of some knowledge on that question, any redistribution of your forces would be difficult. The President, however, desires you to have full authority to use the forces at your command as you deem wise in consultation with the French and British Commanders-in-chief . . . the President's sole purpose being to acquaint you with the representations made here and to authorize you to act with entire freedom in making the best disposition and use of your forces as appears to be possible to accomplish the main purposes in view."

Three days later General Petain presented a French plan for using American troops.

Writing on December 28, 1917, he said: "Since the time when the first programs were fixed for the American forces, the general situation has been modified by the Russian disloyalty and Italian events.

"A menace by the enemy of an imminent, large-scale general offensive on the French front obliges us to utilize all resources, not omitting the support of the American forces.

"Without prejudice to the duration of the war, it is then believed that we cannot wait for these troops to be organized and instructed as would have been desired had we made our dispositions in the tranquillity of considerable time."

General Petain then outlined his proposition, which was to incorporate the Americans with the French forces, one American regiment to each French division. In urging its acceptance he emphasized the importance of hastening instruction so that, in case of need, the French could draw on the better units of the American forces available.

In regard to these proposals the American commander in chief cabled the War Department: "Do not think emergency now exists that would warrant our putting companies or battalions into British or French divisions, and would not do so except in grave crisis."

To the French he said: "As to the question of placing American units in French divisions for actual service, there are many real obstacles in the way. The differences of language, military methods and national characteristics above referred to would seriously hinder complete coöperation necessary in combat. Moreover, the American people would not approve of giving up the integrity of our organization and scattering it among French and British units. Such a plan would prevent the final building up of a cohesive, aggressive, self-reliant American force which must be depended upon to deliver the final blows necessary to end the war."

General Pershing's Note

The training of the American troops in France had not progressed with the speed desired. Those of us who were over there in the winter of 1917–18 will never forget the maddening delays, or the general despondency among the French and British forces and the French population, induced by the collapse of Russia, and German triumphs in that direction; the Italian debacle, in which 300,000 men, 3000 guns and enormous stores were lost to the enemy; the failure of the Allied armies to achieve anything more than local attacks which proved wholly insufficient against the German defense, despite a superiority on the Western Front in 1917 of 20 per cent in strength; and finally the failure of American help to reach the battlefront, after the Allies had been led to hope for our participation in force before winter set in.

This delay was partly due to the shipping situation, but the handicap of French tutelage had a lot to do with it also. A memorandum written by a member of the American General Staff stated: "Reports have been made by several officers whose units have been most closely associated with French units and, while appreciating the value of French assistance, the opinion is very generally expressed that beyond the details of trench tactics, our troops have made better progress under their own instructors and according to our own methods. This, of course, does not apply to our staff officers, who have derived great benefit from association with corresponding French staffs."

Finding that the American commander in chief could not be bent to accept their views, the French proceeded to go over his head to Washington. General Pershing wrote to M. Clemenceau on January 5, 1918, Clemenceau being then President of the Council.

"Dear Mr. President: Permit me to quote the following cablegram from the War Department at Washington: 'The French Ambassador called on Secretary of War to-day and read to him a dispatch from M. Clemenceau to the effect that General Pershing and General Petain had conferred as to the wisdom of seasoning of American troops by attaching their regimental units to French divisions before committing a part of the line to an American division made up of troops not so accustomed to actual front condi... Clemenceau's cablegram stated ... eral Pershing had reported hi... General Petain in substantial ... on this subject, but General P... veyed to M. Clemenceau an oppo... ion. The French urge the actio... above as being safer for the ... troops than it would be to give ... once an independent place in the ... urge very strongly that the Sec... War here accept their view and ... it to you. This the Secretary of W... willing to do, desiring to leave th... wholly within your discretion, ... consideration of the important el... the matter.'

RESTONE CORDS

Cord values have given high standard of mile-ence. For 1922 Firestone been selected by sixty-foremost American car standard equipment. They ularity too among taxicab transport companies who strictest mileage basis.

17.50 **32 x 4, $32.40**
42.85 **33 x 5, $52.15**

They Come Firestone Equipped

IT is evidence of the recognition accorded Firestone quality that on most of America's fine cars Firestone Tires are standard equipment.

Significant, too, is the fact that when these cars *come* Firestone equipped they usually *stay* Firestone equipped. Quality once so definitely learned is not likely to be forgotten.

The reason for such marked preference for Firestone is mileage. It makes these tires the choice likewise of leading taxicab companies and motor transport operators—who carefully check mileage costs.

In short the men who know tire values best endorse Firestones. Their experience and their permanent choice are valid reasons why you should select Firestones when you buy your next tires.

$11.65

30x3½ extra size non-skid, the best known tire in the light car class. Higher in quality than ever and now being produced on a scale that permits its being sold at the lowest price on record. The same unusual value in 30 x 3 size at $9.85.

Most Miles per Dollar

Firestone

$9.99

Oldfield "999"—guaranteed—a full size 30x3½ anti-skid tire. Built with four-ply long staple fabric. In 30x3 size at $8.99. Prices that cannot be equalled for a reputable, well-known tire of trustworthy quality. Sold by Firestone dealers.

Channel ports. This sensitiveness is such as to make it possible for Germany to choose her objectives in such a way as to reduce the cooperation between the French and English.

"(g) . . . We must bear a principal part in the main offensive for the reason that the other countries have suffered nearly all the important losses they will stand except in defense.

"(h) During the early part of 1918 our troops will not be instructed, equipped, or sufficiently numerous to take a materially great part in the war. They will not therefore be suitable for a general reserve. As a last resort they must, of course, be used to the last man, but to parcel them out and use them up prematurely in piecemeal means eliminating the possibility of launching a great Allied offensive in 1919.

"Political situation: To take full account of political considerations it is necessary to inquire not only into national aspirations but also into national antipathies and possible ulterior motives of governments. . . . France desires Alsace-Lorraine. It is believed that many French people suspect ulterior motives on the part of the English. . . . The British consider that the French methods are unreasonable in many cases and feel that the French are more interested in having their own ideas prevail than in winning the war. . . .

"England, France and the United States all contain certain elements who realize more fully the national necessities for after-the-war commerce than they realize that the war must be won before an after-the-war commerce can be established. Whether or not the above estimates are correct, it is undoubtedly true that the French and English relations are none too harmonious. It seems equally true that each of the nations is jealous lest the other's influence over America be greater than their own."

Shortage of Man Power

"In favor of throwing our forces in with the English, we find the increased morale which would benefit England. Due to the exceedingly heavy losses, with but little corresponding gain, which the British suffered in 1917, there appears to be little doubt that the present political and moral condition of England is less favorable than is that of France. It is to be remembered, however, that this condition may only last for a moment.

"Against changing our plans—to be more intimately associated on land with the French than with the British—we must consider the suspicions which would be raised in the French mind, suspicions which would be aggravated by German propaganda. . . . It has been suggested that it would be desirable to place our troops between the British and the French. It is difficult for us to avoid friction now, and to place our forces between those of our allies would increase our difficulties. We are on French soil and must use French facilities and it would appear we must get along with the French unless we decide to turn all our forces over unreservedly to the British.

"The constantly increasing efforts which not only the British but the French are making to induce us to put our troops into their units seems to be indicative of a growing necessity for raising the morale of our Allies and of a deep anxiety on their part concerning the possibilities of the next few months."

Only one American division had appeared on any portion of the front up to the first weeks of January, 1918, training not having been completed; but we had in France at the opening of the new year more than 176,000 troops. Our Allies began to feel the delay acutely and to regard the future with forebodings.

The British thereupon made another proposition, on January tenth, this time to secure 150,000 American replacements for their forces. A memorandum from General Sir William Robertson, Chief of the Imperial General Staff, set forth the plan. As it was discussed in conference later I will give only the substance here. Sir William referred to Russia's defection and the extent of the Italian disaster, emphasized the diminished man power of France and stated that heavy losses had compelled the British to cut down their divisions from twelve to nine battalions. On the other hand the Germans had placed twelve more divisions on the Western Front, bringing them from the east, so whereas the combined French and British divisions were fewer by eleven than they had been, Germany's strength had increased to a net gain of thirty-nine divisions. General Robertson conveyed the information that Germany could bring forty more divisions to the Western Front by the summer, but Britain would have 25 per cent less infantry by then.

"If France and England do not receive substantial American military assistance before the summer," he said, "the assistance America is now preparing may come too late to admit of the entente securing the kind of peace for which they are fighting."

Again: "The main difficulty in making your help available lies in sea transport, and from this point of view it is clear that to bring from America a given number of men with all necessary equipment, horses, etc., as complete divisions means an infinitely greater shipping effort than to bring the same number of men as battalions, and without transport of any kind—which could be found by us. Having regard to the general critical situation and to the shortage of our manpower my Government is prepared, in order to secure infantry reinforcements immediately, to run very considerable risks in the reduction of our present stocks of food and war material in the hope that later on the American commercial fleet, as it gradually increases, may be able to give compensation for the cargo shut out by the carriage of the reinforcements. All could be done without in any way interfering, now or in the future, with the transport for the American army as at present arranged, and it is estimated that 150,000 additional men—or 150 battalions—could be brought over within 3 or 4 months of the time it is decided to permit of their employment in the manner indicated. . . . It would not serve any very useful purpose to put these American units into British formations unless they could remain there for a reasonable period of time—say 4 or 5 months. . . .

"The great difficulty which confronts you in acceding to the above request is the very natural one of national sentiment and the desire to retain national identity. This is fully appreciated by the British government, who feel that if America can accept the proposal she will thereby display the greatest possible magnanimity and sacrifice."

This was an appeal calculated to touch the American spirit of sacrifice. Later in the memorandum General Robertson says: "I have already dealt with (a)"—General Pershing's suggestion to bring over divisions in place of battalions, so that the American Army might be built up without further delay—"in discussing transport; and the 2 or 3 extra divisions which the available tonnage would bring would not, I feel sure, be deemed by my Government sufficient justification for the risks incurred in providing the tonnage."

General Robertson's Statement

At a conference some time later, the Chief of the Imperial General Staff again made it plain that the British could not make sacrifices in shipping unless they were to obtain use of the American troops so transported.

"It is however," Sir William urged in support of the British proposal, "a matter of national sentiment on the one hand and on the other of Germany establishing herself in a winning position if your assistance does not come in time. . . . As you are aware, the French Prime Minister feels equally with the British government the inestimable value of the proposal and has no desire whatever to raise difficulties in regard to its application to the French Army as well as to the British Army."

The American commander in chief forwarded the British proposals to Washington, and in notifying the British of this step, took occasion to inquire into their man power. "In view of the national sentiment in our country against service under an allied flag at this time, it is deemed of the utmost importance, if the above plan be considered by my government, that the British government declare its purpose to exert every energy to keep its own forces as strong in man power as possible. Only with this general understanding in America would the foregoing plan meet with approval there. I would request a full statement from you as to British resources in this regard, including those at present available and to become available during this year."

General Robertson lost no time in replying. He furnished figures with which the world has been made familiar— United Kingdom had raised ar tained 7,500,000 men for its arm and of these over 4,000,000 wer time being carried on the strengt armies. By bending every effort the British could make available ice at the front 449,000 men th training, plus 100,000 more to be

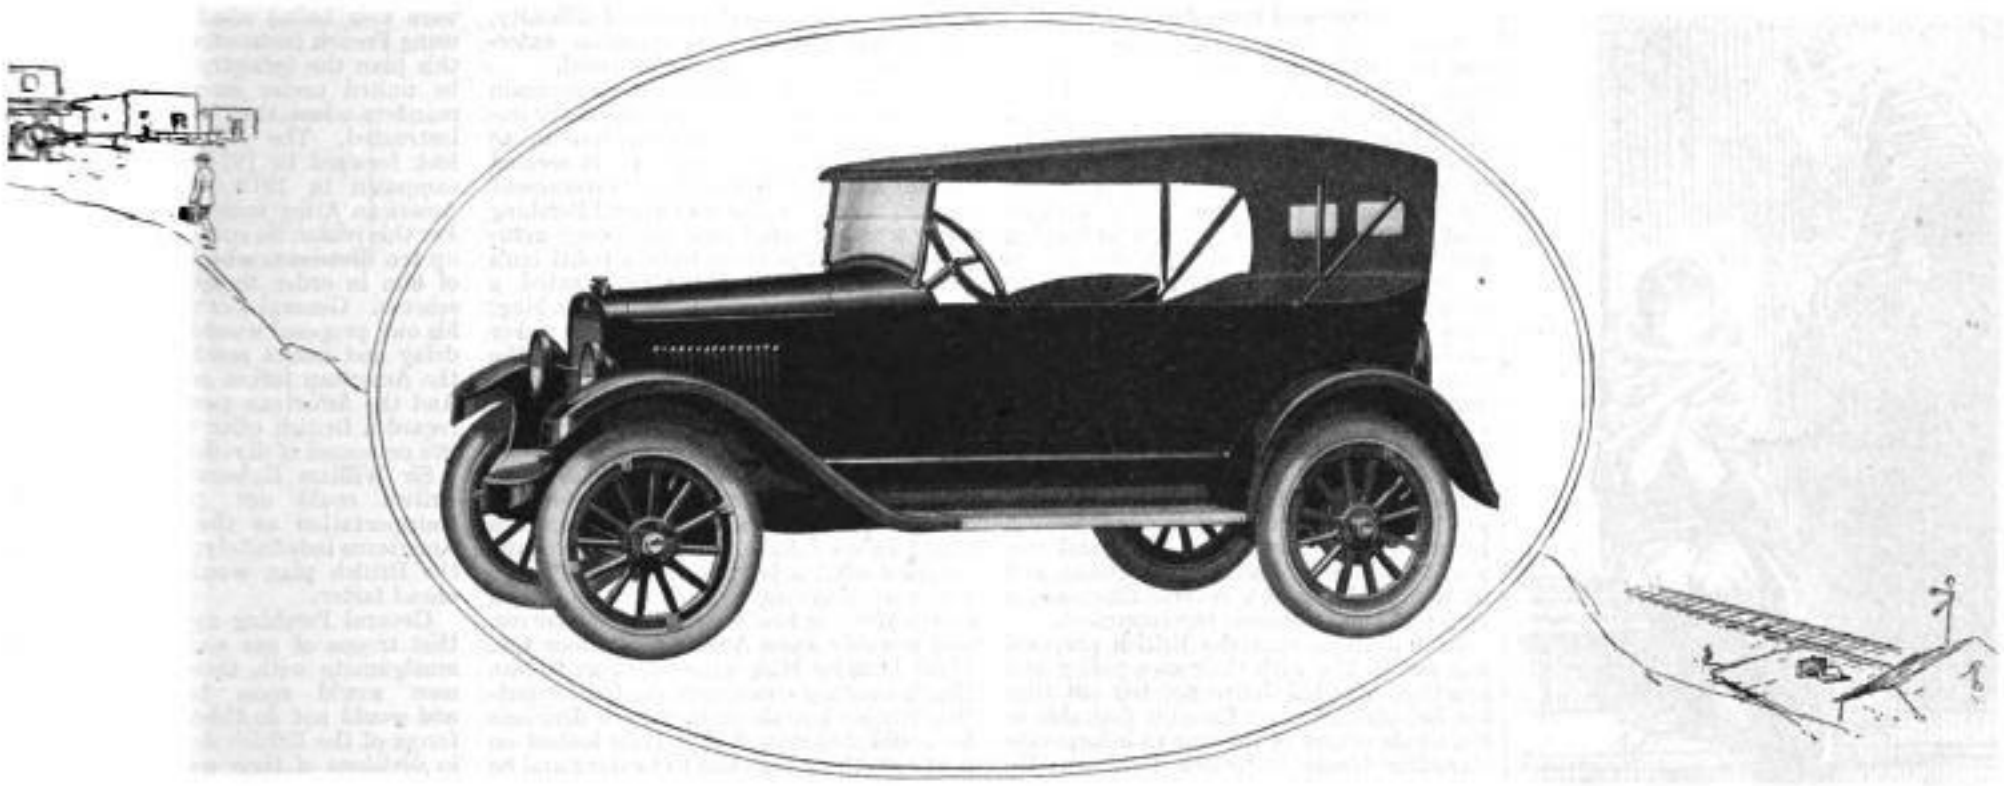
In his book issued since the war Robertson has furnished some figur throw additional light on what th ican commander in chief was tryi at by his queries. "There were a ginning of 1918 nearly 1,500,000 m United Kingdom borne on the str the army," says Sir William in h "and it was frequently asked number should be so great. It was much greater than it ought been, and as C. I. G. S. I had ma endeavored, though without much to get it reduced. The responsib reducing it rested with the Army as a whole and not with the Gener as each department of the War O tained men at home on services co with its own special duties, and th eral Staff could do nothing except bring about a reduction so as to more men for the battle fronts."

"It was frequently asked why th ber should be so great!" Nearly 1,5 men were borne on the strength armies at home in England when th ish government was asking for 1 American troops as replacements fo ish divisions.

Pressure on General Pershi

An explanation of the British diff in maintaining their strength on the ern Front may possibly be found in a part of Sir William Robertson's "There were, towards the end of 191 writes, "probably no fewer than 1,20 men in distant theaters, who, be it were mainly fighting Turks and Bu and not Germans, and although a proportion of them were native troop therefore not altogether suitable fo ployment in France, they contained siderable number of British troops could well be spared without incurrin risk, as our successes in Palestine Mesopotamia had removed all dang Egypt, Persia, and India. By redu our forces in these theaters to a defe minimum we would set free not only troops for the West Front but also shipping for the Americans. As alre shown, this was not done."

At this juncture it may be well to exp what the French and British proposit aimed at and what effect their adop would have had on American effort. government of each of these count strove to get the United States to cons to the American forces being split up amalgamated in its armies by small un In other words, American soldiers wo have fought by battalion or regimen units under British or French comma The United States would have been utili as a great reservoir to supply the British a French armies and furnish replacemen Boiled down to a few words, that is wh their every proposition amounted to.



Day in and day out, month after mont the French and British persisted in th purpose. They brought to bear every co ceivable form of pressure to gain th point. In emergency the United Stat yielded some temporary relief in the w they desired—but all that will show good time. It early developed into a co test between the two Allies for the use our troops, a contest provoking no litt bitterness; but on occasion, when the was some advantage to be gained by united front, they acted in concert.

Had Pershing surrendered to the con stant and powerful pressure brought t bear—had he even backed up an inch— there would never have been any American Army in France, and the history of 191 would have been different.

At a conference on January 24, 1918, in Compiègne, which was attended by Gen eral Petain, Sir Douglas Haig, General Robertson, Foch, Pershing, Davidson and Lawrence, both Petain and Robertson re marked, in reviewing the situation, that their only hope lay in the American re serves. Without them, offensives or counter-offensives could not be undertaken. They asked the American commander in chief for a statement of the state of his forces.

Jimmie Caldwell says!

12,543 miles of hard driving
28 miles to the gallon of gas
No trouble of any kind

Jimmie Caldwell, of Dallas, Texas, one of the many thousands of traveling men who drive the Overland, supplied the figures. His experience gives graphic proof of the sound engineering and careful workmanship which make Overland the outstanding value in owners' service.

"In calling the Overland the 'Economy Car,' you have certainly named it right. I have kept exact cost on my operating expenses from the day I bought my machine.

"At the completion of the 12,543 miles, this is what I found: I had used 478 gallons of gas. This figures up an average of about 28 miles to the gallon.

"My total expenses up to that time, including gas, oil, tire repair, storage, washing and all other expenses, averaged 3.7 cents a mile.

"I have traveled Texas, Oklahoma and New Mexico, regardless of road conditions or weather. I have never been pulled in except on one occasion, when I ran out of gas. I have never been delayed on the road by trouble of any kind."

Other owners' letters record similar satisfaction with the comfortable, dependable, economical, completely equipped New Series Overland. Could there be any more convincing proof of the Overland's unequaled value as America's Comfortable Low-Cost Car?

(Continued from Page 32)

General Pershing pointed out that the question had resolved itself into one of transportation and that nothing he might say could make the troops come faster. He wished them to understand clearly, however, that any real offensive in which the Americans took part would be executed by them as an American Army, and he could not approve the principle of loaning men to the Allies except in an emergency.

The British were still pressing their proposals for the transport of 150,000 American infantry to be amalgamated in British divisions, and their plan became the subject of a conversation between Marshal Joffre and the American commander in chief on January twenty-sixth. Joffre was against the scheme. He thought incorporation of American battalions in British divisions would have a bad effect. The Americans would find themselves commanded by a British general and British staff, and this would inevitably lead to resentment and friction; in case of a reverse there would be a tendency to blame the command.

As indicative that the British proposal was not in line with their own policy and practice, Marshal Joffre pointed out that the British had never found it desirable in the whole course of the war to incorporate Canadian troops in British divisions. He considered that the effect of amalgamation on the American people at home would seriously cool their fervor and create complications.

A very frank discussion of the British proposals took place at a conference in the Trianon Palace, Versailles, on January twenty-ninth. Present at this conference were Premier Lloyd George, Viscount Milner, General Sir William Robertson, Field Marshal Haig, General Sir H. H. Wilson, Lieut. Col. Sir M. P. A. Hankey, General Pershing, General Bliss, and Colonel Boyd, aide to Pershing.

Mr. Lloyd George's Argument

Lloyd George opened proceedings by asking what the situation was in regard to the proposed incorporation of American battalions in British brigades, to which Pershing replied that the question was in abeyance, pending action of the British Government on General Robertson's dispatch.

Sir William Robertson then announced that, contrary to their understanding, General Pershing had not approved the British plan in forwarding it to Washington and had not intended that the Administration at Washington should believe he did. General Pershing had felt very strongly the objections involved, and his counter-proposition was to bring over not only the infantry but the rest of the combat troops in these divisions as well. So, said Sir William, there would be sufficient transport for only seventy-two battalions instead of the one hundred and fifty they had hoped for, if complete American divisions were brought over, and the question arose as to whether it was worth while for the British to carry out the transaction in view of the shipping sacrifices involved.

David Lloyd George then took up the discussion. He read a cable which General Bliss, of the United States Army, had received in London; the Prime Minister insisted that this cable meant Washington had agreed to the British proposition.

Some argument followed, in which General Bliss remarked that the whole question was getting mixed up and that the Washington cable did not express approval of the British proposals. Instead, Washington submitted the question to General Pershing, and the latter did not approve.

Mr. Lloyd George reiterated that the British Government had understood from a telegram it received from General Pershing that he approved of bringing over one hundred and fifty battalions for incorporation in British brigades. To this, the American commander in chief replied that he had never approved the proposition and had never gone on record to that effect.

Lloyd George remarked that his government had interpreted the words "serious consideration" as tantamount to approval.

Pershing told him they were not, however—that he had only submitted the plan to Washington for consideration, and in a subsequent cable had emphasized the importance of keeping the American troops under command of their own officers.

At this point Sir William Robertson drew attention to the fact that the Washington reply referred only to the shipping difficulty and not to the political difficulty, so he had surmised Washington entertained no objections to the proposal.

This hint brought Lloyd George again to the fore. He said he had gained the impression that the question was now up to General Pershing for decision. It seemed to him that the Washington Government wanted a statement from General Pershing as to whether a military emergency actually existed. Speaking from a politician's standpoint, he thought they wanted a recommendation from General Pershing; that he himself knew what Secretary Baker wanted—he wanted a statement from the American commander in chief that a military emergency existed.

Two things had to be considered, argued Mr. Lloyd George. First, the placing of these American soldiers in British units was a necessity; second, they must consider the consequences of the disaster which might follow failure to do so. They must consider what a terrible thing might happen were Germany to turn on the British on the Western Front with all her resources, and possibly some Austrian divisions too. If Sir Douglas Haig were to report to him that a military emergency existed for putting British battalions in French divisions he would understand that Haig looked on it as something that had to be done and he himself would be protected by Haig's statement for the necessity of such action.

After a certain period of war, continued Mr. Lloyd George, every administration was severely criticized. In England the government had fallen; the same thing had happened in France. If he were in Secretary Baker's place he would be relieved to receive a recommendation from General Pershing in favor of the scheme.

General Pershing expressed the opinion that the adoption of this measure would so antagonize national sentiment that political outbursts would create a general opposition against the direction of the war, and the President would be exposed to bitter criticism. The Irish population would very naturally resent giving the United States troops for service in the British Army. All sorts of questions would be raised as to why our divisions were not competent to perform as units under American command. The question would be asked whether we were in the war to fight for Britain, and there would inevitably follow misunderstanding as to why our officers did not lead their own men.

A Question of Method

Mr. Lloyd George interposed that the battalions would be under American officers.

The commander in chief replied that the brigade and division commanders would be British, and the Americans would be acting under their orders. Before any such program could be carried out such a storm of disapproval would be raised that the project would have to be abandoned. The acceptance of this proposal was bound to create a breach of feeling between the British and American people, and stir the jealousy of the French, who would allege British domination. Moreover, it would be a dissipation of the present effort to build up a strong American Army. In his opinion it did not matter so much where the troops were in line—the thing was to get them there—so why not as an American force?

Replying to General Pershing, Lloyd George said the proposition was based on the fact that it took longer to train divisions than it did battalions, and the urgency was great. He then asked Sir Douglas Haig a question, and Haig remarked that a German attack might be expected any time; the Germans were moving to the Western Front an average of nine or ten divisions per month.

Sir Henry Wilson said by the first of May the Germans might attack with ninety-six divisions they had available, and they might have on the Western Front at that time two hundred and fifteen divisions—already they had one hundred and seventy-four.

General Pershing said that if the Germans attacked as soon as indicated, the American troops the British wanted could be of no assistance anyhow, for they could not be brought over that soon.

Amplifying his objections to the proposal he offered instead a plan to have the British bring over the entire combatant personnel of the divisions, giving the British the infantry and auxiliary services, and leaving the artillery to be instructed according to the same plans and on the same grounds as were now being used by the Am using French instructors and mate this plan the infantry and artiller be united under one of our ow manders when they had been sui instructed. The Allies had not look forward to 1918, but probab campaign in 1919 also, for wh American Army must be large and For this reason he could not afford t up ten divisions, which would be r of him in order to carry out the scheme. General Pershing submitt his own proposal would occasion ve delay and would render the useful the American forces much more v And the American people would c regard a British offer to transport tire personnel of divisions as very ge

Sir William Robertson stated th British could not place the p transportation at the disposition Americans indefinitely. He contend the British plan would result in ahead faster.

General Pershing again reminded that troops of one nationality wou amalgamate with those of another men would soon become disgr and would not do themselves credit forces of the British dominion serve in divisions of their own, and the had refused a plan submitted early war to amalgamate with the Frenc

At that, Lloyd George took u cudgels. He said the British had reason to refuse to amalgamate wit French in the beginning of the war. sides, they had done something in the first part of the war—they had five divisions of the very highest quality t in from the beginning. Whereas the A icans had been in the war since last

General Pershing reminded him tha Canadians had not amalgamated wit British.

A Lively Debate

Sir William Robertson said there never been any call for that; and matter of fact the French had never a the British to amalgamate with t Existing conditions pointed to the pr sition to incorporate one hundred and battalions in British divisions as the way to meet the situation.

General Pershing replied that we w not meet the military situation better one plan than by the other.

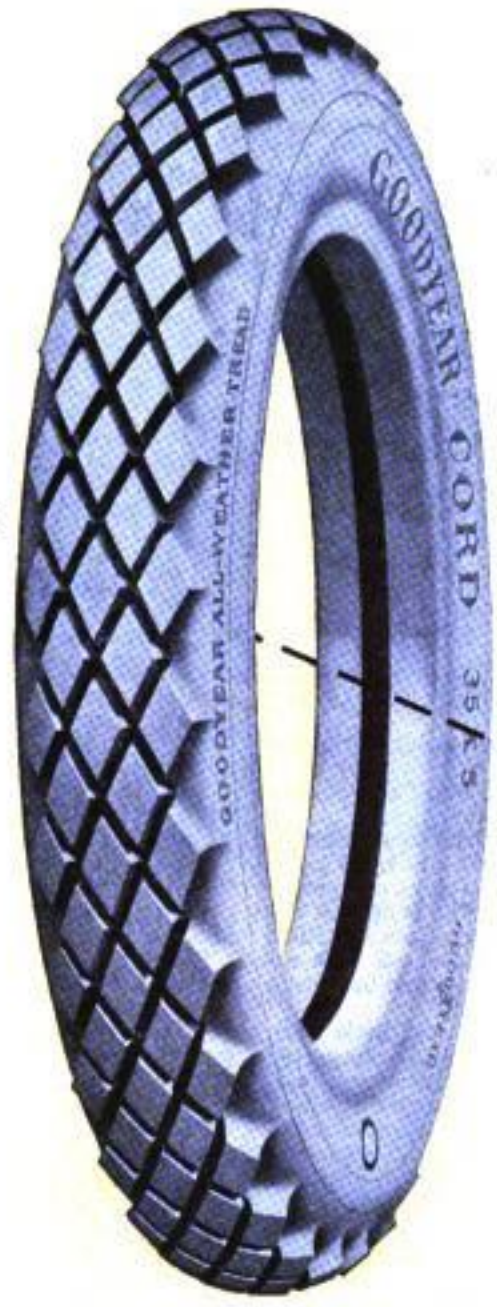
Sir Douglas Haig now took part in discussion, observing that the situat was more serious than he had previou thought. General Petain informed the French would have to disband twe divisions by the end of 1918 without fighting, and that such a fight as the G mans might be expected to put up wor cost at least 500,000 men or thirty di sions. With twenty divisions suppress and thirty more put out by the fightin the French Army would be reduced fifty divisions. That was a very seri matter. Sir Douglas concluded by dwe ing on the difficulty of organizing new di sions and the usefulness of the America in battalion units according to the pl proposed. General Pershing had be speaking only from theory, while he spok from experience, he said.

A general discussion ensued, and the in reply to a remark by Sir Douglas Hai General Pershing said that the Britis commander in chief seemed to imply tha the United States was to continue feedin recruits to the British Army. He de manded to know where this proposition was supposed to stop. In his opinion should stop now, and every effort should b exerted to build up an American Army.

Haig stated he had always understoo the scheme was to be a stepping stone to ward training and turning out American divisions rapidly.

In that case, replied General Pershing, he and the field marshal were in entire accord, if Sir Douglas meant what he said.

Sir Douglas remarked that he was speaking English.



Later, during an argument as to whether these battalions would be with the British for training or really to make up a shortage Haig admitted that, incidentally, they would make up a shortage.

General Pershing announced that he was quite willing to have American troops trained in the British Army and had actually telegraphed this as a recommendation. But he understood that Sir William Robertson's plan comprehended feeding

Veteran Goodyear users tell us that our tires today give more than twice the mileage they did ten years ago

The average decrease in the price of Goodyear Tires since the year 1910 is more than sixty per cent

QUALITY WAS NEVER SO HIGH PRICES WERE NEVER SO LOW

It is a favorite practice nowadays to refer more or less sagely to the good values of "before the war."

So far as tires are concerned, any such reference is an illusion.

The plain fact is, pre-war tire values were only a pale shadow alongside those of today.

Every tire in the Goodyear line proves this to be true.

If you are a veteran Goodyear user you have probably noticed that our tires today give more than twice the mileage they did ten years ago.

If you have compared the prices of then and now you have seen that present Goodyear prices are less than half of what they were.

Just to make this clear, consider our 30x3½-inch Cross-Rib clincher.

In 1910, for example, you paid $33.90 for this size tire.

Today, for a vastly better tire of the same type, you pay $10.95!

All other Goodyear Tires show similarly important reductions, the average decrease in price since 1910 being more than 60 per cent.

Goodyear quality was never so high—Goodyear tires today are larger, heavier and more durable than ever before.

Goodyear prices were never so low—as the figures here listed will show.

30 x 3½ Cross-Rib Fabric	$10.95	32 x 3½ All-Weather Tread Cord	$25.50	33 x 4½ All-Weather Tread Cord	$42.85
30 x 3½ All-Weather Tread Fabric	$14.75	32 x 4 All-Weather Tread Cord	$32.40	34 x 4½ All-Weather Tread Cord	$43.90
30 x 3½ All-Weather Tread Cord	$18.00	33 x 4 All-Weather Tread Cord	$33.40	35 x 5 All-Weather Tread Cord	$54.75

American troops into the British line as a more or less permanent arrangement.

Lloyd George said the British War Cabinet had never understood this.

Sir Douglas reiterated that he quite understood the proposition was intended for the training of American troops.

Still unconvinced that this understanding was clear in all quarters, General Pershing stated that he had gathered from Sir William Robertson that the latter wanted the American battalions put into British divisions to fill up the depleted British battalions.

Viscount Milner now intervened for the first time. His understanding was that Pershing would get his divisions formed more rapidly by passing them through the British line than by confining his training to the American camps.

After General Robertson had read aloud a memorandum covering the conditions for the incorporation of the American battalions, General Pershing resumed statement of his objections. He said he wished to make a clear distinction between placing battalions with the British for training and placing them there for service. Fighting was the best training troops could have, but he wanted them to grasp clearly that American battalions were not coming to stay in British divisions, but merely to train until ready for incorporation in divisions of their own.

On hearing this, Lloyd George asked if the general proposed to take the battalions out of line before the fighting was over, thereby leaving each British division shy three battalions.

"Do you think anyone would change during the fighting?" demanded Pershing.

"Would you take them out when you wanted them?" persisted Lloyd George.

"I would." General Pershing added that he insisted on being free to take over these American battalions when they were sufficiently trained to be used in American divisions.

The British Prime Minister inquired whether Pershing would be prepared to put in more American battalions to replace those taken away. The American commander in chief replied that he would like to be informed what would come from.

Were he to furnish replacements, he said, it would interfere with the project of creating an American Army. Anything to carry out the English plan would, he said, be a perfectly separate and independent scheme from the formation of the American Army.

Shortly after this the conference adjourned, Mr. Lloyd George intimated that he wanted to confer with Sir Douglas.

Editor's Note—This is the first of a series of articles by Mr. Pattullo. The second will appear in an early issue.

THE TIP

(Continued from Page 15)

said that he happened to be in a slight hurry. Twenty minutes later he was swung abruptly upright.

"Lilac on the face, sir? A bit of fragrant tonic on the hair?"

A wild light shone in Mr. Peavy's eyes. "Both," he commanded recklessly.

With the touch of fragrant tonic mingling with the remains of the straight fifteen-center Mr. Peavy paid his check and passed out. At the first corner he consulted the huge hunter which dangled from the Elk's charm and chain. It was 6:55. He extinguished the fifteen-center and boarded a surface car bound uptown.

Twenty minutes later a fat little man, his thinning hair most marvelously parted and exuding the pungent fragrance of budding lilacs, peered into the Ladies' Room of the Restmere Hotel. In a far corner a stiff figure in black and spangles sat between a giggling young thing of thirty-four and a stolid mountain of seal and kolinsky.

The little man smiled broadly and crossed to the sofa.

"'Lo, Henny," he bubbled. "Sorry I was late. Got held up. You know!"

The lady in black sniffed suspiciously and then nodded her head as if confirming some preconceived theory.

"Didn't want to be late. You know that, Henny. Especially a night like to-night. Just wait till you hear why ——"

The lady continued to nod—grimly.

"Where are your rubbers?"

The silly little thing of thirty-four giggled outright.

The little man laughed nervously.

"It's all right, Henny. Let's go in an' eat. There's a fine new picture at the ——"

"When did you take those rubbers off?"

Someone else in the background of faces laughed outright. A desperate inspiration came to the little man.

"Come on, Henny," he said. "It's all right. I—I—I left them out at the front door."

A belted earl conducted them through a blur of faces to an inconspicuous corner of the Fountain Room. On the right a huge palm separated the pair from another small table. On the left an aisle, and at its end the famous fountain sprayed with varicolored lights and huge goldfish darting, like golden blades, against the blue-green of the plate-glass tank.

The little man smacked his lips appreciatively and peered over the huge menu at the ominous figure of his companion.

"Swell! Eh, Henny?"

Henny's lips were a straight line. "If you can afford goldfish with your meals it is."

"We can. Wait till you hear."

A sniff.

For the moment the little man chose to ignore it.

"Oysters, Henny?"

"No."

"But Henny, they're still good. Ain't they, waiter? You know what they say in the rime about the R months." The little man was trying—hard—to ignore the calm.

Henny said it dryly: "It isn't R's that my stomach objects to—it's oysters."

The little man laughed gayly at this—too gayly.

"Some joke! Eh, waiter?"

The waiter thought so.

The lady did not.

"Roast beef," she said briefly, "fried potatoes, mixed tea and a chocolate éclair."

"Aw, Henny! Don't you want something different? Some of this New Jersey duckling or ——"

"The fried-potato order will do for two."

The little man dropped the card disconsolately.

"All right," he said bitterly. "Make the whole thing for two."

Water goblet in hand his bitterness left him.

"Henny! Henny!" he whispered hoarsely. "Lookit! Lookit!"

"At what?"

"Coming towards us. With the head waiter. See?"

"Well?"

"Don't you see him?"

"I see," said Henny quite calmly, "a dried-up man that looks as if he never slept eight hours in his whole life."

The little man tossed his head in complete disgust.

"Ain't that just like a woman?" he whispered under cover of the dinner card. "Calling a man like Henry Loveret dried up an' never sleeping! Can you beat it?"

"Oh," said Henny, quite without emotion, "so that is Henry Loveret, is it? I read about him in the paper last Sunday. The paper says they call him the Wolf of Wall Street—the poor man!"

"Poor!" ejaculated the little man. "Can you beat that? Why, do you know how many millions he is worth? Do you, Henny? Well, it's more than you have fingers and toes. An' all in the last three years too! Started as a board boy at Hallet & Hallet. Saved up and made a little clean-up! Made a little bigger clean-up! Then came the big bear market of 1920. Gosh! The money he made! An', Henny"—insidiously—"he didn't start out with any more than we got now."

"From his looks," observed Mrs. Henrietta Peavy, "he appears as if he won't have very much longer to enjoy it."

Mr. Peavy, for it was he, leaned as far over the table as his generous rotundity would permit.

"But we have, Henny!" he whispered impressively. "And we have it coming to us. Listen! I have it straight this time—straight from Ashbrooke himself! An', Henny! He patted me on the back when he told me! We're going to be rich, Henny! We ——"

Mrs. Peavy stopped him with an ominous forefinger.

"Oliver J. Peavy," she demanded, "when was the first time you made me come downtown to dinner this way?"

"Well, now, Henny ——"

"It was just about eleven years ago. We had saved up just fourteen hundred dollars for the farm. We needed nearly two thousand more and it looked so far off—and you said you had your information so direct ——"

"Oh, now, Henny ——"

"We said that it would be a lesson to us, didn't we? And we went to work harder than ever. And then when we had nearly a thousand again, after four years of the hardest kind of saving—you—you invited me to come downtown to dinner again."

"But, Henny, I had it straight from Mead himself. What you might call a straight tip—almost. Mead knew a man that knew the vice president of the company as well as I know you, and—an'

At the table behind the palms a fidgety old man of thirty-six had ceased to inhale his long brown cigarette. Henny perhaps just as well he had not asked the captain to move him. Apartment-house talkers were not always so interesting as the old lady was the straightest, prettiest thing—like you see in moving pictures.

She was speaking again:

"And the vice president was there, wasn't he, O. J.?"

"Yes; but, Henny, this is different. Never a tip was ever straight this is. I got it straight from Ashbrooke himself. Then, Henny, he laid his hand on my shoulder an' ——"

"You said that before. They are always straight—until it was all over and we were starting again. No! I said to myself the last time that it would never happen again. Never! Not even if the farm never comes. If I never do open the bedroom window and feel the salt in the air."

"But listen!"

"Oliver Peavy," said the lady with finality, "there is no use talking. I will not give up the bank book! We're going to take the long way round, but the way is sure. I may look out the window at the coal dust for many a year, but in the end I may sniff the salt. The Massachusetts Baileys were always a long-lived clan. Even if you were only sober now."

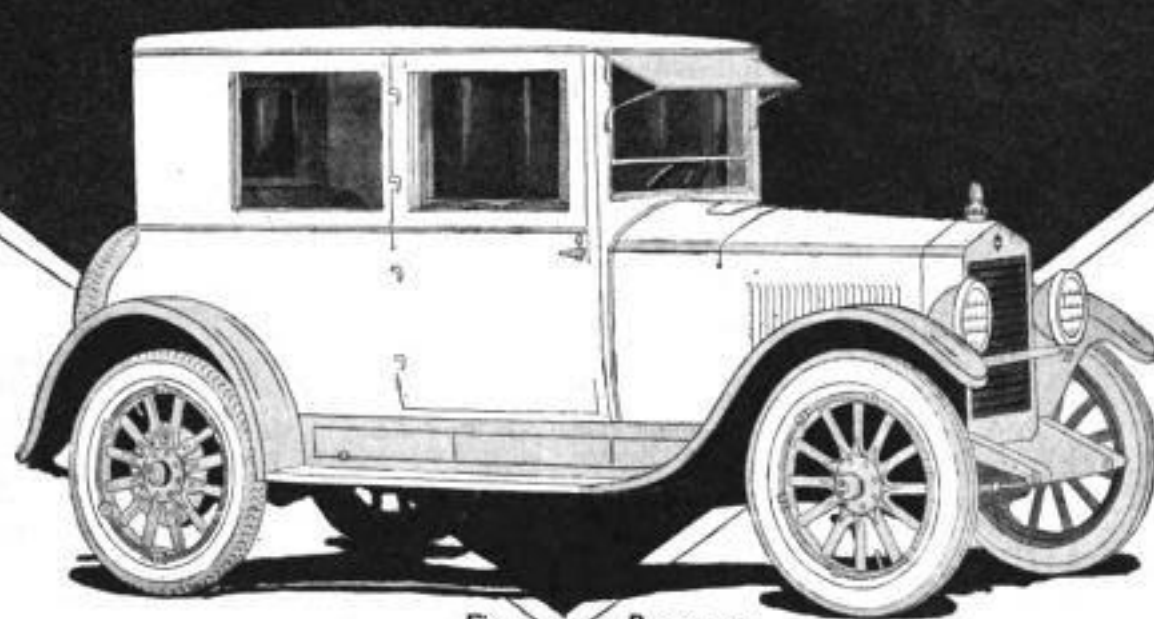
"Sober!" The little man's knife fell with a resounding clatter. "What do you mean, sober? That's what you said over the phone. An' furthermore, Henny, you know better! You know I haven't had even a touch of elderberry wine in fifteen years. You know ——"

"Sobriety," said the last of the Baileys clan slowly, "isn't always a matter of elderberry wine, Oliver! In—in your case it isn't. It's—it's money drunkenness and this is your third jag."

"Why ——"

"I've watched it for many and many a year. It begins when the deposit book begins to draw close to the thousand mark. You begin to get uneasy! You—you talk loud and read the stock page instead of putting on your slippers and demand double Canfield. You get abusive with food and talk about getting a raise or know the reason why. You—you smoke cigars instead of your pipe. You—you get as uneasy as Luke Tullo down home when spree time is approaching. And then it happens. Only this time it won't! Because, Oliver J. Peavy, the bottle is going to stay locked up!"

It was the moment for a determined stand. The money was his! He had worked for it. Hard! Half was his by any code. And the opportunity! It was the moment for any man—no matter how easy-going—to arise and declare himself.



Mr. Peavy reddened liberally and half arose for the declaration of rights. But he didn't. Old Tam Bailey had had the same cold eye. He sank back into the plush of the golden chair.

"All right," he laughed wildly. "All right! Go ahead. Keep me working for another hundred years. I—I—I ——" And then inspiration came. "But just the same I didn't leave the damn old rubbers at

ESSEX COACH
$1345

Five Passenger

ESSEX MOTOR CARS

ESSEX MOTOR CARS

Performance as Notable As its Appearance

Don't Underrate Its Importance

The Essex Coach operates with the nimbleness of an open car.

You will like the way it gets about as well as its good looks and comfort.

It won't cause annoyance with squeaking body and rattling doors. You will be pleased at the little service attention required to keep it in tip-top condition.

Motoring pleasures come from ease of operation—simple control—a free, quick, responsive car that goes at any pace, that darts in and out of traffic and flies up-hill without effort of driver or motor. For these qualities all know Essex excellence.

Touring, $1095

Has These Fine Car Details

Dash controlled ventilator.

Wind and rainproof windshield.

Fine quality plate glass windows.

Sun visor.

Luggage and tool locker, opened from rear.

Newest type easy operating crank-handle lifts on door windows.

Four hinges on each door, and fittings that hold doors solid—very important.

Fine texture, long wearing upholstery and rugs.

Radiator shutters and motometer for efficient motor control.

Cord tires.

Coach, $1345

And no sacrifice of these advantages is made to obtain the closed car comforts furnished in the Coach.

Remember when buying a closed car you will continue to require motoring performance. You will want to drive wherever you drove with your open car. You want its fleetness, its reliability and its economy.

These are advantages of the Essex Coach plus its protection, comfort and distinction. They are made all the more attractive by reason of the price.

You can't ignore that.

Says Goodbye to "$22 a Week"

—At 27 Earns $4,500 a Year

"Three years ago," writes A. J. Klick, "I was just an average young man of 24, possessing a fair education, liking a (so-called) good time, occupying a bookkeeper's high stool and receiving $1,100 per year.

"A crisis in my affairs woke me up and I began the serious study of Higher Accountancy.

"Before the year was over, I was making progress financially. Interested in my work, advancing steadily, more confident of myself, by the time I had finished the course I had an executive position and $3,000 a year.

"Last year I became comptroller of a good-sized corporation. My work became a pleasure; salary increased to $3,800.

"This year I accepted a similar position with a larger corporation, with broader responsibilities and an initial salary of $4,500. The future years are full of promise."

Unusual Opportunities in Accounting

Klick is *right*. His future years *are* full of promise! Never in the history of business has the need for trained accountants been so great or the rewards so attractive. The files of LaSalle Extension University contain literally thousands of letters reporting rapid advancement—incomes doubled, tripled, and quadrupled as the result of a comparatively few months of home-study training. Where these men were getting $1,500 or $2,000 a short time ago, they are earning from $3,000 to $10,000 today, *and they are on the upgrade.*

Their chance is *yours—if you will take it!*

Train by the "Problem Method"

Why let the *other* fellow walk away with the better job when the training you need is readily within your reach?

Right in your own home you can master Higher Accounting just as well as they! By the LaSalle Problem Method, you will be trained under the direct supervision of William B. Castenholz, A. M., C. P. A., former Comptroller and Instructor, University of Illinois, assisted by a large staff of Certified Public Accountants, including members of the American Institute of Accountants. You will be guided step by step through every phase of modern accounting practice—Auditing, Cost Accounting, Business Law, Organization, Management, Finance and Income Tax Procedure. You will handle practical accounting problems lifted bodily from business life. You will be given special preparation for the C. P. A. examinations.

Send for further information regarding the opportunities in accounting; read the enthusiastic testimony of men still in their twenties and early thirties who have broken away from the low-pay ranks and today are expert accountants—with incomes ranging from $5,000 to $10,000 a year. With this information we will send you particulars of our *convenient-payment plan;* also a copy of that inspiring book, "Ten Years' Promotion in One." "Get this book," said a prominent Chicago executive, "even if you have to pay five dollars for it." We will send it *free.*

Mark—Sign—Mail the coupon—NOW.

the door. I didn't wear them down here a-tall. I'll never wear them!"

Behind the palms the tired Wolf of Wall Street grinned and looked almost youthful. The old lady was a peacherino. If all the lambs were of the Clan Bailey the grist would be mighty small. But the little man had spoken of Ashbrooke. Thoughtfully he drained his coffee.

Ashbrooke! It was funny that one of Ashbrooke's tips would come to roost here! Loveret wondered what Ashbrooke would look like if he could sit at the table behind the palms and listen to his confidential clerk telling tales out of school.

Loveret thought. The security had not been mentioned. The old martinet had not let the jag get even that far. Loveret laughed softly. Was it a hunch? Or wasn't it? Somewhere he had heard once—from some cynical broken-down broker—"Out of the mouths of babes ——"

At least it wouldn't be half bad fun, and fun was uncommon. He paid his check and arose. There was still about this Wolf of Wall Street, the supreme gambler of the big slump, much of the boy who had chalked figures on a bright green board and joked with the dopesters.

Passing to the right of the aisle he slipped, and only the presence of the table by the wall prevented an apparently nasty fall.

"I'm so sorry!"

Popeyed with excitement, Mr. Peavy could only open and close his mouth convulsively. It was Henny who answered:

"Young man, you near had a bad fall."

Mr. Peavy regained his breath. "Don't mind her, Mr. Loveret," he apologized. "She didn't know you."

"I—I ——"

"You don't know me of course, Mr. Loveret, but I'm with Ashbrooke, Mead & Oppenheim. You know them. Peavy is the name."

The Wolf of Wall Street acknowledged the meeting with a smile. "A smart banker, Ashbrooke," he smiled, "but too conservative. But as far as that goes, all you bankers are too conservative—eh, Mr. Peavy?"

Tingling, Mr. Peavy managed a knowing wink. "Not always," he confided. "Sometimes we take a little flyer."

Mrs. Peavy sniffed, unnoticed in the glory.

"But I thought bankers never gambled?"

"They don't, Mr. Loveret. He, he! They don't have to! Not when they have sure things right in the office."

"Clever devils, you bankers," said Mr. Loveret thoughtfully. "Deep, too."

Mr. Peavy waved a deprecating fork aloft, a fork still impregnated with a cross section of astonished chocolate éclair. "Not that I wouldn't like to pass it along. But you understand, Mr. Loveret. Confidential. Eh?"

"Exactly. Highly confidential."

"Won't you ——" Mr. Peavy was reaching for another chair.

"No—er—thanks." The Wolf said it quite hastily but with a disarming smile. "I am late now. And—and I must stop at my room first and get—my rubbers."

"Well, you see," said Mr. Peavy slowly. "You heard him. The biggest gambler in Wall Street. You see what opportunities I have. Why, Henny, in two weeks the farm will be ours, an' besides ——"

"I was thinking," his wife interrupted with quiet calm, "about his stopping to get his rubbers—even with all his money."

III

AT 9:45 the telephone attached to the ornate desk of the first vice president of the National Trust Company tinkled musically, as became the telephone bell of a first vice president.

The vice president said "Hello" curtly.

"Loveret talking."

The v. p. said "Yes" cordially.

"I want you to confirm something I am almost sure of. Have Ashbrooke, Mead & Oppenheim anything in their shop now aside from poor old Stage?"

The v. p. laughed. His best customer's laugh. "To the best of my knowledge, not another fly."

"Certain? Nothing else that's listed on the Board?"

The v. p. thought not, giving certain reasons gleaned from financial back alleys.

"Thanks! For your trouble and frankness I'll tell you something: Stage isn't going by the board. They—they must be going to get their pound of flesh some other way."

The v. p. said "Thank you," and added, "But you know I never gamble."

At 10:20 the v. p. commanded an immediate connection with a downtown number and asked for the senior partner.

"Buy me a thousand S. S. P. at the market," he commanded, and then because the senior partner really was the best of good fellows, though inclined towards jumping to hasty conclusions, he added, "It's really not for me—but for the time being put it in my account."

The senior partner winked solemnly at the telephone and touched the button for his colleague.

"Our well-known v. p. is buying S. S. P. at the market in thousand-share lots."

The junior grinned. "Hot stuff?" he inquired.

"It looks that way. He's buying for the well-known friend."

"Would you pass it along?"

The senior nodded his head. "It—it looks pretty good to me; and because we happen to have a rule about employes and partners speculating in this firm I was just going to suggest that I have a well-known friend with a little spare cash that wants about two thousand shares."

The junior grinned again.

"Isn't that a coincidence now?" he said. "I have a friend that wants fifteen hundred."

In the building across the narrow cañon another man hung up a telephone receiver whose wire ran direct to a private suite in the Restmere Hotel. He lit a narrow flat cigar and whistled softly.

"Dynamite!" he said softly. "Ten thousand shares of S. S. P. at the market. Where does he get his hunches? Before this ten thousand is picked up they'll be calling it TNT."

He called a soft-footed man and spoke to him curtly. The soft-footed man nodded and took the slip of paper. On his way out through the clatter of shirt-sleeved operators he stopped over a scribbling form.

"S. S. P. at the market," he whispered and went on.

A few moments later the scribbler lounged carelessly through the door, then ran for an independent telephone. At the other end of the connection a fat man in a dirty little office grunted with satisfaction and hung up the receiver. He reached for a sheet of yellow paper whose imprint read:

AMOS J. McNULTY
SUCCESSFUL SERVICE FOR TRADERS

Under this caption the fat man scrib "To-day's best bet is S. S. P. Hop at least twenty points."

To a lanky girl in an outer offic handed the sheet. "Get this out pr And send Collison a check for a hund in a plain envelope."

The lanky girl giggled.

IV

IN THE private office of Mr. Payne brooke Mr. Oppenheim laughed ously. "It's like throwing gasolin fire. Spangling is nervous too! Simps Sayre have taken five thousand shares they grab every offering anywhere nea market."

Mr. Henry Mead nodded thoughtf "Well, that's what we wanted, wasn' We wanted a chance to distribute a more stock before we greased the skid the big drop, didn't we? That was wh called Peavy in, wasn't it?"

Mr. Oppenheim grunted contem ously. "Sure it was," he agreed. " Peavy and all of the little bucketsho that Peavy knows couldn't margin t than fifteen hundred shares at the ou Does Simpson & Sayre buying thous share lots two points above the ope sale look like Peavy? Don't make laugh!"

The telephone in the corner jangled.

Mr. Oppenheim picked up the rece with a jerk. A moment later he retur it to its place with an oath.

"Coles just bought eight hund eleven hundred and a thousand-sh block—and paid 35½ for the last th sand."

"Coles?" repeated Mead stupidly.

"Yes, Coles! And you know who C stands for. So does everybody in Street. In ten minutes it will be in ev trading room in the United States. Ca you see them reading it? 'Loveret buy S. S. P.' Hanged if I haven't half a mi to ——"

"Wait a minute!" It was the fi words from the head of the house. uttered them from his position by the w dow, where he had stood for a full twen minutes gazing down into the busy crev of Broad Street. "Don't be young! Do forget that you are in the banking busine Don't forget that for a moment! What di ference does it make if Simpson & Sayre take stock at the market? What differen does it make in the end if a born gambl like Loveret, even if he is able to buy an sell anyone in the Street at the momen

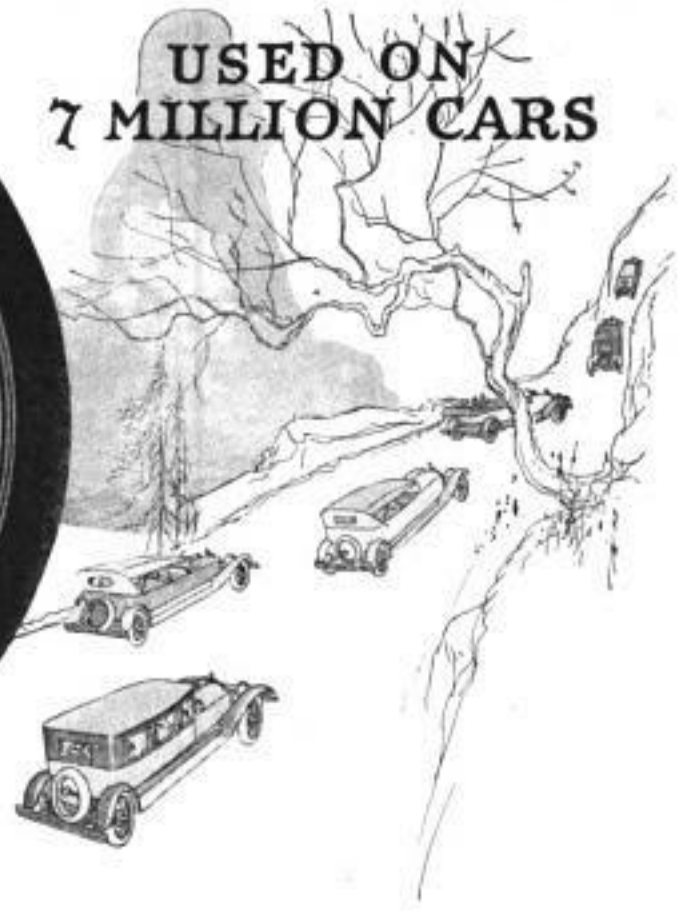
Stewart Vacuum System and Speedometer

Giants of the Automobile Industry

DO YOU know why almost 90 per cent of automobile manufacturers are equipping the cars they are offering you, with the Stewart Vacuum System? Not only because of its perfect operation under all conditions, but because it is the one gasoline feed system on which owners can obtain SERVICE from 86 Stewart Service Stations all over the world; 53 in the United States alone.



* * *

The same is true of Stewart, Warner and Van Sicklen Speedometers chosen by over 90 per cent of manufacturers. These instruments, long noted for their accuracy and fine workmanship, require but little attention. Yet, should the necessity arise, the car owner need not entrust the care of his speedometer to an average mechanic when there are Stewart-trained men in every Stewart-Warner Products Service Station.

thinks of Stage Steel Products? We' know."

"True, but ——"

"We know that twenty million dollars owed to a banking syndicate headed by us must be paid in less than thirty days. And we know the money isn't there to pay it. We know the answer!"

"That's true"—Mr. Oppenheim licked his lips nervously—"but even when you know, it's nervous watching a market with that damned gambler in it. And then there is that old fool, Stage. I woke up the other night—cold, awake—and found myself wondering if he really meant what he said about my neck. If he found out ——"

Ashbrooke laughed. "The trouble with you and Mead," he said, "is, your nerve isn't as long as your avarice."

A moment later he answered the telephone.

"Stage Steel Products just came through on the tape at 38. Four thousand shares."

Oppenheim lumbered out of the room. In his private office he knew there was consolation in a squat brown bottle. It would help him to remember, perhaps, that he was a banker.

V

THREE weeks is, comparatively speaking, a short space of time, yet within its narrow confines lurk untold possibilities for a man who has something to say and the depth of feeling and dramatic ability to say it effectively. Such a man was Mr. Oliver J. Peavy.

On the evening following the dinner at the Restmere Mr. Peavy returned to his apartment and maintained a majestic calm throughout the evening meal. The meal itself disposed of, he removed from the inner pocket of his neat tobacco-brown suit a thin sheet of paper dotted with neat figures.

"It will interest you to know, Mrs. Peavy," he said throatily, "that Stage Steel Products closed to-day at forty dollars per share. If you will take the trouble to examine this sheet you will see that, had I been allowed to follow my own business judgment, a judgment—ahem—based on seventeen years' experience, we would have been two hundred and sixty-five dollars richer—or, at the rate we have been saving out of my salary, your ununderstandable obstinacy cost us to-day the savings of eleven months two weeks. I trust you are satisfied with your work."

After this he bowed stiffly.

On the following evening he carefully opened the evening paper to the financial page, folded it and thrust it dramatically before the calm face of his wife.

"Madam," he said, "please note! Don't take my word for it! Read it in cold print, fresh from the lips of one of America's foremost financial authorities. Here it is":

STAGE PRODUCTS TOUCHES 50 IN HEAVY TRADING

Following a steady demand at fractional advances throughout the early part of to-day's session Stage Steel Products jumped perpendicularly in the last few moments of trading to a new high for the recent move. In a turnover of less than five thousand shares the stock advanced from 43¾ to 50 in ten minutes just before the close.

Talk in the Street gives two reasons for the wide enhancement seen in this stock during the past two days. One is the operations of a big uptown speculator whose following, even on the merest hearsay, is very great. The other is the fact that the company's maturing indebtedness amounting to twenty million dollars will be met or extended.

As has been often pointed out in these columns, the enormous depreciation in this stock has been out of line with its book value for many months, and with a turn in the affairs of the company a condition might easily be created which would leave speculators short of the stock far out on the limb.

Mr. Payne Ashbrooke, head of the syndicate underwriting the loan of the company, could not be reached, and in his absence other members of the firm refused to make any statement.

Mr. Peavy arose and held the evidence dramatically extended. "Six months' more savings we have been cheated out of. Ten points! I tell you, Mrs. Peavy, this thing can't go any further. If you insist on remaining blind to our mutual interests, I will not! We have lost nearly eighteen months' savings, but we are not going to lose any more. I won't stand for it!"

Mrs. Peavy arose and faced her vermilion spouse, and in her eyes was the cold Bailey gleam of battle. Noting it, Mr. Peavy shifted nervously. He became less dramatic.

"Now look here, Henny ——"

She calmly arose and began to collect the dishes. Her hands well filled, she moved quietly to the door leading into the kitchen. There she stopped.

"No," she said—and passed on.

The baffled eye of her husband alighted on a package wrapped in newspaper lying on the golden-oak buffet. It was printed in Greek. He had brought it home that night. He would show her. Package in hand he moved to the window and opened it with a jerk. He waited until he heard its thud in the court below, then he closed the window with a slam.

"There!" he said to the closed kitchen door. "I guess that'll show you who is boss around here!"

VI

ACROSS the city three other gentlemen considered the same newspaper article.

"—— left out on the limb," repeated the largest of the three, and his voice was thick. "I tell you no matter how safe it is I don't like it! Suppose he should dig up the money somewhere, where would I dig up the ten thousand shares I'm short—an' at what price?"

"You're not the only one, Oppenheim. Think of someone else for a change. I'm short ten thousand—and so is Ashbrooke."

"Thirty thousand shares in a market like this!" The large man shivered.

"Shut up! You and Mead ought to be out in the streets stealing pennies from children. There isn't a chance in the world, I tell you—unless—unless ——"

"Unless what?" They both demanded the answer.

"Unless we don't hang together in this market and have one try to get out at the expense of the rest. In that case the market might get to a point where Stage would have enough equity in his collateral to give us the money—especially if business increases with the return of this morale he talks about—and I give him credit for that. I think he knows whereof he speaks. Do we agree not to sell?"

Mead nodded his head nervously. "Sure," he said.

Mr. Oppenheim agreed. "Let's have a drink on it," he suggested.

But four hours later, in the privacy of his own chamber, Mr. Oppenheim found slumber impossible—even with the help of another squat brown bottle. A sentence formed in phosphorescent characters danced upon the wall: "Ten thousand shares isn't as much as thirty thousand." And another: "Number One comes first."

Mr. Oppenheim arose unsteadily and switched on the night light. By its uncertain gleam he found the telephone and hoarsely commanded a number.

"Spangling?" he demanded.

"Yes."

"Rudolph Oppenheim. I want you to buy in all the Stage I am short. An'—an'—Spangling—do it through some other broker. Get me, Spangling? This is just between you and me. No, nothing is the matter. Only what nobody doesn't know don't hurt them."

At the other end Spangling smiled grimly. "No use going to bed just yet," he soliloquized. "I might just as well wait until Mead calls up and completes the thirty thousand. And all just between friends—and as usual Ashbrooke beat them to it."

VII

ACROSS the country another man sat with the financial page of the local daily before him. He was a large man, even as large men go, and from the corner of his mouth a huge brier gurgled and shot ashes.

"A little more," he muttered. "Just a little farther."

He reached for a telephone and asked for a number.

"Anderson," he demanded, "give me those figures again—they're pretty hard to believe. In two days—more business than we've booked in the last two months. Thank you, boy! Good night."

Stiffly he arose and stood in front of the old-fashioned marble mantel. Like a man long out of practice he raised his arms and held them far above his white old head. Jerkily he prayed.

VIII

STAGE STEEL PRODUCTS crossed 60 with a rush and 70 with ease. During the days that followed, Mr. Peavy continued to make pithy remarks relative to the obstinacy of certain people. On the twenty-third of April the Street a trading room in the land waite word from the offices of Ashbroo & Oppenheim. For the first tim weeks Mr. Rudolph Oppenhe downtown, having been sufferi ing to his household, with a s Mead, who had left suddenly f weeks' vacation, returned also. B exactly at the hour of meeting, pal of eye and nervous. Ashbrooke outward sign—of anything. The greeted one another cordially—al cordially—and looked at the cloc ten o'clock.

In an outer room Mr. Peavy, with importance, presided over a waiting newspaper men.

John Stage came—alone, his brier sending a whirling wake over his huge rounded shoulde ceded by the bustling Mr. Peavy t through the ornate walnut door of ference room. He walked straig table and laid on its shiny surfa of light blue paper.

"I left the receiver at home," grimly, "and brought you this I thank you—on behalf of the for the—the accommodation. Goo

The silence was broken by the op the door. Mr. Peavy apologized. newspaper men were insistent. Bu they were admitted he, Mr. Peavy few words to say. A few words of g for the interest they had shown in fare—an interest he, Mr. Peavy never forget as long as he lived—ev was prevented from realizing on it unexplainable obstinacy of a fema

Had he but known it, Mr. Peavy the partnership of Ashbrooke, M Oppenheim by that little speech. nished a safety valve that was needed—a football upon which the that could not be said might be expe

"You get out of here!" roared Oppenheim.

"And stay out!" from Mead.

The senior member of the firm too satisfaction in a lower tone—almost antly. "Get your money at the cas window, Peavy," he said, "and get o good."

Somehow Mr. Peavy found his through the maze of early noonday tr Some way he found his way home Fired! Nearly home it came to him. cause of it all! If she hadn't bee obstinate the thing wouldn't—cou have happened. And if it had happen wouldn't have made any difference. would have had the money—the mone do the things they had dreamed of do all the days and years of scraping paring. A cold rage cleared the numb from Mr. Peavy's brain like a shower ing the first spring dust. His step bec firmer. He moved with more purp Everything was gone! There would n be anything but scraping and paring fo the days to come. For once, however would speak his mind out.

In the doorway to the sitting room stopped. Subconsciously he noticed t she had the window open.

"Well," said Mr. Peavy, "here I a

"So I see, Oliver."

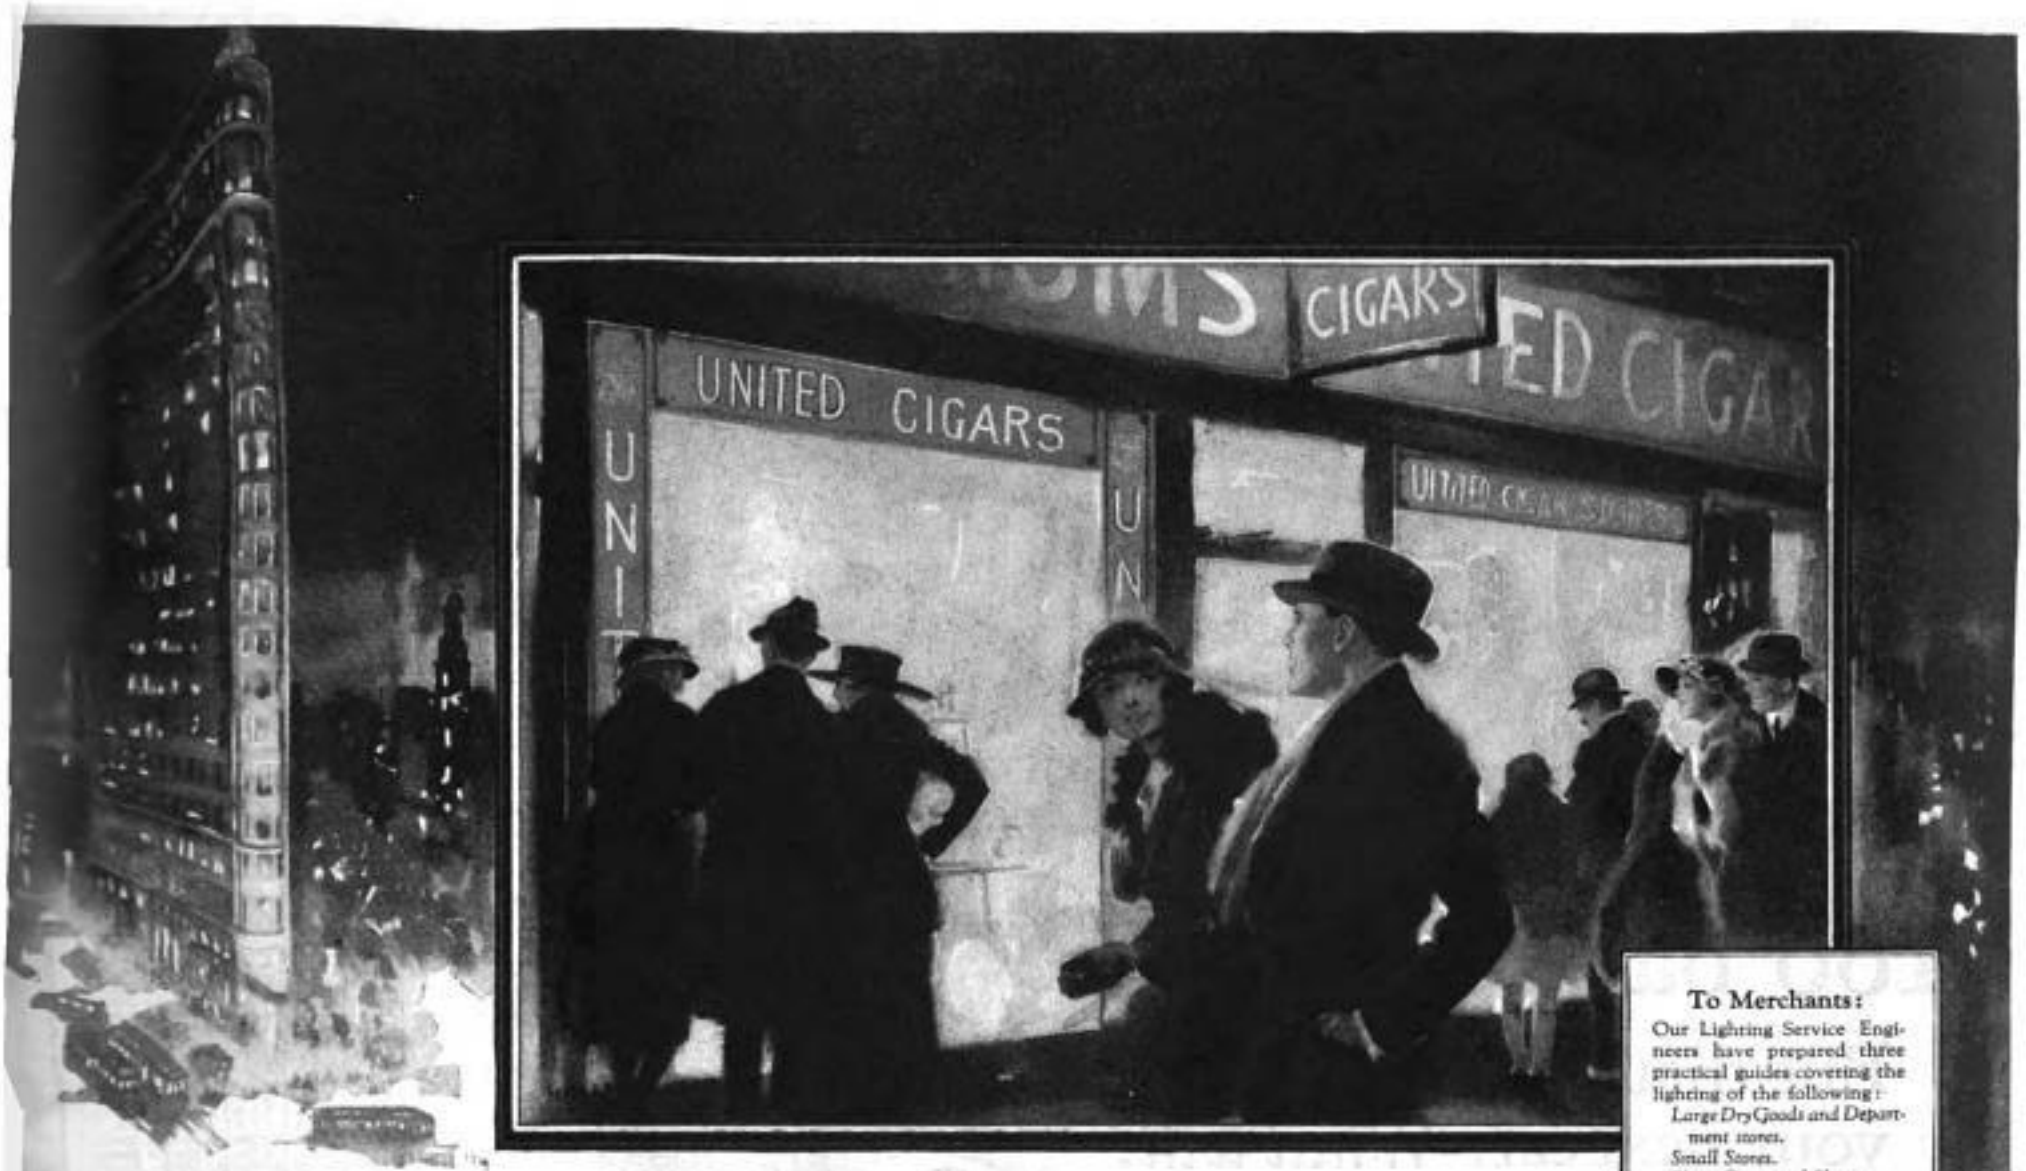
In vain did Mr. Peavy try to be calmly. A torrent can never be a bro Hot tears blinded his fat little eyes. lips quivered as they uttered chaotic, l tering things.

At its close, through the blur he saw t she was holding out a letter and an envel His watery eyes the letters refused to fo until they had been wiped time and ag Finally he read:

MRS. OLIVER J. PEAVY.

Dear Madam: Allow me to send you t very small commission, which I feel tha more than owe you. To your husband, to wh please convey my best wishes, I am also closing a remembrance, as yours is, for a ra day.

Sincerely yours,
HENRY LOVERET



From the envelope Mr. Peavy dr with fingers that could hardly retain th power to grasp two brand-new thousa dollar bills!

"Here is yours, Oliver."

Breathing hard Mr. Peavy untied t string and slowly removed the wrappe Silently he placed a pair of shiny black ru bers upon the table by the door and walk slowly over to the window.

"I tell you what, Henny," he said finall "they're just what I'll need down in th Cape Cod country."

To Merchants:

Our Lighting Service Engineers have prepared three practical guides covering the lighting of the following:

Large Dry Goods and Department stores.
Small Stores.
Show Cases and Show Windows.

Your request, mailed to the Edison Lamp Works, Harrison, N. J., will bring you the proper booklet or booklets at once.

Your Edison MAZDA Lamp Agent can supply you with the right lamps.

People buy
where the lights are bright

"OUR experience has proved it," says C. A. Whelan, President of the United Cigar Stores Company.

"We know positively that Light not only attracts buyers but actually sells goods," he adds. "Next to our salesmen, Light is our greatest selling force. That is why we have increased the wattage of our lamps and doubled our current consumption in the past seven years. That is why proper lighting is an essential consideration when we open a new store.

"We value our windows for advertising purposes at millions of dollars a year in sales. Without proper light our windows would be worth only a fraction of their present sales value—*yet the cost of the lamps is so little in comparison with what they add.*"

* * * * *

A glow of light in the store window is the outward mark of a progressive spirit inside. Good merchants everywhere realize this. You are pretty sure to be safe if you buy where the lights are bright.

Too bad!

But that won't help your next car. *What will?*

YOU give your car every care it should have, perhaps—save one. You may always thoughtlessly say, "Give me a quart of oil."

Queer, unexpected knocks come. Repair bills seem high and frequent. Operating troubles multiply. The repair man simply can't seem to keep the engine sweet. You expected to keep the car five seasons. But the engine already shows signs of age.

All around you are men who *don't* turn cars in every season or two—who *aren't* constantly face-to-face with unexpected repair bills—who climb long hills easily and quietly even when the car is old.

They are the men who fondle their cars a bit, keep them up well. And they are particularly careful about lubrication.

Have you ever noticed how many of them are enthusiasts on Gargoyle Mobiloil?

Now for Economy

People are learning that they have a right to expect more from their lubrication. More automobile owners will learn the lesson this year than ever before. More will wake up to the fact that incorrect lubrication doubles engine repair bills. Instead of saying "Give me a quart of oil" they will ask for the correct grade of Gargoyle Mobiloil.

If your car is not listed in the partial chart shown here, ask the dealer. He has the complete list of recommendations—covering every car built.

Not a gasoline by-product

Nine out of ten lubricating oils on the market are simply by-products in the manufacture of gasoline.

Gargoyle Mobiloil is *not* a by-product.

It is produced by lubrication specialists who are recognized the world over as leaders in lubricating practice. Gargoyle Mobiloil is manufactured from crude oil chosen for its *lubricating* qualities—not for its gasoline content. Gargoyle Mobiloil is manufactured by processes designed to bring out the highest *lubricating* value—not the greatest gallonage of gasoline.

GARGOYLE

Mobiloil

Make the chart your guide

Chart of Recommendations

(Abbreviated Edition)

How to Read the Chart:

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
E means Gargoyle Mobiloil "E"
Arc means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendations should be followed during the entire period when freezing temperatures may be experienced.

The recommendations for prominent makes of engines used in many cars are listed separately for convenience.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

Don't say "Give me a quart of oil" Make the chart your guide

THE PRINT OF MY REMEMBRANCE

(Continued from Page 16)

A Group of Caricatures. At the Left—Frederic Remington by Augustus Thomas. At the Right—E. W. Kemble by Remington. Below—Augustus Thomas by Remington

Palmer, it never
d to him to de-
m the arrange-
nade to sublet
eater. To get
money he was
ore obliged to
alf interest in
ay to Charles
an and Al Hay-
Both these men
him to continue
at the Madison
. They argued
Miss Morton's
was as yet un-
that other the-
s suitable as the
on Square could
t for it in the city and that Miss
n had no right other than the most
ral one, and none whatever in jus-
o impair Mr. Palmer's property by
g it out of a theater where it had such
ntum. As a matter of fact, the new
ers were right. Miss Morton's man-
ould have benefited rather than have
y some financial accommodation that
have deferred their *première*. The
hant was produced in warm weather
was not successful.

arles Frohman knew nearly all the
then playing in the American theater.
had traveled with Haverly's and
nder's Minstrels, with modest ven-
of his own; he was a most approach-
and human person, and with his little
just one flight of stairs up from the
dway sidewalk, where anybody en-
without knocking in those days, his
aintance and his popularity rapidly
. After Shenandoah he acquired a
of the Twenty-third Street Theater,
een Sixth and Seventh avenues, and
ced Men and Women, by Belasco
De Mille, on the model of the plays
were then supplying the Lyceum.
was followed by other dramas and a
of farces provided by the skillfully
inal as well as adapting pen of William
tte. This success built for him the
beautiful Empire Theater at Broadway
Fortieth Street, which he opened with
sco's fine melodrama, The Girl I Left
nd Me, in which Frank Mordaunt,
liam Morris, Theodore Roberts and
rs appeared with the boy actor, Wallie
linger, as Dick.

Frohman's Cheerful Philosophy

Clay M. Greene, in a burlesque of that
y, had the colonel in agony, reading
ws of an injury to little Dick, hand the
egraph tape to the major and say, "Take
I must get back."
"Back where?"
"To the center of the stage."
I'll talk about me.

We were friends, Charles Frohman and
from our first meeting in 1882 until he
s lost on the Lusitania in 1915—thirty-
ree years. After 1892 he produced nine
ays of mine—Surrender, Colorado, The
an Upstairs, The Other Girl, Mrs.
effingwell's Boots, De Lancey, On the
iet, The Harvest Moon and Indian
mmer, and five others which I had re-
itten but did not sign. I don't remem-
r that we ever signed a contract, and I
m sure that we never had a difference. He
as among the first men upon whom I called
hen I first came to New York to go with
he Marlowe company, and when I returned
with the thought
ader Bishop. He was
he first manager to ask
me for a play after my
oming to the city. I
wrote for him many bits
not mentioned above.
These little things were
often written in his
presence as he pushed
a piece of paper across
the desk when a subject
came up in some related
talk. He had a fashion
of doing that with other
playwrights—Gillette
or Fitch or Carleton—
and it was great fun to
give him some bit for
one of his girl stars and
hear him say, "That
will go in to-night."

There was never any talk of remuneration for these little things, as the burden of obligation, if obligation existed, was always so heavily on the other side for the hundreds of little courtesies that he found one way or another of extending. Charles Frohman had a fine dramatic sense, and without attempting exactly imitation had the mimetic faculty that suggested the object of his portrait quite as definitely. Men amused him much, and when he told of his last visitor the interview was likely to be vividly dramatized. I remember a report of a visit of Colonel Alfrend, the Southern author of whom I have written.

C. F., with his irresistible twinkle, said "The colonel was here to see me," and then without another word there was the pantomime of the high hat laid carefully on the table, one finger after another of one glove carefully withdrawn, then the entire glove straightened out and laid across the hat; the same treatment for the other hand; the silk-faced overcoat carefully taken off, shaken out at the collar, folded, laid over the back of the chair; the button of the surtout carefully adjusted at the waist; mustaches stroked, and the victim transfixed with a steady and piercing gaze. The scenario of a play was drawn from one inside breast pocket.

But C. F., *in propria*, interrupted—"I am going to do a play by J. M. Barrie for Miss Adams. If you had brought me in something for Miller ——"

Then C. F. was stopped; another scenario came from the other inside pocket. This was not exactly the kind of story that was wanted. Then, still as the colonel, C. F. put one hand over his head like the legendary Westerner getting a bowie knife and drew a third phantom scenario from the back of his coat collar, this last gesture burlesque, but so in character that it was impossible to find the line dividing it from preceding comedy.

Charles Frohman had a bit of philosophy that he carried through life. He had learned that existence was supportable if he had one real laugh in the day. Among men interested in art and the theater as connoisseurs and patrons the wisest that I know is Mr. Thomas B. Clarke. I was at a loss to comprehend his standard of excellence in the drama until I heard him say one time that any play which for two consecutive seconds made him forget himself, made the playhouse disappear and him to feel that he was in the presence of a real event was for him a notable play. He said:

"One seldom gets from a studio a canvas of uniform excellence throughout. There will be one feature of it better than the others. I can prize it for that feature. And if I get a play with the scene I have indicated I go three or four times when the scene is on to get the same pleasure from it that I get from the excellent note in a painting."

C. F. seemed to apply an equal theory to relaxation and the day's conduct. The thing that amused him he would write upon a blotting pad, and recover somewhat of its joy by telling it to many a subsequent visitor. During the rehearsals of The Other Girl referred to in previous chapters we had on our third or fourth day reached the first repetition of the second act. I was on the stage with manuscript and a blue pencil, the company standing about, slowly marking positions on the parts, when C. F.'s office boy came with an envelope carrying across its back the well-known blue display of Maude Adams' name. As the boy waited for an answer the rehearsal stopped long enough for me to read the sheet inside.

It carried in large and hurried handwriting, in colored crayon, "How are you getting along at rehearsals without me?"

C. F. Wins a Bet

Taking the inquiry at its face value from a busy man, I wrote across the note one word "Great," handed it to the boy and forgot it. Two days later I stopped in at the office for some necessary conference. His letter with my comment was pinned on the wall.

He said, "That furnished me laughs for two days. I showed it to everybody."

He was also a practical joker, and would go to considerable lengths, but never with any of the cruelty or lack of consideration that practical jokes sometimes breed. When Alabama went on its second visit to Chicago he was interested in the management.

He said, "I'll bet you that it'll do a bigger business than it did the first time."

As it was to be in the same house and we had played to capacity the first time, I didn't see how that could be, and said so. He wanted to bet, nevertheless, and rejecting cigars and hats as stakes he fixed upon a suit of clothes. I demurred, feeling that it was unsportsmanlike to bet on a sure thing. He generously gave me that advantage, however. The business on the second trip was nearly double, because of the fact, of which C. F. was aware and I not when he made the bet, that the play had been chosen for the local police benefit and all patrolmen of Chicago were selling tickets. The increased royalties reconciled me to the loss of the bet. The bill for the suit of clothes came in with C. F.'s indorsement. The price, one hundred dollars, amused him greatly. We must remember that back in 1892 fifty or sixty dollars was a fair sum for a suit of clothes. C. F. was fond of telling all this when he had me and some other man in his office.

Considerably later he was to open with a new play, the name of which did not please him. On his blotter he had a half dozen alternative titles suggested by persons who had called during the day. The man who gave the winning title was to get a suit of clothes. He told me the story. I suggested Never Again, which C. F. wrote on the blotter and said would be taken

Eugene Wiley Presbrey and Francis Wilson, Caricatured by Augustus Thomas

(Continued on Page 45)

HAVE the pistons of your automobile been playing any pranks on you lately?

They do that sometimes. But you will know when they commence to cut capers.

When your cylinder walls become worn and out-of-round; your pistons vibrate and tremble and the oil begins to squirt up around them—then you will know that your motor is having a little party with you acting as banker.

You will find it expensive if you don't crab this little game, particularly when your motor begins to loaf on the job and displays a lack of pep and vigor.

You'll have to feed the kitty with oil pretty regularly and donate a few spark plugs to the cause. But that won't stop those piston pranks. They'll keep right on cutting into your roll until you insist on a new deal with new faces setting in. Now I don't want you to feel that we're mercenary—but here's a bit of free advice that you can follow and make some money.

It's simply this: If you want real action under the hood, just slip Spencer-Smith Pistons into your engine.

Then they'll receive sledge hammer blows at every explosion and grin; they'll race up and down the cylinder walls with never a skip, falter, or miss—developing the power that pulls you through hub-deep mud and speeds you over the highways to the *byways*. No oil pumping and no carbon griefs with Spencer-Smiths, because we encircle each piston with a groove into which the oil is wiped by the lower piston ring. From the groove the oil drains through holes into the crankcase. This is a patented Spencer-Smith feature and it works so perfectly that I am surprised somebody hasn't tried to imitate it.

So I say: Junk your old, overweight, sluggish, wasteful pistons and replace them with a set of economical energetic Spencer-Smiths after regrinding your cylinder walls. Honestly you won't believe it's the same old chariot. Smooth? Smooth as the mahogany above the old time brass rail. And power? Why you will be accusing someone of dissolving a stick of dynamite in your gas tank.

Did I hear some doubting Thomas ask "How does he get that way?"

Well, it's a fair question. But we have the evidence—in print, too. The boss is the author and he surely has given a dry subject a punch that would almost be convicting evidence for the prohibition officer—wherever he is.

Just drop me a card in care of the Spencer-Smith Machine Company, Howell, Michigan, and I, personally, will mail you his booklet, "Making Your Pistons Pay a Profit."

SpenSmith

P. S.

A Patented Oil Drain Groove

Notice that oil groove and the oil holes. They prevent carbon trouble caused by burning oil. On the down stroke of the piston the oil is wiped into the groove by the third ring and is then drained through the holes back into the crankcase.

Big as Cords, Cost less than Cords

Defects Kept Out Mileage Built In

Our mechanical process of building Hydro-Toron Tires—vulcanizing by Internal Hydraulic Expansion with water under pressure heated to the proper temperature—prevents those unseen defects which are real causes of Stone-Bruise, Rim-Cut and Blow-Out in ordinary tires.

The scientific chemical process of treating fabric—the Toron (no-rot) treatment—proofs each tire against the damaging effects of moisture and decay. The Toron treatment not only seals the tire against oxidation in all its forms, but gives the fabric a greater affinity for rubber, increases tensile strength, and insures a greater holding power between the layers of the tire.

This mechanical process, and this scientific chemical treatment, result in the unusual mileage represented by Hydro-Toron's fearless guarantee.

Besides this guarantee of 10,000 miles against Stone-Bruise, Rim-Cut and Blow-Out, Hydro-Torons are as big as cords, yet cost less than cords. Be sure to ask for them the next time you buy.

Tire dealers seeking a real money-making opportunity—a better proposition insuring good profit and satisfied customers—should write for our plan.

consideration. My wife and I dined own that night and went to a play. As e coming uptown to the Grand Cenation all of the exposed ash barrels, and temporary scaffolds were being d with snipe advertising of Never I went to an expensive firm and d their best suit; the price was one d dollars. I asked them if there some way to increase it, and after ous additions induced them to boost ne hundred and fifteen. C. F. added o his story.

h the success of Alabama the con- avidity of the public for the South- pe drew Mr. Palmer's attention to el Carter, by Francis Hopkinson . The story, which had appeared in the magazines, was already in book and was probably a best seller; one of it everywhere. I had *carte blanche* material, but felt a little overawed by opularity of the book and the au- of its author. The play was only successful, but it marked a very le date in my own affairs, a friend- with that man of such extraordinary *tility*, Hop Smith, as his friends him, that lasted until his death in I have at hand no scrapbook to upon the defenseless reader, but k it an act of simple justice to the r of the book to quote from The et of Time by Wil- Winter, America's est critic of the ter:

Coming as it did at e when the stage being freely used the dissection of itude and disease, play came like a ze from the pine ds in a morning of ng." And of the derful artist, dear Holland, he writes: is success was de- ve. The Colonel— h his remarkable k coat that could adjusted for all oc- ions by a judi- s manipulation the buttons, his yed wristbands, shiningtrousers, unconsciously lorn poverty, i his unquench- e spirit of hope, e and honor— s, in that remarkable performance, a turesque, lovable reality."

With the production of Carter com- ted, and with plays for Goodwin, Crane d Charles Frohman to write, I ended my nnection with Mr. Palmer and turned to e wider field. Mr. Palmer had about cided to abandon management anyway, though with his caution over any con- dered step he did not do so for two years.

Wallace Eddinger in "The Girl I Left Behind Me"

Mr. Palmer's Retirement

During those two years he produced ilby at the Garden Theater and one or o plays at his own house, in which the eautiful Maxine Elliott made her first ppearance. Mr. Palmer, who had been a ublic librarian in his youth, was the most ultivated manager I knew personally— never met Augustin Daly. But Mr. almer's culture made him timid in a busi- ess that was fast offering premiums for dventure. I remember the melancholy of he man in his gradual retirement, as dur- ng that period he said to me, "I'm an old man"—he was considerably under sixty at the time—"and I cannot compete with these younger men who are coming into the field." He named particularly Charles Frohman and Mr. Erlanger.

It would be of interest to remember the kind of world in which we then were living in that period beginning in 1892 and cover- ing the next five years of which I now write. The President of the United States was Grover Cleveland. William McKinley was governor of Ohio. Roswell P. Flower was governor of New York. The state of Massachusetts had just elected to the United States Senate, to succeed the veteran Senator Dawes, a person comparatively young and described as a man of letters, named Henry Cabot Lodge. The national legislature was considering the favorable report of a Senate committee upon a proposed Nicaragua Canal. We had reached a decision that it was essential to have our Navy doubled. Gold had been discovered in quantities in Colorado, and there was an excited movement to that state. Andrew Carnegie and Henry Frick, declining to consult with their men, with whom they were having some labor disputes, had been responsible for the precipitation of the Homestead trouble.

On the other side of the water Charles Stewart Parnell had just died under something of a cloud. In England Gladstone was preparing to retire from the premiership after explaining his home-rule bill. Bismarck was being charged by the Socialists of Germany with corrupting the press with money improperly collected. There was a famine in Russia. In France Ferdinand de Lesseps had been indicted because of irregularity in the conduct of the Panama Canal enterprise; five deputies and five senators were under arrest charged with complicity therein. Deputies Clemenceau and Déroulède had fought a duel, firing three shots at each other, and concluded by shaking hands.

The Early '90's

Thomas F. Gilroy was mayor of New York City; the community was busy discussing rapid transit and the prospect for a first subway, for which it seemed impossible to borrow money. There was a great stir in municipal consciousness all over the country. L. S. Ellert had just been elected mayor of San Francisco on an independent ticket and a promise to give clean business as opposed to the sand-lot variety of politics. Mayor Pingree, of Detroit, had won on a campaign for city lighting. Mayor William Henry Eustace of Minneapolis was closing a business administration, and although contracts with the lighting companies had five years to run, Minneapolis was resolving at the termination of that time to have her own electric plants. Chicago was hoping to elect Mayor Harrison in order to have his direction during the period of the World's Fair. And Nathan Matthews, mayor of Boston, had been elected on a ticket for municipal lighting and an extension of the transit.

For the season of '91–'92 my wife and I had resumed possession of our apartment on the upper floor of the Oriental Hotel on the Thirty-ninth Street side, overlooking the roof of the Casino. In the summer and early autumn evenings we could sit at the window or on the little fire-escape balcony thereby and see the operatic performance on the Casino roof as comfortably as if from a private box, though a bit remote. Part of our royalties that were coming in I devoted under competent advice to the collection of a small library, good for working purposes, and occasionally getting here and there a little picture that was worth having. Somebody has said that when you have once thoroughly seen a picture you may safely take leave of it; it will never again have for you its first effect.

For some reason that is not the truth for me. A picture that I have really chosen and that I like grows more and more to be a part of my environment, and I feel with Dr. Henry van Dyke, who wrote that his pictures were for him windows through which he looked out from his study on to the world.

In that apartment, thus agreeably situated and surrounded, I began to think about the story for Goodwin. He had been so successful in a sentimental bit in A Gold Mine, written for him by Brander Matthews and George Jessop, that though he was willing to have his new play largely comedy, he hoped that it would have a serious backbone. At that time Goodwin was slight, graceful, and with a face capable of conveying the subtlest shades of feeling;

Spur Tie

50c

Patented — Trade Mark reg. U. S. Pat. Off.

GOOD looking! Stylish! —you bet. The Spur Tie is setting the pace in neckwear this year.

Fashion has dictated—and common sense approves. Why? We'll let you in on a secret—the Spur Tie is all made up for you, ready to slip on. Saves your time and your disposition. A new **patented** feature gives it that jaunty effect, and holds it in shape.

Your dealer will show you the Spur Tie in two attractive sizes, large and small—two styles—elastic neckband or slip-on-grip, guaranteed not to rust or soil the collar. Numerous patterns;—black, polka, fancy and many others. Get your Spur Tie today.

If your dealer won't supply you, send $1.00 for two, 50c for one, specifying size, color preference and whether elastic band or slip-on-grip.

his voice was rich and modulated. My problem was to find a story for a blond hero five feet seven inches tall, weighing under one hundred and fifty pounds, with a Roman nose and a steady, steel-blue gaze. I stood the Goodwin photograph on my table and looked at it until it talked to me. The slight physique couldn't explain the solid confidence of that look except there was behind it a gun. I clarified my problem a little by deciding that the gun should be carried lawfully, and as there was nothing suggesting the soldier in Goodwin, nothing of the setting-up type about him, I was urged to the idea of sheriff.

Persons interested in play writing—and I am persuaded they are not few in number—will see how that clears the atmosphere. When you must or may write for a star it is a big start to have the character agreeably and definitely chosen. To secure the love interest I thought of a girl who would be of a little finer strain than the sheriff type indicated, and the necessity for conflict suggested a rival. The rival should be attractive but unworthy, and to make him doubly opposed to Goodwin I decided to have him an outlaw, someone it would be the sheriff's duty and business—business used in the stage sense—to arrest.

I have told in earlier chapters of my experience with Jim Cummings, the express robber, who had given a messenger on the Missouri-Pacific road a forged order to carry him in his car and then after some friendly intercourse had tied the messenger and got off the train with a suitcase full of greenbacks. The need for a drama criminal decided me to make use of Cummings as Goodwin's rival, a glorified and beautiful matinée Cummings, but substantially him. This adoption rescued the sheriff and the girl from the hazy geography of the mining camps in which my mind had been groping and fixed the trio in Mizzoura.

Newspaper experience in those days before the flimsy and the rewrite emphasized the value of going to the place in order to report an occurrence, and I knew that aside from these three characters and their official and sentimental relationship the rest of my people and my play were waiting for me in Bowling Green, Mizzoura. I told Goodwin of the character and the locality, got his approval of the idea that far, and took a train for Pike County.

Getting Characters in Mizzoura

In those days Mrs. Thomas and I used to hold hands on our evening promenades; but I think it was really our foolish New York clothes that made the blacksmith smile. At any rate, we stopped at his door and talked with him. He knew Champ Clark and Dave Ball, another Missouri statesman, and had the keenest interest in the coming convention for the legislative nomination. It was fine to hear him pronounce the state name Mizzoura, as it was originally spelled on many territorial charts, and as we were permitted to call it in the public schools until we reached the grades where imported culture ruled. The blacksmith's helper, who was finishing a wagon shaft with a draw knife, was younger and less intelligent, and preferred to talk to Mrs. Thomas. A driver brought in a two-horse, side-seated depot wagon on three wheels and a fence rail. The fourth wheel and its broken tire were in the wagon, and the blacksmith said he'd weld the tire at 5:30 the next morning.

We went without breakfast to see him do it. He was my heroine's father by that time—a candidate for the legislature—and I was devising for him a second comedy daughter to play opposite to the boy with a draw knife. That day I also found the drug-store window and the "lickerish" boxes that Cummings should break through in his attempted escape; and I recovered the niggers, the "dog fannell," the linen dusters and the paper collars which in my recent prosperity I'd forgotten. I also nominated Goodwin for the legislature, which increased his importance and gave him something to sacrifice for the girl's father.

I was very happy over what I felt was the backbone of a play as I started from Bowling Green to St. Louis on the return trip. In the day coach my wife and I were the only passengers except a man who sat well forward by the heater and seemed in trouble. When the conductor, whom I knew, came along I asked him about the man. He said, "That's Nat Dryden. You must know him."

On the Ramona. William Crane in an Eccentric Dance. At the Right—Harry Woodruff

I did. I went forward to Dryden's seat. He was weeping and muttering to himself, though slightly consoled by liquor.

When I spoke to him he turned to me for sympathy and said, "Oh, Gus, Gus, Nancy died last night."

Nancy was his wife, and was known as one of the handsomest women in Missouri.

"Yes, last night! And oh, Gus, how she loved you!"

"Why, I don't think I ever met your wife."

"I know it. But you remember that convention at Jefferson City when I was a candidate for attorney-general ——"

I nodded.

"The fourth ballot was a tie between me and that blankety-blank-blank from Calloway County. You were at the reporters' table. At a pause in the proceedings you rose from your impotent and inopportune seat, and addressing that convention in which you had no rights whatever you said in a loud voice, 'I want it distinctly understood that the press of this state is for Nat Dryden.'"

I nodded.

"Dear boy, it beat me. But I went home and told it to Nancy, and we've loved you ever since."

My wife and I stopped only a day in St. Louis, and then we started back for New York. There are few better places than a railroad train for building stories. The rhythmic click of the wheels past the fishplates makes your thoughts march as a drum urges a column of soldiers. By the time our train pulled into New York I was impatient to make a running transcript of speeches of my contending people. But that is a relief that must be deferred. Like overanxious litigants, the characters are disposed to talk too much and must be controlled and kept in bounds by a proportioned scenario, assigning order and respective and progressive values to them.

Nat Goodwin Orders Breakfast

Before beginning to write I submitted the story to Goodwin. He was playing at the Fifth Avenue Theater at the time, I think, in Henry Guy Carleton's Ambition, but I am positive about his rooms at the Worth House annex of the Hoffman House just across Twenty-fifth Street. I called by appointment at twelve o'clock. Nat had been a little wild the night before, and was now propped repentantly against his pillows. As I entered the room a German waiter was standing at the foot of the bed with an order blank in his hand. Nat was studying the menu with a most regretful discrimination. Faintly assuming my permission, he gave his order, the obsequious German responding and writing down.

"Bring me a wineglass of orange juice."

"Vineglass, oranch juice."

"Dry toast."

"Jez-sir, try doast."

"Piece of salt mackerel."

The waiter answered and w
Long pause by Nat.

"Cup of coffee."

"Coffee, jez-sir."

"Curtain."

Following Nat's appealing
I explained to the puzzled w
the significance of the last i
tion.

Goodwin was so enthu
about the story that it w
added stimulation to the w
of it. I got a little inside roo

Think now, of saving ⅓ your fuel next winter

AT THIS time of the year, dealers have plenty of time to spend with you, helping you decide upon the size and type of Sunbeam Furnace that will heat your home thoroughly for the least amount of money. Besides, Sunbeam prices are now lower than ever before, so, this is the season to see a Sunbeam dealer.

He will explain how the Sunbeam Pipeless Furnace, with just one register, can heat a given number of rooms more evenly, more healthfully and with one-third less fuel than stoves or fireplaces.

The Sunbeam is made on a quantity-production basis by one of the oldest and largest furnace manufacturers in the country; it is for this reason that it can be sold at such a surprisingly low cost.

All parts are accurately fitted by a process which makes them leak-proof and they are made so much over-size that a Sunbeam will practically never wear out.

The Sunbeam burns any kind of fuel. It quickly takes the chill off your house in the brisk days of early fall; it maintains an even temperature of warm, moist air in every room, even in below-zero weather. A Sunbeam will warm the most isolated room in the house so that you can dress in comfort on the coldest winter morning.

It takes only one working day to install a Sunbeam; and there is no muss or dirt. Its economy of fuel will be apparent from the first day.

Think *now*, of saving one-third your fuel next winter. And think of the wet, disagreeable days still to come this spring. Why wait for winter to save fuel; why not begin at once?

"Warms like the Sun," heating the entire house with just one register

As everyone knows, warm air rises and cold air falls; that is the simple principle upon which Sunbeam Pipeless Furnaces work. Heated air, mixed with vapor, rises through the central compartment of the large register placed in your hall or living room. A constant, gentle circulation of warm, moist air at an even temperature is maintained in every room; the cool air of the house being drawn down through the outer compartment of your register into the furnace, where it is heated and sent upward again.

The Sunbeam gives healthful heat; it requires little attention, as the draft is regulated from upstairs; owners all over the country tell us that their Sunbeams have paid for themselves the first year by saving one-third on the cost of fuel. See your local Sunbeam dealer.

LINCOLN

MOTOR CARS

Is it reasonable?

If the LINCOLN were not surpassing in its capabilities, is it reasonable that motordom would now accept it as the most advanced and most highly developed of motor cars?

If thousands of motorists were not convinced that the LINCOLN is a better and infinitely a finer car, is it reasonable that they would supplant their already fine equipment with LINCOLNS?

If the LINCOLN were not a car of distinguished character, is it reasonable that there would be such eagerness to seek comparison with it?

If the LINCOLN did not actually provide a fascinating means of travel, never attained in a motor car before, is it reasonable that there would be such great ambition in the industry to approximate its performance?

If thousands of motorists had not waved aside any other possible consideration, and if they had not chosen the LINCOLN for the all-embracing excellence of the car itself, is it reasonable that LINCOLN sales would now be mounting to unprecedented figures?

Surely not

e country good enough for any man
ve in, but being a damn fool theatrical
n had to build stone walls around it,
terraces, and make a production. Now
still working to pay for it."

n the Ramona, Greene and I ham-
d out a story we thought would do for
ne's play. It wasn't easy, because
ne, like all the comedians at that time,
ted a comedy-drama, something that
ld give him a chance for the untried
ntial powers he was sure he possessed.
th this story in hand we had a season
ad of us in which to write the dialogue.
lthough again getting a little out of the
r of events, for the sake of cohesion I
jump ahead to the production of the
e play which we called For Money.
was a four-act construction, and with a
minant serious note. Crane played a
n who had been embittered by finding
his dead wife's locket, which he had
ught contained his own portrait, the
ture of another man. This unhappy
overy had been made many years be-
the opening of our story, and the in-
ue of the play, who had come under his
ection, speaking in pride of her ante-
dents, showed to Crane a portrait of her
ther. The unhappy star was to regard
and say in a quiet undertone to himself,
The man whose picture I found on my
ad wife's bosom."

Charles Thorne or John Mason or Lucien
arry might have got away with that line,
t when Crane spoke it, registering a
rtled surprise, and spreading his hands
a manner that had been irresistible in
s old-time comedy of Forbidden Fruit,
e house rocked with laughter.

Greene said, "Some of 'em wanted to cheer for the man in the picture."

The performance was in Cleveland, where Greene and I had a few friends. Sympathetic people tried to restore the equilibrium of the play by appreciating its other serious values, but as Greene said at our little post-mortem when the evening was over, "Yes, people came to me in the lobby and said they liked it, but they didn't slap me on the back."

By the end of the week Brooks and I took blame for our fall-down in equal shares. The play wasn't as good as it might have been, and Crane didn't handle serious stuff as well as he hoped he would.

I once made a caricature in my guest book of Francis Wilson, under which Frank wrote, "*Du sublime au ridicule il n'y a qu'un pas*," which some years later I was able to translate. But the fact of the easy step from the sublime to the ridiculous I knew by experience. Two weeks ahead Crane's time for his New York season at the Star Theater was waiting for him.

I said, "Joe, I think I can save the printing, the scenery and most of the company and make a farce of this thing in time for New York."

Brooks said, "For God's sake, do it!"

Unintentional Repartee

My wife and I went back to the Oriental Hotel. With close application to the work, with the brave use of scissors and paste pot, I rejoined the company in four days with a new script and parts for a broad farce. We rehearsed it in Baltimore, tried it in Washington, came to our dress rehearsal at the Star in New York with a good company and everybody in high spirits. There occurred at that dress rehearsal a commonplace inquiry of mine which I have seen quoted in newspapers as an example of my brilliant repartee, when it was only the most honest-to-God inquiry a man could make. In the middle of our second act at the Sunday-night rehearsal Brooks loudly clapped his hands after the fashion of the interrupting manager, came down the aisle of the theater, calling my name. I came into the prompt entrance, from where I had been readjusting a light.

Brooks said, "Gus, there are a whole lot of funny things that could be said right there."

Having written myself out on the rush work with the script and worked myself out at rehearsals, and willing to take help from any quarter, I simply answered, "What are they, Joe?"

When I heard the peal from the company that had been interrupted, and from the few people in the otherwise empty parquet, I let the answer go as an example of agility.

For Money played a fine eight weeks in New York, but, as I remember, Crane never did it on the road.

My first play for Charles Frohman was called Surrender. I believed that we were far enough from the Civil War to take a comedy view of some of its episodes, and that after the many serious plays that had handled it the public would be glad to have the subject treated humorously. C. F. thought so too. He liked the script as I gave it to him, and it was turned over to Eugene Presbrey to rehearse in Boston. Presbrey was so appreciative of its values that he thought it a mistake to make a farce of it, and after a conference with C. F., who went over to look at the rehearsals, they decided to play it seriously, stressing melodramatically every possible point and introducing a horse. When I arrived at about the dress rehearsal the enthusiasm of those two men overbore my first conception of the story, and we went to the public with it as a serious play. It lasted on the road only some sixteen weeks.

Maude Banks, the daughter of General Banks, was playing in the piece the part of the only Northern girl. A requirement of the script and of the part was a blue silk sash on her white dress, as I remembered the young women of war days declaring their loyalty. At the dress rehearsal Miss Banks declined to destroy the effect of her white dress by putting any color on it, preferring to leave the company rather than be disloyal to her dressmaker. C. F. said it was too late to do anything about it, and the young lady's whim prevailed. I don't think she ever played under Mr. Frohman's management again.

Louis Aldrich, a stalwart actor who as a star had won great reputation in Bartley Campbell's My Partner and other dramas, played a Southern general with a line that

THE RAZOR THAT SHARPENS ITS OWN BLADES

Without removing the blade this razor strops, shaves and cleans

DID you ever stop to think of the ups and downs you have in your morning shaves? A couple of good shaves when the blade is new. Then poor ones—worse each day—till you have to put in another new blade.

Here's a safety razor that will give you a new keen edge *every morning in the week*. And without constantly paying out good money for new blades.

The Valet AutoStrop Razor sharpens its own blades on a straight leather strop—the kind the barber uses. Just slip the strop through the head of the razor—then a few strokes back and forth. After a few weeks, you'll begin to wonder how it's possible for one blade to keep on giving those smooth-as-silk shaves morning after morning.

Convenient? The Valet AutoStrop Razor strops, shaves and cleans without removing the blade. The blade swings free just like the leaf of a book.

And the money-saving! More than a solid year of smooth, clean shaves is guaranteed from every $1.00 package of blades. Ask your dealer to demonstrate the Valet AutoStrop Razor for you today.

Valet AutoStrop Razor

Silver plated razor, strop, year's supply of blades, in compact case $5.00

Strops and blades may also be bought separately.

Saves constant blade expense

I had taken verbatim from an assertion by Colonel Alfrend that the South had whipped the North on a thousand fields and had never lost except when overcome by superior numbers. Aldrich declined to deliver this speech, because personally he was a Northern man, so that altogether we had considerable trouble with our temperamental actors. There came a time in C. F.'s experience and development, however, when he was somewhat more insistent on the effects that he wanted, and when actors were not so ready to oppose him.

In the spring of 1892 we built at New Rochelle the house which is still our home. The versatile, volatile Sydney Rosenfeld at that time was among the first if not actually the principal librettist of America, and a writer of comedies. He had one or two successes on Broadway, and he and I were very closely associated in the Lambs. At his suggestion we went to New Rochelle to find land on which to drive our stakes. For some reason or other Sydney postponed his building and finally abandoned the intention. I recall our first day's negotiation with Sydney's friend from whom we hoped to buy the land. Mr. Leo Bergholz, ever since that time in the United States consular service, was showing us a little pine thicket on his own land, densely grown, the ground covered with fallen needles. He had a pretty wit, but stood somewhat in awe of the great Rosenfeld, who wrote smart dialogue for the Francis Wilson operas and had also been an editor of Puck.

Very Much Incognito

Commenting on the seclusion of this copse, Bergholz said, "No ray of sunshine ever penetrates this gloomy fastness."

When neither of us smiled at this mediæval utterance, Bergholz repeated it. With some difficulty we continued serious. As Bergholz approached it for the third time he lifted his hands after the manner of a *coryphée*, and dancing in most amateurish fashion a feeble jig, he said again, "No ray of sunshine ever penetrates this gloomy fastness."

Sydney, looking solemnly at Leo's feet, remarked, "That's the gloomiest fastness I ever saw."

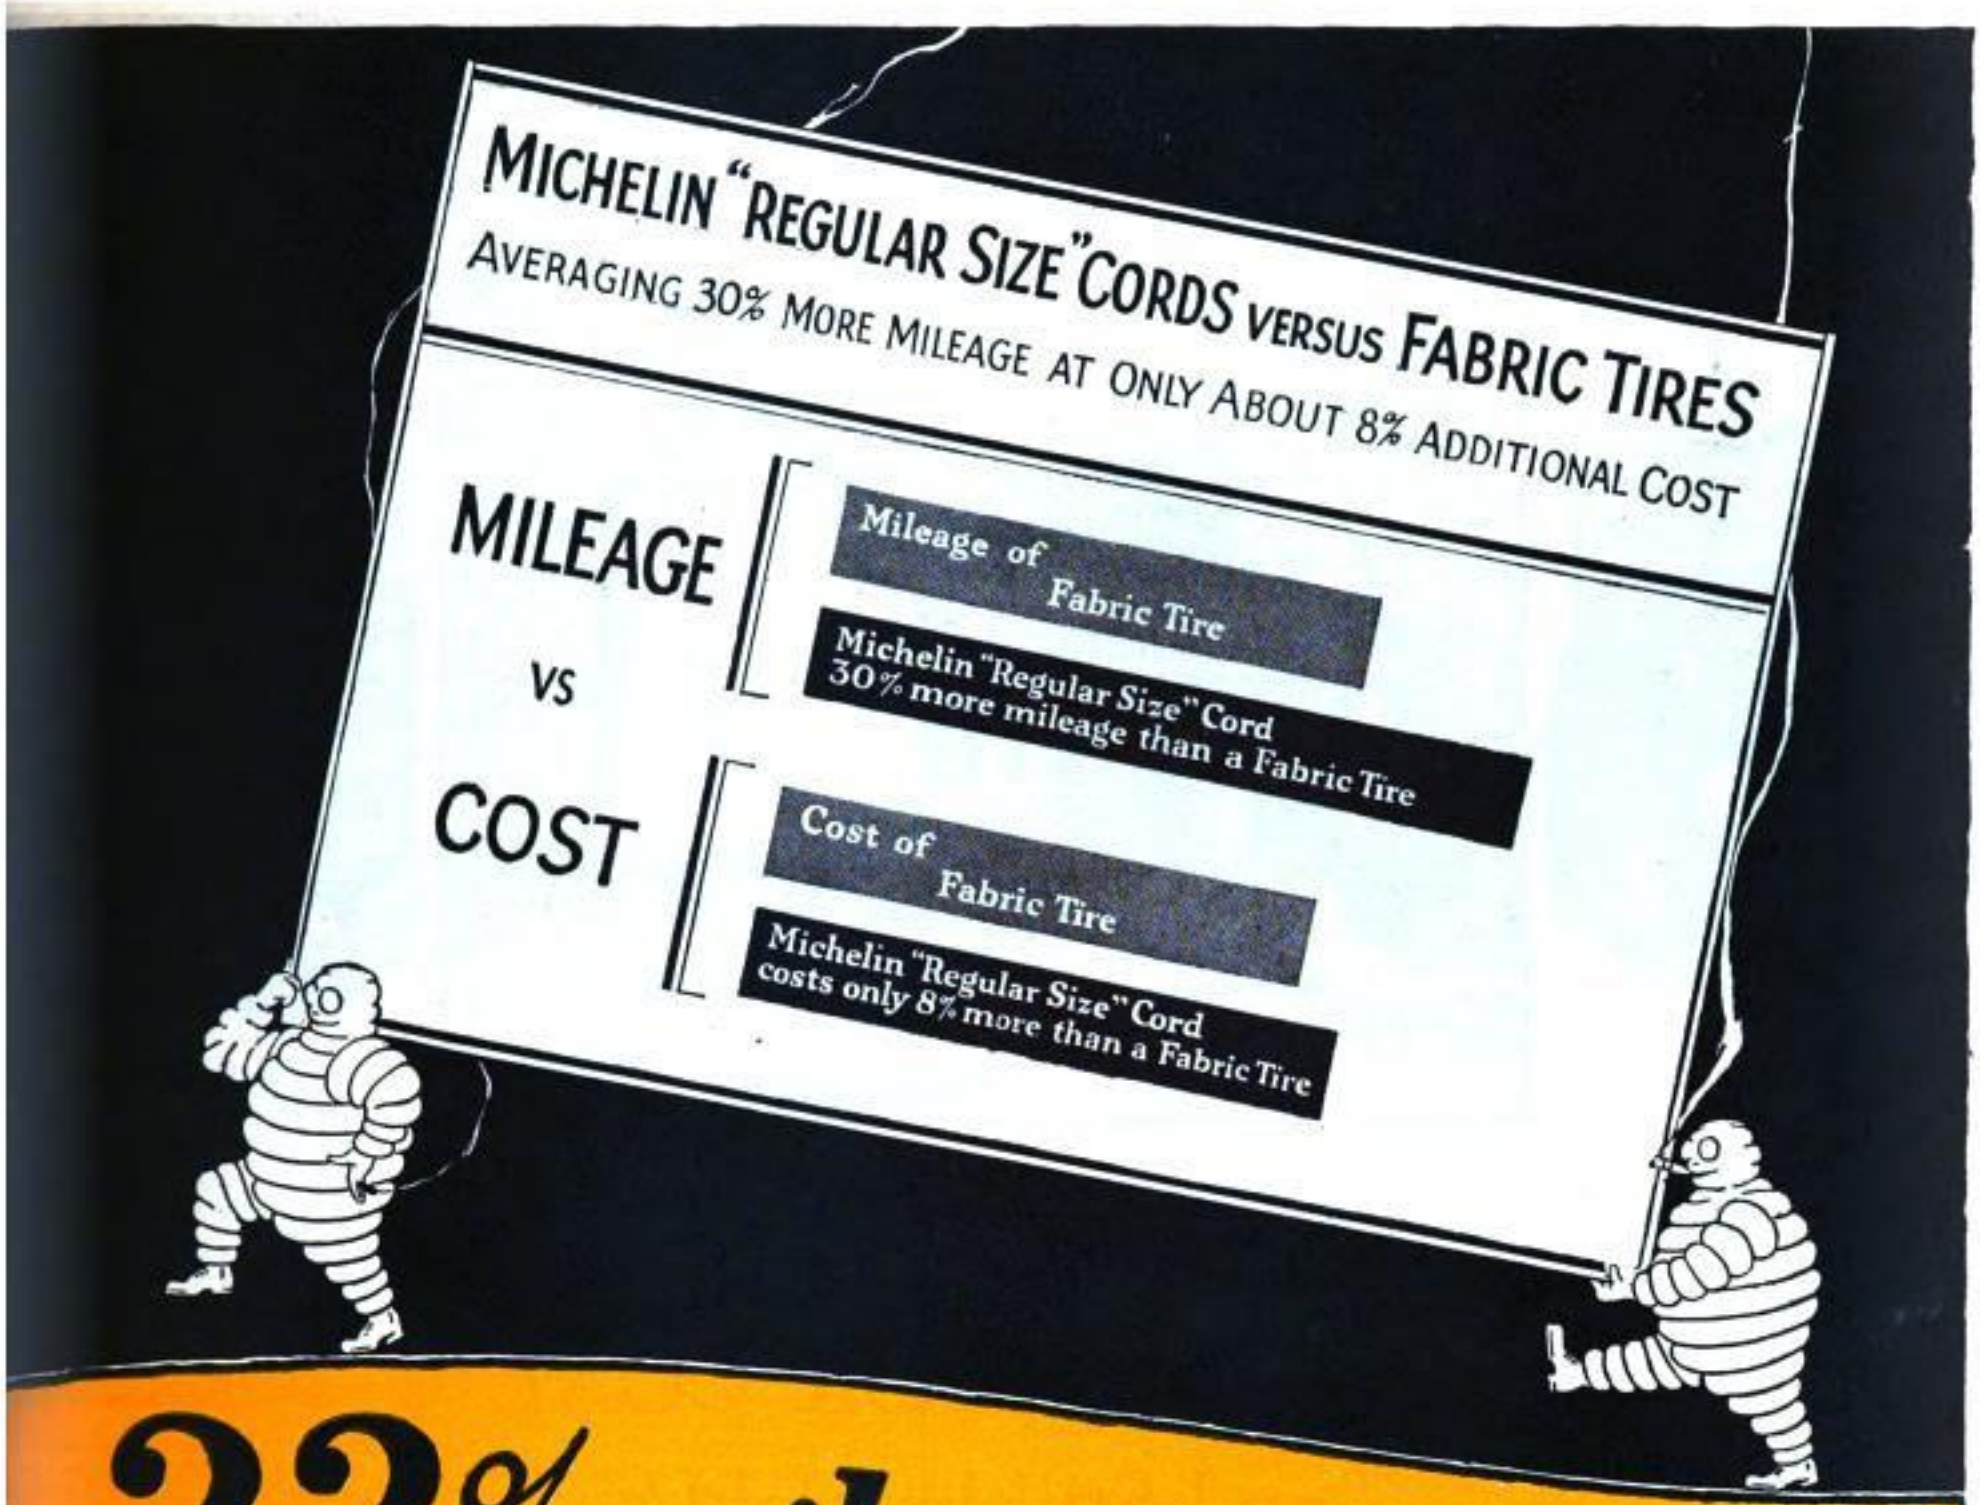
It was great fun to plan a house. In the old days on the St. Louis Post-Dispatch architecture and real estate had been one of my departments. William S. Eames, one of the youngest and most talented architects of St. Louis, associated with Thomas Young, a pupil of Richardson of Boston, had been a member of our old life class at Washington University. He tried to tell me something each week about the beauties of his art, and I came to believe that an essential feature of domestic architecture was a roof that could be seen. According to Eames, the house should droop its wings and hover its sheltered brood like a mother hen. A memorandum sketch that I turned over to our New York architect, and which my wife still has in her scrapbook, was drawn on the back of an envelope after many conferences as to our joint needs. When we began to build we went to New Rochelle to board in order to be near the enterprise. There was no hotel. The best boarding house in the place was kept by two elderly ladies, one of them a Mrs. David, whose husband had been the principal merchant of that little city, and after whose family David's Island, now occupied by Fort Slocum, had been named. We were satisfied with their references, and they inquired for ours. With his permission, I gave them the name of Bronson Howard. They had never heard of him, and asked his business. I told them and named his prominent plays, The Banker's Daughter, The Henrietta and Shenandoah. They had never heard of any one of these.

I said, "He is your neighbor and owns the house just around the corner," giving them street and number. They had never heard of that.

This story of Howard's obscurity was a favorite one of mine for many years to illustrate the indifference of the general public to the men who write plays, until it was superseded by an experience of my own. In 1909 Mr. Shubert asked me to go to Chicago to overlook the performance that the John Mason company were giving in my play, The Witching Hour, at the Garrick Theater. I purposely stood in the lobby until the curtain had gone up, and then in my most humorous manner asked the man in the box office if he passed the profession. The lobby was filled with posters bearing Shubert's and Mason's names, and my own, in that order of impor and display. The treasurer aske name, the branch of the profession in I was. I told him. He asked me the of some plays I had written. I name or five, omitting The Witching Hou said he would have to ask the ma The manager came to the box-offic dow, put me through the same qu naire and shook his head; and it wa when I told him how he would disap Mr. Shubert, and pointed to the sheet bearing the name I had given that he in any way associated the with the type.

At New Rochelle I became intim acquainted with Frederic Remingto E. W. Kemble. These two illustrato been friends for some time elsewher were great companions; but the most tiful side of their friendship needed for its precipitation. Kemble is univ amusing when he cares to be. Fe are his equal in putting the spirit o cature into ordinary verbal report or ment; even his famous "Kemble's K do not show such sure fun. Remingt sponded promptly to Kemble's co however expressed. Most men who k do the same, but Remington went fu When Kemble had left him after any view, all of Kemble's woes of which Re ton had been the repository were sud dwarfed in the larger horizon of Re ton's experiences and transmuted into splitting jokes. In his mind, Kembl never grown up; and Kemble recipro

Remington's throes, viewed th Kemble's prism, were just as amu They took even each other's art as fellows take each other's games. were years when much of their leisur passed in company. Their understa was mutual and immediate. One after the theater, on the train home New York, sitting together, Remi was by the car window, Kemble next t aisle. An obstreperous commuter wa turbing the passengers, men and wo The busy conductor's admonition had ineffective, the brakeman's repeated postulations useless. The men passe seemed cowed; the rowdy was gaining fidence. On his third blatant parade thr the car, and as he passed Kemble's Remington's two hundred and fifty po of bone and muscle reached out into aisle, and with the precision of a snap turtle lifted him from his feet like a nau boy and laid him face downward Kemble's interposing lap. With the s of perfect teamwork, as Remington the ruffian, Kemble spanked him, while legs in the aisle wriggled frantically f foothold. The correction, prolonged ample, was accompanied by roars of la ter from fifty other passengers. Being d Remington stood the offender on his f The man began a threatening tirade. fore half a sentence was uttered Reming had him again exposed to Kemble's rh mic tattoo. This was enough, and w again released the fellow promptly left car for the seclusion of the smoker.



The Hartranft Statue

In those early '90's my sculptor fri Ruckstull's relation to life was not unl my own. He was working in a departm of art where there was no regularity of come, and where his opportunities were result of competition. Next to getting order for a play and finding a story sa factory to a star or manager was see Ruckstull win a commission in a compe tion where his sketch had been approv When he got the order for the Hartra equestrian statue to go up in front of t Capitol at Harrisburg it made quite a lit stir in our colony. Besides myself, bo Remington and Kemble were artistica interested.

After one had submitted a sculptur model sketch which is perhaps eighteen twenty inches high, the procedure towa the heroic group that is finally to be bronze is through what is called a fourt sized model—say, for horse and man pe haps four feet high. Ruckstull decided make his final clay model of the finish group in France. Studio rent, plaster cas ing and the final bronze, together wit one's own living for the year that the wo would require, would all be so muc cheaper that such a foreign residence, wit somewhat of a holiday color to it, woul about pay for itself. His fourth-sized model however, he would make in this country

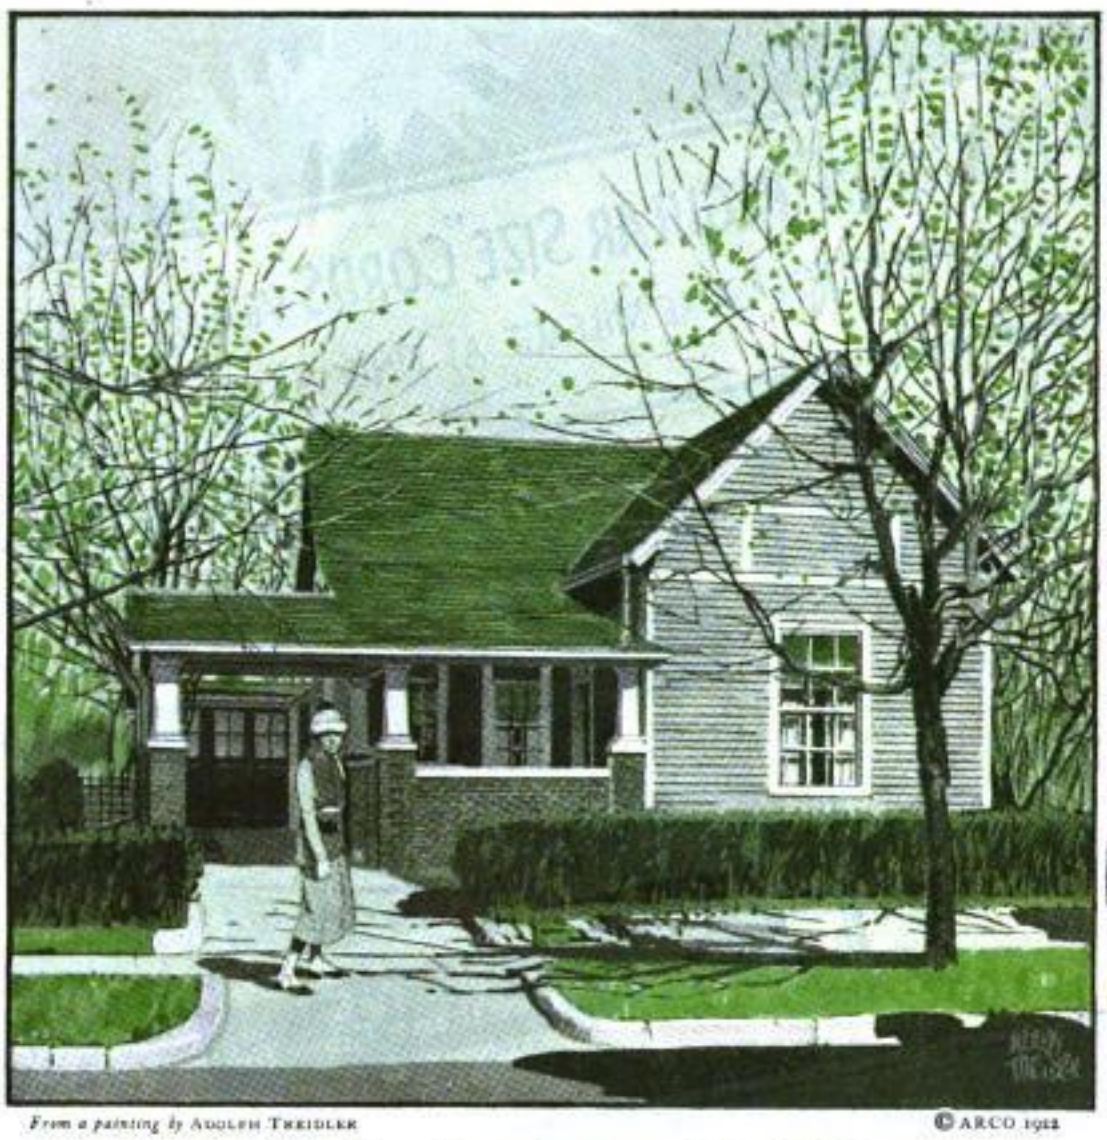
22% mileage free!

HERE is the tire that has literally taken the motoring world by storm. A tire that gives an average of 30% more mileage than a fabric, as proved by tests covering hundreds of thousands of miles—yet costing only about 8% more—in other words, approximately 22% mileage free.

These new cords are the same size as fabric tires and interchangeable with them, and may be fitted one at a time as your fabrics wear out. Thus you may take advantage of the economy of cord tires by "easy stages" at practically no increased expense. Just ask the nearest Michelin Dealer about "Regular Size" Michelin Cords.

MICHELIN
"Regular Size"
CORDS



Michelin offers a complete line of cord tires—oversize and regular size, in one quality only, the best—all just as good as the famous Michelin Ring-Shape Tubes.

No trouble starting in cold weather if there is an American Radiator in the garage

From a painting by ADOLPH TREIDLER

© ARCO 1922

Children have fewer coughs and colds when every room has radiator warmth

DR. JOSEPH MYERS, SR., an Optometrist of Crawfordsville, Indiana, with one ARCOLA warms both his home and garage.

WHY PAY FOR COAL and Still be Cold?

JOSEPH MYERS, SR., heated his house with an old-fashioned base burner. A few rooms were very hot and the rest of the house was cold.

He heard of ARCOLA (perhaps through the booklet that is offered here, which you may have for the asking) and he got in touch at once with a Steamfitter in Crawfordsville.

ARCOLA was installed, with an American Radiator in every room and an extra Radiator in the garage. Imagine his delight when he discovered that ARCOLA heats the whole house, and the garage as well, with no more coal than the base burner consumed.

Thousands of homes are needlessly cold, though the owners pay large sums for coal. If your house is one of these; if it has cold bed rooms, that can't be warmed when the wind comes from the wrong direction—then *ARCOLA is for you.*

See ARCOLA in the window of your Plumber or Steamfitter. And send now for the booklet that tells how quickly and cheaply it can be installed; and how it pays for itself in the fuel it saves.

he Lost Tribe of Dramatists

k in those days there was a wish to ve the theater, not unlike the general so prevalent now, and which has been entirely absent; a feeling that ox office should not so largely domi- in the selection of a play, and that rdict should not be the final one on matic offering. Prominent in this on was Mr. Henry B. McDowell, a g man of enthusiasm and high pur- and, what was equally valuable at time, with somewhat of a fortune. Mr. owell decided upon a winter's series lays which should be produced under repertoire idea and be shown in both York and Boston. To launch his prise he began in the spring of 1892 a dinner of fifty men, about thirty- of whom were novelists, magazine ers and poets, the remainder being ady engaged in the business of writing m. I remember among the literary men William Dean Howells, Charles Dud- Warner, George W. Cable, Frederic J. ason of Boston, Richard Hovey, the d, Richard Harding Davis, Edmund mence Stedman, Frank R. Stockton, l others.
at to the left of Mr. Bronson Howard, during the meal said to me: "These nary gentlemen believe that they con- ute the lost tribe of American drama- s, and that the theater will be elevated, ot saved, as soon as they turn their at- ntion to it."
This critical attitude startled me some- at, as I remembered so pleasantly Mr. owells' little comedies, The Elevator, e Garroters, Register, and the like, nted in 1884 and 1885 in Harper's. ightly opposing Mr. Howard, I took the erty of suggesting that that might be the se.
Very definitely this veteran then asked e, "Thomas, what is a dramatist?"
I answered, "A man who writes plays."
"Exactly! What plays have these men written?" Then reinforcing his position e told me that the capacity to write plays invariably evinced itself in a disposition to do so before middle life. When called upon to speak, however, Mr. Howard took a sympathetic attitude toward the venture and talked encouragingly. One other speech that I remember in a general way is that of Mr. William C. De Mille, father of the present De Mille boys of dramatic and motion-picture fame. One line particularly had a considerable influence on my way of thinking. De Mille reported a proposition by Harper Brothers that he should write for them a set of rules for playwrights.

He said: "I at first accepted the commission, but later declined for the reason that I feared that if I once formulated a set of rules for writing a play I might some time be tempted to follow them."

It was about that time that Frederic Remington, speaking of his own art, as illustrator and painter, said to me, "'Tommy, if I felt cocksure of anything about my business I would begin to be afraid of myself."

The resolution of each of these experts to keep a perfectly open mind about the things they were doing went far toward retarding my own ossification.

Mr. McDowell established his Theater of Arts and Letters and gave the five performances. Plays by Mr. Stimson, Richard Harding Davis, Frank Stockton, Clyde Fitch and some other author were produced under the stage direction of Eugene Presbrey. Mr. Howard took a definite pleasure when the enterprise had closed in calling to my attention the fact that the only play that had made any worthwhile impression was one offered by a professional dramatist, Clyde Fitch, a little thing called The Harvest, which he subsequently elaborated into The Moth and the Flame. Besides a very generous subscription fund, McDowell lost a substantial sum of his own—as I remember it, thirty-odd thousand dollars.

A Reformation That Failed

I saw these performances, and after a lapse of thirty years I remember three distinct features: The small talk of a fashionable company waiting for the bridal couple in a church which made up the background of Fitch's little play; a line from Frank Stockton's Squirrel Inn spoken by Mary Shaw, who played the part of a trained nurse applying for a position, and who when the anxious mother asked her if she understood babies answered, "I ought to, I dissected one"; a third incident wherein Joseph Wheelock, Sr., played the part of a harassed husband whose wife was a drug fiend. Each sympathetic friend that came upon the stage took the husband's hand and gripped it in silent sympathy. As the audience began to titter over the repetition of this business Wheelock became sensitive. He put his hand behind him when Nelson Wheatcroft, the next member of the company, came near him in a succeeding scene. Feeling that something depended on the gesture, Wheatcroft took Wheelock by the elbow, recovered the hidden hand and shook it to general laughter that almost closed the performance. It is interesting, at least to me, that out of this expensive essay these somewhat technical points should be the lasting impressions, and that all the fine literary offerings intended for the reformation of the theater should have so vanished.

In these early '90's Joseph Brooks conceived the idea of having a play written with George Washington as the central character. This was suggested by the resemblance between the portrait of Washington and that of Joseph Holland, then at the height of his popularity as an actor. Brooks' idea was to associate Joe and his older brother Edmund. I undertook to write the play, and made a fairly thorough study of Washington's life and times. Avoiding the error of the biographical play which tries to cover too much, I confined my story to the period when Washington was a colonel of the Virginia militia, and before he had married Martha Custis. I found a character for Ed Holland in Virginia's Scotch governor, Dinwiddie. When the play was done the professional engagements of the two men did not allow them to undertake it immediately, and before both were at liberty one had fallen ill. The joint project was abandoned. Having faith in the play, I wanted to see it tried, and for that purpose went to Boston, where the Castle Square Stock Company at that time had as leading man Jack Gilmour, bearing considerable resemblance in face and figure to the

Love of Oats

Foster it in this way

The love of oats will last a lifetime if you foster it correctly.

Millions of mothers, in fifty countries, have for decades done it this way.

They serve Quaker Oats—the extra-flavory flakes. Some send 10,000 miles to get it.

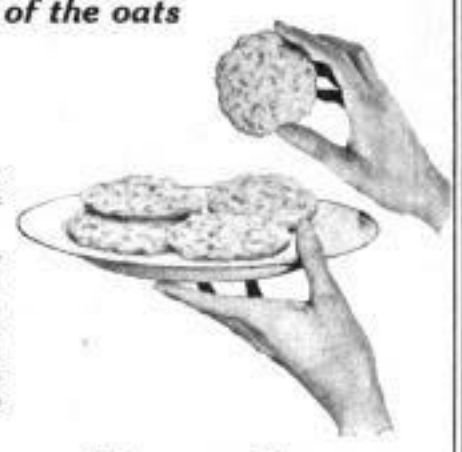
This brand is made from queen grains only—just the rich, plump, luscious oats. A bushel of choice oats yields but ten pounds of Quaker.

The result is a wealth of flavor and aroma. The dish is made delightful.

This food of foods—the greatest food that grows—is made the wanted dish.

The oat is almost a complete food. It is nearly the ideal food. It supplies 16 elements which everybody needs.

As a body-builder and a vim-food it has age-old fame. Then why not get this extra flavor and make the flakes enticing? It costs no extra price.



Quaker Oats

Just the cream of the oats

Quaker Macaroons
A Confection

1 cup sugar, 1 tablespoon butter, 2 eggs, 2½ cups Quaker Oats, 2 teaspoons baking powder, 1 teaspoon vanilla.

Cream butter and sugar. Add yolks of eggs. Add Quaker Oats, to which baking powder has been added, and add vanilla. Beat whites of eggs stiff and add last. Drop on buttered tins with teaspoon, but very few on each tin, as they spread. Bake in slow oven. Makes about 65 cookies.

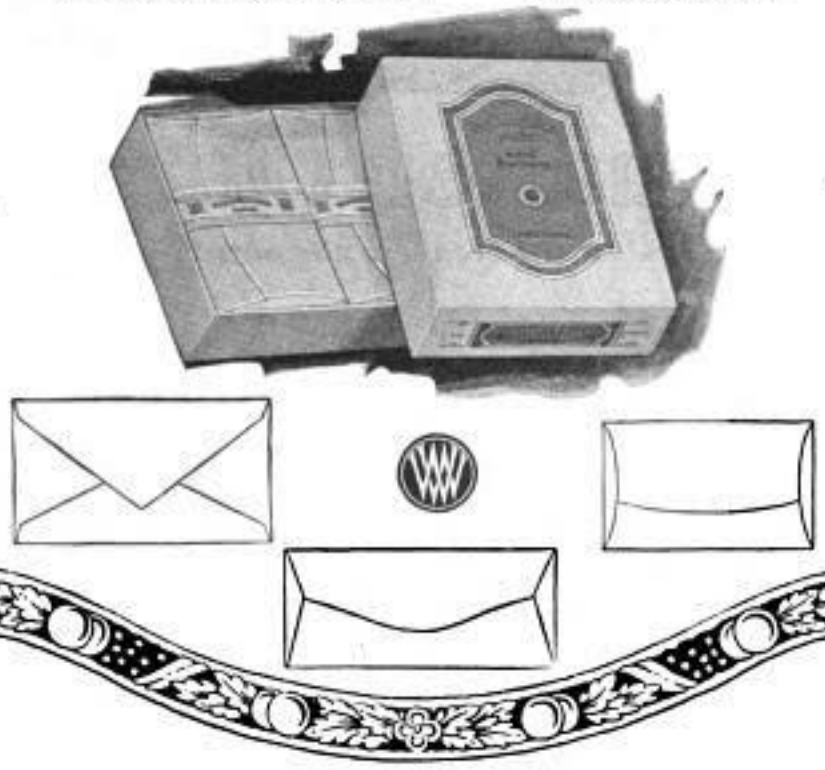
"I Wonder Why She Doesn't Write"

PEOPLE write letters when they have writing material handy. If you don't keep up with your personal correspondence, it may be because you are not supplied with personal stationery. You "forget" to write because you have no paper and envelopes suitable to use.

HAMMERMILL BOND

Social Stationery



Made in three finishes—linen, bond, and ripple—with eight different styles and sizes of envelopes, with sheets to fit. From this selection you can choose just the kind of distinctive personal stationery you like best. Sold by druggists, stationers, and department stores. It is strong, smooth, and pleasant to write upon, and costs but 35c to 75c a box. Also supplied in writing tablets in popular sizes.

If you will send us ten cents (stamps or coin) we will mail you enough Hammermill Bond Social Stationery in different styles and finishes to answer several of the letters you owe.

Hammermill Bond Social Stationery prepared by

WHITE & WYCKOFF MANUFACTURING CO.

Master Makers of Distinctive Stationery Holyoke, Massachusetts

traditional Washington. This stock company played a new play every week, having only five rehearsals in which to prepare.

On our first night a young actor who was playing Bryan Fairfax, with two scenes in the first act, was not at hand when we reached his second one. The usual efforts to hold the stage were made, but we finally had to ring down. The young man when found was in his dressing room in his underclothing, having forgotten his second scene and begun to dress for his second act. This was explained to the audience, but when we rang up again the whole thing had taken on such an air of unreality that two or three other mistakes which have a fashion of running in groups on hard-luck nights in the theater destroyed any impression we might have hoped for. Later performances convinced me that I had a good play, but it was never done after that week.

Brooks went to the production of a new play for Crane called The Governor of Kentucky, written by Franklin Fyles. At the end of rehearsals, star, manager and director felt they were in bad shape as to story. At their dress rehearsal, at the request of the author, I indicated what I thought were the weaknesses, suggested the remedies and told them what I thought the Tuesday morning papers would say. Remembering our quick revision of For Money, Brooks hoped something of the same kind could be done with The Governor. On Tuesday I was waked by telephone at daylight, and at his request came at once from New Rochelle. By arrangement we met Presbrey and Fyles. Fyles approved of all the proposed changes, but not being in good health left the work with Presbrey and me. Between us we had a revised script that evening, and the version went on before the end of the week. Brooks insisted on paying for the day's work. When I hesitated to name a figure he suggested the canceling of a thousand-dollar note of mine which he held. I agreed.

Willie Collier and the Tailor

A little later than this Harry Woodruff came to see me at New Rochelle. He had then left the stage and been two years at Harvard College under romantic conditions. Harry had won the affections of a daughter of a wealthy family whose members objected to an actor as a husband for the young woman. They agreed, however, that if Woodruff would go through Harvard and equip himself for another profession the objections would be withdrawn. They also agreed to pay his way. While Woodruff was at his studies the family took the young girl abroad, and with a change of scene and her wider opportunities succeeded in arranging for her an alliance with one of the nobility. With this accomplished, the family had notified Woodruff that the financial support they were giving him at the university would be withdrawn. Harry was courageously making arrangements to pay his own way through the remaining two years, and regretting that he had not secretly married the girl as he had an opportunity to do.

This possible set of relations—a young man in college secretly married and the family trying to marry his wife to a foreign nobleman—struck me as a pretty complication for a comedy. Having a contract with Goodwin for something to follow In Mizzoura, I developed that story into a three-act play which I called Treadway of Yale. Goodwin accepted both the scenario and the finished script, but before the time came for production he married Maxine Elliott, of whose dramatic ability he had such high opinion that he thought the comedy gave her insufficient chance. He therefore forfeited his advance payments on it and returned the script. It was produced some time later under the title of On the Quiet by William Collier under the management of Will Smythe, and later revived by Charles Frohman when Collier passed under his direction. Collier went to London with the piece. During his successful run with it there Willie had occasion to be measured for a suit of clothes. An English tailor, amused with his American manner, endeavored to spoof him, a risk that no American tailor would have taken.

As he ran his tape over him he said in his blandest manner: "I saw you last night, sir, in your very amusing comedy. Have you played that before the King?"

Collier said, "I played it before anybody. I'm the original."

Along in this epoch that I am so informally trying to describe I was one day in a dark theater listening to a rehe song intended for Marie Cahill, time, I think, still with Daly, with Duff. In the syncopated ac ment there was a hesitation not un intermitting heart jump that so one until the family doctor with h on one's wrist says "Too much The radiant composer-piano-playe above his racket to Miss Cahill, "B ragtime?" She did. I was at som distinguish it, but that was my i tion to the term and to the manne thereafter, a year or two, "ragtim stock word. Some more years at vided space and attention with jaz are negroid. On the border line of belt I had been brought up on dar While the melancholy of slavery them the negroes, intensely respo and expressive in music, had found in the Stephen Foster Kentucky Ho of melody and a racial cadence wo the tunes of the Baptist hymnal lighter output just after abolition w rap-tap-a-tap-tap school of sand da McNish silence-and-fun variety. W equality got onto Sixth Avenue, the African tom-tom in a red vest, appearance. Jazz was its offspring. ragtime triumphant and transfigu Congo arrived at kingdom come.

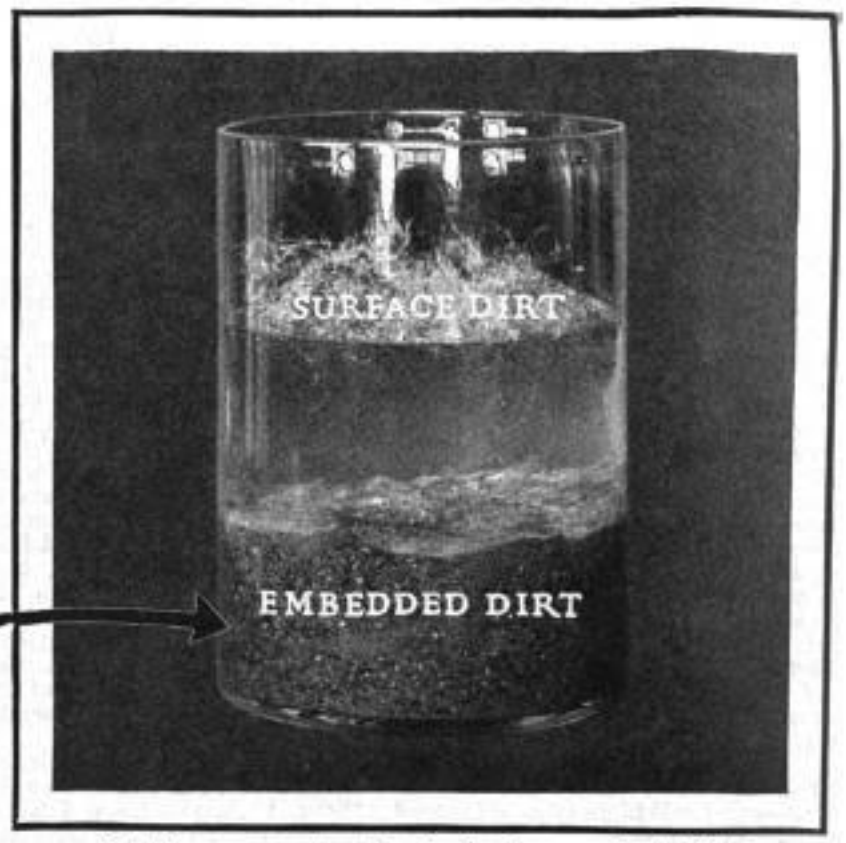
Plato on Jazz

The nation's feet kept time. Th step gave way to the fox trot a shimmy came along with jazz. (Africa saw ghosts. Some moralist of a certain ferocity in Nature whic it had its inlet by human crime, mus its outlet by human suffering." Wh not jazz be the cutaneous eruption virus of black slavery? If Davi Vaughan are accurate in their tran of Plato's Republic the idea is not s as the inquiry, for therein Plato say

"The introduction of a new k music must be shunned as imperil whole state, since styles of music are disturbed without affecting the mo portant political institutions. The style," he goes on, "gradually gai lodgment, quietly insinuates itself manners and customs; and from th issues in greater force, and makes it into mutual compacts; and from com it goes on to attack laws and constitu displaying the utmost impudence, u ends by overturning everything, bo public and in private."

It might no doubt amuse Plato to fifty years of musical progression in A ica and check its changes against our cl ing compacts, laws and constitutions.

"But say, this guy Plato—where he get that compax-and-constatution s Who wised him to anything about business? An' lissun! This Davus Vaughan—words by, music by—I n ketch them on no big time neither."



Frederic Remington, with a natural s philosopher's view of them as they wo not only in the theater but in life, refus believe that the overflowing tide of ignor was destined to inherit the fruits of the ea He disliked the growing influence of unassimilated immigrants. He hated political herding of them. He loathed politicians because they talked. He lo the soldiers because the military a promptly and without debate. In his in the West the local advent of troo meant sudden and inflexible order. saw humanity's future safe only un military discipline. We differed, bu liked his mettle and his impatience w conditions. At Remington's I met sev of his soldier friends, among them G Nelson A. Miles, then the command major general; also Capt. Francis Mich decorated for gallant service against In ans in Arizona in 1872 and 1873.

When finally confused with the rewri and inventions for the theater in whic was then becoming involved, I resolv again to go for a subject to the plain a primitive things as far as one could fi them. Encouraged by Remington, a definitely interested by his enthusiasm, took a mandatory letter that Remingto got from General Miles to all commandan in the West instructing them to give n information and assistance, and with t preconceptions as to story went to Arizon in 1897 to get a play. It was an importa turning point in my career.

Editor's Note—This is the ninth of a series twelve articles by Mr. Thomas. The tenth will a pear in an early issue.

No rug is really clean until this dirt is removed

This laboratory test shows how the Royal removes the EMBEDDED dirt, as well as the SURFACE litter.

Much of the embedded dirt is gritty and injurious to rugs. Much of it is unsanitary and laden with germs.

Notice that the Royal not only picks up all SURFACE DIRT but removes all of the EMBEDDED DIRT.

When you select your suction cleaner, keep that important fact in mind

MRS. John Thompson, 1531 E. 82nd Street, Cleveland, O., was sure that her 9 by 12 Axminster rug was *clean*. She smiled a little when the Royal Man proposed to get dirt out of it.

But the Royal Man smiled, too, plugged in the cord, pressed the convenient trigger-switch, and ran his machine over the rug for exactly 6 minutes.

He then emptied from the Royal's bag 10 *ounces of dirt!*

The most and worst dirt is IN your rug—not ON it

The 10 ounces of dirt that came out of Mrs. Thompson's "clean" rug was largely *embedded* dirt. The jar-of-water laboratory test shows how much of this unsanitary dirt there is as compared with surface litter.

When ordinary cleaning methods have removed the surface litter from your rugs, that is what is left deep down in the fabric. It is unsanitary, germ-breeding—the worst kind of dirt. And it contains much sharp grit that gradually cuts and injures the fibre of your rugs.

How Royal's powerful suction gets this dirt

To get out all of this dirt a cleaner *must*, we believe, do three things. It must produce a *powerful* suction. This suction must be *uniform* all along the nozzle. And the nozzle must be *adjusted* "*directly*" to the rug surface.

The Royal does these three things. Its suction is not only powerful but actually *increases slightly in use*. Scientific and patented design creates a *uniform* suction along the entire 14-inch nozzle length. And with the *patented* Royal adjustment screw, the *powerful, uniform* suction is applied "directly" to the rug surface.

Yet the Royal, thorough as it is, is absolutely harmless. You can clean even your Orientals daily without fear of the slightest injury to them.

Easy to use—and built to last a lifetime

The Royal is so light, it weighs barely 11 pounds, and it requires so few strokes over the rug (because it cleans so fast) that it will never tire you. The trigger-switch on the handle saves stooping to turn on the current, and the Royal nozzle is designed to get into corners and under furniture with greatest ease.

With such mechanical simplicity and precision is the Royal built that it is practically trouble proof. And it is made to last a lifetime. Remember, true economy and thrift lie in the purchase of articles of real value rather than at low price.

Let the Royal Man show you

Arrange with the Royal Man to clean a rug in your home—without obligation to you. He will also show you how to clean from cellar to garret—how to clean concrete, hardwood and linoleum floors; renovate mattresses and pillows; remove the dirt from upholstered furniture or hangings; and clean in and around fireplaces, registers, radiators, etc.

Don't be content with getting only the surface dirt! The most dirt and the really harmful dirt is *in* the fabric, not *on* the surface.

THE P. A. GEIER COMPANY, Cleveland, Ohio

Manufactured in Canada by

Continental Electric Co., Limited, Toronto, Canada

THE ROYAL MAN

The Royal Man is trained in matters of housecleaning and can show you many interesting labor-saving methods of cleaning.

Without obligation on your part, he will be glad to clean a rug for you and let you judge for yourself the worth of the Royal.

The P. A. Geier Company expects every Royal Man to be courteous, considerate, and never insistent in his dealings with you. You need never hesitate to ask a Royal Man for a demonstration in your home.

In practically every community there is a Royal Man connected with a reliable retail store handling electrical appliances who will be glad to explain the superiority of this new cleaning method.

If you do not know where to reach him, write us and we will see that you are put in touch with him.

DEALERS: The valuable Royal Franchise may be had in certain cities and towns. Write for complete information.

RETAIL REPRESENTATIVES: There are numerous desirable opportunities for men of character and ability in the capacity of Royal Men. Inquire of the local Royal dealer about openings in your locality.

JOSEPH'S COAT

(Continued from Page 11)

read my letter from Amanda. But I could not afford to quarrel with the old rascal; I was too used to him. I nodded my head at him and spoke to Valentine.

"Briggs has been with me a great many years, my dear; he is the person to ask if you want anything. He carries my mind and my money about with him. Briggs, this is my niece, Miss Valentine Forster."

I don't think either of them spoke. Valentine laughed a little, and her eyes lighted with mischief that was purely childish as she met the respectful glance of my servant. Did I say respectful? It was devoted. Yes, he knew who Valentine was, and he was already worshiping her family tree. Pshaw! The old snob!

I turned from him in disgust. Outside, the trees in Central Park were tinged with green; spring was here; the pool with the swans on it, up and down which the children sail in summer, had already been decked out with tiny boats. The sun sparkled on the mirrorlike surface, and the blue of the sky was the blue that only a young and slender woman can wear.

"Magic!" said Valentine, following my gaze.

"I had the picture framed especially for my windows," I said flippantly, and turned to pour out her coffee.

But Briggs had forgotten nothing; he had done that and withdrawn. Drat the fellow!

I urged her to eat, but she was almost too tired. The coffee and the warmth of the room revived her somewhat, and presently we managed to get round to the subject of Amanda's letter. To my surprise and relief I found her very direct. Most of the English girls I remembered were so vague and vaporish. Of course that was some time ago. Things change.

She told me that her father had been missing for two weeks.

"He just walked in one night, Uncle Magnus, and stood in the door of the drawing-room looking at me, his overcoat thrown back, his white shirt front gleaming in the light from the fire. He looked very excited somehow, and as if he had been keyed up to something tremendous; the way he looked sometimes when he had been doing a dreadful operation that no one else would undertake. He is so clever," she added proudly; "and so—so strange sometimes, although people don't guess that, ever. Mother had warned me about him when he looked that way. I must be very quiet and matter-of-fact, she said, and not disturb him by my manner; the thing to do was to get him to rest, anyhow, anywhere. I don't know, but I think that something had happened once when they were first married to make mother afraid of what he might do when he was in a tired mood like that—so I just called to him and he came into the room, throwing down his coat. You know, Uncle Magnus, our house is very old-fashioned and furnished almost entirely with things grandma gave to mother when she was married. Beautiful, in its way, but not a bit like your room here.

"Father had to pass several small tables to get to the fireplace, and they must have annoyed him, because he kicked one of them over and just left it lying there, and he is so polite; that wasn't a bit like him. I began to be more than a little disturbed, but I wouldn't have let him see for the world, and I kept on gripping my work and telling myself over and over inside that I must remember how mother used to act and try and take her place, when suddenly the dreadful thing happened."

She stopped, and the face she turned to me had lost every vestige of color; even her lips were white. And her blue eyes were almost black, she was so much in earnest.

"I don't suppose it will seem horrible to you," she said; "it doesn't to anyone except me, but I saw it happen, you see; that makes a difference. Father came to the fire and stopped dead, looking over at the ottoman. And then I knew that I'd done something terrible, though I did not see why it should be.

"Did you ever hear, Uncle Magnus, of Dick Forster, daddy's younger brother? He was just a baby, I think, when you and father were at college, and when I was little I used to think he was splendid, though I believe he was the most awful spendthrift, and quite wild. He used to visit at home a lot when I was at school at Miss Clayton's—he was house surgeon at one of the hospitals then—and once when I was home for the holidays he came in at lunch time and asked for the governor—that's what he called father—and heaved such a sigh of relief when he found he was not there nor expected. He had curly fair hair and always wore the most extraordinary clothes; at least mother said they were extraordinary, but I used to admire them like everything. This time he had on some pink socks with black silk clocks, and a most gorgeous waistcoat; it was of maroon silk, fine as could be. Mother laughed about it; she always teased him about things; and he said seriously, 'Mar'—that is what he always called mother for short—'you don't know what that waistcoat cost! I just wish I had the money I gave for it, now.'

"Well, we had lunch, and Dick was just as gay as he always was, laughing and chaffing mother all the time the servants were in the room; but when they had gone and we were drinking our coffee he sobered suddenly. 'Listen, Mar,' he said, 'will you do something for me? Will you promise to—to always be the same to me, whatever happens?'

"Mother grew a little pale, but she put down her coffee cup and smiled at him. 'Why, Dick, you know I will,' she said. Mother had an awfully comforting way of saying things like that. And when she spoke Dick stretched out his hand on the tablecloth—he had such beautiful hands—and he said huskily, 'Bless you, I believe you will too.' And he got up to go.

"Well, I don't know what happened exactly, because I wasn't there, but mother followed him out into the hall, and I heard them go into one of the reception rooms and close the door, and presently mother came back into the room and hunted in her desk for a check book and went out with it, and when Dick left he was laughing, and mother came back into the room with the maroon-colored waistcoat in her hand, and she was laughing, too, only she had tears in her eyes.

"'That absurd boy!' she said, and sat down with the waistcoat on her lap, smoothing it absently with her fingers every now and then, with a little frown between her brows.

"'What was it, mummy?' I said. 'Didn't Dick take his waistcoat?' And she laughed again softly, and said, 'No, the foolish boy; he insisted on taking it off and going away without it.'

"'Why?' I asked her, because, of course, I was still a little girl, and I didn't understand about not asking all the questions you want.

"'Why?' she repeated. 'Because I bought it, dear.'

"So that was all that happened that day, but often after that Dick would come in a waistcoat of some different design—once it was of moleskin, I remember, ornamented with little silver buttons—and he always left them behind him. Mother grew to have quite a collection, and she always kept them in the ottoman in the drawing-room, close to the fireplace, and once I remember she said to him that any time he wanted to be particularly gay he knew where they were; he could take which one he wanted. But he only shook his head, laughing the way he always did.

"'No, Mar, you've been an angel from heaven, but I won't take my trophies until I've earned them,' he said. 'Some day I'll pay you back and take them away in a taxi.'

"That was the last time I ever saw him, I think; the day he said that. For when I came back from school the next term he had gone, and mother was very sad about it when I asked her. 'Don't speak of him to your father, dear,' she said; 'he's very down on Dick. He didn't understand that he was just a boy; he is always so upright and honorable himself.'

"And Amanda told me there was a most dreadful scene once. Dick had been hauled before the governors of his hospital—he was a house surgeon, and so clever, they said—because he had been found gambling one night with some students. Daddy had been called in, and it was due only to his influence that Dick was allowed to stay. He begged and begged father to take him on as his assistant, but father—Amanda said he sneered.

"'Take you, and have the death of a patient on my hands—while you gambled and forgot!'

"'Take that back!' Dick cried furiously. 'I never neglected a patient in my life, and you know it.' They glared at each other like wild men, but father would not give in; he never gave in—he believed it, I suppose." She gave a tiny sigh. "But Dick wasn't bad, you know; just different. Mother always thought he'd come out all right.

"Once I heard mother and father talking about Dick—I think it was when daddy had been paying some of his debts—and he said angrily that he hadn't brought anything from Oxford but his bad name. Dear mother contradicted him—which is what she very seldom did. She said, 'Oh, you are wrong, Clement. He brought the best reputation as a fancy dresser of anyone in the varsity.' And she laughed a little, a sad laugh. She was awfully fond of Dick.

"So that night when father came home I had been looking at the waistcoats in the ottoman and thinking that I ought to wrap them up in mothproof paper before the spring came, and I suppose I hadn't set the lid down properly, for father caught hold of it with an impatient exclamation and instead of shutting it, jerked it open, and there, of course, lay all Dick's fancy waistcoats!

"He stared at them for a minute, and then he put down the lid quite gently and looked at me, and he looked just as he did when the news came of Toddy's death. Toddy was my little brother, you know, Uncle Magnus, and he died at Marlborough, while he was at school, the last year of the war. It wasn't anyone's fault; he simply had a weak heart and no one knew it, and the rifle exercises he did were too much for him. But father always laughed at him when he said he didn't want to be a cadet, the work made him so tired; and when he died, just because he had been one—though he wanted to, anyway, when it came to wartime, you know, because they were training even the little boys in all the schools—well, father felt as if he had had a hand in killing him.

"He'd taken up one of the waistcoats—it happened to be the one I remembered best of all, the one made of maroon-colored silk—and he felt it all over and he had the most dreadful expression. I can't describe it. It wasn't remorse, and yet it had a lot of that in it too. And he said, more as if talking to himself than to me, 'First the little brother, and then my son!' Then quite gently he dropped the waistcoat in the box and shut the lid, and muttered something to himself. I didn't quite catch it, but I thought he said 'Joseph's coat!'

"I said wouldn't he have some hot milk, or perhaps a whisky and soda, but he said no, he'd have some tea if I could get it for him when it was so late, and I went down to the kitchen myself—it is in the basement at home, and you can't hear what anyone is doing in the drawing-room, of course, because that is up two flights; you remember what English houses are like in the city, don't you, Uncle Magnus?—and made the tea. All the servants had gone to bed, of course, because it was really very late; about two o'clock in the morning.

"When I came back with the tea the drawing-room was empty; but all the lights were on, so I thought father would be back in a minute, and set down the tray and waited. But after a while the house was so still and I heard nothing of father in his room, so I went up to see where he was.

"No; he wasn't there"; she replied to my inquiring gaze. "We never saw him after that, and I think that when I was in the kitchen I heard the front door slam, though I didn't notice it at the time.

"Uncle Magnus, we've done everything to find him, everything we can think of. It was as I had thought at first, only his evening clothes put me off; daddy had done a difficult operation that night; he'd been dining out and they'd sent for him from the hospital. He was simply exhausted when he came home, and I suppose those waistcoats —— You see," she added explanatorily, "Dick had gambled away almost all his money, and he'd asked father time and again to let him come to him as assistant, because the particular work father specialized in was more interesting to him than anything in the world. But father told him to keep straight first and then he'd see. So when Dick simply hadn't anything more to sell he'd taken to his heels and flown the country, and mother told me once that he had gone to Americ and died there. Somehow that must hav preyed on father's mind, you see. Ther isn't any other explanation. Sometim people do strange things—the strange people—the very ones you think neve could!"

It was not in the least like my concep tion of Clement, but I could not tell hi daughter that. He had always been selfis in his young days; why should he hav changed now? It was plain that he ha been a drag on Marie, and that drag ha descended to his daughter. Why, this littl girl should have been in school now, no hunting in a strange country for a los father.

But I couldn't say any of this to Valen tine while she sat with her eyes wistfull on me, her face tense for something—a crumb of comfort, perhaps, I don't know what else—her lips trembling with eager ness to pour out all that had been pent up in her heart during that long ride across the ocean.

"You see, Uncle Magnus," she said, "everyone else thinks that I am crazy to come here to find daddy, everyone except Clem. I've had to fight them all, all the uncles and aunts—all the people who even think themselves related to us."

She passed her hand wearily across her brow. I could see that for an instant she was back again in England facing them one after another, all wearing that implacable expression of right that is so antagonistic to the one who is determined to do something that is never done, all with some coldly wise argument that means nothing to the person possessed of a passion for doing, righteous or otherwise.

And suddenly I found myself violently on her side, championing her cause, wishing her well in a quest that could not be anything but futile. At least it would give the child a rest to visit me, to see something of that America that as yet she viewed so dispassionately merely as a hunting ground for a lost father. Desire to make her love the country for itself rose up in me. She would love—with passion—once she was aroused, this little girl.

For the first time I saw that she had possibilities of beauty, of something that distinguished her from the usual run of American girls, beauties though they are—and there is no more ardent admirer of the American woman than I—something that set her apart from most girls. It came to me with an accompanying mistiness of the eyes that filmed my glasses over that it was a sense of sacrifice. Valentine had probably never had simply a good time. What with one thing and another, lots of English girls don't.

During the slight inconvenience caused by the mistiness of my glasses I had missed some subtle change of mood in the girl before me.

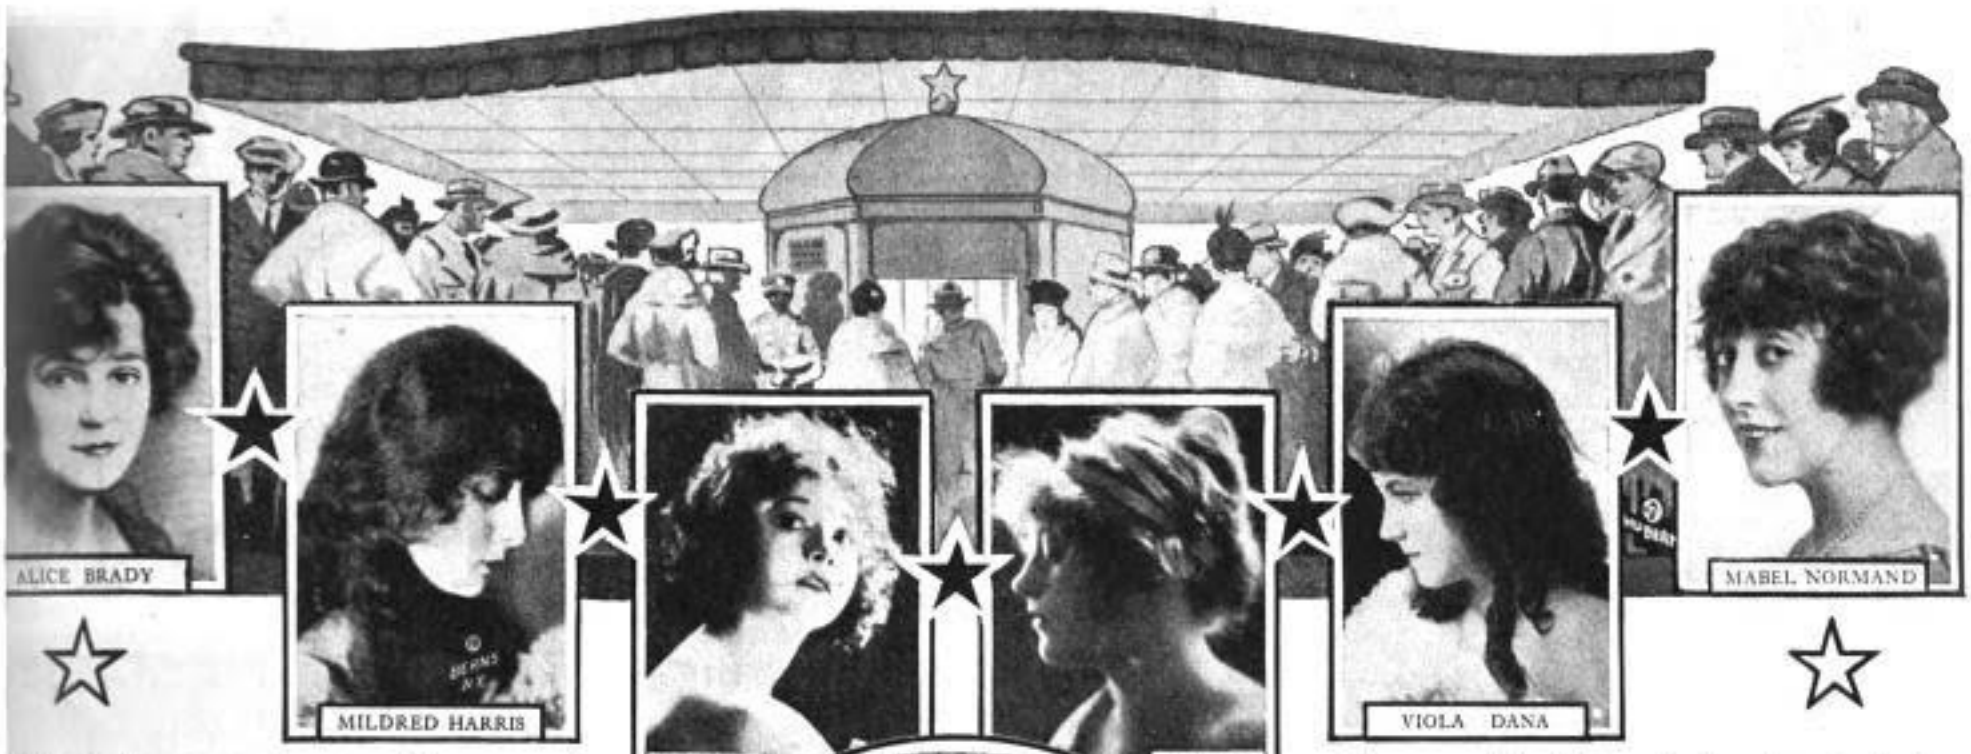
When I regarded her again she was looking out at the park with an expression in her eyes I had not seen before, something wondering, almost ecstatic.

I did not wonder at her. After sixteen years in New York I never tired of looking at my view, the view of Central Park framed by blue sky and shining in rarefied air. You must have been born over there to know how clear the air of even New York is—the gold on the roof of the Century Theater glinting in the sun—the air of charm and hustle everywhere below. I believe even Briggs loved it. And now here was another one, sitting with her hands clasped before her, her eyes mirroring the glory of the whole.

"Magic, isn't it?" she said again without turning her head, just as if she had known me for a long time, and I believe the dear child felt that she had, somehow. "Isn't it—isn't it a foreign city—like a dream—when you think of London? And," she went on, not waiting for me to answer, "how father would love it! After he got used to it of course. Oh! I mustn't miss any time hunting for him!"

She started out of her chair so rapidly and with such grace that I was surprised. I stood up also, but laid a detaining hand on her shoulder.

"What makes you so sure he is here, Valentine?"



She flushed, but her eyes met mine steadfastly. She caught her breath a moment before she answered.

EAUTIFUL HAIR IN THE MOVIES

ow Stars of the Screen Enhance Their Charms

DY the pictures of these beautiful women and u will see just how much their hair has to do their appearance.

autiful hair is not a matter of luck, it is simply a r of care.

u, too, can have beautiful hair if you care for it erly. Beautiful hair depends almost entirely upon are you give it.

ampooing is always the most important thing. is the shampooing which brings out the real life lustre, natural wave and color, and makes your soft, fresh and luxuriant.

hen your hair is dry, dull and heavy, lifeless, stiff gummy, and the strands cling together, and it harsh and disagreeable to the touch, it is because hair has not been shampooed properly.

hen your hair has been shampooed properly, and oroughly clean, it will be glossy, smooth and bright, htfully fresh looking, soft and silky.

hile your hair must have frequent and regular hing to keep it beautiful, it cannot stand the harsh t of free alkali, which is common in ordinary soap. free alkali soon dries the scalp, makes the hair le and ruins it.

hat is why leading motion picture stars and discriminating women, everywhere, now use Mulsified oanut oil shampoo. This clear, pure and entirely aseless product cannot possibly injure, and it does dry the scalp or make the hair brittle, no matter w often you use it.

f you want to see how really beautiful you can make r hair look, just follow this simple method:

A *Simple, Easy Method*

IRST, put two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water. Then t the hair and scalp with clear warm water. Pour e Mulsified evenly over the hair and rub it thoroughly over the scalp and throughout the entire length, wn to the ends of the hair.

Two or three teaspoonfuls will make an abundance of h, creamy lather. This should be rubbed in thorghly and briskly with the finger tips, so as to loosen e dandruff and small particles of dust and dirt that ick to the scalp.

After rubbing in the rich, creamy Mulsified lather, rinse the hair and scalp thoroughly—always using clear, fresh, warm water. Then use another application of Mulsified, again working up a lather and rubbing it in briskly as before.

You can easily tell when the hair is perfectly clean, for it will be soft and silky in the water, the strands will fall apart easily, each separate hair floating alone in the water.

Rinse the Hair Thoroughly

THIS is very important. After the final washing, the hair and scalp should be rinsed in at least two changes of good warm water and followed with a rinsing in cold water.

After a Mulsified shampoo you will find the hair will dry quickly and evenly and have the appearance of being much thicker and heavier than it is.

If you want to always be remembered for your beautiful, well-kept hair, make it a rule to set a certain day each week for a Mulsified cocoanut oil shampoo. This regular weekly shampooing will keep the scalp soft and the hair fine and silky, bright, fresh looking and fluffy, wavy and easy to manage—and it will be noticed and admired by everyone.

You can get Mulsified at any drug store or toilet goods counter, anywhere in the world. A 4-ounce bottle should last for months.

Makes Your Hair Beautiful

WATKINS
MULSIFIED
REG U S PAT OFF
COCOANUT OIL SHAMPOO

Keeping a Child's Hair Beautiful

CHILDREN should be taught, early in life, that proper care of the hair is essential.

Get your children into the habit of shampooing their hair regularly once a week. Put two or three teaspoonfuls of Mulsified in a glass of warm water. Then moisten the hair with clear warm water and pour the Mulsified over it, rubbing it in vigorously with the tips of the fingers. This will stimulate the scalp, make an abundance of rich, creamy lather and cleanse the hair thoroughly. It takes only a few seconds to rinse it all out when through.

You will be surprised how this regular weekly shampooing with Mulsified will improve the appearance of the hair and you will be teaching your child a habit that will be appreciated in after-life, for a luxuriant head of hair is something to be proud of.

To Fair-M

—to those who give a hearing to men who try to please them

By V. K. Cassady, B. S., M. S., Chief Chemist

I am asking here for a simple test of a unique shaving cream. I spent a lifetime to qualify to make it. I consulted 1,000 men to learn just what they wanted. I made up and discarded 130 formulas before I attained this perfection.

Now I ask you to try it—free. And if you have something you are equally proud of, I'll do the same for you.

No ordinary soap

We are makers of Palmolive Soap. It is based on palm and olive oils—the premier cosmetics since the days of Cleopatra. To millions of women it has brought new beauty—skins like velvet, soft, clear, clean.

The makers desired to combine that blend in a shaving cream for men. But they insisted that we first create the best shaving soap in existence.

What men wanted

We first learned what men wanted, by 1,000 interviews. Then, step by step, we met those wants in scientific ways. In 18 months we made and tested 130 formulas.

They wanted abundant lather. We made a soap which multiplies itself in lather 250 times.

They wanted enduring lather. We made a lather which maintains its creamy fullness for ten minutes on the face.

They wanted quick results. Within one minute, with our soap, the beard absorbs 15% of water. And that's enough to make a tough beard cut like wax.

They wanted the skin left soft a irritation. The palm and olive oils do Soap.

We've won the m

This shaving cream has won. It seemed like a fable. And every user some former favorite.

Now we ask your verdict. We hav

PALMOLIVE SHA

ded Men

men like you. In mutual fairness try it and tell us what you think.

Stop now and cut the coupon.

Just make this test at our expense

Send the coupon for this ten-shave tube. Compare results with the best shaving soap you know.

Then decide for yourself. We will accept your choice.

Multiplies Itself in Lather 250 Times

A tiny bit — just one-half inch — suffices for a shave. One tube supplies over a hundred shaves. A pea-size bit makes a lather ball as big as a potato.

Softens the Beard in One Minute

Within one minute the beard absorbs 15% of water. And that's enough. The horniest beard may then be cut like wax.

Leaves the Skin Soft and Velvety

No lotion required. This blend of palm and olive oils soothes all irritation. The after-effects are delightful.

10 Shaves FREE

The Old Way and The New

OLD ways must give way to new ways. Time is too precious to waste. Back-breaking stooping to dust, clean and polish the floors is no longer necessary—it is a foolish drudgery. Compare these pictures—the old way and the new way. The new way is the O-Cedar way. It means even more than the pictures show. It means cleaner, brighter and prettier floors. The saving of time, work and money.

The O-Cedar Polish Mop has six decided improvements, besides being bigger, stronger and better than ever before and, best of all, a decided reduction in price.

Sold on Trial

Simply deposit the price (Large size, $1.50, Cottage size, $1.00) with your dealer. Put your O-Cedar Mop to every test, and if you are not delighted with the result your money will be refunded without a question.

Prices in Canada, $1.25 and $2.00.

O-Cedar Polish Mop

Evolution

Today's way of beautifying furniture and woodwork is to use O-Cedar Polish. For O-Cedar "Cleans as it Polishes."

In place of a greasy, dust collecting shine or liquid coating O-Cedar Polish cleans the furniture and woodwork of all dust, scum, finger marks and the like, brings out the beauty of the grain of the wood and then imparts a high, dry and lasting lustre that does not get gummy, sticky or collect dust. In this way O-Cedar really beautifies, cleans, polishes—all at the same time.

O-Cedar Polish is unconditionally guaranteed and your dealer will refund your money if you are not delighted with the O-Cedar result.

30c to $3 sizes at all dealers

Years ago people greased their furniture to give it a gloss

—

Then came a quicker method—a liquid coating to merely make it shine
